FRENCH REVOLUTION

IN MEMORIAM

TO THE RESTORATION OF THE BOURBONS

13 AUGUST 88

BY ARCHIBALD ALISON, F.R.S.E.

ANDRE VTF

Præterea etiam cum a meo archiepiscopo quatuorcentis et octo scriptis quibusdam litteris ad Carthaginienses scripsit, ubi sic ait: "Propter hoc non valde miror quod a vobis littere et circulares gentesque vestre ferantur, et quia hoc ipsi tractantur quoniam vultis ut ad vobis fiat et hoc idem. Sed illi littere, nec ex, nec expressio prima Punicæ vultur et illa, sed ista etiam in perperam habet certantur quatuor littere et sed etiam illis et vult et ex quibus littere sunt, ut perperam periculum faciant cum vultur."—*It. It. It. It.*

VOL. VII.

PARIS,

BAUDRY'S EUROPEAN LIBRARY,
3, QUAI MALAQUAIS, NEAR THE FONT DES ARTS,
AND STASSIN ET XAVIER, 9, RUE DU COQ.

SOLD ALSO BY AMYOT, RUE DE LA PAIX, TRUCHY, BOULEVARD DES ITALIENS,
BROCKHAUS AND AVENARIUS, RUE RICHELIEU, LEOPOLD MICHLESEN, LIPZIG,
AND BY ALL THE PRINCIPAL BOOKSELLERS ON THE CONTINENT.

CONTENTS OF VOLUME VII.

CHAPTER LI.

BRITISH EMPIRE IN INDIA, PRIOR TO LORD WELLESLEY'S ADMINISTRATION

Geographical, Physical, Moral, and Political State of the British Empire in India—Character and Qualities of the Sepoy force—Early Settlement of the British at Calcutta, Madras, and Bombay—Early Wars with Hyder Ali—Imprachment of Hastings—Mr Fox's India Bill—Mr Pitt's India Bill—Lord Cornwallis's first Campaign with Tippoo Sultan —P 4—50

CHAPTER LII

ADMINISTRATION OF MARQUIS WELLESLEY, AND FIRST APPEARANCE OF WELLINGTON IN INDIA

Early History and Character of Wellington and Marquis Wellesley—Principles of Marquis Wellesley's Government in India—War with Tippoo Sultan and Storming of Seringapatam—Wellington's first Campaign in India—Mahratta War, and Victories of Lord Blake in Bengal—Battle of Assaye, and Conquests of Wellington in the Deccan—War with Holkar—Its early disasters and ultimate triumphs—Causes of the extraordinary growth of the British Power in India —P. 51—107.

CHAPTER LIII

CAMPAIGN OF ABENSBERG, LANDSHUT, AND ECHMUHL.

Commencement of the Austrian War, and State of Germany at this period—Vast efforts of the Imperial Government—Commencement of the Campaign—Battles of Abensberg, Landshut, and Lechnuhl—Retreat of the Archduke Charles to Bohemia—Campaign of the Archduke John in Italy—His early Success, and ultimate Discomfiture.—P 108—142.

CHAPTER LIV.

CAMPAIGN OF ASPERN.

Advance of Napoléon to Vienna—Desperate Battle at Ebersberg—Retreat of the Archduke John from Italy into Hungary—Battle of Aspern, and Retreat of the French into the Island of Lobau—Extreme Peril of their Situation there —P 143—180 -

CHAPTER LV.

WAR IN TYROL, NORTHERN GERMANY, AND POLAND.

Moral, Political and Physical Character of the Tyrol—Character of its Leaders—Their early and astonishing Success—Insurrection in the North of Germany, and Suppression of Schill's Revolt—Operations in Poland—Early Success of the Archduke Ferdinand—General Situation of Napoléon at this period —P 181—218

CONTENTS.

CHAPTER LVI

CAMPAIGN OF WAGRAM

Vast forces which Napoleon had collected at Vienna for the prosecution of the War—Extraordinary ability of his designs for the preparation for the passage of the River—Battle of Raab and Operations in Hungary—Advance of Marmont from Illyria, and actions in Croatia and Carniola—Recapture of Warsaw by the Poles—Preparations for the passage of the Danube at Vienna—Passage of the River and Battle of Wagram—Its varied successes, and ultimate Retreat of the Austrians—Tardy approach of the Archduke John, makes them lose the Battle—Retreat to Znaim, and Armistice there.—P 219—251

CHAPTER LVII

WALCHEREN EXPEDITION—PEACE OF VIENNA—SECOND WAR IN TYROL—DETHRONEMENT OF THE POPE.

Vast importance of the Scheldt as a point of attack against England—Walcheren Expedition—Its early success and ultimate failure—Causes of these disappointments—Characters of Lord Castlereagh, Mr Canning, and Mr Perceval—Negotiations between France and Austria—Peace of Vienna—Continuance of the War in Tyrol and extraordinary successes of the Peasants in that province—Their ultimate subjugation, and conclusion of the contest—Rupture between France and the Holy See—Successive aggressions on the Pope—His excommunication of Napoleon and subsequent Dethronement—Incorporation of the Roman States with the French Empire.—P 253—267

CHAPTER LVIII

MARITIME WAR AND CAMPAIGN OF 1809 IN PORTUGAL AND SPAIN

War in the Peninsula and Resolution of the British Government to continue the contest there—Battle of Basque Roads, and character of Lord Cochrane—Naval Operations in the Mediterranean—Siege and Fall of Saragossa—Operations in Catalonia and Aragon—Siege and Fall of Gerona—Operations in Galicia and Asturia—Expedition of Soult into Portugal and fall of Oporto—Landing of Wellington and expulsion of the French from Portugal—Advance to Madrid—Battle of Talavera, and subsequent Retreat of Wellington—Defeat of the Spaniards at Almonacid and Ocaña.—P 268—324.

CHAPTER LIX.

CAMPAIGN OF TORRES VEDRAS AND YEAR 1810

Divorce of Napoleon and his Marriage to Maria Louisa—Resignation of Louis Bonaparte, and annexation of Holland to the French Empire—Difficult task of Government in England in conducting the War—Conquest of Andalusia by Soult—Wellington's preparations for the defence of Portugal—Invasion of Masséna, and Battle of Bussaco—Faction of Torres Vedras, and ultimate Retreat of the French—Capture of Badajoz by Soult—Battles of Barrosa and Fuentes D'Onore and Fall of Alameda.—P 325—422.

HISTORY OF EUROPE

FROM THE COMMENCEMENT

OF THE

FRENCH REVOLUTION.

CHAPTER LI.

BRITISH EMPIRE IN INDIA, PRIOR TO LORD WILTESLY'S ADMINISTRATION.

ARGUMENT.

Comparison of the Roman Empire in Europe and British in India—Wonderful Circumstances attending the British Empire in the East—Its present Extent, Population, Revenue, and Military Strength—Physical Description of the Indian Peninsula—Its Vegetable and Animal Productions—Extraordinary diplomatic Ability with which India has been Governed—Immense Advantages of the British Rule to the native Population—Great diminution of Crime under the British Rule—And Change effected in the Aspect of the Country in the Central and Western Provinces—Rapid Progress of Wealth, Population, and Comfort, over all India under the English Government—Increased Taste for British Manufactures over India—Vast Police Force established in Bengal, and its admirable Effects—Principles of Indian Taxation—Management of Land in India—The Zemindar System—Its practical Operation—The Ryotwar System—The Village System—Its admirable Effects in all Ages of Oriental History—Effect of this large Land Revenue on the general System of Taxation—Complete System of Religious Toleration established in India—Vast Diversities of Faith in that country—Effect of this religious division in facilitating the Government of the country—Vast Variety of National Character in India—Difference of Character owing to Physical Causes—Origin and Composition of the Sepoy Force—Elevated Rank and Situation of the Sepoy Troops—General Character of the Indian Army—Touching Anecdotes of the Generosity of the Sepoy Troops—Their Fidelity under every Trial and Privation—Which is owing to the fidelity of the English Government to their Engagements—Contrast of the Company's Rule to the devastating Mahomedan Sway which preceded it—Wonderful smallness of the Force by which this Empire has been won—Desperate British Wars during which this Empire has arisen in the East—Wars in which the Empire was involved during the growth of the Indian power—What were the Causes of their extraordinary Successes—Conquest was forced upon them by necessity, not adopted by inclination—Sketch of the principal Indian Powers when the British Empire in the East arose—Origin and early History of the East India Company—Capture of Calcutta by Surajee Dowlah—Calcutta Retaken, and great Exploits of Clive—His Dethronement of Surajee Dowlah—Acquisition of Territory by the Company, and Defeat of the Mogul Emperor—Cession of all Bengal and Bahar to the English—Origin and Progress of the Madras Presidency—Sieges of Madras and Pondicherry by the French and English respectively—Rise and Character of Hyder Ali—First Rupture between the British and Hyder—First Campaigns with him, and early Disasters and Peace—Transactions in the Carnatic down to the renewal of the War with Hyder in 1780—Great Successes of Hyder on the renewal of Hostilities—The firm Conduct of Warren Hastings and Sir Lyre Coote re-establishes affairs—Further Disasters stemmed by the Energy of Warren Hastings—Death of Hyder—War with Tippoo, and Invasion of Mysore from Bombay—Early Success and final Disasters of the Invasion—Siege of Mangalore by Tippoo, which is raised by the British Invasion of Mysore—which leads to a Peace—Change introduced by Tippoo in the Indian Armies—Its ruinous Effects on the independence of the Native Powers—Long-protracted Prosecution of Mr Hastings—Proceedings in Parliament on the subject—His trial and acquittal

—Alternate change of public opinion on the subject—Reflections on the cruel injustice of this Prosecution—Mr Fox's India Bill—Its premature Fate, which occasions the Dearth of his Administration—Objections to which this Bill was liable—Mr Pitt's India Bill, which passes into a law—Arrangements with the British Government for the increase of British Forces in the East—Fresh War with Tippoo—Lord Cornwallis's first Campaign with him—Vast preparations for the Siege of Seringapatam—Preparations for a decisive Battle under the walls of that capital—Total Defeat of Tippoo—Dangers of Cornwallis, and his ultimate rescue—Concluding operations of the war—Treaty of Peace with Tippoo—Experienced necessity of adding new Conquests to the British Empire in India—Pacific Administration and Principles of Sir John Shaw—Its disastrous Effects—Intrigues of Tippoo to form a Confederacy against the English—His overt Acts of Hostility

Comparison
of the
Roman Em-
pire and
British India.

VAST and interesting as are the events which have now been traced, springing out of the wars of the French Revolution, they are yet outdone by the spectacle which, at the same period, the Oriental

World exhibited. THE BRITISH EMPIRE IN INDIA forms, beyond all question, the most dazzling object in that age of wonders perhaps the most extraordinary phenomenon in the history of the species. Antiquity may be searched in vain for a parallel to its lustre. During the plenitude of its power, the Roman Empire never contained above a hundred and twenty millions of inhabitants, and they were congregated round the shores of the Mediterranean, with a great inland sea to form their interior line of communication, and an army of four hundred thousand men to secure the submission of its multifarious inhabitants. Magnificent causeways, emanating from Rome, the centre of authority, reached the farthest extremities of its dominions; the legions not only conquered but humanized mankind and the proconsuls, whether they journeyed from the Forum to the wall of Antoninus and the solitudes of Caledonia, or the shores of the Euphrates and the sands of Parthia, the cataracts of the Nile, the banks of the Danube, or the mountains of Atlas, rolled along the great roads with which these indomitable pioneers of civilisation had penetrated the wilds of nature. Their immense dominions were the result of three centuries of conquest; and the genius of Scipio, Caesar, and Severus, not less than the civic virtues of Regulus, Cato, and Cicero, were required to extend and cement the mighty fabric.

Wonderful
circum-
stances at-
tending the
British do-
minion in
India.

But in the Eastern world, an empire hardly less extensive or populous, embracing as great a variety of people, and rich in as many millions and provinces, has been conquered by the British arms in less than eighty years, at the distance of above eight thousand miles from the ruling state. That vast region, the fabled scene of opulence and grandeur since the dawn of civilisation, from which the arms of Alexander rolled back, which the ferocity of Timour imperfectly vanquished, and the banners of Nadir Shah traversed only to destroy, has been permanently subdued and moulded into a regular province by a company of British merchants, originally settled as obscure traffickers on the shores of Hindostan; who have been dragged to their present perilous height of power by incessant attempts at their destruction by the native princes; whose rise was contemporaneous with numerous and desperate struggles of the British nation with its European rivals, and who never had a fourth part of the disposable national strength at their command. For such a body, in such times, and with such forces, to have acquired so immense a dominion, is one of those prodigies of civilisation of which the history of the last half century is so pregnant; with which we are too familiar to be able fully to appreciate the wonder; and which must be viewed by mankind, simplified by distance, and gilded by the colours of history, before its due proportions can be understood.

Its extent,
Population,
Revenue,
and Military
Strength

The British empire in India,—extending now, with few interruptions, and those only of tributary or allied states, from Cape Comorin to the Himālaya mountains,—comprehends by far the richest and most important part of Southern Asia; is nearly four times in extent the area of France (1), and six times that of Great Britain and Ireland; contains above a hundred millions of inhabitants (2), and yields a revenue of nearly twenty millions sterling (5). The land forces rose in the year 1826, when two bloody wars were to be maintained at the same time, to the enormous amount of 260,000 native troops, including 45,000 cavalry, and 1000 pieces of artillery, besides 51,000 native English, and even under the reduced peace establishment of the present time, they still amount to 194,000, of whom 55,000 are British soldiers (4). This immense force, all in the very highest state of discipline and equipment, is raised entirely by voluntary enrolment, without a compulsory conscription ever being resorted to, and so popular is the British service, and so unbounded the general confidence both in the Company's stability and its fidelity to its engagements, that the only difficulty the authorities experience, is to select the most deserving from the numerous competitors who are desirous of being enrolled under its banners. If public danger threatened, or the Russian eagles approached the Indus, this force might be instantly raised by the same means to a million of armed men. When the British power was threatened with a double attack, and the Rajah

of Bhurtpore raised the standard of revolt at the time that the bulk of their forces were entangled in the jungles of the Irrawaddy, or dying under the fevers of Arracan, no vacillation or weakness appeared in the British councils, with the right hand they humbled what the Orientals styled the giant strength of Ava, while with the left they crushed the rising power of the northern rajahs; and while a larger force than combated in Portugal under Wellington was pursuing the career of conquest in the Burmese empire, and advancing the British standard almost to the minarets of Ummeiapoora, a greater force than the native British who conquered at Waterloo assembled as if by enchantment round the walls of Bhurtpore, and, at the distance of fourteen hundred miles from Calcutta, and ten thousand from the British isles, carried the last and hitherto impregnable stronghold of Hindoo independence (5). The greatness of Napoléon flits as a brilliant vision across our recollection; the power of Russia stands forth a present object of terror to our senses; but Russia never invaded Persia or Turkey, albeit adjoining

(1) The Company's territories consist of 514,000 square miles, including the protected states, it embraces 1,128,800 square miles.—*Parl Return*, 1831, and MARTIN, ix. 2, duodecimo edition Europe contains, to the westward of the Ural mountains, 500,000 square leagues, or 3,500,000 square miles.—*See* MALTE BRUN, i. 4. France, 150,000 square miles.—*Ibid*, viii. 273

(2) The exact numbers are,—

Bengal Presidency, . .	39,957,561
Madras do . .	15,090,084
Bombay do . .	6,940,277
Other states in northern provinces, . .	40,000,000

Ava, Arracan, etc	101,987,922
Allied or protected states,	100,000,000

Total under British sway, 201,987,922

—*See* *Population Returns*, 1831, and MARTIN, viii. 256, 269

(3) The revenue in 1833 was L 18,677,952, that

for fifteen years, ending 1829, L 309,151,920, or about L 20,650,000 per annum. The charges in India are L 17,583,132, leaving at present a surplus of L 1,094,820. The public debt has stood, since 1792, as follows:

1792,	L 9,142,720
1809,	30,812,441
1814,	30,919,620
1829, .	47,255,374
1833,	44,800,000

—*See* *Parl Pap May*, 1833. and MARTIN, ix. 113.

(4) MARTIN, ix. 90

(5) Lord Combermere besieged Bhurtpore in 1825, with 36,000 redcoats, and 180 pieces of cannon, the force employed in the Burmese empire, at the same time, was in all 55,000 strong.—MARTIN, viii. 36, and *Ann Reg* 1825. The British and King's German legion at Waterloo were 29,715 infantry, 8219 cavalry, 6054 artillery, the Hanoverians and Brunswickers about 15,000, the Belgians, 12,000.—*See* *Adjutant-General's Report*, 6th Nov. 1816.—*Battle of Waterloo*,

her own frontiers, with forces equal to those which England has arrayed in the plains of Hindostan (1) and the host which followed Napoleon to Austerlitz and Friedland was inferior to that with which Lord Hastings made war on the Mahratta states (2)

Physical description of the Indian Peninsula. Imagination itself can scarcely do justice to the varied and magnificent scenery of Hindostan. From the snowy summits of the Himalaya to the green slopes of Cape Comorin, from the steep Ghats of Malabar to the sandy shores of Coromandel, it exhibits a succession of the most noble or beautiful features: at times stupendous mountain ranges, their sides clothed with lofty forests, their peaks reposing in icy stillness; at others, vast plains rivalling the Delta of Egypt in richness, and, like it, submerged yearly by the fertilizing waters of the Ganges; here lofty ghats running parallel, at a short distance from the shore of the ocean, to the edge of its waters, and marking the line of demarcation between the low rich or sandy plains on the sea-side, and the elevated table-land, several thousand feet in height, in the interior; there, rugged hills or thick forests teeming with the riches of a southern sun. The natural boundaries of India are the Himalaya range and mountains of Cabul and Candahar on the north; the splendid and rapid stream of the Indus, seventeen hundred miles in length, of which seven hundred and sixty are navigable, flowing impetuously from their perennial snows, on the north-west; the deep and stagnant Irrawaddy, fourteen hundred miles in length, fed by the eastern extremity of the chain, and winding its way to the Bay of Bengal through the rank luxuriance of tropical vegetation, on the north-east; and the encircling ocean on the coasts of Malabar and Coromandel, on the south. Nature every where appears in this highly favoured region in her most imposing array: the Himalaya mountains, surmounting even Chimborazo in elevation; the Indus, rivalling the river of the Amazons in magnitude; the plain of Bengal, out-stripping Mesopotamia itself in fertility,—form some of the features of a country which from the earliest times has been the seat of civilisation, and the fabled abode of opulence and magnificence (3).

The vegetable and animal productions of the Indian Peninsula. All the productions of the globe are to be found, and for the most part flourish to perfection, in the varied climates and soils of this splendid peninsula. The forests, the fruits, the crops of Europe, are recognised by the delighted traveller in the Himalaya Mountains, where the prodigy is exhibited of valleys tolerably peopled, and bearing crops, at the height of sixteen or seventeen thousand feet above the sea, or considerably above the summit of Mount Blanc, or the Great Gloehner. The peach, the apricot, the nectarine, even apples, pears and strawberries, refresh the European, to whom they recall in a distant land and amidst Oriental luxuries, the images and enjoyments of his youth. Wheat, barley, and oats, with noble forests of teak and oak, flourish on the cool slopes of the mountains; while at their feet the vast plain of Bengal is covered to an incalculable extent with double crops yearly of rice, or thickets of bamboo canes, fed by the fertilizing floods which, often to the breadth of a hundred miles, exhibit a sea of water interspersed only with tufts of wood, solitary palms, hamlets, and pagodas. Indigo grows in luxuriance in many districts, and forms a stable article of

(1) In the year of 1818, and which terminated in the recovery of the Balkan and capture of Adrianople, the Russians could never collect 48,000 men in single field. In the Persian war of 1811-2, they never had 10,000 men together in one army to the south of the Caucasus. In 1792 and 1804, the English besieged Seringapatam with 42,000 men and 104 pieces of cannon; in 1811, Lord Hastings sent 30,000 men against the Ghatiahs on the first range of the Himalaya Mountains.—*Max* iii. 32, 31

(2) In 1817 Marquis Hastings took the field against the Mahratta confederacy at the head of 81,000 regular infantry and 32,000 cavalry the greatest force ever assembled under one commander on the plains of Hindostan. The French who fought at Austerlitz were 60,000, of all arms; at Eylau 40,000.—*Max* 471 and vi. 266—*and* *Max* i. viii. 23.

(3) *Max* Brown, iii. 2, 11. *Max*, viii. 91, 92.

commerce to the country; sugar thrives as well as in the West Indies, and promises to fill up the gap in the production of the globe, occasioned by the disastrous emancipation of the slaves in the western tropical regions, grapes, melons, pine-apples, figs, dates, mangoes, are every where found in profusion, with many other fruits still more luscious, peculiar to the Eastern Hemisphere. The elephant, at once the strongest, the most sagacious, and the most docile of animals, the camel, the ship of the desert, the horse, the companion and fellow-soldier of man,—alike flourish in a country where the tiger and the rhinoceros rule the wilds of nature. Even the flowers and birds partake of the splendid character of creation—the roses of Cachmere and Delhi send their highly prized perfume through the world, the scarlet flowers of the *rxora* and *mussonda*, and innumerable other tropical plants, diffuse a blaze of beauty through the woods—the scarlet plumage of the flamingo, the varied hues of the parrot, rival the colours of the setting sun. But the woods are silent, or resound only with the harsh scream of birds, or the fearful cry of beasts, of prey (1), no troops of feathered songsters fill the air with their melodious voices, nor welcome in the breath of spring with the voice of gladness and the notes of love.

Extraordi-
nary diplo-
matic ability
with which
India has
been go-
verned In the transactions of Europe, the historian has too good reason frequently to lament the indecision and want of foresight with which both diplomatic negotiations and military operations have been conducted by the English Cabinet; and he is, perhaps, driven to the conclusion, that greatness has rather been forced on the state by the energy and virtues of its inhabitants, than conferred upon the inhabitants by the wisdom or ability of the Government. But in the East, the reverse has from the outset been the case. If the intelligence, vigour, and bravery of the middle and working-classes of England, who sent forth their sons to push their fortunes in the plains of Hindostan, has furnished an inexhaustible supply of talent and resolution to conduct their enterprises, the foresight and capacity of the Indian Government has almost invariably brought their qualities to bear upon the public service in the most efficient manner. Perhaps there is not to be found in the history of any country, so remarkable a succession of able statesmen and warriors as in India have reared the mighty fabric of British greatness. The cool, daring, invincible intrepidity and military genius of LORD CLIVE laid the foundation of the structure, the quick sagacity, prompt determination, and high moral courage of WARREN HASTINGS rescued it more than once from ruin—but it was the enlarged views, statesman-like wisdom, and energetic conduct of MARQUIS WELLESLEY which completed the superstructure, and left to succeeding governors a force which nothing could resist, a moral ascendancy which nothing could counter-balance. MARQUIS HASTINGS has since, with equal ability, followed out the same enlightened principles, crushed the united confederacy of the Mahrattas and Pindarries, vanquished the hill strength of the Goorkhas, and left to his successors a matchless empire, from the Himalaya snows to the Cape Comorin, and from the frontiers of China to the banks of the Indus, united under one rule, obeying one Government, and actuated by one common sense of experience and obligation.

Immense
advantages
of the Bri-
tish Go-
vernment to
the Indian
people

Mr Burke has said that if the English were to be expelled from India, they would leave no better traces of their dominion than the hyæna or the tiger. Even at the period when this celebrated expression was used, it savoured more of the fire of the orator than

the sober judgment of the statesman; but had that great man survived to these times he would have gratefully retracted the sarcasm, and admitted that, of all the marvels attending the British sway in the East, the most wonderful is the extraordinary blessings which it has conferred upon the inhabitants. Facts more eloquent than words, statistics more irresistible than arguments, place this important point beyond the possibility of a doubt. While under its native princes, the state of capital in India was so insecure that twelve per cent was the common, and thirty-six per cent no unusual rate of interest under the British rule, the interest of the public debt has, for the first time in eastern history, been lowered to five per cent; and at that reduced rate, the capitalists of Arabia and Armenia daily transmit their surplus funds to be purchased into the Company's stock, as the most secure investment in the East. Of the public debt of £47,000,000, a large proportion is due to native or Asiatic capitalists and such is the unbounded confidence in the good faith and probity of the Government, that bales stamped with their signate circulate unopened, like coined money, through the vast empire of China. So complete has been the protection, so ample the security enjoyed by the inhabitants of the British provinces, compared with what obtains under their native rajahs, that the people from every part of India flock, as Bishop Heber has observed, to the three Presidencies; and the extension of the Company's empire, in whatever direction, is immediately followed by a vast concourse of population, and increase of industry, by the settlers from the adjoining native dominions (1).

Brilliant as has been the career of England in the European world during the last half century, there are several circumstances in its internal situation, which cannot be contemplated without painful feelings. Among these, the constant and uninterrupted increase of crime through all the vicissitudes of peace and war, unchecked by penal vigilance, undiminished by intellectual cultivation, is one of the most alarming. But under the British Empire in the East, a very different and much more satisfactory progress has taken place. Rapid as has been the growth of crime in the European dominions of England during the last half century, its decrease in her Eastern possessions has been still more striking; and the steady powerful rule of a central Government has done as much for the inhabitants of Hindostan, as the vices consequent on a corrupted manufacturing population have undone for the people of Great Britain (2). From our returns of commitments and crime in many different provinces of India for

(1) Sinclair's Account of India, 13, 27. Heber's India III. 274. Life, I. 98, 211; II. 74, 111.

(2) A. an example of the rapid diminution of crime in British India within the last twenty years, the Convictions for serious crimes in the Court of Sessions at Calcutta, may be quoted.

the last thirty years, it distinctly appears that crime has, during that period, diminished one half. in many places sunk to a sixth, in the East; while it has in the same time more than quadrupled in the British Islands, and in Ireland multiplied ninefold (1). Nor is it difficult to perceive to what cause this re-

markable difference is owing. Robbery and plunder, the crimes of violence, were those chiefly prevalent in India, growing out of the lawless habits which ages of misrule had diffused through a large portion of the population. These savage and dangerous crimes have been every where severely repressed, in some districts totally extirpated, by the strong and steady arm of the English Government. The long-established hordes of robbers have been in most places dissolved—the Pindarries, who so long spread ruin and desolation through central India, rooted out; the gangs of Dacoits and Looties, who levied a frightful tax on honest industry, transported or broken up. But if this unwonted feeling of security against hostile spoliation, is so generally perceptible even in the provinces which have enjoyed the benefit of English protection for the longest period, what must it be to those which have been lately rescued from a state of anarchy, misery, and bloodshed, unparalleled in the modern history of the world (1)?

Great change of aspect in the aspect of the country: central and western provinces.

"Nothing," says an intelligent observer, "can be more gratifying to an Englishman than to travel through the central and western provinces, so long the theatre of merciless and oppressive war, and to witness the wonderful change which has every where been wrought. Every village in that part of the country was closely sur-

rounded by fortifications, and no man ventured to go to the labours of the plough or the loom without being armed with his sword and shield. Now the forts are useless and are slowly crumbling into ruin; substantial houses begin for the first time to be built in the open plain; cultivation is extended over the distant and undefended fields; the useless incumbrance of defensive armour is laid aside, and the peasant may fearlessly venture to enjoy the wealth and comforts which his industry and labour enable him to acquire. In short, the course of events within the last fifteen years has done more than the whole preceding century, to improve the condition of the middle and lower classes through the whole of India—to give them a taste for the comforts and conveniences of life, and to relieve their industry from the paralysis under which a long continuance of internal dissension had caused it to sink. Englishmen, who have so long been blessed with internal tranquillity and to whom the idea of an invasion presents only a vague and indistinct notion of confusion, bloodshed, and rapine, can hardly conceive the rapturous delight which animates the Hindoo peasant who has had from time immemorial a wretched experience of these frightful realities, or the gratitude he feels to those who protect him from them—who enable him to reap his harvest in security, defend his home from profanation, and his property from the never-ending extortion of the powerful (2).

Rapid progress of wealth, population and comfort, over all India.

This progress, accordingly, of wealth, comfort, and population during the last twenty years, especially in Central India, has been rapid in a most extraordinary degree—and even that short period of firm pacific administration has gone far to obliterate the deep furrows which the devastating wars and interminable oppression of former times had produced. Old neglected tanks have been cleared out, their banks restored and again filled with vivifying floods; roads repaired or struck out anew in the most important lines of communication; harbours excavated, bridges erected, aqueducts constructed, with all the advantages of European skill. Irrigation spread over the thirsty plains, and cultivation extended far into the open country, at a distance from any villages, the centres, in former

(1) *Statistics Tables in Martin's India*, 12, 322.

(2) *Sketches of India*, 8, 9. *Hibber's India*, 21, 236, 241, 242.

times, of all the operations of human labour (1). Villages, almost beyond the power of enumeration, have risen up from their ruins in every part of the country; the ryots around them are to be seen cheerfully cutting into the jungle, and chasing the leopard and the tiger from their hereditary haunts (2); an entirely new feature in Indian society has arisen, a *middle class*, which is gradually approximating to the yeomanry of the Western world, and the never-failing symptoms of a prosperous population have generally appeared, — a great increase in the numbers of the people, co-existent with a marked elevation in their standard of comfort and individual prosperity (3)

The effect of this progressive elevation in the situation of the middle, and improvement in the circumstances of the lower orders, has already been strongly and beneficially felt in the extended commercial intercourse between India and the British Islands. The growing taste for British manufactures of almost every kind, as well as the increased capability of the working classes to purchase them, in every part of Hindostan, was long ago remarked by Bishop Heber, and the same gratifying change has, since his time, been noticed by not less competent observers. The gradual rise of the more opulent of the working into a middle class, has spread a taste among them for luxuries and conveniences to which their fathers, during the many ages of Hindostan oppression, were strangers. The calicoes and long cloths of Manchester and Paisley have now obtained as undisputed possession of the markets of the East, as the hardwares of Sheffield, Birmingham, and Leeds; and the abundance and cheapness of British manufactures have diffused a taste for these articles among classes who formerly never had a wish beyond the mere necessaries of life. While the industry of Indian artisans was, in former times, exclusively directed to fabricate only the coarsest articles for the poorer, and the most costly luxuries for the richer classes, the rapid increase of the consumption of a superior sort of fabric, (still much below the Cachmere shawls and brocades of the rich,) unknown till within these twenty years in any part of Hindostan, marks the slow but gradual growth, under British protection, of an intermediate class in society,

(1) The public works undertaken and carried through by the British Government in India, especially in the formation of roads, bridges, aqueducts, canals, harbours, tanks, &c., almost exceed belief, and though less pompously set forth in official reports, equal those which have shed such an imperishable lustre over the reign of Napoleon in Lu-

rope. An enumeration of them will be found in the *Parl. Papers* in 1833, and an abstract in MARTIN, ix. 344-349. The roads constructed under Lord W. Bentinck's administration alone, in 1834, were 1784 miles, and 10,000 persons were employed on them. — MARTIN, ix. 349.

superior to the naked ryot, but inferior to the pampered zemindar: while, by one of those changes which bespeak the revolutions of ages, and measure the difference in the progress of different quarters of the globe, the cotton of India, transported to the British shores and manufactured by the refinements of European machinery, is sent back to the East, and, by its greater cheapness, has opened to a class who never before could enjoy them, the comforts of the original produce of Hindostan (1)

The extraordinary diminution of crime, especially of a violent kind, in all parts of the Indian peninsula of late years, and progressive amelioration of the people, is in a great measure to be ascribed to the extensive and powerful police force which is very generally established. The discipline and organization of this civil body is admirable and such is its extent, that in the provinces of Bengal and Bahar it numbers one hundred and sixty thousand men in its ranks. In most villages there are two or three, in many, ten or twelve of this protecting force permanently established. Europeans may feel astonished at the magnitude of this establishment, but experience has completely demonstrated that it is highly useful, and indeed indispensable, amidst the habits of lawless violence to which ages of licence and rapine have inured the inhabitants of India. The rapid diminution of crimes of violence in Bengal under the operation of this preventive system, proves that a remedy has been discovered and applied to the prevailing causes of evil in those regions: would that human wisdom could devise an equally effectual preservative against the passion for illicit sensual indulgence, and habitual intoxication, which are now, like a

plague, overspreading the face of society in the British Islands (2)!

Y. Taxation in India is for the most part direct that is, it consists of the rent of lands belonging in property to the Government, and which, from time immemorial, have been devoted to the maintenance of the supreme authority. Of the nineteen millions which at present constitute the general revenue of India, nearly eleven millions are drawn in this manner from the rent of the Government lands. The principle on which this immense revenue is derived from land, has no analogy to the European land tax, which is a burden superinduced upon the owner of the rent; it is, on the contrary the rent itself. The modes in which this tax is levied over India are three: either a perpetual settlement with, or fixed rent constantly payable by, the proprietors of land or a temporary settlement with the heads of villages or townships or a definite settlement with each individual occupant of

(2) Martin, ix. 91, 96. Anber 353.

the ground. These different modes of taxation are all founded on one principle, which is universally admitted and acknowledged in every part of Hindostan, viz, that Government, as the paramount owner of the soil, has right to a certain portion of the gross produce of every foot of cultivated land, which may be commuted generally or partially, by permanent or partial settlements, with classes of men or separate individuals, but never can be wholly alienated by any ruler to the prejudice of his successors. Government therefore, in India, is at once the ruling power and the universal landlord in the state, and hence the general and omnipotent influence which its severity or justice has upon the prosperity and well-being of the people, and the immediate effect of the British sway,—by whose agents the collection of rent has been fixed, upon comparatively equitable principles,—upon the welfare of the humbler classes (1).

When the East India Company came into possession of the Bengal provinces, they found the land-revenue every where collected by the intervention of officers under the Mahomedan Government, who had charge of districts or provinces under the title of *zemindars*. These officers were paid by a per centage on the sums which they collected. the utmost irregularity and abuse generally existed, military force was constantly resorted to, to enforce the collection; and some of them held their offices for life only, others transmitted them, by hereditary succession, to their descendants. Misled by the analogy of European institutions, or desirous of laying the foundation for their establishment in the East, Marquis Cornwallis, in 1795, conceived and carried into effect the idea of transforming the zemindars into landed proprietors, by conferring upon them and then descendants an indefeasible right to the territories over which their powers extended, so long as they continued to pay regularly the fixed land-tax to Government. The propriety of this change was very much doubted at the time, and gave rise to a long and interesting controversy; but it was, nevertheless, carried into execution, and now forms the basis on which the taxation of two hundred thousand square miles of the Bengal territory, a district thrice the size of Great Britain, is founded. Though framed on the principles of benevolence and moderation, it has, however, like almost all similar institutions borrowed from the analogy of other nations, and a different state of society, proved altogether ineffective for the principal object in view. The zemindars could not, by the mere regulation of the Company, be converted from Asiatic to European habits. instead of acquiring the interests and views of hereditary landholders, they continued to act with the characteristic improvidence of eastern rulers. To squeeze the last farthing, by any means how unjust soever, from the ryots, and squander it in extravagance or luxury upon themselves or their families, was the general practice. numbers were ruined and dispossessed by the Company, who exacted the quit rent with unrelenting and injudicious rigour (2); and thus no step was made towards the formation of a landed aristocracy, while no alleviation was experienced in the burdens of the poor.

The evil, in effect, became so great, that it has in some degree worked out, like all other excessive ills, its own cure. The zemindar system has come in the end to benefit a class of landed proprietors, though not the one which Lord Cornwallis originally intended. From the general ruin which overtook these powerful officers, and the terror every

Heber, iii 275

(2) Parl.

where inspired by the rigorous exactions of the Company, the price of estates fell so low that at last it became a prudent matter of speculation to buy land, and look to its returns for the interest of the price. A different and more provident class has thus, to a considerable extent, been introduced into the management of estates; and, as the land-rent which they are required to pay continues fixed, they have the strongest possible inducement to increase by good management the surplus which may accrue to themselves and their families. But, unfortunately, they have not learned in the East to look so far into the future as to see that this is to be most effectually done by equitable and just dealings towards the cultivators. The burdens imposed on the ryots are still generally exorbitant, often ruinous, and the benefits of the British Government are felt by that numerous and important class rather by the cessation of war and depredation than in any practical diminution of the duties legally exigible from them by their landlords (1).

The Ryot System. Impressed with these evils, a different system was adopted by Sir Thomas Munro, late Governor of Madras, in his administration of some of the newly acquired provinces of that presidency. The principle acted on by that able ruler, of whom Mr. Canning justly said, that "Asia did not possess a braver warrior, nor Europe a more enlightened statesman," was to consider the ryot according to the true oriental principle as the real proprietor; to dispense altogether with the zemindar or intermediate collector, and to levy the Government duties, fixed for ever in amount, directly from the cultivator or landholder, whatever was the size of his possession. It is evident that this system is calculated to be much more beneficial than the zemindar one to the cultivators of the soil; because they are thereby brought directly into contact with Government, and participate at once, without the intervention of any middleman, in the benefit of a fixed quitrent only being exacted from the land. It has, accordingly, found many and able supporters, and in some districts has been found in practice to be attended with the most admirable effects (2). But when so powerful a party as Government is brought into immediate contact with the cultivators, in a matter of such vital importance as the rent of land, it is indispensable to the success of the system that its demands should be moderate, and enforced with justice and consideration; and, unfortunately, this can hardly be generally expected under an empire of such immense extent as that of Hindostan, in which the supreme authority is situated at such a distance from the theatre of its fiscal operations. The land tax is usually taken at twelve shillings in the pound of the net produce of the soil—an enormous exaction, rendered still more burdensome by the rigour with which it is collected. The project of bringing the cultivator at once into contact with Government, so equitable in theory, has often proved most fallacious in practice: for such is the subdivision of farms in most parts of India, that the immediate collection of the land-revenue by the Government collector is out of the question. He is obliged to delegate his duties to a host of subordinate agents, over whose operations or oppression he is little able to keep any effectual control: the treasury officers too often come

(1) *Hobbes*, vol. 272, 273. *Mart. Pol.* 117, 119. *Parl. Rep.* 1831. *Comm.* 2113, of May 1832, p. 71.

(2) See in particular most interesting accounts of a settlement on these principles in *Mason's*

India, 329, 330. It is also much more beneficial to Government; as is proved by the fact that, in 1827, the land-tax per head, was,—

	Per head.	Per square mile.	Population per square mile.
In Bengal,	22 pence.	73 pence	214
In Madras,	22 —	17 —	77
In Bombay,	20 —	19 —	76

to esteem a subordinate functionary in proportion to the regularity and amount of his remittances, rather than any other quality: the expenses of collection rise enormously with the multiplication of inferior agents, and the ryot has often little reason to congratulate himself on the exchange of a British collector for a native zemindar (1).

The Village System A third system of land-rents is the *Village* system. This prevails chiefly in the upper districts of India, and is the prevalent institution over the greater part of the East, to which, probably, more than any other cause, the preservation of its population and industry amidst the endless devastations of wars is to be ascribed. Each village forms a little community or republic in itself, possessing a certain district of surrounding territory, and paying a certain fixed rent for the whole to Government. As long as this is regularly paid, the public authorities have no title to interfere in the internal concerns of the community: they elect their own *mocuddims*, or head men, who levy the proportions of the quitrent from each individual, settle disputes, and allocate to each profession or individual the share of the general produce of the public territory which is to belong to it. As the community is justly desirous of avoiding any pretext for the interference of the state collectors in its internal concerns, they make good the quota of every defaulter from the funds of his neighbours, so as to exhibit no defalcations in the general return to Government. The only point in which the interference of the national authorities is required, is in fixing the limits of the village territories in a question with each other, which is done with great care by surveyors, in presence of the competing parties and their witnesses, and a great concourse of the neighbouring inhabitants. In times of trouble they arm and fortify themselves, drive their cattle within their walls, and often contrive, by the payment of a certain contribution, to avoid the evils of actual pillage, even by the most considerable armies. These villages are, indeed, frequently burned or destroyed by hostile forces, the little community dispersed, and its lands restored to a state of nature, but when better times return, and the means of peaceable occupation are again restored, the remnant re-assemble with their children in their paternal inheritance. A generation may pass away, but the succeeding generation return: the sons take the place of their fathers; the same trades and occupations are filled by the descendants of the same individuals, the same division of lands takes place, the very houses are rebuilt on the site of those which had been destroyed, and, emerging from the storm, the community revives, “another and the same (2)”

Admirable effect of the village system in all ages It is in these village municipalities that the real secret of the durability of society in the East is to be found. If we contemplate the desolating invasions to which, from the earliest times, the Asiatic monarchies have been exposed from their proximity to the regions of central Asia, if we reflect on the wide-spread devastation consequent on the twelve dreadful irruptions of the Tartars into Hindostan, and recollect that society, in the intervals of these terrific scourges, has invariably been subjected to the varied but never-ending oppression of different rulers, who seemed to have no other idea of government but to extract as large contributions as possible from the people, — it seems surprising how the human race did not become extinct under such a succession of calamities. But amidst those multiplied evils, the village system has provided an unheeded, but enduring and effectual refuge for mankind. Invasion may succeed invasion, horde after

(1) Sinclair, 33, 36 Parl. Pap. Com. 3156, 4577, 4579 Mart. ix 122, 123

found in some remote quarters of the lost tribes of the children of Israel (1). At first sight it would be natural to conclude, that this extraordinary amalgamation of different religions in one community would produce an insurmountable difficulty in conducting the government, and that the strength of an united empire could never be obtained with such various and discordant materials. The reverse, however, is so much the case, that it is owing to this, more, perhaps, than any other cause, that the subjection of so great a body of natives to the government of a handful of Europeans is to be ascribed. The Indian population is divided into so great a number of different faiths, that no one is predominant or can claim an undisputed pre-eminence over the others, and political power has so long been discovered from religious belief, that it no longer constitutes a bond of union by which any formidable coalition can be held together. Not only are there to be found Hindoos of every province, and tribe, and dialect, in the ranks of the British native army, but the worshippers of Shiva, the adorers of Vishnu, a multitude of Mahomedans, both of the Soonee and Shiah sects, Protestant and Catholic half-castes, and even Jews and Ghebirs. By this intermixture, unparalleled in history, the chances of any considerable combination, either for the purposes of military revolt or political hostility, have been considerably reduced. Although all classes live together on terms of mutual forbearance, and this amazing diversity of religious sentiment in no way interrupts the chain of military subordination, no sooner are their professional duties at an end than the distinctions of religion and caste return with undiminished influence. When the regimental parade is dismissed, the soldiers break into separate knots, the gradation of caste is restored, the distinctions of faith return: the Sudra sergeant makes his *salaam* to the Brahmin or the Rajpoot private; the Mussulman avoids the Christian, the Shiah the Soonee, the Hindoo all; and an almost impassable barrier of mutual distrust and jealousy obstructs all amalgamation of opinion, or unity of action, even upon those national objects which separately interest the whole body. Thus the heterogeneous and discordant mass is kept in a state of complete subordination by the only power among them which possesses the inestimable advantage of unity of action; and the British Government, strong in its established probity, and the good faith with which it observes its engagements both towards its subjects and its enemies, is enabled to maintain an undisputed dominion over its innumerable and multifarious subjects (2).

Yast variety
of nations
dweller in
India.

It is a common opinion in Great Britain,—where the real nature of our Eastern dominions is unknown to an extent which, *a priori* would appear incredible,—that the whole of India is inhabited by a race of meek and inoffensive Hindoos, who willingly bow the neck to every invader who chooses to oppress them, and are incapable, alike from their character, climate, and ignorance, of opposing any effectual resistance to an European invader. The slightest acquaintance, not merely with Indian but Asiatic history must be sufficient to demonstrate the unfounded nature of this opinion. In no part of the world, perhaps, has foreign conquest implanted its traces in more indelible features on the original population. In none is variety of present character and qualities so conspicuous. So far from the inhabitants of India being all of one description, alike timid and inoffensive, there is within its limits to be found a greater intermixture of races than in any part of the world, and as large a proportion of hardy valour and desperate

(1) Mart. ix. 207, 233. Sinclair 10, 48 49.

(2) Kieckhef 48 49. Madras, Central India, I. 42, 47.

s in any people recorded in history. Bishop Heber justly observes, there is as great a disparity between the inhabitants of Guzerat, Bengal, &c., and the Deccan, as between any four nations of Europe; and that the inhabitants of the presidencies of Madras and Bombay, and of the Deccan, differ from each other as the French and Portuguese from the Germans, or Poles. Independent of the varieties of the proper Indian race, which are innumerable, there are to be found in the peninsula of Hindostan at least *thirty* distinct nations, speaking different languages, and entirely unknown to each other. The Mahrattas are as much strangers to the people of Bengal as to the Europeans; the inhabitants of the Carnatic are igno- rant to both; the Seiks have no resemblance to the Mahrattas; and the fifteen millions of Mahomedans have no common bond but their religion, and exhibit the descendants of adventurers, from all the nations of Asia crowded to the standards of the Prophet. If we penetrate into more remote possessions, the varieties of human character are still more remarkable. The inhabitants of the swamps of Arracan, or the meadows of the Irrawaddy, are as distinct from the Highlanders of Nepal as the ricegrowers of the plains are from the horsemen of Mysore, or the Pindarries of Malwa. It was on the plains of Bengal alone, that the British force met with the genuine race, and there victory was of comparatively easy acquisition: but, as the British, by aggression, or the necessities of their situation, forced them into constant warfare, they were brought in collision with nations as brave, as enterprising, as formidable, as any that are arranged under the banner of Mahomedanism. The desperate defence of Barossa, the obstinate resistance of the enthusiastic gallantry of Tyrol, have all their parallel in the Indian warfare; and the heroism with which regular soldiers from the East have resisted and overthrown the most veteran soldiers of Europe, is a parallel to that with which the British soldiers, in the East, have overthrown the most veteran soldiers of Europe. The British soldiers, in the East, have overthrown the most veteran soldiers of Europe, and the British soldiers, in the East, have overthrown the most veteran soldiers of Europe.

revengeful temper, a disposition uncultivated and impatient of discipline habits prone to violence, and nursed to crime by ages of uncontrolled licentiousness. It is in these nations, among the proud Rajpoots, the roving Mahrattas, the daring Afghans, that the restraints of regular government are with most difficulty introduced, and its blessings most sensibly felt by the inhabitants but it is amongst them also that the military spirit is most prevalent, and the British Government has found its most faithful and intrepid native defenders (1)

Origin and composition of the Sepoy Force Among all the prodigies attending the British dominions in India, none, perhaps, is so extraordinary as the rise, progress, and fidelity of the Sepoy Force. It was in Bombay that these invaluable auxiliaries were originally organized, and the first mention of them in history is when a corps of 100 natives from Bombay, and 400 from Tellicherry, assisted the army at Madras in 1747. From these humble beginnings has arisen the present magnificent native army of India, which at one period amounted to nearly three hundred thousand men, and even now, on a reduced peace establishment, numbers a hundred and ninety-five thousand. Their ranks have from the first been filled indiscriminately with recruits of all nations and religious persuasions; and Mahomedans, Hindoos, Parsees, Jews, and Christians are to be found blended among them, without the distinction of race having ever interfered with the unity of action, or the difference of religion ever shaken fidelity to duty. The whole have throughout been raised entirely by voluntary enrolment, without a conscription or forced levy having ever been found necessary and, greater the present army is, it could be quadrupled in a few months, if the circumstances of the Indian Government required such an augmentation of force. The facility with which vast armies can be raised in the East, when compared to the violent measures by which it has been found necessary in Europe to accomplish the same object, appears at first slight surprising, but it ceases to be so, when the effects of the distinction of castes, and the relative situation of the sepoy soldiers and the other classes of the community, are considered. The military form a distinct caste in all the Hindoo communities and from father to son, deeds of arms are handed down, as the only object of honourable ambition, the true incitement to glorious exploit. The Rajpoot of Bengal is born a soldier. The mother recounts acts of heroism to her infant; from earliest youth he is habituated to the use and exercise of arms. Even when still a child, the future warrior is accustomed to handle the sword and dagger, and to look without fear on the implements of death. If his father tills the ground, the sword and shield are placed near the furrow, and moved as his labour advances. The frame of the youth is constantly strengthened by martial exercises he is habitually temperate in his diet of a generous though warm disposition; and, if well treated, zealous, faithful, and obedient. It was from this military caste that the chief Indian armies were first formed, and they still form the strength of the native infantry. In process of time, however, as our empire has extended into more distant regions, the military qualities of its varied inhabitants have been called into action and the desultory activity of the Mahratta horse, not less than the firm intrepidity of the Mysore cavalry, or the chivalrous valour of the Afghan gunners, have contributed to the formation of our mighty dominions (2)

Unlike the soldier of Europe, the sepoy is an object of envy to his less for

(1) *Malis Eves* III. 244 277 *Mart. Lx.* 278. 279

Elevated rank and situation of the sepoy troops fortunate compatriots His profession gives him the precedence, not less in general estimation than in that of his caste, to persons engaged in civil occupations, and his pay is so considerable as to raise him, both in station and enjoyments, far above his brethren who are left behind him in his native village Each private sepoy is attended by two servants in the field there are, at an average, nine followers to every two fighting men a system which gives to a hundred thousand men, in a campaign, nearly five hundred thousand attendants and goes far to explain both the prodigious hosts recorded in history, as commanded by Xerxes and Darius, and the facility with which they were routed by a comparatively small body of Greeks, all real soldiers Such a mode of carrying on war augments to a great degree the difficulty of providing subsistence for so prodigious a multitude as attend every considerable army (1), but it renders it comparatively an easy matter to raise a military force When the pay given to a private soldier is so considerable as to admit of his keeping two servants in the camp, and a still greater number in the field, no want of recruits will ever be experienced: the real difficulty is to find resources adequate to the support of a large army at that elevated standard. When Cromwell gave half-a-crown a-day to every dragoon, he readily got recruits for the Parliamentarian armies (2).

General character of the Indian army

The Indian infantry can hardly be said to be equal, even when led by British officers, to that of England, and, when left to the direction of their own leaders, evince the general inferiority of the Asiatic race to the European; but it is only in the last extremity or most trying situations that this difference is conspicuous, and for the ordinary duties of a campaign, no troops in the world are superior to the sepoys In many of the most essential duties of a soldier,—sobriety during duty, patience under privation, docility in learning, hardihood in undergoing fatigue, steady enduring valour, and fidelity to their colours under every temptation to swerve from them, the Indian auxiliaries might serve as a model to every service in Europe Nay, examples are numerous, in which, emulous of the deeds of their British comrades, they have performed deeds of daring worthy of being placed beside the most exalted of European glory; and instances are not wanting where they have unhesitatingly faced dangers, before which even English troops had recoiled (3). The native cavalry is of more recent in-

(1) When General Harris advanced against Serin-gapatam in 1799, his army was composed of 35,000 fighting men and 120,000 attendants, and when Marquis Hastings took the field in 1817, against the Mahrattas, his regular forces, amounting to 110,000 men, were swelled by above 500,000 camp followers, among whom, chiefly of the lower grades in society, and persons habituated to the humblest fare, the cholera made the most unheard of ravages.

—MALTE BRUN, III 328

(2) Malte Bran, III 328 Martin, IX 79, 80

(3) At the first siege of Bhartpore, in 1805, the 12th regiment of native Bengal infantry was associated with the 75th and 76th British infantry, whose deeds of valour they had emulated at the battle of Laswarree The British were first led to the assault and gallantly mounted the breach, but they were driven back with dreadful slaughter, and such was the panic inspired by the disaster, that, when they were ordered a second time to advance, the soldiers refused to follow their officers and leave the trenches The 2d battalion of the 12th native regiment was then ordered to advance, they did so with resolute steps, though well aware of the desperate nature of the service on which they were

sent, and cheered as they passed the English troops, who lay sheltered in the trenches Such was the heroic valour of their onset that they overcame all opposition, and planted their colours, in sight of the whole army, on the summit of the breach This work, unfortunately, was cut off by a deep ditch from the body of the fortress, and, finding it impossible to pass that barrier, Lord Lake was reluctantly obliged to order a retreat It was with great difficulty, however, that the brave sepoys could be prevailed on to retire from the perilous post of honour which they had won, and not till they had sustained a loss of 360 men, being half their total number when they went into action The British regiment, stung with shame, now implored to be allowed to return to the assault, which was granted, but, notwithstanding their desperate valour, it was still unsuccessful —See MARTIN, VIII, 30—31, and IX 69—70 The author has frequently heard an anecdote from his late lamented brother-in-law Colonel Gerard, Adjutant General of the Be army, who was present on the an off to whose talents, zeal, and under Lord Lake's campaign are, due to be ascribed

production than the infantry, but it is not less admirable in many of the most valuable qualities—the men are fearless riders, indefatigable in the service of light troops, sober and vigilant; they take exemplary care of their horses, many of which are of the best Persian and Arabian breeds, and in the sword exercise or single combat are superior to almost any of the cavaliers of Europe. Nor is the artillery inferior to any in the world, either in the perfection of the material, the condition of the horses, or the coolness, precision, or bravery of the gunners. The immense host is entirely under the direction of British officers, nearly five thousand of whom are employed in this important service; but the non-commissioned officers and subalterns always were natives, and the avenue to more elevated promotion is now opened to the most deserving of their number (1). In the shock of a regular charge alone, the native horse is still inferior to the British, a peculiarity which has distinguished the cavalry of the eastern and western worlds in every age, from the days of Marathon to those of the Crusades (2).

Tackling
marooned
of the
of sepoy
troops. Volumes might be filled with the anecdotes which have occurred within the last eighty years, illustrative of the steady courage and incorruptible fidelity of the sepoy troops. They first rose to eminence in the wars of Lord Clive, Lawrence, Smith, and Coote, in the middle of the last century, and the number of Europeans who were then engaged in Indian warfare was so inconsiderable, that almost the whole glory of their marvellous victories is in reality due to the sepoys. The hardships which were undergone at this period, by all the soldiers, both native and European, from the defective state, or rather total want of a commissariat, were excessive; but, although the British power was then only in its infancy, and little promised future stability to its empire, nothing could shake the fidelity of the sepoy troops. On one occasion, when the provisions of a garrison were very low, and a surrender, in consequence, appeared unavoidable, the Hindoo soldiers entreated their commander to allow them to boil their rice, the only food left for the whole garrison. "Your English soldiers," said they, "can eat from our hands, though we cannot from theirs; we will allow them as their share every grain of the rice, and subsist ourselves by drinking the water in which it has been boiled." In the year 1780, 1781, and 1782, they suffered hardships almost unparalleled—there was hardly a corps that was not twenty months in arrears, and their families, under the pressure of a dreadful famine, were expiring on all sides; nevertheless their fidelity never gave way under this extreme trial, and they repaid with gratitude and attachment, the consideration, to them unwonted, with which they were treated by their European officers. The campaigns of Sir Eyre Coote and Lord Clive, in which they bore so prominent a part, still form an object of well-founded pride to the sepoys of Madras—and when a regiment comes into garrison, they lead their children into the great room of the exchange of that capital, to point out the portraits of the chiefs who first led their fathers to victory (3).

Their fidelity to the English under every trial. Towards the close of the war with Tippoo, in 1782, General Matthews, with his whole troops, almost entirely native, were made prisoners. The Sultan, sensible of the advantages he might derive from the services of so large a body of disciplined men in his ranks, made

(1) The British officers in the Indian army amounted to 4187; the Indian to 3116; but the latter count rise to a higher rank than that of ensign or cornet. The total British troops in India amount to 20,315 soldiers and bayonets, of whom 19,340 are composed of the Queen's regiments, the remainder being English in the service of the East

India Company; but the expense of the whole is defrayed by the Indian Government.—M. *etc.* ix. 72, 73—81.

(2) Martin, *fr.* 83. Williams Indian army 32. 63. *Quart. Rev.* vol. 411 413.

(3) Sir J. Malcolm, in *Quarterly Rev.* vol. 345. 326.

every effort to induce the English sepoys to enter his army, but in vain. He then tried severity, and subjected them for long to the most rigorous confinement, and unhealthy employments, but nothing could shake their fidelity; and at the peace of 1783, fifteen hundred of these brave men marched a distance of five hundred miles to Madras, to embark and rejoin the army to which they belonged, at Bombay. During the march, the utmost pains were taken by Tippoo's guards to keep the Hindoo privates separate from their European officers, in the hope that their fidelity might yet sink under the hardships to which they were exposed, but in vain, and not only did they all remain true to their colours, but swam the tanks and rivers by which they were separated from the officers during the night, bringing them all they could save from their little pittance; "for we," they said, "can live on any thing, but you require beef and mutton." A battalion of the Bombay 12th regiment mutinied in 1763, on account of some promises made to the soldiers, having, as they said, been broken. A severe example was thought necessary, and twenty-eight of the most guilty were sentenced to be blown from the mouth of a cannon. As they were on the point of being executed, three grenadiers who happened to be among them, stepped forward and claimed the honour of being blown away from the right guns. "they had always fought on the right," they said, "and they hoped they should be allowed to die at that post of honour (1)." In the advance of Lord Lake's army to Delhi and Agra in 1803, the hardships and privations which the troops of all sorts endured were such, as almost to break down the spirit of the British officers; but the Hindoo privates never showed the least symptoms of faintness or despondence, saying, "Keep up your spirits, sir, we will bring you in safely to Agra." When in square, and sustaining charges of the enemies' horse, it more than once happened, when a musket was fired by a young soldier, that a veteran struck him with the butt-end of his firelock, exclaiming "Are you mad, to destroy our discipline, and make us like the rabble that are attacking us?" Nor was the same steady courage and devoted fidelity wanting, on still more trying occasions, when the national or religious prejudices of the native soldier were brought still more violently in collision with their military duties. At the mutiny of Vellore, which shook the Indian empire to its foundation, and was brought on by an absurd interference with the religious feelings of the troops, the sabres of the native dragoons were dyed as deep as those of the British in the blood of their unhappy countrymen; and on occasion of a recent tumult at Bareilly, the capital of Rohilcund, occasioned by the introduction of a necessary but unpopular police tax, which commanded the sympathy of the whole neighbouring population, a battalion of the 27th native infantry, with four hundred Rohilla horse recently embodied, were all that could be brought against the insurgents, who were above twelve thousand strong. They continued to resist till two thousand were slain; and, although many of them were their relations and neighbours, and their priest advanced and invoked them to join their natural friends, only one man was found wanting to his duty, and he was immediately put to death by his comrades, who throughout maintained the most unshaken fidelity and courage (2).

(1) "I am sure," says Captain Williams, who was an eye witness of this remarkable scene, "there was not a dry eye among the marines who executed the sentence, though they had long been accustomed to hard service, and two of them had actually been in the execution party which shot Admiral Byng in

1757. The corps to which they belonged, subsequently distinguished itself greatly both at Las warree and the first siege of Bhurtpore."—*Williams's Indian Army*, 247, and *Ante*, vii.

(2) Martin, ix. 66, 72. Williams's *Indian A* 272, 304. Malcolm, in Quart. 9,

Which is owing to the fidelity of the English government to its engagements. The secret of this extraordinary fidelity of the native troops, under every temptation, to a foreign power, professing a different religion, and known only by its successive overthrow of all the native potentates, is to be found in the wise and magnanimous policy with which the East India Company, through every vicissitude of fortune, have made good their engagements, and the inviolable fidelity with which they have rewarded the services of the troops engaged in their ranks. From the earliest times the Indian princes have known no other way of paying their troops than by quartering them on some of the hereditary or conquered provinces of their dominions where, though military license was allowed every latitude in the exaction of their pay or provisions, the soldiers experienced great difficulty, and were subject to a most vexatious uncertainty in the recovery of their dues. When, therefore, instead of this harassing and oppressive system, the Indian sepoys found that they received their daily pay as regularly as an English soldier; that their wants were all provided for by a vigilant and honest Government; that no subaltern fraud or chicanery was permitted to intercept the just rewards of their valour, and that, after a certain number of years service, they were permitted to retire on ample allowances, or a grant of land which formed a little patrimony to themselves and their descendants (1) they were struck with astonishment, and conceived the most unbounded confidence in a power which had thus for the first time set them the example of an upright and beneficent administration. Power in India is, even more than elsewhere in the world, founded on opinion and the belief which gradually spread universally that the East India Company would, with perfect regularity and good faith, discharge all its engagements, formed a magnet of attraction which in the end drew almost all the strength and military virtue of the peninsula to its standards. When minutely examined, it will be found that it was neither the military discipline, nor the scientific acquisitions, nor the political talents of the British which gave them the empire of India, for all these were matched in the ranks of their enemies, recruited and directed as they were by French officers; but their honesty and good faith, which filled them with confidence in each other, and inspired the same reliance in the native powers; qualities which, though often overreached in the outset by cunning and perfidy, generally prove more than a match for them in the end, and are destined ultimately to give to the Anglo-Saxon race the dominion of the globe (2).

Contrast of the Company's rule to the devastating Mahomedan sway which preceded it. The order and regularity which prevail both in the maintenance of the Indian army, and the administration of its provinces, have produced the greater impression on the natives of the East, from the contrasts which they afford to the hideous scenes of devastation and massacre, with which, from the earliest times, conquest had been invariably attended in the plains of Hindostan. Throughout the whole

(1) "I have beheld," says Sir John Malcolm, "with more pathetic pride than has ever been excited in my mind by any other act of British policy in India, tracts of country more than hundred miles in length, past the banks of the Ganges, which had few years before been complete jungle, headlong for prey to tigers and robbers,—covered with cultivated field and villages, the latter of which were filled with old soldiers and their families, in measure which showed their deep gratitude and attachment for the comfort and happiness they enjoyed. When we consider the immeasurable quantity of waste land in the domi-

niions of the Company it appears extraordinary that this plan has not been adopted in every part of British India, upon more liberal and enlarged scale. The native soldiers of Bengal are almost all cultivators, and a reward of this nature was peculiarly calculated to attract them. The accomplishment of this object would add in an incalculable degree to the tax which we have upon the fidelity of those by whom our dominions in India are likely to be preserved or lost."—*W. Crofton, British India*, 1st Ed. 325—328.

(2) Malcolm F. Moore before Parliament, quoted in *Marble*, ix. 35, 72, 71 89. *Stead* 47 49.

period of the Mahommedan ascendancy in the south of India, the same enormities, the never-failing accompaniments of their presence and power, have occurred as in the northern provinces. The annals of this period give a succession of examples of the same unprovoked and devastating warfare; the same struggles for power among the nobles, the same unbridled lust of conquest in the government; the same perfidy, treason, and assassination in the transactions of courts, the same massacres, oppression, and suffering inflicted on the people. It was no unusual thing for sixty, eighty, or a hundred thousand persons of all ages and sexes to be put to death in a single day, great cities and even capitals were at once destroyed and delivered over tenantless to the alligator and the tiger, the treasuries of the native princes were invariably filled with the plunder of their defenceless subjects. The system of Mahommedan exaction, at first under the name of contribution, permanently under that of revenue, being every where the same, with the power of rapacious armies to enforce it, the fate of the unhappy people was stamped with permanent wretchedness. Dreadful as were the devastations of war and conquest, they were as nothing compared to the lasting evils of military exaction and cupidity. There was no security whatever either for persons or property, the latter was always considered as the fair object of seizure wherever it was known to exist, and the mass of the people were subject to a state of poverty from which there was no escape—of violence and oppression, against which there was no redress. Wars between the native or Mahommedan princes were perpetual, and their devastation extended not merely to the troops or armed men engaged, but to the whole population weeping mothers, smiling infants at their breasts, were alike doomed to destruction, the march of troops might be tracked by hillocks of bodies and pyramids of human heads, burning villages, and desolated capitals. Under the Mahratta chiefs, who rose upon the decline of the Tartar dynasty, the same boundless rapacity continued, aggravated by the establishment of above twenty petty chiefs, each of whom exercised the right of making war on his own account. the work of devastation was perpetual—massacres, conquests, conflagrations, make up the history of India for the last eight hundred years. So universal had this oppression been, and so deeply rooted had its effects become in the habits of the people, that the display of property was universally avoided as the certain forerunner of additional exaction, property was invariably either buried or vested in diamonds, which admitted of easy concealment, of the vast and fertile plains of India not more than a fourth part was cultivated (1); the population was hardly a fifth of what, under a more beneficent government, it might become, while the long-continued drain of the precious metals to the East, so well known to politicians of every age, indicated as clearly the precarious tenure of wealth which rendered concealment of property indispensable, as the recent and unparalleled occurrence of the *importation*

(1) Hindostan, from the Himalaya mountains to Cape Comorin, contains 514,000 square miles: including the protected states, 1,128,000. The population of the former is 102,000,000, being at the rate of about 200 to the square mile. This, under the tropical sun, and with the rich alluvial soil of a large part of India, capable in general of bearing two crops in the year, must be considered a very scanty population. France contains 32,000,000 of inhabitants, and 156,000 square miles, or 214 to the square mile: England, 13,500,000, and 38,500 square miles, or 330 to the square mile. Flanders, 3,762,000, and 7400 square miles, 507 to the square mile. Even in Bengal, the garden of Hindostan, out of 202,650 square miles, only 89,250 are actually

under cultivation. The produce of the soil there varies from forty to a hundred fold, on an average about sixty fold, or, at least, four times that of the richest portion of Europe, which would of course maintain four times the number of persons on a square mile that can find subsistence in these northern climates.—MOREAU, *Stat de la Grande Bretagne*, ii 107—112, and *MALTE BRUN*, vi 84, and *Stat Journal*, i 195. In the Madras presidency, the population is only 107 to the square mile in the Bombay, 114 in Singapore and Malacca, 92 in Ceylon, 50 over the whole of India 144, which are hardly as much as a fourth of these respective numbers under the climate and soil of Europe.—MOREAU, ii 113

of gold and silver from India, demonstrates the arrival of the era for the first time in Eastern history, when the necessity for hoarding has ceased (1), and, under British protection, the natural desire for enjoyment can find an unrestrained vent among the natives of Hindostan

Wonderful
nature of
the conquest,
won by so
small
force.

To complete the almost fabulous wonders of this oriental dominion, it only requires to be added, that it has been achieved by a mercantile company in an island of the Atlantic, possessing no territorial force at home who merely took into their temporary pay, while in India such parts of the English troops as could be spared from the contests of European ambition who never had at any period, thirty thousand British soldiers in their service, while their civil and military servants did not amount to six thousand the number of persons under their auspices who proceed yearly to India, is never six hundred, and the total number of white inhabitants who reside among the two hundred millions of the sable population, is hardly eighty thousand! So enormous, indeed, is the disproportion between the British rulers and their native subjects, that it is literally true what the Hindoos say, *that if every one of the followers of Bramah were to throw a handful of earth on the Europeans, they would be buried alive in the midst of their conquests* (2)

Desperate
wars during
which this
empire has
suffered in the
East.

It augments our astonishment at the wisdom and beneficence of the Indian Government, that these marvellous conquests have been gained, and these lasting benefits conferred upon their subjects, during a period checkered by the most desperate wars; when the very existence of the English authority was frequently at stake, and the whole energies of Government were necessarily directed, in the first instance to the preservation of their own national independence. During the growth of this astonishing prosperity in the Indian provinces, the peninsula has been the seat of almost unceasing warfare. It has witnessed the dreadful invasion of Hyder Ali the two terrible wars with Tippoo Sultan; the alternations of fortune, from the horrors of the Black Hole at Calcutta to the storming of Seringapatam the long and bloody Mahratta wars; the Pindaree conflicts the Goorkha campaigns the capture of Bhurtpore, and the murderous warfare in the Burmese empire. During the seventy years of its recent and unexampled rise, twelve long and bloody wars have been maintained; the military strength of eighty millions of men, headed and directed by French officers, has been broken and greatness insensibly forced upon the East India Company, in the perpetual struggle to maintain its existence. The Indian Government has been but for a short time in the possession of its vast empire twenty years only have elapsed since the Mahratta confederacy was finally broken; its efforts for a long period have been directed rather to the acquisition or defence of its territories than their improvement; and yet, during this anxious and agitated period, the progress of the sable multitude who are embraced in its rule, has been unexampled in wealth, tranquillity, and public felicity

Wars in
which the
empire was
involved
during the
growth of
the Indian
power.

It was a maxim with the Romans, from which they never deviated, not to undertake two great wars at the same period; but rather to submit even to insults and losses for a time, than bring a second formidable enemy on their hands. Strongly as this principle is recommended both by its intrinsic wisdom and the example of that renowned people, it is not always capable of being carried into

(1) Richard's India, l. 223, 234. Orme's, l. c. 4.
Martin, l. 23, 24. Make-Don, III. 310 311

(2) Blackie 27 Martin, l. 23, 24.

execution, and the British were frequently compelled in Hindostan, by the pressure of native confederacies, to sustain the most formidable foreign conflicts, at a time when the resources of the monarchy were all required to sustain the fortunes of the state in the contest of European ambition. At the same time that the East India Company, with their brave and faithful sepoy, were successfully combating the immense and disciplined hordes of Hyder Ali and Tippoo Sultaun, the vast American colonies of England, directly ruled by Parliament, were severed from the empire without any considerable external aid, by the mere force of internal discontent, the dissatisfaction of Canada has more than once led to alarming collisions between the central Government and the native French population, and the West India islands have been restrained only by the inherent weakness of a slave colony from breaking off all connexion with the parent state. The first rise of our Indian empire was contemporaneous with the energetic administration of Chatham, and the glories of the Seven Years' War: the moral courage and decided conduct of Hastings saved it from destruction, at the very time when the weakness and corruptions of Lord North's Administration occasioned the loss of the North American colonies: the contest with the Mysore Princes occurred at the same time as that with Revolutionary France, and "Citizen Tippoo" was not the least esteemed ally both of the Directory and the Consular Government: while the able and vigorous administration of Marquis Wellesley took place when Napoléon was commencing his immortal career in Europe; and Great Britain stretched forth her mighty arms into the Eastern hemisphere, and struck down the formidable confederacy of the Mahratta princes, at the very moment when she was engaged in a desperate contest for her existence with the conqueror of continental Europe.

What were the causes of these extraordinary successes? It is an interesting object of enquiry,—what was the form of government and system of foreign administration under which those astonishing triumphs were achieved by England in the Eastern hemisphere? Were these triumphs, as the Continental writers and the enemies of the East India Company assert, the result of a continual system of aggression on their part, like the wars of the Romans in ancient, or the conquests of Napoléon or of Russia in modern times? or were they, as their supporters maintain, forced upon them, much against their will, by native combinations and intrigues, which constantly gave them no other alternative but conquest or ruin?

Conquest was forced upon the British by necessity, not adopted from inclination It is observed by a French annalist, and quoted with approbation by the greatest of modern historians, that "in a light of precaution all conquest must be ineffectual, unless it could be universal, since the increasing circle must be involved in a larger sphere of hostility (1)." There can be no doubt that this remark is well founded, and that it sufficiently explains the experienced impossibility which the British, like all other conquering nations, have felt, of stopping short in their career when once commenced, before they had reached the limits assigned by nature to their further progress. From the time when they first became territorial sovereigns in the East, and a handful of Europeans ventured to rear the standard of independence among the sable multitudes of Asia, they had no alternative but to go on conquering, in a continually increasing circle, till they came to the snows of the Himalaya and the waves of the Indus. But, while the British were, unquestionably, equally with the Romans or Napoléon, exposed to this necessity, yet there was a wide differ-

ence in their relative situations, and the consequent readiness with which they may be supposed to have embraced the career of conquest, thus in a manner forced upon them. Rome had an inexhaustible stock of vigour and capacity in the numerous bands of experienced soldiers whom she nourished in her bosom; and from the moment that they left the frontiers of the republic, they subsisted at the expense of the allied or conquered states. France vomited forth a host of ardent, starving insolvents, to regenerate by plundering all mankind; and, borrowing from her predecessors in ancient times the maxim that war should be made to maintain war, experienced not less relief to her finances than security to her institutions, by providing either by death or victory for such a multitude of turbulent defenders. But England had a very different task to execute when she became involved in the task of subjugating Hindostan. The centre of her strength was situated eight thousand miles from the banks of the Ganges; a few thousand soldiers were all she could spare for Eastern, from the pressure of European or the dangers of American warfare, the power which was involved in Indian hostilities was a mere company of merchants, who looked only to a profitable return for their capital, or a rise in the value of their stock, and dreaded nothing so much as the cost of unproductive warfare. For thirty years after they were involved in hostilities, so far from effecting any conquests, they were barely able to defend their own mercantile establishments from destruction; and every foot soldier they transported from Europe to Hindostan cost thirty every horseman eighty, pounds sterling. In these circumstances, it requires no argument to demonstrate that foreign aggression could not, in the first instance at least, have been voluntarily entered upon by the East India Company; and in fact the slightest acquaintance with their annals is sufficient to show, that they stood in every instance really, if not formally, on the defensive; and that it was in the overthrow of the coalitions formed for their destruction, or the necessary defence of the allies whom previous victory had brought to their side, that the real cause of all their Indian acquisitions is to be found.

When the English, in the middle of the eighteenth century, quitted their commercial establishments at Calcutta and Madras to engage in a perilous contest with the native powers of India, the chief potentates with whom they were brought in contact, either as allies or as enemies, were the following. — In the northern parts of the Peninsula on the banks of the Jumna and the Ganges, which is properly called Hindostan, the once dreaded empire of Timour had sunk into the dust; and the Mogul emperors, on their throne at Delhi, could with difficulty retain even a nominal sway over the powerful rajahs in their vast dominions. The most considerable of these was the Rajah of Bengal and Berar, whose dominions extended over the vast and fertile plains watered by the Ganges, and who boasted of thirty millions of inhabitants who acknowledged his authority. The next formidable potentate on the eastern coast, between Calcutta and Madras, was the Nizam, whose dominions embraced eleven millions of souls; and whose seat of government was Hyderabad. Dread of the Mahrattas, who lay contiguous to this state on the west, and the Sultan of Mysore, who adjoined it on the south, rendered the court of Hyderabad the firm and faithful ally of the East India Company. In the southern part of the Peninsula, the dominions of the Rajah of Mysore extended over a vast extent on the high table-land of Mysore, three or four thousand feet above the sea, and from his strong fortress of Seringapatam he gave the law to sixteen millions of brave men. This dynasty, however, was supplanted, about the same time that the British dominion was established on the banks of the Ganges, by that

Sketch of
the principal
events
which
were the
British
empire arose.

of Hyder Ali, a soldier of fortune, who usurped his dominions, and added to them various lesser states in its vicinity, and soon communicated to the whole the vigour of enterprise, and the thirst for foreign dominion. With this great power serious and bloody wars were waged, by the English, for above thirty years.

Further to the north, and on the western coast, the Mahratta confederacy governed a territory of vast extent and boundless resources, though their predatory and restless habits which engaged them in constant wars with their neighbours and each other, kept the country in great part desolate, and blighted the fairest gifts of nature. If united, the Mahratta chieftains could bring two hundred thousand horsemen, long the scourge of Northern and Central India, into the field; but their constant quarrels with each other rendered it improbable that this vast force would be concentrated against any external enemy. The most renowned of these chieftains were the Rajah of Berar, Scindiah, and Holkar; each of whom could muster sixty thousand men, almost entirely cavalry. They acknowledged allegiance to the Peishwa, who was the head of their confederation, and from his seat of government at Poonah, professed to execute treaties, and issue orders, binding on the whole confederacy; but his authority was little more than nominal, and each of these powerful chieftains took upon himself, without scruple, to make war and conclude alliances on his own account. A vast number of lesser chieftains occupied the intervening country, from the northern frontier of the Mahratta states to the Indus, which was inhabited by different races, the Seiks and Rajpoots, famed in every period of Indian history for their martial qualities; while, in the great Alpine ridge which separated Hindostan from Tartary, the Goorkha and Nepaul tribes had found shelter, and maintained, amidst forest steepes and narrow vales, the indomitable valour which, in every part of the world, seems to be the peculiar attribute of the mountain race.

Origin and
early history
of the East
India Com-
pany

The first charter of incorporation of the East India Company was granted by Queen Elizabeth on the last day of the sixteenth century; but it was not for a hundred and fifty years that they became

territorial sovereigns. During the long period that intervened from their first origin till the middle of the eighteenth century, they painfully and industriously pursued a pacific career, neither aspiring after foreign conquest, nor accumulating any force to defend even their own factories from aggression. So humble were their fortunes at this period, that, in 1756,

when the ferocious tyrant Surajee Dowlah invested and captured Calcutta, the destined Queen of the East, and now the abode of a mil-

Capture of
Calcutta by

Dowlah

lion of inhabitants, the whole persons made prisoners amounted only to one hundred and forty-six! They were all confined, by his orders, in a dungeon not twenty feet square, with only one window, during an intensely hot night in June. Only twenty-four survived the dreadful suffocation which followed, among whom was Mr. Hollwell, the governor; but the indignation excited throughout England by that inhuman cruelty was unexampled. All classes were animated by a generous desire to avenge the sufferings of their countrymen, and from the horrors of the *Black Hole of Calcutta*, the glories of our Indian Empire may be said to have taken their rise (1).

Calcutta re-
taken

The East India Company, at that period, possessed an inconsiderable settlement at Madras, on the eastern coast of India, protected by a fort, called Fort-George, and to it the distressed merchants at Calcutta

suffering, the foundations laid on an empire destined in half a century to overshadow the throne of Baber and Aurengzebe (1)

While the genius of Clive, supported by the commanding spirit of Chatham and the resolutions of the local government, was thus spreading the British dominion on the banks of the Ganges, the English had to sustain a still more obstinate contest in the southern part of India. Madras, on the coast of Coromandel, was, so early as the year 1633, invested with the dignity of a presidency, though at that period its garrison was limited by an express resolution of the Court of Directors, to *few men*. This insignificant town was the object of fierce contest between the English and French in the middle of the eighteenth century; the war which broke out in Europe in 1744, was as warmly contested in the east as the west; and a strong French military and naval force besieged and took it in 1746, its weak garrison of two hundred soldiers being allowed to retire by capitulation. Clive, then a clerk in a mercantile house at Madras first embraced the profession of arms at this siege, and after the capture of the town, escaped in the disguise of a Moor to Fort St. David, a fortress sixteen miles distant, where the remnant of the British successfully made a stand, and the talents of the young soldier materially contributed to the defeat, which followed, of the French, seventeen hundred strong, by two hundred British soldiers. Madras continued in possession of the French till the peace of Aix-la-Chapelle in 1749 when it was restored to the English dominion. Although however, the direct war between England and France was terminated by this treaty, yet the mutual jealousy of these powers led to the continuance of a smothered and ill-disguised hostility in the East. the rival potentates struggled for the ascendancy in the councils of the Carnatic, a vast district, five hundred miles in length and a hundred in breadth, stretching along the coast of Coromandel, comprising the dominions and dependencies of the Nabob of Arcot. For several years the skill and address of M. Duplex, the French commander, prevailed but at length the daring courage of Colonel Clive, and the diplomatic ability of Major Lawrence, formed a counterpoise to his influence. This, however, was more than counterbalanced in the Deccan, where M. Du Bossy had gained firm possession of an extensive district, six hundred miles in length, and yielding a million sterling of revenue for the French crown (2)

No sooner had hostilities broken out a second time in Europe, between France and England, in 1756, than the cabinet of Versailles made a strenuous effort to root out the British settlements on the coast of Coromandel. The expedition fitted out from Pondicherry, the chief French stronghold, for this purpose, consisted of eight thousand men of whom more than half were Europeans, under Lally; and after capturing Fort St. David, to which the British had retired on the former war, besieged Madras in form, and the garrison, consisting of eighteen hundred European and two thousand sepoy troops, had to sustain a variety of desperate assaults, almost without intermission, for two months. At length the siege was raised, when the brave garrison were nearly reduced to extremities, by the arrival of the English fleet with six hundred fresh troops. Lally retired precipitately, and the British immediately carried the war into the enemies territories. Colonel, afterwards Sir Eyre Coote, invested and took the important fortress of Wandimash in the Carnatic and Lally

jaçant territories. He experienced many reverses, but rose superior to them all, and went on from one acquisition to another, till he had entirely subverted the ancient government, seized the great commercial city of Bednore, with its treasures, estimated at twelve millions sterling, placed himself on the throne of Seringapatam, and established his authority over almost the whole southern parts of the Indian Peninsula (1)

Hyder had established amicable relations with the French in the Carnatic, during the period of their influence in India; but the early destruction of their power after the commencement of his importance, prevented any rupture for a number of years from taking place. At length, however, the growing consequence of the Mysore usurper on the one hand, and preponderating strength of the Company on the other, necessarily led these two great powers into collision; hostilities with Hyder were resolved on, and as a precautionary measure, a treaty offensive and defensive was concluded with the Nizam, a Rajah whose dominions were more immediately exposed to his incursions, by which Lord Clive, engaged to support him, if attacked, with a considerable body of European and sepoy troops. The Directors at home, less impressed than the authorities on the spot with the indispensable necessity of advancing in power, if they would avoid destruction, evinced the utmost repugnance at this treaty, and distinctly foretold, that if offensive wars were once engaged in, the British would be drawn on from one conquest to another, till they could find no security but in the subjection of the whole, and would be involved in destruction by the very magnitude of their acquisitions (2). But ere their pacific instructions could reach their destination, the die was already cast, and the dreadful war with Hyder Ali had commenced (3).

Within a few weeks after its opening, the British were rewarded for their aggression by the defection of their faithless ally the Nizam, who deserted to the Mysore chief with all his forces; and at the same time intelligence was received that he had accommodated all his differences in the north with the Mahrattas, so that the confederacy which the English had projected against Hyder was now turned against themselves.

The united forces of Hyder and the Nizam, forty thousand strong, approached Madras, and ravaged the country up to the very gates of the fortress and, though Colonel Smith, with the British and sepoy troops, defeated them with the loss of sixty pieces of cannon, want of cavalry prevented him from obtaining any decisive success in the face of the innumerable squadrons of the Mysore horse. The hostile incursion was repeated in the following year, when he laid waste the Company's territory in so savage a manner, that, like the countries desolated by Timour or Gengis Khan, nothing remained but bleached skeletons and smoking ruins to attest where the dwellings of man had been. In the midst of these successes, Hyder opened a communication with the French authorities at Pondicherry, to whom he announced the approaching destruction of the English power in the Peninsula; while the East India Directors at home, panic-struck

(1) WMs' Historical Sketches 310, 419, 472. MIL. HIL. 481, 417 Martia, vli 40, 47 Asker L. 112, 113.

(2) "If ever we pass the bounds of defensive warfare, we shall be led from one acquisition to another. (iii) we shall find no security but in the subjection of the whole, which, by dividing your force, would lose you the whole and end in our extirpation from Hindostan." And again, in another despatch, "We utterly disapprove and condemn offensive wars."

The same principles were constantly followed by the Court of Directors, both during the administration of Warren Hastings and Marquis Wellesley; but these great statesmen early perceived that it was in vain for handfuls of foreigners to step short in the career of conquest, and that, like M. pulvis, they were constantly placed in the alternative of universal domination or total ruin.—*Despatches Dispatched 22d April 1768; Asker L. 223—224.*

(3) MIL. HIL. 414, 470 Asker L. 213.

by the magnitude of the disasters already incurred, and the interminable prospect of wars and difficulties which opened before them, renewed in earnest terms the necessity of resuming the now almost hopeless prospect of effecting an accommodation. At length he struck a decisive blow. Sending all his heavy cannon and baggage home from Pondicherry, which during his incursions he had twice visited to confer with the French, he put himself at the head of six thousand of his swiftest horse, drew the English April, 1769 by a series of able movements to a considerable distance from Madras, and then, by a rapid march of a hundred and twenty miles in three days, interposed between them and that capital, and approached to Mount St. Thomé, in its immediate vicinity. The council were filled with consternation: although the fortress could have held out till the arrival of the English army, the open town and villas in its vicinity were exposed to immediate destruction, and they gladly embraced the overtures of accommodation which, like Napoléon, he made in the moment of his greatest success, and concluded peace on the invader's terms. By this treaty it was provided that both parties should make a mutual restitution of their conquests, and that in case of attack they should afford each other mutual aid and assistance (1).

Transac-
tions in the
Carnatic,
down to the
renewal of
the war with
Hyder in
1780 The principal object of Hyder in concluding thus suddenly this important treaty, was to obtain for his usurped throne the countenance of the English power. The same motive which was Napoléon's inducement, immediately after obtaining the consular power, in making proposals of peace to Great Britain. He soon after, accordingly, made a requisition for the junction of a small body of English soldiers to his forces, in order to demonstrate to the native powers the reality of the alliance. The Company's affairs received so serious a shock by this inglorious treaty, that their stock fell at once sixty per cent. Hyder, some years afterwards, became involved in wars with his powerful Northern neighbours, the Mahrattas, in which he was at first reduced to great straits, and he made an earnest requisition for assistance to the Company in terms of the treaty of 1769, but the Madras Council contrived, on one pretence or another, to elude the demand, to the inconveniences of which they were now fully awakened. These repeated refusals excited great jealousy in the breast of the Mysore chief, the more especially as he was well aware that the English had, in the interval since the cessation of hostilities, greatly augmented their army, especially in cavalry, in which it had formerly experienced so lamentable a deficiency, and that they had now thirty thousand well-disciplined men in the Presidency. Accordingly, in June 1780, he descended into the Carnatic, at the head of the most powerful and best appointed army which ever had appeared in India, consisting of twenty thousand regular infantry, and seventy thousand horse, of whom nearly one half were disciplined in the European method. So suddenly, and with such secrecy, were his measures taken, that the dreadful torrent was in motion before the English were so much as aware of its existence, and the Government of Madras were apprised of the approach of the enemy for the first time by vast columns of smoke rising from burning villages in the Carnatic, which, converging from different directions, threatened to wrap the capital in conflagration (2).

Great suc-
cesses of
Hyder in the
Carnatic. The success of Hyder in this tremendous inroad was almost equal to that of Surajee Dowlah, in the attack upon Calcutta twenty-four years before. With a degree of daring and military skill which

(1) Mill iii. 414, 424. Auber, i. 249, 250.

(2) Martin, viii. 47, 48. Auber, i. 540, 579. Mill iv. 145, 153.

rivalled that of Napoleon himself: he interposed with his whole forces between the two English armies: the one commanded by Colonel Ballie, the other by Sir Hector Monro, who were approaching each other, and only six miles distant; overwhelmed the former, when caught in ambuscade, by the multitude and vehement charges of his horse, literally trampling the English infantry underfoot with his terrible squadrons and ponderous elephants (1), and compelled the latter to retreat, and leave open the whole fortresses of the Carnatic to his attacks. The Indian chief was not slow in following up this extraordinary tide of success: Arcot was speedily reduced; the whole open country ravaged, and siege laid to Wandimash, Vellore, Chingleput, and all the strongholds of the Carnatic. Parties of the Mysorean horse approached to the gates of Madras: the whole villas in its vicinity were deserted, and preparations were even made in the presidency for crossing the surf at the bar and abandoning the Carnatic for ever (2).

It is invariably on a crisis of this kind that the really great acquire an ascendancy: the timid shrink from responsibility, the multitude clamour for submission; the brave and intrepid stand forth as the deserving leaders of mankind. The Council of Madras in the last extremity applied to the Government of Calcutta for aid; and WARREN HASTINGS was at its head. Instantly summoning up all his resources, he rose superior to the danger; despatched Sir Eyre Coote with five hundred Europeans, and an equal number of sepoy, to the succour of Madras, and superseding the Council, whose improvidence or incapacity had brought the public fortunes to such a pass, took upon himself the supreme direction of affairs both in his own and the sister presidency. Nothing could exceed the disastrous state of affairs when Sir Eyre Coote now took the field against Hyder. His whole force did not exceed seven thousand men, of whom only one thousand seven hundred were Europeans; and he had to oppose above a hundred thousand enemies, of whom eighty thousand were admirable horse, and three thousand French auxiliaries who had recently landed from Europe, in hopes, by the aid of so renowned a chieftain, of restoring their fallen fortunes in the East. By a conduct however, at once prudent and intrepid, he succeeded in re-establishing affairs in the Carnatic: the sieges of Wandimash, Vellore, and the other beleaguered fortresses, were raised by Hyder at the approach of this new and more formidable enemy; and at length, after a variety of operations attended with various success, a decisive battle was fought between the opposing forces on the sea-coast near Porto Novo, where the English had proceeded, in order to stop the incursions of the Mysoreans in the direction of Cuddalore. The contest lasted six hours,

(1) The valour displayed on this occasion by Colonel Ballie with his little band of followers, consisting only of 100 Europeans and 5000 sepoy, never was exceeded even in the glorious fields of Indian warfare. Surrounded on all sides by the constant squadrons of Hyder's horse, torn in pieces by a terrible fire from sixty pieces of cannon, hurled down by the weight and fury of the armed elephants, they yet long resisted with such glory as more than once balanced the fortune of the day and threw Hyder into such perplexity that but for the advice of Lally he would have given up in despair. The accidental explosion of two ammunition waggoners early deprived them of their reserve ammunition; but, nevertheless, they continued the combat with heroic resolution to the last, forming a square which repelled thirteen different attacks of the Mysore

horse, the men taking themselves in many cases from the ground to resist the enemy with their bayonets, while the officers kept them at bay with their swords. Two hundred were made prisoners, for the most part desperately wounded; including the commander himself and his principal officers. They owed their lives to the humane interposition of Lally and the other French officers in the service of Hyder who also did all in their power to mitigate the horrors of the captivity more terrible for them death, which they afterwards underwent in the Mysore dungeons.—See *Narrative of the Sufferings of those who fell into Hyder's hands from the battle of Cuddalore*, Sept. 10, 1790.—*Memoirs of War in Asia* ii. 102-103.—*Asia*, iv. 195-196.

(2) *Mill*, iv. 162, 171. *Martha*, viii. 42. 49. *Asiatick*, i. 580, 572.

and success was, for a long period, so nearly balanced, that the whole reserves of the English were brought into action, but at length, by incredible exertions, Hyder's forces were repulsed at all points, and driven off the field in such confusion, that if Sir Eyre Coote had possessed an adequate force of cavalry, he would have been involved in total ruin (1).

Further disasters attended by the energy of Mr Hastings' Death of Hyder Aug 3d This great success, however, was balanced by a bloody action, fought on the very ground where Baillic had so recently been defeated, in which, although neither party could boast decisive success, the English, upon the whole, were worsted, and Hyder, as they retreated during the night, had good ground for proclaiming it to all India as a decided victory. The affairs of Madras were now reduced to extremities; Lord Macartney, who had just arrived there as governor, in vain made proposals of peace to the victorious chief; another murderous

28th Sept and indecisive action took place in the end of September; there was not a rupee in the treasury, nor the means of fitting out an additional soldier; the supreme Government at Calcutta was as much straitened in finances, in consequence of a burdensome war with the Mahrattas, as the Madras presidency, and nothing but the unconquerable firmness and energy of Mr Hastings' administration preserved the affairs of the Company from total ruin. By his indefatigable efforts the resources of Lord Macartney were

12th Nov 1781 so much augmented, that his lordship was enabled, in November, to undertake the important enterprise of attacking Negapatam, a stronghold of Hyder's on the seacoast, which gave him an easy entry into the Carnatic, and with such vigour were the operations conducted, that in a few weeks the place was taken, and the garrison of seven thousand men made

3d Dec prisoners. The British, upon this, regained their superiority over the enemy in the field, and Sir Eyre Coote, taking advantage of it, pushed on and relieved Vellore, to the infinite joy of the garrison, who had been sixteen months closely blockaded, and were then reduced to the last extremities. Sir Eyre Coote, whose valour and conduct had done so much towards the re-establishment of affairs in the Carnatic, soon after reduced Chitore and drove the enemy entirely out of the Tanjore. He afterwards fought with checkered success, several other actions with his old antagonist Hyder. Colonel

17th Feb 1782 Braithwaite, with two thousand men, was totally defeated by Tippoo Saib, Hyder's son, at the head of ten thousand horse and twenty pieces of cannon, on the banks of the Cole river in the Tanjore, and the humane interposition of Lally and the French auxiliary officers alone preserved the prisoners from destruction, while, after a bloody action, Hyder in person was repulsed by Sir Eyre Coote near Arnee, a few months after. This was the last

Dec 3d contest between these two redoubtable antagonists, Sir Eyre was soon after obliged by bad health to return to Calcutta, and Hyder, in the midst of the most active operations, in conjunction with the French fleet of twelve sail of the line, which had arrived off the coast, was summoned to another world, and died at Chitore at the advanced age of eighty-two (2).

War with Tippoo, and invasion of Mysore from Bombay Peace had been concluded between the Bombay government and the Mahrattas in the May preceding, which enabled the governor-general to assist the Madras presidency with large succours, and offensive operations were commenced, at all points, against Tippoo, who had succeeded to his father's dominions, and all his animosity against the English government. The contest, however, was still extremely equally balanced; and the government at Madras was far from exhibiting the unanim-

(1) Mill, iv, 224, 228. Auber, i, 624, 626.

(2) Auber, i, 600, 67

ity and vigour which the importance of the occasion demanded. In vain ^{Dec. 7th.} Lord Macartney, who was aware of the slender tie by which oriental armies were held together, urged General Stuart, who had succeeded Sir Eyre Coote in the command of the army, to take advantage of the consternation produced by the death of Hyder and absence of Tippoo, and instantly attack the enemy. The precious moments were lost: discussion broke out between the civil and military authorities, and Tippoo joined the army and established himself on his father's throne in the beginning of January. He was recalled, however, to the centre of his dominions, obliged to evacuate all his father's conquests in the Carnatic, and abandon and blow up Arcot, in consequence of the appearance of a formidable enemy in the vitals of his power. The Bombay government, having considerable disposable forces in consequence of the Mahratta peace, had detached a powerful body, under Colonel Humberstone and General Mathews, into the Mysore country. These enterprising officers carried Onore by storm, on the sea-coast, mounted the great pass called the Hussalnagurry Ghaut, four thousand feet high, surmounted by a road slowly ascending through cliffs and precipices for five miles, drove the enemy from all the batteries and forts, hitherto deemed impregnable, by which it was defended, and rapidly advancing along the table-land of Mysore, at the summit made themselves masters of the rich city of Bednore, with a vast treasure, by capitulation; carried Ananpore and Bangalore by assault and spread terror throughout the whole centre of Tippoo's dominions (1).

^{Early success and final disaster of the expedition.} This formidable irruption completely relieved the Carnatic, which had hitherto been almost exclusively the seat of hostilities, from the invasion by which it had been for a series of years so cruelly ravaged, and, by depriving Tippoo of the treasure at Bednore, amounting to above a million sterling, seriously crippled his power; but it led, in the first instance, to a cruel and unexpected reverse. The magnitude of the spoil taken at Bednore, threw the apple of discord among the victors. General Mathews refused to devote any portion of it to the pay of the troops, though ^{March 17th.} they were above eighteen months in arrear. Colonel Humberstone and several of the leading officers threw up their commands, and returned to lay their complaints before the government at Bombay, the army was ruinously dispersed to occupy all the towns which had been taken: and, in the midst of this scene of cupidity and dissension, Tippoo suddenly appeared ^{24th April.} amongst them at the head of fifty thousand men. Mathews, with two thousand infantry, was defeated before Bednore, and soon after forced to surrender in that town. The prisoners were put in irons, marched off like felons to a dreadful imprisonment in the dungeons of Mysore: the whole towns taken by the British, in the high country, were regained: and the remnant of their forces, driven down the passes, threw themselves into the important fortress of Mangalore on the sea-coast below the Ghauts, where they were immediately invested by the victorious troops of the Sultan (2).

^{Siege of Mangalore raised by the British intervention of Mysore.} The Governments of Madras and Bombay, alive to the vital importance of withdrawing Tippoo's attention from this siege by diversions in other parts of his dominions, put in motion two different expeditions from the Malabar and Coromandel coasts, into the country of Coimbatore, in the centre of his dominions, and endeavoured to stir up a civil war there by supporting the cause of the deposed Rajah of Mysore, whom Hyder had dispossessed. This project proved entirely success-

ful Colonel Fullarton, who commanded the southern army, acted with great
 13th Nov vigour and intelligence, reduced Palacatcherry, one of the strong-
 est places in India, commanding an important pass on the sea-coast, made
 26th Nov, himself master of Coimbatore on the high-road to Seringapatam,
 the centre of the Sultan's power, and menaced that capital itself. At the
 same time, the northern army made considerable progress on the other side;
 and both, converging towards the capital, had the conquest of Seringapatam
 full in view. The superiority of the British forces in the field was now appa-
 rent, the conclusion of a peace between France and England, of which in-
 telligence had lately arrived in India, had deprived Tippoo of all hope of Eu-
 ropean aid, and the gallantry of the brave garrison of Mangalore had baffled
 all the efforts of his vast army, and exposed them to dreadful losses by sick-
 ness during the rainy months. Discouraged by so many untoward
 Which leads to a peace circumstances, the bold spirit and inveterate hostility of the Sultan
 at length yielded. After several insincere attempts at an accommodation, a real
 negotiation was set on foot in the close of 1783, and, though the pacification
 came too late to save Mangalore, the brave garrison of which, after sustain-
 ing a siege of seven months against sixty thousand men, had at
 Mar 11, 1784 length been forced by famine to capitulate, on the honourable terms of
 marching to the nearest English territories with all their arms and accoutre-
 ments, yet it was in the end concluded, and delivered the English from the
 most formidable war they have ever sustained for the empire of the East (1).
 On the 11th of March 1784, peace was concluded on the equitable terms of a
 mutual restitution of conquests.

Change in introduced by Tippoo in the Indian armies. It is seldom, says Gibbon, that the father and the son, he who
 has borne the weight and he who has been brought up in the lustre
 of the diadem, exhibit equal capacity for the administration of
 affairs. Tippoo inherited from his father all his activity and vigour, all his
 cruelty and perfidy, and if possible, more than his hatred and inveteracy
 against the English, but he was by no means his equal either in military
 genius, or in the capacity for winning the affections and commanding the
 respect of mankind. Above all, he was not equally impressed as his great
 predecessor with the expedience of combating the invaders with the national
 arms of the East, and wearing out the disciplined and invincible battalions of
 Europe by those innumerable horsemen, in whom, from the earliest times,
 the real strength of Asia has consisted. Almost all Hyder's successes were
 gained by his cavalry, it was when severed from his infantry and heavy artil-
 lery, and attended only by a few flying guns, that his forces were most for-
 midable, and it augments our admiration of the firmness and discipline with
 which the British and sepoy regiments under Coote withstood his assaults,
 when we recollect that they had to resist for days and weeks together, under
 the rays of a tropical sun, the incessant charges of a cavalry, rivalling that of
 the Parthians in swiftness, equalling that of the Mamelukes in daring, ap-
 proaching to that of the Tartars in numbers. But it was the very excess of
 the admiration which their great qualities awakened among the native powers
 which proved the ruin of Tippoo, and in the end gave the British the empire
 of the East. The officers of the Mysore court were so much struck by the
 extraordinary spectacle of a few thousand disciplined men successfully re-
 sisting the thundering charges of thirty or forty thousand admirable horse-
 men, that they conceived that the secret lay not in their character but their
 tactics; and naturally enough imagined, that if they could give to their own

(1) Mill, iv. 239, 247. Mem. of late war in Asia, i. 286, 303. Auber, i. 631. 641.

numbers and daring the discipline and steadiness of Europe, they would prove irresistible.

Hence the general adoption, not only in the Mysore but the other Indian states, of the European tactics, arms, and discipline; a change of all others the most ruinous to their arms, and which, in subsequent times, has proved fatal to the independence of Turkey. Every people will find safety best in their own peculiar and national forces: the adoption of the tactics and military systems of another race, will generally share the fate of the transplantation of a constitution to a different people; it was neither by imitating the Roman legions that the Parthians defeated the invasions of Crassus and Julian; nor by rivalling the heavy armed crusaders of Europe, that Saladin baffled the heroism of Richard; nor by vanquishing the French infantry that Alexander forced Napoleon into the Moscow retreat. Light horse ever have been, and ever will be, the main strength of the Asiatic monarchies, and when they rely on such defenders, and they are conducted by competent skill, they have hitherto proved invincible. It is the adoption of the system of European warfare which has uniformly proved their ruin. Hyder's horse, like the Parthian or Scythian cavalry, might be repulsed; but they could not be destroyed: the European squares toiled in vain after their fugitive squadrons, and, when worn out by incessant marching, found themselves enveloped by an indefatigable and long invisible enemy. But Tippoo's battalions could not so easily escape: protection to their guns and ammunition waggons, required that they should stand the shock of regular soldiers. Asiatic vehemence strove in vain to withstand European valour: the strength of the East was lost without that of the West being gained: and in the attempt to substitute the one for the other, the throne of Mysore fell to the earth (1).

Soon after the Indian empire of the East India Company had been engaged in these desperate contests for their very existence, on the plains of the Carnatic, the statesman whose firmness and ability had brought them through the crisis was exposed to an unparalleled persecution from the people on whom he had conferred so inestimable a benefit. In the confusion and vicissitudes of an empire thus suddenly elevated to greatness in a distant hemisphere, without any adequate restraint either on private cupidity or public ambition, many deeds of injustice had been committed, many private fortunes made by means which would not bear the light, many acts of oppression perpetrated, in the name, and sometimes under the pressure, of state necessity. All these misdeeds, inseparable

(1) In the war with Hyder in 1792, Colonel Wood, who commanded the British forces, found it impossible to bring him to a pitched battle. In vain the Madras government tried to equip him with a light train of artillery and a body of chosen men. He hoped that by the velocity of their advances they might succeed in bringing him to action: all their efforts were defeated by the rapidity and secrecy of his movements. At length, Wood, completely exhausted with the pursuit, hoping to rouse the British pride wrote him before stating "that it was disgraceful for great losses at the head of a large army to fly before a detachment of infantry and few pieces of cannon, unsupported by cavalry." Hyder, however, returned the following characteristic answer:—"I have been told your letter in which you bid me to an action with your army. Go: see the same sort of troops that you command and your wishes shall be accomplished. You will in time come to understand my mode of warfare. Shall

I risk my cavalry which cost a thousand rupees each horse against your cannon-balls, which cost twopence? No! I will march your troops until their legs shall become the size of their bodies—you shall not have blade of grass nor drop of water: I will hear of you every time your drum beats, but you shall not know where I am once month. I will give you army bottles; but it must be when I please, not when you please." Hyder was as good as his word. He laid waste the country and, retiring before Colonel Wood drove him on till his little army was exhausted with fatigues and privations, and in that weakened state attacked him, captured all his artillery and reduced him to such straits that nothing but the opportune arrival of succours under Colonel Smith saved him from total defeat. Had Tippoo never been forced on by some model, his devastations would in all probability have been still on the throne of Bern. Epistola.—See No. vi. vol. 46. note.

from an empire rising under such peculiar and unparalleled circumstances, were visited on the head of Mr. Hastings · faction fastened on the East, as the chosen field of its ambitious efforts, where the lever was to be found by which the inestimable prize of Indian opulence was to be wrested from the hands of its present possessors, the sacred names of justice and equity, of religion and humanity, were prostituted as a cloak to the selfishness of private ambition; and the whole efforts of a powerful party in the British Islands, 30th May, 1782 devoted for a long course of years to the persecution of the statesman who had saved our empire in the East from destruction.

Proceedings Early in 1782, the House of Commons, on the motion of Mr. Dundas, and under the influence of the Rockingham administration, adopted a resolution condemnatory of Mr. Hastings' administration, which led to a vote of recall by the East India Company; and although the latter resolution was, after the death of the Marquis of Rockingham, the head of the Ministry, rescinded by a large majority of 14th June the East India proprietors, yet the investigation resolved on by the Commons was prosecuted with increased vigour by the Coalition Ministry of Mr Fox and Lord North, by which the former cabinet was succeeded. 31st Oct Mr Hastings finally resigned his office, and returned to this country early in 1785, and in the following year the prosecution commenced under the 9th May, 1787 administration of Mr. Pitt, who had succeeded to the helm. The impeachment was solemnly voted by a large majority of the Commons · proceedings soon after commenced with extraordinary solemnity before the 13th Feb, 1788 House of Lords, and were protracted for many years in Westminster Hall, with a degree of zeal and talent altogether unexampled in the British Senate (1).

His trial and acquittal Never before had such an assemblage of talent, eloquence, and influence, been exerted in any judicial proceeding The powerful declamation and impassioned oratory of Mr Fox, the burning thoughts and thrilling words of Mr Burke, the playful wit and fervent declamation of Mr Sheridan, gave lustre to the progress of the prosecution, while the cool judgment and sagacious mind of Mr Pitt interposed with decisive effect, in the earlier stages of the proceedings against the accused (2). During one hundred and thirty days that the trial lasted, diffused over seven years, the public interest was unabated : Westminster Hall was thronged with all the

(1) Auher, i 683, 692 Mill, v 40, 100 Parl Deb. 1786

(2) In the earlier stages of the proceedings against Mr Hastings, Mr Pitt voted with him, and, in consequence, a considerable part of the accusations were negatived by the House of Commons, and his friends looked forward with reason to a total absolution Not only on several preliminary questions, but on the great question of the Rohilla war, he had the support of Government, and these charges were negatived in the House of Commons by a majority of 119 to 67 But, in regard to the charge of extortion from the Rajah of Benares, he suddenly took part with the Whig prosecutors, stigmatizing the fine levied on that potentate (£ 500,000) as enormous and oppressive, and declaring, in regard to these transactions, "the conduct of Mr Hastings had been so cruel, unjust, and oppressive, that it was impossible that he, as a man of honour or honesty, having any regard to faith or conscience, could any longer resist, and therefore he had fully satisfied his conscience that Warren Hastings, in the case in question, had been guilty of such enormities and misdeemeanours as constitute a crime sufficient to call for an impeachment" This sudden and unexpected change of measure on the part of Mr. Pitt,

was decisive against Mr Hastings, as it immediately brought the majority in the Lower House against him, and it led in consequence to many vehement reflections on the conduct of the minister, by the friends of the illustrious accused And, without disputing that the fine was excessive, it must be allowed that it was imposed on a refractory delinquent, who had failed in the duty which his allegiance required, that it was determined on under the overbearing pressure of state necessity, that the exhaustion of the treasury, and the pressing dangers in the Carnatic, imperatively required an immediate supply of money, which could be obtained in no other way, that the funds thus acquired proved the salvation of India, by enabling Sir Eyre Coote to make head against Hyder, and were all applied by Mr. Hastings to public purposes, and that, if justice and not persecution had been the object of the House of Commons, it would have been better obtained by a vote of restitution or reparation from the English legislature to the injured Rajah than by the adoption of vindictive proceedings against a statesman who in this matter, did evil that good might come of it — See Parl Hist i, 103-148, v. 55, 56, and v. 57.

and April, 1755 rank, and wit, and beauty of the realm and though it terminated in his acquittal by a majority of eight to one on all the charges, yet the national mind was seriously impressed with the numerous accusations enforced with so much eloquence his private fortune was almost ruined in the contest, and nothing but the liberality of the East India Company, who nobly supported him against such a torrent of obloquy, with unshaken firmness, preserved the otherwise unbefriended statesman from total ruin (1). The Sovereign of Hindostan, the man who might have placed himself on the throne of Aurengzebe, and severed the empire of the East from the British crown during the perils of the American war, was bowed to the earth by the Aug. 22, 1782 stroke he remained for twenty years in retirement in the country, and sank at last unennobled into the grave.

But truth is great, and will prevail. Time rolled on, and brought its wonted changes on its wings. The passionate declamations of *Ulterior change of public opinion on the subject.* Mr Burke were forgotten; the thrilling words of Mr Fox had passed away; the moral courage of Mr Pitt had become doubted in the transaction; but the great achievements, the far-seeing wisdom, the patriotic disinterestedness of Mr Hastings, had slowly regained their ascendancy over general thought; many of the deeds proved against him, it was seen, had been imposed on him by secret instructions, others originated in overbearing necessity; the poverty of the illustrious statesman pleaded eloquently in his favour, the magnitude of his services rose in irresistible force to the recollection and a few years before his death he was made a privy councillor, from a growing sense of the injustice he had experienced. When he appeared in 1815 at the Bar of the House of Commons, to give evidence on the renewal of the Company's charter, the whole members spontaneously rose up in token of respect to the victim of their former persecution and when he was called from this checkered scene, his statue was, with general consent placed by his unshaken friends, the East India Directors, among those of the illustrious men who had founded and enlarged the empire of the East (2).

(1) The East India Company lent Mr Hastings £50,000 for sixteen years without interest, to meet the expenses of his trial, and settled on him a pension of £4,000 for twenty-eight years, from June 24, 1785 being till the expiration of that charter; and it was continued on its renewal in 1813.—*Debates of Lords on Mr Hastings' Trial* 495; *Misc.* v. 230.

(2) Author L. 682, 697 *Mill* iv. 40, 216. *Parl.* Hist. 1789 1795.

A few hours before Mr Hastings' death, he wrote to the East India Directors— I have called you by the only appellation that language can express me. Your Woodrider my profitable friend; for such, with every other quality of friendship, I have ever experienced yours in all our mutual intercourse and my heart has retained it, unexpectably I own, but with equal satisfaction of the purest Section. My own conclusion necessarily affects me that I myself have not been wanting; my duty to my respectable employers. I quit the world and their service to which I shall condescend myself, to the latest moment that I still draw my breath still devotedly attached, and I the firm belief that, in the efficient body of Directors, I have not one individual interested towards me. I do not express my full feelings, I believe them still to be kindly generously disposed towards me; and to the large constitutional body I can only express hope that, if there be any of different sentiment, the number is but few; for they have supported me when I thought myself headstrong by all other powers, from whom I ever thought myself entitled to any thanks. My latest prayers shall be offered for their service, for that of

my beloved country and for that also whose interest both have so long committed to my partial guardianship, and for which I feel sentiment in my departing hours, not alien from that which is due from every subject to his own.

In January 1826, a proposition was submitted to the East India Directors, by their chairman, Campbell Marjoribank, Esq. After conversing the great services of Mr Hastings, he asked—How were those great services rewarded? He was not allowed even to repeat an indignant retort; he was dragged forward to contend with public accusations, and rewarded with two-and-twenty articles of impeachment. If (Mr M.) would not enter on the proceedings which distressed and lowered the feelings of that great man; they were at an end and the feelings which excited them and that great man himself were now no more; but this he thought himself allowed to say that those proceedings were contrary to the practice and spirit of the laws of this happy nation.

It was unanimously resolved—That the best testimony of approbation of the long services, and successful services of the late Right Hon. Warren Hastings, by maintaining without dissimulation the British possessions in India, against the combined efforts of European Mohammedans, and Mahometans enemies, the statue of that distinguished servant of the East India Company be placed among the statues and heroes who have contributed in their several stations to the recovery, preservation, and security of the British power and authority in India.—*See Annex.* L. 625, 686.

Reflections
on the cruel
injustice of
this proce-
dure

Bright, indeed, is the memory of a statesman who has statues erected to his memory forty years after his power has terminated, and thirty after all the vehemence of a powerful faction, and all the fury of popular outcry had been raised to consign him to destruction. To how many men, once the idol of the people during the plenitude of their power will similar monuments, after the lapse of such a period, be raised? Persecution of its most illustrious citizens, of the greatest benefactors of their country, has ever been the disgrace of free states: the sacrifice of Sir Robert Calder, who saved England from Napoleon's invasion; of Lord Melville, who prepared for it the triumph of Trafalgar; of the Duke of York, who laid the foundation of Wellington's victories, of Warren Hastings, who preserved the empire of the East,—prove that the people of this country are governed by the same principles which consigned Themistocles to Asiatic exile, banished Aristides, because it was tiresome to hear him called the Just, and doomed Scipio Africanus, the conqueror of Carthage, to an unhonoured sepulture in a foreign land. But the friends of freedom may console themselves with the reflection, that, if popular institutions sometimes expose their best citizens to the effects of these occasional fits of national insanity, they furnish the only sure security for the ultimate triumph of just principles, that if despotic power discerns more correctly the real character of its servants, it is liable to no external correction, from the growing influence of equitable feelings after the decay of transitory passion, and that if the historian of England, under other direction, would not have had to record the impeachment of the statesman who had saved its Eastern dominions from destruction, there would not have been permitted to him the grateful duty of contributing, against the united efforts of Whigs and Tories, against all the acrimony of selfish ambition, and all the fury of public passion, to rescue the memory of a great Eastern statesman from unmerited obloquy.

Mr Fox's
India Bill
Its prema-
ture fate

These frequent and interesting discussions on Indian affairs, however characteristic of the grievous injustice which the efforts of party frequently inflict on individuals in all popular communities, were however, attended with one important and salutary consequence, that it drew the attention both of Government and the nation to the administration of our Indian dominions, and the absolute necessity of assuming a more direct control than could be maintained by a mere body of directors of a trading company, over the numerous servants, civil and military, of their vast and growing possessions. This opinion, which had been strongly impressed upon the public mind by the serious and protracted disasters in the campaigns with Hyder in 1780 and 1781, was already general with all parties before the fall of Lord North's Ministry; and when Mr Fox succeeded to the head of affairs in 1783, all parties were already prepared for a great and important change in the government of our Eastern empire⁽¹⁾. But the designs of that able and ambitious statesman far outstripped either the reason or necessity of the case. He proposed, in his famous India Bill, which convulsed the nation from end to end, and in its ultimate results occasioned the downfall of his administration, to vest the exclusive right of governing India in seven directors to be named in the act, that is, appointed by the legislature under the direction of the ministry for the time. The vacancies in these commissioners were to be filled up by the House of Com-

(1) Mr. Pitt, in November 1783, when the coalition Ministry were still in power, called on Mr Fox "to bring forward a plan, not of temporary palliation or timorous expedient, but vigorous and effec-

tual, suited to the magnitude, the importance, and the alarming exigence of the case." — *Parli. Hist.* xxiv. 129

mons under the same direction. The ferment raised by this prodigious change in the country; was unprecedented in the eighteenth century; Mr Pitt, from the first, denounced it as tyrannical, unconstitutional, and subversive of the public liberties. The sagacious mind of George III at once perceived that it would render the present ministers, to whom he was secretly hostile, irremovable in their places, and put Mr Fox at the head of a powerful empire, an *imperium in imperio*, which would soon overshadow the British diadem. By the combined exertions of the crown and the Tory party, this important innovation was defeated, after it Dec 1783, 1783 had passed the Lower House, by a small majority of nineteen in the House of Peers, and this defeat was immediately followed by the dismissal of Mr Fox and his whole administration (1).

The ground taken by the king and the Tory party against this celebrated bill, was its unconstitutional tendency, by vesting the patronage of so large a portion of the empire in directors appointed, not by the executive, but the House of Commons. and it was this consideration which gave them the decisive majority which they obtained upon April, 1784 the dissolution of Parliament in the April following. Nevertheless, it is now apparent that, though at that period unperceived or unnoticed, the greatest danger of the proposed change would have arisen, not from this cause, but from the direct control thereby conferred over our Indian empire on the British legislature. If the vacillating and improvident policy on many occasions forced even upon the resolute and clear-sighted mind of Mr Pitt, by the unreflecting habits, and, on material questions, popular control of the House of Commons,—and still more the total want of foresight in all financial measures since the peace of Paris, on the part both of government and the legislature, be compared with the steady rule, invincible firmness, and wise anticipations of our Indian government during the same period, no doubt can remain, that the interest of the East would inevitably have been sacrificed by the change; that the ministerial directors, acting under the guidance of the House of Commons, could never have carried into execution those prompt and vigorous resolutions indispensable for the preservation of dominions so critically situated as those in Hindostan, and so far removed from the resources of the ruling state. and that no government under the direct control of a popular assembly, would have been permitted to engage in those vast undertakings, or incur the expense of those gigantic establishments, which were necessary to ward off future danger, or obtain present success, over the immense extent of our Indian dominions (2).

Although, however, Mr Fox's India bill was rejected, yet the numerous abuses of our Indian dominions, as well as the imminent hazard which they had run during the war with Hyder Ali from the want of a firmly constituted central government, were too fresh in the public recollection to permit the existing state of matters to continue. Mr Pitt, accordingly, was no sooner installed in power, than he brought forward an India bill of his own, which, it was hoped, would prove exempt from the objections to which its predecessor had been exposed, and, at the

(1) Parl. Deb. iv. 122, 123.

(2) This is not the place to discuss the details of Mr Fox's bill; but it does not appear to have been calculated to afford any practical remedy for most of the evils under which the administration of Indian affairs at that period laboured. and, accordingly it is almost to be forgotten. and, even Mr Fox, whose leaning to the popular side is well known,—"The bills of Mr Fox, on my and crim-

inated, were the men who united their wisdom to compass them, manifest feeble effort in legislation. They demonstrate that the authors of them, however celebrated for their skill in speaking, were not remarkable for their powers of thought, for the right exercise of the powers of government in India, not more new security was provided, and it would not be very easy to prove that any strength was added to the old."—*Mr's Speeches* Ind. i. 119

same time, remedy the serious evils to which the administration of affairs in 14th Aug 1784 India had hitherto been liable. This bill passed both houses, and formed the basis of the system under which, with some subsequent but inconsiderable amendments, the affairs of the East have been administered from that period down to the present time. By it the Court of Directors, appointed by the East India Company, remained as before, and to them the general administration of Indian affairs was still intrusted. The great change introduced, was the institution of the *Board of Control*, a body composed of six members of the Privy Council, chosen by the King, the chancellor of the exchequer and one of the secretaries of state being two, in whom the power of directing and controlling the proceedings of the Indian empire were vested. The duties of his board,—which were very loosely defined, and which have come all to centre in the president, an officer who has become a forth secretary of state for the Indian empire,—were defined to be “from time to time; to check, superintend, and control all acts, operations, and concerns which in any wise relate to the civil or military government, or revenues of the territories and possessions, of the East India Company.” These powers were ample enough, but in practice they have led to little more than a control of the Company, in the more important political or military concerns of the East, leaving the directors in possession of the practical direction of affairs in ordinary cases. All vacancies in official situations, with the exception of the governor-general of India, governors of Madras and Bombay, and commanders-in-chief, which were to be filled up by the British government, were left at the disposal of the East India directors. A most important provision was made in the institution of a secret committee, who were to send to India in duplicate, such despatches as they might receive from the Board of Control, and in the establishment of the supreme government of Calcutta, with a controlling power over the other presidencies, a change which at once introduced unity of action into all parts of the Peninsula. It cannot be affirmed that this anomalous constitution will stand the test of theoretical examination, or that a distribution of supreme power between a governor-general and two subordinate governors in the East, and a board of control and body of directors in the British Islands, gave any fair prospect either of unity of purpose or efficiency of action. Nevertheless, if experience, the great test of truth, be consulted, and the splendid progress of the Indian empire of Great Britain since it was directed in this manner, be alone considered, there is reason to hold this system of government one of the most perfect that ever was devised by human wisdom, for the advancement and confirmation of political greatness (1)

Arrangement with the British government for the increase of the British force in India

It soon appeared how much the vigour and efficiency of Indian administration had been increased by the important changes made in its central government. By Mr. Pitt's India bill, all ideas of foreign conquest in the East had been studiously repressed, it having been declared that “to pursue schemes of conquest or extension of dominion in India are measures repugnant to the wish, the honour, and the policy of the nation.” But this declaration, in appearance so just and practicable, differed widely from the conduct which extraneous events shortly after forced upon the British government; and in truth an extended view of human affairs, as well as the past experience of our Indian possessions, might even then have shown the impracticability of following out such a course of policy, and convinced our rulers that a foreign people

(1) See 24 Geo. III. c. 24, 26 Geo. III. c. 16. Auber, ii, 1, 16. Parl. Deb.

conquerors on the soil of Hindostan, could maintain themselves only by the sword. In order to carry into execution the pacific views of government, a nobleman of high rank and character, Lord Cornwallis, was sent out by Mr Pitt, who united in his person the two offices of governor-general and commander in chief, so as to give the greatest possible unity to the action of government. But no sooner had he arrived there than he discovered that Tippoo was intriguing with the other native powers, for the subversion of our Indian dominion; and, as a rupture with France was apprehended at that juncture, four strong regiments were dispatched to India; and, as the Company complained of the expense which this additional force entailed upon their finances, a bill was brought into Parliament by Mr Pitt, which fixed the number of king's troops which might be ordered to India by the Board of Control, at the expense of the Company, at eight thousand, besides twelve thousand European forces in the Company's service (1).

The wisdom of this great addition to the native European force in India, as well as the increased vigour and efficiency of the supreme government, speedily appeared in the next war which broke out. Tippoo, whose hostility to the English was well known to be inveterate, and who had long been watched with jealous eyes by the Madras presidency, at length commenced an attack upon the Rajah of Travancore: a prince in alliance with the British, and actually supported by a subsidiary force of their troops; and at first, from the total want of preparation which had arisen from the pacific policy so strongly inculcated upon the Indian authorities by the government at home, he obtained very great success, and totally subdued the Rajah against whom he had commenced hostilities. Perceiving that the British character was now at stake in the peninsula, and being well aware that a power founded on opinion must instantly sink into insignificance, if the idea gets abroad that its allies may be insulted with impunity, Lord Cornwallis immediately took the most energetic measures to re-assert the honour of the British name. Fifteen thousand men were collected in the Carnatic under General Meadows, while eight thousand more were to ascend the Ghauts from the side of Bombay, under General Abercrombie. So obvious was the necessity of this war, and so flagrant the aggressive acts which Tippoo had committed, that, notwithstanding their general aversion to hostile measures, from the expense with which they were attended, and their recent declaration of pacific intentions,—on this occasion, both the English Parliament and the Court of Directors passed resolutions cordially approving of the conduct of Lord Cornwallis in the transaction (2). Treaties of alliance were at the same time entered into with the Peshwa and the Nizam, native powers, whose jealousy of the Mysore chief had been of long standing; and hostilities commenced, which were at first attended with checkered success; General Meadows having taken Caroor and other towns, and Tippoo having

(1) *Asker* II. 41, 61.

(2) It is remarkable that the most talented declaration of peace in the House of Commons, as well as for peace and justice, was Lord Brougham's *Memorial of Hastings*, who himself in 1817 with much less preparation and with less the great interest with the Marathas, while terminated so gloriously for the British, was dangerous in its judge of distant transactions from party prejudice or personal and European ideas.—*See Parl. Hist.* 1781. II. 118-125. On this occasion Lord Brougham the ambassador who opposed the declaration against the war said, "I have proved that it has been the constant policy of the Directors and of the Legislature to avoid wars of conquest in India,

and to confine the Company to the limits of their present territories, and the management of their commercial interests."—*Ibid.* 152. In 1818, Lord Hastings, then Governor-general of India, observed in a very valuable discourse on India House, "It was by preponderance of power that the millions of wealth were acquired by the Company and by preponderance of power alone could they be retained. The supposition that the British power could discard the means of strength, and yet enjoy the fruits of it, was one that would speedily and certainly be dispelled; in the state of India, were we to be feeble, our rule would be unprofitable and very short-lived."—*See Hastings' Speech on Revenue* 18th Sept. 1813; *Asker* II. 332.

surprised Colonel Floyd, and burst into the Carnatic, where he committed the most dreadful ravages (1)

Lord Corn
wallis's first
campaign
with Tip
poo

The energies of government, however, were now thoroughly aroused. In December 1791, Lord Cornwallis embarked in person for Madras: the Bengal sepoys were with great difficulty reconciled to a sea voyage, and great reinforcements, with the commander-in-chief, safely landed in the southern presidency. It was resolved to commence operations with the siege of Bangalore, one of the strongest fortresses in Mysore, and commanding the most eligible pass from the coast to the centre of Tippoo's

dominions. In the end of January the grand army moved forward; the important pass of Goorg, leading up the Ghauts, was occupied within a month after, Bangalore was invested in the beginning of March, and carried by assault on the 21st. Encouraged by this great success, Lord Cornwallis again pushed on direct to Seringapatam, although the advanced period of the season, and scanty supplies of the army, rendered it a service of considerable peril, which was increased rather than diminished by the junction shortly after of ten thousand of the Nizam's horse, who, without rendering any service to the army, consumed every particle of grass and forage within its reach. Still the English general continued to press forward, and at length reached the fortified position of the enemy, on strong ground, about

six miles in front of Seringapatam. An attack was immediately resolved on, but Tippoo, who conducted his defence with great skill, did not await the formidable onset of the assaulting columns, and after inflicting a severe loss on the assailants by the fire of his artillery, withdrew all his forces within the works of the fortress. The English were now within sight of the capital of Mysore, and decisive success seemed almost within their reach. They were in no condition, however, to undertake the siege, the supplies of the army were exhausted: the promised co-operation of the Mahrattas had failed, of General Abercrombie, who was to advance from the side of Bombay, no advices had been received, and the famished state of the bullock-train precluded the possibility of getting up the heavy artillery or siege equipage. Orders were, therefore, given to retreat, and both armies retired with heavy hearts and considerable loss of stores and men, but the opportune arrival of the advanced guard of the Mahratta contingent, on the second day of the march, which at first caused great alarm, suspended the retrograde movement, and the army encamped for the rainy season in the neighbourhood of Seringapatam (2).

The attack on the capital of Mysore, however, was only suspended by this untoward event. In the autumn following, Lord Cornwallis was again in motion, having in the preceding months, after the termination of the rains, made himself master of several important forts, which commanded or threatened his communications with the Carnatic. A most important blow was struck by a detachment of the British against a general of Tippoo's, who had taken post in the woods, near Simoga, in order to disturb the siege of that place, which was commencing, and who was defeated with the loss of ten thousand men, a disaster which led to the surrender of that fortress shortly after. Meanwhile Abercrombie, with a powerful force, amply provided with all the muniments of war, broke up from Bombay, surmounted with incredible labour the ascent of the Poodicherrum Ghaut, and was in readiness to take his part

30th Jan. 1798. In the combined enterprise. In the end of January, Lord Cornwallis's army moved forward towards Seringapatam, no longer depending on the doubtful aid of the Mahratta chiefs, but presenting a vast array of native, British, and sepoy troops, such as had never before been presented on the plains of India. Eleven thousand English, thirty thousand regular sepoys, with eighty four pieces of cannon, exhibited a force worthy of contending for the empire of the East. Nor was this force, considerable as it was, disproportioned to the magnitude and hazard of the enterprise in which they were engaged; for not only were the ramparts of Seringapatam of surpassing strength, but Tippoo lay in front of them at the head of fifty thousand regular infantry and five thousand horse, in a strong position, defended by numerous fortifications, and one hundred and fifty pieces of heavy artillery (1).

Preparations for the assault on the walls of Seringapatam, 30th Jan. 1798. No sooner had Lord Cornwallis reconnoitred the enemy's position, than he resolved to commence an attack, and the assault was fixed for that very night. The army was formed in three divisions; his lordship in person commanded the centre, General Meadows the right, Colonel Maxwell the left. Seringapatam is situated on an island, formed by two branches of the river Caverry, which enclose between them a space four miles in length and a mile and a half in breadth. On the eastern portion of the island, Tippoo had constructed without the walls, but within reach of them, in case of disaster, a strongly fortified camp, supported by numerous field-works and batteries, and without this stronghold, beyond the river, the bulk of the Sultan's army was encamped on elevated ground, covered on one side by a large tank, on the other by a small river which falls into the Caverry, and supported on the side next the enemy by six large redoubts. Three hundred pieces of cannon were mounted on the interior fortifications and the walls of the fortress, besides one hundred and fifty on the exterior line; and a thick hedge, formed of bamboos and prickly shrubs, connecting the works, formed a most serious obstacle to the attacking columns, from presenting no resistance to cannon-shot, and being altogether impervious to foot soldiers. To attack such a force so posted, in the dark, and subject to the chances and confusion of a nocturnal assault, must be considered one of the most daring deeds even in the annals of Indian heroism (2).

Total defeat of Tippoo. At eight o'clock the order was given to march. The evening was calm and serene, the moon shone bright, and the troops advanced swiftly and steadily, but in perfect silence; while the reserve, with the whole artillery and ammunition train, struck their tents, and stood to their guns in breathless anxiety. The surprise was complete so admirably was silence preserved, that the centre came upon the enemy wholly unawares, forced their way through the bound hedge, and, carrying every thing before them, pushed through the camp, passed the ford of the Caverry, crossed over to the opposite side, and, taking the batteries, which had opened their fire upon the other division in the inner intrenchment in the rear, drove the gunners from their pieces. The right wing, under General Meadows, also cut through the bound hedge about half past eleven, while the left with ease carried the Carighaut hill; the roar of artillery was heard on all sides, while the flash of musketry now illuminated the whole extent of the horizon. Panic-struck at the celerity and vigour of the attack, which had penetrated their works in so many different quarters at once, the enemy gave way on all sides, when

(1) *MIL.* v. 355, 241. *Martin*, viii. 42, 43. *Ascher* ii. 172, 173. *Wills*, iii. 192, 193.

fortune was nearly restored by one of those accidents to which all nocturnal attacks are subject, and the centre, with its noble commander, was nearly cut off. The right wing, under Meadows, had been grievously impeded in its march within the bound hedge, by several nice enclosures and water courses, which could not be crossed without great difficulty, and, in consequence, for two hours he was unable to reach the advanced point to which Cornwallis had arrived in the island in the early part of the night. Meanwhile, Tippoo's troops began to recover from their consternation, and, as day dawned and they perceived that the body which had penetrated into the centre of their intrenchments did not exceed five thousand men, they closed in on all sides, and commenced with overwhelming numbers an attack upon this band of heroes (1).

Dangers of
Cornwallis,
and his ulti-
mate rescue

The British troops, however, animated by the presence of their commander-in-chief, made a gallant defence. The repeated and furious onsets of the enemy were repulsed by a rolling fire, enforced when necessary by the bayonet, and at length, when daylight dawned and the guns of the fortress began to be turned upon them, they retired towards Caughant hill in perfect order, and took post beyond their destructive range. Meanwhile, the troops of Meadows having by a mistake of their guides been brought close to the Mosque redoubt, which was meant to have been passed without molestation, transported by the ardour of the moment, commenced an assault, which at first was repulsed with heavy loss; the troops; however, returned to the charge, and that formidable work was at length carried amidst cheers which were heard over the whole camp. Animated by the joyful sound, Cornwallis's men stood their ground with invincible firmness, while Meadows was no sooner disengaged from the perilous contest into which he had been unwillingly drawn, than he pressed on with renewed alacrity to the relief of the main body, which he was well aware, from the weight of the firing in that direction, must be engaged in a very serious contest, and, as morning broke, the two divisions met and mutually saluted each other as victors (2). The victory was complete. Out of six of the enemy's redoubts, four were in the hands of the victors; Tippoo in an early part of the night had taken refuge in his capital; the intrenched camp, with above a hundred pieces of cannon, was abandoned; four thousand men had fallen, and nearly twenty thousand more had disbanded and left their colours, while the loss of the victors did not amount to six hundred men (3).

Concluding
operations
of the war

On the following morning Tippoo made a desperate attempt to regain the Sultan's redoubt, which was so near the capital as to be commanded in rear by its guns: and a body of two thousand chosen horse came on with appalling cries to storm the gorge, before the slender garrison, consisting only of a hundred and fifty men, could barricade it; but they were repulsed by the steady gallantry and ceaseless fire of this heroic

16th Feb

(1) Lord Cornwallis's Despatches, 4th March, 1792 Ann Reg 469 Mill, v 372

(2) When the enemy had surrounded Lord Cornwallis, in the middle of the night, and a heavy fire had set in on all sides, he said to those around him,—"If General Meadows is above ground this will bring him." Nor was he mistaken. True as the magnet to the pole, his gallant lieutenant pressed to the scene of danger, and, attracted by the sound, reached in time the theatre of that desperate conflict. The unanimity and heartfelt mutual admiration of these two great men is, as Mill has justly observed, one of the finest features of this campaign, and is particularly worthy of admiration on the part of Meadows, considering that Cornwallis, by assuming the

direction in person, deprived him of the honour of a separate command in so momentous a service. What a striking circumstance, that he so soon after should have the means of rescuing his noble and respected commander-in-chief from destruction! But India is the theatre of romantic adventure, as well as of heroic and disinterested exploits, and a most inadequate conception will be formed of British character or glory, till the memorable history of its empire in the East is given by an historian worthy of so magnificent a theme.—See MILL, v 367, note

(3) Lord Cornwallis's Despatches, 4th March, 1792 Ann Reg Mill, v 372, 374 Auber, ii, 120, 124

band Upon this the enemy retreated entirely within the fort and soon after, the army obtained an important accession of strength by the arrival of Abercrombie with two thousand Europeans and four thousand sepoy troops. Operations were now commenced in form against the fortress, the first parallel was begun and completed on the night of the 18th the splendid gardens and shady walks of the country palace, in which the Sultan so much delighted, were destroyed, and the palace itself converted into a great hospital; and at length, when the breaching batteries were in readiness and armed with fifty pieces of heavy cannon, the Sultan concluded a treaty on such terms as Lord Cornwallis chose to prescribe, and hostilities terminated. Such, however, was the ardour of the troops, especially the sepoys, who were engaged in the trenches, that it was with the greatest difficulty they could be prevailed on to cease firing, and when the European troops enforced the command, they retired sullen and dejected to their tents while Tippoo's men by a vain bravado continued discharging cannon for some time after the British lines were silent as if to demonstrate that they had not been the first to give in in the contest (1)

Treaty
13th Sep-
tember, 1792.
March,
1792. By the treaty of peace which followed, Tippoo was compelled to submit to the cession of half his dominions to the British, the Nizam, and the Mahrattas to pay L.5,500,000, as the expenses of the war; deliver up all the prisoners made in Hyder's time, some of whom still lingered in a miserable captivity; and to surrender his two sons as hostages. The young princes were immediately after courteously received, and splendidly treated, by the British government. Lord Cornwallis, whose health had for some time been declining, and who had postponed his return to England only on account of the contest in the Mysore, soon after returned to his native country, having, during his short government, added 24,000 square miles to its Eastern dominions (2)

Expressed
necessity of
British com-
merce in
India. Human affairs are every where governed at bottom by the same principle the varieties of colour, language, and civilisation, are but the different hues which conceal the operation of passions and interests which are for ever identical among mankind. Differing widely in its origin and its effects upon social happiness, the British empire in India bears, in many respects, a very close analogy to the contemporaneous French domination in Europe; and in none more than in the experienced necessity of advancing, in order to avoid destruction, which was felt equally strongly by the Emperor Napoleon and the English governors-general of India. The reason in both cases was the same, viz. that a power had got a footing in the midst of other states, so formidable in its character, and so much at variance in its principles with the policy of the powers by whom it was surrounded that of necessity it was engaged in constant hostilities, and had no security for existence but in the continual extension of its dominions, or increased terrors of its name. The East India Company had fondly flattered themselves that Tippoo, being thus humbled, would lay aside his hereditary hostility to the English power, just as Napoleon seems to have imagined that, after the spoliation of Thibet, he might rely upon the forced submission or cured inveteracy of Prussia, and the result to both was the same.

Further ad-
vancement
and prosper-
ity of the
British
John Shore. Sir John Shore, a most respectable civil servant of the company, who was appointed governor-general after the retirement of Lord Cornwallis, was strongly imbued with those maxims of the neces-

sity of pursuing a pacific policy in India, and avoiding all causes of collision with the native powers, which were so general both with the government, the directors, and the people at home, and which had been so strongly enforced upon the local authorities by the Board of Control. Ample opportunities soon occurred for putting the expedience of their apparently reasonable and
 1794 just principles to the test. Shortly after the conclusion of the peace with Tippoo, differences broke out between the Mahrattas and the Nizam; and the English Government, as the old ally of the latter Prince, were strongly urged by his partisans to support him, as they had done the Rajah of Travancore, in the contest (1). This, however, Sir J. Shore, acting on the pacific system, refused, and even declined to permit the Nizam to employ in his warfare with the Mahrattas the battalions which were placed as a protecting force in his territories.

Its disastrous effects The consequences of this temporizing conduct might easily have been foreseen. The Nizam, after a short contest, was overthrown by the superior force of the Mahrattas, (who could bring twenty thousand cavalry, forty thousand infantry, and two hundred guns into the field,) and
 March, 1794 compelled to make peace on very disadvantageous terms. Such was the dissatisfaction produced very naturally at the court of the Nizam, by this desertion of their ally at the most perilous crisis, that they soon after signified a wish to be relieved of the presence of the British subsidiary force, which was complied with, and the Nizam immediately threw himself without reserve into the arms of the French resident, M. Raymond, and augmented the organized force in his dominions, under the direction of officers of the French republic, to twenty-three battalions and twelve pieces of artillery.
 1795 These troops carried the colours of the French republic, and the cap of liberty was engraven on their buttons. Thus, by the timid policy of the British Government at that crisis, not only was the power and influence of the Mahrattas materially increased, but their old and faithful ally, the Nizam, converted from a friend into an embittered enemy, and the moral sway resulting from the glorious termination of the war with Mysore seriously impaired (2).

Intriguing of Tippoo to form a confederacy against the English Tippoo was not slow in turning to the best advantage this unexpected course of events in his favour. Already had exaggerated reports of the growing power and conquests of the great Republic reached the courts of Hindostan, and numerous French agents had found their way to all the native powers, who represented in glowing colours the favourable opportunity which now presented itself for expelling the English from the peninsula, and re-establishing, on a durable basis, the independence of all the Indian states. The Mysorean chief, whose cunning and perfidy were equal to his ability, strove, in the first instance, by professions of eternal gratitude and attachment, to disarm the suspicions of the British Government; and he succeeded so far, that, in two years after the treaty of Seringapatam, his two sons were restored to his embraces. No sooner had he got free from this restraint, than he sent a secret circular to the different native powers of India, proposing to them all to unite in a common league for the expulsion of the English from Hindostan, received with unbounded confidence the agents who had been dispatched to the court of Seringapatam by the French Directory, and even sent emissaries to the distant court of Caubul, beyond the Himalaya snows, to confirm Zemaun Schah, the restless and ambitious chief of that formidable people, in his declared design of invading the

(1) Malcolm, 136, 154. Auber, ii. 137, 142

(2) Malcolm's India, 136, 177. Auber, ii. 137, 145

northern parts of India, and reinstating, in its original splendour, the throne of the Moguls. Meanwhile his own activity was indefatigable, and his preparations were complete: his army was on the best footing, and constantly ready to take the field; and while the Mahrattas and the Nizam had, by mutual dissensions, broken up the triple league, of which he had formerly experienced the weight, and the former had fallen entirely under the guidance of the large French force in his capital, the military strength and political consideration of Mysore were more formidable than ever (1).

^{Tippoo's} ^{overt acts} ^{of hostility} Matters were at length brought to a crisis, by the Sultan's taking the extraordinary step, in spring 1768, of sending ambassadors to the Isle of France to negotiate with the French authorities for the expulsion of the English from India, and effect the levy of a subsidiary European force to assist him in his designs, and afterwards publicly receiving the troops then raised at Mangalore, and conducting them with great pomp to his capital. It was impossible to doubt, after this decisive step, that he was only awaiting Feb. 1768. the favourable moment for commencing his operations; the more especially when, at the very same period, a French armament, of unprecedented magnitude, sailed from Toulon for the Nile, and both the Directory and Napoleon publicly spoke of their communications with the redoubted Mysorean chief, as their principal inducement for giving it that direction, and "Citizen Tippoo" was openly announced as the powerful ally who was to co-operate in the ultimate objects of the expedition (2). It was evident, therefore, that a crisis of the most dangerous kind was approaching, and that, too, at the very time when the diminution in the consideration of the English in India, and the weakening of their alliances among the native powers, had rendered them least capable of bearing the shock. But the hand of fate was upon the curtain. At this perilous moment the sons of Britain were not waiting upon the theatre, who were destined to carry its glory to the highest point of exaltation, and leave an empire, both in the East and West, unrivalled in the extent of its dominions, unequalled in the impression it was destined to produce upon the fortunes of mankind.

(1) Wellesley's Despatches, I. 21, 22, 23. Malacca, 18th 1800.

(2) Wellesley's Despatches, I. xi. Introduction. Letter III 187. Carr. L. 7.

Jan. 26, 1768. The following were the terms of this remarkable proclamation by General Hippolyte Malartie, governor of the Isle of France:—"Tippoo Sultan has dispatched two ambassadors to us with particular letters to the Colonial Assembly to all the powers employed under this Government, and to the Executive Directory. 1. He declares an alliance offensive and defensive with the French and proposes to maintain it in his charge, as long as the war shall last in India, the troops which may be sent him. 2. He declares that he has made every preparation to receive the success which may be sent to him. 3. In a word, he only waits the moment when the French shall come to his assistance to declare war against the English, whom he ardently desires to expel from India. 4. This power desires also to be assisted by the free citizens of colonies who therefore invite all such who are willing to serve under his flag to enrol themselves."—WELLESLEY'S Despatches, I. xi. Introduction, &c.

On the 20th July 1768, Tippoo transmitted to the Directory at Paris a note of proposals for an alliance offensive and defensive, "in order to obtain such an accession of force as, joined to mine, may enable me to attack and annihilate for ever our common enemies in Asia; and may the heavens and the earth

swear that the alliance of the two nations shall suffer the smallest diminution. The proposals were, 1. That the French should furnish a subsidiary force of ten or fifteen thousand troops of every description, with an adequate naval force. 2. That the Sultan should furnish military stores, horses, bullocks, provisions, and all other necessaries. 3. That the expedition should be directed to Porto Novo, or some other point on the coast of Coromandel, where it will be joined by an army under the command of the King in person. 4. All conquests which shall be made from the common enemy, excepting the dominions of the Sultan which have been wrested from him by the English, shall be equally divided between the two contracting parties.—WELLESLEY'S Despatches VII 712. Appendix.

Napoleon's letter to Tippoo upon landing in Egypt, already alluded to [see III. 223], was in the following terms:—"Caïro, 25th Jan. 1799. You have already been made acquainted with my arrival on the shores of the Red Sea with a formidable and invincible army. Armed with the desire to deliver you from the iron yoke of England, I hasten to convey to you my desire that you should give me by the way of Mevrat, or Malha, intelligence of the political circumstances in which you find yourself placed. I desire even that you will send to Mevrat, or Grand Cairo, some able man in whom you have confidence with whom I may confer. —CARR. Corr. de Napoleon, III. 172.

CHAPTER LII.

ADMINISTRATION OF MARQUIS WELLESLEY, AND FIRST APPEARANCE OF WELLINGTON
IN INDIA.

ARGUMENT.

Birth of the Duke of Wellington and Marquis Wellesley—Illustrious Men then rising into manhood in England and France—Wellington's Education and first Military Services—His talents are distinguished during the Retreat from Flanders—Excellent Effect of this Campaign on his mind—He is sent to India, and first entry on separate command there—His Character as a public man—His Military Character—Difficulties with which he had to contend in that capacity—Admirable Ability and Skill with which he overcame them—Character of Marquis Wellesley—And of his Indian Administration—Statesmanlike Wisdom with which it was accompanied—Character of Lord Melville—His great abilities and vast information on Indian affairs—Lord Wellesley's first objects of policy, and early perception of the necessity of War—He is unable, from financial and military difficulties, to commence immediate hostilities—Rapid Effect of his administration in improving affairs—Successful reduction of the French subsidiary force at Hyderabad—Its great Effects in India—Prodigious Energy of Lord Wellesley in overcoming the difficulties of his situation—Commencement of Hostilities against Tippoo, and his Defeat by the Bombay army—General Harris's advance to Seringapatam, and defeat of the Sultan—Investment of that capital—Progress of the Siege, and repulse of Colonel Wellesley—Assault and storm of the fortress—Death of Tippoo—Immense Importance of the blow thus struck—Appointment of Colonel Wellesley as Governor of Seringapatam—Judicious Arrangements consequent on the fall of Mysore—Rise and formidable force of Doondiah Waugh—His defeat and Overthrow by Colonel Wellesley—Alliances with the Nizam, Persia, and the Imam of Muscat—Expedition of Sir D. Baird from India to Egypt—Great acquisition of territory from the Vizier of Oude—Assumption of the Government of the Carnatic—Causes of the Rupture with the Mahrattas—Character and Situation of the Rajah of Berar and Scindiah—And of Holkar—Reasons for a Mahratta War—Perron's French Force—Collection of Forces, and Delivery of Poonah by General Wellesley—War with Scindiah and the Rajah of Berar—Lord Wellesley's Plan of Operations—Defeat of Perron's Force and Storming of Alichgur—Battle of Delhi—Lord Lake's strong opinion on the necessity of European troops in India—Alliance with the Mogul Emperor, and Surrender of the French Chiefs—Battle and Fall of Agra—Humane conduct of the British Troops—Battle of Laswarro—Desperate Fight and Final Victory of the English—Conquest of the Cuttack—Operations in the Deccan under General Wellesley—Movements which led to the Battle of Assaye—Battle of Assaye—Imminent Danger and final Victory of the English—Operations after the Battle—Battle of Argaum—Siege and Fall of Gawilgur—which compels Scindiah to sue for Peace—Its terms—Pecuniary Difficulties of the Government on the conclusion of the War—Negotiations and Rupture with Holkar—Commencement of the war with that Chief—Its arduous Character—His Strength, and its causes—Defeat and Capture of Mahommed Khan—Plan of the Campaign against Holkar—Its Errors and early Disasters—Holkar's able Conduct against Colonel Monson in Bundelcund—Advance of Monson's division—His disasters and Defeat—Desperate Action on the Bannas river, and conclusion of the Retreat—Alarming Fermentation produced through the whole of India—Generous Conduct and able Resolutions of Lord Wellesley and Lord Lake—Advance of Holkar to Delhi—His Repulse and Retreat—Battle of Dieg—Pursuit and Defeat of Holkar at Furruckabad—Siege and Capture of Dieg—Siege and unsuccessful Assault of Bhurtpore—Repeated Assaults, and their Defeats—Reasons on both sides which led to an Accommodation with that Chieftain—Peace with the Rajah of Bhurtpore—Holkar, expelled from Bhurtpore, joins Scindiah—Operations in Cuttack, Bundelcund, and against Meer Khan—And against Scindiah, who sues for Peace—Lord Wellesley returns to England—Second Administration, and Death of Marquis Cornwallis—Arrival of Sir G. Barlow—Treaty of Peace with Holkar and Scindiah—Review of Lord Wellesley's Administration—Return of Wellington to Europe—Reflections on the rise of the British power in India—Causes of its extraordinary Progress—It was owing to the union of democratic energy with aristocratic foresight—Causes of this unusual combination—Circumstances which will eventually subvert our Eastern Dominion—Great and lasting Benefits it has produced in human affairs

Birth of
Wellington
and Mar-
quis Welles-
ley

ARTHUR WELLESLEY, afterwards Duke of WELLINGTON,
the 1st May 1769. His father was the Earl of Morni
was descended by the mother's side from an ancien

ON

C

-

mily His elder brother, who succeeded to the hereditary honours, afterwards was created MARQUIS WELLESLEY so that one family enjoyed the rare felicity of giving birth to the statesman whose energetic councils established the empire of England in the Eastern, and the warrior whose immortal deeds proved the salvation of Europe in the Western Hemisphere (1)

Wellesley was then a member of the French army The young soldier was regularly educated for the profession of his choice, and received his first commission in the year 1787, being then in the eighteenth year of his age Napoleon had entered the artillery two years before, at the age of sixteen, and was then among on the heroes of Plutarch Sir Walter Scott, at the age of seventeen, was then relieving the tedium of legal education by wandering over the mountains of his native land, and dreaming of Ariosto and Amadis in the grassy vale of St. Leonard's, near Edinburgh Viscount Chateaubriand was inhaling the spirit of devotion and chivalry, and wandering, in anticipation, as a pilgrim to the Holy Land, amidst the solitude of la Vendée Goethe, profound and imaginative, was reflecting on the destiny of man on earth, like a cloud which "turns up its silver lining to the moon," Schiller was embodying in immortal verse the shadows of history and the creations of fancy; and the ardent spirit of Nelson was chafing on inaction and counting the weary hours of a pacific West Indian station. Little did any of them think of each other, or anticipate the heart-stirring scenes which were so soon about to arise, in the course of which their names were to shine forth like stars in the firmament, and their genius acquire immortal renown There were giants in the earth in those days (2)

Wellesley's education and first military services. Mr Arthur Wellesley, educated at Eton, studied for a short time at the Military Academy of Angers, in France, but he was soon removed from that seminary to take a part in the active duties of his profession As subaltern and captain he served both in the cavalry and in infantry: in spring 1795 he was promoted to the majority of the 33d regiment, and in autumn of the same year he became, by purchase, its lieutenant-colonel At the head of that regiment he first entered upon active service, by sailing from Cork, in May 1794, and landing at Ostend in the beginning of June following, with orders to join Lord Moira's corps, which was assembling in June 1794. that place, to reinforce the Duke of York, who was in the field near Tournay That ill-fated prince, however, was then hard pressed by the vast army of the Republicans, under Pichegru (3), and as he was under the necessity of retreating, it was justly deemed unadvisable to attempt the retention of a fortress so far in advance as Ostend, and Lord Moira marched by Bruges and Ghent to Scheldt, and crossing that river at the Tête de Flandre, joined the English army encamped around Antwerp (4)

His talents were distinguished during the retreat from Antwerp. The multiplied disasters of that unhappy campaign soon brought Colonel Wellesley into contact with the enemy, and taught him the art of war in the best of all schools, that of great operations and adverse fortune The English army, now entirely separated from that of the Austrians, who had marched off towards the Rhine, were in no sufficient strength to face the immense masses of the Republicans in any considerable combat But a number of detached actions took place with the rearguard, in which the spirit and intelligence of Colonel Wellesley speedily became conspicuous On the river Neelie, in a warm affair near the village

30th Dec 1794 of Boxtel, and in a hot skirmish on the shores of the Waal, the
 31st Jan 1795 55d did good service; the ability with which they were conducted
 15th Jan 1795 excited general remark, and Colonel Wellesley was in consequence promoted
 to the command of a brigade of three regiments in the ulterior retreat from
 the Lech to the Yssel. They were no longer, indeed, pursued by the enemy,
 who had turned aside for the memorable invasion of Holland, but the rude-
 ness of the elements proved a more formidable adversary than the bayonets
 of the Republicans. The route of the army lay through the inhospitable pro-
 vinces of Guelderland and Over Yssel, the country consisted of flat and desert
 heaths; few houses were to be found on the road, and these scattered, singly,
 or in small hamlets, affording no shelter to any considerable body of men.
 Over this dreary tract the British troops marched during the dreadful winter
 of 1794-5, through an unbroken wilderness of snow, with the thermometer
 frequently down at 15 and 20° below zero of Fahrenheit, and, when it was
 somewhat milder, a fierce and biting north wind blowing direct in the faces
 of the soldiers. In this trying crisis, Colonel Wellesley commanded the rear-
 guard, his activity and vigilance arrested in a great degree the disorders
 which prevailed; and, in his first essay in arms, he experienced severities
 equal to the far-famed horrors of the Moscow retreat (1)

Excellent effect of this campaign on his mind Short as was this first campaign of the Duke of Wellington, it was
 the best school that had been presented for nearly a century for the
 formation of a great commander War was there exhibited on a
 grand scale, it was in an army of sixty-eight battalions and eighty squadrons
 that he had served The indomitable courage and admirable spirit of the
 British soldiers had there appeared in their full lustre but the natural re-
 sults of these great qualities were completely prevented by the defects, at
 that period, of their military organization, by total ignorance of warlike
 measures in the cabinet which planned their movements, a destructive mi-
 nuteness of direction, arising from too little confidence on the part of Go-
 vernment in their generals in the field, a general want of experience in
 officers of all ranks in the most ordinary operations of a campaign, and,
 above all, the ruinous parsimony which, in all states subject to a really po-
 pular government, breaks down, on the return of peace, the military force,
 by which alone, on the next resumption of hostilities, early success can be
 secured These defects appeared in painful contrast to the brilliant and effi-
 cient state of the more experienced German armies, which, with national re-
 sources no ways superior, and troops far inferior both in courage and energy,
 were able to keep the field with more perseverance, and, in the end, achieve
 successes to which the British soldiers could hardly hope to arrive These
 considerations forcibly impressed themselves on the mind of the young offi-
 cer, and he was early led to revolve in his mind those necessary changes in
 the direction and discipline of the army, which, matured by the diligence
 and vigour of the Duke of York, ultimately led the British nation to an un-
 paralleled pitch of strength and glory (2)

Colonel Wellesley sent to India, and first entry on command there It was not long before an opportunity presented itself for witness-
 ing the capability of British soldiers when subjected to an abler
 direction, and led by more experienced officers After the return
 of the troops from Flanders to England, the 55d regiment was or-
 dered to the West Indies, but contrary winds prevented the transports in
 which it was embarked from sailing, and their destination was soon after

(1) Gurw 1 2, 3 Scher 1 4, 5

"The cold in Russia in 1812 never fell so low as

in Holland in the winter of 1794-5"—JOMINI, *Field of Napoleon* 11 74

(2) Scherer, 1 G, 10

changed for the east. Colonel Wellesley arrived with his corps at Calcutta in January 1797. During the voyage out it was observed that he spent most of his time in reading; and after he landed in India, he was indefatigable in acquiring information regarding the situation and resources of the country in which he was to serve, so that when he was called, as he early was, to high command, he was perfectly acquainted, as his correspondence from the first demonstrates, both with the peculiarities of Indian warfare, and the intricacies of Indian politics (1). And, when his division of the army took the field in January 1799, against Tippoo Sultan, the fine condition and perfect discipline of the men, as well as the skill and judgment of the arrangements made for their supplies, called forth the warm commendations of the commander-in-chief, who little thought what a hero he was then ushering the name into the world (2). During the campaign which followed, he had little time for study, and still fewer facilities for the transport of books. His library consisted of only two volumes, but they were eminently descriptive of his future character—the Bible and Caesar's Commentaries (3).

The name of no commander in the long array of British greatness will occupy so large a space in the annals of the world as that of Wellington. and yet there are few whose public character possesses, with so many excellences, so simple and unblemished a complexion. It is to the purity and elevation of his principles, in every public situation, that this enviable distinction is to be ascribed. Intrusted early in life with high command, and subjected from the first to serious responsibility, he possessed that singleness of heart and integrity of purpose which, even more than talent or audacity, are the foundation of true moral courage, and the only pure path to public greatness—a sense of duty, a feeling of honour, a generous patriotism, a forgetfulness of self, constituted the spring of all his actions. He was ambitious, but it was to serve his king and country only; fearless because his whole heart was wound up in these noble objects; disinterested, because the enriching of himself or his family never for a moment crossed his mind. Insensible to private fame when it interfered with public duty; indifferent to popular obloquy when it arose from rectitude of conduct. Like the Roman patriot, he wished rather to be, than appear deserving. "*Ease quam videri bonus malebat, ita quo minus gloriam petebat eo magis adsequelatur* (4)." Greatness was forced upon him, both in military and political life, rather because he was felt to be the worthiest, than because he desired to be the first; he was the architect of his own fortune, but he became so almost unconsciously, while solely engrossed in constructing that of his country. He has left undone many things, as a soldier, which might have added to his fame, and done many things, as a statesman, which were fatal to his power; but he omitted the first because they would have endangered his country, and committed the second because he felt them to be essential to its salvation. It is to the honour of England, and of human nature, that such a man should have risen at such a time, to the rule of her

(1) *Gazet.* 1. 2. 3. *Scher.* 1. 9, 10. *Wellesley's* *Desp.* 1. 121.

(2) It is no much satisfaction in acquiring your lordship that the very handsome appearance and perfect discipline of the troops under the orders of the then General W. Wellesley do honour to their services and to him, while the judicious and masterly arrangements as to supplies, which showed an abundance of every market, and inspired confidence into the ranks of every description, were no less creditable to Colonel Wellesley than advantageous to the public service and deservedly creditable to my master's

approbation." How early is the real character of great men shown when once thrown into important situations! This might have passed for a description of Wellington's arrangements for the supply of his army in the month of June in spring 1814.—*G. et H.* 10 to the *Commons*—*General in Council* Feb. 2. 1799; *Wellesley's* *Despatches*, 1. 121.

(3) I have interesting letters from my highly esteemed friend Lord Ashley who received it from the Duke himself.

[1] 1802. *Edin. Cal.*

armies and her councils, but he experienced with Themistocles and Scipio Africanus, the mutable tenure of popular applause, and the base ingratitude of those whom he had saved. Having triumphed over the arms of the threatening tyrant, he was equally immovable in the presence of the insane citizens; and it is hard to say whether his greatness appeared most when he struck down the conqueror of Europe on the field of Waterloo, or was himself with difficulty rescued from death on its anniversary, eighteen years afterwards, on the streets of London.

His military character A constant recollection of these circumstances, and of the peculiar and very difficult task which was committed to his charge, is necessary, in forming a correct estimate of the Duke of Wellington's military achievements. The brilliancy of his course is well known. an unbroken series of triumphs from Vimeira to Toulouse; the entire expulsion of the French from the Peninsula; the planting of the British standard in the heart of France; the successive defeat of those veteran marshals who had so long conquered in every country of Europe; the overthrow of Waterloo; the hurling of Napoléon from his throne, and the termination, in one day, of the military empire founded on twenty years of conquest. But these results, great and imperishable as they are, convey no adequate idea, either of the difficulties with which Wellington had to contend, or of the merit due to his

Difficulties with which he had to contend in that capacity

transcendent exertions. With an army seldom superior in number to a single corps of the French marshals, with troops dispirited by recent disaster, and wholly unaided by practical experience, without any compulsory law to recruit his ranks, or any strong national passion for war to supply its want—he was called on to combat successively vast armies, composed in great part of veteran soldiers, perpetually filled by the terrible powers of the conscription, headed by chiefs who, risen from the ranks, and practically acquainted with the duties of war in all its grades, had fought their way from the grenadier's musket to the marshal's baton, and were followed by men who, trained in the same school, were animated by the same ambition. Still more, he was the general of a nation in which the chivalrous and mercantile qualities are strangely blended together, which, justly proud of its historic glory, is unreasonably jealous of its military expenditure, which, covetous beyond measure of warlike renown, is ruinously impatient of pacific preparation, which starves its establishment when danger is over, and yet frets at defeat when its terrors are present; which dreams, in war, of Cressy and Agincourt, and ruminates, in peace, on economic reduction. He combated at the head of an alliance formed of heterogeneous states, composed of discordant materials, in which ancient animosities and religious divisions were imperfectly suppressed by recent fervour or present danger, in which corruption often paralysed the arm of patriotism, and jealousy withheld the resources of power. He acted under the direction of a Ministry which, albeit zealous and active, was alike inexperienced in hostility and unskilled in combinations, in presence of an Opposition, which, powerful in eloquence, supported by faction, was prejudiced against the war, and indefatigable to arrest it, for the interests of a people who, although ardent in the cause and enthusiastic in its support, were impatient of disaster and prone to depression, and whose military resources, how great soever, were, dissipated in the protection of a colonial empire which encircled the earth.

Admirable ability and skill with which he overcame them

Nothing but the most consummate prudence, as well as ability in conduct, could, with such means, have achieved victory over such an enemy, and the character of Wellington was singularly fitted for the task. Capable, when the occasion required, or opportunity

was afforded, of the most daring enterprises, he was yet cautious and wary in his general conduct, prodigal of his own labour, regardless of his own person, he was avaricious only of the blood of his soldiers—endowed by nature with an indomitable soul, a constitution of iron, he possessed that tenacity of purpose and indefatigable activity, which is ever necessary to great achievements; prudent in council, sagacious in design, he was yet prompt and decided in action; no general ever revolved the probable dangers of an enterprise more anxiously before undertaking it—none possessed in a higher degree the eagle eye, the arm of steel, necessary to carry it into execution. By the steady application of these rare qualities, he was enabled to raise the British military force from an unworthy state of depression to an unparalleled pitch of glory—to educate, in presence of the enemy, not only his soldiers in the field, but his rulers in the cabinet; to silence, by avoiding disaster, the clamour of his enemies—to strengthen, by progressive success, the ascendancy of his friends—to augment by the exhibition of its results, the energy of the government—to rouse, by deeds of glory, the enthusiasm of the people. Skillfully seizing the opportunity of victory, he studiously avoided the chances of defeat—aware that a single disaster would at once endanger his prospects, discourage his countrymen, and strengthen his opponents, he was content to forego many opportunities of earning fame, and stifle many desires to grasp at glory; magnanimously checking the aspirations of genius, he trusted for ultimate success rather to perseverance in a wise, than audacity in a daring course. He thus succeeded, during six successive campaigns, with a comparatively inconsiderable army, in maintaining his ground against the vast and veteran forces of Napoleon, in defeating successively all his marshals and baffling successively all his enterprises, and finally rousing such an enthusiastic spirit in the British empire as enabled its government to put forth its immense resources on a scale worthy of its present greatness and ancient renown, and terminate a contest of twenty years by planting the English standard on the walls of Paris.

Character of Wellington To have given birth to such a man is a sufficient distinction for one family; but Wellington is not the only illustrious character which England owes to the house of Mornington. It is hard to say whether, in a different line, in the management of the cabinet, the civil government of men, and the far-seeing sagacity of a consummate statesman, MARQUIS WELLINGTON is not equally remarkable. He was the elder brother of the family, and gave early promise, both at school and college, of those brilliant qualities which afterwards shone forth with such lustre in the administration of India. His talents for business soon introduced him to the notice of government—but his predilection was so strongly evinced from the first for Oriental affairs, that nature appeared to have expressly formed him for the command of the East. At an age when most of his contemporaries were acquainted with the affairs of India only through the uncertain medium of distant report, or the casual hints of private conversation, he was fully master of the politics of Hindostan, and had already formed those clear and luminous views of the condition and situation of our power there, which enabled him, from the very outset of his career, to direct with so steady a hand the complicated mazes of Indian diplomacy. He had for several years been an active member of the Board of Control then under the able direction of Lord Melville—and had acquired from his remarkable proficiency in the subject, a large share in the confidence of government—but it was not in any of the public offices it was not from the inspiration of Leadenhall Street, that he drew the enlarged and statesman-like views which from the first characterised his eastern adminis-

tration. It was in the solitude of study that the knowledge was obtained; it was from the sages and historians of antiquity that the spirit was inhaled; it was in the fire of his own genius that the light was found.

Character of
his Indian
administra-
tion

The maxims on which Marquis Wellesley acted in the East, were the same with those which Napoleon perceived to be indispensable to his existence in Europe, and which, in former times, had given the Romans the empire of the world. He at once perceived that the British sway in India was founded entirely on opinion, that twenty or thirty thousand Europeans, scattered among a hundred million of Asiatics, must have acquired their supremacy by fascinating the mind, that this moral sway could be maintained only by fidelity to engagement, and fearlessness in conduct, and that, in such circumstances, the most prudent course was generally the most audacious. Disregarding, therefore, entirely that temporizing policy which the government at home had taken such pains to impress upon its rulers, which Cornwallis had triumphed over only by disregarding, and Sir John Shore had obeyed only to destroy, he resolved, at all hazards, to maintain the British faith inviolate, to strike terror into his enemies by the vigour of his measures, and secure victory by never despairing and being always worthy of it. He recollected the words of Cato,—“*Quanto vos attentiores ageris tanto illis animus infirmior erit; si paululum modo vos languere viderint, jam omnes feroces aderunt* (1)”.

Statesman
like wisdom
with which
it was ac-
companied

But vigour and resolution are not alone capable of achieving success, though they are generally essential towards it. Wisdom in combination, foresight in council, prudence in preparation, are also indispensable, and it was in the union of these invaluable qualities with the courage of the hero and the heart of the patriot, that Marquis Wellesley was unrivalled. Boldly assuming the lead, he kept it without difficulty, because he was felt to be the first; ardently devoted to his country, he inspired a portion of the sacred fire into all his followers (2), discerning in the estimation of character, he selected from the many men in his service the most gifted, penetrated with the most lofty, as well as the soundest views, he communicated his own statesmanlike principles both to the direction of the councils and the guidance of the armies of India. In vigour of resolution, moral courage, diplomatic ability, and military combination, he was the first of British statesmen, even in the days of Pitt and Fox. Never, perhaps, in so short a time, was such a change produced on the character of public administration, the vigour of national councils, or the success of national aims, as by his eastern rule. He found them vacillating, he left them decided, he found the public service weakened by corruption, he left it teeming with energy; he found the East India Company striving only to defend their possessions on the coast, he left them seated on the throne of Aurungzebe. So vast a change, effected in a few years, is one of the most remarkable instances which history affords of the impress which a lofty character can communicate to the sphere of its influence, and, like the corresponding and simultaneous ele-

(1) *Sall. Bell. Cat.*

(2) “So entirely devoted am I,” said Lord Wellesley, “to the indispensable duty of providing a large force in the field and an efficient system of discipline, that my estimate of character, and my sentiments of respect and even of affection, in this country are regulated absolutely by the degree of zeal and alacrity which I find in those who are to assist me in this great struggle. Nor can I conceive a more firm foundation, or a more honourable bond of friendship, than a common share in the labours,

difficulties, and honour of defending and saving so valuable a part of the British Empire. This is the nature of the connexion which I seek with your Lordship, and these are the sentiments which render me so averse to those men who appear negligent, or reluctant, or irresolute in a conjuncture which ought to extinguish all partialities, all private resentments and affections, and unite and animate all talents and exertions in one common cause.” — MARQUIS WELLESLEY TO LORD CLIVE, *Governor of Madras*, 14th Nov. 1798, *Wells. Despatches*, i. 341.

vation of France under the guidance of Napoleon, may tend to modify the ideas which philosophic minds are apt to entertain of the entire government of human affairs by general causes, and to make us suspect, that in working out its mysterious designs, Providence not unfrequently makes use of the agency of individual greatness

Character of Lord Melville. Another statesman, possessed of less brilliant, but equally important qualities, presided over the direction of Indian affairs in this country during the most momentous period of Lord Wellesley's government, and had long contributed essentially, by the enlarged and statesmanlike views with which he himself was impressed, to train the mind of the future ruler of the East to those great conceptions which from the very first distinguished his administration. HENRY DUNBAR, afterwards LORD VISCOUNT MELVILLE, was descended from the house of Arncliffe, in Scotland—a family which, since the Revolution, had enjoyed a large share of the legal honours and offices in that country, and had early risen, alike from his talents and his connexions, to the office of Lord Advocate. But his force of mind and ambition impelled him into a more elevated career. In 1782, he entered Parliament, and from that time, for the next twenty five years, enjoyed to a greater degree than any other person the confidence and friendship of Mr Pitt. In 1792, he was promoted to the important situation of President of the Board of Control, and from that period down to Mr Pitt's retirement in 1800, had the almost exclusive direction of Eastern affairs. When that great man resumed the helm in 1801, he was made first Lord of the Admiralty, and by his indefatigable energy soon restored the navy from the state of decay into which it had fallen during the short-sighted parsimony of the Addington administration. So that the same statesman enjoyed the rare distinction of framing the policy which produced Lord Wellesley's triumphs in India and winging the fleets which extinguished the navy of France amidst the shoals of Trafalgar.

His great abilities and vast Indian empire. Lord Melville's talents were of a high order, but they were of the solid and useful rather than the brilliant and attractive kind. A powerful debater from strength of intellect and vigour of thought, he overcame by these qualities the disadvantages of a northern accent, a deficiency in imaginative or oratorical qualities, and the prejudices against his country, which were general in England, till the genius of Sir Walter Scott and the increasing intercourse between the two nations converted it into a sometimes indulgent partiality. But if he could not rival Mr Fox or Mr Sheridan in the fire of genius or graces of eloquence, he excelled them in many sterling qualities which constitute a great statesman—and the want of which is too often, to its grievous loss, thought to be compensated in Great Britain by the more showy but inferior accomplishments which command and seduce a popular assembly. To vast powers of application, he united a sound judgment and a retentive memory; the native force of his mind made him seize at once the strong points of a subject; his prodigious information rendered him thoroughly master of its details. Nowhere is to be found a more comprehensive and statesmanlike series of instructions than is presented in his Indian correspondence. It has been declared by an equally competent judge and unbiassed opponent, that in these and Marquis Wellesley's Despatches is to be sought the whole materials both of history and information on our Eastern dominions (1). All the features of Lord Wellesley's administration are to be found there chalked-out with prophetic wisdom, even

(1) Lord Brougham, Edin. Review No. 129.

before that illustrious man left the British shores. The true principles of colonial government are developed with a master's hand and a statesman's wisdom; all his subsequent measures obtained the cordial support of that able auxiliary in the British Cabinet. It may safely be affirmed, that if England ever lose the empire of the seas, it will be from departing from his maxims in the management of the navy; if she is stripped of her Indian empire, from forgetting his principles of colonial administration (1).

The general objects of his policy are clearly pointed out in his letters from the Cape of Good Hope in February 1798, to Lord Melville; a series of state papers drawn up before he had set foot in India, which will bear a comparison with any in the world for sound and enlarged views of complicated politics. He at once perceived that the advantages of the triple alliance against Tippoo Sultaun, and the ascendancy acquired by the glorious victory of Lord Cornwallis before Seringapatam, had been in a great measure lost by the timid policy of the succeeding administration, and therefore the first object of his endeavours was to recover the ascendancy which had been so unhappily impaired, and take measures against the powers which had risen upon its ruins. The destruction of the French subsidiary force at Hyderabad and restoration of our influence at the court of the Nizam, the arrangement by mediation of the differences among the Mahratta powers; the removal of the league which was to prove a counterpoise to the ascendancy of Tippoo, and the separation of his territories, if hostilities became unavoidable, from the coast, so as to detach him from French intrigue or co-operation, were the objects which presented themselves to his mind, not so much as steps to power as essential to existence (2).

Lord Wellesley's first objects of policy, and early perception of the necessity of war

No sooner had he landed in India, however, than he perceived that the open alliance of Tippoo with the French, joined to the success of their expedition to Egypt, and the increase to their influence among the native powers which Napoleon's victories had produced, rendered an early attack on the Mysore chief indispensable (3). Had he possessed the means, he would immediately have commenced hostilities before the Sultan's preparations were completed, but unfortunately the state of the Government finances and military establishment at Madras, where the principal efforts required to be made, rendered that altogether impracticable. So low had the credit of the Company fallen at that presidency, that their eight per cent paper had sunk to a discount of

He is unable, from financial and military difficulties to commence immediate hostilities

(1) "It is of the last importance to keep up the means of a large importation from India, not only from the encouragement it affords to the navigation and shipping of the kingdom, and the addition which it makes annually to the wealth and capital of the country, and being a fruitful source of revenue, but its necessity as immediately connected with the prosperity of our Indian provinces. It is to the increased exports from India to Europe that we are to attribute the increase of Indian prosperity, industry, population, and revenue, and the manufacturers of that country would immediately be reduced to a deplorable state if any check were ever given to their annual exports to this country"—Lord MELVILLE to Lord WELLESLEY, August, 1799; *WEL. DESP.* ii. 102. It is on this principle, a fair reciprocity of advantages, that all really wise colonial administration must be founded, and by it alone that such distant possessions can be permanently preserved, but how different is this view from the sacrifice of all colonial interests to cheap purchasing by the mother state, which, under the free trade sys-

tem, has almost exclusively regulated our policy for the last fifteen years!

(2) Wellesley to Lord Melville, Feb. 28, 1798 i. 1, 34, 81, 91

(3) Sir Thomas Munro, one of the ablest men that India has ever produced, was of the same opinion at this period. "Men read books," says he, "and because they find all warlike nations have had their downfall, they declaim against conquest as not only dangerous but unprofitable, but there are times and situations where conquest not only brings a revenue greatly beyond its expenses, but also additional security. Let us advance to the Krishna, we shall triple our revenue, our barrier will then be both stronger and shorter. The dissensions and revolutions of the native governments will point out the time when it is proper for us to become actors. While Tippoo's power exists, we shall usually suffer the danger of losing what we have." *ARR. OF MONTICATO, J.* 234; and *AUBEN*,

battering train; a noble force, in an incomparable state of discipline and equipment, while a co-operating body of six thousand men, in equally admirable condition, were ready to advance from Bombay under General Stuart. Explanations were demanded from Tippoo of his hostile measures, particularly his sending ambassadors to the Isle of France; but no reply was received, although the British Government gave ample proof of their disposition to act with fidelity according to the existing treaties, by relinquishing to him, at this very crisis, the territory of Wynaad, a disputed district which, on Lord Wellington's arrival in India, was in the possession of the British authorities, without any adequate title. A proposition on the part of the Governor-general to open an amicable negotiation through Colonel Doveton, having been eluded with characteristic artifice (1) by the Sultan, and the military preparations being complete, Marquis Wellesley, early in January, proceeded to Madras in person, and on the 10th of February the army, under General Harris, entered the Mysore territory, while, shortly after, General Stuart also advanced with his co-operating force from the side of Bombay (2).

Notwithstanding the depth and extent of his plans, Tippoo was on this occasion taken by surprise. He had not anticipated the vigour and celerity of the new Governor-general, and calculated upon being permitted to choose his own time, as on former occasions, for the commencement of hostilities, which he would have deferred till his preparations were complete, and the extensive confederacy in the course of formation was encouraged by the presence of a French auxiliary force. His military power, however, was already very great; Seringapatam was in a formidable state of defence, and he had above fifty thousand men in a central position, under arms. Finding, therefore, that his territories were menaced on two sides at once, he judiciously resolved to direct his efforts, in the first instance, against the least considerable of the invading armies and with that view moved against General Stuart, even before he had crossed the Bombay frontier. The Sultan's force on this occasion amounted to twelve thousand men, the flower of his army but though the weight of the contest fell on two thousand European and Sepoy troops, they were defeated after a violent struggle of three hours' duration, and quickly retired to the neighbourhood of Seringapatam, with the loss of fifteen hundred killed and wounded (3).

The progress of the grand army, thirty thousand strong, which advanced from the side of Madras, was at first very slow, owing to the immense battering and siege equipage which followed in its train, and the sickness which almost uniformly seizes the transport cattle when they leave the coast and ascend the high table-land of Mysore. They experienced, however, very little molestation from the Sultan until the 27th March, when a general engagement took place. Tippoo's army occupied a range of heights beyond the little town of Malavelly; and a distant exchange of cannon-shot from the batteries on either side at length led to a general action. Colonel Wellesley (Wellington) commanded the division on the left, and General Floyd the cavalry in the centre. Harris himself was on the right. Owing to the exhausted state of the bullocks which drew the artillery, a delay occurred in the formation of the line, of which the Mysore infantry took advantage to make a daring charge on Colonel Wellesley's division, which moved on to the attack, and was con-

(1) Tippoo wrote in answer to the communication, summoning Major Doveton mission, that being frequently disposed to mal-
understand and abuse, he was accordingly proceeding upon hunting grounds; but that he would be pleased that the Governor-general would be so good as to dispatch Major

Doveton to him unattended, or slightly attended.

siderably in advance, separated by a wide gap from the centre (1); while a large body of horse bore down on the right, under Harris himself. They were, however, gallantly repulsed by the brigade under Harris's orders, while the 55d on the left were ordered to reserve their fire till within pistol-shot, when they delivered it with decisive effect, and immediately charged with the bayonet. The red-plumed dragoons of Floyd, soon after coming up from the centre, charged them on the other flank, and completed the rout. Two thousand of the enemy fell in the battle or the pursuit, while the loss of the victors did not exceed three hundred (2).

Investment of Seringapatam April 5 No further obstacle now remained to prevent the British from taking up their ground before Seringapatam, which was done on the 5th April. The assembled host, which was soon joined by the corps under General Stuart, from Bombay, presented a formidable appearance, and exhibited a splendid proof of the magnitude and resources of the British empire in the East. Thirty-five thousand fighting men, a hundred pieces of battering cannon, and camp followers in the usual Asiatic proportion of four to one soldier, formed a stupendous array of above a hundred and fifty thousand men, assembled on the high table-land of Mysore, three thousand feet above the level of the sea, and above eight thousand miles from the parent European state. The greatness of this effort will not be duly appreciated unless it is recollected that at the same moment twenty thousand admirable troops, under Sir James Craig, lay in the territories of Oude, to guard the northern provinces of India from Zemaun Schah; that the army was collected in the Mediterranean which so soon after expelled the French from Egypt, and the fleet was afloat which was to dissolve, by the cannon of Nelson, the northern coalition (3).

Progress of the siege and repulse of Colonel Wellesley The efforts of Lord Cornwallis had been directed against the northern face of the fortress of Seringapatam; and Tippoo, anticipating an attack in the same quarter, had greatly strengthened the defences in that direction. These preparations, however, were rendered altogether unavailing by the able movement of General Harris, previous to taking up his ground before the town, in suddenly crossing the Cavery by a neglected ford, and appearing before its southern front; a quarter in which the country was not yet ravaged, the fortifications in a comparatively neglected state, and the communication with the Bombay army direct and easy. The camp was formed opposite to the south-western side of the fortress, the army from Bombay effected its junction on the 14th, and the approaches were conducted with great vigour. In the course of these operations, much annoyance was experienced from an advanced post of the Sultan's, placed on a rocky eminence near the walls, from whence a destructive fire, chiefly with rockets, was kept up on the parties working in the trenches. In order to put a stop to this harassing warfare, an attack on the post during the night was resolved on, and intrusted to Colonel Wellesley and Colonel Shaw. This nocturnal encounter

(1) Colonel Wellesley on this occasion was not intended by General Harris to make the attack, but to wait till the onset was made by the right and centre, and orders to that effect were sent him by the commander-in-chief. When they were delivered, however, he saw, from the confusion into which the enemy in his front had fallen, that the attack could be made with more prospect of success by his division, and he said so to the officer who bore the despatches. He agreed with him, but stated that he had only to deliver his orders, but that he would report the circumstance, and Colonel Wellesley's

hear from him to the contrary in ten minutes, he might conclude the suggestion was approved of. Nothing was heard during that time, and Colonel Wellesley made the attack, which proved successful. "I was a little annoyed," said the Duke, in London in 1823 "at the time, that this circumstance was not noticed by Harris in his official despatches, but I now see he was quite right not to mention it."

would be of little importance, were it not rendered remarkable by a circumstance as rare as it is memorable, and worthy of being recorded for the encouragement of young officers exposed to early disaster—a failure by Wellington (1)

Both divisions marched a little after it was dark. Colonel Shaw succeeded in getting possession of a ruined village, within forty yards of the aqueduct from whence the firing issued; but Colonel Wellesley, on entering the rocky eminence, near the Sultanpettah Tope, was assailed on all sides with so severe a fire, that both the 33d regiment and sepoy battalion, which he commanded, were thrown into disorder (2), and he was obliged to fall back to the camp—and such was the confusion which prevailed, owing to the darkness of the night, that he arrived there accompanied only by Colonel Mackenzie. The young officer proceeded at midnight to the general's tent, who was anxiously expecting his arrival, at first much agitated, but after relating the event to that officer he retired, threw himself on the table of the tent, and fell asleep—a fact in such a moment singularly characteristic of the impetuous character of the future hero of Torres Vedras (3). General Harris next morning drew out the troops for a second attack, and at first offered the command to General Baird, as Colonel Wellesley had not yet come up to the parade from having been detained at the Adjutant-General's office, but, on second thoughts, he said it was but fair to give Colonel Wellesley a second trial; a proposal in which that generous officer, after having turned his horse to take the command at once and cordially acquiesced. Accordingly, at ten next morning, Colonel Wellesley, with the Scotch brigade and two battalions of sepoys, again advanced against the Tope, which was soon carried in gallant style, while Colonel Shaw, at the same time, drove the Mysoreans from their camp. post on the side of the ruined village. But for this circumstance, and the elevation of mind which prompted both General Harris and General Baird to overlook this casual failure, and intrust the next attack to the defeated officer, the fate of the world might have been different, and the star of the future conqueror of Napoleon extinguished in an obscure nocturnal encounter in an Indian water-course (4).

Account and
fall of Sering-
apatnam,
4th May

The approaches to the fortress being much facilitated by this success, the operations of the siege were conducted with great rapidity.

Several formidable sallies of the Mysore Infantry and horse were repulsed by the steadiness of the besiegers. Infantry, and the great vigilance

(1) Wellesley's Despatch, 1. 33 & 340. Gurney, 1. 22, 23.

(2) The 23d regiment, and some battalions, under Colonel Wellesley, were ordered to be reviewed at sunset on the 24th—Gurney, 1. 22. There is erroneously inserted in Lambington, 477.

(3) "When they retired back, Colonel Wellesley proceeded to headquarters to report what had happened; but finding that General Harris was not yet in, he threw himself on the table of the drawing-room, and, worn out with fatigue and an wet of cold, fell asleep.—Mackenzie's Narrative, who was with Wellesley on the occasion.—Harris, 1. 182. This fact is erroneously inserted in Lambington's Life of H. Carr.

(4) Wellesley's Despatch, 26th April, 1799, 1. 321 & 3. Gurney, 1. 22, 23—Lambington's Life of Mar. 377, 308.

General, afterwards Lord David Baird, in particular delicacy and civility, tried to the suggestion that Colonel Wellesley should be intrusted with the second attack; on pretence of an opportunity to superior officers, who might be accused by public beings, have been anxious rather to throw into the scale a rival for the honors of the siege worthy

of the highest admiration. This fact is mentioned in Mackenzie's Memoirs of Sir David Baird, and was doubtless known upon it by Gurney's Despatches of Wellesley; though that gallant officer admits that Baird elevated character was perfectly capable of so honorable a course. But, for the human nature the author is happy to be able to give it an entire confirmation; he has repeatedly heard the anecdote from many gallant officers, he was present on the occasion, and afterwards contributed, in no small degree to the glorification of Baird and Wellesley.—Colonel Gurney, afterwards Adjutant-General of the Bengal army, then engaged in the siege, the author transmitted his friends to whom letters and letters, details, proceeded to the explanation of that head of heroes, he has distinctly pleasure in being of his public testimony. The fact also, as was related, caused a personal with the accounts which Baird himself gave of the two victories, and which is given as authentic in the Life of Lord Harris by Mr. Lambington, under the name of Harris, 1. 182 & 183; in Mackenzie's Memoirs of Sir David Baird, 1. 182; and Gurney's 1. 22, note.

exhibited everywhere in the trenches, the most exposed parts of which were
 30th April under Colonel Wellesley's direction. At length, on the 30th April,
 the breaching batteries opened on one of the bastions, which was soon shaken
 by a severe cross-fire from different sides; the curtain on the right was soon
 levelled, a great magazine of rockets blew up in the town on the morning of
 the 2d May, and spread terror and devastation far and wide by its tremendous
 explosion. Early on the morning of the 4th, the troops destined for the assault
 4th May were placed in the trenches, and the hour of one o'clock in the
 afternoon was chosen for the attack, when the sultry heat usually disposed
 the Asiatics to repose. Two thousand five hundred Europeans, and eighteen
 hundred natives formed the storming party, under the command of General
 Baird. They had a fearful prospect before them, for two-and-twenty thousand
 veteran troops composed the garrison, and the bastions, of uncommon
 strength, were armed with two hundred and forty pieces of cannon (1).
 "Follow me, my brave fellows, and prove yourselves worthy of the name of
 British soldiers," was the brief address of that noble officer to his gallant fol-
 lowers, as leaping sword in hand out of the trenches, he descended the slope
 which led to the rocky bed of the Cávery, and required to be crossed before
 the foot of the breach was reached. He was rapidly followed by the forlorn
 hope, which soon led the host, and was immediately succeeded by the assault-
 ing column in close array. But the enemy were at their post, all was ready
 for the assault, every battery was manned, and from every bastion and gun
 which bore on the assailants a close and deadly fire was directed which speed-
 ily thinned their ranks; and would have caused any other troops to recoil (2).
 On, however, the British rushed, followed by their brave allies, through the
 deadly storm; in five minutes the river was crossed, in five more the breach
 was mounted, a crimson torrent streamed over the ruin; a sally on the flank
 of the assaulting column by a chosen body of Tippoo's guards was repulsed;
 and, as Baird was leading his men up the entangled steep, a loud shout and
 the waving of the British colours on its summits, announced that the fortress
 was won, and the capital of Mysore fallen. But here an unexpected obstacle
 occurred. The summit of the breach was separated from the interior of the
 wall by a wide ditch, filled with water, and at first no means of crossing it
 appeared, but a length Baird discovered some planks which had been used
 by the workmen in getting over it to repair the rampart, and himself leading
 the way, this formidable obstacle was surmounted. Straightway, dividing his
 men into two columns, under Colonels Sherbrooke and Dunlop, this heroic
 leader soon swept the ramparts both to the right and left, the brave Asiatics
 were, by degrees forced back, though not without desperate resistance, to the
 Mosque, where a dreadful slaughter took place. It at length surrendered,
 with two of Tippoo's sons, when the firing had ceased at other points, while
 the Sultan himself, who had endeavoured to escape at one of the gates of the
 town, which was assaulted by the sepoys, was some time afterwards found
 dead under a heap of several hundred slain, composed in part of the principal
 officers of his palace, who had been driven into a confined space, and
 mowed down by a cross fire of musketry. He was shot by a private soldier
 when stretched on his palanquin, after having been wounded himself, and
 had his horse killed under him, while Baird, who for three years had been
 detained a captive in chains in his dungeons, had the glorious triumph of tak-

(2) At one o'clock the troops moved from the

under an extremely heavy fire, passed the glacis and ditch, and ascended the glacis in

ing vengeance for his wrongs (1), by generously protecting and soothing the fears of the youthful sons of his redoubted antagonist.

Death of Tippoo. Tippoo could never be brought to believe that the English would venture to storm Seringapatam, and he looked forward with confidence to the setting in of the heavy rains which were soon approaching, to compel them to raise the siege. He was brave, liberal, and popular, during his father's life; but his reign was felt as tyrannical and oppressive by his subjects, which, however, as is often the case in the East, they ascribed rather to the cupidity of his ministers than his own disposition. The Bramins had predicted that the 4th of May would prove an inauspicious day to him; he made them large presents on that very day, and asked them for their prayers. He was sitting at dinner under a covered shed, to avert the rays of the sun, when the alarm was given. He instantly washed his hands, called for his arms, and, mounting his horse, rode towards the breach. On the way he received intelligence that Syed Gossar, his best officer, was killed. "Syed Gossar was never afraid of death," he exclaimed; "let Mahommed Cassim take charge of his division." His corpse was found under a mountain of slain, stripped of all its ornaments and part of its clothing, but with the trusty amulet which he always wore still bound round his right arm. He had received three wounds in the body, and one in the temple. But the countenance was not distorted, the eyes open, and the expression that of stern composure. The body was still warm; and for a minute Colonel Wellesley, who was present, thought he was still alive; but the pulse had ceased to beat which had so long throbbled for the independence of India (2).

Immense importance of the blow thus struck. The storming of Seringapatam was one of the greatest blows ever struck by any nation, and demonstrated at once of what vast efforts the British empire was capable, when directed by capacity and led by resolution. The immediate fruits of victory were immense. The formidable fortress, the centre of Tippoo's power, garrisoned by twenty-two thousand regular troops, with all his treasures and military resources, had fallen; the whole arsenal and founderies of the Kingdom of Mysore were taken, and the artillery they contained amounted to the enormous number of 451 brass, and 478 iron guns, besides 287 mounted on the works. Above £20,000 pounds of powder, and 421,000 round shot, also fell into the hands of the victors: the military resources, on the whole, resembled rather those of an old-established European monarchy, than of an Indian potentate recently elevated to greatness. But these trophies, great as they were, constituted the least considerable fruits of this memorable conquest; its moral consequences were far more lasting and important. In one day a race of usurpers had been extinguished, and a powerful empire overthrown: a rival to the British power struck down, and a tyrant of the native princes slain; a military monarchy subverted, and a stroke paralysing all India delivered. The loss in the assault was very trifling, amounting only to three hundred and eighty-seven killed and wounded, though fourteen hundred had fallen since the commencement of the siege; but the proportion in which it was divided, indicated upon whom the weight of the contest had fallen, and how superior in the deadly breach European energy was to Asiatic valour. For of that number three hundred and forty were British, and only forty-seven native soldiers (3).

Appoint-
ment of Col
Wellesley as
governor of
Seringapa-
tam

Colonel Wellesley was not engaged in the storm, but he commanded the reserve, which did not require to be called into action, and viewed merely with impatient regret the heart-stirring scene. He was next day, however, appointed governor of the town by General Harris, which appointment was not disturbed by Lord Wellesley, and constitutes one of the few blots on the otherwise unexceptionable administrations of that eminent man. History, indeed, apart from biographical discussion, has little cause to lament an appointment which early called into active service, the great civil as well as military qualities of the Duke of Wellington, and which were immediately exerted with such vigour and effect in arresting the plunder and disorders consequent on the storm, that in a few days the shops were all re-opened, and the bazars were as crowded as they had been during the most flourishing days of the Mysore dynasty. But individual injustice is not to be always excused by the merits of the preferred functionary; and, unquestionably, the hero of Seringapatam, the gallant officer who led the assault, was entitled to a very different fate from that of being superseded in the command almost before the sweat was wiped from the brow which he had adorned with the laurels of victory, and seeing another placed as governor of the most important fortress that had ever been added to the British dominions (1).

Judicious
arrange-
ments con-
sequent on
the fall of
Mysore

The political arrangements consequent on the fall of Mysore, rivalled in ability and wisdom the vigour with which the military operations had been directed. The body of Tippoo was interred with the honours due to his rank, in his father's mausoleum, his sons obtained a splendid establishment from the prudent generosity of the victors; the principal Mahomedan officers of the Mysore family, the main strength of the monarchy, were conciliated by being permitted to retain their rank, offices, and emoluments, under the new government, the heir of the ancient Rajahs of Mysore, whom Hyder had dispossessed, was restored to the sovereignty of the country, with a larger territory than any of his ancestors had possessed, the Nizam was rewarded for his fidelity by a large accession of territory taken from the conquests made by the Hyder family; the Peishwa was confirmed in his alliance by a grant somewhat more than a half of what had been allotted to the Nizam, although his conduct during the war had been so equivocal as to have forfeited all claim to the generosity of the British government, and rendered his participation in the spoil a matter merely of policy; while to the Company were reserved the rich territories of Tippoo on either coast, below the Ghauts, the forts commanding those important passes into the high table-land of Mysore, with the fortress, and island of Seringapatam in its centre, acquisitions which entirely encircled the dominions of the new Rajah of Mysore by the British possessions, and rendered his forces a subsidiary addition to those of the Company. With such judgment were these arrangements effected by the directions of Lord Wellesley, and under the immediate superintendence of Colonel Wellesley, and so considerable were the territories which were at the disposal of the victorious power, that all parties were fully satisfied with their acquisitions, the families of Hyder Ali and Tippoo Sultaun enjoyed more magnificent establishments than they had even done during the late reign, the infant Rajah of Mysore was elevated from a hovel to a palace, and reinstated in more than his ancestral splendour; the Mahomedan officers of the fallen dynasty, surprised by the continuance of all the honours and offices which

they had formerly enjoyed, were impressed with the strongest sense of the generosity of the British government; while the substantial power of Mysore had passed with a territory yielding £250,000 a-year to the munificent victors (1), and Marquis Wellesley, the distributor of all this magnificence, put the purest gem in the diadem of glory with which his brows were encircled, by refusing for himself and his family any portion of the extensive prize money derived from the public stores taken at Seringapatam, which had fallen into the hands of the victorious army (2)

the hands in the victorious army (5)
 But and power of Doondlah to escape.
 Little difficulty was experienced in effecting the pacific settlement of the Mysore after the death of Tippoo—the principal rajahs having hastened to make their submission after they heard of the favourable terms offered by the conqueror to the nobles and the judgment as well as firmness of Colonel Wellesley, upon whom, as governor of Mysore, the principal part of that important duty devolved, was alike conspicuous. One, however, Doondlah Waugh, a partisan of great energy and activity, was imprudently liberated during the confusion consequent on the storm of Seringapatam; and, having collected a band of freebooters and disbanded soldiers from the wreck of Tippoo's army, long maintained with indefatigable perseverance, a desultory warfare. He first retired into the rich province of Bednore, which he plundered, during the paralysis of government consequent on the fall of the Mysore dynasty, with merciless severity but Colonel Stevenson and Colonel Dalrymple having advanced against him at the head of light bodies of cavalry and infantry, he was defeated in several encounters, the forts which he had occupied carried by assault and himself driven, with a few followers, into the neutral Mahratta territory. Doondlah, however, though defeated, was not subdued. Meeting with no very friendly reception from the Mahratta chiefs, he again, in the succeeding year, hoisted the colours of independence, and soon attracted to his standard multitudes of those roving adventurers who, in India, are ever ready to join any chieftain of renown who promises them impunity and plunder (5)

Colonel Wellesley was so fully aware of the necessity of not permitting such a leader to accumulate a considerable force in provinces but recently subjected to European rule and abounding with disorderly characters of every description, that though he had recently refused the command of the projected expedition against Patavla from a sense of the importance of his duties in Mysore, he took the field against him in person, and soon brought the contest to a successful termination. Doondiah having entered the Peishwa's territories in May 1800, he immediately moved against him with a body of light infantry, two regiments of British, and two of native dragoons. A victory recently gained over a considerable body of Vahratia horse, had greatly elated the spirits of Doondiah.

(1) The territory acquired by Tippecanoe comprised all the purchase by the Company was 30,000 square miles, which to the north of Myrtle was recorded as 20,000. The common made by Tippecanoe on occasion of land conveyance treaty was 20,000 square miles. Explained resolution 45,000 square miles - 4,000 M. P. (land, Council, Liberty and W. in. from 1811).

On letter on this subject is an follow-up. I understand that if the reserved part of the prize taken at voting pattern, consisting of pre-annuity and colander should even have the permission of the Company. It is their intention to grant the whole to the one receiving £100,000, to be it towards granted to not I am satisfied that such

(2) *Auber* M. 175 187 *Schwarz* L. 12. 13

and his followers; he was rapidly following in the footsteps of Hyder Ali in the formation of a dynasty, and, in the anticipation of boundless dominion, he had already assumed the title of "King of the World." But the hand of fate was upon him. Advancing with a celerity which exceeded the far-famed swiftness of the Indian chief, marching frequently twenty-five or thirty miles a-day, even under the burning sun and over the waterless plains of India, Colonel Wellesley at length came up with the enemy, who retired at his approach. ^{24th July} Mangal, into which he had thrown a garrison, was stormed; Dummul, garrisoned by a thousand choice troops, carried by escalade, a ^{26th July} division of his army, four thousand strong, attacked and routed, early on the morning of the 30th, on the banks of the Malpoorba, the whole artillery, baggage, and camels being taken, and at length intelligence was received, that Doondiah himself, with five thousand horse, lay at Conaghur, about thirty miles distant from Colonel Wellesley's cavalry. The latter made a forced march to reach him before it was dark, but the jaded state of the horses rendered it impossible to get nearer than nine miles, two hours before daylight, however, on the following morning, he was again in motion, and at five o'clock met the "King of the World," as he was marching to the westward, without any expectation of the British being at hand. Colonel Wellesley had only the 19th and 22d dragoons, and two regiments of native horse, in all about twelve hundred men, but with these he instantly advanced to the attack. Forming his troops into one line, so as not to be outflanked by the superior numbers of the enemy, who were quadruple his own force, and leading the charge himself, the British General resolutely bore down upon the foe. Doondiah's men were hardy veterans, skilfully drawn up in a strong position, but they quailed before the terrible charge of the British horse, and broke ere the hostile squadrons were upon them. The whole force was dispersed in the pursuit, and Doondiah himself slain—a decisive event, which at once terminated the war, and afforded no small exultation to the English soldiers, who brought back his body in triumph, lashed to a galloper gun, to the camp (1).

^{Alliances with the Nizam and the Rajah of Tanjore} The effect of these brilliant successes soon appeared in the alliances which were courted with the Company by the Asiatic powers. The Nizam, who had obtained so large an accession of territory by the partition treaty of Mysore, soon found himself unequal to the task of governing his newly acquired territories, which were filled with warlike hordes, whom the strong arm of military power alone could retain in subjection, and he solicited, in consequence, to be relieved of a burden which ^{12th Oct 1800} his character and resources were alike incapable of bearing. A treaty, offensive and defensive, was accordingly concluded with that potentate soon after he had entered into possession of his new dominions, by which the Company guaranteed the integrity of his dominions against all attacks from whatever quarter, and, to add to the security which he so ardently desired, agreed to augment the subsidiary force stationed at Hyderabad by two additional regiments of infantry and one of cavalry, while the Nizam ceded to the Company the whole territories which he had acquired by the treaties of Seringapatam in 1792, and Mysore in 1799, of which he had never been able to obtain more than a nominal possession. The territories thus ^{25th Oct 1799} acquired by the Company amounted to 25,950 square miles, or more than half of all England, and yielded a revenue of £450,000. The Rajah of

(1) Sir A. Wellesley to Col. Munro, 11th Sept. 1800, and Lord Wellesley, 31st Aug. 1800. Gurw. i. 69, 72, 73.

Tanjore, anxious to shelter himself under a similar protection, entered into a treaty of the same description, and in return ceded territories, for the maintenance of his subsidiary force, amounting to 4000 square miles. The Portuguese settlement of Goa was voluntarily surrendered by its debilitated possessors to the English authorities, and the descendants of the ancient discoverers and conquerors of India acknowledged the rising supremacy of the Anglo-Saxon race (1).

Amicable relations were, at the same time, established with the Imam of Muscat, a powerful chief, having a considerable naval force and vast maritime coast in the Persian Gulf and on the shores of Arabia, and the King of Persia, which terminated in the conclusion of a most important treaty, both commercial and political, with the Court of Isfahan. By its valuable privileges were secured to British trade in the interior of Asia, and a barrier was provided against the only powers which, at that period, were thought to threaten the provinces of Hindostan. It was agreed that, in the event of any inroad being threatened by the Affghans, or any hostile measures attempted by France, Persia should make common cause with England in arresting the invader. No stipulations were deemed necessary against Russia, though all history told that it was from that quarter that all the serious invasions of India had emanated, and although only two years before a treaty had been concluded between Napoleon and the Emperor Paul for the transport of a force of thirty five thousand French, and fifty thousand Russian troops, from the banks of the Rhine and of the Wolga to those of the Indus (2). So short sighted are the views even of the ablest statesmen and diplomatists, when, carried away by the pressing, and, perhaps, accidental dangers of the moment, they overlook the durable causes which, in every age, clove and direct the waves of conquest.

Delivered from all domestic dangers by these prosperous events, Lord Wellesley was enabled to direct the now colossal strength of the Indian empire to foreign objects. Such was the extent of resources at the disposal of Government, that, without weakening in any considerable degree, the force at any of the presidencies, he was enabled to fit out an expedition at Bombay, consisting of seven thousand men, to take part in the great concerted attack by the British Government upon the French in Egypt. Sir D. Baird, as a just reward for his heroic conduct at Seringapatam, received the command, and sailed from Bombay on the 30th March. Colonel Wellesley had been appointed second in command, and he looked forward with exultation to the service for which he was destined; but a severe illness rendered it impossible for him to follow out his destination. General Baird, therefore, proceeded alone, and Colonel Wellesley, to whom the important and romantic character of the expedition had rendered it an object of the highest interest, continued during his recovery, to write letters to his brave commanding officer, containing suggestions for the conduct of the campaign, and precautions against its dangers, highly characteristic of the sagacious foresight of his mind. General Baird conducted the expedition with admirable skill and contributed in no small degree, by his opportune arrival, to the surrender of the French force at Cairo, and the triumphant issue of the Egyptian campaign (3); while fate, which here seemed to have blasted Colonel Wellesley in the brightest epoch of his career was only

reserving him for higher destinies, and preparing, in the triumph of Assaye, the opening of that career which was destined to bring the war to a triumphant conclusion.

Great ac-
quisition of
territory
from the
Vizier of
Oude

Civil transactions, however, of the most important nature, highly conducive to the power and stability of the British empire in the East, ensued before the sword was again drawn on the plains of Hindostan. The kingdom of Oude had long been the seat of a large British force, both on account of the internal weakness of its Government, and the importance of its situation on the northern frontier of India, and the first likely to fall a victim to foreign invasion. By existing treaties the Company were at liberty to augment the subsidiary force serving in that province, if they deemed such increase requisite for the security of the two states, and the mutinous, turbulent disposition both of the vizier's soldiers and subjects, as well as his inextricable pecuniary embarrassments, had long made it too apparent that it was indispensably necessary for the very existence of society in these provinces, the security of our northern frontier, as well as a guarantee of the pay of the troops, that the weakness and corruption of the native Government should be exchanged for the vigour and equity of British rule. The native prince, however, though well aware of his inability either to conduct his own administration, or discharge his engagements to the British Government, evinced the utmost repugnance to make the proposed grants of territory in discharge of his obligations to maintain a subsidiary force; but at length his scruples were overcome by the firmness and ability

Sept 6 of the British diplomatic agent, Mr. Henry Wellesley, and a treaty was concluded at Lucknow, by which his highness ceded to the British Government all the frontier provinces of Oude particularly Goorackpoor and the lower Doab, containing thirty-two thousand square miles, or three fourths of the area of England. The revenue of the ceded districts, at the time of the treaty, was estimated at considerably less than the subsidy which the Nawaub was bound to furnish for the pay of the subsidiary force, by which alone his authority had been maintained, but the British Government was amply indemnified for this temporary loss by the revenue of the ceded districts, which, under the firm government of the Company, soon rose to triple their former amount while the native prince obtained the benefit of an alliance offensive and defensive, with the Company, and a permanent force of thirteen thousand men to defend his remaining territories; and the inhabitants of the transferred provinces received the incalculable advantage of exchanging a corrupt and oppressive native, for an honest and energetic European government (1).

Assumption
of the go-
vernment of
the Car-
natic, July
31, 1801

Another transaction of a similar character, about the same period put the British in possession of territories of equal value in the Carnatic. Among many other important papers discovered in the secret archives of Tippoo Sultaun at Seringapatam, was a correspondence in cypher between that ambitious chief and the Nawaub of the Carnatic, Omdut-ul-Omrah, which left no doubt that the latter had been engaged in a hostile combination against the British Government (2). The situa-

(1) Sultan's Treaty, Well Des ii. 599 Malcolm, 322, 325 Auber, ii 227, 231

(2) This correspondence, the cypher to which was accidentally discovered, was very curious. It contained decisive evidence that the Nawaub had severely reprobated the Nizam's alliance with the English, as contrary to the dictates of religion, as well as the triple alliance between that potentate and the Mahrattas and the English, which had been

the principal means in 1792 of reducing the power of Tippoo. The English were denominated *Taza Waruds*, or the new comers, the Nizam himself *Fleech*, or nothing, and the Mahrattas *Pooch*, or contemptible. By the 10th treaty of 1792, he was bound "not to enter into any negotiation or political correspondence with any European or native power whatever, without the consent of the Company"—MALCOLM'S i 7, 339.

tion of the rich and fertile district of the Carnatic, so near to the British provinces on the Madras coast, rendered it of the highest importance that no hidden enemy should exist in that quarter and as the authority of the Nawaub had been little more than nominal for a number of years past, Lord Clive, the Governor of Madras, received orders to take military possession of the country in June 1801. The old Nawaub died about that time, and, after ^{22nd July 1801} a difficult negotiation with his son, who had succeeded to his dominions, a treaty was at length concluded, by which the British obtained the entire command of his dominions, under the condition only of providing an income suitable to the splendour and dignity of the deposed family. This stipulation, like all others of a similar character, was faithfully complied with and though in making the cession, the young Nawaub unquestionably yielded to compulsion, yet he obtained for himself a peaceable affluence and splendid establishment for his country, the termination of a distracted rule and a ruinous oppression, and for his subjects blessings which they never could have obtained under a native dynasty. The territories thus acquired amounted to twenty-seven thousand square miles, and were of the richest description, extending on the plains from the foot of the Mysore mountains to the coast of Coromandel (1).

But there never was a juster observation than the one already ^{Causes of the rupture with the Mahrattas.} noticed that conquest to induce security must be universal; for any thing short of that only induces additional causes of jealousy, and a wider sphere of hostility. By destroying the power of Tippoo and reducing the Nizam to a mere tributary condition, the English had done what Napoléon had achieved by crushing Prussia, humbling Austria, and establishing the Confederation of the Rhine: they had rendered inevitable a contest with a more formidable power than either, and induced a struggle for life or death with the most powerful nations in India. The formation of alliances offensive and defensive with the Nizam and the Rajah of Mysore, necessarily brought the British Government into contact with their restless and enterprising neighbours the MAHRATTAS, and made them succeed to all the complicated diplomatic relations between the courts of Hyderabad, Serinapatnam, and Poona. It is needless to examine minutely the causes of the jealousy and ultimate rupture which ensued between them. That the Mahrattas, a powerful confederacy, inflamed by conquest, inured to rapine, whose hand was against every man and every man's hand against them, and who could bring two hundred thousand horsemen into the field, should view with apprehension the rapid advances of the English to supreme dominion, is not surprising: the only thing to wonder at is, that like the European powers in regard to Napoléon they should so long have looked on apathetically while the redoubtable stranger beat down successively every native power within his reach. They owed, as already mentioned, a nominal allegiance to the Peishwa, who was the head of their confederacy and held his seat of government on the ^{Deccan} ~~Deccan~~ or throne, at Poona; and it was with him that all the treaties and diplomatic intercourse, both of the Company and the native powers had been held. But his authority like that of the Emperor in the Germanic confederacy was more nominal than real; and the principal chiefs in this warlike restless race, acted as much on their own account as the cabinets of Vienna, Berlin, or Munich (2). Three of these had recently risen to eminence, and formed the chief powers with whom

(1) W. H. Douglass, II. 213, 221, 247, 261. Auber

(2) Lord Wellesley's Memoirs, II. 29, Introd. Auber
II. 272, 273.

the English had to contend in the arduous conflict which followed : the Rajahs of BERAR, SCINDIAH, and HOLKAR.

Character and situation of Rajah of Berar and Scindiah The Rajah of Berar, had established a sway over all the territory from the sea, on the western shore of the bay of Bengal, to the dominions of the Nizam on the south-west His capital was at Nagpoor; and he could bring twenty thousand disciplined cavalry, and half that number of infantry, into the field Scindiah's power was much more considerable. Besides eighteen thousand admirable horse, he had sixteen battalions of regular infantry under the command of European officers, and above two hundred pieces of cannon ready for action Holkar's territories were further removed from the scene of action, being situated between the dominions of the Scindiah and Bombay, but his power was greater than either of the other chieftains He could with ease bring eighty thousand men into the field, and though the greater part of them were cavalry, they were only on that account the more formidable to an invading enemy. The families of the two latter of these chiefs had been of recent elevation; the founder of that of Scindiah, the grandfather of the present Rajah, had originally been a cultivator, and owed his rise, when a private soldier in the guard of the Peishwa, to the accidental circumstance of being discovered by his sovereign, when left at the door in charge of his slippers, asleep with the slippers clasped with fixed hands to his breast; a proof of fidelity to his humble duty which justly attracted the attention of the monarch. Both the present Rajah and his father had been the resolute opposers of the English power, and though they wielded at will the resources of the Peishwa, they were careful to observe all the ceremonials of respect to that decayed potentate When Scindiah was at the head of sixteen regular battalions, a hundred thousand horse, and two hundred pieces of cannon, he placed himself at the court of the Peishwa below all the hereditary nobles of the state, declined to sit down in their presence, and untying a bundle of slippers, said, "This is my occupation it was my father's" But, though thus humble in matters of form, no man was more vigorous and energetic in the real business of government. He was the nominal subject but real master of the unfortunate Mogul Emperor, Schah Aulum, the ostensible friend but secret enemy of his rival Holkar; the professed inferior but actual superior and oppressor of the Rajpoot chiefs of central India, the enrolled soldier but tyrannic ruler of the declining throne of the Peishwa (1)

The family of Holkar were of the shepherd tribe, the first who rose above the class of peasants was Mulhai Row, born in 1695 By the vigour and ability which they displayed, his ancestors gradually rose to eminence under the Mahratta chiefs, and at the death of Tukajie, the head of the family, in 1797, two legitimate and two natural sons appeared to contest the palm of supremacy Jeswunt Row was the youngest of the latter class, and in the first civil contest which ensued with his legitimate brothers, he was totally defeated, and obliged to fly with only a few followers The native vigour of his character, however, rose superior to all his difficulties after undergoing the most extraordinary vicissitudes of fortune, in the course of which he on one occasion quelled a revolt among his Pindarrie followers, by springing from his horse, and with his own hand loading and discharging a field-piece among them, he at length succeeded in all his designs, and under the title of guardian to the infant son of his elder legitimate brother, in effect obtained the command of the whole possessions of the Holkar

1708

(1) Auber, ii. 272, 277 Lord Wellesley to Secret Committee, Sept.

some time he was engaged in hostilities with Scindiah but no sooner was his power fully established than these two formidable chieftains united their forces against the Peishwa, the acknowledged head of their confederacy 1802 Oct. 1802. The combined armies encountered those of the Peishwa in the neighbourhood of Poonah; Scindiah's forces commenced the action, and his troops at first met with a repulse; while Holkar, with his cavalry dismounted, watched the conflict from the heights in the rear. Instantly mounting his horse, the brave chief bade all who did not intend to conquer or die, to return to their wives and children; for himself, he was resolved not to survive defeat. - Bearing down with his squadrons yet fresh, on the wearied foe, Holkar soon restored the combat, and finally routed the Peishwa's troops with great slaughter. The unhappy monarch was obliged to fly from his capital, which was soon occupied by his enemies, and the august head of the Mahrattas appeared as a suppliant in the British territories (1)

Known for
Mahratta
war. Per-
ron a French
Genl. Lord Wellesley justly deemed this a favourable opportunity to establish a proper balance of power among the Mahratta states, and erect a barrier between their most enterprising chiefs and the British dependencies. It had long been a leading object of English policy, to prevent the establishment of any considerable power in India with whom the French might form dangerous connexions and already a sort of military state had risen up, of the most formidable character, under French officers, and under Scindiah's protection, on the banks of the Jumna. Perron, a French officer in the service of that chieftain, had organized a formidable force, consisting of thirty thousand infantry and eight thousand cavalry, admirably equipped and disciplined, with a train of a hundred and fifty pieces of cannon of brass, and one hundred and twenty iron guns, entirely under the direction of officers of his own country, and disposed equally to second the hostile views of the Mahratta confederacy, or forward those of Napoléon for the subversion of the British power in the East. For the maintenance of this subsidiary force he had obtained a grant of a rich and extensive territory yielding L.1,700,000 a-year of revenue, extending from the banks of the Jumna towards those of Indus, through the Punjab, and comprising Agra, Delhi, and a large portion of the Doab, or alluvial plain between the Jumna and the Ganges. It was not the least important circumstance in this military establishment, that it gave M. Perron the entire command of the person of the unfortunate Shah Aulum, the degraded heir of the throne of Delhi and promised at no distant period to put the French Emperor in possession of the rights of the House of Timour over the Indian peninsula (2)

The Peish-
wa at length
joins the
British al-
liance. The Peishwa was not insensible of the need in which he stood of British protection, to maintain his precarious authority over the unruly Mahratta chiefs but dread of the hostility of Scindiah and Holkar, joined to a secret jealousy of the rising power of those aspiring foreigners, had hitherto prevented him from closing with the advances made to him by the governor-general; and he had even declined to accept the share of the spoils of Mysore, which, in order to conciliate his cabinet, had notwithstanding their dubious conduct in the war with Tippoo, been offered by the British government. The decisive overthrow received from Scindiah and Holkar, however, and the desperate state of his affairs in consequence of their invasion, entirely overcame these scruples; and on the morning of

25th Oct. the day on which he evacuated his capital, the fugitive monarch eagerly solicited the aid of a British subsidiary force to enable him to make
3d Dec head against his rebellious feudatories. He was cordially received, therefore, by the English authorities; and having escaped out of his dominions, he embarked on board a British vessel, and landed safely at Bombay.

18th Dec 1802 The result of these disastrous circumstances was the conclusion of the treaty of Bassein, between the Company and the Peishwa, in virtue of which a close alliance, offensive and defensive, was contracted by the two powers, and the latter agreed to receive a subsidiary force, to be maintained at his expense, of six thousand men (1).

Collection of forces, and delivery of Poonah by Colonel Wellesley This crisis was rightly considered by Lord Wellesley to require the immediate application of the most vigorous measures. In contemplation of its arrival, he had already collected a body of twenty thousand men under General Stuart, at Hurrighur, a town of the Madras presidency, near the Mahratta frontier, while General, afterwards Lord Lake, received the command of the principal force, called the army of Bengal, which was stationed in Oude. The Madras army, however, was afterwards divided into two parts, and the command of the advanced guard, consisting of ten thousand European and sepoy troops, with two thousand of the Mysore horse, was intrusted to Colonel Wellesley, whose admirable disposition during the war with Doondiah, had both won for him the confidence of the troops and conciliated the good-will of the native po-

9th March, 1803 wers. With this force, that enterprising officer broke up from Hurrighur on the 9th March, and after crossing the Tumbudra river, entered the Mahratta territory. He was every where received by the people as a deliverer the peasants, won by the strict discipline of his troops and the regular payment for provisions in the former campaign, flocked in crowds with supplies to the camp; while the whole inhabitants, worn out with the incessant oppression of the Mahratta sway, welcomed, with loud shouts, the troops who were to introduce in its room the steadiness of British rule and the efficiency of British protection. Holkar had left Poonah some time before, with the bulk of his army, and the garrison which he had left in that capital abandoned it on the approach of the British forces. Colonel Wellesley, therefore, deemed it unnecessary to wait the tardy movements of the infantry; and aware of the importance of gaining possession of the capital before Scindiah could assemble forces for its relief, or the threats of burning it, which they had uttered, could be executed, put himself at the head of the cavalry, and advancing by forced marches, reached Poonah on the 19th

19th April April, and entered the city amidst the acclamations of the inhabitants, whom, by an extraordinary effort, he had saved from the vengeance of the retiring enemy. In the thirty-two hours immediately preceding, he had marched at the head of his horse above sixty miles, an instance of sustained effort, under the burning sun of India which never has been exceeded in history (2).

War with Scindiah and Rajah of Serar The effects of this vigorous step were soon apparent. The Peishwa, relieved from his compulsory exile in Bombay, returned to his dominions, and was re-seated with much pomp, in presence of the British army, on the *musnud*, or hereditary throne of the Mahrattas. His principal feudatories renewed their allegiance to him, and even, in some instances, joined their troops to the British forces; and it was for a short

(1) Wellesley's Desp. iii. 33, 36, Malcolm, 200, (2) Wellesley's Desp. iii. 37, 38, Introd. Gurw. 291, Auber, ii. 237, 239. iii. 138, 145

time hoped that this great stroke of securing the Peishwa to the British interest, by the strong bond of experienced necessity, would be accomplished without the effusion of human blood. It soon appeared, however, that those hopes were fallacious. The jealousies and animosities of the Mahratta chiefs had been subdued by the approach of common danger and it speedily became manifest, from the great accumulation of forces which assembled on the frontiers of the Nizam's territories, that hostilities on a very extended scale were in contemplation. Lord Wellesley's preparations were immediate, and proportioned to the imminence of the danger. General Lake assumed the command of the principal army, twenty-five thousand strong, which had assembled in Oude while Colonel Wellesley, now promoted to the rank of general, drew near to the threatening mass of forces which was collected on the Nizam's frontier. A long negotiation ensued, conducted by Colonel Collins, the British resident at the court of Scindiah, the professed aim of which was to smooth away the subjects of jealousy which had arisen between the two powers; its real object to gain time for Scindiah, till the preparations of the Rajah of Berar were completed, and his approach had enabled the combined forces to take the field. At length, in the end of May, Scindiah being much pressed to give an explanation of his armaments, or direct the withdrawal of his troops, broke up the conference, by declaring, "After my interview with the Rajah of Berar, you shall be informed whether we will have peace or war." It was evident to the persons who conducted this negotiation, that the success of the Mahratta confederacy with Hyder in 1780, which had brought the Madras presidency to the brink of ruin, had inspired the chiefs of that nation with a most extravagant opinion of their own importance: that they were wholly unaware of the vast intermediate progress which the British power had made; and deemed that the renewal of hostilities on their part was to be immediately followed by the siege of Madras and expulsion of the English from India. Perceiving this, and being convinced that a rupture was inevitable, Lord Wellesley committed full diplomatic powers to his generals in the field; and General Wellesley demanded, in peremptory terms, an explanation of his intentions, and removal of his forces from Scindiah, to a less threatening station. The Rajah, in his turn, insisted upon the withdrawal of the British forces, to which General Wellesley at once agreed but when the time for carrying the mutual retreat into effect arrived, the Mahrattas showed no disposition to move, and the British government received information that the combined chiefs had resolved not to retire from their threatening position. Upon this, the resident quitted Scindiah's court, and war began both in the Oude frontier under Lord Lake, and that of the Nizam under General Wellesley (1).

(1) Wellesley Desps. II. 28 41 Introd. and 316. 318. Mahomed, 293, 307 & Ser II. 291 299.

The substance of this important negotiation was thus pitifully summed up by the Duke of Wellington, in a letter to Scindiah at this period.—"The British Government did not threaten to commit hostilities against you, but you threatened to commit hostilities against them and their allies; and when called upon to explain your intentions, you declared that it was doubtful whether there would be peace or war; and, in conformity with your threats and declared doubts, you assembled a large army in station contiguous to the Nizam's frontier. On his ground, I called upon you to withdraw your army to its usual station, if your pacific declarations

were sincere; but, instead of complying with this reasonable requisition, you have prepared that I should withdraw the troops which we intended to defend the territories I claim against your designs; and that you and the Rajah of Berar should be suffered to remain with your troops assembled in readiness to take advantage of their absence. This proposition is unreasonable and inadmissible and you need stand to the consequences of the measures which I had myself said you to adopt to repel your aggressions. I offered you peace upon terms of equality and honourable to all parties; you have chosen war and are responsible for all the consequences."—Ed. of Wellesley to Scindiah 6th Sep 1803, *North's Despatches* II. 377.

Lord Wellesley's plan of operations

The campaign which followed, though it lasted only five months, was one of the most brilliant in the British annals, and conducted our eastern empire, by an uninterrupted series of victories, to the proud pre-eminence which it has ever since maintained. General Lake's instructions, dictated by that clear perception of the vital point of attack, which, as much as his admirable foresight, characterised all Marquis Wellesley's combinations, were to concentrate all his efforts, in the first instance, upon the destruction of M Perron's formidable force on the banks of the Jumna; next to get possession of Delhi and Agra, with the person of Schah Aulum, the Mogul Emperor; and finally, to form alliances with the rajpoots and other native powers beyond the Jumna, so as to exclude Scindiah from the northern parts of India. General Wellesley was directed to move against the combined forces of Scindiah and the Rajah of Berar, on the Nizam's frontier, and distract their attention by vigorous operations, while the decisive blows were struck by General Lake at the centre of their power; and subsidiary operations were to be conducted by Colonel Campbell against the province of Cuttack, and the city of Jaggernaut, with the view of adding that important district, the link between the Bengal and Madras provinces, to the British dominions (1)

Defeat of Perron's force, and storm of Allighur

General Lake's army commenced its march from the ceded provinces of Cawnpore on the 7th August, and on the 28th, as he drew near to Perron's force, he received a letter from that officer, proposing to enter into an arrangement, by which he himself and the troops under his command might remain neutral in the contest which was approaching; but the terms proposed were deemed inadmissible, and the flag of truce returned without effecting any arrangement. On the day following, the English came up with the whole of Perron's force, drawn up in a strong position, covering the important fort of Allighur. They were immediately attacked by the British army with the greatest vigour, and, after a short resistance, put to flight. The fortress of Allighur was next besieged, and, as the extraordinary strength of its fortifications, armed with one hundred and eighty guns, rendered operations in form a very tedious undertaking, General Lake, after a few day's cannonading, resolved to hazard the perilous attempt of an escalade. The ditch, to use his own expression, was so large as to float a seventy-four, and the garrison, four thousand strong, both disciplined and resolute, but all these difficulties were overcome by the devoted gallantry of the storming party, headed by the 76th regiment, led by Colonel Monson, and after a bloody struggle, an hour in duration, the gates were blown open, and the British colours hoisted on the walls of the fortress (2).

Battle of Delhi

Brilliant as was this opening of the campaign, it was speedily succeeded by other successes still more important. Advancing rapidly towards Delhi, General Lake was met by General Perron, who entered into a separate negotiation, and soon passed through the British camp on his way to embark for France, with the large fortune which he had made in the Mah-ratta service. But he was succeeded in the command of the French subsidiary force by M Louis, who, instead of showing any disposition to come to an accommodation, advanced in great force, and with a most formidable train of artillery. The British army, after a fatiguing march of eighteen miles, on the 11th of September found the enemy, twenty thousand strong, includ-

(1) Anber, ii. 301, 305 Wellesley's Desp iii. 210, 215

(2) Lord Lake's Desp iii. 204, 20

ing sixteen thousand disciplined in the European method, with a hundred pieces of cannon, posted on a strong ridge which covered the approaches to the city of Delhi. The troops which General Lake had at his immediate disposal, as the whole of the army had not come up, did not exceed five thousand men; but with this handful of heroes he did not hesitate instantly to advance to the attack. When the men came within range, they were received by a tremendous fire, first of round and chain shot, and afterwards of grape and musketry. Advancing, however, without flinching, through the dreadful storm, the British waited till the order was given, at the distance of a hundred yards, to fire; and then, after pouring in a close and well-directed volley rushed forward with the bayonet, and in a few minutes drove the enemy from their guns and from the field in the utmost confusion. Sixty-eight pieces of heavy artillery, thirty-seven tombrils, and eleven standards were taken; but such was the severity of the fire to which they were exposed during their rapid advance, that in that short time four hundred of the British army were killed and wounded, and it was to the steady intrepidity of the 70th regiment that General Lake mainly ascribed the glorious result of the battle (1).

The immediate consequence of this victory was the capture of Delhi, the ancient capital of Hindostan, and seat of the Mogul emperors, which was taken possession of without resistance on the following day, and the liberation of the Emperor Schah Aulum from the degrading servitude in which he had long been retained by the Mahratta and French authorities. The English general was received by the descendant of Timour, seated on his throne with great pomp, in presence of all the dignitaries of the empire; and experience in the end proved that he had made a most beneficial change for his own interest; for if the original Tartar conqueror would have had much to regret in the deprivation of real power with which his circumstances were attended, his enfeebled successors would have seen much to envy in the perfect security and unbounded luxury which he enjoyed under the liberal protection of his generous allies. The British power derived great moral influence and consideration from this auspicious alliance; and the name of the Emperor of Delhi proved of more service in the end than ever his arms could have been. But an event of more immediate importance to the success of the campaign soon after occurred. M. Louis, and five other chiefs of the French subsidiary force, despairing of their cause, delivered themselves up to the British, and were marched off to

(1) Lord Lake. Despatch, Sept. 12 and 13, 1803. *Well. Despatch*, lii, 302, 312.

Lord Lake's strong opinion on the necessity of European troops in India. I cannot avoid saying in the most confidential manner that, in the event of success, the British country about our great addition of force in Hindostan, the consequences will be fatal as there ought to be at least one European battalion in four states; ours this I think necessary I have seen great deal of those people lately and am quite convinced that without any troops, our only hope to be spared in short the last try of the army as well as cavalry, would be annihilated.—*Confidential Despatch*, Sept. 12, 1803; *Well. Despatch*, lii, 312. This wise advice has been since entirely thrown away; because Government did not venture in the face of popular clamour for reduction and retrenchment to keep up the British troops

in India at their former level, for less to support them; double their means, as they should have been, to preserve the proper balance between the European and native forces. It was immediately after the battle of Asserote that Kapurthla, gifted with the sagacity which amounts to perseverance, forced his army for the fortification of Feroz; and it was immediately after the battle of Delhi that Lord Lake, improved upon Government the necessity of great augmentation in the European forces in India. The failure to the one has proved; and Kapurthla, as we shall see, the prompt fall, became dread of standing he British popular power, and him from carrying his revolution what he felt to be essential to the safety of these independent states. I would to be still to come though the prospect I ever open to think, all sinister means may already be directed to the breach; but positively will we whether the French empire is to be an exception to the rule of stability is to be given to our power by continuous to popular clamour which have proved fatal to the greatest of those which have preceded us.

Calcûta; while the remainder of the troops under their orders, in a great degree destitute of leaders, retired, though in good order, towards Agra (1).

Battle and fall of Agra, Oct. 13 Thither they were speedily followed by General Lake with the British army; and, on the 10th October, a general attack was made on their strong positions, intersected by ravines, covering the city from the south. The gallant sepoy troops, emulating the conduct of their European brethren in arms, under the guidance of Lieut -Colonel Gerard, the

Oct 10 adjutant-general of the army, drove the enemy in the finest style from the rugged ground which they occupied, and, pursuing their advantages hotly, ascended the glacis, and gained possession of the town, though not without sustaining a heavy loss. Two days afterwards, two thousand five hundred of the enemy came over and entered the British service; and the breaching

Oct 17 batteries having been completed, and the fire commenced with great effect on the ramparts, the garrison, six thousand strong, soon after surrendered at discretion. By this decisive blow, the last strong-hold and great arsenal of the enemy fell into our hands (2). The stores captured were immense. one hundred and sixty pieces of brass and iron cannon were taken, with all their equipments and ammunition, while the discipline observed by the troops in the midst of their triumphs was so extraordinary, and afforded such a contrast to the license and devastation usually attendant on military success in Hindostan, that it contributed, even more than their astonishing victories, to the belief that they were, and the wish that they should continue to be, invincible (3).

Battle of Laswaree Oct 10 This early and unparalleled series of successes secured the submission or alliance of all the native potentates in the north of Hindostan, and a treaty of alliance was concluded with the Rajah of Bhurtporé,

Oct 21 and another with Runjeet Sing, the Rajah of Lahore, in consequence of which, fifteen hundred of the latter's horse joined the British camp. Mean-

Nov 1 while, however, Scindiah moved up fourteen battalions of his best regular infantry from the Deccan by forced marches into the northern provinces; and these troops, having joined some regiments which had escaped from the wreck of Delhi and Agra, and received an ample supply of artillery, formed a formidable force, which it was of the last importance to destroy before its numbers were still further augmented by additions from other quarters. Leaving behind him, therefore, his artillery, and the greater part of his infantry, General Lake set out with the cavalry and light infantry, by forced marches, in pursuit of the enemy. After several fatiguing days' journey, he

(3) "All the inhabitants of this place (Delhi,) who for a time fled, perceiving that no ravages had been committed by the troops, returned to their habitations last night. I am informed from all quarters that the inhabitants beheld with astonishment this proof of the discipline and good conduct of the army, and declare that hitherto it has been unknown in Hindostan, that a victorious army should pass through a country, without destroying by fire, and committing every excess the most injurious to the inhabitants. but on the contrary, from the regularity observed by us, our approach is a blessing, instead of bringing with it, as they at first feared, all the horrors of war, attended by rapine and murder, that their cattle remain in their fields without being molested, and the inhabitants in their houses receive every protection."—Lord Lake

to Lord Wellesley, 2d Oct 1803, Well. Desp. iii 426, 427

On this occasion, also, Lord Lake reiterates his observation of the indispensable necessity of having a large proportion of British troops to achieve success in India. "The sepoys," says he, "have behaved excessively well, but from my observation on this day, as well as every other, it is impossible to do great things in a gallant and quick style without Europeans, therefore, if they do not in England think it necessary to send British troops in the proportion of one to three sepoy regiments, which is, in fact, as one to six, they will stand a good chance of losing their possessions in India, if a French force once get a footing in India. You may perceive, from the loss of European officers in sepoy regiments, how necessary it is for them to expose themselves, in fact, every thing has been done by the example and exertions of the officers, and without which not but we are"—Lord Lake 10, 1803, Well,

Oct. 26. reached the spot they had quitted the day before, and received intelligence that they were not more than forty miles from the British camp. Setting out at midnight, he accomplished that distance at the head of his cavalry, in the next twenty-four hours, and about noon, on the first November 1. he came up with the enemy, sixteen thousand strong, with seventy pieces of cannon, advantageously posted with their right upon a rivulet, which required to be crossed before their position was reached, and their left resting on the village of LASWAREE. The dust, which obscured all the ground in advance of the enemy as soon as the rivulet was crossed, prevented the English general from seeing the extent of the formidable array of guns which protected his front, and in his anxiety to cut off his retreat to the neighbouring hills, he resolved upon an immediate assault with the cavalry alone, before any part of the infantry had come up. The attack was made, and at first with brilliant success. Wearied as they were, the British and native horse forced the enemy's line at several points, penetrated into the village, and even carried a part of the artillery (1) but, being unsupported by infantry and cannon, these gallant horsemen could make no reply to the severe fire of artillery and musketry with which they were assailed; the taken guns could not be withdrawn for want of bullocks, and, after sustaining a severe loss, they were obliged to evacuate all the ground they had gained, and retire to a short distance from the field.

Encouraged by this success, but yet fearful of the onset of the British infantry when it came up, the enemy sent to say, that if certain terms were allowed them they would deliver up their guns.

General Lake, being doubtful of the issue of a second attack, acceded to the proposal, and gave them an hour to carry it into effect; during which time he formed his little army, consisting of the 70th regiment and seven weak battalions of sepoys, with a few galloper guns, and three regiments of British and five of native cavalry, in all four thousand infantry and three thousand five hundred horse, into two columns; and when the time allowed expired, moved on to the attack. The 70th regiment headed the array, and was directed to move against the enemy's left flank and assault the village of Laswaree the second column of infantry and all the cavalry were to support the onset of the first, and take advantage of any confusion which might appear in the enemy's line. With an undaunted step, the 70th, with General Lake and all his staff at their head, advanced against the terrible line of cannon which was planted along the enemy's front; so admirable was their steadiness that a staff-officer observed, at the moment as they approached the fire, that an arrow discharged at one end of the line would go through half the feathers of the regiment (2). No sooner, however, were they arrived within range of canister-shot than they were received by so tremendous a fire that in a few minutes a third of their number were struck down; and, at this awful moment, a large body of the enemy's horse bore down to the charge. A close and well-directed volley from this heroic regiment, however who had never yet fired a shot, repulsed the attack; but, as they retired only to a little distance and still preserved a menacing attitude on the flank of the advancing column, General Lake ordered them to be charged by the British cavalry (3).

This momentous duty was instantly and ably performed by the 20th regi-

but General Wellesley, by marching eastward along the banks of the Godavary, effectually frustrated his designs, and, at the same time, covered the advance of two important convoys which were coming up to his army. Jalna, an important fort on the frontier of the Mahratta territory, was soon after

Sept. 2. carried by Colonel Stevenson by assault and a few days after he surprised a considerable detachment of the enemy, by a nocturnal attack, and routed them with very heavy loss, while, on the side of Bombay, the

Aug. 29. fortress of Baroach was carried by storm by Colonel Woodington. But more decisive events were approaching. The confederate chieftains, who hitherto had merely hovered round the British troops with clouds of horse followed by a few thousand irregular foot, were now joined by the flower of their forces; sixteen battalions of Scindiah's regular infantry, and an immense train of artillery, under French officers, entered their camp, and they exhibited an imposing array of fifty thousand men, of whom thirty thousand were admirable horse, with a hundred pieces of cannon (1).

Movements which led to the battle of Assaye. Sept. 22. This formidable concentration of force evidenced the necessity of combined operations to the British generals and, for this purpose, a conference took place between General Wellesley and Colonel Stevenson, on the 21st September. It was then agreed that a joint attack should be made on the enemy, who were about a day and a half's journey off, and reported to be encamped at Bokerdun. The two generals separated on the day following, and advanced towards the concerted point by different routes; Colonel Stevenson by the western, General Wellesley by the eastern road, having a range of hills between them. The motive for this separation, though it may be doubted whether it was a sufficient one for a division in the neighbourhood of so great a force, was the difficulty of getting forward the united army through the narrow defiles by which both roads passed, and the chance that, if they both moved by one line, the enemy would retire by another, and the opportunity of striking a decisive blow be lost. In moving forward thus parallel to each other, the two corps were not more than twelve miles asunder; but the intervening hills rendered any mutual support impossible. Upon arriving within five miles of the enemy, General Wellesley received intelligence that their horse had retreated, and that the infantry alone remained, exposed to the chance of defeat if quickly assailed. As the chief strength of the Mahrattas lay in their cavalry, the English general resolved upon an immediate attack, and dispatched orders to Colonel Stevenson to co-operate in the proposed enterprise. When he arrived, however, in sight of the enemy, he found their whole army, infantry and cavalry, with an immense artillery, drawn up in a strong position, with the river Jalna, which could be crossed over only by a single ford flowing along their front. The sight was enough to appal the stoutest heart: thirty thousand horse, in one magnificent mass, crowded the right; a dense array of infantry, powerfully supported by artillery formed the centre and left. The gunners were beside their pieces, and a hundred pieces of cannon in front of the line, stood ready to vomit forth death upon the assailants. Wellington paused for a moment, impressed but not daunted by the sight. His whole force, as Colonel Stevenson had not come up, did not exceed eight thousand men, of whom sixteen hundred were cavalry; the effective native British were not above fifteen hundred and he had only seventeen pieces of cannon. But, feeling at once that a retreat in presence of so prodigious a force of cavalry was impossible, and that the most audacious course was, in such

guns; the infantry in many places lying in files on the ground, as they had stood in their ranks. During the retreat a large body of foot soldiers collected together, and, for a short time, showed a determined front. But they were dispersed by a brilliant charge of Colonel Maxwell with the unconquerable 49th, in which that gallant officer lost his life. Some of Scindiah's gunners, when the flight was general, fell on the earth and forgone to be dead, to avoid the sabres of the cavalry, but no sooner had the horsemen passed than they started up, turned the guns about, and opened a destructive fire on the backs of the advancing enemy. Indignant at the fraud, the British soldiers wheeled about, again stormed the batteries, and bayoneted the deceitful gunners at their pieces. At length they fled on all sides, just as night set in, leaving in the hands of the British ninety-seven pieces of cannon and almost all the ammunition and stores of the army. The Mahrattas had two thousand men slain on the field, and six thousand wounded; but the British loss was very severe, and the victor found himself weakened by above fifteen hundred killed and wounded, including more than a third of the whole British force (1).

"Never," says Southey, "was victory gained under so many disadvantages. Superior arms and discipline have often provided against as great a numerical difference, but it would be describing the least part of this day's glory to say that the number of the enemy was as five to one; they had disciplined troops in the field, under European officers, who more than doubled the British force; they had a hundred pieces of cannon, which were served with fearful skill and which the British, without the aid of artillery, twice won with the bayonet (2)." 1

Operations after the Battle of Assaye. After this decisive overthrow, the confederates retired twelve miles from the field of battle, where they passed the night. But no sooner did they hear of the approach of Colonel Stevenson, who, with eight thousand men was advancing against them, than they fled headlong down the Ghauts, and reached the bottom in great confusion, without either cannon or ammunition. These losses, however, were soon restored, and the exhausted state of both corps of the British army, rendered any effective pursuit of an enemy still so immensely superior in cavalry altogether impossible. Colonel Stevenson soon after reduced Asseeghar, an important fortress in the Rajah of Berar's dominions. While Wellington by a series of masterly manœuvres, defended the territories of his allies, the Nizam, and Soubadar of the Deccan, and threw back the clouds of the Mahratta horse on their own territories. After some weeks marching and countermarching, Scindiah, disgusted with a war in which no plunder was to be obtained, and of which the burden as well as dangers, fell entirely on his own dominions,

1818 Nov. made proposals for peace. An armistice on certain terms, was agreed to by the British general; but the conditions not having being complied with by the Mahratta chiefs, he resolved not to lose the opportunity which presented itself of determining their indecision by striking a decisive blow against their united forces before they were thoroughly re-
2d Nov. covered from their late defeat. Having effected a junction with Colonel Stevenson, the whole moved against the enemy, and, late on the evening of the 28th, after a fatiguing march in a sultry day, when the Mysore horse, which were skirmishing with the Mahratta cavalry in front, cleared away, a

should be able to prevail on the troops to do more; and it gave that the battle was the reverse that has ever been seen in India; our troops behaved admirably the orders astonished me. — *Wellington to Major-General Wellesley* October 3, 1803. *Gen.* L. 437.

long line of cavalry, infantry, and artillery, could be distinctly perceived, extending about five miles in length, in the plains in front of ARGAUM. Though the men were much exhausted by the heat, Wellington deemed the opportunity too favourable to be lost, for he had fourteen battalions of infantry, and six regiments of cavalry, in all about fourteen thousand men, besides four thousand irregular horse, and the enemy did not exceed forty thousand. Rapidly, therefore, the formation was made, the infantry, with the 74th and 78th on the right, and in advance, so as to enter first into action, the cavalry in the second line following the first in *echelon*, the Mysore and Mogul horse on the left, thrown back, so as rather to protect the rear than enter into the fight, and opposite to the immense mass of Mahratta horse which crowded the enemy's right wing (1)

Battle of
Argaum
25th Nov

As the British line advanced, the European regiments in front were received by a heavy fire from the batteries placed along the front of the enemy's line, and shortly after they were assailed in flank with the utmost fury by a large body of Persians, who engaged in a close conflict, hand to hand, with the British, in which, after a fierce struggle, the Asiatic scymitar yielded to the European bayonet, and the assailants were almost wholly destroyed. Three battalions of sepoys, however, who succeeded next in the column, no sooner came into cannon-shot than they disbanded and fled, though they had advanced bravely through a much heavier fire at Assaye. Wellington, however, was at hand to repair the confusion rallying them, and advancing at their head himself, he soon restored the day, a disorderly charge of Scindiah's horse on the left of the line was repulsed by the steadiness of another battalion of the native troops, and the British regiments in advance having carried the principal batteries which played upon their line, the whole Mahratta force went off in confusion, leaving in the hands of the victors thirty-eight pieces of cannon, and all their ammunition. Had there been an hour more of daylight, or the delay consequent on the breaking of the sepoy regiments not occurred, the whole of the enemy would have been destroyed, as it was, the pursuit was actively continued for many miles by the British cavalry, by moonlight, and all their elephants and baggage taken. But that singular failure, even in veteran soldiers who had formerly distinguished themselves, demonstrates the necessity of a large proportion of European to native troops in all Indian campaigns, for we have the authority of Wellington for the assertion, that if he had not been at hand to repair the disorder, the day would have been lost (2).

Siege and
capture of
Gawilghur

On the very day after the battle Wellington marched to invest Gawilghur. This celebrated fortress is situated in a range of mountains between the sources of the rivers Poorna and Taptee, and stands on a lofty pile of rocky eminences, surrounded by a triple circuit of walls, rising from the edge of inaccessible precipices. The entrance to this almost impregnable stronghold are by three narrow and steep paths, winding for a long ascent through the cross-fire of batteries, and intersected at various points by strong iron gates. After reconnoitring the different sides of this formidable fortress, Wellington resolved to attack it on the northern front, where the ground is comparatively level, though to reach that quarter required a circuit of thirty miles, over rugged intervening mountains. Thither the heavy ordnance and stores were dragged, over heights hitherto deemed impassable for all but foot soldiers, through roads made by them-

selves and, at length, after considerable exertion, a sufficient number of cannon were placed in the trenches on that side to commence battering. With such vigour was the fire sustained, though nine heavy guns only had been brought round, that by the evening of the 14th the breach in the outer

Nov. 25. wall was declared practicable. Arrangements were immediately made for the storm, which were carried into execution on the following morning, with the most perfect success. The troops on the north side, headed by the flank companies of the 94th regiment, mounted the breach with irresistible vigour, while a false attack on the south distracted the attention of the enemy. The inner wall was surmounted by escalade. The inner gates blown open, and, at the moment when the fugitive garrison were attempting to escape by the southern ports, they were met by the victorious British, who in that quarter also had made their way in, and all made prisoners (1).

Which supplies English to our for peace.
17th Dec. 1818.
The capture of this stronghold deemed over all India impregnable, following such a train of disasters, at length broke the proud spirit of the Mahratta princes. Negotiations in real earnest were now resumed, and a treaty was concluded two days afterwards, between Wellington and the Rajah of Berar. By this pacification it was stipulated that the Rajah should cede to the Company all the territories which *20th Dec. 1818.* he had possessed in the Deccan, the province of Cuttack, and various districts to the south of the hills of Gawilghur while, by a subsequent treaty with Scindiah, all his territories in the Doab, between the Jumna and the Ganges the fortresses of Barroch and Achmednugger, with their circumjacent territory; the whole district below the Adjuttee hills and the Godavery river were made over to the Company. By these glorious treaties amounting to 52,000 square miles, and yielding, even under all the disadvantages of the Mahratta rule, nearly three millions sterling a-year of revenue, including Delhi, the ancient capital of the Mogul emperors Agra, Gwalior, and many other fortresses, were acquired by the British Government (2), and their influence rendered paramount through the whole north of Hindostan (3).

Formerly embargoed on the Government on the issue of the war.
The termination of the Mahratta war, though it established the political supremacy of the British in India, and spread the fame of their valour over all Asia, yet left the Government involved in considerable difficulties. The expenses of moving such large bodies of men to such immense distances was very great and as the English reversing the usual principles of Indian warfare uniformly paid for every thing which they required their march though hailed with blessings by the natives of the conquered provinces proved extremely burdensome to the Company's treasury. The dangers of the Mahratta war had been strongly felt in India, and seriously exaggerated in the mother country; the Company's stock had fallen in consequence since the commencement of hostilities, from two hundred and fifteen, to one hundred and sixty; no less than £1,700,000 in specie had been remitted by the Court of Directors, in the course of the war; and, large as this sum was, it was exceeded by the wants of the Indian trea-

(2) *See the Treaty in Genl. L. 355, 371 and 381. L. 323, 325.*

(3) *By these treaties, even in all objects were to be aided by the Mahratta chiefs to the Deccan. The name of Maliput Room, was mentioned to obtain information as to what particular measures or disputes were likely to be ended; and at some conference offered Wellington the loss of papers*

(L. 70,000) to India. "Can we keep secret?" asked the English general. "Yes," replied Maliput Room. "And so," answered the general. "The British Government is carrying on the war, that they have no objection that any fourth party have high secrets to show it. The measures of the English were mainly justified by them to the benevolent spirit of their Government, and the field of the great of their Government." L. 323.

surey. Mercantile men, unacquainted with the real state of affairs in the East, who estimated the propriety of all measures by their effect upon the value of their stock, or the amount of their dividends, and were incapable of appreciating the present sacrifices requisite to produce ultimate security to so vast a dominion, murmured loudly at these effects of Lord Wellesley's administration, and the opinion became general in Great Britain, that his inordinate ambition had involved us in endless wars, which would ultimately prove fatal to our empire in the East. So vexatious were the restrictions with which his administration was surrounded, and so disproportioned the ideas of the Directors to the grandeur or the real nature of their situation, that he tendered his resignation to Government, and was only prevailed on to continue at the head of affairs in India on an assurance that, as soon as the present complicated transactions with the Mahrattas were brought to a conclusion, he would be relieved from his duties (1).

Negotiations and rupture with Holkar, 27th Feb 1803

Meanwhile, a treaty had been concluded with Scindiah, by which it was stipulated that he should cede Gwalior and Gohud, and receive a subsidiary force; in other words, become entirely dependent on the British Government. These events, however, brought the English in contact with a still more formidable power, whose hostility it hitherto had been their studious care to avoid. Holkar commanded a powerful army, which was posted in a threatening position on the frontier of Scindiah's territory; and as he held several valuable possessions in the Doab, which had recently been ceded to the British Government, it was indispensable to come to some terms to accommodate the conflicting interest of the parties. Though that wily chieftain, with the characteristic dissimulation of a Mahratta, professed the utmost desire to cultivate the friendship of the Company, it soon appeared that he had resolved on the most determined hostility. Secret information reached the governor-general, that he was underhand instigating the tributaries and dependants of the English to enter into a confederacy against them, and he even wrote to General Wellesley, threatening to overrun the British provinces with an innumerable army (2). At length, he openly sent an agent to Scindiah's camp to solicit that chieftain to renew hostilities with the British, and, at the same time, he began plundering the territories of their ally, the Rajah of Jypore. Justly considering these acts as equivalent to a declaration of war, the commander-in-chief advanced into Holkar's territory (5).

Commencement of the war with Holkar. Its arduous character

General Wellesley was invested with the general direction of affairs, military as well as political, in the Deccan, and the territories of the Peishwa and Mahratta chiefs, but he had no longer any active command in the war, and the chief weight of the contest fell on General Lake in the northern provinces. Arduous as the conflict with Tippoo Sultaun and Scindiah had been, this last strife was still more formidable, from the recurrence of the Asiatic chief to that system of warfare in which the strength of the East, from the earliest ages, has consisted. With-

(2) "Countries of many hundred miles in extent shall be overrun and plundered, Lord Lake shall not have leisure to breathe for a moment, and calamities will fall on backs of human beings in continual war by the attacks of my army, which overwhelms like the waves of the sea."—HOLKAR TO GENERAL WELLESLEY, Feb 21, 1804, MALCOLM, 315. In his letters to the Indian chiefs, tributary of England, he uniformly styled the English "infidel

Christians, the enemies of the Christian Faith," "seditious men, whom they should be prepared to do distinguished service against," and that "it is the object of the religion and the rule of Mussulmans, that the whole body of the faithful having assembled together, they should be employed, heart and soul, in extirpating the profligate infidels."—See *intercepted Corresp of HOLKAR, Well Desp* iv 48, 49.

(3) Malcolm, 315, 316. Auber, ii. 341, 345. Well Desp iv.

out despoiling the aid of disciplined battalions and a powerful train of artillery, it was the policy of Holkar to trust chiefly to his cavalry to relieve his army of those incumbrances which retarded their march, and seldom failed to fall a prey in regular battles to the swift advance and daring courage of the British soldiers; and to trust for success to the encompassing the European hosts, like the Roman legions by the Parthian cavalry, with clouds of light horse, who could not be reached by the heavy-armed European squadrons. True, these irregular bodies could not withstand the charge of the English or sepoy dragoons, any more than the Saracens could the shock of the steel-clad crusaders of Europe but they seldom awaited their approach, and, by hovering round their columns and cutting off their foraging and watering parties, frequently reduced to extreme distress bodies of men before whom they could not have stood a quarter of an hour in regular combat (1)

Holkar's strength, and his success. Defeat and capture of Mohammed Beg Khan.

Holkar's territories, though extensive, lay in different parts of the Deccan and Hindostan they were, for the most part, in a neglected state, from the devastation and military license to which, from time immemorial, all the Mahratta provinces had been subjected.

He was an usurper of his brother's rights, his family had never risen to the rank of considerable potentates, and his present power was mainly owing to the vast concourse of predatory horsemen who, on the conclusion of peace by Scindiah and the Rajah of Berar, flocked to his standard as the only one which promised a continuance of violence and plunder. Vast bodies of these irregular but formidable freebooters swarmed in all the northern parts of the Deccan and over Hindostan; and the number of them, amounting to little short of a hundred thousand, whom Holkar had collected under his banners, was so disproportioned to the resources of his dominions, that foreign conquest had become to him, as to Napoleon, a matter of necessity. Bands of these plunderers, before they were attracted by the reputation of the Mahratta chief had already appeared in various quarters, spreading terror and devastation wherever they went and one, ten thousand strong, which had passed the Kistna, burst into the British dependencies, and was making south Dec. 24. for the Toombodra, with the design of crossing the Company's frontier, was overtaken by General Campbell, and entirely routed by a skillfully conducted surprise before sunrise, with the loss of three thousand killed and wounded. Twenty thousand head of cattle taken in their camp, demonstrated the vast extent of the depredation which in a few days these marauding horsemen could commit. Mohammed Beg Khan, the leader of the party, was wounded and made prisoner, and the whole body dispersed (2).

Plan of the campaign against Holkar by Lord Lake and Sir J. Wellesley.

Important as this early success was in arresting the destructive inroads of the Mahratta freebooters, it was attended with one bad effect, in leading the British commanders to underrate the enemy with whom they had to deal inducing the belief that the strength

of their confederacy had been broken, by the reduction of Scindiah and the Rajah of Berar's power; and that, by a simultaneous invasion of his territories by comparatively small bodies of troops, converging from different directions, Holkar would speedily be reduced to submission. The plan of the campaign was arranged on these principles. Lord Lake with the army of Bengal about ten thousand strong, was to advance from the neighbourhood of Delhi westward into Holkar's country; while lesser bodies, acting in concert with Scindiah's forces, pressed upon it from the Guzerat, Malwa

(1) M. A. 216. A. 1. v. 11. 215.

(2) General Campbell's Despatch Dec. 30 1802. Vol. II. p. 14. 2. 2.

and the Deccan. Colonel Murray, with two European and six native regiments, about six thousand men, was to advance from Guzerat; while Colonel Monson, with the 76th regiment and four battalions of sepoys, about three thousand men, moved upon Jyenagui, in order to menace the rear of Holkar's main army, which was ravaging the country in that neighbourhood.

23d April, 1804 These movements had the effect of inducing the Mahratta chief to retreat, which he did to the westward, with extraordinary rapidity, while

16th May General Lake, following in his footsteps, carried by assault the important fort of Rampoor, and expelled the enemy from all his possessions in that part of Hindostan. So completely was Government impressed with the idea, that Holkar could nowhere face the British troops, and that a short campaign at the close of the rainy season would effectually reduce his power, that the troops on its commencement were every where withdrawn to their original stations; General Lake returned to his cantonments near Delhi, while Colonel Monson was left at Malwa, above two hundred miles in advance, in a position which it was thought would effectually preclude the possibility of the predatory chieftain's return into Hindostan (1)

Holkar's conduct now demonstrated that he was intimately acquainted with the art of war, the principles of which are often as thoroughly understood by illiterate chieftains, to whom native sagacity and practical experience have unfolded them, as by those who have most learnedly studied the enterprises of others. Rapidly concentrating his desultory bands, he fell with an overwhelming force, as soon as the decline of the rainy season would admit of military operations, upon Colonel Monson's division; while a subordinate force, five thousand strong, made a diversion by an irruption into the province of Bundelcund. A British detachment, under Colonel Smith, of three hundred men, was there almost entirely cut off by the sudden attack of these freebooters, and with it six guns and a considerable quantity of ammunition captured, a disgrace which was the more sensibly felt, as Colonel Fawcett, who, with five battalions, lay within a few miles, and had, by imprudently separating his infantry from his artillery, brought about this disaster, instead of attempting to avenge it, commenced a retreat. Such was the consternation produced by this unwonted calamity, that it was only by the firm countenance and intrepid conduct of Captain Baillic, who commanded a small subsidiary force at Banda, the capital, in the southern portion of the province, that subordination was maintained, and the Mahrattas at length retired, finding a further advance hazardous, leaving their course every where marked by conflagration and ruin (2)

Advance of Colonel Monson's division This disgrace was but the prelude to still greater misfortunes, in which, however, the high character and undaunted courage of the British troops remained untarnished. Colonel Monson, having been joined by the troops under General Don which had captured Rampoor—which raised his force to about four thousand men, with fifteen guns, besides three thousand irregular horse—advanced through the strong pass of Mokundra, which commanded the entrance through the mountains into

(1) Lord Wellesley to Secret Committee, June, 1804. Well. Desp. iv 115, 127.

"The necessity of repelling Holkar's banditti from the frontier of Hindostan, and of reducing him to a peaceable conduct, will not lead to any serious interruption of peace, and will probably tend to consolidate our connexion with Scindiah. The commander in chief, with the greater part of

the main army in Hindostan, has returned to the cantonment of Cawnpore, and my attention is now directed to the desirable object of *withdrawing the whole army from the field*, and reducing the military charges."—Lord Wellesley to Lord Castlereagh, 9th July 1804, *Well. Desp.* iv 131.

(2) Colonel Fawcett's Desp. 22d May, 1804. *Well. Desp.* iv 72, 73, 75, 127.

Hindostan from the westward; and, contrary to the directions of General Lake, who had stationed him only to protect that galle, still pushing on fifty miles further, carried by assault the important fortress of Henglaisgush, a stronghold of Holkar's, though garrisoned by eleven hundred of his best troops. The Mahratta chief meanwhile lay at Malwa with his whole disposable force, which exceeded forty thousand men; and of whom twenty thousand were disciplined infantry, with one hundred and sixty guns. With this immense body he rapidly approached the English general; and the exaggerated rumours which preceded his march as to the strength of the Mahratta host, impressed the latter with the idea that he had no chance of safety but in an immediate retreat. Colonel Murray who, with a powerful force including fifteen hundred Europeans, was to have advanced from the Guzerat into such a position as to have been able to render him assistance if required, had, instead of performing his part of the general plan, been unfortunately induced to fall back; and thus Monson was left alone to withstand the whole shock of Holkar's force. His troops, however, though not a fourth part of the enemy in point of number, were highly disciplined, admirably equipped, and insured to victory; and, by a daring advance upon the Mahratta chief, especially when embarrassed with getting his immense artillery across the Chumbul river, then swollen by rains, he might perhaps have achieved as decisive success, as, with a similar numerical inferiority, Wellington and Lake obtained at Assaye and Laswaros (1).

But it then appeared of what importance is military skill and moral resolution in Indian warfare, and how much the brilliant career of Lord Wellesley's victories had been dependent on the daring energy, which, seizing the initiative, never lost it till the enemy was destroyed. Monson was as brave as any officer in the English army second to none in undaunted valour at storming a breach, but he wanted the rarer quality of moral intrepidity, and the power of adopting great designs on his own responsibility. On the 6th July, Holkar was engaged in crossing the Chumbul; the fortunate moment of attack never to be recalled was allowed to escape, and two days afterwards the English general commenced his retreat. He did what ordinary officers would have done at Assaye, when it was ascertained Stevenson's division could not come up and what was the result? In a few hours the subsidiary horse, now four thousand strong, which was left to observe the enemy, was enveloped by clouds of the Mahratta cavalry, and, after a bloody struggle, cut to pieces with their gallant commander, Lieutenant Lucan, whose individual heroism long averted the disaster. The infantry and guns retired without molestation to the strong Mokundra pass; and several attacks made by Holkar on the outposts stationed there, were repulsed with great slaughter. Despairing, however, after the recent disaster, of being able to make good the pass against the enemy when his infantry and numerous artillery should come up, Monson resumed his retreat, a few days after, to Kotah, and from thence to Rampoora, with great precipitation. Such were the obstacles presented by the horrible state of the roads and incessant rains, during the latter part of this journey (2), that the whole guns, fifteen in number, were abandoned, and fell into the enemy's hands.

No sooner was General Lake apprised of the commencement of this retreat, than he dispatched two fresh battalions and three thousand irregular

horse to reinforce his lieutenant; and with such expedition did they advance, that they reached Rampoora a few days after the retiring column had arrived there. Still Monson deemed it impossible to make a stand; and, on the 21st August, after leaving a sufficient garrison in that fortress, he resumed his march for the British frontier. On the day following, his progress was stopped by the Banmas river, which was so swelled by the rains as to be no longer fordable; and during the delay occasioned by this obstacle, the whole of the enemy's force arrived close to the British detachment. Their situation was now truly frightful: in their front was a raging torrent, in their rear twenty thousand horsemen, continually receiving fresh accessions of strength in infantry and guns, as they successively came up. The river having at length become fordable, four battalions crossed over, and the enemy, seeing his advantage, immediately commenced a furious attack on the single battalion and pickets, which now remained alone on the other side. With such heroic constancy, however, was this unequal contest maintained by these brave men, that they not only repulsed the whole attacks made upon them, but, pursuing their success, captured several of the enemy's guns; an event which clearly demonstrated what results might have followed the adoption of a vigorous offensive in the outset, when the troops were undiminished in strength and unbroken in spirit (1). As it was, however, this little phalanx, being unsupported, was unable to follow up its success, and, in the course of falling back to the river and effecting their passage, had to sustain an arduous conflict, and experienced a frightful loss.

Meanwhile Captain Nicholl, with the treasure of the army and six companies of sepoy, who had been first ferried across, proceeded to Khooshalghur, where they were attacked by a large body of Scindiah's troops, who with the characteristic faithlessness and rapacity of Mah rattas, assailed their allies in their distress in hope of plunder, and being beat off, openly joined Holkar's camp. Almost all the irregular horse, which had come up to Rampoora, soon after deserted to the enemy; and even some companies of sepoy, shaken by the horrors of the retreat, abandoned their colours and followed their example, though in general the conduct of these faithful troops was exemplary in the extreme. Abandoned by his horse, Colonel Monson, on his route from Khooshalghur to the British frontier, formed his whole men into an oblong square, with the ammunition and bullocks in the centre, and in that order retreated for several days almost always fighting with the enemy, and surrounded by fifteen thousand indefatigable horsemen, who were constantly repulsed with invincible constancy by the rolling fire of the sepoy. At length, however, this vigorous pursuit was discontinued, the firm array of the British dissolved as they entered their own territories, great numbers perished of fatigue or by the sword of the pursuers, others allowed themselves to fall into the hands of the enemy, and the sad remnant of a brilliant division, which had altogether mustered, with its reinforcements on the retreat (2), six thousand regular and as many irregular troops, now reduced to a thousand or twelve hundred men, without cannon or ammunition arrived at Agra in a scattered and disorderly manner about the end of August.

Alarming
fermenta-
tion through
the whole
of India

Then was seen in clear colours the precarious tenure by which our empire in India is held, and the indispensable necessity of those vigorous measures in former times, which, to an inexpe-

(2) Colonel Monson's Desp. 2d Sept. 1804. Well Desp. iv 199. Lord Lake's Desp. July, 1, 1805.

Well Desp. v 289, 292. Lord Wellesley to Secret Committee, v. 333, 343.

experienced observer, might wear the aspect of rashness. The overthrow of Monson's division resounded through Hindostan from sea to sea. Great as had been the disasters of the retreat, they were magnified by the voice of fame, ever ready to augment the extent of public and private calamity; and the sinister reports of the native powers, whose wishes, father to their thoughts, represented the British empire in Asia as tottering to its fall. The general consternation was increased by the cruelties exercised by Holkar on the prisoners of all descriptions who fell into his hands; the Europeans were immediately put to death, and the natives who refused to enter his service, mutilated in the most shocking manner. Every where an alarming fermentation was apparent. The conduct of several of the allied states was such as to afford just grounds to distrust their fidelity; that of others was verging on open hostility. Scindiah, so far from acting up to the spirit, or even letter of his alliance, was secretly intriguing, and even publicly assisting the enemy. The Rajah of Bhurtpore, already repenting of his recent treaty, was supporting him with his treasures and his arms. The spirit of disaffection was found to have spread to some of the chiefs of the British newly acquired provinces (1) even the fidelity of the sepoys was not every where proof against the seductions or threats of the enemy. And that general despondency prevailed which is so often at once the forerunner and the cause of public calamity.

But the British government in India was at that period in the hands of men whom no reverse could daunt, whose energy and foresight were equal to any emergency. Generously resolving to take their full share in the responsibility of all the measures which had turned out so unfortunately; determining to screen the commander from all blame, even for those details of execution which were necessarily entrusted to himself; they set vigorously to stem the progress of disaster (2). The causes which had led to it were obvious. It was the reversing the principles which had produced the triumphs of Delhi and Laswaree. These glorious days were the result of striking with an adequate force at the heart of the enemy's power, and suspending, or even neglecting, all minor consti-

(1) Lord Lake to Lord Wellesley July 1. 1803. Lord Well. to General Lake Sept. 11. 1804. Ibid. iv. 203.

(2) "From the first hour of Colonel Monson's retreat, said Marquis Aylmer to Lord Lake, I always figured the ruin of that detachment; I am pained to say I do not find so much gale. Whatever may have been his fate, or whatever the result of his misfortune as to my own force, I will endeavour to shield his character from obloquy nor will I attempt the mean purpose of securing his reputation to any man. His former services and mail entitle him to this indulgence; and, however I may lament or suffer from his errors, I will not reproach his memory if he be lost, or his bravery if he survives. We must endeavour rather to retrieve than to blame what is past; and under your auspices, I entertain no doubt of success. Every loss, however, which shall be left to this plunderer will be marked with some malignity; we must expect general derision of our allies, and even confusion in our own territories, unless we can attack Holkar's main force immediately with decisive success. I perfectly agree with you; the first object must be the defeat of Holkar's infantry in the field and to take his guns. Holkar defeated, all alarm and danger will instantly vanish; even doubtful battles would be perilous; we must therefore look steadfastly at that grand object, and if we accomplish it, every other will be easy. — Lord Wellesley to Lord Lake, Sept. 11. 1804; W. M. Dep. iv. 205.

At the same time Lord Lake wrote to Lord Wellesley:—"The first object, in my opinion, is to destroy Holkar. I shall therefore do every thing in my power to bring him to action at an early period, which by his bringing his guns, and he has met with success, I think, very probably may soon take place. The taking large force with me, will, of course, leave our provisions in a weak and defenceless state; but as it appears the whole of India is at stake some risk must be made to accomplish this, our principal object. Despondency is of no use; we must, therefore, set to work and retrieve our misfortune as quickly as possible. Here my dear Lord I must remark, that whatever may be said upon the subject you surely cannot be implicated in the business; for all blame ought to fall upon me for detaching the force in the first instance when I thought I had selected corps, with an officer to command them, who would have accomplished all my wishes, and obtained the end proposed. This being the case I certainly become responsible in the first instance and shall upon every occasion, both here and at home declare publicly that you had nothing to do with the march of that detachment and that all censure for that measure must be attributed to me, and not to you. — Lord Lake to Lord Wellesley Sept. 21. 1804; W. M. Dep. iv. 216. These are the principles by which empires are won and saved. Here is, on the part of both these great men, the eye of Napoleon and the heart of Henry IV.

derations to accomplish that grand object; the present misfortunes were the consequence of attacking from four different quarters at once, with forces inadequate to victory, if singly brought into action, trusting for success to their combined operation, and advancing one column, single and unsupported, into the heart of the enemy's power. The British victories had been the result of the strategy which caused Napoléon to triumph at Ulm and Jena their misfortunes, of the system which, for twenty years, had chained disaster to the Austrian standard. Wellesley resolved instantly to return to this enlightened plan of operations, from which, in an evil hour, under the influence of undue contempt of the enemy, he had departed (1) "The success of your noble triumphs of last year," said he to Lord Lake, "proceeded chiefly from your vigorous system of attack. In every war the native states will always gain courage in proportion as we shall allow them to attack us, and I know that you will always bear this principle in mind, especially against such a power as Holkar."

Advance of
Holkar to
Delhi Proceeding on these just and manly principles, every exertion was made to reinforce the main army under Lord Lake, then lying at Cawnpore, and put it into a condition speedily to take the field. It was full time that some decisive effort should be made to retrieve affairs, for the British empire in Hindostan was, in truth, in a very critical situation.

Sept 12 Rapidly following up his success, Holkar pursued the remains of the beaten army to the banks of the Jumna; and on the British cavalry under Lord Lake approaching his position, they drew off; the infantry and guns taking the direction of Delhi, while the horse engaged the attention of the English troops

Oct 8 by endeavouring to cut off their baggage. On the 8th of October the enemy's main force arrived before the imperial city, and summoned the garrison, consisting only of one battalion and a half of sepoy, with a few irregulars, to surrender, while his emissaries used every exertion to excite the native chiefs in the Doab to revolt against their European masters, and with such success as seriously embarrassed the operations of the British army, especially in the vital article of obtaining supplies (2)

His repulse
and retreat For seven days Holkar continued before Delhi, battering its extensive and ruinous walls with the utmost vigour; but such was the resolution of the little garrison under Colonels Ochterlony and Burn, that they not only repulsed repeated assaults, but, sallying forth, carried a battery which was violently shaking the rampart, and spiked the guns. At length the Mahrattas, despairing of storming the city, and intimidated by the approach of Lord Lake with the Bengal army, raised the siege, and retired by slow marches through the hills in the direction of Dirc.

Oct 15 The English general had now the fairest prospect of bringing the enemy's whole force to action, with every chance of success, for the prodigious train of artillery, which accompanied him rendered his retreat very slow; and ten thousand infantry and three thousand cavalry, including about two thousand five hundred Europeans, followed the British standards. But a total failure of supplies, arising from the disaffection or treachery of the native chiefs, by

Oct 18 whom they were to have been furnished, rendered it impossible to continue the pursuit for some days, and during that time Holkar got out of the reach of immediate attack, and, crossing the Jumna with his whole force, proceeded to ravage the country, and stir up resistance to the English beyond that river. Suddenly recrossing it, however, with his ca-

(1) Lord Wellesley to Lord Lake, Sept. 11, 1804
Well. Desp. iv. 207, and 191, 192.

(2) Well. Desp. v. 293, 297,

alone; a few days after, he advanced by forced marches to attack Colonel Burn, who, with a detachment, had been sent to Soranlungpore, after the retreat of the enemy from the neighbourhood of Delhi (1)

Part of General, now Lord Lake, upon this made a corresponding division
Disp. of his force Putting himself at the head of the horse artillery, two thousand cavalry, and fifteen hundred light-armed infantry, he pursued in person Holkar's horse on the one side of the river while General Fraser, with eight thousand infantry, a thousand cavalry, and eighteen guns, was entrusted with the task of attacking his foot soldiers and artillery on the other.

Nov. 12. That gallant officer, having at length, by great exertions, obtained the requisite supplies, commenced his march from Delhi, and on the 13th November came up with the Mahratta army, consisting of twenty four battalions of regular infantry, a hundred and sixty pieces of cannon, and three thousand irregular horse, in all above twenty five thousand men. This formidable force was drawn up with considerable skill, in a strong position, with their left resting on the fortress of Dleg, their right upon a walled village, situated on a height about two miles distant; an extensive morass, altogether impassable, covered the greater part of their front, a large expanse of water protected from attack the whole of their rear; while their immense artillery was so disposed as to bear with a concentric fire on the narrow isthmus by which alone their line could be assailed (2)

Noways daunted by these formidable obstacles, General Fraser resolved to make the attack on the following morning. At daybreak the troops advanced to the charge, headed by the unconquerable 70th, led on by that general in person. They had to make a long circuit round the morass before they reached the point at which it could be passed during the whole of which they were exposed to a galling cannonade in flank from the enemy's artillery, which as they approached the isthmus leading to the village became dreadfully severe. Rushing impetuously on, however, the 70th, followed by the native infantry, ascending the hill, stormed the village with irresistible gallantry. From the village, General Fraser advanced upon the main body of the enemy, who faced about, and were now posted between the morass and the lake, with the fort of Dleg in their rear, and several heights, crowned with artillery to defend the approach to it, interspersed in the intervening space. Such, however, was the vigour of the attack led by Fraser and Monson, that, though the enormous batteries of the enemy played with a concentric fire of round, chain, and grape shot, on the advancing column, it pushed on through the awful storm, carrying every thing before it from right to left of the enemy's whole position, and storming successfully all the batteries, drove them at length, in utter confusion, into the fortress of Dleg. Nothing but the heavy fire from its ramparts prevented the whole artillery of the enemy, in the field, from being captured as it was, eighty-seven guns and twenty four tumbrils were taken; two thousand men fell on the field, and great numbers perished in the lake, into which they had fled to avoid the bloody sabres of the English cavalry. The British loss was about seven hundred killed and wounded; among the latter of whom was the brave General Fraser, to whose decision and intrepidity the success was in a great degree owing; while Colonel Monson, the second in command who succeeded to the direction of the army upon his fall, amply demonstrated by his skill and bravery, that his former misfortunes had not been owing to any want

of heroic courage. Among the guns taken, were, to the inexpressible delight of the soldiers as well as of that brave man, thirteen of those which had been lost in the late calamitous retreat (1).

Pursuit and
defeat of
Holkar at
Furrucka-
bad While this important success was gained over the infantry and artillery of Holkar, a triumph equally decisive attended the operations of Lord Lake in person against his cavalry. That enterprising chief having, as already mentioned, crossed the Jumna with ten thousand horse, made for a ford of the Ganges near Hurdwar, with the design of carrying the war into Rohilkund, and the provinces beyond that river. No sooner, however, did he learn that Lord Lake, with a chosen body of cavalry, was marching against him, than he suddenly changed his course, and flying down the Doab by rapid marches, reached Furruckabad Nov. 16 on the evening of the 16th November. Rapid, however, as were the movements of the Mahratta chief, they were exceeded by those of the English general, who, having crossed the Jumna in pursuit on the 1st November, continued to follow his indefatigable adversary with such vigour for the next seventeen days, that he not only effectually prevented him from devastating the country, except in the immediate line of retreat, but kept constantly at the distance only of a single march in his rear. During the whole of this period, both armies marched twenty-three or twenty-four miles daily, even under the burning sun of Hindostan. At length, on the evening of the 16th November, Lord Lake received intelligence that Holkar, after having been repulsed in an attack on Futtehghur, had encamped for the night under the walls of FURRUCKABAD, twenty-nine miles distant. Though the troops had already marched thirty miles on that day, Lord Lake immediately formed the resolution of making a forced march in the night, and surprising the enemy in their camp before daybreak on the following morning (2).

Nov 17 No sooner was the order to move delivered to the troops at nightfall, than all fatigues were forgotten, and, instead of lying down to rest, they joyfully prepared to resume their march during the sultry hours and thick darkness of an Indian night. The fires in the enemy's camp, and the accurate information of the guides, conducted them direct to the ground which the Mahrattas occupied. As they approached the camp, the utmost silence was observed in the British columns, the horse artillery only were moved to the front, and advanced slowly and cautiously to within range of their tents. All was buried in sleep in the Mahratta lines, the watch-fires had almost all burned out, and a few drowsy sentinels alone were watching in the east for the first appearance of dawn. Suddenly the guns opened upon them, and the sleeping army was roused by the rattle of grape-shot falling in the tents among the horses, and through the bivouacs. So complete was the surprise, so universal the consternation, that very little resistance was attempted. Before the squadrons could be formed, or the horses in many places unpicketed, the British dragoons were upon them, and well, in that hour, did the sabres of the 8th, 27th, and 29th, avenge the savage cruelty of Holkar's followers upon the captives in Monson's retreat. The enemy were thrown into irretrievable confusion by this impetuous attack, and, rushing promiscuously out of the camp, fled in all directions, hotly pursued by the British and native horse. Great numbers were slain in the pursuit, as well as on the field, and still more abandoned their colours, and dispersed, deeming the

(2) Lord Lake's Desp. 18th Nov. 1801. Well Desp. iv. 240.

cause of Holkar hopeless, after so decisive an overthrow. Of the mighty host which had so lately swept like a torrent over Hindostan, a few thousand horse only escaped with their leader across the Jumna, and joined the defeated remains of their infantry within the walls of Dieg. Holkar himself was on the point of falling into the hands of the British dragoons, and owed his escape entirely to the accidental explosion of an ammunition waggon, which, almost by a miracle, blew his pursuers off their horses, while he himself passed unhurt. Of the victors, the greater part had ridden seventy miles during the preceding twenty-four hours, when they took up their ground after the pursuit (1), besides fighting the whole of Holkar's cavalry: an achievement far exceeding any thing recorded of the boasted celerity of Napoleon's squadrons, and which is probably unparalleled in modern war.

Siege and capture of Derg. Colonel Monson, whose vigour and bravery in the field, was far from being accompanied by a similar degree of capacity and resolution in leading an army, had formed the design of retreating after the victory of Dieg to Muttra for supplies, of which his troops stood much in need, and which were procured with extreme difficulty, owing to the hostile disposition of the inhabitants in the country, and arrived there on the 20th November. But Lord Lake, who at once perceived the prejudicial effect which such a retrograde movement after a battle would have, by giving the enemy a plausible ground to represent it as a defeat, immediately repaired to the spot, and reinforcing the infantry with his victorious cavalry, again moved forward his whole army, and proceeded in the direction of Dieg, where the broken remains of Holkar's army were now all assembled. On the 4th, the troops arrived under the walls of that fortress; and operations were commenced against it as soon as the battering train came up from Agra, which arrived on the 8th. The siege was prosecuted with the utmost activity, and a breach having been pronounced practicable, the lines around the town were first stormed by the 70th regiment, and on the day following the fortress itself surrendered at discretion. By this important blow the whole of Holkar's remaining artillery, amounting to eighty pieces, many of them of very heavy calibre, with immense stores of ammunition, were taken: but that redoubtable chief himself escaped with four thousand horse, and took refuge in BUNTOORE (2), the Rajah of which, Rdujeet Sing had during the last three months treacherously embraced his cause, and deserted the British alliance.

Siege and unsuccessful result of Buntoore. Nothing remained to complete this glorious contest but the reduction of this celebrated fortress; an object become of the highest importance, both on account of the signal treachery of the Rajah, who, on the first reverse, had violated his pledged faith to the Company, by whom he had been loaded with benefits, and of its containing the person and last resources of Holkar, who had waged so desperate a contest with the British forces. Thither, accordingly, Lord Lake moved immediately after the fall of Dieg; and the battering train having speedily made a breach in the walls, the assault took place in the evening of the 9th January. The water in the ditch proved exceedingly deep: and, during the time spent in throwing in fascines, the troops were exposed to a most destructive fire from the rampart on the opposite side. At length, however, they succeeded in passing over: but all their efforts to gain the summit of the breach proved ineffectual. The wall, which was of tough mud, was imperfectly ruined; the

JAN 21 scaling ladders were found to be too short, and, after sustaining a very heavy loss, the troops were compelled to return to their trenches. A second storm, some days afterwards, met with still less success, the brave men reached the edge of the ditch, but it proved to be so broad and deep that

JAN 23 all attempts to fill it up were fruitless, and, after sustaining for above an hour a dreadful fire within pistol-shot from the ramparts, the assaulting column was again obliged to retire. An attempt was soon after made by the whole of Holkar's remaining cavalry, and that of Meer Khan, another noted Mahratta freebooter (1), to cut off a valuable convoy on its way from Muttra to the British camp. The convoy with its covering force was hard beset, by an immense body of cavalry, in a village, when the approach of the 27th light dragoons, and a regiment of native horse, enabled them to sally out and totally rout the assailants. Meer Khan's equipage with all his arms and a complete suit of armour fell into the hands of the victors.

Repeated assaults on Bhurtpore, which are repulsed The siege was now prosecuted with fresh vigour by the English army, which was reinforced by a division five thousand strong from Bombay, which raised the besieging force to twenty thousand men; while the efforts of the besieged, who were greatly elevated by their former success, were proportionally increased. It was soon discovered that the troops of the Rajah were amongst the bravest and most resolute of Hindostan, comprising, in addition to the remnant of Holkar's followers, the *Jats*, or military caste of Bhurtpore, who yielded to none in Asia the palm of resolution and valour. After a month's additional operations, the breach

FEB 20 was deemed sufficiently wide to warrant a third assault, which was made by the 75th and 76th regiments, supported by three sepoy battalions, under Colonel Don, while two other subordinate attacks were made at the same time, one on the enemy's trenches outside the town, and another on the Beem-Narain gate, which it was thought might be carried by escalade. The attack on the trenches proved entirely successful, and they were carried, with all their artillery, by Captain Grant; but the other two sustained a bloody repulse. The scaling ladders of the party destined to attack the gate were found to be too short, or were destroyed by the terrible discharges of grape which issued from its defences, and, despite all their efforts, the brave 75th and 76th were forced down with dreadful slaughter from the breach. They were ordered out again to the assault, but the troops were so staggered by the frightful scene, that they refused to leave their trenches, and the heroic

See ante, vii p 21 12th regiment of sepoys marched past them with loud cheers to the breach. Such was the vigour of their onset, that they reached the summit in spite of every obstacle, and the British colours were seen for a few minutes waving on the bastion, while the 76th, stung with shame, again advanced to the assault. The bastion proved to be separated by a deep ditch from the body of the place, and the guns from the neighbouring ramparts enfiladed the outwork so completely, that the valiant band, after losing half their numbers, were in the end driven down the breach, weeping with generous indignation at seeing the prize of their heroic valour thus torn from them. The attempt was renewed on the following day with no better success. The whole of the European infantry in the army, about two thousand five hundred strong, with three battalions of native infantry, were employed in the assault, under the command of Colonel Monson. Such, however, was the height and difficulty of the breach, and such the resolute resistance opposed by the enemy, that all their efforts proved unsuccessful. A

FEB 21

(1) Lord Lake's Desp. Jan. 10, 21, 23, 1805. Well D, iv. 264, 267

small number only could mount abreast, from the narrowness of the ruined part of the wall; and, as they pushed up, they were crushed under logs of wood, or torn in pieces by combustibles thrown among them by the besieged while the few who reached the top were swept off by discharges of grape which poured in by a cross fire from either side (1). After two hours employed in this murderous and fruitless contest, in which prodigies of valour were performed on both sides, the troops were drawn off and, after six weeks of open trenches, and four desperate assaults, which cost above three thousand brave men, the native colours still waved on the walls of Bhurtpore.

Although, however, the British troops had, at the close of their long career of victory, met with this unexpected check, yet many reasons concurred to recommend submission to the hitherto unsubdued Rajah. His territory was wholly occupied by the enemy; his resources cut off; his stores and magazines rapidly diminishing and, even if he should be so fortunate as to withstand a repetition of the furious assaults from which he had so recently and narrowly escaped, he was well aware that, by the slower, but more certain process of blockade and famine, he would in the end inevitably be reduced. On the other hand, various considerations, equally forcible, concurred in recommending an accommodation with the perfidious Rajah to the English Government. Though Scindiah had, in the outset of the negotiation, consented to the cession of Gwalior and Gohud, with its adjacent territory, to the Company, and even vol. vi. 1802. signed a treaty in which they were formally ceded to them, yet he had never been reconciled to the loss of that important fortress and, from the first moment that hostilities commenced with Holkar, it became evident that he was waiting only for a favourable moment to come to an open rupture with the English Government, or take advantage of its difficulties to obtain their restitution. Troops under his banner had openly attacked the escort of the treasure in Colonel Monson's retreat; the language of his court had been so menacing, the conduct of his government so suspicious, that not only had a long and angry negotiation taken place with the acting Resident, but General Wellesley had been directed to move the subsidiary force in the Deccan, eight thousand strong, to the frontier of Scindiah's territories. The prince himself, who was a weak, sensual man, had fallen entirely under the government of his minister and father-in-law, Surajee Row Ghanuka, a man of the most profligate character, who was indefatigable in his endeavours to embroil his master with the British government. Under the influence of these violent counsels, matters were fast approaching a crisis: the cession of Gwalior was openly required, with menaces of joining the enemy if the demand were not acceded to; and at length he announced a determination to interfere as an armed mediator between Holkar and the English, and moved a large force to the neighbourhood of Bhurtpore to support his demands during its long-protracted siege. The conduct of the Rajah of Berar had also become extremely questionable; hostilities, evidently excited by him, had already taken place in the Cuttack and Bundelcund; and symptoms began openly to appear in all quarters, of that general disposition to throw off the British authority, which naturally arose from the exaggerated reports which had been spread of Holkar's successes (2).

Peace with
the Rajah
of Bhurtpore

Under the influence of those concurring motives, on both sides, there was little difficulty of coming to an accommodation with the Rajah of Bhurtpore. The English government became sensible of the expediency of abandoning their declared intention of punishing him by the total loss of his dominions for his unpardonable defection, and limiting their resentment to the reduction of his military power and ability to do further mischief; while he saw the necessity of abandoning the alliance of Holkar, and expelling him from his dominions. The terms ultimately agreed to, at the earnest suit of the enemy, were, that the Rajah should pay twenty lacs of rupees, by instalments, in four years, that he should never hold any correspondence with the enemies of the British power, whether in Europe or Asia, and that, as a security for the faithful performance of these conditions, he should forthwith surrender one of his sons as a hostage, and make over the fortress of Dieg to the British troops, and submit any difference he might have with any other power to their arbitration, and obtain from them a guarantee for his remaining possessions. These conditions appeared to the Governor-general and council to be honourable to the British arms, and to provide for the main object of the present contest, viz, the separation of the Rajah of Bhurtpore from Holkar's interests, and the severing of the latter chieftain from the resources which his fortresses and treasures afforded.

April 17 The treaty was, therefore, ratified by the Governor-general, and on the day on which it was signed, the Rajah's son arrived in the British camp, and Holkar was compelled to leave Bhurtpore (1)

Holkar joins
Scindiah,
being ex-
pelled from
Bhurtpore

As the forces of this once formidable chieftain were now reduced to three or four thousand horse, without either stores or guns, and his possessions in every part of India had been occupied by the British troops, he had no alternative but to throw himself upon the protection of his ancient enemy, Scindiah, who had recently, under his father-in-law's counsels, appeared as an armed mediator in his favour. He accordingly joined Scindiah's camp with his remaining followers immediately after his expulsion from Bhurtpore. The Mahratta horse had previously re-assembled in small bodies in the vicinity of that town, in consequence of the absence of the great bulk of the British cavalry, which had been detached from the grand army to stop the incursion of Meer Khan, who had broken into the Doab, and was committing great devastations. On the 1st April, Lord Lake, having received intelligence that a considerable body of the enemy had assembled in a position about sixty miles from Bhurtpore, made a forced march to surprise them in their camp, and he was so fortunate as to come up with, utterly rout, and disperse them, with the loss of a thousand slain, and return to his camp the same day, after a march in twelve hours of fifty miles. A few days after, four thousand of the enemy, with a few guns, were attacked by Captain Royle, in a strong position under the walls of Adaulnaghur, and totally defeated, with the loss of their artillery and baggage. By these repeated defeats, the whole of this formidable predatory cavalry was dispersed or destroyed, with the exception of the small body which accompanied Holkar into Scindiah's camp (2)

Operations
in Cuttack,
Bundel-
cund, and
against
Meer Khan

Nor had the incursion of Meer Khan into Rohilcund and the Doab, or the detached efforts of the Mahrattas, in other quarters been more successful. The Rajahs of Koorkha and Kunkha, in the Cût-tack, instigated by the Rajah of Berar, made an incursion into the

(1) Lord Well. to Secret Committee, May, 1805.

(2) Lord Wellesley to Secret Committee, 13th
May, 1805, v. 155, 159.

British dominions, but they were repulsed, pursued into their own territories, and Khoordah carried by assault, by a force under the command of Colonel Harcourt Bundelcund was for some weeks agitated by the intrigues of Scindiah, who secretly instigated its chiefs to revolt, in order to give more weight to his armed intervention in favour of Holkar, but though this division, in the outset, had some success, in consequence of the absence of the British cavalry at this siege of Bhurtpore, yet it was of short duration. The approach of a considerable British force speedily reduced them to submission. More difficulty was experienced from the incursion of Meer Khan, who broke into Rohilcund at the head of fifteen thousand horse; and in the middle of February occupied its capital, Moradabad. Three regiments of British, and three of native horse, were immediately dispatched, by Lord Lake, from the grand army before Bhurtpore, and marched with extraordinary expedition to arrest the enemy. They arrived in time to rescue a little garrison of three hundred sepoy, which still held good the house of Mr. Leicester, the collector for the district, and compelled the enemy to retire. Meer Khan fled to the hills, closely pursued by the British horse, under General Smith, who, after a variety of painful marches, came up with the enemy in the beginning of March, and completely destroyed the flower of his army. and, on the 10th of the same month, they sustained a second defeat from Colonel Burn, at the head of thirteen hundred irregular horse, and lost all their baggage. Disheartened by these disasters, and finding no disposition to join him, as he had expected, in the inhabitants of Rohilcund, Meer Khan retired across the Ganges by the same ford by which he had crossed it, and after traversing the Doab, re-crossed the Jumna in the end of March, having, in the course of his expedition, lost half his forces (1).

No sooner was the treaty with the Rajah of Bhurtpore signed, than Lord Lake marched with his whole force to watch Scindiah's movements, whom Holkar had joined, and effected a junction with the detachment, under the command of Colonel Martindell. This wily Rajah, finding the whole weight of the contest likely to fall upon him, and that he had derived no solid support from Holkar's force, immediately retired from his advanced position, and expressed an anxious and now sincere desire for an accommodation. A long negotiation ensued, in the outset of which the demands of the haughty chieftain were so extravagant as to be utterly inadmissible, and Lord Wellesley bequeathed it as his last advice to the East India Directors and Board of Control, to make no peace with him, or any of the Mahratta chiefs, but on such terms as might maintain the power and reputation of the British Government, and deprive them of the means of continuing the system of plunder and devastation by which their confederacy had hitherto been upheld (2); and Lord Cornwallis, his successor, having arrived, this great statesman was relieved from the cares of sovereignty and embarked at Calcutta on his return to England, amidst the deep regrets of all classes of the people, leaving a name imperishable in the rolls alike of European and Asiatic fame (3).

(1) Lord Wellesley to Secret Committee, March 1803. *Wells. Disp.* 142, 143.

(2) "Advertiſe in the restless disposition and predatory habits of Holkar &c. it is not probable that he will be induced to consent to any real general which shall deprive him of the means of ravaging the territories of Hindostan at the head of a body of plunderers, except only in the last extremity of reduced resources. Whatever might be the expedience under other circumstances than those which at pre-

sent exist, of offering to Holkar terms of accommodation, without previous submission and solicitation on his part, at present the offer of terms such as Holkar would accept, would be most truly injurious to the reputation and ultimately hazardous to the security of the British Government. — Lord Wellesley to Secret Committee 25th June 1803. *Wells. Disp.* v. 220, 270.

(3) Lord Wellesley to Secret Committee, Jul 1803. 265, 274.

Second
administra-
tion and
death of
Lord Corn-
wallis

These principles, however, were not equally impressed by personal observation upon his successors. The East India Company and the Board of Control, far removed from the scene of action, mainly solicitous about the husbanding of the national resources for the

desperate contest with Napoleon in Europe, and unaware that a similar necessity existed to uphold the British supremacy in the east, had directed the succeeding Governor-general to use his utmost efforts to bring the costly and distressing contest with the Mahratta powers to an early termination. Lord Cornwallis, however, did not live to carry these instructions into effect. The health of this distinguished nobleman, which had been declining before he left England, rapidly sunk under the heat and the labours of India, and he expired at Benares, on the 5th October, without having brought the negotiations to a termination. They were resumed in the same pacific spirit by his successor, Sir George Barlow. Treaties were in November concluded with Scindiah, and with Holkar in the beginning of January. These treaties were indeed honourable to the British arms, they provided an effectual barrier against the Mahratta invasions, and secured the peace of India for twelve years. But Lord Wellesley's principles proved in the end to be well founded, pacific habits were found to be inconsistent with even a nominal independence on the part of these restless chieftains, conciliation impossible, with men who had been inured to rapine by centuries of violence. The necessity of thorough subjugation was at last experienced, and it was then accomplished in the most effectual manner. It was reserved for the nobleman who had been most fierce in his invectives upon Lord Cornwallis's first war with Tippoo, to complete the conquest of the Mahratta powers, for a companion in arms of Wellington, to plant the British standard on the walls of Bhurtpore (1)

Terms of
peace with
Scindiah
and Holkar

The principal articles in the treaty with Scindiah were, that all the conditions of the former treaty, except in so far as expressly altered, were to continue in full force. That the claim of the Company to Gwalior and Gohud should be abandoned by the British Government, and the river Chumbul form the boundary of the two states, from Kotah on the west, to Gohud on the east, and Scindiah was to relinquish all claim to the countries to the northward of that river, and the British to the south. Various money payments, undertaken by the Company in the former treaty, were by this one remitted; and the British agreed not to restore to Holkar any of his possessions in the province of Malwa. Holkar, driven to the banks of the Hyphasis, and in extreme distress, sent to sue for peace, which was granted to him on the following conditions. — That he should renounce all right to the districts of Rampoorah and Boondée, on the north of the Chumbul, as well as in Koonah and Bundelcund. That he was to entertain no European in his employment, without the consent of the British Government, and never admit Surajee Ghautka into his counsels or service. Contrary to the earnest advice of Lord Lake, Sir George Barlow, the new governor-general, so far gratuitously modified these conditions to which the Mahratta chiefs had consented, as to restore the provinces of Rampoorah and Boondée to Holkar, and to abandon the defensive alliance which had been concluded with the Rajah of Jypore. This last measure was not adopted without the warmest remonstrances on the part, both of Lord Lake and the abandoned Rajah, who observed to the British resident, with truth, "That this was the first time, since the English Government had been established in India, that it had been

(1) Malcolm, 388, 427. Auber, ii. 361, 461

known to make its faith subservient to its convenience." But every thing announced that the master spirit had fled from the helm, when Lord Wellesley embarked for England; advantages, conceded by our enemies, were gratuitously abandoned in the vain idea of conciliation, and the objects to be gained by a pacific policy; a treaty signed, to which the illustrious statesman, who had conquered the means of dictating it, would never have consented; and future burdensome and hazardous wars entailed upon the empire, to avoid the necessity of a suitable assertion of the British supremacy at the present moment (1).

Review of Lord Wellesley's administration. The administration of Marquis Wellesley exceeds in the brilliancy and importance of the events by which it was distinguished, any recorded in British history. In the space of seven years, triumphs were then accumulated, which would have given lustre to an ordinary century of success. Within that short period, a formidable French force, four teen thousand strong which had well-nigh subverted the British influence at the court of their ancient ally the Nizam, was disarmed—the empire of Tippoo Sultan, which had so often brought it to the brink of ruin, subverted; the Peishwa restored to his hereditary rank in the Mahratta confederacy, and se cured to the British interests; the power of Scindiah and the Rajah of Berar crushed, and their thrones preserved only by the magnanimity of the conqueror; the vast force, organized by French officers, of forty thousand disciplined soldiers on the banks of the Jumna, totally destroyed; and Holkar himself, with the last remnant of the Mahratta horse, driven entirely from his dominions, and compelled, a needy suppliant, to sue for peace, and to the restitution of his provinces to the perhaps misplaced generosity of the conqueror. He added provinces to the British empire in India, during his short administration, larger than the Kingdom of France; extended its influence over territories more extensive than the whole of Germany; and successively vanquished four fierce and warlike nations, who could bring three hundred thousand men into the field.

From maintaining with difficulty a precarious footing at the foot of the Ghats, on the Malabar and Coromandel coasts, the British government was seated on the throne of Mysore; from resting only on the banks of the Ganges, it had come to spread its influence to the Indus and the Himalaya: it numbered among its provincial towns Delhi and Agra, the once splendid capitals of Hindostan; among its stipendiary princes, the Sultan of Mysore and the descendant of the imperial house of Timour. These great successes were gained by an empire which never had twenty thousand European soldiers under its banners which was engaged at home at the moment, in a mortal conflict with the conqueror of the greatest continental states and found in his fidelity to its engagements, the justice of its rule, its constancy in difficulty, its magnanimity in disaster, the means of rousing the native population in its behalf, and compensating the want of British soldiers by the justice of British government, the ability of British councils, and the daring of British officers. Impressed with these ideas, future ages will dwell on this epoch as one of the most glorious in British one of the most marvellous in European annals; and deem the last words of the British inhabitants of Calcutta to Lord Wellesley, on his departure for Europe, as not the florid language of panegyric, but the sober dictates of truth. "The events of the last seven years have marked the period of your government as the most important epoch in the history of European power in India. Your discernment

in seeing the exigencies of the country and of the times in which you were called upon to act; the promptitude and determination with which you have seized upon the opportunities of acting, your just conception and masterly use of our intrinsic strength, have eminently contributed, in conjunction with the zeal, the discipline, and the courage of our armies, to decide upon these great events, and to establish from one extremity of this empire to the other the ascendancy of the British name and dominion (1) "

Return of
Wellington
to Europe
March 10,
1805

General Wellesley, had, a few months before his brother, set sail for the British islands. His important duties as Governor of Mysore had prevented him from taking an active part in the war with Holkar; although the judicious distribution of troops which he had made in the Deccan, had secured the protection of the British provinces in that quarter, and contributed powerfully to overawe the southern Mahratta powers, and keep Scindiah and the Rajah of Berar from breaking out into open hostility. But though not personally engaged, his active and watchful spirit observed with intense interest the progress of the contest, his counsel and experience proved of essential service both to the government and the armies; and his letters on the subject remain to this day an enduring monument of judgment, foresight, and penetration (2). His able and impartial government of Mysore, and the tributary and allied states connected with it, had endeared him to the native inhabitants; while his extensive local knowledge and indefatigable activity in civil administration, had justly commanded the admiration of all ranks of European functionaries. But he was dissatisfied with the restrictions sometimes imposed upon him by the government at home, and prompted to return to Europe by that hidden law which so often makes the temporary vexations of men, selected by Providence for special purposes, the means of turning them into their appointed theatre; he felt the influence of that mysterious yearning, which, even in the midst of honours and power, prompts the destined actors in great events to pant for higher glories, and desire the trial of more formidable dangers. Addresses showered upon him from all quarters when his approaching departure was known, the inhabitants of Calcutta voted him a splendid sword, and erected a monument in their capital to the battle of Assaye, but among all his honours none was more touching than the parting address of the native inhabitants of Seringapatam, which seemed almost inspired with a prophetic spirit. They "implored the God of all castes and of all nations to hear their constant prayer; and wherever greater affairs than the government of them might call him, to bestow on him health, happiness, and glory (5)."

Analogy of
the British
Empire in
India and
Napoleon's
in Europe

The progress of the British empire in India bears, in many respects, a close resemblance to that of Napoléon in Europe; and the "necessity of conquest to existence" which was so strongly felt, and forcibly expressed, by Lord Clive, Lord Cornwallis, Lord Wellesley, and Lord Hastings, should make us view with a charitable eye the corresponding invincible impulse under which the European conqueror continually acted. Both empires were founded on opinion and supported by military force; both brought a race of conquerors to supreme dominion, in opposition to the established rights and vested interests of the higher classes; both had to contend with physical force superior to their own, and prevailed chiefly by espousing the cause of one part of the native powers against the other, both were compelled at first to supply inferiority of numbers by supe-

(1) Address of Inhabitants of Calcutta to Lord Wellesley, 29th July, 1805. Well Desp iv 613

(3) Gurw ii. 606, 608 Scherer, i 66.

riority in energy and rapidity of movement; both felt that the charm of invincibility once broken was for ever lost, and that the first step in serious retreat was the commencement of ruin. Both had gained their chief increase of power during periods of peace; the strength of both appeared more terrible on the first renewal of hostilities, than it had been when they last terminated and it was hard to say whether the open hostility or withering alliance of either was most fatal to the adjoining states.

Their essential point of difference. But while, in these respects, these two empires were remarkably analogous to each other, in one vital particular their principles of action and rules of administration were directly at variance, and it is to this difference that the different durations of their existence is to be ascribed. The French in Europe conquered only to oppress—seducing words, indeed, preceded their approach, but cruel exactions accompanied their footsteps—desolation and suffering followed their columns; the vanquished states experienced only increased severity of rule by the sway of the tricolor flag. The English in India, on the contrary, conquered only to save; the oppression of Asiatic rule, the ferocity of authorized plunder disappeared before their banners—multitudes flocked from the adjoining states to enjoy the blessings of their protection; the advance of their frontier was marked by the smiling aspect of villages rebuilt, fields recultivated, the jungle and the forest receding before human habitations. And the difference in the practical result of the two governments has been decisively established, by the difference of the strength which they have exhibited in resisting the shocks of adverse fortune; for while the empire of Napoléon sunk as rapidly as it rose, and was prostrated on the first serious reverse before the aroused indignation of mankind—the British dominion in Asia, like the Roman in Europe, has stood secure in the affections of its innumerable inhabitants, and though separated by half the globe from the parent state, has risen superior during almost a century to the accumulated force of all its enemies.

No reference to the rise of the British power in India. After the most attentive consideration of the circumstances attending the rise and establishment of this extraordinary dominion, under Lord Clive, Warren Hastings, Lord Cornwallis, and Marquis Wellesley, it seems almost inexplicable to what cause its marvellous progress has been owing. It was not to the magnitude of the forces sent out by the mother country, for they were few and furnished in the most parsimonious spirit. It was not to the weakness of the conquered states, for they were vast and opulent empires, wellnigh equalling in numbers and resources all those of Europe put together; it was not to their want of courage or discipline, for they had all the resources of European military art, and fought with a courage which sometimes rivalled even the far famed prowess of British soldiers. The means of combating with resources at first slender, and always dependent for their existence on the capacity and energy of the Indian government, were found in the moral courage and far-seeing sagacity of our Eastern administration, and the unconquerable valour of our British officers, who brought a degenerate race into the field, and taught them, by their spirit and their example, to emulate the heroic deeds of their European brethren in arms. The history of the world can hardly exhibit a parallel to the vigour and intrepidity of that political administration—the courage and daring of those military exploits. And perhaps, on reviewing their achievements, the British, like the Roman annalist, may be induced to conclude that it is to the extraordinary virtue and talent of a few leading men, that these wonderful successes have been owing. “*Mihi multa legenti, multa audienti, quæ populus Romanus domi militæque, mari atque terrâ, præclara facinora fecit, forte*

lubuit attendere, quæ res maxime tanta negotia sustinuisset. Sciebam sæpe, numero parvâ manu, cum magnis legionibus hostium contendisse; cognoveram, parvis copis, bella gesta cum opulentis regibus; ad hoc sæpe fortunæ violentiam tolerasse; facundia Græcos, gloria belli Gallos, and Romanos fuisse. Ac mihi, multum agitantî, constabat paucorum civium egregiam virtutem cuncta patravisse, eoque factum, ut divitias paupertas, multitudinem paucitas superaret (1) ”

Causes of this extraordinary progress Much, however, as the strenuous virtue of individuals, may have contributed to the greatness of the British empire in Asia, as it did of the Roman dominion in Europe, it will not of itself explain the phenomenon. This strenuous virtue itself is the wonder which requires solution. How did it happen that Great Britain, during the course of eighty years should have been able to furnish a race of statesmen adequate to the conception of such mighty projects, of warriors equal to the execution of such glorious deeds, men capable of seizing with unflinching courage the moment of action, of combining with profound sagacity the means of conquest, of executing with undaunted resolution the directions of genius? Still more, how was this constellation of talent exhibited when the state was involved in bloody and arduous conflicts in the western hemisphere, and shone with the brightest lustre at the very moment when all the resources of the state seemed concentrated for the defence of the heart of the empire? It was the boast of the Romans that their republican constitution, by training all the citizens to civil or military duties, either as leaders or followers, provided an inexhaustible fund of virtue and ability for the service of the state, and that the loss even of the largest army or the most skilful commanders could, without difficulty, be supplied by the multitudes in every rank whom the avocations of freedom had trained to every pacific or warlike duty. In British India, equally as in ancient Rome, the influence of the same undying energy and universal capacity may be descried. The natives say that the Company has always conquered, because it was *always young*; and such in truth was ever its character. In no other state of society but that in which a large mixture of the democratic element has spread energy and the spirit of exertion through every rank, is to be found for so considerable a period so large a share of the undecaying youth of the human race.

It was owing to the union of democratic energy with aristocratic foresight But this element has usually been found in human affairs to be inconsistent with durable greatness. It has either burned with such fierceness as to consume, in a few years, the vitals of the state, or dwindled into a selfish or short-sighted passion for economy, to gratify the jealousy of the middle classes of society, fatal in the end to its independence. In moments of general excitement, and when danger was obvious to the senses, democratic societies have often been capable of the most extraordinary exertion, it is in previous preparation, sagacious foresight, and the power of present self-denial for future good, that they have in general proved deficient. That England, in its European administration, has experienced throughout the contest with revolutionary France, its full share both of the strength and weakness incident to democratic societies, is evident from the consideration that, if the unforeseeing economy of the Commons had not, during the preceding peace, when danger was remote, reduced the national strength to a pitiable degree of weakness, Paris could with ease have been taken in the first campaign, and that, if the inherent vigour, when danger is present, had not supported

later stages, the independence of Britain and the last remnant of European freedom, notwithstanding all the efforts of the aristocracy, must have sunk beneath the arms of Napoleon. No one can doubt that, if a popular House of Commons or unbridled press, had existed at Calcutta and Madras, to coerce & restrain the Indian government in its political energy or military establishment, as was the case in the British Isles, the British empire in the East must have been speedily prostrated, any more than that, if its able councils and gallant armies had not been supported by popular vigour at home, even the energy of Lord Wellesley, and the daring of Lord Lake, must alike have sunk before the strength of the Asiatic dynasties.

Causes of this extraordinary combination.

The eastern empire of England, on the other hand, has exhibited no such vicissitudes; it has never felt the want either of aristocratic foresight in preparation, or of democratic vigour in execution; it

has ever been distinguished alike by the resolution in council, and tenacity of purpose, which characterise patrician, and the energy in action and inexhaustible resources which are produced in plebeian government. This extraordinary combination, peculiar, in the whole history, of the species, to the British empire in Asia and the Roman in Europe, is evidently owing to the causes which in both, during a brief period, rendered aristocratic direction of affairs co-existent with democratic execution of its purposes; a state of things so unusual, and threatened by so many dangers; an equilibrium so unstable, that its continuance, even for the brief time it endured in both, is perhaps to be ascribed only to Divine interposition. And it is evident, that if the same combination had existed, in uncontrolled operation, in the government at home; if the unconquerable popular energy of England had been permanently directed by foresight and resolution equal to that which was displayed in the East; if no popular jealousy or impatience had existed, to extinguish, on the termination of war, the force which had gained its triumphs, and the fleets and armies of Marlborough, Chatham, Nelson, and Wellington had been suffered to remain at the disposal of a vigilant executive, to perpetuate the ascendancy they had acquired; if the two hundred ships of the line, and three hundred thousand warriors, once belonging to England, had been permanently directed by the energetic foresight of a Chatham, a Burke, or a Wellesley, to external purposes, the British European empire in modern, must have proved as irresistible as the Roman in ancient times, and the emulation of independent states been extinguished in the slumber of universal dominion.

Causes which will eventually subvert our Eastern empire.

But no such gigantic empire was intended by providence to lull the ardent spirit of Europe, till it had performed its destined work of spreading the seeds of civilisation and religion through the habitable globe. To Great Britain, a durable colonial ascendancy is

given; but it will be found, not among the sable inhabitants of Hindostan but the free descendants of the Anglo-Saxon race in the American and Australian wilds. The extraordinary combination of circumstances, which gave us the empire of the East, could not remain permanent: aristocratic constancy and democratic vigour, can co-exist only for a brief space, even in the most favoured nation. Already, the great organic change of 1832, and the extension of the direct influence of British popular power upon Eastern administration, have gone far to shake the splendid fabric. When the time arrives as arrive it will that adverse interests, ignorant philanthropy or prejudiced feeling, in the dominant island, shall interfere with vested rights violate existing engagements, or force on premature changes in the East, as they have already done in the West Indies, the discontent of the inhabitants will break

out into inextinguishable revolt. When the national strength is prostrated to gratify the jealousy of popular ascendancy in the Asiatic, as it has long been in the European world, the last hour of our Indian empire has struck. Distant provinces may be long ruled by a wise, vigorous, and paternal central government; but they cannot remain for any considerable time, under the sway of a remote and tyrannical democratic society. The interests of the masses are, in such a case, directly brought into collision, the prejudices, the passions of the ruling multitude, soon prove insupportable to the inhabitants of the subject realm, the very spirit which the central empire has generated, becomes the expansive force which tears its colonial dependencies asunder. Whether the existing contest between the different classes of society in the British islands terminates in the lasting ascendant of the multitude, or the establishment, by democratic support, of a centralized despotism; the result will be equally fatal to our eastern supremacy in the first case, by terminating the steady rule of aristocratic foresight; in the last, by drying up the fountains of popular support.

Great and
lasting bene-
fits it has
already pro-
duced in
human
affairs

But whatever may be the ultimate fate of the British empire in India, it will not fall without having left an imperishable name, and bequeathed enduring benefits to the human race. First of all the Christian family, England has set its foot in the East, not to enslave but to bless; alone of all the conquering nations in the world, she has erected, amidst Asiatic bondage, the glorious fabric of European freedom. To assert that her dominion has tended only to social happiness, that justice has regulated all her measures, and equity pervaded every part of her administration, would be to assert more than ever has been, or ever will be produced by human nature. But when interest has ceased to blind or panegyric to mislead, the sober voice of impartial truth will confess, that her sway in Hindostan has contributed, in an extraordinary degree, to correct the disorders of society, to extricate from hopeless oppression the labouring, to restrain by just administration the long-established tyranny of the higher orders; and that public happiness was never so equally diffused, general prosperity never so thoroughly established among all ranks, as under the British rule, since the descendants of Shem first came to sojourn on the banks of the Ganges. Already the fame of its equitable sway and thorough protection of all classes, has spread far, and sunk deep into the mind of the East, Mahomedan prejudice has been shaken by the exhibition, amidst its severities, of Christian beneficence, and even the ancient fabric of Hindoo superstition yielded to the ascendant of European enterprise. Whether the appointed time has yet arrived for the conversion of the worshippers of Brahma to the precepts of a purer faith, and the vast plains of Hindostan are to be peopled by the followers of the Cross, as yet lies buried in the womb of fate. But, whatever may be the destiny of Asia, the British standard has not appeared on its plains in vain; the remembrance of the blessed days of its rule will never be forgotten, and more glorious even than the triumph of her arms, have been the seeds of future freedom, which the justice and integrity of English government have sown in the regions of the sun.

CHAPTER LIII

CAMPAIGN OF ASSENBERG, LANDSHUT AND ECHMÜHL.

ARGUMENT

Influence of the Aristocratic and Democratic Principles on the two contending Parties in Europe—Policy of the Austrian Cabinet since the Peace of Presburg—Important Decree ordering the Formation of the Landwehr. In June 1806—Napoleon's Remonstrances against it—Deceitful Pacific Professions of Austria at Erfurt—Intelligence of the Preparations of Austria, induces Napoleon to halt in Spain—Division of Opinion in the Austrian Cabinet on the War—Arguments for and against it—Amount and Distribution of the French Forces in Germany in Spring 1806—Efforts of Austria to obtain the Accession of Russia to the Confederacy—Prussia resolves to remain neutral—General Effervescence in Germany in aid of the Austrian Cause—Character of Metternich, the Austrian Ambassador at Paris—Angry Interchange of Notes between the French and Austrian Cabinets—Deep Umbrage taken by Austria at the Conference of Erfurt—Measures taken for the Concentration of the French Army—Preparations and Forces of Austria—Last Diplomatic Communications at Paris—Spirit which animated all Classes in the Austrian Empire—Austrian Plan of the Campaign—Plans of Napoleon—Commencement of Hostilities by the Austrians—First movements of the Austrians, and imminent Danger of the French—Faulty movements of Berthier to arrest their Progress—Advance of the Austrians almost only in two the French Army—Movements of the two Armies towards each other—Napoleon's Plan of Operations, and its great Dangers—Action between Davoust and Hohenollern, at Thame—Positions of the two Armies on the night of the 19th—Napoleon's Address to the German Confederates—Combat of Abensberg—Hiller pursued to Landshut—Is again beaten by the Emperor—Operations of Davoust and the Archduke Charles in the centre—Attack and Capture of Ratisbon by the Austrians—Preparatory Movements on both sides with a view to a General Battle—Description of the Field of Battle—Battle of Echmühl—Victory of Napoleon—Desperate Cavalry Actions in front of Ratisbon—The Archduke Retreats across the Danube—Operations against Ratisbon by the French, and wound of Napoleon—Its Assault and Capture—Great Results of these Actions—Indefatigable activity of Napoleon and his Soldiers was the principal cause of these successes—Impressive Scene in the conferring of military honours at Ratisbon—Defeat of the Bavarians by Hiller—Successful Operations of the Archduke John in Italy—Total Defeat of Eugene Beauharnais at Sacile—Important effects of this Victory on the Italian Campaign—Hopes which the commencement of the Campaign afforded to the Allies.

Influence of the aristocratic and democratic principles on the contending parties in Europe

As the History of Europe during the eventful year which succeeded the French Revolution, contains, in the domestic transactions of every state possessing the shadow even of free institutions, a perpetual recurrence of the strife between the aristocratic and democratic principles; so the military annals of the same period illustrate the effect of these contending powers, on the course of external events, and the issue of warlike measures. In the results of military operations, not less than the consequences of social convulsion, we perceive the influence of the same antagonist principles—the long-continued successes of the one, not less than the persevering firmness of the other, clearly illustrate the action of those great antagonist powers which in every age have divided between them the government of mankind. France, buoyant with the energy, and radiant with the enthusiasm of a revolution, was for long triumphant; but the fever of passion is transient, the suggestions of interest permanent in their effects; and, in the vehement exertions which the democratic principle there made, externally and internally, to achieve success, the foundation was necessarily laid for disappointment and change within, exhaustion and ultimate disaster without. Austria, less powerfully agitated in the outset, was directed by principles calculated to be more uniform in their operation, and more effect

ive in the end . recurring to the aid of popular enthusiasm only when driven to it by necessity, and guided throughout by aristocratic foresight, she did not so soon wear out the scorching flame which shakes the world; like a skilful combatant, she gave ground and yielded, till the strength of her antagonist had exhausted itself by exertion; and thus succeeded at last, not only in appearing with undiminished strength on the theatre of combat, but rousing to her standard the still unexhausted vigour of popular excitation.

Policy of "the Imperial Cabinet since the peace of Presburg" Since the gallant but unsuccessful attempt made by the Imperial Government in 1805, the Cabinet of Vienna had adhered with cautious prudence to a system of neutrality. Even the extraordinary temptation afforded by the disasters of the Polish campaign, and the opportunity, thence arising, of striking a decisive blow when the forces of the east and the west were engaged in doubtful hostility on the banks of the Alle, had not been able to rouse to immediate exertion. Austria armed, indeed, and assumed a menacing attitude, but not a sword was drawn; and the rapid termination of the contest by the disaster of Friedland, put an entire stop to any projects of hostility which a decided victory in that quarter by the Muscovite arms, or even the transfer of the war into the interior of Russia, might probably have occasioned. But during this interval the Government was not idle. Under the able guidance of the Archduke Charles, the war department assumed an extraordinary degree of activity, the vast chasms which the campaigns of Ulm and Austerlitz had occasioned in the ranks, were filled up by voluntary recruiting, or the prisoners who at length were restored by the French Government, and, with a patriotism and wisdom worthy of the very highest admiration, the treasury, at the very time when the state was overburdened with the enormous contribution of four millions sterling, imposed by the victorious French troops, purchased from their retiring armies the greater part of the immense park of two thousand pieces of cannon, which they were removing from the arsenal of Vienna. During the whole of 1806 and 1807, the efforts of the war department were incessant, without any ostentatious display, to restore the horses of the cavalry and artillery, and replenish the arsenals and magazines, which had been nearly emptied by the efforts or spoliation of the last campaign; but the attention of the Archduke was, in an especial manner, drawn to the remodelling of the infantry, the real basis of all powerful military establishments. The French organization into corps d'armée, under the command of marshals, and divisions under them of generals, each with a certain proportion of cavalry and artillery, so as to render it a little army complete in itself, that admirable system, which Napoleon had adopted from the ancient conquerors of the world (1), was introduced into the imperial service, while the younger and more ardent officers, with the Archduke John at their head, eagerly supported still more energetic steps, formed plans of national defence and internal communication, warmly recommended the adoption of measures calculated to rouse the national enthusiasm in the public defence, and already contemplated those heroic sacrifices in the event of another invasion, which afterwards, under Wellington in Portugal, and Alexander in Russia, led to such memorable results (2)

Important decree ordering the formation of the Landwehr, in June 1808 It was the presence of the grand army of France, two hundred thousand strong, in the north and west of Germany, which long overawed the imperial government, and prevented the adoption of any steps which could give umbrage to Napoléon; but with the

(1) *Ante*, v. 152

(2) *Pelet, Guerre de 1805*, 36, 39 *Der Erzherzog Johans Feldzug in Jahre 1809*, 8

transfer of a large part of that immense force to the Peninsula, after the breaking out of the war in that direction, this oppressive load was materially diminished. The able statesmen who directed the imperial councils, immediately perceived that a powerful diversion was now likely to be created in the quarter where the French Emperor least expected it, and where he was most desirous of obtaining a solid support; and they readily anticipated that England would not be slow in availing herself of this unexpected revolution of fortune in her favour, and descending in strength upon that theatre of warfare where the sea would prove the best possible base for military operations, and the scanty internal resources of the country would render it impossible to keep the armies of France together for any length of time in sufficient strength for their expulsion. In order to be in a situation to improve on any chances which might thus arise in their favour, the cabinet of Vienna no sooner heard of the breaking out of the Spanish contest, than they issued a decree by which a militia, raised by conscription, under the name of *Landwehr*, was instituted. The general enthusiasm in favour of the monarchy, about, it was hoped, to resume its place in the theatre of Europe, soon raised this admirable force from 200,000, fixed by the law for its German possessions, to 500,000 men. In addition to this, the Hungarian Diet voted twelve thousand recruits for the regular army for the year 1807, and eighty thousand for 1808; besides an insurrection, or *levy en masse* of eighty thousand men, of whom thirty thousand were excellent cavalry. These immense military preparations, in addition to a regular standing army now raised to 350,000 men were sufficient to demonstrate the existence of some great national project (1); and they were rendered still more formidable by the activity which prevailed in completing the remounting of the cavalry and artillery, and arming the fortresses, both on the frontier and in the interior; as well as the enthusiastic feelings which this universal note of military preparation had awakened in all classes of the monarchy.

Napoleon's remonstrances against these measures. 24th July. Napoleon was no sooner informed of these serious military changes, than he addressed the most pressing remonstrances to the Imperial cabinet and, in the midst of the increasing intricacy of the Peninsular affairs, and all the whirl of a rapid journey from Bayonne, by Bordeaux, to Paris, repeatedly demanded a categorical explanation of armaments so well calculated to disturb the peace of Europe. At the same time, he addressed a circular to the princes of the Confederation of the Rhine, in which he called on them "to make ready their contingents, and prevent a war without a pretext, as without an object, by showing to Austria that they were prepared for it." No sooner had he arrived in Paris than he 18th Aug. addressed a public remonstrance on the same subject, to Metternich, the Austrian ambassador, in presence of all the diplomatists of Europe. The Imperial Government made loud professions of pacific intentions; but did not, for an hour, discontinue their military preparations. Napoleon was not deceived: the coincidence of these formidable armaments with the insurrection in Spain, and the disasters of Almeida and Baylen, was too evident to elude the most ordinary sagacity (2) but he dissembled his resentment, and contented himself with ordering the princes of the Confederation to keep their contingents together, and strengthening, to the utmost, the armies in Germany, so as to replace the veterans who were withdrawn in such numbers, for the war in the Peninsula.

Deceitful
pacific pro-
fessions of
Austria at
Erfurth

It was, in a great measure, to overawe Austria, that Napoléon pressed the Emperor Alexander to meet him at Erfurth, and he flattered himself, that however tempting the opportunity afforded by the Spanish insurrection might be, the cabinet of Vienna would hesitate before they engaged in hostilities with the two most powerful military states of the continent. The preparations of Austria being not yet complete, it was deemed advisable to gain time; and in order to accomplish this object, M. de Vincent was dispatched with a letter to the coalesced Emperors in that city, so full of protestations of amity (1), that Napoléon authorized the princes of the Confederation to dismiss their contingents, with the advice, merely, to re-assemble them as soon as ever Austria resumed her hostile attitude. To the Emperor Francis, he returned an answer, earnestly counselling moderation and pacific views (2), and having thus, as he hoped, dispelled, or at least delayed, the cloud which threatened to burst in the east of Germany (5), he, by a formal decree, dissolved the grand army, and directed a considerable part of the troops composing it, particularly the corps of Soult and Ney, with the Imperial guards, to Spain where they achieved the successes which have already been detailed.

parations of
Austria, in-
duces Napo-
léon to halt
in Spain
and return
to Paris

Notwithstanding the disasters, however, which befell the Spaniards, the cabinet of Vienna was not discouraged. During the winter, measures evidently indicating a hostile spirit, were adopted. The harbour of Trieste was opened to the English and Spanish flag: large purchases of arms, were there made by the agents of the insurgents, articles hostile to Napoléon began to appear in the public journals, which, being all under the control of the police, indicated more or less the disposition of Government. and the Austrian ambassador declined to accede to a proposal made at Paris by Count Romanzow, for the conclusion of a treaty, involving a triple guarantee between the courts of St -Petersburg, Vienna, and the Tuileries. Secret amicable relations had been established with Great Britain; the common refuge of all those however hostilely disposed in former times, on the continent, who found the tyranny of France growing insupportable. But though the cabinet of St -James's tendered the offer of their assistance in subsidies, they strongly counselled the Imperial government not to take the irrevocable step, unless the resources of the monarchy were clearly equal to the struggle which awaited them. But the vigour of the English administration, notwithstanding their prudent advice, was such as eminently to inspire confidence, the spectacle of fifty thousand British soldiers taking the field, in the Peninsular campaigns, was as unusual as it was animating, and promised a diversion of a very different kind from those which had terminated in such disaster on

(1) "He flattered himself, that the Emperor Napoléon had never ceased to be convinced, that if false insinuations, in regard to the organic changes which he had deemed it necessary to introduce into his monarchy, had for a moment thrown doubts on the continuance of his amicable relations, the explanations which Count Metternich had made on that subject had entirely dissipated them. The Baron Vincent was charged to confirm them, and to afford every explanation that could be desired."—FRANCIS to NAROLLOV, 21st Sept 1808. SCHÖLL, ix 218

(2) "He could assure his Imperial Majesty, that he was seriously afraid he should see hostilities renewed, the war faction had pushed Austria to the most violent measures, and misfortunes even greater than the preceding ones. If, however, the measures of the Emperor Francis were such as to indicate confidence, they would inspire it, Truth and sim-

plicity have now become the best politicians, he had communicated to him his apprehensions, in order that they might be instantly dissipated: when he had it in his power to have dismembered the Austrian dominions, he had not done so. He was ever ready, on the contrary, to guarantee their integrity. The last levy *en masse* would have occasioned a war, if he had believed it was raised in concert with Russia. He had just disbanded the camp of the Confederation of the Rhine one hundred thousand of his troops were about to renew their threatening attitude against England.—Let your Imperial majesty, therefore, abstain from all hostile armaments which could give umbrage to the French cabinet, or operate as a diversion in fa.

—THIBAUDEAU, vii 73, 74

(3) Thib. v 200, 201.

the plains of Flanders or the bay of Quiberon. At length there appeared, in the middle of December, a declaration of the King of England, which openly alluded to the hostile preparations of Austria, and assigned the prejudicial effect of Great Britain withdrawing at such a moment from the contest, as a powerful reason for declining the mediation of France and Russia, offered at Erfurth (1); and the same courier, who, on the 1st January 1809, brought this important state paper to Napoléon, conveyed at the same time decisive intelligence in regard to the hostile preparations and general movement in the Austrian states. He immediately halted, as already mentioned, at Astorga, returned with extraordinary expedition to Valladolid, where he shut himself up for two days with Maret, his minister for foreign affairs; dispatched eighty-four messengers in different directions (2), with orders to concentrate his forces in Germany, and call out the full contingents of the Rhenish confederacy; and returned, without delay, himself to Paris.

Division of opinion in the Austrian cabinet on the war. The Austrian cabinet, meanwhile, notwithstanding their hostile preparations, were as yet undecided as to the course which they should finally adopt. The extreme peril which the monarchy had already undergone in the wars with Napoléon, as well as the uncertain nature of the diversion which they could expect from so tumultuary a force as the Spanish insurrection, naturally excited the most anxious solicitude, and induced many of the warmest and wisest patriots to pause before they engaged in a contest, which, if unsuccessful, might prove the last which the country might have ever to sustain. Opinions were much divided, not only in the cabinet but the nation, on the subject. At the head of the party inclined to preserve peace, was the Archduke Charles, whose great military exploits and able administration as director of the war department, necessarily gave his opinion the greatest weight, and who had felt too frequently the weight of the French arms not to appreciate fully the danger of again provoking their hostility. On the other hand, the war party found an able and energetic advocate in Count Stadion, the prime minister, who was cordially seconded by the majority of the nobility, and ardently supported by the great body of the people. It was known also that the Emperor himself inclined to the same opinion. The question was vehemently argued not only in the cabinet but in all the private circles of the metropolis.

Arguments used on both sides. On the one hand, it was argued that the military preparations of the monarchy were still incomplete, and its finances in the most deplorable state of confusion; that Prussia whatever her inclinations might be, was incapable of rendering any efficient assistance, and Russia too closely united with the French Emperor to offer any hope of co-operation; that the Spanish insurgents could not be expected long to hold out against the immense forces which Napoléon had now directed against them, and accordingly had been defeated in every encounter since he in person directed their movements; and the English auxiliaries, deprived of the solid base of Peninsular co-operation, would necessarily be driven, as on former occasions, to their ships. What madness, then, for the sake of a transient and uncertain success,

(1) - If among the nations who maintain against France a precarious and doubtful independence, there are any who, at this moment, hesitate between the rule which will result from prolonged inaction and the contingent dangers which may arise from a courageous effort to escape from it, the successful prospect of a peace between Great Britain and France could not fail to be singularly dis-

trous. The hope of return of tranquillity might suspend their preparations, or the fear of being abandoned to their own resources shake their resolution. — 18th Dec 1803. *King Speech, Parl. Deb.*

(2) *Ann. xl. 400 n. Thib. vii. 208, 202. Harl. x. 237 238. Fict. i. 13, 14.*

PRINCE SCHWARTZENBERG, to St.-Petersburg Stadion had been previously made aware, by secret communications from Baron Stein, the Duke de Serra Capriola, and others, that, notwithstanding Alexander's chivalrous admiration of Napoleon, he still retained at bottom the same opinions as to the necessity of ultimately joining in the confederacy for the deliverance of Europe and he was not without hopes that the present opportunity, when so large a portion of the French armies were engaged in the Peninsula, would appear to the cabinet of St.-Petersburg a fair one for taking the lead in the great undertaking. But all the efforts of Schwarzenberg were in vain. Alexander had given his word to the French Emperor; and though capable of the utmost dissimulation so far as the mere obligations of cabinets were concerned, the Czar was scrupulously faithful to any personal engagements which he had undertaken. He was occupied, moreover, with great schemes of ambition both on his northern and southern frontier, and little inclined to forego present and certain conquests in Finland and Moldavia for the problematical advantages of a contest in the heart of Germany. All attempts to engage Russia in the confederacy, therefore, proved abortive and the utmost which the Austrian envoy could obtain from the Imperial cabinet, was a secret assurance that Russia, if compelled to take a part in the strife, would not at least bring forward any formidable force against the Austrian legions (1).

Prussia had no objects of present ambition to obtain by remaining quiescent during the approaching conflict; and the wrongs of Tilsit were too recent and serious not to have left the strongest desire for liberation and vengeance in every Prussian heart. No sooner, therefore, had it become manifest that Austria was arming, than public feeling became strongly excited in all the Prussian states, and the government was violently urged by a powerful party, both in and out of the cabinet, to seize the present favourable opportunity of regaining its lost provinces, and resuming its place among the powers of Europe. Scharnhorst, the minister at war, strongly supported the bolder policy; and offered to place at the disposal of the king, by his admirable system of temporary service (2), no less than one hundred and twenty thousand men, instead of the forty thousand which they were alone permitted to have under arms. But the cabinet of Berlin was restrained from giving vent to its wishes, not merely by prudential considerations, but a sense of gratitude. The visit of the King and the Queen to St. Petersburg in the preceding spring, had renewed the bonds of amity by which they were

united to the Emperor Alexander they had obtained a considerable remission of tribute, and relaxation of the hardships of the treaty of Tilsit, from his intercession (3); and they felt that, not indifferent spectators of the Austrian efforts, they could not with safety take a part in them, until the intentions of Russia were declared. They resolved, therefore, to remain neutral; and thus had Napoleon again the extraordinary good fortune, through his own address or the jealousies or timidity of the other potentates, of engaging a fourth time in mortal conflict with one of the great European powers while the other two were mere spectators of the strife (4).

But, though refused all co-operation from the European cabinets, the court of Vienna was not without hopes of obtaining powerful succours from the Germanic people. The Tugendbund or Burschenschaft, which had spread its ramifications as far as indignation at French oppression was felt in the north and east of Germany, had already

been ambassador, but they excited jealousy and distrust among the diplomatists of Paris, who, seeing in the new representative of the Emperor qualities which they were not accustomed to in his predecessors, and unable either to overcome his caution or divine his intentions, launched forth into invectives against his character, and put a forced or malevolent construction upon his most inconsiderable actions (1).

Notwithstanding all his caution and diplomatic address, however, the Austrian ambassador could not blind the French Emperor to the preparations which were going forward. In a public audience of the envoys of the principal European powers at Paris, he openly charged the cabinet of Vienna with hostile designs and Metternich,

who could not deny them, had no alternative but to protest that they were defensive only, and rendered necessary by the hostile attitude of the princes of the Rhenish confederacy, to whom Napoleon had recently transmitted orders to call out their contingents (2). In truth, however, though loud complaints of hostile preparations were made on both sides, neither party were desirous to precipitate the commencement of active operations. Austria had need of every hour she could gain to complete her armament, and draw together her troops upon the frontier from the various quarters of her extensive dominions; and Napoleon had as much occasion for delay, to concentrate his forces from the north and centre of Germany in the valley of the Danube, and he was desirous not to unsheath the sword till advices from St. Petersburg made him certain of the concurrence of Alexander in his designs. At length the long wished for despatches arrived and relieved him of all anxiety by announcing the mission of Prince Schwartz-

berg to St. Petersburg, the refusal of the cabinet of Russia to accede to his proposals, and its determination to support Napoleon in the war with Austria which was approaching. Orders were immediately dispatched for the French ambassador to leave Vienna, who accordingly took his departure on

the last day of February, leaving only a chargé d'affaires to communicate intelligence till relations were finally broken off; and though Metternich still remained at Paris, his departure was hourly expected, and such was the estrangement of the Emperor, that he never addressed him a word, even in public and formal diplomatic intercourse (3). In the course of his

discussions with Champagny, the French minister for foreign affairs at this period, Metternich, with all his caution, could not disguise the deep umbrage taken by Austria at not having been invited to take part in the conferences of Erfurt, and he admitted that, if this had been done, the cabinet of Vienna would in all probability have recognised Joseph as King of Spain, and the rupture would have been entirely

(1) *Hist. x.* 302, 303. *D'Ale.* vi. 174, 175.

(2) "Well," said Napoleon, "M. Metternich has been here from Vienna. What does all this mean? Have they been stung by scorpions? Who threatens you? What would you be at? As long as I had my army in Germany you conceived no inquietude for your existence; but the moment it was transferred to Spain you consider yourselves endangered! What can be the end of these things? What, but that I must arm as you say; for at length I am seriously wounded. I am rightly punished for my former caution. Have you, sir, communicated your pretended apprehensions to your court? if you have done so, you have disturbed the peace of mind and will probably plunge Europe into unnecessary calamities. I have always been the slave of your court in diplomacy; we must now speak not of it in making too much noise for the preservation of

peace, too little for the prosecution of war. Do they suppose me dead? We shall see how their projects will succeed; and they will reproach me with being the cause of hostilities when it is their own folly which forces me to engage in them. But let them not imagine they will have war to carry on with me alone; I expect a courier from Russia; if another does not arrive as I expect I shall give them fighting enough." How easily may Napoleon's ideas and words be set at naught by those of all other men! At least he has let us understand his means; he has made us sensible of the advantage in the midst of the general studied obscurity and evasions of diplomatic language.—See *TASS.* *xxx.* vii. 304, 305.

(3) *Thib.* vii. 203, 204. *Hist. x.* 303, 304. *Felt.* i. 117, 119. *Stat.* ii. 29.

prevented In truth, Austria had good reason to anticipate evil to herself from the ominous conjunction of two such bodies in her neighbourhood, while, at the same time, the cordiality of Alexander would unquestionably have been cooled if Francis or Metternich had been admitted to their deliberations. Napoléon's favour was too precious to be divided between two potentates without exciting jealousy like a beauty surrounded by lovers, he could not show a preference to one without producing estrangement in the other. He chose for his intimate ally the power of whose strength he had had the most convincing experience, and from whose hostility he had, from its distance, least to apprehend (1)

Measures for the concentration of the French army March 4 Meanwhile Napoleon was rapidly completing his arrangements: orders were dispatched to Davoust early in March to concentrate his immense corps at Bamberg, and establish the head-quarters of the whole army at Wurtzburg, Massena, at the same time, received directions to repair to Strasburg, and press on with his corps to Ulm, and then unite with the army of the Rhine, Oudinot was moved upon Augsburg; Bernadotte dispatched to Dresden to take the command of the Saxons, Bessieres transported by post, in all imaginable haste, with the Imperial guard, from Burgos across the Pyrenees and Rhine, instructions were transmitted to the French ambassador at Warsaw to hasten the formation of three Polish divisions, and co-operate with the Russians in protecting the Grand Duchy of Warsaw and menacing Galicia, while the princes of the Rhenish confederacy were enjoined to collect their respective contingents at their different rallying points, and converge towards the general rendezvous of this immense force on the Danube, at Ingolstadt, or Donauwerth. Thus, from all quarters of Europe, from the mountains of Asturias to the plains of Poland, armed men were converging in all directions to the valley of the Danube, where a hundred and fifty thousand soldiers would ere long be collected; while the provident care of the Emperor was not less actively exerted in collecting magazines upon the projected line of operations for the stupendous multitude, and providing, in the arming and replenishing of the fortresses, both a base for offensive operations, and a refuge in the improbable event of disaster (2)

Preparations and forces of Austria On the side of the Austrians, preparations not less threatening were going rapidly forward. The regular army had been augmented to three hundred thousand infantry and above thirty thousand cavalry, besides two hundred thousand of the landwehr and Hungarian insurrection. The disposable force was divided into nine corps, besides two of reserve. Six of these, containing nominally one hundred and fifty thousand men, of whom one hundred and twenty thousand might be relied on as able to assemble round the standards, were mustered on the frontiers of Bavaria, besides a reserve in Bohemia, under the immediate command of the Archduke Charles. The Archduke John was entrusted with the direction of two others, forty-seven thousand strong, in Italy, supported by the landwehr of Carinthia, Carniola, and Istria, at least twenty-five thousand men, who, though hardly equal to a shock in the field, were of great value in garrisoning fortresses and conducting secondary operations. The Marquis Chastillon was prepared to enter the eastern frontier of Tyrol from the Pusterthal, with twelve thousand regular troops, where he expected to be immediately joined by twenty thousand hardy and warlike peasants. While the Archduke Ferdinand, with thirty thousand infantry and five thousand cavalry, was to invade the Grand

Duchy of Warsaw, and avert the calamities of war from the Gallician plains. The total number of troops, after deducting the non-effective and sick, might amount to two hundred and twenty thousand infantry, and twenty-eight thousand cavalry, with eight hundred pieces of cannon: a prodigious force, when their discipline and efficiency were taken into consideration; and the support which they were to receive, not only from the immense reserves of landwehr in all the provinces, but the general spirit and unanimity of the monarchy. The commencement of hostilities at once in Bavaria, Italy, Tyrol, and Poland, might seem an imprudent dispersion of strength, especially when the tremendous blows to be anticipated from Napoléon in the valley of the Danube are duly weighed; but these, in appearance offensive, were in reality strictly defensive operations. It was well known that the moment war was declared, the French Emperor, according to his usual policy, would direct all his forces at the centre of the enemy's power; invasion from Italy, Bavaria, and Poland was immediately to be anticipated and in maintaining the struggle in the hostile provinces adjoining the frontier, the war was in reality averted from their own vitals (1).

Spirit which animated all classes of the Austrian empire. The utmost efforts were at the same time made to rouse the patriotic ardour of all classes, and Government in that important duty were nobly seconded by the nobles and people throughout the empire. Never, indeed, since the foundation of the monarchy, had unanimity so universal prevailed through all the varied provinces of the Imperial dominions, and never had so enthusiastic a spirit animated all ranks of the people. The nobles, the clergy, the peasants, the burghers, all felt the sacred flame, and vied with each other in devotion to the common cause. The requisitions of government were instantly agreed to, the supplies of men and money cheerfully voted, the levies for the regular army anticipated by voluntary enrolment, the landwehr rapidly filled up with brave and hardy peasants. At Vienna, in particular, the patriotic ardour was unbounded; and when the Archduke Charles, on the 6th April, marched into the city at the head of his regiment, one swell of rapture seemed to animate the whole population. That accomplished prince aided the general ardour by an address to his soldiers on the day of his entry, which deserves to be recorded for the generous sentiments which it contains, as well as the light which it throws on the general reasons for the war (1).

While these immense military preparations were going on on both sides, the semblance of diplomatic relations was still kept up at Paris. Metternich

Of whom 250,000 might be relied on for active operations — STUTTGARTIN, 38, 46

(1) Stitt 34, 41 Erz John Feld, 29, 34 Ann Reg 1809, 203, 204

"When all endeavours to preserve independence from the insatiable ambition of a foreign conqueror proved fruitless, when nations are falling around us, and when lawful sovereigns are torn from the hearts of their subjects, when, in fine, the danger of universal subjugation threatens even the happy states of Austria, and their peaceable fortunate inhabitants, then does our country demand its deliverance from us, and we stand forth in its defence. On you, my brother soldiers, are fixed the eyes of the universe, and of all those who still feel for national honours and national prosperity. You shall not incur the disgrace of being made the instruments of oppression, you shall not carry on the endless wars of ambition under distant climes, your blood shall never flow for foreign fleets or insatiable covetousness, nor on you shall the curse alight of annihilating distant nations, and over the bodies of the slaughtered defenders of their country, paving the way for a foreigner to an usurped throne. A happier lot awaits you, the liberty of Europe has taken refuge under your banners. Your victories will loose its fetters, and your brothers in Germany, yet in the ranks of the enemy, long for their deliverance. On the fields of Ulm and Marengo, of which

the enemy so often reminds us with ostentatious pride, shall we renew the glorious deeds of Wurtzburg and Ostrach, of Stockach and Zurich, of Verona, Trebbia and Novara. We will conquer a lasting peace for our country, but that great end is not to be attained without proportionate virtues. Unconditional subordination, strict discipline, persevering courage, unshaken steadiness in danger, are the companions of true fortitude. Nothing but an union of will, and joint co-operation of the whole can lead to victory. I will be every where in the midst of you, you shall receive the first thanks of your country from your general on the field of battle. The patriotism of the Austrian nobility has anticipated your wants, this is a pledge of the national gratitude. Adorned with the marks of the public esteem, will I present to our sovereign, to the world, those brave men who have deserved well of their country. Civil virtues must also accompany your arms out of the field of battle, the real soldier is moderate, compassionate, humane, he knows the evils of war, and strives to lighten them. It is not the intention of our monarch to oppress foreign nations, but to deliver them, and to form with their princes a lasting peace, and maintain the general welfare and security."—Ann Reg 1809, 691, App. to Chron

Last diplomatic
mission
at Paris.
March 26.

who remained there to the last, rather as a legitimate spy than in any other character, presented a note to the cabinet of the Tulleries, on the 10th March. He there represented it as an undoubted fact, that since the treaty which followed the evacuation of Brannau, there was no longer any subject of difference between the two powers and that, although the Emperor of Austria might well conceive disquietude at the numerous movements which had taken place since January, he had no desire but to see Europe in peace. The French cabinet replied that as unquestionably no subject of difference remained between the two powers; and that, this being the case, the Emperor could not conceive, either what the Austrians would be at, or what occasioned their pretended disquietudes. Here terminated this diplomatic farce. It deceived neither party; but both had objects to gain by postponing, for a short time, the commencement of hostilities (1).

Austrian
plan of the
campaign.

The original plan of the Austrians was to invade at once Franco-nia, Lombardy, Tyrol, and the Grand Duchy of Warsaw. In all these districts they had numerous and active partisans, and they confidently expected a powerful co-operation from their exertions. For this purpose they had accumulated enormous masses of troops, above a hundred thousand strong in Bohemia: from whence as a central point, they were in a situation to issue in any direction which might seem advisable. They were, in March, grouped around Prague in the north-western extremity of that country, between the Elbe, the Eger, the Moldava, and the Wittava. The object of this extraordinary concentration of troops was, to advance suddenly into the country of Barenth, lend a helping hand to the numerous ardent spirits and malecontents of that quarter of Germany, fall upon Davoust's corps which was assembled at Wurtzburg, before it could receive the reinforcements which were hastening to its support, or be electrified by the presence of Napoleon, and, if possible, drive it back by superior forces to the Rhine. Such an event, it was well known, would at once bring to the Austrian standards a vast body of ardent recruits, whom the enormous exactions and grinding tyranny of the French armies had filled with unbounded hatred at their dominion, and at the same time it was hoped, would overcome the indecision of Prussia, and bring its disciplined battalions to stand by the side of the Imperialists in the great contest for European freedom. This plan was ably conceived: and if carried into execution with the requisite alacrity and vigour, might have been attended with great results; for the French armies were very much scattered in the end of February, and, by issuing suddenly from the great salient fortresses of Bohemia, and pressing forward towards the Rhine, the Archduke Charles might have entirely separated Oudinot, who lay in Swabia, from Davoust, who was cantoned on the banks of the Main (2).

Plan of
Napoleon.
April.

The Austrians had taken Napoleon, in a certain degree, at un-
awares; as not only was the flower of his veteran troops in Spain, but the forces which still remained in Germany, though extremely formidable if once assembled together, were scattered from the Alps to the Baltic at

(1) *Thib. N.* 257-268.

(2) *Journ. N.* 182, 183. *Print.* 1, 189-193. *Stat.* 46-49.

The directions of the Aulic Council for the war in Italy and Tyrol, were to concentrate both corps, under the command of the Archduke John, between Yibach and Klagenfurt, and then advance in two columns: one by the Pusterthal into the Tyrol, and

over the Brenner to Trient; the other by Friaul to Rovereto, and from thence to the Adige; while the eye of observing the lower Danube, was entrusted to the Landwehr of Jaria. The cabinet of Vienna calculated with much reason upon the expected intervention in Tyrol by 181 and support both these movements.—*CHRISTIAN* 86-87 and *PALEY* 1, 196.

a great distance from each other. His plan, therefore, contrary to his usual policy, was strictly defensive in the outset, to gain time for the concentration of his troops, and, as he deemed it unfitting that he himself should be at the head of his army before any decisive blows were struck, and where, possibly, disasters might be incurred, Berthier was despatched early in April to assume the command of the whole until the arrival of the Emperor, a convenient arrangement, as, if his operations proved successful, they would, of course, be ascribed to the intelligence and ability of his superior in command; if the reverse, the whole blame of a miscarriage might be laid upon himself. From the period of his arrival, the whole troops, both French and of the confederation of the Rhine, were formed into one army, to be called the *army of Germany*. It was divided into eight corps (1), commanded by the most distinguished marshals in the French service, and mustered two hundred thousand men. The Emperor was indefatigable in his efforts to provide subsistence, clothing, and ammunition for this enormous multitude, among other things, twenty-five million ball cartridges were collected. But he enjoined that the system should be rigorously followed out of making war support war, and strictly forbade any stores or provisions being purchased in France for the use of the troops, if they could be procured by requisitions or military contributions on the other side of the Rhine. Rapid concentration of his troops was enjoined to Berthier around the Lech (2), but no offensive operations were to be commenced before the arrival of the Emperor, who was expected about the middle of April. To all who were acquainted with the character of his movements, it was evident that the moment he arrived, and deemed himself in sufficient strength, he would commence a furious onset, and pour in concentrated masses down the valley of the Danube.

Commence
ment of
hostilities
by the
Austrians The Cabinet of Vienna took the initiative. On the 8th of April, the Austrian troops crossed the frontiers at once on the Inn, in Bohemia, in Tyrol, and in Italy. Had the original plan of the Aulic Council been followed out, and the Archduke Charles, at the head of a hundred thousand men, debouched from Bohemia, midway between the Main and the Black Forest, and advanced towards Mannheim, this commencement of hostilities might have been attended with most important effects; for dissatisfaction with the French rule was universal in that quarter, and had a powerful demonstration from England, on the coast of Flanders, seconded this irruption, the seat of war might have been permanently fixed on the middle and lower Rhine (3). On the 17th March, Austria had a hundred and forty thousand men

(1) Second corps,	Marshal Lannes,	50,000 men
Third,	Davoust,	60 000
Fourth,	Maséna	50,000
Seventh,	Iscowre,	34 000
Eighth,	Augereau,	20 000
Ninth, Saxon confederation and French,	Bernadotte,	50 000
Tenth,	King of Westphalia,	25,000
Imperial Guard,		22,000
Reserve Cavalry,	Bessières,	14,000
		<hr/> 325,000 and

400 pieces of canon.

But at least one hundred thousand of them had not yet arrived. The guard and reserve cavalry were on their march from Spain. Bernadotte's corps was still at a distance in the north of Germany, and the contingent of the confederation of the Rhine were far from being complete. Still a hundred and forty thousand French troops and sixty thousand of the Confederation might be relied on for active operations in the valley of the Danube.—*THIBAUT, vii 214.*

(2) *Thib vii 214, 223 Jom iii. 152, 153. Stat 58, 64 Pelet, i 197, 209*

(3) The instructions of the Aulic Council in the outset of the campaign were, "to advance in large masses, and attack the French army wherever it might assemble, either on the Main, the Nab, or the Danube. Should a French corps enter Bavaria, the grand Austrian army was not to sweep from its direction, but trust to arresting the movement on Bavaria, by threatening the advancing corps on the side

on the two banks of the Danube, within eight days' march of Ratisbon; while Davoust only broke up his cantonments in the north of Germany, on the Oder and lower Elbe, on that day; Masséna was still on the Rhine, and Oudinot alone at Augsburg, the Bavarians being on the Iser. Thus the complete separation of the French corps was a matter of perfect certainty, by a rapid advance towards Mannheim at that period. But the successful execution of this well-conceived design, required a vigour of determination and alacrity of execution to which the Austrians were as yet strangers; and, by hesitating till the period for striking the blow was past, and the French troops were concentrated on the Danube, Austria lost all the immense advantages of her central threatening position in Bohemia. When it was resolved to attack the French in Bavaria, the *Aulic Council* committed a second error, still greater than the former: for instead of permitting the Archduke Charles, from his central position in Bohemia, to fall perpendicularly on the French corps, scattered to the south along the valley of the Danube, at the distance of only six or eight days' march, they ordered him to countermarch the great body of his forces, and open the campaign on the Inn—a gratuitous fault, which gave his troops triple the distance to march, and the enemy triple the time to complete their preparations and concentrate their forces. At length, however, the toilsome and unnecessary countermarch was completed; the Austrian columns after being transported a hundred miles back towards Vienna, and across the Danube, were arrayed in dense masses on the right bank of April 22. the Inn; and the Archduke, crossing that river in imposing strength, prepared to carry the seat of war into the vast and level plains which stretch from the southern bank of the Danube to the foot of the Alps. At the same moment, the long wished-for signals were given from the frontiers of Styria and Salzburg, to the provinces of Tyrol. With speechless transport, the brave mountaineers beheld the bale-fires glowing on the eastern boundaries of their romantic country. Instantly, a thousand beacons were kindled over all its rugged surface; the cliffs of the Brenner were reddened by the glare, the waters of the Eisach reflected its light, and long before the ascending sun had spread his rosy tint over the glaciers of the Glockner, the inhabitants of his icy steeps were warmed by the glow, which, at the voice of patriotism, called a nation of heroes to arms (1).

First movements of the Austrians, and final march of the French.

The instructions of Napoléon to Berthier (2), before leaving Paris, were clear and precise; viz. that if the enemy commenced his attack before the 15th, by which time, it was calculated, the bulk of his forces might be assembled around Ratisbon, the army was to be

of Ratisbon or Dossauwerth. If Marshal Davoust retired in order to avoid any engagement before the arrival of his reinforcements, the grand Austrian army was nevertheless to continue its advance with all possible expedition, and take up a central position between the Black Forest and the Rhine, and there to be regulated by the force of the enemy and the chances of successful operations which were afforded. The issue of the war depended on this operation, and on the issue of the first battle which will, in all probability, if successful, raise the preponderance of Berthier's army and bring round to the standards of Austria great part of the troops of the confederation of the Rhine which remain arrayed against her.—*STRICK*, *ix.*, 61-69; *Pict.* *L.* 191.

(1) *Journ.* *L.* 182, 153. *Thell.* *vii.*, 321. *Pict.* *L.* 191.

(2) "By the 1st April, said Napoléon, 'the corps of Marshal Davoust, which broke off from the

Oder and Lower Elbe on the 17th March, will be established between Ratisbon, Bamberg, and Ratisbon. Masséna will be around the Oulart between Augsburg and Dossauwerth. From the 1st to the 15th, three French corps, 120,000 strong, besides 10,000 allies, the Russians in advance on the Iser and the Wirtembergers in reserve may be concentrated on the Danube at Ratisbon or Legelstad. Strong arms de pied should be thrown up at Augsburg to secure the passage of the Lech at Legelstad, in order to be able to detach to the left bank of the Danube and have all at Passau, which should be put in a position to hold out two or three months. The Emperor's object is to concentrate his army as soon as possible at Ratisbon: the position on the Lech is to be assumed only if it is attacked before the concentration: the former now is possible. The second corps will be at Ratisbon by the 10th and on that day Erzherzog will arrive with the reserve cavalry of the grand De-

concentrated on the Lech around Donauwerth, if after that date, at Ratisbon, guarding the right bank of the Danube from it to Passau. On the 12th, however, by means of the telegraph which the Emperor had established in central Germany, he was apprized at Paris of the crossing of the Inn by the Archduke and the commencement of hostilities. He instantly set out, and with such precision were the movements of the immense force, which was converging from the mountains of Galicia and the banks of the Oder to the valley of the Danube, calculated, that the last arrived at the general point of rendezvous around Ratisbon, at the very moment when the Emperor was approaching from Paris. It was high time that he should arrive to take the command of the army, for, in the interim, Berthier had brought it, by the confession of the French themselves, to the verge of destruction (1). Instead of instantly following up the Emperor's instructions, by concentrating his forces at Ratisbon or Donauwerth, he scattered them, in spite of the remonstrances of Davoust and Masséna, in the dangerous view of stopping the advance of the Austrians at all points. Nothing but the tardiness of their march saved the French army from the most serious calamities. But while Berthier dispersed his troops, as if to render them the more accessible to the blows of the Imperialists, the Archduke moved forward with such slowness, as apparently in order to give them time to concentrate their forces before he commenced his attack. They crossed the Inn on the 10th at Braunau and other points, and on the 16th, they had only advanced as far as the Iser, a distance of twenty leagues. On the latter day, they attacked the bridge of Landshut, over that river, and at the same time, crossed a division at Dingelsing, further down its course, which threatened to cut off the communications of General Derooy, who commanded the Bavarians placed in garrison at that point, and obliged them to evacuate that important town. The whole line of the Iser was now abandoned by the Bavarians, who fell back in haste towards Ratisbon and Donauwerth, while the Austrians, in great strength, crossed that river at all points, and directed their steps on the great road to Nuremberg, evidently towards the bridges of Ratisbon, Neustadt, and Kellheim, in order to make themselves masters of both banks of the Danube. Yet, even then, when their forces were concentrated, and greatly superior to those of the enemy as yet assembled, and every thing depended on rapidity of movement, they advanced only two or three leagues a-day, so inveterate were the habits of tardiness and delay in the German character (2).

Faulty
movements
of Berthier
to arrest
their pro-
gress

The approach of the formidable masses of the Austrians, however, full a hundred and twenty thousand strong, even though advancing with the pace of a tortoise, threw Berthier into an agony of indecision. It then evidently appeared, how much the major-general of the army was indebted for the reputation he enjoyed to the directions of the Emperor, and how different a capacious talent for the management of details is, from the eagle glance which can direct the movements of the whole. Despite all his remonstrances, he compelled Davoust to concentrate

his corps at Ratisbon, while, at the very same moment, he ordered

Davoust will be at Nuremberg. Masséna at Augsburg, Lefebvre at one or two marches from Ratisbon. Headquarters then may be safely established in that town, in the midst of 200,000 men, guarding the right banks of the Danube, from Ratisbon to Passau, by means of which stream, provisions and supplies of every sort will be procured in abundance. Should the Austrians debouch from Bohemia or Ratisbon, Davoust and Lefebvre should fall back on Ingolstadt or Donauwerth."—NAPOLEON'S *Instructions*

to BERTHIER, April 1, 1809, PELET, 1 212, 213

(1) "The Emperor, on his road to the army," says Jomini, "felt the liveliest disquietude at the posture of affairs—Berthier had brought the within a hair's-breadth of 'on'—Jo 111 159

(2), Jom 11 159, 239 64, 72

Maséna to defend the line of the Lech, separating thus the two principal corps of the French army by at least thirty five leagues from each other, and exposing the former, with his magnificent corps, the flower of the army, to be overwhelmed by the Archduke before any adequate reinforcements could be brought up to his support. Orders were at the same time given to Lefebvre, Wrede, and Oudinot, placing them in three lines, one behind another across Bavaria, in so useless and absurd a position, that more than one of the marshals did not scruple to ascribe it to treachery—a charge, however, from which the whole character of Berthier, and the uninterrupted confidence he enjoyed from the Emperor, is sufficient to exculpate him. As it was, however, the scattered position which he gave to the army over a line of forty leagues in extent, with numerous undefended apertures between the corps, was such, that a little more activity on the part of the Archduke would have exposed it to certain destruction, and brought the Austrian columns in triumph to the Rhine (1).

Meanwhile the Archduke, notwithstanding the tardiness of his movements, was inundating Bavaria with his troops. Hiller had advanced to Mosburg. Jellachich had occupied Munich, from whence the King of Bavaria hastily fled to Stuttgart to meet Napoléon; the two corps left in Bohemia had crossed the frontier, and were approaching by leisurely marches towards Ratisbon while the Archduke himself, with four corps, a hundred thousand strong, was drawing near to Abensberg, Neustadt, and Kellheim—midway between Ratisbon and Donauwerth. Berthier had gone to the former town, where Davoust was stationed with sixty thousand men—but it seemed next to impossible to extricate him from his perilous situation, as Maséna was at Augsburg, thirty five leagues to the south-west, and the centre of the Archduke was interposed in appalling strength right between them. The Bavarians under Wrede, Lefebvre, and the reserve under Oudinot were indeed in front of the Archduke around Ingolstadt, but they could with difficulty maintain their own ground, and were in no condition to extricate Davoust, who, threatened by a hundred thousand Austrians under the Archduke on the south of the Danube, and forty thousand descending from Bohemia on the north, seemed destined for no other fate than that of Mack four years before at Ulm (2).

Matters were in this critical state when Napoléon, early on the morning of the 17th, arrived at Donauwerth. Instantly he began enquiring of every one concerning the position, destination, and movements of the Austrian corps; sent out officers in all directions to acquire accurate information, and next morning dispatched the most pressing orders to Maséna to hasten, at least with his advanced guards and cavalry, to Pfaffenhofen, a considerable town nearly halfway from Augsburg to the seat of war around Neustadt and Kellheim (3). Davoust, at the same time, received

(1) Pict. I. 218, 219. Talb. II. 221, 224. Jom. II. 156, 166. Sav. IV. 44, 45.

"You cannot imagine," said Napoleon, "in what a condition I found the army on my arrival, and to what dreadful reverses it was exposed, if we had to deal with an enterprising enemy. I shall take care that I am not surprised again in such manner. And to Berthier himself he wrote from Donauwerth, the moment he arrived on the 17th. 'What you have done appears so strange, that if I was not aware of your friendship I should think you were betraying me; Davoust is at this moment more completely at the disposal of the Archduke than of myself.'—Pict. I. 218; Talb. II. 221; Sav. IV. 44.

(2) Pict. I. 262, 263. Talb. II. 224, 226. Jom. II. 176, 180. Sav. IV. 44, 45.

(3) "It is indispensable that Oudinot with his corps, and your three other divisions, with your caissons and all, should sleep at Pfaffenhofen to-morrow night; those in the rear who are still at Landshut, should do their utmost to reach Aich or at least get on as far as they can on the road from Augsburg to Aich. One word will explain to you the urgency of this. Prince Charles, with 60,000 men, debouched yesterday from Landshut on Ratisbon; the Bavarians combated the whole day with his advanced guard. Orders have been dispatched to Davoust to move with 60,000 in the direction of Kellheim, where he will form a junction with the

April 18 orders to move on the 18th in the direction of Neustadt, so as to form a junction with the Bavarians and Wirtemburghers under Lefebvre, who had retired to that quarter before the Archduke Charles, so that in the next twenty-four hours these two Marshals would be twenty leagues nearer each other, and having the troops of the confederation in the interval between them, might almost be said to be in communication. At the same time, dissembling his fears, the Emperor addressed to his soldiers a nervous proclamation, in which, loudly reproaching the Austrians with the commencement of hostilities, he promised to lead them to yet more glorious fields of fame (1)

Movements of the two armies towards each other Notwithstanding the pressing instance of the Emperor, and their own sense of the urgency of the case, Davoust and Massena could not reach the places assigned to them so early as he had anticipated, and the former, in consequence, was exposed to the most imminent danger. The messenger ordering Davoust to draw towards the Lech, had been dispatched from Donauwerth at two o'clock in the morning of the 17th, and his instructions were to march forthwith on Ingolstadt, while Wrede with

April 18 his Bavarians was stopped in his retreat at Neustadt, and ordered to concentrate with the Wirtemburghers, behind the Abens. Davoust received his orders at midnight of the 17th, but his divisions were dispersed in the villages around Ratisbon, as well as in that town, and could not be instantly put in motion, while the bulk of Massena's forces, being six or eight leagues behind Augsburg, could not be concentrated till the night of the 18th, even at that town, or reach Pfaffenhofen till late on the following evening. Davoust, having collected his whole force during the 17th, commenced the evacuation of that town at daybreak on the following morn-

April 19 ing, and by mid-day on the 19th, was already approaching Neustadt, leaving only a single regiment, three thousand strong, to guard the important bridge of Ratisbon. On the same day the Archduke divided the army which he commanded in person into two parts, and while he left the Archduke Louis with fifteen thousand men to watch the troops of the confederacy on the Abens, he himself, with twenty-five thousand, moved towards Ratisbon, in hopes of making himself master of that important passage over the Danube during the absence of Davoust's corps, and thus at once gain possession of both banks of that river, and open up a secure communication with his two corps under Klenau, on its opposite bank. The worst was to be apprehended for Davoust, if, in the course of his march to Neustadt, he had encountered this enormous mass, moving in a direction almost perpendicular to his flank, and not more than a few leagues distant. The two armies crossed without the bulk of the forces meeting (2).

Bavarians To-morrow (19th) all your troops who can be mustered at Pfaffenhofen, with the Wirtemburghers, a division of cuirassiers, and every man you can collect, should be in a condition to fall on the rear of Prince Charles. A single glance must show you that never was more pressing occasion for diligence and activity than at present. With 60,000 good troops, Davoust may indeed make head against the Archduke but I consider him ruined without resource, if Oudinot and your three divisions are on his rear before day-break on the 19th; and you inspire the soldiers with all they should feel on so momentous an occasion. In the 18th, 19th, and 20th the whole affairs of Germany will be decided.—
NAPOLEON to MASSENA, Donauwerth, 18th April 1809;
Savart, iv 51, 52

(1) Sav. iv 50, 51, Pelet, i 263, 267 Thib. vii 226, 227

Soldiers' the territory of the Confederation of the Rhine has been violated. The Austrian general supposes that we are to fly at the sight of his eagles, and abandon our allies to his mercy. I arrive with the rapidity of lightning in the midst of your Soldiers! I was surrounded by your bayonets when the Emperor of Austria arrived at my bivouac in Moravia, you heard him implore my clemency, and swear an eternal friendship. Conquerors in three wars, Austria has owed every thing to our generosity. Three times she has perjured herself! Our former successes are a sure guarantee for our future triumphs. Let us march, then, and at our aspect let the enemy recognise his conquerors!—*Moniteur*, 26th April 1809, and *TAULIEN*, vii 224

(2) Stat. 76, 81 Sav. iv. 50 Thib. vii 226, 228. Pel. i 281, 293

wars of the Great Frederick and of the laurels which they had won in the last campaign in Silesia. These words translated into German by their respective officers excited great enthusiasm, which was soon raised to the very highest pitch by the proclamation read to the troops, in which the Emperor declared that, without any French to aid them, he was to combat that day at their head, and announced a glorious destiny to their countries (1). Perceiving that the spirit of the troops was now roused to the highest point, the emperor gave the signal to engage (2).

Combats of
Austerlitz.
A. P. 1805. Notwithstanding, however, the deserved confidence which he placed in the German troops, Napoléon did not trust the result of the day exclusively to their exertions. Lannes, who the day before had joined the army from Saragossa, was intrusted with the command of two French divisions, drawn from Masséna's corps, which formed the left of the centre, under Napoléon's immediate command, and was to advance on the great road from Kellheim to Landsbut. The Wirtemburghers, under Vandamme, were in the centre. The Bavarians on the right, directly opposite to Arnststadt, under Wrede. Had two of the Austrian corps been concentrated, they might successively have combated this aggregate of allied troops, whose total strength did not exceed sixty five thousand men; but, unfortunately, they were so much dispersed, as to be incapable of opposing any effective resistance to the enemy. Hiller, with twenty-two thousand, was in march from Mainburg to Pfaffenhausen. The Archduke Louis, with ten thousand, guarded Siegenburg with its bridge over the Ader. The prince of Reuss, with fifteen thousand lay in the rear at Kirchdorf. General Thierry with five thousand, at Offenstetter. Thus, above fifty thousand were in front of the French; but scattered over a space several leagues broad, and without any centre or plan of operations. Not expecting an attack on that day, they were leisurely performing the various movements assigned to them, with a view to the concentration of their troops for the morrow, when they were simultaneously attacked by the enemy at all points, who passed at once, from cautious defensive, to furious offensive operations. They made, in consequence, but a feeble resistance: or rather they were attacked at so many different points, and so much in detail, that no one general could take upon himself the responsibility of halting to give battle: and the day was a sort of running fight, in many detached places, rather than a regular engagement. It proved, however, very disastrous to the Austrians. Thierry, whose troops had not recovered the rout of the preceding day, assailed by Lannes with greatly superior forces, was thrown back in confusion upon Hiller's troops at Rottenburg, who, coming up in haste from Mainburg. Instead of stopping increased the general disorder, and the whole were driven across the bridge of the Lär, which Lannes traversed with bayonets fixed and colours flying; the Prince of Reuss and Bianchi attacked in front by Lefebvre, and in flank by Vandamme, with the Wirtemburghers, deemed themselves fortunate in being able to escape to Pfaffenhausen without any serious loss: whither they were

(1) "Bay. place! I do not come among you as the Emperor of the French, but as chief of the confederation of the Rhine and protector of your country. You combat to-day alone against the Germans; not against Frenchmen! to be seen in the first time; they are only in reserve and the enemy are not aware of their presence. I place entire confidence in you: cheer! I have extended the limits of your country; but I now see that I have not done enough. Hereafter I will render you so great, that, in certain wars against Austria, you will no longer have need of my assistance. Two hundred years the Ba-

varian hammers, protected by France, resisted Austria; now we are on the march for Vienna; where we shall punish her for the mischief which she has done to your forefathers. Austria laboured to have partitioned your country into baronies, and divided you among her regiments. Hereafter, this war is the last which you will have to sustain against your enemies; smother them with the bayonet, and annihilate them. — TALLEYRAND in 219, 221.

(2) See iv 48. Thib. ii. 222, 231. P. 1, 8, 19.

immediately followed by the Archduke Louis, who had been driven from the bridge of Siegenburg, closely pursued by Wrede and the Bavarians, who, on this occasion, emulated the vigour and rapidity of the French troops. The Austrians were not routed at any point, and no artillery was taken; nevertheless, they had to lament the loss of eight thousand men; the line of Landshut was thrown open to the enemy, they had lost the advantage of the initiative, and, what is of incalculable importance, had been unsuccessful in the first considerable action of the campaign (1)

Hiller pur- Napoléon was not slow in following up the important blow thus
sued to struck in the outset of operations. His great object was to throw
Landshut by himself upon the Archduke's communications, and the success
Napoléon April 21 thus gained, against the covering corps of his brother Louis, by opening up
the great road to Landshut, rendered that undertaking an easy task. To cover
the movement, and distract his attention, Davoust received orders to threaten
the enemy on the side of Ratisbon, where the bulk of his forces were assembled,
but the serious operations were conducted by the Emperor in person,
against the retiring columns of Hiller, Bianchi, and the Archduke Louis.
Uniting their shattered troops, these generals had fallen back in the direction
of Landshut, in the hopes of preserving that important passage in the rear,
with the immense stores of baggage and ammunition which it contained, from
the attacks of the enemy. Thither, however, they were instantly followed by
Napoleon, who, putting himself on horseback at daybreak on the 21st, moved
every disposable bayonet and sabre in the direction of Landshut, while Masse-
na, on his right, still further in advance, manœuvred in such a way, between
Pfaffenhofen and Mosburg, as to render a retreat upon that town a matter of
absolute necessity, to avoid the communications of the grand army being in-
stantly cut off, while Davoust, on the left, was to engage the attention of the
Archduke Charles so completely, as to prevent him from rendering any effec-
tual assistance (2)

His defeat by the Emperor These movements, admirably combined, and executed with un-
common vigour and precision, proved completely successful. The
rearguard of the Archduke Louis, warmly attacked on different occasions
during the night, was thrown back in disorder in the morning on Furth and
Arth, by roads already choked with baggage waggons and all the immense
materiel of the grand Austrian army. Their confusion became altogether
inextricable when they approached the valley of the Iser, and the bridges of
Landshut, which are traversed only by two *chaussees*, passing for a consider-
able distance on the western side through low swamps, altogether impassable
for artillery or chariots. To strengthen the rearguard while the retiring col-
umns were defiling through those perilous straits, Hiller ordered General
Vincent to hold firm with the cavalry at their entrance, but at that very mo-
ment Napoleon, accompanied by a powerful train of artillery, and the cur-
rassiers of Nansouty, arrived on the ground, and instantly, under cover of a
tremendous fire of cannon, the French horse thundered in a charge. Vincent's
dragoons were unable to withstand the shock, horse, foot, and cannon were
thrown together in wild disorder on the *chaussees*, and a vast quantity of
artillery and baggage abandoned by the Austrians, who crowded in utter
disorder into Landshut. But, even behind its ramparts, they were no longer
in safety, for on the same morning Masséna had gained possession of the bridge
of Mosburg, and was rapidly advancing, agreeably to his orders, down the

right, or eastern bank of the Isar. Alarmed by his approach, the Austrians put the torch to the long wooden bridge which leads into the town, and kept up a heavy fire upon it from the neighbouring houses and churches, but General Moulon, at the head of the French grenadiers, advanced through a shower of balls, amidst the flames, to the portcullis, which was speedily demolished, and the heroic *assaillants* burst into the town. Hiller no longer fought but to gain time to draw off his artillery and chariots: but such was the rapidity of Masséna's advance, whose dense columns now covered the opposite side of the river, and had reached to within a mile of the town, that a large part of them required to be sacrificed. Hiller at length, after having made a most gallant resistance, drew off towards the Inn in the direction of Oetting, where he crossed on the following day, having lost nearly six thousand men, twenty-five pieces of cannon, six hundred ammunition waggons, a pontoon train, and an enormous quantity of baggage, in this disastrous affair (1).

Operations
of Davoust
and the
Archduke
Charles in
the centre

The task assigned to Davoust, while Napoléon was in this manner destroying the left wing of the Imperialists, and laying bare their vital line of communications to Landsbut and the Inn, was to occupy the attention of the Archduke Charles, who with the whole centre of the army had diverged to Ratisbon, in order to make himself master of the important bridge at that place, and open up the communications with the two corps of Kleinau and Bellegarde on the opposite side of the Danube. Rightly judging that the best way to impose upon his adversary, and inspire him with a mistaken idea of his own strength, was to assume the offensive, the French marshal, early on the morning of the 21st commenced an attack in the woody country which lies on the banks of the Laber, and after a warm contest drove the Austrians across that river. Though their positions were strong and forces numerous, yet Hohenzollern was so much deceived by the vivacity of the French attack, and by the idea that two divisions of their army would never have ventured, unsupported, to hazard an attack upon the dense masses of his own and Rosenberg's corps, that he never doubted that it was only a part of a general movement to pierce the Imperial centre, and that he would soon have Napoléon thundering on his flank. He gave orders for them accordingly, at noon, to fall back and take up a new position facing the south, on the right or eastern bank of the Laber, between that river and Dinzling. Forty thousand Austrian foot and five thousand horse were in two hours collected there, where they were soon assailed by thirty-five thousand French and Bavarians, under Davoust, Lefebvre, and Montbrun, whom the Emperor, after the victory of Abensberg, had detached to assist in that quarter, while he himself followed up his decisive successes against Hiller at Landsbut. The action was warmly contested till nightfall when both parties maintained their positions; and though each had to lament the loss of three thousand men killed and wounded, both claimed the victory; but, as the operations of Davoust were intended rather as a feint than a serious attack, and they had completely the desired effect, of preventing any reinforcements being sent from the centre to the left wing under Hiller, then in the act of

(1) *Hist.* 101. 100. *Pol.* II. 35, 49. *Journ.* II. 176. 171. *Thib.* vol. 222, 223.

A singular trait of heroism occurred on this occasion, on the part of an Austrian grenadier which is recorded with generous eulogy by the French historian Pelet. T. comp. As Austrian grenadiers of Traubenstein were closely pursued by the French cavalry and on the point of being sur-

rounded. A grenadier ran to an ammunition wagon and set it on fire; he was instantly thrown up with it, but, by his death, and the explosion which it inspired in the pursuers, created the pursuit and saved his comrades.—*REVUE HISTORIQUE*, 1831, *Feillet* II. 48.

being crushed by the overwhelming legions of the Emperor, the French with reason claimed the advantage (1)

Attack and capture of Ratisbon by the Austrians While these important events were shaking the Austrian left wing and centre, the Archduke Charles with the main strength of the army was pressing the attack on Ratisbon. That town, commanding the only stone bridge over the Danube below Ulm, and opening up a direct communication with the two Austrian corps on its northern bank, was at all times a point of consequence, but it had now become, unknown to the Austrians, of incalculable importance, as forming the only line of retreat for the army, now that its communication with the Inn was cut off by the capture of Landshut and the alarming progress of the Emperor on the left. Fully sensible of the value of such an acquisition, the Archduke, as soon as Davoust had left the town, ordered Kollowrath to attack it on the northern, and Lichtenstein on the southern side. The former quickly obeyed his orders, and appeared on the 19th in great strength in the villages at the northern extremity of the bridge, which were carried by assault. Soon after a dense column burst open the gates, and advanced by the great street to the northern end of the bridge, but, being there stopped by the palisades, and severely galled by a cross fire from the houses, it was obliged to retire after sustaining a severe loss. In the afternoon, however, Lichtenstein, with the advanced guard of the grand Austrian army, approached from the southern side, and attempts were made by the French garrison to destroy the bridge, but that solid structure, the work of the Romans, composed of large blocks of stone strongly cemented by Pozzuolo cement, was still, after having stood for seventeen hundred years, so entire, that it resisted all attempts at demolition by ordinary implements, and the powder of the garrison was so much exhausted, that they had not the means of blowing it up. Deeming resistance impracticable, and having nearly expended his ammunition, the French colonel surrendered at discretion. Thus were the successes in the shocks of these two redoubtable antagonists in some degree balanced; for, if the French had gained possession of Landshut, and the communication of the grand Austrian army with Vienna, they had lost Ratisbon, the key to both banks of the Danube, and, if they had five thousand prisoners to exhibit, taken in the combats of Abensberg and Landshut, the Austrians could point with exultation to the unusual spectacle of an entire regiment, nearly three thousand strong, with its eagle and standards, which had fallen into their hands (2)

Preparatory movements on both sides Matters were now evidently approaching a crisis between the Archduke and Napoléon, and both these able generals concentrated their forces, to engage in it with advantage. Conceiving that the French Emperor was at a distance, following up his successes against Hiller, the Austrian general resumed the movement towards Neustadt, which he had so unhappily abandoned three days before, and having brought Kollowrath, with his whole corps, over to the southern bank of the Danube, concentrated eighty thousand men between Abensberg and Ratisbon; Bellegarde, with his corps, above twenty-five thousand strong, was so far removed, without any assignable reason, that he could not approach nearer on that day to the scene of action than Stad-am-Hoff, at the northern end of the bridge of Ratisbon. The eighty thousand men, however, whom he had assembled, would in all probability have been able to make head against all the forces which Napoléon could bring against them, were it not that, instead of group-

(1) Stut 109, 115 Pel 11 49, 57 Jom 11 172, 173. Thib vii 233 Davoust's Report. Pel, ii, 416.

(2) Stut 114, 120 Pel 11, 24, 32. Jom. 11 169 Thib. vii 232

ing them together in one field, the Archduke moved Kollowrath and Lich-
 teuslein, forty thousand strong, on the great road to Neustadt, by the defile
 of Abach, which Davoust had previously traversed, throwing thus the weight
 of his forces against the French left, and intending to menace their rear and
 communications, in the same way as they had done with the Austrian left,
 by the capture of Landshut. But Napoleon was in too great strength to be
 disquieted by such a demonstration, and leaving only a curtain of light troops
 to retard the advance of the Austrians in that direction, he concentrated all
 his forces to bear down upon their centre at Ecnart and Laichling, the
 scene of such obstinate fighting on the preceding day. At daybreak, on the
 22d, the Emperor set out from Landshut, taking with him the whole of Lau-
 nes' and the greater part of Masséna's corps, the Wirtemburghers, the reserve
 under Oudinot, which, coming up from the rear, received in the night that
 direction, and the guards and cuirassiers just arrived from Spain. Thus, one
 half of the Archduke's army, under Rosenberg and Hohenzollern, not forty
 thousand strong, was to be exposed to the blows of above seventy-five thou-
 sand French, flushed by victory, and led on by the Emperor in person (1).

*Description
 of the battle*

The Austrians, waiting for the arrival of Kollowrath's corps from
 the north of the Danube, were not in a condition to persecute their
 offensive movement to the French left, till after mid-day. They had arrived
 at the defile of Abach, however, and were driving the light troops of Davoust
 before them, when a loud cannonade at the extreme left announced the ar-
 rival of the Emperor on that weakly guarded part of the line. As they arrived
 on the top of the hills of Lintach which separate the valley of the Isar from
 that of the Laber, the French who came up from Landshut, beheld the field
 of battle stretched out like a map before them. From the marshy meadows
 which bordered the shores of the Laber, rose a succession of hills, one above
 another, in the form of an amphitheatre, with their slopes cultivated, and
 diversified by hamlets, and beautiful forests clothing the higher ground. The
 villages of Echmuhl and Laichling separated by a large copsewood, appeared
 in view, with the great road to Ratisbon winding up the acclivities behind
 them. The meadows were green with the first colours of spring; the osiers
 and willows which fringed the streams that intersected them, were just burst-
 ing into leaf, and the trees which bordered the roadside, already cast an
 agreeable shade upon the dusty and beaten highway which lay beneath their
 boughs. The French soldiers involuntarily paused as they arrived at the sum-
 mit, to gaze on this varied and interesting scene; but soon, other emotions
 than those of admiration of nature, swelled the breasts of the warlike mul-
 titude who thronged to the spot. In the intervals of these woods, artillery
 was to be seen amidst those villages, standards were visible; and long white
 lines, with the glancing of helmets and bayonets on the higher ground,
 showed the columns of Rosenberg and Hohenzollern already in battle array,
 in very advantageous positions, on the opposite side of the valley. Joyfully
 the French troops descended into the low grounds, while the Emperor gal-
 loped to the front, and, hastily surveying the splendid but intricate scene,
 immediately formed his plan of attack (2).

*Route of
 Napoleon
 April 22*

The plan of Napoleon was to cut the Austrians off from their whole
 remaining communications with the Isar and Inn, and by throwing
 them back upon Ratisbon and Bohemia as their only line of retreat, sever
 them entirely from the support and protection of Vienna. With this view he

(1) *Strat.* 115, 123. *F. & A.* 32, 73, 74, 112, 171, 347. *Sav.* iv. 34.

(2) *Pol.* ii. 76, 77. *Personal observation.*

began the action, advancing his right in great strength, under Lannes, who commanded the divisions Gudin and St -Hilaire, belonging to Davoust's corps, who soon commenced a furious attack upon the Austrian left, which his great superiority of force enabled him to turn and drive back. At the same time, the Wirtemburghers were brought up to the attack of Echmuhl in the centre, but the tremendous fire of the Austrian batteries at that point so shattered their ranks, that, though repeatedly brought again to the charge by their French officers, they were always repulsed, and sustained a very heavy loss. Finding that the village could not be carried by an attack in front, Lannes detached the division Gudin, which assailed the batteries in flank that protected it. This rendered it necessary to draw back the guns, or point them in another direction, and, aided by this diversion, the Wirtemburghers at length dislodged their antagonists from this important post. At the same time, Davoust resumed the offensive on the side of Abach, and, by a vigorous effort, made himself master of Unter Lachling, and the woods which adjoin it, so as to prevent the enemy from drawing any support from that quarter to the left, which was principally menaced. The corps of Rosenberg, placed on the high grounds between Echmuhl and Lachling, was now hard pressed, being assailed by the Wirtemburghers under Vandamme, who issued from the former village on the one side, and the victorious troops of Davoust, who debouched with loud shouts from the latter on the other. But these brave men, fronting both ways, presented an invincible resistance to the enemy, the repeated charges of the Bavarian horse against their batteries, were baffled by the valour of the Austrian cuirassiers, and the battle wore a doubtful aspect in that quarter, when intelligence arrived that Lannes had made himself master of a battery of sixteen guns on the left, after sabring the cannoniers, who gloriously fell beside their pieces (1)

Napoleon
gains the
victory

Rightly supposing that the Archduke would suspend his attack on the right, in consequence of this check on the left, against which the constantly increasing masses of the enemy were now concentrating, and that a general retreat would take place, Napoleon conceived that the decisive moment had arrived, and therefore brought up the reserve cavalry, which hitherto had not taken a part in the action, and sent it forward, at a rapid pace, along the highroad to Ratisbon, to harass their retreat, while a general advance took place along the whole line, Lannes on the right, Lefebvre and Vandamme in the centre, Davoust on the left, Massena and Oudinot with the guards, in reserve. A general order to fall back was now given by the Archduke, or rather a change of front took place, the left retiring rapidly, and the whole wheeling back to a certain degree on the point of the right, which held firm at Abach, so as to present a new front oblique to the former, but still barring the great road to Ratisbon to the enemy. His troops were disposed in *echelon*, from Santing to Isling, in a sort of column parallel to the highway, at the distance of a mile and a half from it, while on that *chaussée* he left only the grenadiers, who were still untouched, and in the rear of all the undaunted cuirassiers. These dispositions, though based on the abandonment of the field of battle and the victory to his antagonists, were admirably calculated to preserve the troops from disaster in the hazardous operation of retiring before a victorious enemy—the great object to which the attention of the Archduke was always directed. The movements on the part of the Imperialists were at first performed with firmness and regularity.

(1) Stat 139, 145. Pel II 79, 85. Jom II 174.

(2) Stat 145, 146.

but by degrees their infantry fell into confusion, in consequence of the frequent woods which interrupted their line of march, and the close pursuit of the enemy, which prevented the ranks, once broken, from being ever thoroughly regained.

Desperate cavalry action in front of Ratisbon. The consequences might have been disastrous in the level and open plains, which ensued when the retiring columns approached the Danube, had not the Archduke placed twelve squadrons of the Emperor's cuirassiers and a large body of hussars in front of Egloffsheim, which was garrisoned by six battalions of grenadiers, and supported by several powerful batteries. As the pursuing columns approached this imposing mass of cavalry, they paused till the French horse came up in sufficient strength to hazard an engagement: a variety of charges of hussars then took place on both sides, with various success; but at length the magnificent Austrian cuirassiers bore down with apparently irresistible force upon their pursuers. The French light horse could not withstand the shock, and were quickly dispersed; but their cuirassiers came up, and then two rival bodies, equally heavily armed, equally brave, equally disciplined, engaged in mortal combat. So vehement was the onset, so nearly matched the strength of the combatants, so tremendous the conflict, that both parties, as if by mutual consent, suspended their fire to await its issue; the roar of the musketry subsided, even the heavy booming of the artillery ceased, and from the mêlée was heard only as from the battles of the knights of old, the loud clang of the swords ringing on the helmets and cuirasses of the dauntless antagonists. The sun set while the contest was still undecided: the moon rose on the deadly strife, and amidst her silvery rays, fire was struck on all sides by the steel upon the armour, and dazzling sparks flew around the combatants, as if a thousand anvils were at once ringing under the blows of the forgers. Nothing could overcome the heroic courage of the Imperialists, but their equipment was not equal to that of their opponents: and in close fight, the Austrian horsemen, whose front only was covered, were not an adequate match for the cuirassiers of Napoléon, whose armour went entirely round their body. After a desperate struggle, their numbers were so reduced that they were unable any longer to make head against the enemy, and leaving two-thirds of their number on the field, they were driven in disorder along the *chaussée* towards Ratisbon. But their heroic stand, however fatal to themselves, proved the salvation of the army: during the engagement, the artillery and infantry withdrew in safety to the rear, and Napoléon, who perceived that the Archduke had brought up the reserve under Lichtenstein, which had not yet been engaged, dreading a reverse like that which befell the Austrians in similar circumstances at Marengo, reluctantly, and against the earnest advice of Lannes, gave orders for the army to halt, and bivouac on the ground which they occupied (1).

The Archduke retreats across the Danube and Ratisbon is taken by the French. The situation of the Archduke was now very critical; with a victorious army, headed by Napoléon, in his front, and the broad Danube, traversed only by the single bridge of Ratisbon, in his rear. By bringing up his whole forces from the opposite side of the river, and concentrating his troops from Abach and the right, he was still in a situation to compensate the losses of the day, and give battle with eighty thousand admirable troops in front of Ratisbon (2). But that field was imminently hazardous; for a serious disaster there sustained might lead to total

(1) *ibid.* 146, 151. *Pol. Et. 85*, *Pl. Jour.* III. 171. 175. *Rev.* iv. 54, 85.

(2) He had only thirteen men round the walls of Ratisbon the night after the battle (including

Bellegarda's corps, which was still on the other side of the Danube: the total force was about eighty thousand.—*SCOTTISHMAN* 189; and *G. et. Cour.* *posthume*.

ruin, and his army was not only extremely fatigued by the constant combats and marches of five successive days, but considerably affected in its spirit by the reverses it had experienced, and seriously weakened by the loss of the reserve parks and ammunition train at Landshut. Five thousand men had been killed and wounded, and seven thousand made prisoners in the battle which had just terminated, besides twelve standards and sixteen pieces of cannon, which had fallen into the enemy's hands; and though Lichtenstem's corps much more than supplied these losses, yet the French guards under Oudinot had just arrived on the field from Spain, and Masséna's corps, which had not been engaged at all, was certain to bear the brunt of the next battle which might ensue. Influenced by these considerations, the Archduke resolved to retire during the night, and restore the spirit and recruit the losses of his army in Bohemia, before again engaging in active operations. A bridge of boats was immediately thrown over the Danube, some miles above Ratisbon, and over it and the bridge at that town the army defiled without intermission the whole night. With such expedition and order was this critical operation conducted, that before nine o'clock on the following morning, not only were almost all the soldiers, but all the guns, chariots and ammunition waggons, safely on the other side, and when the French, who, from the large watchfires kept on the enemy's lines during the night, supposed a decisive battle was intended for the ensuing day, stood to their arms in the morning, they beheld, with astonishment, the whole plain of Ratisbon deserted (1), except by a few broken waggons or gun carriages, and saw only in the extreme distance dense masses of cavalry protecting the retreat of the last trains within the walls of Ratisbon (2).

Operations against Ratisbon by the French and wound of Napoleon

Operations against Ratisbon by the French and wound of Napoleon

No sooner did Napoleon discover that the Archduke had withdrawn the bulk of his forces during the night, than he moved forward the whole cavalry to attack the rearguard, drawn up in front of Ratisbon. Notwithstanding all their efforts, they could not prevent great confusion occurring as the last of the carriages withdrew into the town, and nearly a thousand brave horsemen there sacrificed themselves for the safety of the rest of the army. The screen of cavalry which was drawn up around the bridge of boats, happily concealed its existence from the enemy, till the troops were all over, but the pontoons themselves were burned, or fell into the hands of the victors. At length, the rearguard was all withdrawn within the walls of Ratisbon, the gates closed, and the ramparts lined with infantry. Napoleon at noon arrived on the spot, and in his anxiety to press the assault, approached so near the walls, that a musket-ball struck him on the right foot, and occasioned a considerable contusion. The pain obliged him to dismount from his horse, the report spread that the Emperor was wounded, and instantly the soldiers broke from their ranks, and leaving their muskets, their guns, their horses, crowded round their beloved chief. Regardless of the cannon balls which fell in the dense group, fifteen thousand men of all arms hastened to the spot, every one forgetting his own danger in the intense anxiety concerning their general's welfare. After a few minutes, the wound was found to be so inconsiderable, that the

(1) Stat 160, 164 Pel 11 93, 99 Jom 11 174,
175 Thib 11 234, 235

(7) The French lost in the battle of Echmuhl about six thousand men. The bulletin stated the general loss from the opening of the campaign, at twelve hundred killed, and four thousand wounded which, according to their usual proportion of admitting only a fourth part of its real amount, would make it about twenty thousand men, which was

probably very near the mark. The Austrians, in the whole five days, lost 11 killed, wounded, and prisoners, about thirty thousand, and one hundred pieces of cannon — See *first Bulletin*, 24th April 1809, *Pellet*, 11 99, and *Graves's Correspondence*, a copy of which the author from the Imperial archives at Vienna his valued friend, Car-

Emperor again mounted his horse a rapturous cheer from the warlike multitude announced the joyful event to the army and soon the rolling of the drums and clang of the trumpets recalled the soldiers in all directions to their arms (4)

Its success and capture This perilous incident retarded only for a few minutes the progress of the attack. Lannes, who directed the operations, perceiving a large house which rested against the rampart, pointed several guns against its walls, which speedily reduced them to ruins, and formed a sort of breach, by which access might be obtained to the summit. A heavy fire, however, was kept up from the rampart, which rendered the crossing of the glacis highly dangerous and for long, no soldiers could be found who would incur the hazard. Impatient of the delay, Marshal Lannes seized a scaling ladder, and himself ran forward over the perilous space, swept in every part with the enemy's balls. Animated by this example, the troops rushed on, cleared the glacis, leaped into the ditch, and crowding up the breach formed by the ruined house, forced their way into the place. LAMEROYERE, reserved for a melancholy fate in future times, was the first man who was seen on the summit. The troops now followed rapidly into the town the gates, attacked in flank, were seized and opened, and the streets filled with a ferocious multitude of assailants. Still the Hungarian grenadiers maintained their resistance slowly retiring towards the bridge, they kept up an incessant discharge upon their pursuers the houses took fire in the conflict; the ammunition waggons were only rescued from the flames by the united efforts of both friends and foes; and, after losing half their numbers in the desperate strife, they reached the barricades of the bridge, where the cannonade of artillery from the opposite side was so violent, as to render all further pursuit impossible. The French headquarters were established for the night in the convent of Prull, under the walls; in the course of it, the bridge was evacuated, and next day, the Austrian rearguard was discovered beyond Stadt-am-hoff, covering the retreat of the army to the woody heights of the Bohmer-yald (2)

Great results of these actions. The advantages gained by these brilliant operations to Napoléon, were very great. Twelve days only had elapsed since he left Paris and already he had re-assembled the army after its imprudent dispersion by Berthier, combated the Austrians on four successive days, separated Miller and the Archduke Louis from the Archduke Charles, thrown the two former back upon the Inn, in too inconsiderable strength to be able to cover Vienna, and driven the latter to an eccentric retreat into the Bohemian mountains. Thirty thousand Austrians had fallen or been made prisoners in these disastrous engagements a hundred pieces of cannon six hundred ammunition waggons, two pontoon trains, and an incalculable quantity of baggage taken and the spirit of the vanquished so thoroughly broken, as to render them incapable for some time of engaging in active operations. The road to Vienna lay open to the conqueror. It was a matter of mere convenience to him, when he should step forward and seize the capital of the monarchy its magnificent arsenal, and boundless resources of every kind. Twenty thousand men were lost to the French army; but what were they amongst such a host, and what such a diminution compared to the incalculable moral influence upon his own troops and those of the allies, in consequence of such a series of successes at the very outset of the campaign! If ever the words

of Cæsar, *Veni, vidi, vici*, were applicable to a modern conqueror, they might have been used by Napoléon on this occasion (1)

Indefatigable activity of Napoléon and his soldiers was the principal cause of these successes It was by indefatigable activity, and the nicest calculation of time, that these astonishing results had been obtained, and never had the Emperor displayed in a more striking manner the indefatigable energy of his character. Unwearied by a rapid journey, night and day, for six successive days from Paris, he no sooner arrived at Donauwerth, than he began the incessant questioning and correspondence, which, with him, were the invariable preludes to great achievements. His letters to his lieutenants during the next five days, would, of themselves, make a volume. His calculation of time was so exact, and the habits of precise obedience on the part of his generals so complete, that his divisions invariably arrived on the ground assigned them, at the very moment on which he relied, and when their operation was required, and generally again marched and combated on the day following, without any intermediate repose. By this means, though his forces were not, upon the whole, more numerous, at least at that period, than those of the Austrians, they were almost always greatly superior at the point of attack. Nor did the Emperor shun the fatigue which he thus imposed upon his soldiers: on the contrary, not one of them underwent any thing like the mental and bodily labour to which he subjected himself. From the morning of the 19th, when the battle of Abensberg began, till the night of the 25d, when that of Ratisbon terminated, he was on horseback, or dictating letters, at least eighteen hours a-day; he had outstripped his own saddle-horses by the rapidity of his journey, and knocked up those of the King of Bavaria, by the fatigue they had undergone; and, when all around him were ready to drop down with exhaustion, he began to read and dictate despatches, and sat up half the night receiving reports from the generals and marshals, and completing the directions for the succeeding day. He has himself told us, that his manœuvres at this period in Bavaria were the most brilliant of his life (2), and without going the length of so extraordinary an eulogium, it may safely be affirmed, that they never were excelled by the operations either of himself or any other general (3).

(1) Join ii 177

(2) "The greatest military manœuvres I ever made, and those for which I give myself most credit, were performed at Echmühl, and were infinitely superior to those at Marengo, or to any other of my actions" [O'Meara, ii 296] "On this day, I heard the Emperor repeat what I had often previously heard him say, that the finest manœuvres of his life were those which preceded the battle of Echmühl"—LAS CASES, v 168 169

The details of the grounds on which this striking opinion is formed, are thus given by Pelet, and quoted by Las Cases: "In four days of combats and manœuvres were completed the destinies of the Austrian army—of that army, recently so numerous and arrogant, the most formidable and perfectly equipped which Austria had ever sent forth. By his first dispositions, Napoléon had organized the plan of his great battle, secured his outposts, and reconnoitred the ground for a battle in front of Augsburg, according to the direction which the enemy's columns seemed disposed to take. He had corrected the false dispositions of Berthier, and collected his forces in such masses on each wing, as to preclude the danger which he had induced. On the 18th April, he arrived on the ground and made his dispositions, and announced that in three days

all would be accomplished. On the 19th it commenced, and the junction of the wings took place under the cannon of the Archduke. On the 20th, he broke the enemy's centre at Abensberg, and entirely separated their left wing from their centre. On the 21st, he routed the left wing at Landshut, got possession of its magazines, park equipages and communications. Quick as lightning, he returned on the 22d to Echmühl, to deal out his final blows to the army of the Archduke, the remains of which with difficulty saved themselves behind the walls of Ratisbon and the mountains of Bohemia. Had Massena, as he was ordered, attacked Landshut on the 21st, on the right bank of the Isar, at the same moment when Napoléon pressed him on the left bank, the remains of Hitler's corps would have been entirely destroyed, and Ratisbon not been delivered up to the Archduke, the remains of his army, cooped up in the bend formed by the Danube at that place, would have been utterly ruined. Thus, but for these untoward incidents, the vast army of the Archduke would have been cut to pieces in these four days; as it was, it was severed in two, and found salvation only in flight"—LAS CASES, v 196

(3) SAY ii 53, 59. Thib vii 234. Pel ii 120, 121

On the day following, the Emperor reviewed a great part of his army at Ratisbon, and one of those imposing spectacles was exhibited, which, almost as much as his military talents, contributed to his astonishing successes. As each regiment defiled before him, Napoléon demanded from the colonel who were the most deserving among the officers, non-commissioned officers, and privates, and in presence of the army conferred their honours and distinctions upon them. On these interesting occasions he decided alone, and often conferred the reward on a common soldier, in preference to those of higher grade who were recommended. He recognised some of the veterans of Marengo or the Pyramids as they were presented to him, and when conferring the cross, gave them a signal of recognition by a slight tap on the cheek or clap on the shoulder, accompanied by a kind expression, as "I make you a baron or a chevalier." One of these veterans, on being presented, asked the Emperor if he did not recognise him. "How should I?" answered Napoléon—"It was me," replied the soldier, "who in the desert of Syria, at the moment of your utmost necessity, gave you a portion of my rations." Napoléon at once recognised him, and said, "Oh! I recollect you perfectly and make you a knight, with an annual endowment of twelve hundred francs," (L.80). These heart-thrilling scenes excited the usual transports among the French soldiers; but in the troops of the Confederation, upon whom honours and bounties were prudently and profusely showered, and to whom they were perfectly new, they produced an unbounded impression and it then appeared how strongly the German heart was capable of being moved by those appeals to honour and generous feeling, of which the allied sovereigns in after times so largely availed themselves. At the same time, forty of the most deserving of the 63th regiment, which had capitulated at Ratisbon, were admitted into the old guard, to show that the Emperor entertained no displeasure at that corps for that untoward event and a proclamation was addressed to the army, which, with just pride, though in exaggerated terms, recounted their great exploits (1).

But though these splendid triumphs attended the arms of Napoléon, where he commanded in person, the fate of war was very different in other quarters; and already were to be seen convincing proofs, from the disasters attending them under the direction of his lieutenants, that the invincible veterans of the republic were fast wearing out, that the conscripts of the empire possessed no superiority over the now improved and invigorated armies by which they were opposed, and that the successes, where he in person commanded, were owing to the talent of his combinations or the terrors of his name. Miller, who had retired to the Inn after the disaster of Landshut, finding that he was not pursued by the French troops and having ascertained that Napoléon had diverged with the bulk of his forces in another direction, deemed it a favourable opportunity to take vengeance on the Bavarians by whom he had been somewhat incautiously

(1) *Peil. II. 111 112. Thib. II. 237*

"Soldiers! You have justified my expectations; you have supplied by bravery the want of numbers, and marked the difference which exists between the soldiers of Caesar and the armed rabble of Xerxes. Within the space of a few days we have triumphed in the battles of Thann, of Austerlitz, and Friedland, and in the combat of Preussisch-Erdau, and Ratisbon, one hundred pieces of cannon, forty standards, fifty thousand prisoners, three bridge-equipages, three thousand baggage wagons with their drivers, all the calashes of regiments,—such are the

fruits of the rapidity of your marches and of your courage. The enemy, seduced by a prepared cabinet, appeared to retain no recollection of you. His weakening has been speedy for you have appeared more terrible than ever. Lately he roused the lion and wounded the territory of our allies; lately he talked of nothing less than carrying the war into the bosom of our country; now defeated, dispersed, he flies in consternation. Already my advanced guard has passed the Inn in triumph; still he is at Verona."—*Napoleon to the Troops April 26, 1809; P. et II. 113*

pursued, for the losses which he had experienced. Having collected some small reinforcements on the Inn, and divided his troops, about thirty thousand strong, into three columns, he remeasured his steps, and suddenly attacked the Bavarians under Wurmser, who, along with the reserve under Bessières, were advancing beyond the defile of Neumarch, and had taken post on the heights in front of St-Vert. The Bavarians made at first a stout resistance, but being outnumbered and outflanked, they were soon driven back; and though Molitor came up to support them with some regiments of the Imperial Guard, they too were compelled to retreat, and sustained a considerable loss. Before night the French and their allies were entirely driven off the field, with the loss of fifteen hundred men killed, wounded, and prisoners; but the intelligence which Hiller received in the night of the battle of Echmühl and retreat of the Archduke upon Ratisbon, induced him to halt in the career of victory (1), and remeasure his steps to the Inn, in order to cover the approach to Vienna.

Successful
operations
of the Arch-
duke John
in Italy

A disaster of a still more serious description was sustained about the same period, by the Viceroy Eugène Beauharnais, in the Italian plains. On the same day on which the Archduke Charles crossed the Inn, his brother, the Archduke John, passed the mountain frontier of the kingdom of Italy with forty-eight thousand men, and after crossing the Isonzo at Gorizia, and passing Udina, poured down on the Italian plains, and took post in front of Passeriano, already famous in the diplomacy of Napoléon (2). The Viceroy had above forty-five thousand men to oppose the invader, but they were, in great part, of Italian extraction, and could hardly be relied upon to withstand the shock of the transalpine forces. This inferiority speedily appeared in the first actions of the campaign. Eugène fell back across the Tagliamento, and established his headquarters at Sacile. The Austrians, two days after, came up in great force, and surprised the 55th French regiment at Pordenone, which, with its eagle and four pieces of cannon, fell into the enemy's hands. Stung to the quick by this disgrace, and fearful of the effect of any further retreat upon the spirit of his multifarious troops, the Viceroy determined to hold firm and give battle to the enemy. Orders accordingly were given for the whole army to suspend its retreat, and retrace its steps on the 15th, and, on the day following, he made an attack on the imperialists between Sacile and Pordenone (5).

Total defeat
of Eugène
Beauharnais
at Sacile
April 16

The field of battle, which lay between Vigo-nuovo and Porcia, on the gentle slopes where the Alps of Roveredo melt into the Italian plains, was singularly favourable for the operations of cavalry, in which arm the Austrians had considerably the advantage. So little did they anticipate, however, an attack, that at the moment when it commenced, the Archduke John was engaged in hearing mass at Pordenone, and one of his corps was considerably in the rear at Palse. The best dispositions, however, which circumstances would admit, were made to repel the enemy, and as the troops in the rear successively came up, they were passed on to the plain of Vigo-nuova, so as to menace the communication between Eugène and the bridge of Sacile. The combat was very warm, and in the first instance, before the corps of Chastellar came up, Prince Eugène had the advantage; and at the village of Porcia, in particular, and which was repeatedly taken and retaken, a frightful carnage took place. Gradually, however, the Austrians, who had outflanked their opponents, cooped up their line within very narrow limits,

(1) Stat 172, 176 Jom. iii 178. Pell ii 166,

(2) *Ante*, iii 186

(3) Erz. Joan Feld, 44, 52.

and at length it was driven into the space between Fontana, Fredda, and Porcia, which did not exceed two miles in breadth. Fearful of the consequences of any disaster upon troops restrained within such narrow limits, Eugène gave the signal to retreat, which was effected at first by squares in *échelon* which arrested their pursuers by alternate volleys as on a review day; but at the defile occasioned by the bridge of the Lovinza and the marshes on either side of the stream, they fell into disorder, which was soon augmented by the intelligence that seven thousand men of the corps in reserve had passed them, and already occupied Sacile. The whole army, upon this, fell into confusion. Horse, foot, and cannon, became blended together in frightful disorder, and fled towards the Adige, without either direction or further attempt at resistance (1). The approach of night alone saved them from a total overthrow; but as it was, they lost four thousand killed and wounded, and an equal number of prisoners, besides fifteen pieces of cannon. While the Austrians had not to lament the loss of half the number.

Important effects of this victory on the Italian campaign. This important victory in the outset of the campaign was likely to prove decisive, as that of Magnano in 1700 (2) of the fate of Italy, and would have been attended with not less material results upon the general issue of the war, had its effects not been obliterated, and the career of success in the plains of Lombardy, arrested by the rapid and overwhelming advance of Napoléon to Vienna. At it was, however, and even though the Archduke John was far from following up his success with the vigour which might have been expected, the results of the battle were, in the highest degree, important. Eugène, reinforced by some battalions which he had left at Verona, succeeded in at length re-organizing his army, and took post behind the fortified line of the Adige, already immortalized in the campaigns of Napoléon. The Archduke, though obliged to send three divisions at this period to observe Marmont in Dalmatia, and considerably weakened by the necessity of making large detachments to observe Venice and Palma nuova, in which the enemy had large garrisons, followed his retreating adversary, and took post, with thirty thousand excellent troops, in the famous position of Caldiero, a few miles from Verona. But the spirit of the two armies was essentially changed: the Italians depressed and weakened by defeat, felt the old superiority of the Tramonate forces, and were prepared to fall back, as in the time of Suwarrow, to the farthest verge of the Italian Peninsula (3); while the Austrians, roused to the highest degree by their early success, confidently anticipated a repetition of the glories of Novi and the Trebbia. But the expectations of both parties were traversed by the extraordinary progress of Napoléon down the valley of the Danube, which soon rendered necessary the concentration of the whole forces of the monarchy for the defence of the capital (4).

Represents which the continuation of the campaign afforded to the Allies. Thus, though Napoléon's successes had been great on the Bavarian plains, he had by no means gained any decided advantage: his armies had been routed, or run the most imminent hazard, wherever he did not command in person; and disasters which would have been decisive in any other warfare had been experienced by his lieutenants on the Italian frontier. It was evident that the forces of the

(1) Ersk. Journ. Feldz. in J. bre 1805. 41. 12. P. II. 111. 102. Journ. ul. 179. 100. Hist. 181. 182.

(4) In the order of these. The war in Tyrol should

be treated of immediately after the opening of the campaign in Italy; but the great moral importance of that contest, as well as its romantic character, require a separate chapter, and will be treated of here that which follows previous to the battle of Wagram.

contending parties were approaching to an equality : the wonted vehemence of the Republican armies had disappeared when led by the marshals of France, the Austrians had clearly proved their superiority to the allies who swelled their columns, and it was the consummate talents, overwhelming force, and paralysing renown of Napoleon, that alone still chained victory to the standards of the grand army. Reversing the principles of both parties in the contest, the fortunes of France had come to depend on the genius of a single man, the pyramid rested on its apex, while, driven by necessity to a more enlarged policy, Austria was reaping the fruits of popular enthusiasm, and successfully combating the revolution with the aims which itself had created. The aristocratic power, generally successful, failed only from the want of a leader adequate to the encounter of the popular hero, the democratic, generally defeated, prevailed through the extraordinary abilities of one man. Such a state of matters might promise little for present success, but it was pregnant with hope for future deliverance. Great as may be the ascendancy, unbounded the activity of a single leader, they cannot, in the long run, compensate general disaster ; and, in all prolonged contests, that power is ultimately destined to victory, which, appealing to principles which find a responsive echo in the human heart, rests upon the organized and directed efforts of the many, rather than the abilities, how splendid soever, of the few.

CHAPTER LIV

CAMPAIGN OF ASPERN

ARGUMENT

Measures of Napoleon for a grand concentric Attack upon Vienna—Defensive Steps of the Archduke Charles—Napoleon advances to the Borders of the Traun—Description of the Position of Ebersberg—And of the Austrian corps which occupied it—Massena resolves to Attack—Devoted Gallantry of the French—After a desperate Struggle they gain the Pass—Müller falls back towards Vienna—Advance of the French army towards that Capital—Ineffectual attempt to defend it—The Archduke Maximilian abandons Vienna which capitulates—Position of the different Corps of the French Army in the middle of May—Movements of the Archduke Charles, and Positions of his Army—Retreat of the Archduke John to Italy—Battle of the Plave, and Defeat of the Austrians—Retreat of the Austrians from Italy into Hungary—Capture of the Mountain Forts of Styria and Carinthia by the French—Capture of the Col de Tarvis, and other Forts—Fall of Trieste Laybach and the whole Frontier Defence of Austria—Total Defeat of Jellachich in the Valley of the Inn—Junction of Eugène with Napoleon at Vienna—Chances of the Conflict under its Walls to either Party—Napoleon resolves to cross the Danube and attack the Enemy—Description of its Islands near Vienna and the different Channels of the River—Napoleon's Preparations to effect the Passage—Failure at Nusdorf—His vigorous Efforts to effect a Passage at Lobau—Passage of the River—Operations of the Archduke Charles on the Upper Danube at Linz and Krems—He resolves to attack that portion of the French which had crossed the River—Austrian Plan and Order of Attack—Position and Dangers of the French Army—Napoleon is surprised, but resolves to give Battle—Austrian Plan of Attack, and Forces on both sides—Desperate Conflict at Aspern, which is a length Carried by the Austrians—Grand Charge of French Cavalry to the Centre—Bloody Attack on Essling, which proves unsuccessful—Feelings with which both Parties passed the night on the Field of Battle—Renewal of the Action on the 22d—Aspern and Essling are again obstinately disputed—Napoleon makes a grand Attack on the Austrian Centre—which is at first successful—Desperate Resistance of the Austrian Centre—Success of Hohenzollern, and Rupture of the Bridges of the Danube—The French retire to the Island of Lobau—Last Attack of the Austrians, and Fall of Marshal Lannes—Results of the Battle, and loss on both Sides—Deplorable Situation of the French Army in the Island of Lobau on the night of the 22d—Council of War held in the Island, in which it is resolved to maintain the Position there—Reflections on the conduct of Napoleon in this Battle—Observations on the French method of attack in column—Glorious Character of the Resistance of the Austrians at Aspern—Disastrous Effect of the Archduke John's disobedience of his Orders—Immense Importance of central Fortresses on the Defence of Nations—Infatuation of England in this respect.

Measures of Napoleon for grand concentric attack upon Vienna. IMMEDIATELY after the battle of Echmühl, Napoleon clearly perceiving the expediency of striking at the heart of his enemies' power before the consternation consequent on the disasters in Bavaria had subsided, issued orders in all directions for the concentration of his forces upon the Austrian capital. Orders were dispatched on the 21st to Eugène to press forward in the Italian plains to Bernadotte, who had assumed the command of the Saxons at Dresden, without a moment's delay to enter Bohemia by the northern frontier; and to Poniatowski, who commanded the Polish army, to invade Galicia, and endeavour to excite an insurrection in that province against the Austrian dominion (1). Every

(1) T. Erskine has written—"Advance in full confidence; the Emperor is bent to move into the interior of Austria; the enemy will not keep their ground before you any more than they have done in Russia. This army defeated in its most enriched projects, is totally demoralized."—T. Bernadotte at Dresden—"Napoleon is about to march upon Vienna, and he expects, with the greatest impatience your arrival in Bohemia, to co-operate

with the grand army which will at once render disposable the corps of Suvoroff, now left in observation at Rastatt."—T. Poniatowski—"That he fully relied on his zeal in the common cause, and that, at the Emperor's word, he was to march upon Vienna, now was the moment for him to enter Galicia."—See also original Letters de Paris. II. 177

preparation was also made for moving the whole grand army, with the exception of Davoust's corps, which was left at Ratisbon to observe the Archduke, down the valley of the Danube, into the interior of the monarchy; and, by daybreak on the 26th, a hundred thousand men were in full march for the Inn and Vienna. At the same time, to impose upon Prussia, and overawe the numerous malecontents in the north of Germany, a corps of observation was formed, under the orders first of Kellerman, and afterwards of Junot, which, though consisting only of fourteen thousand men, was pompously announced in the bulletins as numbering fifty thousand combatants (1).

Defensive measures of the Archduke Charles The situation of the Archduke Charles was now embarrassing in the highest degree. By having been driven off from the valley of the Danube, and compelled to take refuge in the mountains of Bohemia, the approach to the capital was left unguarded, save by Hiller's corps and the Archduke Louis, thirty-five thousand strong, which were wholly inadequate to arrest the march of the mighty conqueror. An ordinary general, indeed, responsible to his superiors, would hesitate to advance into the interior of the Austrian monarchy, having seventy-five thousand men on one flank, in the Bohemian mountains, and the insurgent Tyrol, secure in inaccessible Alps, on the other, to menace or cut off his lines of communication. But it was not the character of Napoléon to be deterred by such obstacles. On the contrary, it was distinctly foreseen, what the event speedily proved was the case, that the French emperor, relying on the power and terror of the army under his immediate command, would hurry forward to the capital, and trust to his never-failing resources to dissipate any assemblages on his flanks or rear by which his communication might be threat-

April 23 ened. Impressed with these ideas, Prince Charles dispatched orders on the 23d to Hiller to retard as much as possible, the advance of the enemy; to the Archduke John to retreat towards the hereditary states; while he himself, after forming a junction with Bellegarde, exerted himself to the utmost in re-organizing his army, and, with the consent of the Emperor Francis, dispatched a courier with a dignified letter proposing an exchange April 28 of prisoners, and hinting at more important negotiations to Napoleon, which arrived, however, at the French headquarters, after they had already been established in upper Austria, and too late to arrest the dreaded march of the conqueror to Vienna (2).

(1) Pell ii 171, 173 Thib vii 243 Sav iv 50

(2) Erz Joan 49 Stat 178, 182 Pel ii 173 179

To his brother the Emperor, the Archduke observed—"Finding it impossible to keep my ground with a river such as the Danube in my rear against a victorious enemy in front, I have deemed it expedient to cross to the northern bank and form a junction with Count Bellegarde. You are aware that all the operations of the campaign were based on the probability of an early success, and on the co-operation of the troops of the Rhenish Confederacy, who, in fact, declared against us. Would it not be expedient, then, to try the result of a negotiation, before the enemy has invaded Austria, and while, in Italy and Tyrol, there remain successes to counterbalance his advantages?" The Emperor dispatched Count Stadion with his reply, which approved of overtures by the Archduke, provided they did not compromise his dignity. The latter, accordingly, wrote to Napoleon on the 30th April "Your Majesty has announced your arrival by a salvo of artillery, I had no time to reply to it, but though hardly informed of your presence, I speedi-

ly discovered it by the losses which I experienced. You have taken many prisoners from me, and I have taken some thousands from you in quarters where you were not personally present. I propose to your Majesty to exchange them, man for man, rank for rank, and, if that proposal proves agreeable with you, point out the place where it may be possible to carry it into effect. I feel flattered, sire, in combating the greatest captain of the age, but I should esteem myself more happy if Heaven had chosen me to be the instrument in procuring for my country a durable peace. Whatever may be the events of war, or the chances of an accommodation, I pray your Majesty to believe that my desires will always outstrip your wishes, and that I am equally honoured by meeting your Majesty either with the sword or the olive branch in your hand." But all this graceful flattery was thrown away, for, before it reached Napoléon, he was far advanced in the valley of the Danube, and the terrible combat of Edersberg had opened to him the gates of upper Austria, when nothing remained but to march to Vienna.—
F
JANUARY 1809, 55, 56, and

Napoleon
advances to
the borders
of the
Tyrol.

The Emperor's dispositions being all completed, the grand army was, to a certain extent, divided Davoust, whose corps, exhausted by the fatiguing marches it had undergone, and seriously weakened by the losses of the campaign, stood in need alike of reinforcements and repose, was left at Ratisbon to guard the passage of the Danube, and watch the retiring columns of the Archduke; Lefebvre, with the Bavarians, was detached into the Tyrol, to make head against the insurrection in that province, which was daily assuming a more menacing aspect while the Emperor himself, at the head of the corps of Masséna, Lannes, and Bessières, still, notwithstanding all the losses of the campaign, above eighty thousand strong, proceeded direct by the great road along the southern side of the Danube to Vienna Vandamme followed at a little distance, with the troops of the Confederation, eighteen thousand more and as soon as Bernadotte, with the Saxons, who was tolling round the external frontier of the Bohemian mountains, relieved Davoust at Ratisbon, he too was to follow in the same direction with his corps, still numbering forty thousand men Every disposition being thus made to secure his rear, and station his troops in *échelon*, so as to ensure his communications, Napoleon left Ratisbon on the April 28th, and arrived the same day at Landshut, where he found the whole guard, both horse and foot, assembled, having just come up from Spain This veteran corps, full twenty thousand strong, proved a most important addition to his invading force; and when it is recollected that in the beginning of January it was at Astorga at the foot of the Galician mountains (1), it must be admitted that few more rapid marches are on record in the whole annals of military achievement Meanwhile, the vanguard pressed on with ceaseless vigour and soon the advanced posts were on the Inn The rocky banks of that river, flanked by the ramparts of Braunau and Passau, afforded an apparently favourable situation for arresting the advance of the enemy but the vast line, above thirty leagues in length, would have required a hundred thousand men for its defence, and the Austrian general had not above a third of that number at his disposal For the same reason he contented himself with breaking down the bridges over the Salza, which had the effect of retarding, by two days, the advance of the French army Napoleon arrived at Braunau on the 1st May, and pressed on with ceaseless activity the march of his troops while Miller, abandoning the wood range and unformed entrenchments of the Kirchbergwald, took post at the formidable position of Ebersberg, to defend the passage of the Traun, and cover the wooden bridge, which at Mauthausen, or a little further down the Danube, formed an important line of communication with the northern bank of the river It was of the most vital consequence to gain possession of this post; for a few hours would suffice, with a corps such as Miller's, to put it in a posture of defence and if the Archduke who was following by Durbach down the left bank, should arrive before it was forced, it might retard, or altogether defeat the projected march upon Vienna (2)

Descent of
the
Traun.

Descending from the lofty summit of the Alps by lateral branches, to the great valley of the Danube, several mountain streams between Munich and Vienna present scenes the beauty of which is for ever engraven on the mind of the traveller and afford, at the same time, favorable positions to dispute the advance of an invading army Of these, the most impetuous and savage in its character is the Traun, which issuing

from the wild cliffs of the Alter and Abersees, and descending through the wooded steepes of the Traunese, makes its way through narrow ravines and steep pine-clad hills, to the Danube, a little below Ebersberg (1) A long wooden bridge crosses the stream in front of that place, which is commanded by the precipitous heights and old castle on its right or western bank: another bridge existed some leagues higher up, at Wels, but the road over it crossed, a little further on, another mountain torrent, the Krems Munster, and as all these bridges were of wood, which were easily destroyed, and required a considerable time for their reparation, the wing of the invader's army, which attempted the passage by that circuitous route, was liable to very serious interruption. Every thing, therefore, recommended an immediate attack upon the bridge of Ebersberg, and Masséna, who commanded the advanced guard, and was perfectly alive to all these considerations, resolved to pursue the enemy with such vigour, that they would not have time to apply the torch to the combustible arches (2)

And of the Austrian corps which occupied it The prudence of this determination, considering the vital importance of anticipating the Archduke at the bridge at Mauthausen, could not be disputed, but, when the French arrived on the left bank of the Traun, beyond Scharlantz, in front of Ebersberg, the spectacle which presented itself was sufficient to daunt the most intrepid breasts. Right in front of them lay the bed of the impetuous Traun, nearly eight hundred yards broad, intersected by many sand banks and islands, clothed with stunted wood, traversed only by a single chaussee, terminating in a bridge three hundred yards long, over the largest arm of the river which flows in a deep and rapid torrent, close to the right bank. The bridge, closed at its western extremity by the gate of Ebersberg, was enfiladed by the houses of the town, which were all filled with musketeers, and commanded along its whole extent by a plentiful array of artillery, disposed on the heights above. On the summit of the whole, stood the old square castle, its walls bristling

(1) The lakes and valleys in the vicinity of Salzburg, particularly the König see, the valley of Berchtesgaden, leading to it, the defile above Hallen, the Tröön, Aber, and Alter sees, and the whole valley up to Gastern, present the most magnificent scenery in Europe. It rivals the Grande Chartreuse in grandeur, and unites to its romantic character the sublimity of the Gasteren-thal and the Oeschinen thal at the upper extremity of the valley of Kandertegg in Switzerland, the finest and most impressive scenery in the vast amphitheatre of the central Alps. No words, in particular, can do justice to the König see, a noble sheet of water, eight or ten miles in length, thirty miles to the south of Salzburg, shrouded amidst stupendous mountains, whose summits, ten thousand feet high, wrapt in eternal snow, almost overhang the lake which nestles in their bosom. Vast forests of fir lie immediately below the region of rock and snow in these lofty piles, but the cliffs which shut in the lake, several thousand feet in perpendicular height, descend abrupt and sheer to the water's edge, varied at intervals by noble forests of beech and oak, whose tints, especially in autumn, add inexpressible beauty to the near points of this matchless landscape. The great superiority which the Alps in this quarter possess over those in the central cantons of Switzerland consists in this, that from their not rising from so elevated a plateau, the pine and the fir do not occur so uniformly and early in the scene, but rich forests of walnut, sycamore, beech, and oak, surmount, in the first instance, the green and grassy vales, where mountain freedom and laborious industry have spread a velvet carpet amidst the shape

less piles of rock, which primæval earthquakes have detached from the overhanging mountains. The pine and larch occur in a more elevated region, forming a sable band between the brilliant tints of the foliage beneath, and the pure glitter of the snow, or the grey hue of the rocks above. The mountains are not of such height as to be overloaded, or have their ravines filled with snow, naked, or sprinkled only in the upper parts with a silvery mantle, they exhibit all their romantic forms to the eye, and the enormous strata are disposed with such regularity, that at the distance even of twenty or thirty miles, every layer is distinctly visible, and the traveller feels as if he was approaching the ruined castles of the giants of the earth, some standing erect, some cast down and scattered in fragments around. Yet so steep and perpendicular are their sides, and so completely do they in many places overhang the lakes, that in rowing along you can see reflected in the mirror all the gradations, from the smooth shaven meadow, on the margin of the water, through the inaccessible cliffs rising abruptly from their sides, to the dark forests of the middle zone, and bare rocks of the upper region—you can touch with your hand the snowy summits of the mountains. The author visited these incomparable scenes two-and-twenty years ago, but the assistance of numerous sketches then made, is not requisite to recall the features of the scenery to his memory; they are indelibly imprinted there, and will remain engraven to the latest hour of his life.

(2) Pell ii 198, 203. Stat. 176, 181. Jom ii 181. Personal observation

with bayonets, and artillery planted on its mouldering battlements, to command the bridge, at the distance of a hundred toises. The hills, or rather swelling eminences next the river, were covered with deep masses of infantry interspersed with powerful batteries of cannon, who stood prepared to dispute the passage, while, immediately in their rear, rose a second range of heights, considerably more elevated than the former, clothed with pines, over which, equally with those in front, the road passed, and which afforded another position stronger than the first, to which, if driven from their original ground, the enemy might retire (1)

Masséna
resolves to
attack
Desperate
gallantry of
the French. It required no ordinary resolution to attack with no greater force thirty-five thousand men, supported by eighty pieces of cannon, in such a position; but Masséna, who burned with desire to illustrate his name by some brilliant exploit in a campaign where hitherto he had not had an opportunity to signalize himself, and who was in hopes that, if the combat should be prolonged for any length of time, he would be aided by a flank attack from Marshal Lannes, who was to cross at Weis, and force his way across the lesser streams in his front, resolved to hazard an attack. The French troops, at that period, were in such a state of exultation from their triumphs, that, under the eye of the Emperor at least, nothing was impracticable to their audacity. Four battalions of Austrian grenadiers had been injudiciously left on the left bank, occupying some houses and walled inclosures, which formed a sort of *tête de pont* to the bridge. Upon them the attack was first made, and being speedily overwhelmed by numbers, they were driven, at the point of the bayonet, along the chaussée; and, in spite of a gallant resistance, all the islands and little bridges over the branches of the torrent were wrested from the enemy. But when the pursuers reached the long bridge over the principal branch of the Traun, the fire of grape and musketry from the batteries and houses on the opposite side was so violent that the head of the column hesitated, and recoiled. Instantly General Cohorn, a descendant of the illustrious engineer of the same name, is at their head, and, animated by his gallant example, the French troops return to the charge. A frightful scene exceeding in horror even the terrible passage of the bridge of Lodi, ensued. At the point of the bayonet, amidst showers of balls, the heroic French headed by Cohorn, pursued the retiring Austrians; while the troops on the opposite bank, seeing the enemy's colours advancing through a cloud of smoke, and in the midst of a frightful contest, closed the gate at the further end, and fired incessantly with grape, round shot, and canister, indiscriminately on friend and foe. Numbers of the Imperialists, threatened with death on both sides, threw themselves into the water, and were swept away by the impetuous torrent; others were trampled down by the advancing columns, or sought refuge in the wooded islands, and were made prisoners. Several ammunition waggons blow up in the middle of the bridge, and the dauntless foemen were scattered in the air by the tremendous explosion. But nothing could withstand the enthusiastic gallantry of the French. Side by side, Cohorn and Campy, side-by-side, to Masséna, head the column. Soon the gate and palisades flanking it are levelled by the pioneers, and the assailants penetrate into the town. Here, however, they are exposed at once to a plunging fire from the castle, and a flanking one from the houses, while fresh battalions assail them in front. Torn in pieces by the terrific discharge, to which, in the crowded streets of an ancient village, they could make no reply, they speedily fall

victims to their daring valour. In a few minutes two-thirds of their number are stretched upon the pavement; the survivors are driven back in confusion to the entrance of the bridge; its barricades, hastily re-established, are closed, lest it should again fall into the hands of the enemy, and the Austrians are preparing a column to clear it of the assailants, and set fire to the combustibles already provided, which, in the suddenness of the former assault, had not been fired (1)

After a
desperate
struggle
the French
gain the
pass

Masséna, however, who had now come up to the opposite bank, was well aware of the importance of following up the extraordinary advantage gained by the brilliant temerity of his advanced guard.

Accordingly, he instantly dispatched powerful succours to Colhorn and his handful of heroes, now cooped up between the gate at the end of the bridge and the rapidly increasing forces of his assailants. Three fresh brigades, headed by Claparede, were soon passed over, and at length the division Le Grand having come up, it also was sent forward (2), through a storm of grape and musketry, over the bridge, and lent its powerful aid to the attacking force. Strengthened by such assistance, Claparede regained his ground in the village, and gradually forced his way up the narrow lanes leading to the castle, and stormed that stronghold itself. Miller, however, recovered from his first surprise, renewed his efforts to regain the post. Two fresh divisions came up, drove the French out of the chateau, and forced them down again into the low streets adjoining the bridge. Again the French returned to the assault. Masséna ordered a division to cross over further up the river to the right, in order to attack the left of the Imperialists, while engaged with their unwearied antagonists in front. Amidst a frightful storm of shot, Le Grand swiftly passed over the narrow open space which separated the town from the castle. but even in that distance of two hundred yards, the path of every regiment was marked by a long and melancholy train of slain. Arrived at the gates, they were found to be closed, and the whole head of the column was swept away by the plunging fire from the battlements. Again reinforced, Le Grand returned to the assault, under cover of a tremendous fire of all arms, which brought down every exposed limb on the castle, the sappers rushed up to the gates, which they broke through, and the heroic garrison, cut off from all external support by the columns which had got round it on the eastern side, laid down its arms (3).

Miller falls
back to-
wards
Vienna

Miller now, seeing the key of the position carried, gave the signal for retreat, but to troops so intermingled and closely engaged with the enemy, it was no easy matter to obey this order, and the division which had crossed further up the river already threatened their left flank, for in the hurry of this sudden attack there had not been time to break down the bridges of the Krems, Munster, and other streams which discharge themselves into the Traun above Ebersberg, and which, if destroyed, would for some hours at least have secured that flank from attack. With great difficulty the Austrians withdrew to the position behind the town, where another combat not less obstinate and bloody took place. Every road, every pathway leading up the ascent was the scene of a desperate struggle, the pastures, the corn fields, the pine woods on the crest of the ridge, were all the theatre of mortal combat, while the flames of Ebersberg in the hollow behind, the trampling of horsemen over the dead and dying, the cries of the wounded, and the

(1) Pel. ii. 202, 209. Stat. 194, 199. Sav. iv. 61, 62. Jom. ii. 181, 182.

(2) As Le Grand debouched from the bridge, the French general in command there rather officiously tendered his advice—"I want none of your ad-

vice," said he, "but room for the head of my column," and instantly passed the castle.—PELET, ii. 211.

(3) Pel. ii. 209, 213.

cheers of the soldiers who successively arrived on the opposite bank, formed a scene surpassing all but the field of Eylau in circumstances of horror. The combat, however, was too critical and violent to admit of any relaxation, and as the French cavalry of the guard came up to the opposite side they were hastily hurried forward, and trampling underfoot the dead bodies and wounded of either army, forced their way through the burning houses with loud shouts, swords glittering, banners waving, and all the animation of war, to the front of the battle. Still the Austrians, with invincible resolution, made good the post on the ridge behind; but as evening approached, the masses on their left flank which had crossed at Wels, and other places in the upper part of the stream, became so threatening that Hiller drew off his troops, and fell back in the night to Enns, where he burned the bridge over the river of the same name, and continued his retreat towards Amstetten. In this terrific combat few trophies were taken by the victors (1) the French could only boast of four guns and two standards wrested from the enemy, while on each side six thousand brave men had fallen a sacrifice to their heroic sense of patriotic duty (2).

Advance of the French army to Vienna. This severe loss altogether disabled Hiller from making any further resistance to the advance of the invading army to Vienna; and he accordingly fell back as fast as the encumbrance of so many wounded would permit, to the neighbourhood of the capital. Napoleon arrived on the opposite side of the Traun to Ebersberg, during the latter period of the combat, and passed through the town soon after it had ceased. How much soever indured to scenes of carnage, he was strongly impressed by the unwonted horrors which there presented themselves, where brave men by thousands lay weltering in their blood, amidst burning rafters and smoking ruins, and the first who had fallen were thrown into the river, or crushed under the feet of the horses, or by the wheels of the artillery which had since passed over them (3), and testified considerable displeasure both at Masséna for provoking so desperate a contest, where a flank movement might have rendered it unnecessary, and at Lannes, whose corps was to cross at Wels, further up the river, for not having made his dispositions so as to be up in time to take a part in the strife, by attacking the flank or rear of Hiller's corps. After passing Ebersberg, however, being uncertain of the movements of the Archduke, and fearful of advancing into the interior without being aware of the position of his principal adversary, he halted for two days at Enns, re-established the bridge there, and collected a number of boats, which he already foresaw would be required for the difficult operation of crossing the Danube in front of Vienna while his advanced guard, under Lannes and Masséna, pursued their route by the great road to the capital. Anticipating a battle on the woody ridge which lies between St. Pölten and Vienna, he concentrated his troops before attempting the passage of that defile; but the precaution was unnecessary. Hiller had received

(1) Vol. II. 303, 315. Hist. 292, 297. Koer. III. 299. Jan. II. 183. 183.

(2) The author has been the more particular in the description of this combat, not only from its peculiar and terrible character, but because the castle and bridge of Ebersberg form well known objects to every traveller who has visited Vienna; and it is desirable that the multitude of English who frequent that capital be aware of the pleasure or amusement should be aware of the heroic deeds of which the Gothic castle under whose walls they pass, has been the theatre.

(3) During this terrible action, the bridge and

street immediately leading from it were so encumbered with the wounded, that it became necessary to the great necessity of commencing the fresh troops which came up to throw the mangled comrades into the river; and such of them as were struck down were treated in the same manner by those who next came up to the attack. There was no alternative for else the enemy would soon have become impassable and the allusion in front here really is at off—See Ca. v. de O. par. 10. *Jour. et. d'Autriche. la note de l'armée française* 1842. p. 137.

orders to cross the Danube, and fall back, with all his forces, to the neighbourhood of the metropolis, and occupy the islands until the arrival of the

May 8 Archduke. Meanwhile, the Emperor, continuing his advance along the Danube, perceived, from the Abbey of Melk, situated on a high rock, a considerable encampment of soldiers on the left bank of the river. Devoured with anxiety to know to which army they belonged, he dispatched a sergeant of the old guard and six chosen men; who soon made their way across in a boat, and brought over three Austrian soldiers, who reported that they belonged to the Archduke's army, and that he was advancing, by forced marches, in

May 10 hopes of arriving at the capital before the enemy. This important intelligence made the Emperor redouble his activity (1), orders were given to Masséna to watch, with the utmost vigilance, all the points where a passage of the Danube could be effected, while Lannes and Bessières were directed to advance with increased celerity to the capital. All arms accordingly pressed on

May 9 with the utmost expedition, and, on the 10th of May, being exactly a month from the time when the Austrian standards crossed the Inn, the French eagles appeared before the walls of Vienna (2).
 Though deprived, by the passage of Müller to the northern bank of the Danube, of the corps on which it had chiefly relied for protection, Vienna was by no means destitute of resources. The external barriers, indeed, were not in a condition to make any defence; and the Archduke Maximilian, to whom the command was entrusted, withdrew at once from the rich and extensive suburbs into the ancient walled capital. They were constructed, however, of solid granite, well armed with artillery, and capable of being supplied to any extent from the inexhaustible resources of the arsenal; while four thousand regular troops, and eight thousand landwehr and Milan volunteers were in arms in the city. Great efforts were made to electrify the inhabitants, and patriotic ardour was at its highest pitch. The people talked of their glorious resistance, one hundred and thirty years before, to the Turks, and loudly proclaimed their resolution to emulate the heroic defence of Sagossa in more recent times. But all history demonstrates, that there is one stage of civilisation, when the inhabitants of a metropolis are capable of such a sacrifice in defence of their country, but only one; and that when past, it is never recovered. The event has proved that the Russians were in the state of progress when such a heroic act was possible, but that the inhabitants of Vienna and Paris had passed it. Most certainly the citizens of London would never have buried themselves under

(1) Pel ii 220, 254 Stat 203, 212 Join ii 182, 186

(2) Riding from Melk towards St Pölten, with Berthier and Lannes, the Emperor's eyes were riveted on the Gothic towers of Diernstein, the scene of the captivity of Richard Cœur de Lion, which rose in gloomy magnificence at some distance on the other side of the Danube. He could speak for long on no other subject. "He also," said Napoleon, "had been a warrior in Syria and Palestine. He was more fortunate than us at St Jean d'Acre, but not more valiant than you, my brave Lannes. He beat the great Saladin. And yet hardly had he returned to Europe, than he fell into the hands of persons who certainly were of a very different calibre. He was sold by a Duke of Austria to an Emperor of Germany, who has been rescued from oblivion by that act alone. The last of his court, Blondel, alone remained faithful to him, but his nation made great sacrifices for his deliverance." Still keeping his eyes riveted on the towers, he continued,—"These were barbarous times, which they

have the folly to represent to us as so heroic, when the father sacrificed his children, the wife her husband, the subject his sovereign, the soldier his general, and all without shame or disguise, for the mere thirst of gold or power. How much are times changed now! what progress has civilisation made in our time! You have seen emperors, kings, in my power, as well as the capitals of their states, and I exacted from them neither ransom nor sacrifice of honours. And that successor of Leopold and Henry, who is already more than half in our power, will not be worse treated on this occasion than the preceding!" How deceitful is self love. The ransom which Napoleon had exacted, on the very last occasion, on Austria (1,500,000) and on Prussia (1,600,000), exceeded all that feudal cupidity had ever extorted, and in the dark annals of Gothic crime and treachery, nothing exceeded the cruelty of the French Revolution, or the perfidy of his own seizure of the thrones of the Sr Peninsula.
 See PELTZ, ii 246, 247.

the ruins of the Bank, the Treasury, or Leadenhall Street, before capitulating to Napoleon. In fact, without supposing that the members of a highly civilized and opulent community have altogether lost their patriotic spirit, it is evident that the sacrifices which are unavoidable, if obstinate resistance is attempted by a city in the later stages of society, where wealth is concentrated, credit universal, and hundreds of thousands would at once be reduced to beggary by its stoppage, are so great, that no moral courage, how intrepid soever, can be equal to the responsibility of incurring them. Napoleon wisely trusted to two methods to effect the reduction of the city,—the cutting off its communication with the northern bank of the river, and the terrors of a bombardment. With this view, he directed Masséna to make himself master of the island of Prater, while a similar attack was made on that of Jägerhaus by Lannes, so as to reach from both sides the great bridge of Spitz and Thabor. These attacks were entirely successful, for the Archduke had not forces sufficient to defend them; and such had been the confident security of the Aulic council, that they had not taken the simple precaution of connecting the works of the place with the bridges of the Danube. At the same time, a battery of twenty mortars was established nearly on the same ground from which the Turks had, a hundred and forty years before, bombarded the city and with such vigour were they served, that in the next ten hours they discharged three thousand projectiles into the capital and already, in the course of the night, it was in flames in several quarters (1).

*Republique
fran-
coise
pour le
Sacre Em-
pereur
Napoléon.*

At that period, there lay sick in the Imperial palace, directly opposite to the French batteries, and incapable of removal to a place of safety, a young princess, daughter of the illustrious house of Hapsburg. It was by the thunders of artillery, and the flaming

light of bombs across the sky, that Napoleon's first addresses to the Archduchess Marie Louise were made. Informed of the dangerous situation of the noble captive, he ordered the direction of the pieces to be changed, and while the midnight sky was incessantly streaked by burning projectiles, and conflagration was commencing in every direction around her, the future Empress of France remained secure and unharmed in the Imperial palace. Strange result of those days, not less of royal than national revolution! that a daughter of the Cæsars should be wooed and won by a soldier of fortune from Corsica—that French arms should be exerted to place an Austrian princess on the throne of Charlemagne—that the leader of a victorious invading host should demand her for his bride, and that the first accents of tenderness should be from the deep booming of the mortars, which, but for his interposition, would have consigned her father's palace to destruction (2).

*The Arch-
duke Max-
imilian
surrendered
to France
which cap-
tured.*

Aware of the danger of his situation, if cut off from all communication with the Danube and the powerful armies on the north bank of that river, the Archduke Maximilian made an attempt at one in the morning of the following day, to regain the Lusthaus, an

important point, which would have hindered the formation of the bridge the French were preparing from the southern bank to the first island but the attack, not supported with adequate force, was speedily repulsed. Despairing, after that check, of being able to maintain his ground in the capital and intimidated by the sight of the flames which were bursting forth in many quarters, the Archduke resolved to abandon it to its fate. The troops of the line, accordingly, with the exception of a few hundred invalids, were

May 12 withdrawn to the north bank by the great bridge of Thabor, which was immediately afterwards burnt. They were just in time, for so rapid was the progress of the French troops between the battlements and the river, that in a few hours more their retreat would have been irrevocably cut off, and the bridge gained. General O'Reilly, who was left in command, now lost no time in signifying his readiness to capitulate; and the terms were soon agreed to, and ratified early on the following morning. They were the same as those granted in 1804, guaranteeing the security of private property of every description, but surrendering all public stores, and in particular, the magnificent arsenal, containing four hundred pieces of cannon, and immense military stores of every description; fifty guns in addition, which were on their route for Hungary, were captured by Masséna, before they had got many miles from the capital (1).

Positions of the different corps of the French armies in the middle of May The capture of Vienna was a prodigious stroke for Napoléon; affording him, as it did, a fortified post on the Danube, amply provided with military stores of every description, and which it was impossible to starve out, for fear of destroying the inhabitants of the metropolis. The French troops took possession of the gates at noon on the 15th, and at that period, the positions of the different corps of their army were as follows.—The corps of Lannes, with four divisions of cuirassiers of the reserve cavalry, and all the guards, were stationed at Vienna. Masséna, between that capital and the Simmering, with his advanced posts occupying the Prater, and watching the banks of the Danube. Davoust, who had come up from Ratisbon, was advancing in *echelon* along the margin of that river, between Ebersberg and St-Polten, with his headquarters at Melk. Vandamme, with the Wirtemburghers under his orders, guarded the important bridge of Lantz; while Bernadotte, who had at length completed his circular march round Bohemia, with the Saxons (2), and other troops of the Confederation, about thirty thousand strong, had arrived at Passau, and was advancing to form the reserve of the grand army. Lefebvre, with the Bavarians, was fully engaged in a desperate strife in the Tyrol, but independent of that corps, the Emperor had a hundred thousand men concentrated between Lantz and Vienna, besides a reserve of thirty thousand approaching to reinforce them from the Upper Danube (3).

Movements of the Archduke Charles, and position of his army While these rapid successes were achieved by the grand army, the Archduke Charles, with a tardiness which is to this day inexplicable, was pursuing his route from Bohemia towards the capital. After his retreat from Ratisbon, on the 25d of April, he retired to

(1) Stat 217, 224 Pel 11 276, 289 Jom 111 188 Sav 14 67, 68

(2) Napoleon was exceedingly displeased at the tardy movements and inefficient condition of the Saxons during this period, and shortly before had addressed the following letter to their general Bernadotte, on the subject. "The foot artillery of the Saxons is extremely defective. What I want is warlike troops, and experienced generals to direct their movements. The Saxons are incapable of acting by themselves. There is not one of their generals to whom I can venture to intrust a detached operation. With Frenchmen I can rely on energy and experience in the troops, but the Saxons can do nothing. It is indispensable that they should be strengthened and stimulated by the example of troops more warlike than themselves."—PELET, 11 241

(3) Pel 11 286, 288 Jom 111 188, 190
On entering Vienna, Napoleon addressed the following proclamation to his troops:—"Soldiers! In a month after the enemy passed the Inn, on the

same day, at the same hour, we entered Vienna. Their landwehrs, their levies *en masse*, their ramparts, created by the impotent rage of the princes of the house of Lorraine, have fallen at the first sight of you. The princes of that house have abandoned their capital, not like soldiers of honour, who yield to circumstances and the reverses of war, but as perjurers haunted by the sense of their own crimes. In flying from Vienna, their orders have been murder and conflagration. Like Medea, they have, with their own hands, massacred their offspring. Soldiers! the people of Vienna, according to the expression of a deputation of the suburbs, abandoned, widowed, shall be the object of our regard. I take its good citizens under my special protection, as to the turbulent and wicked, they shall meet with exemplary justice. Let us exhibit no marks of haughtiness or pride, but as a proof of the Divine justice, our hands the ungrateful THIBAUDEAU, VII, 250, 1^{re}

Horsdliowitz, in the southern parts of that province, and was followed by Davoust as far as Straubing, who so far imposed upon the prince as to make him believe that he was pursued by the whole French army. This natural but unfounded illusion, was attended with the most unfortunate consequences. Conceiving that Hiller would be perfectly adequate to restrain any incursion of a detached corps towards the capital, he made his dispositions so as to draw upon himself the weight of the invading army, deeming that the most effectual way to ward off the danger from the capital. No sooner was he undeceived in this particular, than he dispatched the most pressing orders to Hiller to defend his ground as long as possible, so as to give him time to join him by the bridges of Linz or Mautausen, and he himself set out by forced marches to join him at one or other of these points. It was to gain time for the effecting of this junction, that Hiller, who had not force sufficient to make head at Linz, maintained so desperate a resistance at Ebersberg. But that action took

May 2. place on the 3d May, and on the evening of the same day the Archduke arrived at Budweis with the bulk of his army, about forty leagues to the north-west of Vienna. At that place he remained for three days; a delay which was the most inexplicable, as he heard, in the course of the 4th of the forcing of the bridge of Ebersberg, which in effect opened the road to the capital to the French army. In truth, he was impressed with the idea that Napoleon would never advance to Vienna while so formidable an army menaced his line of communication and accordingly, instead of hastening towards it, he merely pushed on Kollowrath with twenty thousand men towards the bridge of Linz, and sent orders to the Archduke John to abandon Italy and make for the same point vainly hoping that the concentration of such forces in his rear would compel Napoleon to abandon his attack on the capital. Awakened, at length, by the pressing representations of the Archduke Maxi-

May 3. millian, to the necessity of instantly providing for the protection of Vienna, he commanded Hiller, who, in obedience to his orders, had passed over, after the combat at Ebersberg, by the bridge of Mautausen to the northern bank, to advance by forced marches to the metropolis; and breaking up from Budweis on the morning of the 8th he himself followed in the same direction. But it was too late the repose of three days at that place had given his indefatigable adversary the start of him by a day. Hiller received his orders on the 10th, at two in the morning, and marching twelve leagues that day reached, with his advanced guard, Nusdorf, a league from Vienna, before night, but found the town already invested; while the Archduke advanced by Twetel towards Krems, hoping still to be in time to throw himself

May 11. between the invader and the capital. Notwithstanding all their efforts, however, they were too late. Hiller indeed, occupied the isles of the Danube on the 11th the day before the Archduke Maximilian withdrew from the city, but too late to prevent its complete investiture, and the advanced guard of the Archduke Charles reached the northern extremity of the bridges late on the evening of the 13th, when the enemy was already fully established

May 14. in Vienna. But for the delay at Budweis, and the order to Hiller to cross over to the northern bank, the army would have been up in time to combat for the capital for on the 16th, the junction was fully effected with Hiller a few miles to the north of Vienna on the left bank of the river (1); and as from Budweis to that place is just six days march Prince Charles, who arrived at this first town on the 4th, might have reached the capital with ease on the evening of the 11th, twenty four hours before it actually surren-

(1) Pol. H. 252. 253. Jour. H. 182. 183. Hist. 230. 231.

dered, and long before, if garrisoned by the united forces of Hiller and Maximilian, consisting of thirty thousand good troops, it could possibly have been reduced

Retreat of
the Arch-
duke John
in Italy

The disasters in Bavaria, and the rapid advance of Napoléon to Vienna, produced an immediate change on the aspect of affairs in the Italian plains. Cut short in the career of victory, not less by the necessity of making considerable detachments to the right and left, to watch the progress of Marmont in Dalmatia, and aid the insurrection in Tyrol, than by the peremptory orders of the Archduke Charles to draw near to the hereditary states for the defence of the capital, the Archduke John broke up from the position of Caldiero on the Adige. In order to conceal his real intentions, he made, on the 29th, several attacks on the enemy, but without effecting his object, for Eugene was aware of the events in Bavaria, and had concentrated his troops to resume the offensive the moment that his adversary retired. Orders arrived on that day from Vienna to suspend as little as possible his offensive operations in Italy, but to open a communication with Hiller, who was to fall back to the Enns, and to be prepared to maintain himself in Styria, Carinthia, and Tyrol, as a vast fortress, where he could keep his ground though detached altogether from the other Imperial armies. The Archduke John, however, was of an opposite opinion, and deeming it indispensable to concentrate all the forces of the monarchy in the centre of the hereditary states, he stated his acting differently in a despatch to the Emperor Francis on 30th April, and on the 1st May commenced his retreat by Friuli. Eugène followed the enemy leisurely, and the Austrians reached the Brenta without sustaining any loss, where Prince John was distracted by new orders to the same effect, from the Archduke Charles, dated Cham, 29th April, directing him to co-operate with the intended movement of the general-in-chief, from the north bank of the Danube upon Lintz, so as to threaten the enemy's communications. But the progress of events both on the Danube and the Italian plains disconcerted all these projects, and rendered a retreat upon Vienna, in Prince John's opinion, a matter of necessity (1)

Battle of the
Piave and
defeat of the
Austrians
May 8

Retired behind the Piave, the Archduke conceived it practicable to defend the course of that torrent, and thereby both arrest the enemy's progress in that quarter, and maintain a position from which the projected lateral movement upon Lintz, or the ultimate retreat upon Vienna, might be effected. Like all the other streams which, in the lower parts of Lombardy, descend from the summits of the Alps to the Italian plains, this river flows in the middle of an immense gravelly bed, elevated for the most part above the adjoining meadow, and fordable in all parts except after heavy rains. At that season, however, the melting of the snows in the higher Alps rendered the torrent swollen, and any attempt to cross a hazardous operation. Finding, however, that the spirits of his troops had been most powerfully elevated by the triumphs of the grand army, Eugène resolved to attempt the passage by main force, and hoped, by rivalling the brilliant exploit of Napoléon at the passage of the Tagliamento (2), to wipe out the disgrace of his defeat at Sacile. The attempt was made on the 8th May at two points, viz the fords of Toreillo and St -Nichol, distant two miles from each other, in front of Lovadina. Dessaix, with six battalions, crossed at the first of these points at daybreak, but he had no sooner drawn up his troops in square, on the opposite bank, than they were charged with great vigour by three thousand Austrian horse. The Imperial cavalry, notwithstanding the most

(1) Jom. iii. 224, 225. Pcl. iii. 180, 195. Erz. John Feldz. 104, 107.

(2) Ante, iii. 123

gallant exertions, were unable to break that solid mass of infantry. Had a body of foot-soldiers been at hand to support their attacks, or cannon to break the firm array of the enemy, without doubt their efforts would have proved successful; but the infantry, considerably behind, could not get up in time and meanwhile, Eugène succeeded in bringing up a large body of French horse, which quickly passed over, and by charging the Imperial cavalry in their turn, relieved the grenadiers, now almost sinking under the fatigues of the continued combat, of the weight which had oppressed them. Wolfskehl, however, who commanded the Austrian dragoons, turned fiercely on these new assailants; the Imperial horsemen, the flower of their army, fought bravely a terrible combat ensued, in which their gallant commander was slain, and it was not till half their number were stretched on the plain, and an overwhelming superiority of force had rendered further resistance unavailing, that these intrepid cavaliers fell back upon their infantry, who were slowly advancing to the charge. The foot soldiers were ridden over and thrown into confusion by the flying dragoons; disorder speedily spread in the columns; several cannon and large quantities of baggage were taken; and it was only by bringing up in person the reserve of grenadiers that the Archduke succeeded in arresting the rout. Meanwhile, as the waters of the Piave still continued to rise from the melting of the snows in the mountains, Eugène hastily constructed a bridge of boats, by means of which Macdonald's division was crossed over, which was soon followed by that of Grenier and the rest of the army, Dessaix, with his unconquerable squares, still keeping his ground in front, and covering the deploying of the columns to the right and left. At two in the afternoon, Eugène having collected thirty thousand foot and six thousand horse on the left bank, marched forward to attack the enemy but the Archduke was already in full retreat by the great road of Cornegliano, which was effected in excellent order, though not without much bloody fighting the numerous canals, dykes, and hollow ways of the country affording every facility for arresting the progress of the enemy. In this disastrous affair, in which the Austrian commanders vainly attempted to defend seven leagues of a fordable river, and uselessly sacrificed their noble cavalry, by bringing it into action against infantry without the aid either of foot or cannon, the Archduke John lost nearly six thousand men, fifteen guns, and thirty caissons, while the French had not to deplore the fall of more than four thousand. But what was far more important, he lost the whole moral influence of the victory of Sacile; and the prestige of success, with all its incalculable effects, had passed over to the enemy (1).

After this check, the Archduke John retired without any further struggle, and without being disquieted in his retreat to Villach in Carinthia. The strong forts which he had constructed at Stallborghetto, Tarvis, and Prediel, on the roads to that town, and at Prevald, on that to Laybach, gave him the means of effecting this movement without any molestation. Arrived at Villach, he received intelligence of the fall of Vienna, and, at the same time, a letter of the Archduke Charles, of 15th May, directing him to move with all his forces upon Lintz (2). Conceiv-

(1) Erz-John. Feldzug 1809 pp. 116. Fel. III. 180. 307. Journ. III. 221. 227. Th. h. II. 263.

(2) The orders, cited Fœderer of 15th May 1809 were quite peculiar—"I march from Villach by Spital and Seibersdorf on the Dürnbach to command to his aid the corps of Jellachich, and to head him to Kallmuth, who, at the same period, was to be before Lintz, on the left bank of the river. I to act in union on the river and command the corps of

Napoleon, now master of Vienna." It was eight days march from Laybach to Lintz; Prince John, therefore, might have been there by the 21st or 23d, where he now remained but Corradotto with the 30,000. Of what formidable importance would such a concentration of 50,000 men have been on the direct line of Napoleon's communications across immediately after his defeat at Aspern, which took place on the 23d —see Fœderer Vol. III. 221. 222.

May 10. which Eugène was already preparing to do so that the Archduke on the 10th, sent orders to Gullay to evacuate his post, and effect his retreat in the night down the valley of the Save. This order was promptly obeyed but at daylight the French discovered the evacuation, and pressed on in pursuit.

May 12. They overtook the retiring Austrians in front of Weissenfels, and put them to the rout, taking eighteen guns and two thousand prisoners. Another mountain fort, on the Prediel, blocked up the road from Gorizia to Tarvis and so arrested the march of Serras with the centre of the French army. Its garrison was only three hundred men, with eight pieces of cannon but they were commanded by a hero, Hermann, who had inspired his handful of followers with the resolution of the defenders of Thermopylæ.

May 17. When summoned to surrender, and informed of the retreat of the Archduke, and the fall of Malborghetto, he replied, nothing daunted, that "he was resolved to lay down his life for his country." Nor did his defence derogate from these heroic sentiments. Though assailed by forces twenty times as numerous as his own, he persevered in the most desperate resistance, made good the external rampart as long as a man was left upon it who could hold a bayonet, and, when its defenders were all maimed or slain, fell back, alone, to the block-house in the centre, and, when it was set on fire, sallied forth at the head of a band of devoted followers, and fell, gloriously pierced by innumerable wounds (1) Macdonald, who, with the right wing was to advance further to the south across the Isonzo and the mountains of Prevald,

May 4. encountered a less serious opposition. On the night of the 14th, he effected the passage of the swollen torrent of the Isonzo near Gorizia, and at that place made himself master of the battering train destined for the siege of Palmanova. Two thousand men were stationed in the forts of the Prevald, constructed on the same plan of those of Malborghetto, and, like them, commanding entirely the summit of the pass. Several assaults were in the first instance repulsed by the garrison; but when the besiegers' artillery was

May brought up, and the occupation of the adjacent heights exposed them without resource to a plunging fire, against which their fortifications were no protection, they deemed further resistance useless, and capitulated with the whole artillery at their disposal, consisting of fifteen pieces (2)

May 20. Meanwhile, Trieste, which was unarmed, and incapable of resistance, fell an easy prey to General Schilt, with the light troops of Macdonald's division and the artillery taken at Goriza and the Prevald was forthwith forwarded to that important seaport, to place it

May 21. in a posture of defence against the English cruisers who were then blockading some Russian ships of war. Rapidly following up his advantages, Macdonald, immediately after making himself master of the Prevald, turned towards Laybach, where an entrenched camp armed with fifty pieces of cannon, commanding the approach to the capital of Carniola, was garrisoned by five thousand landwehr. Joining conduct to vigour, the French general, at the same time that he approached the entrenchments with the bulk of his forces in front, detached Broussier, with two brigades, which threatened to cut off their line of retreat towards Croatia, while several squadrons on the left bank of the Save made preparations for crossing that river, and assailing them on the other side. Alarmed at the simultaneous appearance of the enemy's forces in so many different directions, and deeming further resistance useless, now that Vienna had surrendered the commander of the entrenched

(1) The Archduke John was so impressed with the gallantry of the Austrian commander on this occasion, that he wrote a letter to Hermann's father

congratulating him, as he best could, for the loss of so heroic a son.—Y. L. J. x. 5. 1809, 129

(2) Erz. Joh. F. 129 126. Pol. III. 734, 737

camp laid down his arms, with nearly five thousand militia, and sixty pieces of cannon. This important success ensured the submission of all Carniola, and left Macdonald at liberty to follow the forward movement of the Viceroy towards Vienna; while the occupation of Trieste, and the passes leading to it, opened up a communication with Marmont in Dalmatia, who was already preparing to effect the junction, and concur in the operations of the grand army. By these successes, the whole frontier fortifications of the hereditary states were forced, with the loss to the Austrians of ten thousand men, and ninety pieces of cannon; but they were dearly purchased, for at Malborghetto, Tarwis, and Prediel, nearly half that number of French had fallen (1).

Total defeat of Jellachich in the valley of the Muhr May 21 These disasters, however, considerable as they proved, were not the only, nor the greatest which befell the retreating army. Jellachich, who had advanced towards Salzburg, in order to prepare the way for the prescribed lateral movement of the Archduke John towards Lintz, having received counter orders from that Prince, to descend by the valley of the Muhr towards Gratz, in order to form a junction with the bulk of the Italian army, encountered, at the bridge of St -Michel, Serras with his powerful division, who, after forcing the barrier of the Prevel, was descending the narrow defiles of the Muhr, on the road to Leoben. The Austrian general was following the lateral vale of Lessing, which unites at right angles with that of the Muhr at St -Michel, and the two divisions came suddenly and unexpectedly in contact, at that romantic pass. The Imperialists at first made a vigorous resistance, and Jellachich, arranging his troops on the road at the foot of the rocks on each side of the bridge kept up so heavy a fire, that, for two hours, all the French columns which presented themselves were swept away. Attracted to the front by the cannonade, the viceroy came up, and immediately detached several battalions on the road to Mautern, on the other side of the Muhr, who speedily scaled the mountains in the rear of the Imperialists, and commenced a plunging fire upon them from behind. Panic-struck by this unexpected apparition, which they conceived was a second army come to complete their destruction, the Austrians broke and fled - some by the road of St -Michel, where they were pursued without mercy, and for the most part either cut down or made prisoners; some by the valley of Lessing, where they fell into the hands of a French brigade, under General Valentin. Nearly two thousand Imperialists were killed or wounded, and above three thousand made prisoners in this disastrous affair. and such was the terror now inspired by the French armies, and such the depression arising from the fall of their capital, and then multiplied defeats, that on the road from Salzburg to Leoben, four hundred recruits, and twice that number of militia, laid down their arms to a captain, followed by a single dragoon (2).

Eugene advances to Vienna, and joins Napoleon May 26 Jellachich, having lost all his baggage and cannon, with difficulty escaped at the head of two thousand men, by cross mountain paths to Gratz, where his arrival, and the woful condition of his troops, excited such consternation, that the Archduke forthwith set out in the direction of Kormond in Hungary, abandoning all attempt to bar access to the capital to the invader. Relieved by this retreat of all further molestation in his advance, Eugene moved on rapidly in the footsteps trod twelve years before by Napoléon, to Judenburg and Leoben, and next day, amidst shouts of joy from both armies, his advanced posts fell in with the

John 129, 135

patriots of Lauriston, who belonged to the grand army, on the Simmering and on the day following, the junction of the two armies was fully effected; while the army of the Archduke John, driven to a circuitous and eccentric retreat into Hungary, was entirely lost for the present to the forces of the monarchy (1)

The eyes of all Europe were now fixed with absorbing interest on the shores of the Danube, near Vienna, when a hundred thousand men on either shore stood prepared for mortal, and, to all appearances, decisive conflict. Defeat to either party seemed fraught with irreparable ruin for, if the Austrians had no other army or reserves to fall back upon if the Archduke's army were defeated in the heart of the monarchy, the French, on their side, had a disastrous retreat to the Rhine to anticipate, if their arms should prove unsuccessful. Prussia and the north of Germany it was well known, would start up the moment that a serious reverse befell their eagles; and, though the contest took place under the walls of the Austrian capital, it was in reality one of life and death for the French empire. Nor were the chances so unequal as they might at first sight appear, for, though the Austrian armies had been driven back, separated from each other, and repeatedly defeated, yet their physical strength was not reduced in a much greater proportion than that of their antagonists; and though their capital was taken, still this had been accomplished only by a bold irruption which exposed the invader to nearly the same peril as the invaded. Every one felt, what Napoléon at the time admitted to be true, that a single defeat on the Danube would soon bring the Imperialists to the Rhine (2); and, though the Archduke Charles could not lay claim to the transcendent military talents of his opponent, yet he was second to none of the other generals of Europe in scientific ability. And it was no small military skill, which, after so desperate a shock on the plains of Bavaria, could still array a hundred thousand undiscouraged warriors for the defence of their country, on the banks of the Danube (3)

During the week which immediately followed the occupation of Vienna, the Emperor being well aware of the crisis which had arrived, was indefatigable in his efforts to station his troops in such a manner in *échelon* along his line of communication, as to secure his rear from insult while, at the same time, innumerable despatches in every direction provided for the supplies of the army. Titles, decorations, ribbons, crosses of honour, and pensions, were liberally distributed among the soldiers. splendid reviews reanimated the spirits of the men, which the fatigues of the campaign had somewhat depressed, while confident announcements in the bulletins, predicted the speedy destruction of the Austrian monarchy. He had now assembled around Vienna the whole corps of Masséna and Lannes, the Imperial guard and reserve cavalry under Bessières⁴ and though their strength had been much diminished by the losses of the campaign, they could still, after deducting the sick and wounded bring above eighty thousand veteran troops into the field. Davoust at St. Polten, and Bernadotte at Ebersberg and Enns, kept up his communications, while the viceroy was hourly expected with forty thousand from Italy. Supported by the battlements of Vienna, such a force was beyond the reach of attack from any force

(1) Pol. III. 212, 217. Ess. John. Feldt. 179, 181. Journ. III. 279, 280. Thib. vii. 266, 267.

(2) In the council of war held after the battle of Austerlitz, when some voices had been expressed for retreating, Napoléon said—If we retreat, we shall admit on the face of all Europe that we have been

defeated. Where shall we retire to? The Tyrol, the Inn, or the Lech? No! we must fight or die at the Rhine; for the allies, whom history or fortune has given us, will all turn against our standards the moment we acknowledge reverse.—Ess. III. 231.

(3) Pol. III. 250. Bent. 169, 171.

the Imperialists could bring against them, but it was neither consistent with the Emperor's principles of war nor political policy, to remain shut up behind walls while the enemy kept the field, and was accumulating the forces of the monarchy around him, and he resolved, therefore, to attempt, by main force, the passage of the river (1)

Description of the islands of the Danube near Vienna, and the different channels of the river The Danube, which, till it comes to within a few leagues of Vienna, flows in a narrow channel, there swells into a wide expanse and spreads over the plain, embracing several islands in its course. Some of these are extensive, and richly cultivated, but the greater part are smaller, and covered with wood. The island of Prater, with its beautiful umbrageous avenues and much-loved woody recesses; and that of Lobau, at a greater distance down the river, and varied with enclosures and cultivation, are the most considerable. The latter is two miles and a half in length, and a mile and three quarters in breadth, covered with rich meadows, swampy thickets, and verdant copsewoods; it has been immortalized in history, from the memorable events of which it soon became the theatre. By far the most favourable point for forcing a passage from the right bank is at Nussdorf, half a league above Vienna. There the principal branch of the Danube, a hundred and eighty toises in breadth, flows in a deep and impetuous channel separated from a smaller branch, fifty toises broad, by an island which would serve as an advantageous support for assembling and putting under cover the first troops employed in the operation. Another point for attempting the same enterprise was in front of Ebersdorf, across the great island of Lobau. This island is separated from the right bank by another isle about a mile in length, and half that distance in breadth, while several smaller islets are scattered in the principal channel of the river. Thus, an army attempting the passage at that point has four branches of the Danube to cross, each of which may be considered as a separate river. There is, first, the channel separating the right bank from the lesser island, which is two hundred and forty toises broad, then the main body of the stream, flowing in a deep current, a hundred and seventy toises in breadth, which separates it from Lobau, with a small island in its course dividing this main stream into two parts, finally, the northern branch which lies between the isle of Lobau and the banks of the Marchfeld on the left of the river, it is seventy toises in breadth, and in like manner broken in its course by several smaller islands. Thus, at Ebersdorf, many more bridges required to be constructed than at Nussdorf, and a military road across the islands was necessary to connect them together, but these disadvantages were more than compensated by the diminished weight and impetuosity of the stream; in consequence of being separated into so many channels, and the solidity given to the lengthened structure, by having such considerable abutments to support it at different points (2)

Napoleon's preparations to effect the passage of the Danube at Nussdorf May 13 After mature deliberation, Napoleon resolved to attempt the passage at the same time at both points. Lannes was charged with the undertaking at Nussdorf, Massena at Lobau. This double set of operations, it was hoped, would distract the attention of the enemy, and enable the Emperor to select, in the end, that one for the real passage where the least difficulties were to be overcome. Lannes, in the first instance, attempted to surprise a passage at Nussdorf, and pushed forward six hundred men to the island of Schwarze Lacken, which lies, as already mentioned,

(1) Jom. iii. 189, 190. Pel. iii. 251, 255, 259. Thib. vii. 277.

(2) Personal Observation. Stut. 202, 210. Pel. ii. 259, 267. Jom. ii. 192, 191.

near the northern bank at that point; but this advanced guard was speedily beset by superior forces, which General Hiller dispatched from his side of the river, and before any fresh succours could arrive from the southern shore, vigorously assailed, and compelled to capitulate. This check, joined to the obvious difficulty of establishing such a force as could maintain itself in an island so near the north bank, and separated by so wide and impetuous a current from the southern (1), induced the Emperor to relinquish all serious intentions of effecting the passage there and he, in consequence, bent all his attention to the island of Lobau, where Masséna was charged with the enterprise.

Indefatigable were the efforts made by all ranks, from Napoleon to the humblest soldier, for the prosecution of this great work. The inexhaustible arsenal of Vienna supplied in abundance all the stores and implements necessary for its success and the prudent foresight of the Emperor had already provided a flotilla of boats, drawn from many different quarters, and transported by land carriage to the Danube, which were easily converted into the materials of a bridge. Five days were consumed in these preparations on the sixth, every thing being in readiness, the enterprise was commenced. So anxious was the Emperor for the success of this undertaking, that he stationed himself on the southern bank as the troops were embarking minutely examined and assigned to each the place they were to occupy in the vessel superintended the distribution of cartridges to the soldiers, and addressed a few words to almost every individual man. With such secrecy had Masséna's preparations been conducted in the narrow channel of the Danube, near Vienna and behind the leafy screen of the Prater, that no danger was anticipated by the Austrians in that quarter; and although the posts in the island of Lobau were daily relieved, they had not been particularly strengthened on that occasion (2).

At ten at night on the 10th, all things being in readiness the first boats pulled off from the shore, and steering round the intermediate islands, made straight for that of Lobau where the Imperialists were first apprised of their approach by the keels of the boats striking on the shore. Instantly leaping into the water, the tirailleurs rushed forward into the thickets, and being constantly fed by reinforcements from the rear, soon expelled the Austrians from the isle. Masses of infantry were immediately after passed over, who soon secured the lodgement and rendered this important post safe from attack. At the same time, other detachments in like manner took possession of the intermediate isles; and the material points of the passage being thus secured, all hands were instantly set to the commencement of the bridges which were to connect them with the northern bank. The depth and rapidity of the current at that period, when the melting of the Alpine snows had already commenced, presented very formidable difficulties; but all were overcome by the ardour and activity of the French engineers. Sixty-eight large boats had been collected and nine huge rafts they made the bridge of the most solid materials as far as Lobau but from that island to the opposite shore of the Marchfeld, it was necessary to construct it of pontoons. With such vigour, however, was the enterprise conducted that by noon on the following day the whole was completed, and the leading columns of Masséna's corps instantly began to descender in great strength to the opposite bank (3).

(1) Vol. II. 262, 263. Journ. III. 193. Stat. 212.

(2) Vol. II. 270. 271. Journ. III. 196. 197. Stat. 224, 225. Stat. I. 62, 71, 72.

resistance, the cavalry, which had been all advanced to the edge of the river, were recalled, while the whole strength of the army was collected on the Bisamberg, concealed from the enemy, but ready to fall with its accumulated masses upon the first corps which should be transported across. At the same time, instructions were sent to Kollowrath, Nordman, and the officers in command further up the river, to collect a quantity of boats to be laden with heavy materials and combustibles, and, when the proper season arrived, detached, to be borne down by the force of the swollen current against the enemy's bridges. In truth, it was evident that Napoléon's overweening confidence in his good fortune had at last brought him into a situation full of danger, and that, with fatal rashness, he had exposed himself to the most perilous chance in war, that of being attacked by greatly superior forces in an open plain, with a great river traversed by a single bridge, recently constructed and liable to destruction, in his rear (1).

Austrian
plan and
order of
attack.
May 21

Anxiety for the great events, which were approaching, caused many a noble heart to throb during the night in the Austrian host; and already, as the morning dawned, thousands of aching eyes were turned in the direction of Lobau and the Marchfeld, where, even at that early hour a great accumulation of force was visible. The march of troops across the bridge continued incessant, and all the reports from the outposts announced that the lines in their front were rapidly widening and extending. With exulting hearts, the army received orders at sunrise to stand to arms: the advantages of their situation were obvious even to the meanest sentinel: the noble array which was pouring across the bridges before them, into the plains at their feet, seemed a devoted host, blindly rushing upon destruction. The vast plain of the Marchfeld, stretching from the foot of the Bisamberg to the margin of the Danube, lay spread like a carpet before the front of the line, and appeared, from the absence of every obstruction, to be the destined theatre of some great event. The officers around him urged the Archduke to commence the attack early in the morning: and while as yet the whole of Masséna's corps was not passed over, but when the enemy was making a false movement was not the moment to interrupt or warn him of his danger. Instead of acceding to their suggestions, that able commander ordered the arms to be piled, and the troops to dine; following thus the maxim of the great generals of antiquity, that, even with the bravest troops, it is of the last importance to commence a battle with the strength of the men recently recruited by food. At twelve o'clock, the movement of the enemy being sufficiently pronounced, and retreat in presence of so great a host impossible, the signal to advance was given. The men received it with loud shouts and enthusiastic acclamations; joyful war songs, accompanied by Turkish music, resounded through the air: long-continued shouts arose on all sides, as the Archduke Charles, the saviour of Germany, rode along the lines of the second column, at whose head he had taken his station. Every breast panted with anxious desire and deserved confidence for the decisive moment, and the finest weather favoured the awful scene. The circumstances had spread a noble ardour through every heart. Their much-loved capital, the abode of their Emperor, was in sight, polluted by the eagles of the stranger: their homes were the prize of victory; before them was a splendid battle-field, where they would combat for their sovereign, their liberty and their country, under the eyes of their wives, their parents, their children.

(1) Archduke Charles's Official Account of Aspern. A. N. R. 1842 Chron. 312, 313. Hist. 226, 227. Pol. II. 275, 277.

Descending from their elevated encampment, horse, foot, and cannon rapidly and eagerly pressed forward towards the enemy (1), and soon, to those who yet lingered on the Bisamberg, but a small space of clear green intervened between the volumes of dust which enveloped the extremity of the bridge of Lobau, and the moving clouds which marked the advance of the German host

Position and dangers of the French army Midway between the villages of ASPERN and ESSLING, each situated at the distance of half-a-mile from the bank of the Danube, the French bridge opened upon the vast plain of the Marchfeld. These villages, therefore, formed the bastions on either flank of Napoléon's army, which extended in line across the open space, a mile broad, which lay between them. Built of stone, houses, most of them two stories in height, and surrounded by enclosures and garden walls of the same durable materials, both offered valuable *points d'appui* to the bridges, under cover of which, it was hoped, Massena and Bessières would be able to maintain themselves, till the remainder of the army could be brought over to their support. Essling had a large stone granary, three stories in height, furnished with loop-holes, capable of containing several hundred men, while Aspern, a long straggling village, above two miles in length, was strengthened, like Eylau, by a churchyard surrounded by a strong wall. A double line of trenches, intended to draw off the water, extended between these two natural bastions, and served as a wet ditch, which afforded every possible security to the troops debouching from the island of Lobau. The whole ground was perfectly level, gently sloping upwards, like a vast natural glacis, towards Raschdorf. White villages alone, bosomed in tufted trees, rising above the tender green of the plain, which was covered with rich crops at that early season, broke the uniformity of the expanse, among which, on the right, the glittering pinnacles of Breitenlee, and the massy tower of Neusiedel were conspicuous (2); while on the left, the woody heights of the Bisamberg, resplendent with watch-fires, shut in the scene. The wide-spread light of the bivouacs, along the broad expanse of the horizon, revealed the magnitude of the force to which they were opposed, and inspired an anxious inquietude through the French army.

Napoléon is surprised, but resolves to give battle Uneasy at the situation of the troops which had crossed over, Napoléon was on horseback by break of day, and in person rode forward to the outposts to satisfy himself as to the amount of the enemy's force by whom he was likely to be assailed. Lannes, with his usual impetuosity, maintained that there was nothing but a curtain of ten thousand men in front, and that they should be attacked without delay, but Massena, instructed by long experience, and who had surveyed the fires of the enemy from the steeple of Aspern the preceding night, gave a decided opinion, that the whole Austrian army was at hand. Napoléon saw too good reason to adhere to the latter opinion, and instantly appreciating the magnitude of the danger, rode back to the bridge to hasten the passage of the troops. Orders were dispatched in every direction to assemble the forces on the right bank; the corps of Lannes was already beginning to cross over; that of Davoust, which had arrived at Vienna the evening before, was ordered up with all imaginable expedition, the cuirassiers, the guards, the reserve cavalry, the park of artillery, all received directions to hasten to the bridges. But it was too late: their narrow breadth would only permit a very limited number of sol-

(1) Archduke Charles's Account of Aspern Ann Rec 1809 382 Chron Stat 230, 235 Fel II 275, 276

(2) Personal Observation, Archduke Charles's Account Ann Rec 1809, 383 Fel II 283, 287

diers to march abreast upon them; the cavalry and artillery could only be got across with considerable difficulty (1); and the one over the main branch of the river was so much damaged by the rise and impetuosity of the stream, that by four o'clock in the afternoon it was almost impassable. Meanwhile the Austrian army in great strength, eighty thousand strong, of whom fourteen thousand were magnificent cavalry with two hundred and eighty-eight pieces of cannon, was already upon them.

Austrian plan of attack, and the way on both sides. The Imperialists advanced in five massy columns, preceded by a strong cloud of horse, which concealed their direction and probable points of attack from the enemy. The first, under Illier, next the Danube, moved by the meadows on the northern bank of that river direct upon Aspern; the second, under Bellegarde, with the generalissimo by his side, advanced upon Leopoldau, and also directed its steps towards the same village; the third, led by Hohenzollern, moved by Breitenlee also upon Aspern; the fourth, commanded by Rosenberg, was to advance by Raschdorf towards Essling; the fifth, also directed by Rosenberg, was to turn the right flank of the enemy by Enzersdorf and co-operate in the attack upon Essling; the cavalry, all massed together, was to move over the open country between Raschdorf and Breitenlee, so as to assist the head of any column which might find itself assailed by the enemy's horse. No less than eleven of the Austrian batteries were of position which, as they drew near to the enemy's lines, sent a destructive storm of round shot through their ranks. The French were far from having an equal force at their disposal, and they were particularly inferior in the number and weight of their artillery; but, by two o'clock in the afternoon, when the opposing hosts came into collision, seven divisions (2) of native troops (3), besides the guards of Württemberg, Hesse Darmstadt, and Baden, in all fifty thousand men, were in line, and from the known character of the soldiers, as well as the firmness of their leaders, a desperate resistance was to be anticipated. Masséna, with two strong divisions, was around Aspern; Lannes, with a third, was in Essling; the intermediate space was occupied by the remainder of Masséna's corps, the Imperial guard, and German auxiliaries, with the formidable cuirassiers of Bessières glittering in their front.

Disorderly conduct at Aspern, which is at length carried by the Austrians. Aspern, into which Masséna had not had time to throw an adequate garrison, was, in the first instance, carried by the advanced guard of Illier under Gullay; but the French marshal having quickly attacked it with the whole division of Molitor, it was not only retaken, but the Imperialists pursued to a considerable distance to the northward; till the broad and deep columns of Illier, Bellegarde, and Hohenzollern, advancing to their support, warned the skilful French commander of the necessity of withdrawing all his troops to the defence of the village itself. The prospect which now presented itself was capable of daunting the most intrepid hearts. On the left, three broad and deep columns were seen converging towards Aspern; at a greater distance on the right, vast clouds of dust announced that other masses were threatening Essling; while along the whole front, a formidable array of artillery, vomiting forth fire and smoke,

(1) Nap. in Month. 41 77 Arch. Charles Accout. Ann. Reg. 1809 333, 331. Chron. Pol. II. 293, 297. Mal. 240, 247. Ann. I. 290.

(2) Viz. Mal. 240, 247. Le Grand Boudet, Ferrand, Masséna's papers, and Lantini. The four first were infantry, the last cavalry of the reserve and cuirassiers. Their united strength, with the German auxiliaries, must have been at least fifty thousand men, as Molitor's and Boudet were two thousand

each. The French, however, will only admit that they had thirty thousand native troops in action on the first day. See Arch. Charles Accout. Ann. Reg. 333, 331. Chron. Pol. II. 293, 297.

(3) Arch. Charles Accout. Ann. Reg. 333, 331. Chron. Pol. II. 293, 297. Mal. 240, 247.

steadily advanced, rendering more awful the scene by the obscurity in which it involved all behind its traces. But this suspense was of short duration, and in a few minutes the Austrian battalions of Hiller, with loud shouts, advanced to the attack. If, however, the assault was impetuous, the defence was not less heroic, and never had the experienced skill and invincible tenacity of Marshal Masséna been so conspicuously displayed. Stationed in the cemetery of Aspern, under the boughs of the great trees which overshadow the church, he calmly awaited the result, directing the movements of his troops, and giving his orders to support the points which most required it, with the coolness and precision of veteran courage, while the crash of the boughs above his head, and the incessant clatter of grape-shot on the steeple, told how near the enemy's batteries had approached. Both parties were aware that the fate of the day mainly depended on the possession of this important point, and incredible efforts were made on either side to attain it. For several hours the murderous conflict continued, fresh troops were brought up on both parts to supply the place of those who had fallen, or were exhausted in the strife: the Austrian infantry, the Hungarian grenadiers, the volunteers of Vienna, rivalled each other in courage and perseverance in the assault, while the different divisions of Masséna's corps nobly in succession sustained the defence. Every street, every house, every garden of the village, became the theatre of mortal combat: the shouts of transient success, the cries of despair, were heard alternately from both parties—an incessant shower of bombs and cannon balls from the concentric batteries of the Imperialists spread death on all sides, alike among friend and foe, while great part of the village took fire, and the flames of the burning houses afforded, as night approached, a ghastly light wherewith to continue the work of destruction, and illuminated the whole field of battle. A desperate conflict at the same time continued in the marshy plain between Aspern and the river, where the wet ditches leading to the Danube athwart their front, and the thickets of alder-bushes, gave the French the advantages of a natural fortification. For long the superior numbers of the Austrians impeded each other, as the position of the French centre prevented them from attacking the village on more sides than one, but at length, at eleven at night, their line having gained ground in that quarter, a combined attack was made by Hiller in front, and Vacquant, commanding part of Bellegarde's corps, which had just repulsed a formidable charge of cavalry in flank, and, in spite of the most heroic efforts on the part of Masséna, Molitor, and his officers, the village was carried amidst deafening shouts, which were distinctly heard above the roar of the artillery along the whole line. The French marshal made a gallant effort to regain his ground, and succeeded with Le Grand's division, which had succeeded Molitor's in their tremendous strife, in wresting some of the houses from the enemy, but the churchyard, and the greater part of this bloodstained village, remained through the night in the hands of the Imperialists (1).

Grand charge of the French cavalry in the centre While this tremendous struggle was going on in Aspern, the central space between it and Essling was almost denuded of infantry, the numerous and formidable Austrian batteries in that quarter being chiefly guarded by cavalry, with Hohenzollern's infantry in their rear, while the splendid horsemen of the French Guard, concealed on the opposite side the weakness of their infantry in the centre of the line. So severely, however, were his troops in both villages, and even in the most distant re-

(1) Archduke Charles' Account, Ann. Reg. 1809, 385, 386. Stut. 230, 239.

serres, galled by the sustained and incessant discharge of this tremendous array of guns, that Napoléon ordered a grand charge of cavalry in his centre to wrest them from the enemy. Bessières first sent forward the light horse of the guard: they made repeated charges; but were unable to withstand the terrible discharges of grape which were vomited forth by the Austrian batteries. Upon their repulse, the French marshal ordered the cuirassiers of the guard to charge. These gallant horsemen, cased in shining armour, whose weight the English felt afterwards so severely at Waterloo, advanced at the gallop, shaking their sabres above their heads, and making the air resound with cries of "*Vive l'Empereur!*" So swift was the onset, so vehement the attack, that the Imperialists, who saw at once the danger of the artillery, had barely time to withdraw the guns, and throw the foot soldiers in their rear into squares when the clattering tempest was upon them. In vain, however, Bessières, D'Espagne, and Lasalle, at the head of these indomitable cavaliers, swept round the now insulated foot, routed the Austrian cavalry of the reserve under Lichtenstein, which was brought up to oppose them, and enveloping the infantry formed in squares of battalions on all sides summoned them in the pride of irresistible strength to surrender. Cut off from all other support, the brave Hungarians stood firm back to back in their squares, and kept up so vigorous and so sustained a fire on all sides, that after having half their numbers including the gallant D'Espagne stretched on the plain (1), the French cuirassiers were obliged, shattered and defeated, to retire to their own lines, and both parties at this point slept upon the field of battle.

Nearly at-
tack on
Essling
which
proved un-
successful. Rosenberg's columns followed the course prescribed to them: but, as the fifth corps, which was to make the circuit towards Enzersdorf and attack Essling on the extreme flank, necessarily required more time for its movement than the fourth, which advanced direct by Raschdorf upon the same point, the latter retarded their march, and the combined attack did not take place till five in the afternoon. Enzersdorf was evacuated by the enemy upon the approach of the Imperialists; and Lannes, at the head only of a single division, was threatened with an attack by forces more than double his own, both in front and flank. The fourth column, which attacked the village on the western side, was vigorously charged in flank in its advance by a large body of French horse, detached by Bessières from the centre of the line: and the necessity of forming squares, to resist these attacks, retarded considerably the assault on that side. At length, however, the unsuccessful charge on the Austrian central batteries having thrown back the French cuirassiers in that quarter, and the reserve dragoons of Lichtenstein having been re-formed, and brought up in great strength to the support of the centre, the Archduke ordered a general advance of the whole line, at the same time that a combined attack of Rosenberg's two columns, now perfectly able to co-operate, was made on Essling. In spite of the utmost efforts of Napoléon, the centre of the Austrians sensibly gained ground: and it was only by the most devoted gallantry on the part of the French cuirassiers, who again and again, though with diminished numbers, renewed the combat, that he was able to prevent that part of his line from being entirely broken through. The violence of the flanking fire of grape and musketry, however, which issued from Essling, was such as to arrest the Imperialists when they came abreast of that village: and although many assaults were made upon it by Rosenberg's columns, and it was repeatedly set on fire by the Austrian shells, yet such was the intrepid resistance of Lannes, with his

heroic division, who defended with invincible obstinacy every house and every garden, that all the assailants could do was to drive them entirely within its walls; and when darkness suspended the combat, it was still in the hands of the French (1)

The night which followed this desperate conflict was spent with very different feelings in the two armies. On both sides, indeed, the most strenuous efforts were made to repair the losses which had been sustained, and prepare for the conflict on the morrow; but it was with very different emotions that the soldiers' breasts were agitated in the opposite hosts. On the side of the French, to the proud confidence of victory had succeeded the chill of disappointment, the anticipation of disaster; the wonted shouts of the men were no longer heard; a dark feeling of anxiety oppressed every breast, the brilliant meteor of the empire seemed about to be extinguished in blood. They could not conceal from themselves that they had been worsted in the preceding day's fight. Aspern was lost; Essling was surrounded, the line in the centre had been forced back; the enemy slept among the dead bodies of the French, while the multitude of slain, even in the farthest reserves of their own lines, showed how completely the enemy's batteries had reached every part of their position. The Austrians, on the other hand, were justly elated by their unwonted and glorious success: for the first time, Napoleon had sustained a decided defeat in the field, his best troops had been baffled in a pitched battle, his position was critical beyond example, and the well-known hazard of the bridges diffused the hope that, on the morrow, a decisive victory would rescue this country from the oppressor, and at one blow work out the deliverance of Germany. But, though anxiety chilled the hopes, it no ways daunted the courage of the French. Stretched amidst the dead bodies of their comrades, they sternly resolved to combat to the last man on the morrow, for their beloved Emperor and the glory of their country. Sleep, induced by extraordinary fatigue, soon closed the eyes of the soldiers: the sentinels of either host were within a few yards of each other, Napoleon lay down in his cloak on the sand of the Danube, within half a mile of the Austrian batteries. But no rest was taken by the chiefs of either army, both made the most strenuous efforts to improve their chances of success for the following day. During the night, or early in the morning, the infantry of the Imperial guard, the corps of Lannes, and the troops of Oudinot, were with much difficulty got across the bridges, so as to give Napoleon, even after all the losses of the preceding day, full seventy thousand men in line, while Davoust, with thirty thousand more (2), was just commencing the passage of the bridges. The Archduke, on his side, brought up the reserve, consisting of the grenadier corps of the Prince of Reuss, from the Bisamberg to Breitenlee, a mile in the rear of the field of battle. "*Ejus prælii eventus utrumque ducem, diversis animi motibus, ad maturandum summæ rei discrimen erexit. Civilis instare fortunæ, Cerialis abolere ignominiam. Germani prosperis feroces, Romanos pudor excitaverat* (3) "

(1) Stat. 239 250 Archduke Charles' Account. Ann. Reg. 1809, 338, 389 Pel. ii. 296, 299 Jour. iii. 202

(2) These numbers are ascertained in an authentic manner. Napoleon admits that "the French army on the second day, on the two banks of the Danube, was 20,000 men superior to that of the Archduke, who had 100,000 men in the field." Davoust's corps was, at the utmost, not above 40,000 men

after the losses it had undergone, at this rate, therefore, the French army, which was all across excepting that marshal's corps, would have been 80,000, and, deducting 10,000 for the losses of the preceding day, 70,000 must have remained in the field on the 22d—See *NAPOLEON IN MOSCOW*, ii. 78

(3) *Treat Hist.* v. 15 Archduke Charles Ann. Reg. 1809, 389 Pel. ii. 308, 309

*Renewal of
the action
on the 22d
Aspern and
Essling are
not aban-
doned.*

Short as the night was at that season on the banks of the Danube, that period of rest was not allowed to the wearied soldiers. Long before sunrise, the moment that the first grey of the summer's dawn shed a doubtful light over the field of battle, the Austrian columns of Rosenberg again assailed Essling in front and flank, and Masséna, with strong reinforcements, renewed his attacks on the churchyard of Aspern. Both assaults proved successful. Essling for the first time was carried by the Archduke's regiment of grenadiers in the early twilight, and the Imperialists, following up their success, forced the French lines on their left back towards the Danube, and straitened them considerably in that quarter: but this important success was counterbalanced by the loss of Aspern, which at the same moment was taken, with the battalion in the churchyard, and four pieces of cannon, by the French division of Cara St.-Cyr. Both parties made the utmost efforts to retrieve these momentous losses. St.-Hilaire came up with his division of Lannes' corps to the assistance of that gallant marshal, who was now driven out of all parts of Essling except the great granary, and, by a sudden effort, expelled the Austrians, who were never able again to recover their footing in that important village, though the most desperate conflict, both of foot and horse, went on the whole day in its immediate neighbourhood. The regiment of Eibeck rushed about the same time with fixed bayonets into the burning ruins of Aspern: the French of St.-Cyr were expelled by the violence of the shock, but they returned to the charge reinforced by several battalions of the Imperial guard, and after a struggle of an hour's duration, again drove out the Imperialists, and got possession of the churchyard, which by this time was literally covered with the dead. Hiller, however, was not to be outdone in this tremendous struggle. Again forming a column of attack, in conjunction with part of Bellegarde's corps, he himself led on the charge at the head of the regiment Bonjowsky trampling underfoot the dead and the dying, these heroic assailants advanced through burning houses and a storm of shot, and by great exertions succeeded in driving the French entirely out of the village. The Austrian commander instantly ordered the pioneers to pull down the walls of the churchyard, and burn the church and parsonage-house so as to prevent these important points from being again rendered a shelter to the enemy. Some additional regiments were soon after brought up under General Bianchi, which enabled the Imperialists not only to maintain themselves till the close of the battle in this obstinately contested village, but to advance in the evening somewhat beyond its limits, and direct the fire of their artillery upon the flank of the French lines, drawn up between it and Essling, which played till nightfall with tremendous effect upon the dense masses, who were there accumulated on a space of little more than a mile in extent (1).

*Napoleon
made a
grand at-
tack on the
Austrian
cavalry
which he at-
tacked suc-
cessfully.* These bloody contests in the villages were not such as by any means suited the ardent and impetuous mind of Napoleon. He moved from the necessity of remaining on the defensive, by the important accessions of force which he had obtained during the night, he was preparing a grand attack in the centre. For this purpose, instructions were sent to Masséna, who had not yet been expelled from Aspern, to maintain himself in that village; Davoust was to debouch from the bridges, in the direction of Essling; while Oudinot and Lannes, supported by the infantry and cavalry of the guard, were to make a united attack on the

(1) Archduke's Account. Ann. Reg. 1809, 290-291. Chron. Hist. 250-251. Jan. III. 282, 283. Pol. II. 318, 311. Rep. in Month. II. 75, 79.

Archduke's centre, which it was hoped might be thus driven back, and entirely separated from the wings engaged in the combats around the villages. From his station, behind the centre of the French line, Napoléon pointed out with his finger, at seven in the morning, to Lannes, who was on horseback beside him, the direction which his corps should follow in their advance, which was where the Austrian line appeared weakest, between the left of Hohenzollern and the right of Rosenberg. The Emperor soon after rode through the lines of the troops who were to advance, and was received with enthusiastic shouts of *Vive l'Empereur!* Attracted by the sound, the enemy's cannon concentrated their fire in that direction, though the fog which still lingered on the banks of the Danube concealed him from their sight, and General Montlun was killed by his side. Instantly the necessary orders were given, and in a few minutes the whole of Lannes' corps were thrown into open column, which advanced at a rapid pace, the right in front, the cavalry in reserve, immediately behind the infantry, while two hundred pieces of cannon, arrayed in the front of the whole line, distracted the attention of the enemy by a fire of unprecedented severity. As soon as Lannes, on the right, had made some progress, the remainder of the French centre, to the left, also advanced. Oudinot's troops formed the first columns, with the cuirassiers immediately behind them, and the Imperial guard in reserve; so that the whole French line between Essling and Aspern moved forward in *éche-lon*, the right in front, and preceded by a tremendous array of artillery. The shock was irresistible: the heads of Lannes' columns, skilfully directed against the weakest part of the Austrian line, soon forced their way through, and threw some battalions into disorder. Into the opening thus formed, the cavalry rushed with appalling fury, and soon a huge gap appeared between Rosenberg and Hohenzollern, and the foremost of the squadrons penetrated even to Bietenlee, where the Austrian reserve of the Prince of Reuss, was stationed, while the fugitives from the broken battalions spread in all directions the report that the battle was lost (1).

Desperate resistance of the Austrian centre The Archduke now felt that the decisive moment had arrived: the battle, the monarchy were at stake. In this extremity that gallant prince displayed alike the skill of a consummate commander, and the heroism of a common soldier. The reserve grenadiers, under the Prince of Reuss, were hastily thrown into square, and brought up to the menaced point, the numerous dragoons of Prince Lichtenstein advanced immediately behind them, and the Archduke himself, seizing the standard of Zach's corps, which had begun to give way, addressed a few energetic words to the men, and led them back against the enemy. The generals around him emulated the noble example, but most of them were killed or wounded at this dreadful moment. General Colloredo received a ball in the head, close by the Archduke's side, and the diminished numbers of his personal staff showed how desperate was the strife in which the generalissimo was engaged. But these heroic efforts restored the battle: re-animated by the heart-stirring example of their chiefs, the soldiers stood their ground, the dreadful column of Lannes was arrested in its advance, and the squares among which it had penetrated, pouring in destructive volleys on all sides, soon occasioned hesitation and anxiety through the dense array. The Austrian batteries, playing at half musket-shot, occasioned a frightful carnage in the deep masses of Napoléon's troops, which, unable either to deploy under a fire

(1) Pel iii 310, 316. Join iii. 204. Stat 241, Reg 1809, 391, 250. Archduke Charles' Account of Aspern. Ann Nap iii Month

turn it to advantage from the edges only of their columns, were swept away without making any serious resistance. From the moment that the irruption of Lannes' column was stopped, and the regiments behind were compelled to halt, the French soldiers felt that the day was lost (4). In vain the cuirassiers were brought forward who dashed, as at Waterloo, through the intervals of the squares; in vain those brave horsemen rode round the steady battalions, and charged them repeatedly to the bayonets' point (5), not one square was broken, not one column gave way, and the horsemen, grievously shattered by the terrible fire, were soon after charged by the enemy's reserve cavalry, under *Leichtenstein* who came up with loud shouts from the rear, and driven back in disorder to their own infantry.

At this critical moment, *Hohenzollern*, perceiving a considerable opening on the right of the French line, occasioned by the unequal advance of some of their regiments, seized the favourable opportunity to dash in with *Trofuk's* regiment, and occupy the space. It sustained itself there against all the attacks of the enemy, till the Archduke, who at once saw the importance of this movement, supported that gallant corps, when almost overwhelmed by fatigue and numbers, by six regiments of Hungarian grenadiers. These fresh troops pressed forward, intersecting the whole French line, overthrowing every thing which opposed them, and even reached the batteries in the rear, near *Eassling*, where they were assailed by such a destructive fire from that village that nothing but the presence of the Archduke, who hastened to the spot, enabled them to maintain their ground. At the same time, the want of ammunition began to be sensibly felt in the French army, especially by the artillery, the supplies of which were nearly exhausted by the incessant firing of two days; and accounts began to circulate, and soon spread like wild fire through the ranks, that the bridges were broken down, and all communication with the reserve posts, and two-thirds of *Davoust's* corps, still on the southern bank, cut off. In effect, at half past eight, the alarming intelligence reached the Emperor that the fireships and heavy barks laden with stones, sent down by the Archduke, had, with the swelling of the river, produced the desired effect (5), and that a considerable part of the bridge over the main stream of the Danube had been swept away.

In this terrible moment *Napoleon's* courage did not forsake him. Grave and thoughtful, but collected, he allayed by the calmness of his manner the alarm of those around him, and immediately gave the necessary orders to suspend the attacks at all points, and fall back towards the island of *Lobau*. Before they could reach the columns in front, however, the advance was already arrested by the violence of the enemy's fire, and several battalions, melting away under the destructive storm, had already begun to recede, or stood in a state of hesitation, unable to go on, unwilling to retire. The Austrians, perceiving those symptoms of vacillation,

(1) "We perceived," says *Barry* no eye or team, "in penetrating into the cluster of squares which formed the enemy's line, when the extreme severity of the fire of grape and musketry did not so to speak, and heights or hanging valleys with our satiric name, under very different ground is mountain. Every quarter of an hour which we passed in that position rendered our disadvantage greater: our troops were in no more or column, and could not deploy to return the fire with which they were assailed. From that moment it was easy to foresee not only that the day would not have a favourable issue, but even that it would probably terminate in some disaster.

They tried in vain to reduce them and outposts & charges of cuirassiers, which took place in several directions but they had a rally pierced through the openings of the enemy's squares, when there were several by the Austrians were there some more men, and I drove back upon our 1st line. This was before the capture of the bridges which I affirm was ordered by the Duke of S. Igo under a
 (27) May 1777. *Stad.* 212, 231. P. 1. 11. 212 234
 (31) 5 7 27 > at 231 233 June. 11. 215, 204. P. 11 212 277 Arch. *Charles* *Armand* & M. *Box* 1872, 271 272

resumed the offensive at all points, and forming two fresh columns of attack under Dedowich and Hohenlohe, made a sudden assault on Essling, which was carried, with the exception of the great granary, at the very moment that the French centre, slowly retiring, re-entered the narrow plain between that village and Aspern, from which they had issued in all the confidence of victory in the morning. This important success rendered the situation of Napoleon wellnigh desperate, and disorder was rapidly spreading through the ranks, for Aspern, in spite of the most heroic efforts of Masséna and Le Grand, was in great part already lost, and the capture of the second village precluded almost entirely the possibility of a retreat to the river side. He made the utmost exertions, therefore, to regain it, and General Mouton, at the head of a brigade of the Imperial guard, being intrusted with the attack, advanced in double quick time, and drove out the enemy at the point of the bayonet. Again the Austrians returned, and pushing up to the very foot of the granary, fired, and thrust their bayonets into the loopholes from which the deadly fire issued which thinned their ranks. In the tumult, the upper part of the building took fire, but still the invincible French soldiers maintained themselves in the lower stories, amidst the roar of musketry, and the crash of burning rafters. Five times did the Hungarian grenadiers rush up to the flaming walls, and five times were they repulsed by the unconquerable firmness of the old guard. At length, Rosenberg, finding that the enemy was resolved to maintain himself in that post at all hazards, and that the combat there was constantly fed by fresh reinforcements of the flower of the French army, drew off his troops, and desisting from all further attack on the village, confined himself to an incessant fire of grape and round shot upon the French columns, which, now in full retreat, were massed together in such extraordinary numbers at the entrance of the bridges leading to Lobau, that every shot told with fatal effect on men or horses (1).

Last attack
of the Aus-
trians, and
fall of Mar-
shall Lannes

Anxious to crown his glorious efforts by a decisive attack, the Archduke now brought forward his last reserves of Hungarian grenadiers, and, putting himself at their head, advanced with an intrepid step against the retreating French columns, while the whole artillery rapidly advancing in front and rear, contracting into a semicircle round the diminished host, kept up an incessant and destructive fire. The most vivid disquietude seized the French generals when they beheld their wearied bands assailed by fresh troops, which seemed to spring up from the earth at the conclusion of this fight of giants. But Lannes arranged his best men in the rear of the columns, and supporting them by the infantry and cuirassiers whom Napoleon sent up to his assistance, prepared to resist the attack, while Masséna, on his side, sometimes on foot sometimes on horseback, with his sword in his hand and fire in his countenance, seemed to multiply as necessity required his presence. Reserving their fire to the last moment, the French veterans, when the Hungarians were within pistol-shot, poured in so close and destructive a volley, that the advance of the enemy was checked, and a close combat with fire-arms commenced. At that moment, Lannes, who had dismounted from his horse to avoid the dreadful fire of the artillery, which swept off every thing above the heads of the soldiers, was struck by a cannon ball, which carried away both his legs. As Napoleon was engaged in the island of Lobau in directing the position of some batteries to protect the passage into that island from the field of battle, he saw a litter approaching, on

(1) Nap. in Month. ii. 77, 79. Sav. iv. 78, 79. Pell. ii. 318, 325, 326. Stat. Ann. Reg. 1809, 392, 393.

which, when it came up, he beheld the heroic marshal, his early companion in arms in Italy, extended in the agonies of death. Lannes seized his hand, and said, with a voice tremulous only from loss of blood—"Adieu, Sir! Live for the world; but bestow a few thoughts on one of your best friends, who in a few hours will be no more." On his knees, beside the rude couch of the dying hero, Napoleon wept, "Lannes, do you not know me? It is the Emperor—it is Bonaparte, your friend—you will yet be preserved to us." "I would wish to live, replied Lannes, "to serve you and my country but in an hour I will be no more." Napoleon was deeply affected: he had never before evinced such emotion. "Nothing," said he to Masséna, "but so terrible a stroke could have withdrawn me for a moment from the care of the army." Shortly after, Lannes was relieved from his sufferings by a faint, which, after some days, terminated in death. St. Hilaire, at the same time, was brought in mortally wounded (1). It was time that this terrible carnage should cease: the generals and superior officers were in great part struck down; the artillery horses were almost all killed, and the guns drawn by the foot soldiers: the infantry and cannon had exhausted almost all their ammunition; the cavalry were already all withdrawn into the island of Lobau but still the rear-guard, with unconquerable resolution, maintained the combat. The Austrians were nearly as much exhausted as their opponents and desisting from all further attacks, maintained only a tremendous fire from all the batteries till midnight, when, the last of the enemy having withdrawn from the field of battle into the island, exhausted by fatigue, the artillerymen sunk into sleep beside their guns (2).

Such was the famous battle of Aspern, the most glorious in the Austrian annals—for ever memorable in the annals of military fame. It was the first great action in which Napoleon had been defeated; for at Eylau, though, as the event ultimately proved, he had been worsted, yet, in the first instance, he remained master of the field of battle. The loss on both sides was enormous but that of the French was much greater than that of their opponents, owing to their decided inferiority in numbers, and especially artillery, on the first day, and the tremendous effect of the concentric fire of three hundred pieces of cannon on the second, upon the dense columns of attack, whom the narrow extent of the ground, the awful cannonade, and obstinate resistance of the Imperial squares, prevented from deploying into line. Eighty-seven superior officers and four thousand two hundred privates were killed, besides sixteen thousand three hundred wounded on the side of the Imperialists: a loss which, how great soever, the Archduke, with true German honesty, had the magnanimity at once to admit in his official account of the battle. The French lost above thirty thousand men of whom seven thousand were buried by the Austrians on the field; a few guns and some hundred prisoners were taken on both sides: five thousand wounded fell into the hands of the Imperialists. For several days after

(1) These officers were among the most renowned of all Napoleonic generals. Lannes, said he was wise, prudent, and without ambition, gifted with impeccable sense and firmness of the sword. He had received little education; all his qualities were derived from nature. A patriot, who withdrew from his court in the Italian campaign the extension of his understanding, often remarked it with surprise. He was superior to all the French generals on the field of battle in directing the movements of twenty-five thousand infantry. He was still young when he had them risen to perfection; perhaps he would have ultimately risen to the same eminence in strategy which he did not yet attain.

prelud. St. Hilaire was remarkable for ever since the battle of Castiglione in 1796, by his brilliant character. He was a good brother and parent, and was devoted to the Emperor ever since the legs of Trajan. He was called in the way the character without fear and without reproach. Napoleon shed better tears than did all and that of Lannes. They would not have been wanting in consistency to self-esteem, nor have been sufficient to the glory of France. Not mention to the reason. G. 83. 84.

the battle, the Austrians were constantly occupied in burying the dead; innumerable corpses were found in the smaller channels of the Danube; the waters even of that mighty stream were for some days poisoned by the multitude of slain which encumbered its banks, and a pestilential air was wafted down the theatre of death (1)

Driven back with all his army into an island in the Danube, after sustaining this frightful loss, the French Emperor, at ten at night, hastily called a council of war on the margin of the river. Seated under a tree which overhung the stream, Napoléon beheld the great bridge in the central channel entirely swept away, and the lesser one of pontoons to the intermediate island of Reduit also in ruins. Retreat to the southern bank from the island of Lobau was evidently impossible; for the Danube, which had risen fourteen feet during the three preceding days, from the melting of the snows in the Alps of Tyrol, was rolling impetuously in a raging flood, which had carried down every boat in the main channel, overflowed the whole low grounds in the island, and rendered even the narrow branch which separated them from the Marchfeld, usually only a few feet deep, a rapid and dangerous torrent. Never was an army assembled under more disastrous circumstances than the French on that memorable night. To the deep roar of artillery, the shouts of the combatants, and the incessant clang of musketry, had succeeded a silence yet more awful, interrupted only by the challenges of the sentinels, as they paced their melancholy rounds, or the groans of the wounded, who, without covering or shelter of any kind, lay scattered on the humid surface. Above twenty thousand brave men were there, weltering in their blood, or murmuring in their last moments a prayer for their mother; their children, their country. Gloom had seized on every mind, despair had penetrated the bravest hearts. It was universally known that the artillery ammunition was exhausted, and the communication with the southern bank cut off, and it was difficult to see how an attack from the enemy, on the succeeding day, could be resisted with any prospect of success. Nearly half the combatants had fallen: every one, even though unhurt himself, had to deplore the death of a friend, a comrade, a benefactor. Provisions there were none in the island, succour for the wounded, burial for the dead, were alike beyond the strength of the wearied survivors. A few were still buoyant with hope, and, protesting they had not been defeated, vociferously demanded a renewal of the combat on the morrow: but the great majority, in gloomy silence, mused upon their fate, and not a few openly murmured against the chief, whose imprudence and obstinacy had brought them into a situation where victory was hopeless and retreat impossible (2).

The influence of these gloomy feelings strongly appeared in the opinions of the chiefs who attended Napoleon at his council of war on the banks of

(1) Archduke Charles Ann Reg 1809 Chron 394 Pel ii 358 Thib vii 295

The tenth bulletin acknowledged a loss daily of fifteen hundred killed and three thousand wounded a list of casualties so obviously disproportioned to the magnitude and obstinacy of the conflict, as to excite the ridicule of all Europe. Subsequently Napoleon admitted he had four thousand killed, which would imply a total loss of above twenty thousand. The Austrian official account, which derives credit from the candour with which it admitted their own casualties, estimates the French loss at thirty six thousand, on the authentic grounds that seven thousand French were buried on the field of battle, and twenty nine thousand seven hundred and seventy-

three wounded were carried to the hospitals at Vienna. The experience of the British in the Peninsular war, especially at Talavera and Albuera, warrants the assertion that two armies of from sixty thousand to eighty thousand on each side, could not combat in so obstinate a manner for two days under the fire of five hundred pieces of cannon all crossing each other, without a loss of above twenty thousand to the victor, and this or party, See 10th Bulletin, CHARLES' Official App to Chronicle; 1809, (2) Sav ii 81

Reflections
on the con-
duct of Na-
poléon in
the battle of
Aspern

The conduct of Napoleon in provoking an engagement with inferior forces in so hazardous a situation as the Marchfeld, with a single and insecure bridge in his rear, has been the subject of keen discussion by the French military writers, and three of the most distinguished of them have undertaken its defence, and pleaded it with all their wonted ability (1). But there are some questions so plain, that in discussing them the strength of a child is equal to that of a giant, and if Napoléon, Cæsar, and Hannibal, were to concur in justifying that extraordinary step, they would fail in producing any impression upon the common sense of mankind. The military is not, any more than politics, at least in its leading principle, an abstruse art, whatever directs the proceedings of large masses of mankind must be founded on maxims obvious to every capacity. Napoleon himself has told us that the leading object in strategy is, with a force inferior upon the whole, to be always superior at the point of attack, and that the greatest fault a commander can commit is to fight with no other retreat than by a narrow defile. His main charge against the generalship of Wellington is founded upon the fact of his having fought at Waterloo with a single highway traversing the forest of Soignes in his rear (2). Judging by these principles, which are recommended not less by the weight of his authority than their intrinsic justice and sense, what are we to say to the general who, though inferior by twenty thousand men upon the whole to his adversary, on the first day, according to his own account of the matter, exposed thirty-five thousand men (3) to a hopeless contest with eighty thousand, and, on the second, precipitated seventy thousand, in close columns, against a semicircle of batteries containing three hundred guns, every shot from which fell with the certainty of destruction upon their crowded ranks, and that, too, when a vast river, traversed only by a tottering bridge, connected the troops in advance with the reserve of the army, and served as the only possible retreat to either in case of disaster? It is in vain that his defenders argue that eight divisions on the field of battle, with four under Davoust on the right bank, were equal to any force the Austrians could bring against them. Granted, provided always the communication between them was secure, but what is to be said to hazarding two-thirds of the army on the left bank, when a narrow bridge, a mile in length, shaking under the flood, separated that portion from the remaining third on the other bank? Napoléon has himself told us that "twice, on the 21st, the bridges were carried away by the flood, and that the Austrian boats were already dashing against the pontoons. At midnight the Danube rose in the most frightful manner, and the passage was a third time interrupted, and not restored till next morning, when the guard

Montmartre, vain would be all the skill of the generalissimo, unless, in that decisive moment, the bravery of the colonel repaired the disorder, and arrested the dreadful irruption of Laumes' columns.

(1) See Nap. in Month. ii 71, 83. Pellet, ii 358, 364. Jour. ii 217, 220.

(2) "The position of Mount St. John," said Napoleon, "was ill-chosen. The first requisite of a field of battle is to have no defiles in its rear. The injudicious choice of the field of battle rendered to the English army all retreat impossible."—*Ninth Book of Memoirs of Napoleon*, 207.

(3) "On the two banks of the Danube," says Napoleon, "I had, at the time of the battle of Aspern, twenty thousand men more than the Archduke. In the battle of the 21st, twenty-five thousand men combated a hundred thousand during three hours and a half, and preserved their positions."—*Napoleon in Montholon*, ii 78, *Mélanges*. These num-

bers are grossly exaggerated, according to his usual practice, but the greater disproportion is made, the worse for Napoleon, for how did a general, at the head of a hundred and twenty thousand men, come to expose twenty five thousand to so grievous a chance as combating against such odds, with a river all but impassable in their rear? There are occasions in war when such a risk as this must be incurred, and when to hazard it is the first duty of a commander. Such was Wellington's situation on the Douro in 1809, and Napoléon's own at Lodi in 1796, and in Champagne in 1814, but in 1800 he lay under no such necessity, the capital, the resources, the arsenals of Austria were in his power. the great stroke which had been struck: the A ment of being con- measures

and Oudinot's corps commenced their passage (1) "What temerity, then, in such circumstances, to hazard a decisive action on the day following with the whole Austrian army, and precipitate Lannes into the centre of their batteries, early in the morning, before either the bulk of Davoust's corps or the reserve parks of ammunition had crossed the perilous passage!

Nor is this all the result of the battle of Aspern clearly demonstrates, that the method of attacking in column in a narrow field, and against a brave enemy, is essentially defective and that the prodigious loss sustained by Napoleon was owing to his persisting in it under circumstances where it had obviously become inexpedient. The observations of a distinguished French military writer on this subject are convincing and unanswerable. "The battle of Essling was lost," says General Rogniat, "in consequence of our having attacked in column the centre of the Austrian line. That centre skillfully gave ground as the French columns of Lannes and Oudinot advanced, while their wings insensibly approached our flanks. By means of that skilful manœuvre we soon found ourselves in the centre of a semicircle of artillery and musketry, the whole fire of which converged on our unhappy columns. Cannon balls, musket-shots, shells, grape, bombs, crossed each other in every line over our heads, and fell on our ranks like a hail-storm. Every thing was struck or overturned, and our leading columns were literally destroyed. In the end we were obliged to fall back and yield to that frightful tempest, till we again came abreast of Aspern and Essling, the bulwarks of our wings (2)." It was by a system of tactics precisely similar that Hannibal crushed the Roman centre, and gained the battle of Cannæ. "Cunctis Gallorum ut pulsus aquavit frontem primum, deinde nitendo etiam alium in medio dedit, Afri circa jam cornua fecerant, irruentibusque incaute in medium Romanis circumdeditque alas. Mox cornua extendendo, clausere et ab tergo hostes (3)." The military art is in its fundamental principles the same in all ages and it is highly interesting to see Hannibal's triumph, and Napoleon's defeat, arise, under the greatest possible difference of ground, arms, and contending nations, from the same simple and obvious cause (4).

The Austrians, indeed, had not yet attained to the incomparable discipline and firmness which enabled Wellington with British troops so often to repel with prodigious slaughter the French attack in column by a single line, three or four deep; but they did on this occasion, as well as at Wagram, successfully resist it by receiving the column in a checker of squares; a disposition extremely similar to that adopted by the British commander at Waterloo, and which the Archduke then adopted for the first time, after having read a few weeks before the chapter on the principles of war, by General Fomini, where it was strenuously recommended (5). The dreadful carnage, sustained by the French troops in subsequent battles, especially at Albuera, Borodino, and Waterloo, were mainly owing to the same cause. Doubtless, the attack in column is most formidable, and it requires great firmness in a single line to resist a mass to which weight and numbers have given so much

(1) Rep. in Month. R. 77.

(2) Regulus sur l'Art Militaire 232.

(3) Polyb. lib. vi. 12 Liv. xlii. 47.

(4) Napoleon was these principles clearly when judging of the conduct of other generals. "Scarcely," says he, "was I conquered at the Trebia and Yra at Cannæ, though they committed errors more numerous than Hannibal, because in conformity with the Roman practice, they engaged their troops in a column of three lines, while I had

only drawn up his in single line. The Carthaginians on any war superior in number and quality, the Roman legions were attacked I found them, and ever and in consequence defeated. If the two commands had adopted an order of battle more conformable to circumstances, they would probably have succeeded." What Roman commander on his own conduct and defeat at Aspern—see R. vol. xiv. in Month. R. 232. Napoleon.

(5) Jour. de la Rep. lib. 201.

momentum, but its success depends entirely on the courage of the leading and flanking files, its concentrated ranks present an unerring mark for the enemy's fire, if they will only stand to deliver it, confusion is apt to arise in the centre from the losses sustained or witnessed by men not warmed by the heat of action, and if it is exposed to a concentric discharge, or meets with opponents as resolute as itself, it becomes liable to a bloody reverse. The same principle applies to breaking the line at sea that system has done admirably with the French and Spaniards, but let the British admirals consider well before they adopt it in combating the Russians or Americans.

In truth, nothing can be more apparent than that, considered merely in a military point of view, the conduct of Napoléon, in regard to the battle of Aspern, was altogether inexcusable, and that it was the peculiarity and hazard of his political situation which made him persist in so perilous an undertaking. He has told us so himself "At Aspern, at Jena, at Austerlitz, where I have been accused of acting rashly, I had no option. I was placed in the alternative of victory or ruin (1)." He felt that his situation, as head of a military republic, required continual excitement for its maintenance, that he must fascinate the minds of men by rapid and dazzling successes, and that the first pause in the career of victory was the commencement of ruin. Though in possession of the Austrian capital, military resources, and the finest provinces, he still felt that the war must not be protracted, and that to keep up his character for invincibility, he must cross the Danube, and finish the war by a clap of thunder. Undue contempt for the Austrian troops, or ignorance of the magnitude of the host which they had at hand, led him to hazard the engagement of the 21st, with a most unequal force; and having once engaged, however imprudently, in the contest, he felt that he must at all hazards carry it on, and, despite of an army divided by the Danube and a precarious retreat, fight for life or death in the plain of the Marchfeld. It is the invariable characteristic of revolutionary power, whether political or military, to be perpetually exposed to this necessity, from the want of any lasting support in the interest and affection of the industrious classes of the people, and it is in the experience of that necessity, not any oblivion of the rules of the military art, that the true explanation and best vindication of Napoléon's conduct, both at Aspern, Moscow, and Dresden, is to be found.

Glorious character of the Austrian resistance at Aspern The resolute stand made by the Austrians at Aspern, is one of the most glorious instances of patriotic resistance which the history of the world exhibits. Driven back by an overwhelming force into the heart of the monarchy, with their fortresses taken, their arsenals pillaged, their armies defeated, they still continued the contest, boldly fronted the invader in the plenitude of his power, and, with unshaken resolution, advanced, alone and unsupported, to drive the conqueror of Europe from the capital he had subdued. Contrary to what has usually been experienced in similar cases, they showed the world that the fall of the metropolis did not necessarily draw after it the submission of the empire, but that a brave and patriotic people can find their capital in the general's headquarters, and reduce the invader to the extremity of peril, in consequence of the very success which he had deemed decisive of the contest. The British historian can hardly hope that similar resolution would have been displayed by the citizens of his own country, or that a battle of Waterloo would have been fought by the English after London and Woolwich had fallen into (1)

(1) *See Cases*, vi. 41, vii. 125

enemy. Contrasting the heroic battles of Aspern and Wagram, after Vienna had fallen, with the unbounded terror inspired at Paris by the advance of the Duke of Brunswick to Valmy in 1792, a hundred a twenty miles from the capital, even when the people were in the highest state of democratic excitement, it is impossible to avoid the inference, that as much in the conduct of a nation, under such circumstances, depends on the national institutions as on the stage at which they have arrived in social advancement; and in the invincible tenacity and far-seeing sagacity of an aristocratic government is to be found the only guarantee, from the days of Cannæ to those of Aspern, of such an unshaken resolution, under calamities generally considered as utterly destructive of political independence.

Disobedience of the Archduke John's army to the orders of Napoleon. Nor would this heroic constancy have failed in obtaining its appropriate reward, if the admirable directions of the Archduke Charles for the conduct of the campaign had been implicitly obeyed. It was the disobedience of his orders by the Archduke John, which deprived the Austrians of all the results of the battle of Aspern, and enabled Napoleon to extricate himself with success, from the most perilous situation in which he had yet been placed since ascending the consular throne. Had that prince obeyed the instructions which he received from the generalissimo on the 17th May, and marched direct from Carinthia to Linz, he would, in conjunction with Kollowrath, who was in that neighbourhood some days before, have formed an imposing mass, at least sixty thousand strong, even on the 23d, to which Bernadotte with his inefficient corps of Saxons, could have opposed no sort of resistance. Can there be a doubt that the concentration of such a force directly in his rear, and on his principal line of communication, at the very moment when he was driven with a defeated army into the island of Lobau, would have compelled Napoleon to retreat: and that the battle of Aspern would have been the commencement of a series of disasters, which would speedily have brought the Imperial eagles back to the Rhine? The instantaneous effect which a similar concentration of force, from the north and the south at Borisow, produced on Napoleon at Moscow, three years afterwards, affords the clearest illustration, both of the importance of this movement, and the prodigious effects which it was fitted to have had, if properly executed, upon the issue of the campaign. No hazard was incurred by such a direction, to part of the Imperial forces; for the Tyrol afforded a vast fortress, in which, aided by its gallant mountaineers, the detached corps, though separated from the main forces of the monarchy, might have long maintained themselves against all the efforts of the enemy. And it is impossible to estimate too highly the fortitude and talent of the illustrious general, who, when still reeking with the slaughter of a recent defeat, could conceive so admirable a plan for the circumvention of the enemy, and, undismayed by the fall of the capital, see in that catastrophe only the lure which was to seduce the invader to his ultimate ruin.

Importance of central positions in the defence of nations. From the important consequences which followed the occupation of Vienna, and the seizure of its immense military resources by the French, may be derived one conclusion of lasting value to every independent state. This is the incalculable importance of every metropolis either being adequately fortified, or possessing in its immediate vicinity, a citadel of approved strength, capable of containing twenty or thirty thousand soldiers, and of serving as a place of secure deposit for the national archives, stores, wealth, and government, till the national strength can be fairly roused for their rescue. Had Austria possessed such a

fortress, either in or near adjoining to Vienna, the invasions of 1805 and 1809 would have terminated in the invaders' ruin : had the heights of Belleville and Montmartre been strongly fortified, the invasions of 1814 and 1815 would have been attended with nothing but disaster to the allied armies. Had Berlin been of as great strength as Dantzic, the French armies, after the disaster of Jena, would have been detained round its walls till the Russian hosts advanced, and six years of bondage saved to the Prussian monarchy. Had the Kremlin been a citadel capable of holding out six weeks, the terrible sacrifice of Moscow would not have been required ; had Vienna not been impregnable to the Mussulman arms, the monarchy would have sunk in the dust before the standards of Sobieski gleamed on the Bisamberg, had the lines of Torres Vedras not formed an impassable barrier to Masséna, the germ of patriotic resistance in the Peninsula, would have been extinguished in the bud, had the walls of Rome not deterred the Carthaginian hero from a siege, the fortunes of the republic would have sunk after the disaster of Cannæ. It is by no means necessary for these important ends, that the whole metropolis should be confined by fortifications, it is enough that a citadel of great strength is at hand to contain all the warlike and civil resources of the kingdom.

Infatuation
of England
in this
respect

Let no nation imagine that the magnitude of its resources relieves it from this necessity, or that the effulgence of its glory will secure it from ultimate danger. It was *after* the battle of Austerlitz that

Napoléon first felt the necessity of fortifying Paris (1), it was in five short years afterwards that the bitter consequences of the national vanity, which prevented his design from being carried into effect, were experienced by the Parisians. England now slumbers secure under the shadow of Trafalgar and Waterloo ; but let not her infatuated children suppose that they are for ever removed from the chances of disaster, or that the want of citadels to surround the vast arsenals of Woolwich, Chatham, and the Tower, will not, ere long, be bitterly felt either against foreign or domestic enemies. These ideas, indeed, are not popular with the present age, with whom foresight is the least cultivated of national virtues, and in which the democratic character of the legislature has tinged the government with that disregard of remote consequences, which is the invariable characteristic of the masses of mankind ; and, doubtless, if any minister were now to propose the expenditure of one or two millions on such central fortifications, it would raise such a storm as would speedily prove fatal to the administration. It does by no means, however, follow from this circumstance, that it is not a measure which wisdom dictates and national security enjoins, and in despair of effecting, at present at least, any change on public opinion on this particular, the historian has only to bequeath this counsel, as Bacon did his reputation, to the generation after the next, and mark these words, if they should live so long, for the judgment of the world at the expiration of two centuries.

CHAPTER LV

WAR IN TYROL, NORTHERN GERMANY AND POLAND.

ARGUMENT

Extraordinary Interest of the Tyrolean War—Description of Tyrol—Opposite Character of the Northern and Southern Sides of the Mountains—Description of the great Valleys and Rivers of the Country—Castles of Tyrol—Superstitions of the Country—Their Religious Feelings and Impressions—Omens which were observed on the approach of the War—Powerful Religious Feelings of the People—Practical Utility of the Priests—Remarkable difference in this respect of ancient and modern times—Influence of Religion in producing it—National Character of the Swiss compared with that of the Tyrolese—Love of Freedom which animates the People—Their Character and Manners—Practical Freedom which the People have always enjoyed under the Austrian Government—The Peasants are all owners of their land—Its great influence on their Character—Astonishing Industry of the People—Discontent of the inhabitants under the Bavarian Government—Preparations of Austria to take advantage of these discontents—Military description of the Country—Character of Hofer—Of Speckbacher—Of Joseph Haspinger—Of Martin Teimer—Preparations of the People for the Contest—Insurrection in Tyrol—Its early and complete Success—Successes in the Pustertal—Defeat of the Bavarians at Sterzing—Moor by Hofer—Capture of Innsbruck by the Peasants of the Upper Innthal—Striking Jackboots which occurred on its Capture—Arrival, Defeat, and Surrender of Blason's division from Sterzing—Capture of Hall by Speckbacher—Result of these Successes—Entire deliverance of the Tyrol—Measures of Napoleon and Chastellier in the Country—Actions in the Southern Tyrol, which is evacuated by the French—Combats at Feder Säger and Weyl—Innsbruck is retaken by the Bavarians—Desperate State of Affairs in Tyrol, and Firmness of the Peasantry—Preparations for the Battle of Innsbruck—Battle there and total Defeat of the Bavarians—Bloody Actions of Speckbacher and Haspinger—Results of these Actions, and the entire deliverance of the Tyrol—Rise of the Insurrection in the North of Germany—Its first outbreak on the approach of the Austrian Grand Army—Enterprise and early Success of Schill—Fails in his attempt on Magdeburg—Retires to Stralsund—His prospects there—He is defeated and killed—Movement of the Duke of Brunswick—Operations in Poland and their object, by the Archduke Ferdinand—Forces of the Grand Duchy of Warsaw to oppose him—Success of Ferdinand and Fall of Warsaw—Skillful Measures of Poniatowski to prolong the contest in the Grand Duchy—Discovery of the secret treaty of the Russians towards Austria—Secret Negotiation between Austria and Prussia—Particulars of its Progress—The exorbitant demands of Prussia cause it to fail—Operations in Italy and Diversions from Sicily and in the North of Europe—Situation and prospects of Napoleon after the Battle of Aspern—Duke of Brunswick takes Dresden, and threatens all the North of Germany

Extraordi-
nary Interest
of the
Tyrolean
war

It is neither on the greatest fields of battle, nor places where the most calamitous bloodshed has taken place, that the recollection of future ages is chiefly riveted. The vast theatres of Asiatic conflict are forgotten—the slaughtered myriads of Timour and Genghis Khan lie in undistinguished graves—hardly a pilgrim visits the scenes where, on the fields of Châlons and Tours, the destinies of civilisation and Christendom were fixed by the skill of Vercingetorix or the valour of Charles-Martel. It is moral grandeur which produces a durable impression. It is patriotic heroism which permanently attracts the admiration of mankind. The pass of Thermopylae, the graves of Marathon, will warm the hearts of men through every succeeding age—the chapel of Tell, the field of Morgarten, still attract the generous and brave from every civilized state—the name of Wallace—the plain of Bannockburn—have rendered Scottish story immortal in the annals of the world. The time may come when the vast and desolating wars of the French Revolution are dimmed by the obscurity of revolving years—when the great name

of Napoléon is recollected only as a shadow of ancient days, and the fields of his fame are buried in the waves of succeeding change, but even then, the siege of Saragossa will stand forth, in undecaying lustre, amidst the wreck of ages, and the war in Tyrol, the strife of la Vendée, survive unshaken above the floods of time

Description of Tyrol The country now immortalized under the name of Tyrol, the land of Hofer and Speckbacher, lies on the southern frontier of Germany, and is composed of the mountains which, stretching eastward from the Alps of Switzerland, are interposed between the Bavarian plains and the field of Italy. Less elevated than those of the Helvetic cantons, without the awful sublimity of the Alps of the Oberland, those of Tyrol are still more romantic, from the wild and savage character which they in general bear, and the matchless beauty of the narrow valleys, or rather clefts, which are interspersed around their feet. Their summits, though sometimes little inferior to the Jungfrau or the Titlis (1), are more rugged than those of Switzerland, from being, in general, somewhat lower, and in consequence less charged with snow, and exhibiting their various strata, ravines, and peaks, in more undisguised grandeur than where a silver mantle has been for ever thrown over the higher regions. The general level of the country is less elevated than the central parts of Helvetia, and hence it is often more beautiful. The pine and larch do not appear in such monotonous masses, but noble forests of beech and oak clothe the mountain sides to a greater height than any hills in Britain, and a dark zone of pine separates their brilliant hues from the grey piles of rock, or snow-besprinkled peaks which repose in undisturbed serenity on the azure firmament (2).

Opposite character of the northern and southern sides of the Mountains The northern and southern slopes of the Alps exhibit here, as elsewhere on the sides of the great stony girdle of the globe, the same remarkable difference in the productions of nature, the character of the landscape, and the disposition of the human species. To the north of the central chain of the Brenner, every thing wears a frigid aspect; vast forests of pine and fir clothe the middle regions of the mountains, naked rock or masses of snow compose their highest peaks, extensive pastures afford nourishment to numerous flocks and herds, barley and oats constitute the principal food of the inhabitants, and Indian corn is cultivated only in the rich and sheltered vale of the Inn. The inhabitants, like all those of Germanic descent, are brave, impetuous, and honest, tenacious of custom, fearless of danger, addicted to intemperance. But to the south of the range, these rigid features insensibly melt away under the increasing warmth of a more genial climate, maize and wheat are reared with assiduous care in the few level spots which are interspersed among the rocks; walnut and cherry-trees next give token of the approach of a milder atmosphere, beech and sweet chestnut succeed to the sable pine in the woody region above, the vine and the mulberry are found in the sheltered bosoms of the valleys, and at length the olive and the pomegranate nestle in the sunny nooks, where, on the margin of the lake of Garda, the blasts of winter are averted by a leafy screen of almost perpetual verdure. But, if the gifts of nature improve as the traveller descends to the plains of Lombardy, the character of man declines, with the sweet accents of the Italian tongue, the vices of civilisation, the craft of the south, have sensibly spread. The cities

(1) The Gross Glochner is 12,400, and Orteler Pitz 14,500 feet high: those on the frontiers of Salzburg of little less elevation.—MALTE BRUN, *vol.* 511, and *Travels in Tyrol*, p. 250.

(2) Personal Observation. Malte Brun, *vol.* 511 *Inghis's Tyrol*, p. 241

foaming declivity, and forcing its way through stupendous rocks, the Adige joins the vale of the Eisach at Bolsano. These are the principal valleys of Tyrol, but the upper parts of several others belong to the same country, in particular, those of the Drave, the Salza, and the Brenta, the two first of which, descending from opposite sides of the Gross Glochner, find their way into the open country, through long defiles of matchless beauty, the former, after washing the battlements of Klagenfurt, to the Hungarian plains; the latter, beneath the towers of Salzburg, to the waters of the Danube; while the Brenta, after struggling through the narrow clefts and romantic peaks of the Val Sugana, emerges in still serenity into the Italian fields under the mouldering walls of Bassano (1).

Castles of
Tyrol

With the exception of the Grisons, Switzerland contains few ruined castles, the moral earthquake which five centuries ago overthrew the feudal power of Austria in the forest cantons, cast down in its subsequent shocks, the authority of the barons in its simple valleys. But the case is otherwise in Tyrol. Though enjoying, practically speaking, popular privileges of the most extensive kind, and yielding in no respect to the descendants of Tell in the ardent love of freedom, the Tyrolese have never gone so far as to expel the great proprietors, and, though few of them are still resident in the country, the remains of their immense castles constitute one of its most peculiar and characteristic features. In every valley they are to be seen, rising in imposing majesty on wooded heights, perched on crags overhanging the floods, or resting on cliffs to all appearance inaccessible to human approach. The effect of these venerable and mouldering remains, surmounting the beautiful woods, and throwing an air of Gothic interest over the wildest ranges of the mountains, is inexpressibly charming, and they go far to compensate the absence of lakes, which are alone wanting to render the scenery of this country the most enchanting in Europe (2). Almost all of these castles have their legends or romantic incidents, many of them connected with the Holy Wars, which are fondly dwelt on by the inhabitants. In several, the weapons and armour of the heroes of the crusades are still preserved, and the traveller, in treading their long-deserted halls, feels himself suddenly transported to the age of Godfrey of Bouillon, or Richard of England, and all the pomp and interest of chivalrous exploits (3).

Supersti-
tions of the
country

In every part of the world, mountainous regions have been the nursery of superstitious feeling. The greatest works of man there appear as nothing compared to the magnificence of nature, and the individual is left in solitude, to receive the impressions which the sublime scenery in which he is placed is fitted to produce. Upon minds so circumstanced, the changes of external nature come to be considered as the immediate work of some invisible power, the shadows that fall on the lakes at sunrise are interpreted as the approach of hostile bands; the howl of the wind through the

(1) Personal Observation. Inghis' Tyrol, i. 289, 290. Malte Brun, vii. 511.

(2) Tyrol proper has no lakes, though the adjoining countries of Styria, Salzburg, and Bavaria, have several. Two most beautiful ones, the Kochel see and Walchen see, adjoin the great road from Munich to Innsbruck, and give token to the enraptured traveller of his approach to the mountain region. The first, which much resembles, though on a grander and more perfect scale, Loch Katrine, in Scotland, is described by an author who has transferred into romance the hues and colouring of nature, Mr. JAMES, in *Atala*, vol. 374.

(3) Personal Observation.

Eight and twenty colossal bronze statues of prin-

ces and paladins of the dark ages, in armour, stand around the tomb of Maximilian I, in the Church of Holycross in Innsbruck, and the effect of the group is extremely impressive, though hardly equal to that of the simple tomb of Hofer, which it also contains, whose remains were brought there from his grave at Mantua in 1823. The castle of Ambras, near Innsbruck, formerly contained an unique collection of ancient armour, which, when the author visited it in 1816, was one of the most interesting spectacles in Europe, but the greater part of these precious remains have now been removed to the Imperial museum at Vienna. — See INGHIS'S *Tyrol*, i. 200, 21.

forests is thought to be the lamentations of the dead, who are expiating their sins; and the mists that flit over the summit of the mountains seem to be the distant skirts of vast armies, borne on the whirlwind and treading on the storm. The influence of these feelings is strongly felt in Tyrol, and the savage mountains or ruined castles with which it abounds have become peopled with the phantoms of a romantic superstition. Lights are said to have been often observed at night in towers which have been uninhabited for centuries, and bloody figures distinctly seen to flit through their deserted halls. The armour which still hangs on the walls in many of the greater castles, has been observed to move, and the plumes to wave, when the Tyrolese arms were victorious in war. Groans, they affirm, are still heard in the neighbourhood of the dungeons, where the victims of feudal tyranny were formerly sacrificed; and the cruel baron, who persecuted his people in his savage passion for the chase, is often heard to shriek in the forests of the Unterberg (1), and to howl as he flies from the dogs whom he had trained to the scent of human blood (2).

Superstitions, too, of a gentler and more holy kind, have arisen from the devout feelings of the people, and associations connected with particular spots, where persons of extraordinary sanctity have dwelt. In many of the farthest recesses of the mountains, on the verge of perpetual desolation, hermits in former times had fixed their abode; and the imagination of the peasant still fancies that their spirits hover around the spots where their earthly trials were endured. Shepherds, who have passed in the gloom of the evening by the cell where the bones of a saint are laid, relate that they distinctly heard his voice, as he repeated his vesper prayers, and saw his form, as he knelt before the crucifix which the piety of succeeding ages had erected in his hermitage. The image of many a patron saint has been seen to shed tears when a reverse has happened to the Tyrolese arms; and the garlands which are hung round the crosses of the Virgin wither when the hand which raised them has fallen in battle. Peasants who have been driven by a storm to take shelter in the little chapels which are scattered over the country, have seen the crucifix bow its head, and solemn music is heard at vespers in the higher places of worship of the mountain. The distant pealing of the organ, and the chant of innumerable voices are there distinctly heard; and the peasant, when returning at night from the chase, often trembles when he beholds funeral processions clothed in white, marching in silence through the gloom of the forests, or slowly moving on the clouds that float over the summits of the mountains (3).

It may easily be imagined how strongly these feelings were excited by the approach of the war of deliverance in 1809. The emissaries of Austria had long before prepared the people for revolt; foreign oppression had led them to desire it with passionate ardour unknown to Bavaria, the whole population were impatiently expecting the signal to rise. During this period of anxious expectation, the excited minds of the people clothed the air with an unusual number of imaginary appearances. In the gloom of the evening, endless files of visionary soldiers, clad in the Austrian uniform, cavalry, infantry, and artillery, were seen to traverse the mountain tops. The creaking of the wheels, the tramp of the horses, the heavy tread of marching columns, intermingled with wild bursts

of laughter and shouts of triumph, were distinctly heard; but all was hushed, and the spectres melted into mist and vapour, when the anxiety of the spectators inclined them to approach too nearly. The Tyrolése, nay, the Bavarian sentinels themselves, often beheld the Emperor's tower in the fortress of Kufstein surrounded with lambent fire, and the Austrian banners, wrapped in flames, were seen to wave at night over the towers of Sterzing. Withered arms were seen to stretch themselves from the rocks in the most secluded recesses of the mountains, vast armies of visionary soldiers, with banners flying, and all the splendour of military triumph, were seen at sunrise reflected in the lakes which lay on the Salzburg and Bavarian frontiers, and when the widows and orphans of the fallen warriors knelt before the Virgin, the flowers and garlands placed round the image, according to the amiable custom of Catholic countries, and which had remained there till they had withered, burst forth in renovated beauty, and spread their fragrance around the altar, as if to mark the joy of the dead for the approaching deliverance of their country (1).

Powerful religious feelings of the people The most remarkable feature in the national character of the Tyrolése is their uniform piety—a principle which is nowhere more universally diffused than in their sequestered valleys. The most cursory view of the country is sufficient to demonstrate the strong hold which religion has taken of the minds of the peasantry. Chapels are built almost at every half mile, on the principal roads, in which the traveller may perform his devotions, or which may awaken his thoughts to a recollection of his spiritual duties. The rude efforts of art there have been exerted to portray the events of our Saviour's life, and innumerable figures, carved in wood, attest in every part of the country, both the barbarous taste of the people and the fervour of their religious impressions. Even in the higher parts of the mountains, where hardly any vestiges of human cultivation are to be found, in the depths of untrodden forests, or on the summit of seemingly inaccessible cliffs, the symbols of devotion are to be found, and the cross rises every where amidst the wilderness, as if to mark the triumph of religion over the greatest obstacles of nature. Nor is it only in the solitudes or deserts that the proofs of their devotions are to be found. In the valleys and in the cities it still preserves its ancient sway over the people. On the exterior of most houses, the legend of some favourite saint, or the sufferings of some popular martyr, are delineated, and the poor inhabitant deems himself secure from the greater evils of life, under the guardianship of such heavenly aid. In every valley numerous spires are to be seen, rising amidst the beauty of the surrounding scene, and reminding the traveller on the eastern frontier and in the Styrian fields, by the cupola form in which they are constructed, of his approach to the regions of the East. On Sunday, the whole people flock to church in their neatest and gayest attire; and so great is the number who thus frequent these places of worship, that it is not unfrequent to see the peasants kneeling on the turf in the churchyard where mass is performed, from being unable to find a place within their walls. Regularly in the evening, prayers are read in every family, and the traveller who passes through the villages at the hour of twilight, often sees through their latticed windows the young and the old kneeling together round their humble fire, or is warned of his approach to human habitation by hearing their hymns stealing through the silence and solitude of the forest (2).

and resistance useless, spread her invisible ægis over the traveller, and conducts him secure under her protection through all the dangers of his way. When in such situations he reflects upon his security, and recollects that these mountains, so savage and so well adapted to the purposes of murderers and banditti, have not in the memory of man been stained with human blood, he ought to do justice to the cause, and gratefully to acknowledge the influence of religion. Impressed with these ideas, he will behold with indulgence, perhaps even with interest, the crosses which frequently mark the brow of a precipice, and the little chapels hollowed out of the rock where the road is narrowed: he will consider them as so many pledges of security and rest assured that so long as the pious mountaineer continues to adore the 'good Shepherd,' and to implore the prayer of the afflicted mother (1), he will never cease to befriend the traveller not to discharge the duties of hospitality (2)."

Notwithstanding the same mountain range, and under the influence of the same climate as the Swiss, the Tyrolese are distinguished by a totally different national character—a striking example of the undying influence of that difference of race which appears to stamp indelible features on the remotest generations of men. Both have the usual qualities of mountaineers, a bold and intrepid character, a frame fitted to endure toil, a soul capable of despising danger. Both are distinguished by their uniform and enthusiastic love of freedom, and both have been illustrated in every age by their heroic and martial exploits. But, nevertheless, the fundamental principles of their life are different. The Tyrolese is animated with an ardent and enthusiastic loyalty; attachment to the house of Austria has ever distinguished him; he mingles prayers for his beloved Kaiser with his supplications for his family and his country; the Swiss, nursed in republican ideas, abhors the very name or emblems of royalty. The Tyrolese is ardent, impetuous, sometimes inconsiderate; the Swiss grave, reflecting, always tenacious: the former seldom quits his native valleys, and has never sold his blood in mercenary bands. The latter is to be found in the remotest countries of Europe, and has in every age prostituted his valour for foreign gold (3). patriotic devotion strongly animates both; but in the Tyrolese it is dignified by disinterested attachment to the throne; in the Swiss, somewhat dimmed by its union with the thirst for individual aggrandisement.

Notwithstanding, however, the long-established and hereditary loyalty of the Tyrolese, there is no part of Europe where the love of freedom is more strongly felt, or its practical blessings have been more uninterruptedly enjoyed. In every part of the country, the bold and martial air of the peasantry, their athletic form and fearless eye, bespeak the liberty and independence which they enjoy. Often the people carry arms, universally they possess them; on Sundays or holidays they usually appear with costly weapons in their belts or slung around their shoulders, as a mark at once of their wealth and privileges. Frequent exercise of the chase, and the universal practice of firing at targets and serving in the militia or trained bands, have given them an extraordinary proficiency in the use of fire-arms of which the French and Bavarians, in the course of the war had ample experience. It was in a great degree in consequence of the extra-

Love of freedom which animates the people. Their character and manners.

tion in modern times of the Helvetic tribes, and invariably the first beam of order and industry perceived in the immediate neighbourhood of the religious establishments, under Pius I. Switzerland, l. 17, et seq.

(1) Fustate Travels, l. 96.

(2) It is to the unceasing efforts of the clergy during the many centuries that elapsed between the fall of the Roman empire and the revival of knowledge that the judicious historian of Switzerland ascribes the early civilization and humane disposition

(3) Formal Observations

ordinary perfection of the Tyrolese marksmen, that the inhabitants of the province, with little aid from the Austrian armies, were enabled for so long a period to make head against the united force of France and Bavaria. Their dress is singularly calculated to add to this impression. That of the men consists, for the most part, of a broad-brimmed hat, sometimes ornamented by a feather, a jacket, tight to the shape, but generally worn open, and exhibiting a red or green waistcoat, a broad girdle, richly ornamented, fastened in front by a large buckle of costly workmanship; embossed braces worn over the waistcoat, and supporting tight breeches, which, with gaiters up to the knee, are invariably made of black leather. The colours of the attire, especially about the breast, are brilliant and varied, and, with the pistols or knife stuck in the girdle, bespeak a degree of opulence rarely to be met with in the actual cultivators of any other country. But every thing about them indicates a general and long-established well-being, and demonstrates that the opulence which industry had won, has been fearlessly and habitually displayed by the possessors. They are courteous and hospitable in their manner towards strangers, but they expect a similar treatment on their part, and in no country of Europe is an insult more likely to be avenged, or is the peasant more ready to redress with his own hands any wrong, whether real or imaginary, which he may have received. Honest, sincere, and brave, the people are yet warm in their temperament; and acknowledging no superiors and being but little habituated to gradation of rank, they expect to be treated on all occasions on the footing of respect and equality. But, if this is done, in no part of the world will the foreigner experience more courteous reception, or can he repose with more perfect security on the honesty and fidelity of the inhabitants (1)

Practical freedom which the people have always enjoyed under the Austrian Government The two circumstances which have mainly contributed to nourish these independent and masculine feelings in the Tyrolese peasantry, are the practical freedom of their government, and the circumstance of their being, in general, proprietors of the lands which they cultivate. Though forming part, ever since their acquisition by Austria, by inheritance in 1565, of a despotic monarchy, the Tyrolese have uniformly been in the practical possession of all the blessings of freedom; and from the earliest times they have enjoyed the two grand privileges of representative assemblies, and not being taxed without their own consent (2). Impressed with the bold and impetuous character of these fearless mountaineers, as well as the vast importance, in a military point of view, of their country to the defence of the hereditary states, the Austrians not only never made any attempt to infringe their privileges, but treated the inhabitants with such lenity, that they knew government only by the protection and benefits which it afforded. The taxes were so light as to be almost imperceptible, civil appointments were almost all filled by natives, municipal officers were elected by the people, customhouse restraints were hardly felt, the conscription was unknown. Four battalions of light armed troops were all that was required by Government from the province, though it contained seven hundred thousand souls—a requisition rather felt as a privilege than

(1) Malte Brun vii 516 Personal Observation Inglis's Tyrol i 162, 164

(2) In Tyrol, as in Sweden, the four orders of nobles, clergy, burghers, and peasants, met in a general convocation at Innspruck, where the president was chosen by the suffrages of the united body. The Bishops of Trent and Brixen were usually elected alternately for that situation. In these assemblies, all matters relative to taxation, as well as

the calling out the militia were settled, and in order to facilitate the latter, a sort of conscription was established, and the days of service, being in general forty two, fixed upon. These days were a period of festivity and recreation to the youth upon whom the lot fell. To the latest times, previous to the cession of the province to Bavaria in 1805, these privileges had been religiously observed by the Austrian Government —MULLER'S *Gesch.*

a burden, as it afforded a vent to their numerous and warlike youth—and were always filled with volunteers. But the whole male inhabitants were enrolled in the militia, and regularly instructed in the rudiments of military art and hall practice. Twenty thousand men, capable of being augmented to double that force in case of need, were at all times ready to defend their mountains, and often, by their hardihood and valour (1), rendered essential service to the monarchy in the most critical periods of its history.

The peasants are all owners of their land. Its great influence on their character.

In the German Tyrol, the peasantry are almost all owners of the land they cultivate; a state of things of all others the most favourable to social happiness, when not brought about by the spoliation of others, and accompanied by a tolerable administration of government. It is much less so on the Italian side of the mountains:

there, great proprietors, with their attendant evils of non-resident gentry and resident middlemen, are to be found. Hence, in a great degree, as well as in the original difference of race, the wide distinction between these two great divisions of the country in the character and independence of the people. Their look, their customs, their character, are essentially distinct; in the German Tyrol are to be seen a national dress, primitive usages, early hours, independent character, intrepid resolution; in the Italian, polished manners, an harmonious accent, opulent cities, selfish craft, enervating luxury. The line between the two, however, is not to be drawn merely according to the flow of the waters into the Danube or the Po: the German population has overspread the crest of the mountains, and come far down towards the Italian plains: all the valleys of the Adige and the Elzsch above Bolzano are inhabited by the northern brood, who, with the harsh language and fair hair, have preserved the virtues and customs of their fathers. The population of German, is nearly four times that of Italian descent: and in all struggles for freedom or independence, though the latter has not been wanting in energetic characters, the weight of the contest has fallen upon the Gothic race (2).

Astonishing industry of the people.

To complete the picture of this highly interesting people, it is only necessary to observe, that they are all frugal and industrious, that domestic manufactures are to be found in many of their cottages, and valuable salt mines at Hall, on the lower Inn: but that the great reliance of the people is on the resources of agriculture. The wonderful effect of a general diffusion of property in stimulating the efforts of individual industry, is nowhere more conspicuous: the grass which grows on the sides of declivities too steep for pasture, is carefully cut for the cattle; the atmospheric action on rocks is rendered serviceable by conveying their debris to cultivated fields, and the stranger sometimes observes with astonishment a Tyrolese peasant, with a basket in his hand, descending inaccessible rocks, by means of a rope, in order that he may gain a few feet of land at the bottom, and devote it to agriculture. All the family labour at the little paternal estate; the daughters tend the cows, or bring in the grass; the sons work with the father in the field, or carry on some species of manufacture within doors. Notwithstanding this universal industry, however, the country is too sterile to maintain, from its own resources, its numerous inhabitants; a large proportion of it is covered with forest, a still larger is desert rock or snow-tenanted only by the chamois and the marmot; and a considerable portion of the people are yearly induced to seek the means of bettering their condition

(1) Mahe-Bron, ii. 516, 517. Croch. And. Hec. 12, 13. Earth. 61, 72.

in the neighbouring and richer countries, from whence such of them as prosper return, after many years of absence, to purchase a little domain in their beloved valleys (1)

Discontent of the people under the Bavarian government To a people of such a character, and enjoying such advantages under the paternal government of their ancient princes, the forcible transference to the rule of Bavaria by the treaty of Presburg had been the subject of inextinguishable aversion. The cabinet of Munich, little acquainted with the character of the inhabitants, ignorant of the delicacy requisite in the management of free-born mountaineers, and relying on the powerful military aid of France and the Rhenish confederacy, adopted the dangerous policy of coercing their discontents by force. Though all their privileges were solemnly guaranteed by Bavaria, in the treaty of Presburg in 1805 (2), yet no sooner were the Bavarian authorities established in the country, than all these stipulations were basely violated. The court of Munich seemed intent only on making the utmost of their new acquisition, as if under a presentiment, that their tenure of it was not destined to be of very long duration. The constitution, which had subsisted for ages, was overthrown by a royal edict, the representative estates were suppressed, and the provincial funds seized. No less than eight new and oppressive taxes were imposed, and levied with the utmost rigour. The country, after the model of revolutionary France, was divided into the departments of the Inn, the Etch, and the Eisach: the dramatized legends which formed so large a part of the amusement of the people, were prohibited, all pilgrimages to chapels or places of extraordinary sanctity forbidden. The convents and monasteries were confiscated, and their estates sold, the church plate and holy vessels melted down and disposed of; the royal property was all brought into the market, even the ancient castle of Tyrol in the Passeyrthal was not spared. New imposts were daily exacted without any consultation with the estates of the people, specie became scarce, from the quantity of it which was drawn off to the royal treasury, the Austrian notes were reduced to half their value, and the feelings of the people irritated, almost to madness, by the compulsory levy of men to serve in the ranks of their oppressors. It was even attempted

(1) *Gesch. A. Hofer*, 21. *Malte Brun*, vii. 514, 515. *Barth. Krieg von 1809*, 74, 78.

The Tyrolese are of a singularly mechanical turn. Necessity has driven them to the useful arts, as a means of supplying the deficiencies of nature; and the numerous mountain streams and cascades, with which the country abounds, afford ample opportunity of obtaining, at no expense, an external power capable of setting in motion their simple machinery. Conducted into the fields, the houses, and mills, by little wooden troughs, in the course of their precipitous descent, the mountain torrents perform the most important functions of domestic economy. The irrigation of meadows, the grinding

of corn, the fabrication of oil, the grinding of tools, are all performed by these streams, or the mills which they set in motion. In many places, each peasant has his mill, which is applied to almost every purpose of life—even the rocking of a cradle is sometimes performed by means of a water wheel. Nor are the most minute arts overlooked by this industrious people, and numbers of families earn a not contemptible livelihood by rearing canary birds, which are sold in all the cities of Europe.

The following are some of the most remarkable statistical facts connected with the population of Tyrol, viz —

		Acres
Inhabitants,	762,000	392,000
Cows,	131,000	152,000
Sheep,	137,000	1700
Oxen,	44,000	1,508,600
Goats,	63,000	2,906,700
Elementary Schools,	735	
Do, endowed by Government,	15	
Meadows,		
Fields,		
Vineyards,		
Forests,		
Rock and waste,		
German race,		598,500
Italian race,		163,420

The people are all Catholic. The great proportion of the country in forest and rock is very remarkable, and sufficiently explains its romantic character — See *MALTE-BRUN*, vii. 549, 551.

(2) “The above mentioned countries (Tyrol and

Vorarlberg) shall be enjoyed by his Majesty the King of Bavaria in the same manner, and with the same rights and prerogatives, as the Emperor of Germany and Austria, and the princes of his house enjoyed them, and no otherwise — *Treaty of Presburg*, Dec 26, 1805, *Art. 8*, *MARTEN'S Sup.* iv. 215.

to change the very name of the country, and incorporate it with the Bavarian provinces; and the use of their mother tongue was only to be permitted to the southern provinces for a few years (1)

Preparation of Austria to take advantage of this disunion.

The existence and wide diffusion of these discontents was well known to the Austrian Government, by whom a constant correspondence with the disaffected leaders had been maintained in secret, ever since that valuable province had been reft from their dominion. Sensible of the immense error committed in 1803, in stripping the country of regular troops, at the very time when the advance of the French to Vienna rendered it of the last importance that this great natural fortress should be strengthened on their flank, the cabinet of Vienna resolved not to fall a second time into the same mistake, and made every preparation for turning to the best account the martial qualities and excited feelings of the people. The Archduke John, who commanded the army destined for the Italian campaign, and then stationed at Villach and Klagenfurth, and made frequent excursions in former years through the Tyrol and in the course of his rambles had become as much attached to those spirited mountaineers as they had acquired confidence in his patriotism and ardour. An active correspondence was carried on between the Archduke and the Tyrolese leaders, from the moment that war had been resolved on by the cabinet of Vienna, till it actually broke out; but although that accomplished prince was thus in a great degree instrumental in producing that general insurrection in the province which afterwards took place, yet he was fated never to return to it till the contest was over, nor to take part in a struggle in which he would willingly have pledged his fortune and his life (2).

Military description of the country.

The Tyrol, notwithstanding its rugged aspect, is, in a military or strategical point of view, a very simple country. There are very few practicable roads. The great chain of mountains which forms the southern barrier of the valley of the Inn, and which, beginning with the snowy peaks of the Orteler Pitz, stretches through the Gefroth to the huge mass of the Gross Glochner, is traversed only by one road, which, from time immemorial, has formed the chief communication between Germany and Italy. Setting out from Munich, it crosses the northern barrier of the Innthal by the gorge of Scharnitz; descends to Innsbruck, and, after crossing the southern bulwarks of the valley by the pass of the Brenner, descends the course of the Eisach to Sterzing, Brixen, Botzen, Trent, and Roveredo, below which it emerges at Verona into the Italian plains. From Trent branch out two lateral roads: the first, after mounting an inconsiderable ridge, descends, by the waters of the Brenta, through the romantic desiles of the Val Sugana to Primolano, and loses itself in the plains of Verona at Bassano; the second, after crossing the high Sarea, winds down by Chiesà and the lake of Idre to the Brescian fields. From Botzen, or Bolsano, a great road ascends the whole course of the Adige, called, in its upper or German parts, the Etsch, and penetrates into the cold and cheerless pastures of the Engadine, in Switzerland, at Nauders. From Brixen branches off the great road to Carinthia and Sla-

(1) Muller's *Geogr.* 871. *Geogr. A. Heft* 17. *Introd.* *Fests* 24, 25.

Brennerthal, by an order dated *Munich* September 24, 1812, only permitted to some of the southern districts the use of their mother tongue for 51 years longer—*Quarterly Review* vii. 231. The date is singular and unusual. Aspiration afterwards was well ware of how much the Tyrolese profit was owing to the humane general of the Biscars, and told to Count Dalmat. "The Bavarians did not know

how to govern the Tyrolese, and were worthy to rule that noble country only as a Host." It is true, however, it was the iniquitous and cruel of his own exertions, I mean and many laws that subject power which drove the heart of Munich to the above measures which had no power at all. (See) *Bringing* to it the correction.

(2) *Geogr. A. Heft* 18. *Geogr. Tyrol* i. 114. 181. *Barth* 42, 43.

genfurth, through the Pusterthal and down the valley of the Drave, and the route communicates with Salzburg by a cross road, which surmounts the great central ridge by St-Michel and Tauern, till it reaches Rastadt and the waters of the Salza. Another great road crosses Tyrol in its whole breadth, along the valley of the Inn; communicating on the west with Switzerland by Feldkirch and Bregentz, on the east by Rattenburg to Salzburg, Enns, and Vienna. The Brenner is thus by far the most important position in Tyrol, because whoever has the command of it, is the master of the only communication from Germany and the northern, to Italy and the southern Tyrol, and the bridge of Laditch, at the junction of roads leading to Innspruck, Carinthia, and Verona. Rude fortifications are erected on the principal passes leading into the province on all sides from the adjoining states; but they were of no great strength, and incapable of holding out against a numerous and enterprising enemy. The true defence of the Tyrol consisted in its rugged and inaccessible surface, which rendered it for the most part wholly impervious to cavalry (1), in the number of woods and defensible positions which it contains, and, above all, the indomitable spirit of its inhabitants.

Character of
Hofen—His
birth and
descent When the peasantry of Tyrol, at the summons of Austria, took up arms, they had no fixed or authorized leaders, but several persons had acquired such consideration among them as naturally placed them at the head of affairs. The first of these was ANDREW HOFEN, a native of St-Leonard, in the valley of Passeyr, a name, like that of Tell and Wallace, now become immortal in the history of the world. Like his ancestors for many generations, he carried on the business of an innkeeper on his paternal property on the banks of the Adige, a profession which is one of the most respectable among that simple people, from the intercourse with strangers and wealth with which it is commonly attended. He was born on the 22d November, 1767, so that he was in the forty-second year of his age when the insurrection broke out. His frame was herculean, his shoulders broad, his strength surpassing, but, like most persons long habituated to climbing mountains, his carriage was somewhat impaired by an habitual stoop. His education and means of improvement had been superior to those of most persons in his rank of life, from his frequent intercourse with travellers, as well as the traffic which he carried on in wine and horses, in the course of which he had visited most of the principal cities on the southern side of the mountains, and become a fluent master of the Italian language, though in the low Venetian dialect. His dress was the common habit of the country, with some trifling variation—a large black hat with a broad brim, black ribbons, and a dark curling feather, a green jacket, red waistcoat, green braces, black leathern girdle, short black breeches of the same material, and red or black stockings. About his neck was always to be seen a crucifix and a silver medal of St-George, to which was afterwards added a gold medal and chain, sent him by the Emperor. He never, however, obtained any rank in the Austrian army, and was indebted for his influence among his countrymen to his well-known probity of character and disinterested disposition, as well as the secret connexion which he maintained with the Archduke John, with whom he had formed an acquaintance in the course of that prince's scientific rambles in the Tyrol, which led to his being chosen as a deputy from his native valley to confer with him at Brunecken, in November 1805, and Vienna in January 1809. His talents and acquirements were of a superior order, as was recently evinced by his having been selected by that discerning prince.

(1) *Poll* iii. 375, 382, and *Personal Observation*

such importance for the discharge of difficult duties but his parts were solid rather than brilliant, and he evinced, in its merits equally as its defects, the true German character—honest, sincere, and confiding, tenacious of custom, attached to antiquity, ignorant of present times, benevolent in disposition, he was at the same time pious and patriotic, and ready to lay down the last drop of his blood in defence of his religion and Emperor. It was easy to excite him to severe measures; but when their execution commenced, he was readily diverted from his purpose, and his native gentleness of disposition speedily caused the sterner mood to relent. His attachment to the Catholic faith, and his patriotic ardour, were unbounded; and the bare recital of a victory gained by Austria in former times, or allusion to the classical days of Tyrol, a word in favour of the sacred person of the Emperor or the Archduke John were sufficient to fill his eyes with tears. Though slow and sometimes vacillating in decision, he was capable, when he applied to a subject, of just discrimination and when invested, during a few months in autumn 1800, with the entire government of the province, his measures were judicious to a degree that could hardly have been expected from his limited means of information. Fond of conviviality, sometimes addicted to intemperance, he was often carousing with his friends when the troops were engaged in action; and, though repeatedly victorious, and fearless in danger, he was only once under a hot fire during the war, though then he acted with the utmost gallantry. But his energy in conduct, and well-known patriotic ardour, obtained for him the attachment of his countrymen, whom he constantly led to victory; and the intrepidity of his conduct in his last moments, has secured for him a lasting mausoleum in the hearts of his countrymen (1).

Of Speech-
bachers Inferior to Hofer in general government, and unversed in the threads of political negotiation, SPECHBACHER was greatly his superior in the energy and conduct of actual warfare. He was a substantial yeoman, having inherited from his father a farm of some value in the village of Gnadenwald, in the Lower Innthal. Born in the year 1768, he was left an orphan at the age of seven years; and though his relations bestowed all the care upon his education which circumstances would admit, he showed little disposition for study or any sedentary pursuit. From an early age he was found from morning till night among the mountains, with his rifle over his shoulder, pursuing the roe or engaging the lammergeyer. As he advanced in years, these pursuits had such attractions for him, that, abandoning altogether his paternal estate, he associated with a band of hunters, who set the forest laws at defiance, and ranged the mountains of the Upper and Lower Innthal, the Oetzthal, and the rugged forests of the Bavarian Tyrol. By this wandering mode of life, as he afterwards himself admitted, he became acquainted with every pass and glen on the frontiers of Tyrol and Bavaria, from Ildkirch to Kufstein—a species of knowledge which was of essential importance in the conduct of the partisan warfare with which he was afterwards intrusted—while at the same time it nourished in his mind that inextinguishable hatred towards Bavaria, which is felt more or less by every inhabitant of the northern Tyrol. His grandfather had distinguished himself in the war against the Bavarians, under Maximilian Emmanuel; “and when I was a child,” said Spechbacher in after days “and listened to him as he told us the history of those times, I longed to have an opportunity of fighting against them as he had done.” He was diverted, however, from this dangerous course of life, by the impression produced by seeing one of his companions shot in

a rencontre with a band of chasseurs; and returning at the age of twenty-eight to his native village, he married a young woman with some property, entered into a contract to supply the salt-works of Halle with wood, made himself master of the elements of education, and continued for twelve years to lead a laborious, inoffensive life, till the trumpet of war from Austria roused him to danger, and glory, and immortality (1).

Of Joseph
Hofer
the friar

JOSEPH HOFER was a Capuchin friar, and buried in the seclusion of a monastery till the war broke out. Though reckoned with justice one of the most formidable of the Tyrolese leaders, he carried with him into the field of battle only the spiritual weapons which he brought from the cloister. Clothed in his brown garment and rope girdle, he bore in his hand a large ebony crucifix, with which, it is said, in close combat, he sometimes exchanged blows with the enemy; and being endowed with prodigious strength, nearly as many wonders are recounted of his personal feats, as miracles won by his faith and devotion. When a student in the faculty of theology, he had borne arms against the French, and won a silver medal, which he consecrated, on entering the order of St. Francis, to the miraculous crucifix at Eppén near Bolsano. He was distinguished by a flowing beard of a red colour, which gave him the surname of *Rothebart*, and often the massy crucifix and animated voice of the friar restored the combat, when his countrymen were sinking under numbers or fatigue (2).

Of Martin
Teimer and
Baron Horn-
mayer

MARTIN TEIMER, though a brave and active leader, was not so celebrated as the other chiefs, among the peasantry, but from his military talents, skill in negotiation, and a certain degree of aristocratic favour which it induced, he received marks of distinction from the Emperor which the others never enjoyed, and was made a baron, with the cross of Maria Theresa, to which Hofer never attained. Teimer, however, was Hofer's superior in conduct and understanding, though, from not being so great a favourite with the people, he never enjoyed the same influence or celebrity. He was born on the 15th August 1778, at Schlanders, in the Visitschgau, and had a countenance, in which the prominent forehead and sparkling eye clearly indicated the ascendant of talent. He served in the militia in the war of 1796, and raised himself, by his abilities, from the ranks to the station of major, having distinguished himself in several actions under Laudon in that year, and Bellegarde in 1799. In 1800, he was again made captain in the militia, and subsequently kept a shop at Klagenfurth. Like Hofer, his disposition was phlegmatic, and he was fond of conviviality, but, when roused by danger and placed at the head of his troops, he displayed equal courage and capacity, and contributed with the peasants of the Upper Innthal, whom he commanded, to some of the greatest successes of the war. It was only unfortunate that the favour of the Emperor occasioned a certain jealousy between him and Hofer, which in some degree dimmed the glory and impaired the usefulness of both. Baron Hormayer, one of the few native nobility who appeared in arms for their country, was early appointed by the Austrian cabinet governor of the province, and he showed his judgment by delegating his authority at a very early period to Hofer, by whom the movements of the peasants were practically directed till the close of the contest (3).

Brave pre-
parations of
the people
for the con-
test

Such were the simple leaders under whose guidance the Tyrolese engaged in the formidable contest with the united power of France and Bavaria. It was from no ignorance of the perils which awaited

(1) Barth 36, 42. Inglis, ii 179, 180.
(2) Barth i 52, 51. Inglis, ii, 180, 181.

(3) Barth, 82, 84. Inglis, ii 181. Gesch. A. Hofers, 59, 60.

So unanimous, however, was the feeling with which the country was animated, that at the first intelligence of hostilities having commenced, it burst forth at once with uncontrollable fury in all quarters. The night of the 8th April was fixed for the event on which the destinies of the Tyrol were to depend. The signal agreed on was throwing sawdust into the Inn, which floated down; and was soon discovered and understood by the peasants. In addition to this, a plank with a little pennon affixed to it was launched in the upper Innthal, and safely borne down the stream, amidst the throbbing hearts of all who witnessed it. Bale-fires at the same time were lighted on a hundred hills, and many a ruined castle blazed with a long-unwonted glow. The peasantry of the Innthal were warned, besides, by women and children, who carried from house to house little balls of paper, upon which were written the words "*s'ist zeit* " it is time. Roused by these various methods, the inhabitants every where rose on the 8th April as one man, and with their redoubted rifles on their shoulders descended every lateral glen and ravine, till their accumulated force, gaining strength at every step as it advanced, rolled in an impetuous torrent down the great valleys of the Inn, the Eisach, and the Adige (1).

Successes in the Pusterthal. Marquis Chastellar, with the regular troops under his command, about ten thousand strong, but very deficient in cavalry, was on the Klagenfurth frontier, to take advantage of, and support these enthusiastic movements, and crossed the frontier at daybreak on the 9th. Their march through the Pusterthal resembled rather the triumph of a victorious, than the advance of an invading army. Mothers brought their children out to look at them, blind old men were led out of their cottages that they might hear and bless their gallant countrymen, all endeavoured to get near, that they might touch their clothes, or even kiss their horses. But more serious occupation awaited them. On arriving in the neighbourhood of St. Lawrence, in their way down towards Brixen, they found the peasants in considerable numbers already engaged with the enemy. The rising there had been precipitated two days before the time agreed on, by an attempt of the Bavarians on the important bridge at that place, which commanded the communication between Brunecken and the upper part of the valley. The peasants rose to prevent its destruction, and Wrede, aware of the importance of suppressing such a revolt in the outset, immediately marched to the spot, with two thousand men and three guns, from Brixen. With these, however, he made no impression on the assembled peasants stationed in the woods and rocks, but being joined on the day following by a reinforcement of a thousand foot soldiers and six hundred horse, he renewed his attacks with better success, and the Tyrolése, unable to block up the main road against such formidable odds, were beginning to give way, when the arrival

necessary and general? Because so great a power cannot be opposed alone, and therefore every one should assist in the cause. Because the restoration of rights and liberties is to be gained, if attempted, because neither Germans nor Bohemians ought to be obliged to sell their blood as the blind instruments of an insatiable power—to be forced against their will to invade Russia or Spain, or oppress the less powerful kingdoms of the world. We have an enemy to oppose, whom hitherto nothing has been able to oppose, but, with unanimity, ardour, and firm perseverance, nothing is impossible. We possess this firmness and courage, this unanimity warms every heart. Austria has gone through many dangers, and emerged from them victorious. The present is the greatest of them all, but there never was the same

unanimity. In a moment of such consequence to our faithful country, in the midst of such ardour for the holiest cause for which sword was ever drawn, I plant the Austrian eagle on the earth of Tyrol. I know you—I recall you, as Duke Ferdinand did, 933 years ago—the prelates, the nobles, the citizens, the peasants, to the foot of the throne. Arms, and courage, to restore the rights you desire. Recollect the glorious days when you defeated Joubert at Spinger, Jenisir and Botzen. I am no stranger to your mountains and valleys. I am confident you will retain the hopes of your prelatious—ARCHDUEL J
FEA, 64, 76

(1) Gesch. A. Hofer, Barth 82, 84.

of seventy light horse, and a few companies of chasseurs, the advanced guard of Chastellier, who instantly charged with loud shouts, changed the fate of the day. The Tyrolese, suspending the combat, fell on their knees to return thanks, or embraced the Austrians with tears of joy while the Bavarians, thunderstruck at this unexpected apparition, fled in disorder down the gully, and when they arrived at the tremendous bridge of Laditch (1), broke into two divisions, the first of which, under Bisson, hotly pursued by the peasants, ascended the Eisach towards Sterzing, while the second, two thousand strong, under General Lemoine, followed the course of that river down to Bolzano. Here, however, they were met by the landsturm of the valley of the Adige, which had descended to that place in great strength, from the upper part of the Eisach, and though some forced their way through to Trent, the greater part, with the general himself, were made prisoners (2).

Detail of
the Battle
of
Mollath
by
Hofier
at
Sterzing
Mollath.

While these events were going on below Brixen, the Bavarian regiments which had ascended to Sterzing encountered Hofer with the landsturm of the Pusteythal and the Vinchgau, on the plain of Sterzing-Moos near the town and castle of that name. The Bavarians advanced in good order and with an intrepid air over the open ground which lay between them and the enemy; but as they approached the Tyrolese, who were posted on rocks and in thickets around its outer circumference, they were staggered by the close and deadly fire of the rifles, and fell back in confusion. The guns were next brought up; but they could produce little impression on the peasants scattered among, and in great part concealed in the broken ground and woods; and the gunners were soon laid prostrate by the unerring aim of the mountain sharpshooters. Encouraged by this success, the Tyrolese now burst from their covert, and rushing forward, like the Vendée peasants, in loose array, but with desperate resolution, using their spears, halberds, and the butt-ends of their muskets, fell with loud shouts upon the enemy. After a violent struggle of a few minutes duration, the Bavarians gave way, and being enveloped on all sides, laid down their arms to the number of three hundred and ninety, besides two hundred and forty who were killed or wounded in this sanguinary combat. The column which succeeded however under Bisson and Wrede, contrived to force its way by a circuitous route, up the pass of the Brenner; but it was grievously harassed in the defile of Lueg by the peasants, who broke down bridges, and barricaded the highway, by heaps of trees thrown across the road, and only penetrated through to the neighbourhood of Innsbruck, after sustaining a heavy loss. All these columns in their retreat committed the greatest excesses, burning houses, and massacring the peasantry where ever they had it in their power; while the Austrian authorities exhibited, at the same time, the noble contrast of a proclamation issued expressly to restrain the feelings of revenge arising in the breasts of the people (3).

(3) Gau. A. Hofier 81 82. Pol. III. 87. Barth. 88 100.

"Tyrolese! you have proved yourselves worthy to be free and of that constitution which the Emperor promised to respect, but he has not kept his word. You have proved yourselves worthy of liberty, do not let him grieve you by your bad faith, and let him

come unpunished, but set with unanimity and confidence, determined to die or be free. I leave the terrible responsibility to the real Tyrolese. I allow myself to be accused of such a deed. I follow the example of those who have nothing to lose, who resist and plunder the powerful and wealthy, and would inevitably see the seeds of disorder among my people, who are rich. Without disorder, order and abundance with a will prosper. In the name of the Emperor and the Archduke I will put every one who dares his orders, and send every one who dares to resist, as a reward to the brave. —Gau. A. Hofier, p. 82, 83.

On the same day, the peasantry of the Upper and Lower Innthal, rose in arms, and so active were the exertions made, that early on the morning of the 11th, twenty thousand armed men, directed by Teimer, were assembled on the heights around Innsbruck. In no condition to resist so formidable an assemblage, the Bavarians, who had only fifteen hundred men and a few guns in the place, withdrew into the town, but there they were speedily assailed by a furious crowd of peasants, who carried successively the external barriers, the bridge of the Inn, the artillery, and finally penetrated into the principal square, shouting out, "Long live the Emperor Francis—down with the Bavarians!" and made themselves masters of the place. A frightful scene ensued—the Bavarians in some places surrendered, and begged for quarter; in others, continued the combat with undaunted resolution, and, in the *mêlée*, several bloody deeds were committed, which, in their cooler moments, the Tyrolese would have been the first to condemn. General Kinkel, after making a brave resistance, was slain: Colonel Dietfurth, who atoned for his former conduct by the gallantry of his last hours, desperately wounded, was made prisoner, and soon after died, and the whole garrison of Innsbruck, consisting of one entire regiment, four guns, a few cavalry and several depots of battalions, either taken or slain (1)

An event here took place which strongly marked the particular character of the warfare which had commenced. Dietfurth, the Bavarian colonel, had made himself peculiarly obnoxious in the province, by the severity of his public, and licentiousness of his private conduct, as well as the contemptuous expressions which he had used towards the people (2). As he lay half fainting from loss of blood in the guard-house of Innsbruck, he asked who had been the leader of the peasants. "No one," they replied, "we fought equally for God, the Emperor, and our native country."—"That is surprising," said Dietfurth, "for I saw him frequently pass me on a white horse." The report of this incident produced an extraordinary impression upon the peasants, by whom it was universally believed, thenceforth, that St. James, the patron of the town of Innsbruck, and who was always represented, in the battles with the Moors, mounted on a white horse, had combated at their head. The cavalry which escaped from Innsbruck took refuge in a convent near the bridge of Volders, but Spechbacher, having assembled a body of peasants from the Lower Innthal, burst open the gates on the day following, by means of an immense fir-tree, which was rolled up on wheels to the massy portal by fifty of his strongest peasants, and every man was made prisoner. The Tyrolese after these brilliant successes, set no bounds to their rejoicings—the great Imperial eagle was taken down from the tomb of Maximilian in the High Church of Innsbruck, decorated with red ribands, and carried amidst deafening acclamations through the streets, the peasants flocking in crowds to gaze at and kiss it; while the pictures of the Archduke John and the Emperor were placed on a triumphal arch, surrounded by candles kept constantly burning, every one that passed stopping an instant, bending the knee, and exclaiming, "Long live the Emperor (5)!"

In the midst of these rejoicings the Tyrolese were called to more serious duties. The victorious peasants, who had fallen asleep in the streets or in

the orchards around the town, were alarmed at three o'clock in the morning of the 12th, by the intelligence that the enemy were approaching. It proved to be the division of Bisson, which, having forced its way through the pass of Lueg and over the Brenner, from Sterzing and the valley of the Eisach, had reached Mount Ysel

and the neighbourhood of the Abbey of Wilten, on its way to the northern Tyrol and Bavaria. The gates were immediately barricaded with casks, wagons, carts, and every thing that could be found for that purpose, and the approaches to the city filled with armed men, ready to give the enemy a warm reception. But the Bavarians, who were descending the Brenner, were in still greater consternation than their opponents at the circumstances of their situation. With difficulty, and constantly harassed by a cloud of peasants in their rear, they had reached the heights of Mount Ysel, and now they found Innspruck, their sole point of retreat, where they expected to find succour, rest, and security, occupied by twenty thousand peasants. General Kinkel, who perceived the hopelessness of their situation, wrote to General Bisson, urging him to send some confidential person into the town who might report the state of affairs: and, in pursuance of this advice, Wrede with a large escort, soon made his appearance, and they were immediately taken into custody. Wrede was detained, the remainder being allowed to return to their comrades. The situation of the French and Bavarians was now almost desperate. Chastelliar, with a body of armed peasants as well as a few regular troops, was descending the Brenner and already menaced their rear while the rocks and thickets in their front and flanks were bristling with the peasants of the Innthal, who, in great strength, obstructed their advance. After some unsuccessful parleying, in the course of which Bisson expressed the utmost dread of the vengeance of Napoleon if he laid down his arms, the fire began and a close discharge, admirably directed, thinned the ranks of the French grenadiers, while the shouts with which the mountains resounded on all sides were so tremendous that they were completely panic-struck, and compelled their commander to consent to an unconditional surrender. Bisson laid down his arms with all his troops including the division at Schwatz which was to be delivered up to the Austrians there: nearly three thousand men, on this occasion, fell in all into the hands of the enemy (1).

^{Capture of}
^{the town by}
^{Spechtbacher} The only post of importance in the Tyrol now occupied by the Bavarians was Hall in the Lower Innthal, and it soon yielded to the enterprise and skill of Spechtbacher. The women and children who remained on the left bank of the Inn, lighted fires on all the hills bounding the valley on that side, and this stratagem induced the Bavarian garrison to believe, that if the town were attacked at all, it would be from the northern quarter. Thither accordingly they all crowded carefully manning the ramparts and watching the approaches. Meanwhile Spechtbacher with his men silently advanced in ambush to the other side, and, when the drawbridge was let down and the gate opened, upon the bell ringing for matins, they rushed in, overpowered the guard, and made themselves masters of the town. The Bavarian prisoners, about four hundred in number, were immediately marched off under an escort consisting chiefly of women. Considering this at

(1) *Geogr. A. Magaz.* 97 98. *P. L. Lit.* 90. *Farch.* 180 183.

Upon signing this capitulation, Bisson exclaimed: "This day will be my last; the grave of my honour and military reputation. Never will I Napoleon believe that this disaster might not have been avoided: even were I severely unfortunate, he would not have been a crime." In this, how-

ever the French general was mistaken, as for the future of his empire he recovered this loss, and the force of subsequent events enabled him to accomplish this object. Bisson was put to death, and, by a singular coincidence of fate, was the governor of Metz when it was shut by the Prussians. *Geogr. A. Magaz.* 97 97.

a studied insult, the captives were exceedingly indignant; but in truth, it was the result of necessity, the whole male population having been marched off towards Innsbruck, and for the same reason, a similar service was often assigned to the female sex during the war (1)

Results of these successes. En tire deliver ance of the Tyrol Thus did the Tyrolese, in one week after the insurrection broke out, by means solely of their own valour and patriotism, aided by the natural strength of the country, entirely deliver the province from the enemy, recover all the fortresses, except Kufstein, which were in the hands of their oppressors, and entirely destroy above ten thousand regular troops of the enemy, of whom six thousand were made prisoners! These extraordinary successes, too, were gained almost exclusively by the unaided efforts of the people, for though the Austrian régulars came up most opportunely in the first contest, at the bridge of San Lorenzo, yet they had no share in the subsequent triumphs, which were achieved long before their arrival at the scene of action, by the assembled peasantry a memorable instance of what may be effected by unanimity and vigour, even in opposition to a formidable military force. The effect of the victories of the peasantry was to liberate the southern as well as northern Tyrol, for the French troops were so much discouraged by their reverses, that they evacuated both Trent and Roveredo, and fell back to the neighbourhood of Verona. The insurrection gained all the Italian Tyrol, and even spread into the valleys of the Oglio and the Mella, where the people were highly discontented with the government of the kingdom of Italy. Numerous bodies of partisans appeared to the north, in the Bavarian plains, and the Swabian hills, and on the south, in the neighbourhood of Brescia and Verona, they communicated with the Archduke John, whose victory at Sacile excited extraordinary enthusiasm, by the vale of the Piave, and symptoms of revolt were already manifesting themselves in all the southern valleys of the Alps, as far as Piedmont, where the people only waited for the Austrian standards to cross the Adige to break out into open insurrection. Nor was it the least honourable circumstance in this glorious contest, that though the population were strongly excited by a long course of previous injuries, and almost entirely destitute of military officers to restrain their impetuosity, they were as much distinguished by their humanity as their valour, and, with a few exceptions, originating in the heat of assault, conducted their hostilities with as much moderation as regular soldiers (2)

Measures of Napoleon and Chastellar in Tyrol Meanwhile Napoleon, who was exceedingly irritated at this unlooked-for series of disasters in the Tyrol, and, notwithstanding all his power, was not able altogether to conceal them even from his own subjects, let his exasperation exhale in furious invectives against the

May 5 Marquis Chastellar, to whom he ascribed both the exciting of the revolt in Tyrol, and the cruelties which he alleged had been committed by the peasantry. The latter charge, founded upon some isolated acts of revenge perpetrated in the assault of Innsbruck, was wholly unfounded as against the Tyrolese in general, and against Chastellar, in particular, was, in an especial manner, false, as at the time of the acts complained of on the banks of the Inn, he was still at Brixen, sixty miles distant, to the south of the Brenner, and even ignorant of the whole operations to the north of that mountain. But this sentence of outlawry against Chastellar and Hoimayer, both of whom were ordered to be delivered to a military commission as soon as taken, and shot within twenty-four hours, was of a piece with the invariable policy of

(1) Barth 116, 120 Gesch A Hof, 101, 102

(2) Pel iii 91, 95 Gesch A Hof

Napoléon in such circumstances. Whenever a disaster had occurred to his arms, or an event had taken place likely to rouse an enthusiastic moral feeling against his government, he instantly propagated some falsehood against its authors; or exaggerated some trifling incident into a mighty enormity; and by the vehement abuse of the persons by whom his power had thus been assailed, often succeeded, at least with his own benighted subjects, in withdrawing public attention altogether from the calamities on his own part, or virtues on those of others, which he sought to conceal (1).

Action in the South-
ern Tyrol
which is
evacuated
by the
French. Chastellar, for a fortnight after the Tyrol was evacuated by the enemy, laboured assiduously to give something like military consistency to the tumultuary efforts of the peasantry. He succeeded in equipping a small body of cavalry, to whom he gave arms a species of force of which these poor mountaineers stood much in need, and organized several battalions of excellent foot soldiers, and having put matters in a train to the north of the mountains, recrossed the Brenner with his regular troops, and descending the valley of the Eisack and Adige, came up

April 22. with the enemy in front of the famous defile of La Peira, between Roveredo and Trent. The French, under Baraguay D'Hilliers, six thousand strong, were there posted in a well-known position of uncommon strength, and held firm, to give the main body of their army under Eugène time to retreat in order, to the banks of the Adige, after the disastrous battle of Sa-

April 24. *elle*. The Austrians having imprudently commenced an attack when worn out with the fatigue of a long march, were worsted and driven out of the defile with loss. but the French, notwithstanding, continued their retreat to the neighbourhood of Verona, and Chastellar took up his quarters in Roveredo. From thence, however, he was soon recalled to the north of the Brenner, by the threatened invasion of the province by the French troops after the disastrous battles in Bavaria (2).

Action on
the Salz-
burg frontier
April 29. Jellachich, as already noticed (3), after the defeat of Müller at Landhut, had retired from Munich towards Salzburg on the 24th April. Thither he was followed by Marshal Lescbvre with his corps,

consisting chiefly of Bavarians. The Austrian general took up a strong position in front of Salzburg, where he endeavoured to arrest the advance of the French troops. but the numbers of the French were so superior that he was unable to effect his object, and driven into the town with the loss of several hundred prisoners and three guns. The victors entered pell-mell with the vanquished, and Jellachich, continuing his retreat in great disorder to the south, ascended the valley of the Salza, and crossing the mountains behind Rastadt, made the best of his way towards Villach and Carinthia, abandoning the eastern districts of Tyrol to their fate. Thither Lescbvre shortly after bent his steps, having remained in Salzburg only long enough to put the town in a sufficient posture of defence, and establish the magazines necessary for

May 10. the operations in that quarter. On the 10th May he broke up and advanced to Reichenhall, a considerable burgh still in the open country, but within a mile of the mountains, which there rise in awful majesty abrupt and sheer from the plain, to all appearance impervious to human approach.

May 11. On the day following the French in great force advanced to the entrance of the passes. Notwithstanding their immense superiority of numbers, such was the natural strength of the defiles (4), that it is doubtful if

they would have succeeded in making good their entrance had the Tyrolese guards been all at their stations, but it was Ascension-day, and a large proportion of the peasants were absent at church, or engaged in their devotions or sports on the holiday. so that the contest fell on four hundred regular troops, and a few companies of sharpshooters, who, notwithstanding, for several hours kept at bay a whole Bavarian division. At length the barricades and formidable defences in the tremendous defile of Strub were forced, and the Tyrolese driven, combating all the way up the frightful gorges of the Achen, back to the neighbourhood of Worgl. There they stood firm, as they were reinforced by Chastellar with a few thousand regular troops; but on the same day, intelligence arrived that the passes of the Inn, at the entrance of the plain, had been forced by Deroz with another Bavarian division, the Thierseebach crossed, and that the enemy's outposts had already appeared before Kufstein.(1)

Combats at
Feuer-Sin-
ger and
Worgl

Finding himself thus threatened both from the side of Salzburg and Kufstein, Chastellar, who had only three thousand regular troops at his disposal, the remainder being a body of as many Tyrolese peasants, without any other discipline than what they had acquired in their native valleys, resolved to take the initiative, and combat Lefebvre in the first instance, before Deroz came up. With this view he occupied the defile of Feuer-Singer, which lies between the ravines of the Achen and the pass of Strub, and strengthened the gorge with some rude field-works: but the impetuous attack of the Bavarians, flushed with the victory of Abensberg, overcame every obstacle, and the Austrians, after a bloody struggle, were driven back at the point of the bayonet to their reserves, posted at the important position of Worgl. Stationed there behind a rivulet, in a situation which commanded the junction of the roads from Kufstein and Salzburg, and barred the only access to Innspruck, Chastellar stood firm, and, with four thousand regular troops and six thousand peasants, gave battle to the enemy. The open and desolate plain of Worgl, however, was unfavourable to the operations of the new levies, who were dispirited at finding themselves driven into the open country from the fastnesses which they had deemed impregnable, and their total want of cavalry rendered them incapable of opposing with success the numerous and powerful squadrons of Lanange. The Bavarians were greatly superior in number, being eighteen thousand strong, with thirty pieces of cannon, while the united Tyrolese and Austrians did not amount to half that number. After a short combat, the Austrians were entirely defeated, with the loss of all their baggage, ammunition, and guns, seven in number, which, with five hundred prisoners, fell into the hands of the enemy (2)

ravines shut in by walls of rocks, which barely leave room for a carriage-way, often blown out of the mass, between precipices a thousand or fifteen hundred feet high, scaling heights to appearance almost perpendicular, by an angle of elevation unknown in any other European road, descending break-neck declivities by the side of roaring streams, in the midst of forests of matchless beauty, surmounted by romantic peaks, starting up in endless fantastic forms, six or seven thousand feet in height, they possess a degree of interest to the lover of the picturesque, exceeding even the far famed passage of the Simplon. The most ardent imagination, furnished with the widest recollection of romantic scenery, can figure nothing approaching to the sublimity of the defile of Strub, where the road, apparently blocked up by a wall of rock two thousand feet in height, is cut through a narrow passage

beside the roaring stream, and then winds its devious way amidst overhanging forests of dark pine, intermingled with huge crags of brilliant colours, and surmounted by bare peaks silvered with snow. The most beautiful points in the vast amphitheatre of the Alps, as the author can testify, after having visited most parts of them, are the valley of Berchtesgaden, the Königsee and defile of Strub, near Salzburg, the Via Mala in the Grisons, the defile of Gondo on the route of the Simplon; the valley of Gasteren and Oeschinen in the vale of Kandersteg, near the Gemmi, and the approach to the Grande Chartreuse in Savoy.—*Personal Observation*

Innsbruck
taken by
the Bre-
nner.
May 29.

Nothing now remained to prevent the conquest of the Lower Innthal by the Bavarians; and if they had pushed on with vigour and rapidity, they might have struck a seasonable terror into the insurgents by the capture of their principal leaders and magazines at Innsbruck. But they advanced so tardily that they gave the Tyrolese time to recover from their consternation; reinforcements poured down from the Brenner and the mountains of Scharnitz, to the fugitives from Wörgl; and Chastellar, who narrowly escaped being made prisoner by the enemy, met with Hormayer at Steinach, and concerted measures for future operations. Slowly moving up the valley of the Inn, Lefebvre found the resistance of the people increase with every step he advanced. Schwatz was only carried by assault after a desperate resistance, and burned, in the struggle, to the ground. Frightful atrocities marked the steps of the invaders: the Bavarians wreaking their vengeance on the unhappy peasants, for the real or imaginary injuries they had received, by the perpetration of the most revolting military cruelties. Old men, women, and children, were massacred indiscriminately; and every village, from which a shot had issued, committed to the flames. Meanwhile, Chastellar, who had been strongly irritated at the Tyrolese, on account of the furious conduct of some drunken peasants at Hall, who tried

May 24. to pull him from his horse from indignation at his retreat, had repassed the Brenner, and the Innthal was again reduced to its own
May 4. resources. On the 10th, Lefebvre appeared before Innsbruck, which submitted without resistance; the minds even of the heroic leaders of the insurrection being stunned by the misfortunes which were now accumulating around them on all sides; and justly considering a prolonged resistance hopeless after Vienna had opened its gates to the enemy, and the Archduke John had evacuated the Carinthian mountains (1).

Desperate
state of
affairs in
Tyrol and
Savoy of
the present
war.

Affairs in Tyrol were now well nigh desperate: for, at the very time when these disasters were accumulating on the north of the Brenner, a strong French force of fifteen thousand men under Baraguay D'Hilliers, and Rusea, detached by Eugène after his victory on the Piave, to which the peasants, now stripped of the regular troops for the defence of the Innthal, had nothing to oppose, was rapidly advancing up the valley of the Adige, and had already occupied Roveredo and menaced Trent. Chastellar, despairing of success, had made arrangements for leaving the country: and Hormayer, who, with unshaken resolution, was still endeavouring to rouse the peasantry in the lateral valleys of the Innthal, found them in most places indignant at the retreat of the Austrians, and fast returning to their homes. General Döl, indeed, with two thousand five hundred men and six guns, still occupied the crest of the Brenner: but he was in a wretched condition, starving with cold, destitute of ammunition, and

(1) *Moniteur* June 8, 1809. P. L. III. 101, 100. *Genl. A. Defer* 155, 156.

The Archduke John, on occasion of his first disaster on the Piave, on 30th April, wrote to Defer: "I have written to the poet of the misfortunes of Germany to make an outcry: we have done our duty and will defend the Tyrol of Styria, Carinthia, Carniola, and Salzburg to the last drop of our blood. It is that fortress, held by our brave men, which we ought to conquer or die. For the glory of our ancestors and our country I shall not leave it. I beg you to write to Chastellar: the misfortunes of Germany have not yet made the Brenner and to direct my attention to the present, which are of so much consequence to Austria. Do not be alarmed: the Tyrol shall never be forsaken; I will defend it and

the frontier of Austria to the last breath. It would have been well for the Archduke John, and the Austrian monarchy if he had adhered to these principles, and thrown himself into Tyrol, as he did. I am sure that by the disaster of the Piave, as in that case he would have been in a position to have taken part in the important and profitable decisive operations projected by the Archduke Charles. I flatter me on the 22d May and predicted the liberation of the country by the formation of a new army of Vienna. I am of this, for I see the support of the brother orders, and those of the 3rd, 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22nd, 23rd, 24th, almost without provisions. In these mournful circumstances, it was the invincible tenacity of the peasantry in the upper Innthal, and elevated parts of the Brenner and Scharnitz ranges of mountains, which restored the fortunes of the campaign. Eisenstücken, aide-de-camp to Hofer, Speechbacher, and Friar Haspinger, vied with each other in the indefatigable ardour with which they roused the people, and even the first fell himself on his knees to General Buol, when he was preparing to abandon the Brenner, and by the vehemence of his entreaties, prevailed upon him to keep his ground on that important position. Hofer, who in the first instance, was thrown into the deepest dejection by the misfortunes impending over his country, and rendered incapable of active exertion, was roused by their example to nobler efforts, and appearing at the head of his peasants, forced the Passeyrthal, commenced a fierce attack on the Bavarians at Presberg, near Mount Ysel, which, although unsuccessful, struck no small alarm into the enemy, from

May 25 the gallantry with which it was conducted. This combat renewed the warlike ardour of the Tyrolese, who flocked from all quarters in great strength to the general place of gathering on Mount Ysel, which ancient prophecy led them to expect was to be the theatre of great events to the Tyrol, while Lefebvre, who deemed the affairs of the provinces settled by the capture of Innspruck, and submission of the authorities in that place, had set out for Salzburg, leaving Deroy at the capital with eight thousand foot, eight hundred horse, and twenty pieces of cannon (1)

Preparations for the battle of Innspruck May 25 The forces engaged on the 29th May, on the heights of Mount Ysel, were, in numerical strength, very unequal the Tyrolese having nine hundred infantry, seventy horse, and five guns of the Austrian troops, besides a motley assemblage of peasants, to the number of twenty thousand men, individually brave and skilled in the use of arms, but altogether undisciplined and unaccustomed to act together in large masses; while the Bavarians had only eight thousand foot, eight hundred horse, and twenty-five guns. The numerical superiority, however, of the former was fully counterbalanced by their great inferiority in discipline, cavalry, and artillery, so that the real military strength of both sides might be considered as very nearly equal. Hofer did his best to compensate his weakness in cavalry, by stationing his followers, as much as possible, in the wooded heights at the foot of Mount Ysel, where horsemen could not penetrate (2) but the town was not to be carried by such a blockade, and the impetuous spirit of the peasantry led them to demand an immediate assault. Their spirits had been elevated to the highest degree by the intelligence of the battle of Aspern, which had been communicated with extraordinary rapidity to the most secluded valleys, and by a proclamation issued by the Emperor Francis the day after that glorious event, dated Breitenlee, 23d May, in which he solemnly engaged "never to lay down his arms till Tyrol was reunited to the Austrian monarchy (5) "

(1) Pel iii. 106, 107, iv. 31, 32 Gesch A Hofer, 217, 229 Barth 138, 150

(2) Pel iv. 31 Gesch A Hofer, 231, 232 Schoell Hist des Trait de Paix, 9, 257 Lrz Johan Feldzug, 1809 162

(3) Hofer addressed the following characteristic letter to the inhabitants of the Upper Innthal — "Dear brethren of the Upper Innthal! For God, the Emperor, and our Fatherland! Tomorrow, early in the morning, is fixed for the attack. With the help of the blessed Virgin we will seize and destroy the Bavarians, and confide ourselves to the beloved Jesus. Come to our assistance but if you fancy

yourselves wiser than Divine Providence, we will do without you — ANDREW HOFER," — Gesch A Hofer, 238

The proclamation of the Emperor Francis to the Tyrolese, dated 1st June, 1809, bore — "Operations at all points are about to recommence, I will send you a helping hand. We will combat together for our country and our religion. Your noble conduct has sunk deep into my heart. I will never abandon you. The Archduke John will speedily be amongst you, and put himself at your head." — J. ZERNER, *Johannes Feldzug in Jahre 1809*, 162

Battle of
Innsbruck,
and battle
of the
Brenner.
May 20.

The attack on Innsbruck was combined with more military skill than could have been anticipated from the untutored character of the leaders by whom it was conducted. Spechtbacher; who, in spite of the utmost vigilance of the Bavarians, had contrived to warn the peasants on both sides of the Inn of the approaching gathering (1), menaced the bridge of Hall, and the line of retreat down the valley of the Inn from the northern side, while Colonel Reissenfels co-operated in the same direction from the southern valleys, by a descent along the right bank of the Sill and attack on the castle of Ambras; Hofer descended with all the strength of the southern and central valleys of Tyrol, from the Brenner and Mount Ysel while Teimer, with a small band of six hundred resolute followers, was sent by a circuitous route to the heights of Hottingen on the north of the town, and in the rear of the Bavarians, to make his appearance in the middle of the action, and spread terror among the enemy, from the belief that they were beset on all sides. Thus the battle consisted of a variety of detached combats in different directions around Innsbruck, contemporary with the now furious struggle at the foot of Mount Ysel, between the main body of the combatants on either side. By daybreak, Spechtbacher was at the post assigned to him, and amidst loud shouts, carried the important bridge of Hall with such vigour, that it gained for him the surname of "*Der Feuer Teufel*" the Fire Devil. The castle of Ambras soon after yielded to the impetuous assault of Reissenfels, and the whole right bank of the Sill was cleared of the enemy; but they long held their ground at the bridge of Passberg, commanding the passage of that torrent by the great road on the south of the Inn. From this position, however, they were at length driven about noon, by the more skilled attacks of Captain Dobrawa; and the left flank of the enemy being thus completely turned, and their retreat down the Inn cut off, they were thrown back in great disorder to the village and abbey of Wilten (2).

Bloody
action of
April
between
Hofer and
Hapsburgers

While affairs were proceeding so prosperously on the east of Innsbruck, a more dubious conflict was raging in the centre and on the left, at the foot of Mount Ysel. Haspinger with a huge wooden cross in his hand, here led on the attack, and animated his followers not less by his example, than the assurances of Divine protection which he held forth; he was followed by Colonel Ertel with the most disciplined part of the Tyrolese, two thousand strong; while Hofer, with the peasants of the Pansyrthal, descended from Mount Ysel by the great road direct upon Innsbruck. His brave but tumultuous array shouting aloud—for God, the Emperor, and our

(1) "All the passages over the Inn, and especially the bridge of Hall, were vigilantly guarded by the Bavarian posts, who justly deemed it matter of especial importance to prevent any point whence being concerted on the opposite sides of the river, Spechtbacher, however, undertook the perilous mission of opening up the communication between the northern and southern allies. Accompanied by his trusty companions, Georg Zappert and Johann Lechner, and a young peasant girl, Zappert went, he set out on the evening of Wednesday. In the evening they encountered a body of hundred Bavarian dragoons. Spechtbacher and his companions concealed themselves behind some plantations at the foot of a cliff fired on the party from their ambush, and immediately setting the peasants, loaded and fired again. The Bavarians, conceiving they were attacked by a numerous body of sharpshooters, fled, and left the passage open. Spechtbacher met with Hofer's army easily, and general skirmishes around Innsbruck were carried on for the 21st May. On his return, however, fresh

difficulties were encountered. The heights of Hall and all the points of retreat were vigilantly guarded, and every person rigorously examined, who attempted to pass from the one side to the other. In this perplexity he was relieved by the humane goodness of his trusty companions, Georg Zappert, and his earnest maid. The girl first saved the bridge; and, as nothing suspicious was found upon her, she was allowed to pass. Then Georg Zappert prevented himself; a black crossbowman's great powder dog, whose usually till the dawn pastures were concealed; and, while the dragoons were busily employed in searching Zappert, he let the dog, obedient to the call of the earnest maid, break past the soldiers and run up her side, back to her feet, but being observed, and nothing found upon him, he was allowed to pass. — *Don Quixote* Army 18 2, 168 172

(2) *Cont. A. H. d. 212, 213. Earth 172, 174. 18 16, 17, 183*

fatherland (1)! The outposts of the enemy were speedily driven in by the superior numbers and unerring aim of the Tyrolese riflemen; but when they advanced out of the woods and broken knolls to the open ground in front of the town, where the Bavarians were drawn up in line in admirable order, the usual superiority of discipline and organization became apparent, and the peasants were driven back. Rallying, however, among the rocks and thickets, they again poured down a destructive shower of balls on their assailants, and both sides maintained the contest with the most undaunted resolution. The ammunition of the Tyrolese, with which they were very scantily provided, at length began to fail, they were compelled to reserve their fire till it could be given with decisive effect, and balls could be obtained only by the women and children (2), who picked up those of the enemy which fell in the rear of the combatants. In this anxious moment, Teimer's bands appeared on the heights of Hottingen in the rear of the Bavarians, and though their attack was restrained by the troops which Derooy sent to oppose his progress, yet this circumstance, joined to the disastrous accounts of the progress of Spechbacher on the left, determined Derooy to retreat. At four in the afternoon, a sort suspension of arms was agreed to by the leaders on both sides; and as soon as it was dark the Bavarians commenced their retreat by the left bank of the Inn, and evacuating Innsbruck and the great road, withdrew by mountain paths amidst rocks and forests to Kufstein, from whence they continued their march to Rosenheim in the Bavarian plains (3).

Bavarian
Account of
battle,
Moniteur,
June 22,
1809

In this battle the Bavarians lost four thousand men, but, what was of still more importance, they were deprived by it of the possession of the whole of Tyrol. Intoxicated with joy, the peasants crowded into Innsbruck in such numbers, that they were an oppression rather than a source of strength to the Austrian commanders, who

Results of
these vic-
tories in the
entire de-
liverance of
Tyrol

were totally destitute of ammunition or military arms for the ardent multitude. A proclamation was immediately issued, calling on all persons to bring forth their little stores of money and powder for the use of the troops, and considerable supplies were obtained in this way, though in no degree proportionate to the wants of the people. The desperate struggle in the heart of Austria required every sabre and bayonet around the walls of Vienna, the intervening country was all in the hands of the enemy, and not a dollar or a gun could be obtained from that quarter. Such, however, was the native vigour of the inhabitants, that without any external aid, or the support of regular troops, they not only cleared their territory of the enemy, but carried their incursions into the adjoining provinces of Swabia, Bavaria, and Lombardy. On the west, the peasantry of the Vorarlberg repulsed a body of French and Wirtemburghers who attempted to penetrate into Bregentz, on the east, Chastellar, who had collected four thousand regular troops, raised the blockade of Sachsenburg, and drove the enemy back to Villach; in the south, Leinengen cleared the whole valley of Trent of the enemy, and then turning to the left, descended the defile of

May 29

June 3

(1) Für Gott, den Kaiser, und Vaterland "

(2) Spechbacher was attended in the battle by his little son Andrew, a boy of ten years of age. When the fire grew warm, his father ordered him to quit the field: the boy did so, but soon returned, and was again at his side. Irritated at this disobedience, Spechbacher struck him and ordered him to withdraw. He did so, but, without retiring out of reach of the shot, observed where they struck the ground, and bringing his hat full of them next morning to his father, begged that they might be

used against the enemy. The wounded in this battle refused to be carried from the field, lest those who conveyed them to a place of safety should weaken the combatants, and numbers of women throughout the day were to be seen behind the ranks, bringing up ammunition, water, and refreshments to the wearied men.—See BARTH *Krieg* 1809, 204—216, Gesen A. Horza, 248

count of battle, M

the Val Sugana, and made himself master of Bassano at the entrance of the
 June 6. plains of Treviso. Returning from thence to the banks of the Adige,
 he threw himself into the castle of Trent, where he was soon besieged by a
 June 9. division of Eugène's Italian army. The landsturm of the upper
 Adige, however, flew to his relief; the Italians, overwhelmed by numbers,
 retired with considerable loss to Dolce, and the whole valley of the Adige, as
 far as Verona, was cleared of the enemy. The Vorarlberg followed the example
 of Tyrol; all the valleys took up arms, and seven thousand well-armed mark-
 men, besides a landsturm of equal force, carried terror and devastation over
 all the adjacent provinces of Germany. Moeskirch and Memmingen were suc-
 cessively occupied, and laid under contribution. Constance fell into their
 hands: their victorious bands appeared even at the gates of Munich and
 June 29. Augsburg; and, in conjunction with the inhabitants of Swabia, who
 were highly discontented with the exactions and tyranny of the French troops,
 delivered no less than seventeen thousand of the prisoners taken at Echmühl,
 Ebersberg, and Vienna, who found refuge in the valleys of Tyrol, and were
 speedily formed into fresh battalions. To the south of the Alps, Bassano,
 Belluno, Feltre, were repeatedly in their possession: they communicated
 with the Austrian regulars in Carniola: levied contributions to the gales of
 Verona, Brescia, and Como; and, spreading the flame of insurrection from
 the Black Forest to the plains of Lombardy, and from Salzburg to the Grisons,
 soon had twenty thousand infantry and eight hundred horse, regularly orga-
 nised and equipped, under arms, besides a still greater number of brave
 men, undisciplined, indeed, but skilled in the use of arms, ready, in case of
 invasion, to defend their native valleys (1).

While this heroic contest was going forward in the Tyrol and Vorarlberg,
 the generous flame had extended to the north of Germany, and the indignant
 feelings of an insulted people had wellnigh induced a general revolt against
 the French authority in Saxony and Westphalia.

Rate of the
 Insurrection
 in the north
 of Ger-
 many It has been already mentioned with what ardent though incon-
 siderate enthusiasm the people of Prussia had rushed into the
 contest in 1806, and what oppressive burdens were laid upon them
 after its disastrous termination (2). Since that time the continued presence
 of the French troops and the enormous plunder levied by their command
 under the name of contributions, had still further spread the flame of dis-
 content: dear bought experience had dispelled all the illusions in favour of
 French principles, and the people were no where so ready to throw off the
 yoke as in those principalities where separate thrones had been erected in
 favour of members of the Bonaparte family. Such was the weight of the
 oppression under which they laboured, that the ramifications of a secret and
 most formidable insurrection were spread over all the north of Germany.
 The ancient Gothic blood, slow to warm, but enduring in purpose, was every
 where inflamed: the feeling of patriotism, a sense of duty, the precepts of
 religion, all concurred to rouse a disposition to resistance; the self-lament
 over the visible decrease of their substance under the withering contribu-
 tions of Napoleon, the generous, over the degradation of their country, and
 the slavery of the human race. Every where the Teutobund was in activity:
 Hesse-Cassel, Hanover, and Westphalia, in an especial manner, were agitated
 from the enormous weight of the burdens imposed on their inhabitants by

(1) P. L. iv. 22, 23. Ann. Reg. 1809 218. Gerch.

(2) *Idem* 214 and 1 212.

French government Twenty thousand disbanded soldiers were scattered over the former dominions of England in the German empire, ready, at the first signal, to compose an army; as many ardent and discontented spirits resided in Cassel and Westphalia, awaiting only the first success of the Austrian arms to declare openly in their behalf. From the Thuringian forest to the banks of the Vistula, from the Bohemian mountains to the shores of the Baltic, the threads of a vast association existed, held together by the sacred bond of patriotism, to devote themselves to their fatherland. Though the court of Berlin did not venture openly to fan the flame, yet in secret they could not but wish for its success, and several of the most energetic members of the cabinet awaited only the advance of the Austrian banners to urge Frederick William to join the great confederacy for European freedom (1).

It was chiefly with a view to give support and consistency to this enthusiastic spirit that the grand Austrian army, in the opening of the campaign, advanced towards Bareuth and Franconia, and it is owing to the unfortunate abandonment of that design, and the return of a great part of these troops, when already on the borders of Franconia to the banks of the Inn, that the early disasters of the campaign, as already noticed, were incurred (2). Two of the Archduke's corps were far advanced towards the Rhine, and could not be recalled in time to share in the battles of Abensberg and Eckmühl, while the concentrated masses of Napoleon were thrown upon the Imperial army, weakened in the centre by the advance of the van in one direction, and the retreat of the rear in another. But this early irruption of the Austrians towards Franconia and Saxony excited a prodigious sensation in the adjoining provinces under the immediate control of the French authorities, and early in April, a spark blew up the flame on the banks of the Elbe. Katt, a Prussian officer, had the honour of first raising the standard of independence in the north of Germany, but the effort was premature, and having failed in an attempt upon Magdeburg, he was compelled, by the active pursuit of the Westphalian horse to take refuge in the Prussian states. The next outbreak took place three weeks after, when Dörnberg, the colonel of a regiment of Westphalian horse, was commanded by King Jérôme to march against a body of insurgents. Conceiving himself discovered, he left his colours and put himself at their head. Eymeng, in these critical circumstances, a spirit worthy of his family, though far beyond his ordinary character, Jérôme assembled his guards, two thousand strong, and assuring them that he confided in their honour, and threw himself upon their support, succeeded in attaching even the most disaffected, by the bond of military honour, to his cause. Eble, the minister at war, and Leubell, governor of Cassel, displayed the greatest vigour and firmness of character, and, by their energetic measures, saved the kingdom when on the verge of destruction, and prevented a general insurrection breaking out in the north of Germany. Dörnberg, at the head of several thousand insurgents, marched upon the capital, but having been encountered near its gates by a part of the garrison, whom he was unable to bring to a parley, his undisciplined followers were dispersed by a few discharges of cannon, and he himself fled with a few followers to the Hartz mountains. His party were seized at Homberg, and among them were some which compromised several persons in the service of other powers, particularly SCHILL, at that time a colonel in the Prussian army (3).

Enterprise
and party
success of
Schill.

This enthusiastic officer, an ardent member of the Tugendbund, and heart and soul devoted to his fatherland, was the first Prussian officer who had entered Berlin, at the head of a native force, after its evacuation by the French troops and the impression made upon his mind by the universal transports which prevailed on that occasion, had never been effaced. His intentions were fixed but the ardour of his disposition was tempered by a rare prudence, and but for the accidental discovery of his name among the papers of Dornberg, his enterprise would in all probability have been delayed till the period for its successful prosecution had arrived. Almost every day he led his regiment out of Berlin, in full marching order, to reviews, marches, and mock fights, which so completely imposed upon the ministers of Russia, France, and Westphalia, that with all their vigilance, they never suspected him of being engaged in any sinister design, while his engaging manners and martial qualities rendered him the idol of the soldiers under his command. Denounced, at length, by the King of Westphalia to the King of Prussia, who was then at Königsberg, he was summoned by the latter to the royal presence to give an account of his conduct. Perceiving now that he was discovered, he boldly threw off the mask, marched at the head of six hundred men out of Berlin, under pretence of going to manœuvre, and at once erected the standard of war against France. He was speedily reinforced by three hundred more, who joined him during the night; the whole inhabitants of the capital applauded his conduct and such was the ferment in the garrison, that it was with the utmost difficulty that they could be prevented from proceeding in a body to his standard. The cabinet of Berlin, whatever may have been their secret wishes, were too much overawed by the influence of Napoleon, and the intelligence recently received of his astonishing victories in Bavaria, to sanction this hazardous proceeding. Schill was indicted for disobedience of orders, and outlawed for non-appearance. Lestock, Tauentzien, and Scharnhorst, who were known to be at the head of the war party, sent in their resignation. The two former were brought to trial but acquitted, their being no evidence to connect them with Schill's enterprise (1).

Meanwhile, Schill, having collected about twelve hundred men, presented himself before Wittenberg where there was known to be a considerable magazine of arms and ammunition; but he was refused admittance by the governor. He next moved towards Magdeburg, which, at that period, was garrisoned only by two companies of French, and three of Westphalian voltigeurs. Had he succeeded in gaining possession of that important fortress, all the north of Germany would have been in a blaze for it contained five hundred pieces of cannon and a hundred and twenty thousand stand of arms, besides ammunition in proportion; and the news of so vast an acquisition would speedily have brought thirty thousand men to his standards, whom its impregnable ramparts would have given the means of disciplining in security. It is the more to be regretted that he did not attempt a coup-de-main against it, as the urban guards would speedily have given him the means of defending its walls, and numerous partisans within the town were already prepared to favour his entrance. Ignorant however, of these propitious circumstances, he turned aside upon the first appearance of resistance at the distance of a mile from the glacis, and retired to Domitz on the other side of the Elbe; having by an equally unfortunate accident diverged from the Harz mountains, where he would have united with

(1) *Harz. L. 377 378. Pol. St. 17, 73. J. A. III. 233, 271. Thib. 148 274.*

the remains of Dornberg's corps, which had taken refuge in their fastnesses, and together, formed a body of disciplined men adequate to the encounter of the whole forces of Westphalia, which, at that period contained hardly two thousand regular soldiers. His unfortunate direction, however, down the Elbe, deluded by the hope of obtaining succour from the English cruisers on the coast, led him far away from all assistance, and, at length, being pursued, though slowly, and at a respectful distance, by a considerable body ^{May 25} of Dutch and Westphalian troops, he threw himself into Stralsund, of which he gained possession without much resistance, the greater part of the garrison having joined his standard (1).

^{His pros} ^{pects there} He was now at length within a renowned fortress, abundantly stored with provisions, and communicating with the sea; the isle of Rugen seemed to offer a secure asylum in case of disaster, and he had the good fortune, the day after his arrival, to capture a convoy of seven hundred barrels of powder on its road to Denmark. But its defences had been almost entirely dismantled by order of Napoléon. only twenty rusty guns were mounted on the ramparts, the palisades were levelled with the ground, and the ditches, half choked up by luxuriant vegetation, presented hardly any obstacle to an enemy. Still Schill had considerable means of resistance at his disposal. his troops had swelled to two thousand infantry and twelve squadrons of cavalry, two companies had been formed of students from the universities, armed, as yet, only with pikes, and the landwehr of Pomernia, five thousand strong, might be expected to augment his forces, if he could hold out for a few days, in order to give them time to assemble. Where, where was England then? A single brig, with her pendant, would have inspired such spirit into the garrison, as would have rendered them invincible: three thousand men, and a few frigates, would have rendered Stralsund the base of an insurrection which would speedily have spread over the whole of northern Germany, determined the irresolution of Prussia, thrown eighty thousand men on Napoléon's line of communication, and driven him to a disastrous retreat from Aspern to the Rhine. But the English government, as usual, insensible to the value of time in war, had made no preparation to turn to good account this universal demonstration in their favour in the north of Germany, and, as with the Vendéans at Grandeville (2), in 1795, did not appear on the theatre till the standards of their allies had sunk in the conflict. In vain all eyes were turned towards the ocean in vain every steeple was crowded with gazers, anxiously surveying with telescopes the distant main not a friendly sail appeared, not a pendant of England brought hope and consolation to the besieged (3).

^{His defeat} ^{and death} Deprived of the hoped-for succour, on which he had mainly relied in directing his steps to the sea-coast, Schill did all that prudence and energy could effect to strengthen his position. Palisades were hastily erected, the vicinity of the gates armed, barricades thrown up behind the breaches, and in the streets, and the external defences put in some sort of order. But, before his preparations could be completed, the hand of fate was upon him. The French authorities, now every where thoroughly alive to the dangers of this insurrection, made the most vigorous efforts to crush it in the bud. troops marched from all sides to the neighbourhood of Stralsund, the Dutch and Danish soldiers were united to all the French who could be ^{May 31} hastily drawn together, and, on the 31st May, General Gratien,

(1) Pel. iii. 23, 31. Jom. iii. 234. Hard. v. 330, 331. Ann. Reg. 1809, 213.

(2) *Ante*, ii. 125.

(3) Pel. iii. 34. Hard. v. 330, Jom. iii. 234.

with six thousand men, commenced the assault. The patriots made a gallant defence; but the dismantled walls presented huge breaches on all sides, through which, despite the utmost resistance, the assailants penetrated, and the interior barricades were forced. Still every street was obstinately contested. The result was yet doubtful, when Schill was killed, and his heroic band disheartened, and, without a leader after his loss, dispersed. The insurrection in the north of Germany was extinguished and, on the same day on which General Gratien had hoisted the French colours on the walls, the English cruisers approached the harbour (1). Arrived a few hours sooner, the place had been secured, the insurrection spread over the whole north of Germany, and Wagram had been Lepsic! Such is the value of time in war.

Movements of the Duke of Brunswick, May 4. The Duke of Brunswick, who, at the same time that Schill left Berlin, had with a small Austrian force, advanced out of the Bohemian frontier, and made himself master of Lepsic and other considerable towns in Saxony, being unable to effect a junction, either with Schill or Dornberg, and surrounded by superior forces, was obliged to retire by Zittau into Bohemia, from whence, after the battle of Wagram, he contrived to make his way across all the north of Germany, and was ultimately taken on board the English cruisers, and conveyed, with his black legion, still two thousand strong to the British shores. The insurrection was thus every where suppressed but such was the impression which it produced upon Napoleon, that the whole corps of Kellerman, thirty thousand strong, which otherwise would have been called up to the support of the Grand army, was directed to the north of Germany (2).

Operations in Poland, and thereabout, by the Archduke Ferdinand. This gigantic contest stained also the waters of the Vistula with blood. It has been already mentioned (3), that the Archduke Ferdinand, at the head of a corps of the Austrian army, mustering in all thirty-two thousand infantry, five thousand cavalry, with ninety-six guns, was destined to invade the Grand Duchy of Warsaw, at the same time that the Archduke Charles crossed the Inn, and the Archduke John descended from the Carinthian mountains into the Italian plains. The direction of so considerable a portion of the Imperial troops to a quarter, where their operation could have no immediate effect upon the issue of the campaign, at a time when it might easily have been foreseen that the whole force of Napoleon would be hurled at once at the heart of the monarchy, might justly be stigmatized as a serious fault, on the part of the Austrian cabinet, if military operations and consequences alone were taken into consideration. But this was very far indeed from being the case. Throughout the whole contest, the military preparations of the cabinet of Vienna were justly considered as subordinate to their political measures, and it was chiefly in consequence of the former being unsuccessful that the latter miscarried. The monarchy was well aware, that the moment they threw down the gauntlet, the whole military force which Napoleon could command would be directed with consummate skill against the centre of their power. They could not hope even with the aid of English subsidies, to be successful in the crippled state of the monarchy, in resisting so formidable an invasion, unless they succeeded in fousing other nations to engage with them in the contest. To effect this, early and imposing success was requisite; something which should counterbalance the prevailing and far-spread terror of the French

(1) P. L. III. 35. Mart. 2. 330, 331. Jan. 14. 231.

(2) Ann. Reg. 1807. 212. Pol. III. 29. June, 231.

(3) *Ibid.* h. 120

arms, and induce neutral or semi-hostile cabinets to forget their divisions, and incur the risk of venturing boldly for the cause of general freedom. It was to attain this object that all the military demonstrations of the cabinet of Vienna at that period were directed. The march of the Archduke Charles towards Franconia and Bareuth was intended to determine the hesitation of the Rhenish Confederacy, and rouse the numerous malecontents of Westphalia, Hanover, and Cassel, into action, that of the Archduke John and Chastellar, to spread the flame of insurrection through the plains of Italy and the mountains of Tyrol and Vorarlberg. Not less important than either of these, in its political consequences, the advance of the Archduke Ferdinand, with an imposing force to Warsaw, would, it was hoped, at once paralyse the strength of Saxony, the only sincere ally of Napoléon among the native German powers, by depriving it of all aid from its Polish possessions; offer a rallying point to the numerous discontented in that kingdom, afford an inducement to Prussia to join the common cause, by securing its rear and holding out the prospect of regaining its valuable Polish provinces; and, at the same time, give Russia a decent pretext for avoiding any active part in the contest by the apparent necessity of providing against hostilities on her own frontier, a pretext, of which there was reason to hope the cabinet of St.-Petersburg, despite the French alliance, would not be unwilling to take advantage (1)

Forces of
the Grand
Duchy of
Warsaw
Success of
Ferdinand,
and fall of
Warsaw

The army, of which PRINCE PONIAŃSKI had the direction, in the Grand Duchy of Warsaw, was not equal to the encounter of so considerable a force as the Austrians now directed against him. Great activity, indeed, had been displayed since the peace of Tilsit in organizing an effective force in that recently acquired possession of the house of Saxony, and three legions of infantry, commanded by Poniatowsky, Zayoncheck, and Dombrowsky, formed a total force of twenty-two thousand men, including nearly six thousand excellent cavalry. But great part of these troops were newly levied, and had not yet acquired an adequate degree of military efficiency, the territory they had to guard, extending from Dantzic to Cracow, was extensive, and the flower of the Polish troops were in Napoleon's Imperial guard, or in distant hostilities in the Spanish Peninsula. The French Emperor, moreover, relying on the invasion of the Austrian province of Galicia by the Russian forces, had not only made no dispositions to support the Grand Duchy with external aid, but retained the Saxons under Bernadotte for immediate support to the grand army on the Bohemian frontier, so that Poniatowsky found himself, with no more than twelve thousand disposable troops, exposed in front of Warsaw to the attacks of triple that number of enemies. That renowned leader, however, who, to an ardent love of his country, united the most profound hatred of the strangers by whom it had been despoiled, and military talents of no ordinary kind, matured in the best school, that of misfortune, resolved to stand firm with this inconsiderable body, and without invoking or trusting to the aid of the Russians, more hateful as allies than the Austrians as enemies, to rely on their own valour alone for the defence of the capital. He drew up his little army at Raszyn with considerable skill, and for four hours opposed a gallant resistance to the enemy, but the contest was too unequal, between thirty thousand regular soldiers and twelve thousand men in great part recently levied, and he was at length obliged to retire, with the loss of five hundred killed, a thousand wounded, and four pieces of cannon. Warsaw

April 19

was now uncovered; and as Poniatowsky found himself unable to man the extensive works which had been begun for its defence, he was compelled, with bitter regret, to sign a capitulation, in virtue of which he was permitted to evacuate the capital, which, two days afterwards, was occupied by the Austrian troops (1).

Accompanied by the senate, authorities, and principal inhabitants of Warsaw, Poniatowsky retired to the right bank of the Vistula, and took up a position between Modlin and Sierock, on the Bug. The capital presented a mournful appearance on the entrance of the Imperialists; and in the melancholy countenances of the citizens, might be seen how deep-seated was the national feeling, which, notwithstanding all the political insanity of the people which had subverted their independence, still longed for that first of blessings. This direction of the march of Poniatowsky was conceived with considerable skill, and had a powerful influence upon the fate of the campaign; for the Austrians had calculated upon his retiring to Saxony and abandoning the Grand Duchy to its fate; whereas the continuance of the Polish troops in the centre of that country, both evinced a determination to defend to the last extremity, and kept alive the spirit of the inhabitants, by the assurance which it held out that they would not be deserted. The first care of Poniatowsky was to put these two important fortresses in a respectable posture of defence, and having done so, he boldly, by the directions of Napoleon, left the enemy in possession of the capital and three-fourths of the territory of the Grand Duchy, and threw himself upon the right bank of the Vistula, remounting that stream towards Gal-

icia, whether Prince Gallitzin at the head of twenty thousand auxiliary Russians was slowly bending his steps. Meanwhile the Archduke Ferdinand rapidly descended the left bank, and in the middle of May appeared before Thorn. In the course of this movement, Poniatowsky obtained intelligence that an Austrian division had crossed over to the right bank of the Vistula, and lay unsupported at Ostrowek in front of Gora. Rapidly concentrating a superior force, he suddenly attacked the enemy, routed him, and made fifteen hundred prisoners. Thus the opposing armies mutually passed and crossed each other. Poniatowsky, relying on the support of the Russians, menaced Galicia and the Austrian provinces, while the Austrians penetrated to the lower Vistula, raised the standard of insurrection in the old Prussian provinces, and threatened Dantzic itself (2).

An event occurred in the course of this expedition of the Archduke Ferdinand's light troops across the Vistula, attended in the end with more important consequences than any other in the Polish campaign. In pursuing the Austrians on the right flank of the river, a courier was taken by the Poles with despatches from the Russian general Gortchakoff, who lay with his division at Brzecz, to the Archduke. In which he congratulated him on his victory at Raszyn, and capture of Warsaw, expressed hopes for his ulterior success, and breathed a wish that he might soon join his arms to the Austrian eagles. This letter was immediately forwarded to Napoleon, who received it at Schonbrunn in the end of May. He was highly indignant at the discovery, and transmitted the letter without delay to St. Petersburg, accompanied by a peremptory demand for an explanation. The Russian cabinet hastened to make every reparation in their power; Gortchakoff's letter was disavowed, and he himself recalled from his

command, while CHERNICHOFF, aide-de-camp to Alexander, who was the military charge d'affaires for the Czar at the head-quarters of the French Emperor, exerted all his skill to remove the unfavourable impression produced by this unlucky discovery. Napoleon, who, after the battle of Aspern, had no need of another powerful enemy on his hands, feigned to be satisfied, and the approach of the Russian troops to the theatre of war soon after, caused the affair to be hushed up, but the impression made on his mind was never effaced. He saw that the ascendancy of Tilsit was at an end, and frequently repeated to those in his immediate confidence, "I see that after all I must make war on Alexander (1) "

Secret nego-
tiation
between
Austria and
Prussia

The most important political effect, however, which flowed from the battle of Aspern was the commencement of a secret negotiation between Austria and Prussia, which, though from the tardiness of England unsuccessful at that juncture, was not without its effect in future times, and showed that the ancient jealousies which had wrought such wonders for French supremacy, were fast giving way under the pressure of common danger.

Particulars
of its pro-
gress

Even before that great event, a vague correspondence had been kept up between the two courts, and in consequence of distant overtures transmitted first through the Count de Goltz, and subsequently the Prince of Orange, Colonel Steigenstesch had been sent by the cabinet of Vienna to Königsberg, where the King of Prussia then was, with a letter from the Emperor of Austria, in which he earnestly invited that monarch to declare openly for the common cause, and enter upon a concerted plan of military operations. Early in June, the Emperor of Austria, in reply to a letter of the King of Prussia, wrote to the cabinet of Berlin, announcing that "the bearer was authorized to regulate the proportions of the forces to be employed on both sides, and the other arrangements not less salutary than indispensable for the security of the two states, in conformity with the overtures made by Count de Goltz." The proposals of Colonel Steigenstesch were, that as the war in which they were now engaged was of such a kind as to decide for ever the fate of the respective monarchies, they should mutually support each other by their whole forces, that the general directions of the campaign should be intrusted to the Imperial generalissimo, that they should mutually engage not to conclude a separate negotiation; and that the peace to be ultimately concluded should embrace not only their own but the interests of the adjoining states. These propositions were warmly supported by Scharnhorst and Blücher, and the whole war or patriotic party in the Prussian dominions. The former offered, in a fortnight's time, to have fifty, in a month, a hundred and twenty thousand disciplined soldiers under arms. He assured the King of secret intelligences which would secure for him, on the first signal of hostilities, Magdeburg and

(1) SAV. IV. 92, 93. POL. III. 71, 72. THIB. VII. 310.

Conversing with Savary on this subject at Ebersdorf, who was, in a peculiar manner, admitted to his inmost thoughts from having been formerly ambassador at St. Petersburg, he said, "I was perfectly in the right not to trust to such allies. What worse could have happened if I had not made peace with the Russians? What have I gained by their alliance? It is more than probable that they would have declared openly against me, if a remnant of regard to the faith of treaties had not prevented them. We must not deceive ourselves, they have all fixed a rendezvous on my tomb, but they have

not courage openly to set out thither. That the Emperor Alexander should not come to my assistance, is conceivable, but that he should permit Warsaw to be taken in presence almost of his army, is indeed hardly credible, it is plain that I can no longer reckon on an alliance in that quarter. Perhaps he thinks he does me a great favour by not declaring war, by my faith, if I had entertained any doubt on that subject before engaging in the affairs of Spain, I should have cared very little for the part which he took. And yet, after all, they will probably say that I am wanting to my engagements, and cannot remain at peace."—SAVARY, IV. 92, 93.

Several other important fortresses, and strongly supported the justice of Count Stadion's opinion, so clearly expressed in his despatch (1), that the fate of Prussia was inseparably wound up with that of Austria, and that the two monarchies must stand or fall together.

On this occasion, the cupidity and exorbitant demands of the Prussian cabinet again marred the prospect of an European alliance, and prolonged, for four years longer, the chains and misery of their country. Still clinging to the idea that victory must be clearly pronounced before they declared themselves, and that they might turn to some good account the dangers and distresses of Austria, the Prussian Government replied, that they had every disposition to assist Austria, but that they were in want alike of arms, ammunition, and money, that they could not take a part in the contest till the views of Russia in regard to it were known; and that they must have the guarantee of a treaty for the intentions of Austria, in the event of success, before they took a place by her side. To the envoy of the Imperial government, however, it was insinuated that "a great stroke would determine the irresolutions of the cabinet of Berlin," but that, in that event, they would expect not merely the restoration of all the Prussian provinces of Poland, but also the *Austrian share in the partition*. Anspach, Barenitz, a part of Saxony, and various lesser provinces, ceded at different times to France or other powers. It was, of course, beyond Colonel Steigensches's powers to accede to such extravagant demands. They were referred, with the proposal for a separate treaty, to the cabinet of Vienna; and meanwhile, the negotiation, notwithstanding all the care of those engaged in it, to a certain degree transpired (2); a joint requisition was made by the Ministers of France and Russia for a communication of the proposals of Austria, and although this inconvenient demand was eluded at the moment, Steigensches was obliged to quit Berlin, and before diplomatic relations could be established in any other channel, of which the King of Prussia still held out the prospect, the battle of Wagram had taken place, and Austria, beset on all sides, and unsupported by any continental power, was driven to a separate accommodation (3).

Affairs wore a menacing aspect for the interests of Napoleon in more distant parts of his vast dominions. England, seeming to rise in vigour and resources as the contest advanced, was making her giant strength be felt in more than one quarter of Europe. Wellington had again landed in Portugal; the consternation produced by the Corunna retreat had passed away. And Soult, defeated on the banks of the Douro, had with difficulty escaped from the north of Lusitania by the sacrifice of all his artillery and baggage. The Spanish armies were again assembling in the south of Castile. Large forces were collecting in the plains of La Mancha; and every thing indicated that, ere long, a formidable demonstration against the Spanish capital would be made by the united English and Peninsular forces. A considerable expedition was preparing in the harbours of Sicily to transport a large body of English and Sicilian troops into the south of Italy, where it was well known their presence would speedily produce a general insurrection, which was the more to be dreaded, notwithstanding the well-known imbecility of the Italians in military operations, that the recent annexation of the whole Ecclesiastical States to the French empire had aroused, as might have been expected, the most vehement hostility on the part of the Roman

see and its numerous adherents in the Italian states, while General Mollis, the French governor of Rome, had so small a force at his command that it would be compelled, in all probability, to yield to the first summons of the Anglo-Sicilian forces. Lastly, the English, not content with their exertions in other quarters, were, it was well known, preparing an expedition of unprecedented magnitude in the harbours of the Channel. Some had magnified to a hundred thousand armed men and forty sail of the line the forces to be employed on the occasion, the Scheldt, the Elbe, the Seine itself, were alternately assigned as the probable designation of this gigantic armament, and Napoleon, with all his resources, was too clear-sighted not to perceive that he might ere long be overmatched by the strength of a more formidable confederacy than he had yet encountered; that the English standards would soon rouse the might of northern Germany into mortal hostility; and that a second reverse on the shores of the Danube, would at once dissolve his splendid dominion, and bring the forces of Europe in appalling strength to the banks of the Rhine (1)

Situation
and prospects of
Napoleon
after the
battle of
Aspern
Duke of
Brunswick
takes Dresden

The impression produced over the continent by the battle of Aspern was immense. It dissipated in a great degree the charm of Napoleon's invincibility, and, more even than the battle of Eylau, diffused a general hope that the miseries of foreign domination were approaching their termination, and that a second victory over the remains of the French army, now shut up in the island of Lobau, would at once restore freedom to an injured world. While the Eng-

lish nation abandoned themselves to transports of joy at the prospects which were thus dawning upon Europe, active endeavours were made by Austria to turn to the best account the extraordinary prosperous change which had taken place in their fortunes. Not discouraged by the failure of former attempts to rouse the north of Germany, the Duke of Brunswick Oels again advanced from Zittau, at the head of his gallant band of volunteers, towards

June 1

Westphalia, while a considerable body of imperial landwehr from Bohemia, under General Amende, invaded Saxony, and another, under Radivovich, five thousand strong, overran Franconia and penetrated to Bareuth. The forces of that kingdom, chiefly drawn under Bernadotte to the banks of the Danube, were in no condition to oppose this irruption, and the royal family, flying from their dominions, took refuge in France. Dresden and Leipsic were occupied by the Austrian troops, Bareuth and Bamberg fell in-

June 12

to their hands, insurrections spread over all Franconia and Swabia, symptoms of disaffection were breaking out in Saxony and Westphalia, and a chain of Austrian posts, extending from the Elbe, by Nuremberg and Stockash, to the mountains of Tyrol, entirely cut off the communication be-

June 22

tween France and the grand army. Meanwhile, the most energetic appeals were every where made by the Austrian commanders to the people of their own and all the adjoining countries (2), to take up arms, while Na-

(1) See chap. LVIII and LVIII infra, where these events are narrated.

(2) "Germans! said the Duke of Brunswick, "will you continue to combat Germans? Will you, whose mothers, wives, and sisters have been outraged by the French, shed your blood in their defence? It is your brothers who now invoke you—come to break your fetters—to avenge the liberty of Germany! To arms! then, Hessians, Prussians, Brunswickers, Hanoverians! all who bear the honourable name of Germans, unite for the deliverance of your fatherland, to wipe away its shame and avenge its wrongs. Rise to deliver your country from a disgraceful

joke, under which it has so long groaned. The day of its emancipation has arrived—none more favourable can ever be desired."—"Aspern," said General Radivovich, who had penetrated into Franconia, and occupied Bareuth with five thousand men from Egra, in Bohemia, "Aspern has destroyed the invincibility of Napoleon! Arm yourselves for the cause of liberty, of justice, of Austria, to deliver Europe and the human race."—"You combat," said Noditz, one of the chiefs of the Tagendbund, to the Prussians of Bareuth, "in order to restore your country to your beloved King." The Duke of Brunswick's Volunteers wore a light blue uniform,

polém, weakened by a disastrous battle on the banks of the Danube, could maintain himself only by a concentration of all his forces under the walls of Vienna (1)

with a death's-head and cross-bones on their cheeks, to indicate the mortal hostility in which they were engaged, from whence they acquired the name of the *Death's-Head Hussars*. The officers were distinguished from the privates, in a corps where all were respectable only by small cross on their arms. The Duke himself was as simply dressed as any of his followers—he shared their fare—slept beside them on the ground—underwent their fatigues. These martial qualities, joined to the accident of a noble figure and uncomparable intrepidity as won

the hearts of his followers, that they distained to desert him even in the wreck of the fortunes of Germany after the battle of Wagram; followed his standard with devoted confidence across all Westphalia and Hohenlohe culminated in safety for England, and lived, as we shall see in the sequel, to reap their swords in the best blood of France on the field of Waterloo.—See HARRINGTON, x. 202, 204 and FELLER iv. 20, 27.

CHAPTER LVI.

CAMPAIGN OF WAGRAM.

ARGUMENT.

Views and Policy of Napoléon at this juncture—Forces he had assembled in the Island of Lobau—Forces and Views of the Archduke Charles, at the same period—Napoléon's Projects for passing the River—Prodigious Works executed in the Island of Lobau, by the French Emperor—Hidden real Designs of Napoléon as to the Point of Passage—Defensive Preparations of the Austrians—Measures of Napoleon to clear his Rear and Flanks—The Austrians are checked in their Attempt to Force a Passage at Presburg—Retreat of the Archduke John to Raab, and Position he took up there—Battle of Raab—Varied Success, but final Victory of the Viceroy—Defeat and Losses of the Austrians—Siege and Capture of Raab—Operations of Marmont and Macdonald in Illyria, Carinthia, and Carniola—Extraordinary Difficulties which they encountered—Operations of Giulay in Carniola, Carinthia, and Styria—Attack on Broussier near Gratz—Junction of Eugène to the Grand Army, and Re-occupation of Croatia by the Austrians—Operations in Poland, and Successes of the Polish Detachments at Sandomir and Zamosc—Re-capture of Warsaw by the Poles, and Retreat of the Archduke Ferdinand—Concluding Operations of the Campaign in Poland—Extraordinary Concentration of the French Force in the Island of Lobau—Force and Disposition of the Austrian Army—False Preparations for a Passage in front of Aspern—Extraordinary Passage of the Danube by Napoleon—Vast Advantages gained by this manoeuvre to the French—Retreat of the Austrians to the Position of Wagram—Its description—Advance of the French over the Marchfeld—Their Unsuccessful Attack on the Plateau of Wagram—Position and Plan of Napoléon for the Battle on the following day—The Archduke resolves to assume the Offensive—His Plan of Attack—Commencement of the Battle of Wagram—Defeat of Masséna in the Centre—Napoléon's Measures to Arrest the Disorder—Splendid Progress of the Austrian Right towards Essling—Success of Davoust against the Austrian Left Wing—Neusiedel is taken, and the Austrian Left Wing driven back—Grand Attack by Napoléon from the Centre—Decisive Advance of Macdonald in that Quarter—Measures of Napoléon to Support that Attack—Retreat of the Archduke, and Bloody Encounters in the course of it—Tardy approach of the Archduke John—Vital Importance of his Co-operation—Results of the Battle—Loss of the Battle was owing to the Archduke John's neglect of Orders—Napoleon visits the Field of Battle, and makes Macdonald a Marshal—Appointment of Oudinot also a Marshal—Disgrace of Bernadotte—The Austrians retire toward Bohemia—Retreat of the Archduke to Znaim, and his Position there—Combat of Znaim—Advance of Marmont, and Conclusion of the Army's Retreats to Znaim—Motives which led the Austrians to this Step—Arguments for and against the Amnesties, at the French Headquarters—Limits assigned to the two Armies by the Amnesties—Hesitation of the Emperor of Austria to sign it, which is only done on the 18th—Heavy Contribution levied on the Imperial Dominions—Comparison of Wagram, Cannæ, and Waterloo—Reflections on the Campaign, and its glorious character to Austria—Proof thereby afforded of the Practical goodness of the Austrian Government—Causes of the extraordinary Public Virtue exhibited by Austria at this time—Remarkable Contrast afterwards exhibited by France—Elevation of the Austrian Character from past Calamities.

Views and policy of Napoléon at this juncture BORN the military and political position of Napoléon was now full of peril, and it was obvious to all the world, that a single false step, one additional defeat, would expose him to certain ruin. But it was precisely in such circumstances that his genius shone forth with the brightest lustre, and that he was most likely by a sudden blow to reinstate his affairs, and overturn all the calculations of his enemies. No man ever saw so clearly where was the decisive point of the campaign, or so firmly made up his mind to relinquish all minor advantages, in order to accumulate his forces upon that vital quarter where defeat to his antagonists would prove certain ruin. In doing so, he followed the natural bent of his genius, which was never inclined to owe to combination what could be effected by audacity; but he was powerfully aided by the despotic nature of the authority which he led,

and the irresponsible character of the command with which he was invested; for many other generals might have seen equally clearly the policy of concentrating all their strength for a blow at their adversary's heart, without possessing either the power to effect such a concentration, or the independence of others necessary to incur its responsibility. In the present instance, he saw at once that the vital point of the war was to be found under the walls of Vienna; and that if he could succeed in defeating the Archduke Charles on the plain of the Marchfeld he need not disquiet himself either about the victories of the Tyrolese in their Alpine valleys, the insurrection of the Germans on the banks of the Elbe, or the distant thunder of the English on the shores of the Scheldt. Fixing all his attention, therefore, upon the restoration of his bridges, the concentration of his forces, and the re-animating of his soldiers in the centre he gave himself little disquiet about the tardy movements of the coalitions in the vast circumference of hostilities; and wrote to his lieutenants only to keep open the communications of the grand army with the Rhine, and he would soon find the means of dispersing the host of enemies who were accumulating round his extremities (1)

The force, which remained at the disposal of the French Emperor,
 even after the very serious losses of the battle of Aspern, was still
 immense. The *chiasms* produced by that disastrous engagement had
 been more than supplied by the opportune arrival of Eugene's army at the
 Imperial headquarters while the corresponding forces of the Archduke John
 were, for the time at least, lost to the Austrian generals by the eccentric re-
 treat of that prince to the Hungarian plains; instead of obeying his instruc-
 tions and menacing the French communications from the Tyrolean moun-
 tains (2). From the confidential correspondence of Napoleon with Berthier at
 this period, which has since been published, it appears that, in the begin-
 ning of June, the grand army numbered, present with the eagles, no less
 than one hundred and ten thousand infantry, and twenty four thousand
 horse, with four hundred pieces of cannon; in all, at least a hundred and
 fifty thousand combatants. This was independent of the corps of Marmont in
 Dalmatia; of Vandamme in *echelon* in the rear towards Bavaria, of Lefebvre
 in Tyrol, and of Macdonald in Styria. After making every deduction for the
 portions of these different corps which might be requisite to keep open the
 rear, and maintain communications, at least fifty thousand men might be
 ordered up to support the army; and thus, after deducting for the sick and
 absent, a hundred and eighty thousand men could be assembled in a month's
 time under the walls of Vienna, of whom thirty thousand were cavalry, with
 six hundred pieces of cannon. A greater force, if the quality and equipment
 of the troops is taken into consideration than had ever in the world before
 been assembled in a single battle. Nor was this all immediately in their
 rear they had a fortified capital amply stored with provisions and contain-
 ing abundant supplies of all sorts for the use of the army; and the great ar-
 senal of the Austrian monarchy, overflowing with artillery arms, ammun-
 ition, pontoons, and every species of equipment that could be desired for the
 most extensive military operations (3).

(1) PrL fr 18, 17 Str fr 91 Jan. III. 216,
217

On the 6th June Napoleon wrote from Schombrunn to Marshal Kellermann, who commanded the army of reserves in the north of Germany. "Before the enemy can have accomplished any thing of essential importance in Saxony the Emperor will have passed the Danube and be on their rear. But

forces which should approach the line of communication of the grand army might really prove dangerous. So much so, that any thing which could occur in the north of Germany — I would be hell.

June 6, 1860: Price is 72.75

Forces and
views of the
Archduke
Charles at
the same
juncture

The inhabitants of the other countries of Europe, electrified by the intelligence of the battle of Aspern, and the retreat of the French army into the island of Lobau, entertained the most sanguine hopes that they would immediately be assailed there by the victorious Austrians, and either driven to the right bank of the Danube, and forced to evacuate the capital, or compelled to lay down their arms in that crowded and untenable position. Possibly, if the Archduke Charles had been aware of the magnitude of the losses which the French army had sustained, and the almost total exhaustion of their ammunition, he might, on the day after the battle, have made good a descent upon the island, and achieved the most glorious success. Such an enterprise, however, would at best have been attended with considerable hazard; for, although the French actually in the island the morning after the battle did not exceed forty thousand men, yet an equal force was under the command of Davoust on the right bank around Vienna, and thirty thousand more under Vandamme and Bernadotte were only a few marches in the rear from St. Pölten to Linz. On the other hand, the Imperialists, exhausted by the fatigues of a battle of two days' duration of unexampled severity, and weakened by the loss of near twenty-five thousand killed and wounded in the strife, were too happy to have escaped without destruction from so dreadful a contest, to think of immediately recommencing active operations. The force at the command of the Archduke, though rapidly augmenting, was not at first, after the battle, very considerable. Fifty thousand of the warriors who had borne a part in the glorious strife, alone remained unhurt; Kollowrath might soon bring up twenty thousand more from Linz, and, when the fatal detour of the Archduke John was completed, he, it was hoped, would be able to add thirty thousand veteran troops from the Hungarian plains. Thus a hundred thousand regular troops, of which about twenty thousand were cavalry, might be reckoned on for the decisive battle which was to decide the fate of the monarchy, and, as this force would probably be swelled by fifty thousand landwehr, or reserves from the eastern and northern provinces of the monarchy before the end of June, the forces on the opposite sides were not materially different, so far as numerical strength went, and the superior number of regular and veteran soldiers in the French ranks might be considered as compensated by the advantage which the German host derived from the homogeneous quality of its troops, the animation with which they were inspired in behalf of their country, and the enthusiasm which they generally felt at the glorious result of the late memorable battle in which they had been engaged (1).

Napoleon's
projects for
crossing the
Danube

While remaining in a state of apparent inactivity at Schœnbrunn, Napoleon's attention was chiefly directed to three objects, first, to convert the island of Lobau into a vast fortress, rendered impregnable to attack by a plentiful array of heavy artillery, and connected with the right bank by strong bridges, from whence he might at any moment issue forth to attack the Archduke Charles, and at the same time, find a secure refuge in case of disaster. Next, to secure and keep open his communication with the Rhine, by means of a chain of posts, occupied by strong detachments, and a skilful disposition of the troops of the Rhenish confederacy, under Lefebvre, Bernadotte, and Vandamme, all along the menaced districts in the valley of the Danube. Lastly, to clear his right flank of the enemy, drive the Archduke John still further into the Hungarian plains, and throw back upon the left flank the corps which the Austrian Generalissimo

was pushing forward to endeavour to open up a communication with the Italian army. To accomplish these various objects, however, and at the same time retain a sufficient number of troops at headquarters to keep the great and rapidly increasing army of the Archduke Charles in check, required an immense accumulation of forces. Every effort, therefore, was made to strengthen the grand army: Marmont received orders to hasten his march from Dalmatia with his whole corps; Macdonald, with his numerous divisions of the Italian army, was directed to advance from Styria, and the most pressing instructions were sent to the rear to order up every man and horse which could be spared from the depots and garrisons in the interior, to the headquarters of the grand army (1).

The works in the island of Lobau were of the most gigantic description, and still remain an enduring monument of the great designs of the Emperor Napoleon, and the persevering energy and skill of his engineers: Never, since the days of the Romans, had works so vast been erected in the field in presence of the enemy. Three solid bridges connected the island of Lobau with the right bank of the Danube; and, in addition to this, a fourth which ran across all the islands from shore to shore, over an extent of two hundred and forty fathoms. The most extraordinary pains were taken to render this bridge secure against the misfortune which had befallen the last. Immediately above the bridge of boats, was one on piles which served as a barrier both against the violence of the current, and the machinations of the enemy. And close adjoining to it on the other side, one on pontoons, which also contributed to the strength of the whole, and served as an additional line of passage for the columns of infantry and light chariots. Both extremities of these bridges were fortified by strong *têtes-de-pont* that on the northern extremity, where it was exposed to the attacks of the enemy, soon became a complete fortress, with rampart, wet ditches, ravelins, and lunettes, armed with eighty pièces of heavy cannon, drawn from the arsenal of Vienna. All the prominent points of the intermediate islands were also fortified and mounted with artillery, and boats collected and manned with marines brought from Brest by the provident foresight of the Emperor, before the opening of the campaign, to be in readiness to intercept and turn aside any fire-ships or loaded barks that might be directed against it by the enemy. The Emperor was indefatigable in urging forward these important operations; every day, for the first fortnight, he was to be seen in the island of Lobau, animating the men, conversing with the engineers directing the works, and such was the vigour which his presence and exertions inspired into his followers, that, in a fortnight, after the battle of Aspern, the works were beyond the reach of the enemy's attack, and in a month they were entirely finished (2).

(1) *Vol. iv. 77. 78. Hist. 210, 212. Vict. at Compey. xix. 120.*

T. such perfection were the movements of these distant and numerous bodies brought, that on each despatch was marked the hour and minute when the courier set out, with the hour when the troops were required to be at the general rendezvous in the island of Lobau; and they all arrived many from the distance of some hundred miles at the precise hour assigned to them.—*Vol. iv. 99.*

(2) *Vol. at Compey. ix. 100. Vol. i. 178, 180. Hist. 97, 99.*

During this momentous period, the care of the Emperor extended, in an especial manner, to the comfort and interests of his soldiers. Walking one

day with his marshal on the shores of the lake of Lobau, he passed company of grenadiers seated at their dinner. "Well, my friends," said Napoleon, "I hope you find the wine good."—"It is not such an awful supply as of those numbers;—there I saw rather," pointing to the lake. The Emperor who had ordered distribution of bottles of wine to each man, was surprised and pained at immediate enquiry. "Further back will set it on foot, and it turned out that forty thousand bottles, sent by the Emperor for it, were before the army had been purchased and sold by its own ministers. They were immediately brought to trial, and condemned to be shot.—*Pictorial of Compey. xix. 209.*

Immense as these preparations were, it was not to them that the Emperor alone trusted for the grand operation of crossing the river. He was well aware that such gigantic works would speedily fix the attention of the enemy; and he daily beheld rising before his eyes, vast intrenchments running through Essling and Enzersdorf, by which the Austrians hoped to bar the entrance to the Marchfeld from the bridge, and confine the enemy within the fortifications they had constructed. Like the vast armament of armed gun-boats, collected in 1805, on the shores of the Channel, these great operations were intended only to mask his hidden designs, and conceal from the enemy the real point of attack. While these prodigious bridges and fortifications attracted all the attention of the Austrians, to the anticipated passage in front of Essling, there were secretly collected in one of the narrow channels behind the Island of Lobau, in a situation entirely concealed from the enemy, the materials for three other bridges over the narrow arm of the river which separated that island from the northern bank, and which were so constructed that they could be transported and put together with extraordinary celerity. One of these bridges was composed of a single piece, sixty fathoms in length; the second, of the materials of the old bridge which had given way on the 22d May, reconstructed with more skill; the third, of boats and pontoons drawn from the arsenal of Vienna. The first of these bridges was justly considered so wonderful a piece of art, that a model of it is still preserved in Paris in the hall of the Conservatory of Objects of Art. The intention of the Emperor was, that these bridges should be thrown across the arm of the Danube which separates Lobau from the opposite shore, considerably further down than the great bridge in front of Essling, and in such a situation as to take all the Austrian defence in rear. Thus the three fixed bridges from the southern bank to the island of Lobau, secured the passage of the troops and artillery into that important station, the great bridge from thence to the *tête-de-pont*, on the northern bank, attracted all the attention of the enemy to that point while the movable bridges, prepared in secret in the channels behind, were calculated to throw the troops speedily across, in a situation where they were not expected, and where they would find themselves in the rear of the whole Austrian intrenchments. To cover the latter design, and at the same time distract the attention of the enemy, preparations as if for a passage were made both at Nussdorf and Spitz, on the upper part of the river above the islands; while the whole semicircular shore of the island of Lobau, fronting the northern bank, was lined with heavy artillery, drawn from the arsenal of Vienna, and a hundred and twenty pieces of cannon, disposed on every headland along the wide circumference, were prepared to cover the formation of the new bridges, and bewilder the Imperialists by their wide-extended fire (1).

While Napoléon was engaged in these great undertakings, the Austrians on their part were not idle. Directly opposite to the end of the main bridge, where the attack was anticipated, the Archduke Charles erected a vast line of intrenchments, which running from Aspern across the former field of battle, and through Essling, terminated in the banks of the Danube at Enzersdorf. These immense works, consisting of field redoubts and ravelins, united by a curtain, were strengthened by palisades all along their front, and armed with a hundred and fifty pieces of heavy artillery. The bulk of the Austrian army was stationed about a league

(1) SAV. IV. 99. FEL. IV. 79, 83. STAT. 240, [246.]

in the rear, along the course of the little stream, the Rusbach, which provided water for the prodigious multitude. Tranquil behind his formidable intrenchments, the Archduke quietly awaited the course of events, while his army hourly received accessions of strength, and improved in discipline and efficiency. The veterans recovered from their fatigues, burnished their arms, and instructed the young soldiers, who were daily flocking to the camp, in the rudiments of the military art. The chasms in the cavalry and artillery were filled up by numerous supplies from Hungary and Transylvania where vast public establishments for the breeding of horses had been brought to the highest perfection (1); the wounded in great numbers rejoined their ranks. The artillery were augmented to a degree hitherto unheard-of in war; and, before the end of June, a hundred and forty thousand men, of whom twenty five thousand were splendid cavalry, with seven hundred pieces of cannon, were assembled round the Austrian standards, all animated by their recent victory, with a degree of spirit and enthusiasm never before witnessed in the Imperial armies (2).

Effects of Napoleon's river his rise and fall. The situation of the respective parties required that the principal attention of the French should be turned to the preservation of their communications clear with the Rhine, and the Germans to the maintenance of their connexion with the eastern provinces of the empire, where the forces of the monarchy were still untouched, and the great armament called the Hungarian Insurrection was daily acquiring a more complete consistency. For this purpose Napoleon issued the most pressing orders to Bourcier and Rouyer to re-open, with all the forces of the Confederation which they could assemble, the great road to the Rhine, and, neglecting all minor objects, to concentrate their whole troops upon that vital line of communication, while Kellerman, who was soon afterwards succeeded by Junot, was directed to strain every nerve for the accumulation of an imposing force, under the denomination of the army of observation of the Elbe, at Frankfort, and drive the Imperialists from their threatening positions at Darcuth and

July Nuremberg. These directions were promptly obeyed. Early in July, Junot advanced into Franconia and Saxony on the one side, while Jerome, relieved by the destruction of Schill's corps from domestic danger, threatened them on the other. And the Duke of Brunswick, with the Austrian commanders, were obliged to retire into the Bohemian mountains; while July Augsburg and Ratisbon were retaken by the national guard of Wirtemberg and Baden, and the line of communication both with Strasburg and Frankfort re-opened to the grand army (3).

The Austrians are checked in their attempts to force passage at Presburg. More important operations followed the attempts of the Austrians to regain by the circuitous route of Presburg and the east, their communication with the Archduke John and the Hungarian Insurrection. The Archduke Charles occupied with the corps of Bianchi, the town of Presburg situated six leagues below Vienna, on the left bank of the river with a *fort-de-pont* commanding the bridge at that place over the Danube. Desirous of dislodging the enemy from this important post which gave them the means of manœuvring on both banks of the river and of turning his right flank, Napoleon directed Davoust to march against it. He found the *fort-de-pont* unfinished, and his troops tried to

(1) A very interesting account of these vast establishments is given in the first volume of Marshal Marmont's *Traité de la Hongrie et de la Turquie*, which proves that that veteran commander saw the eye of an experienced observer in the

greatly mistaken. See M. Marmont's *Tr. de la Hongrie et de la Turquie*, t. I. p. 252, and II. p. 116.

(2) *Stat.* 252, 256. *Art. et Conq.* xi. 197, 199.

Pol. iv. 82, 83.

carry it by a *coup-de-main*, but the sustained fire of the Austrian works re-
 June 3 pulsed them with loss, while the arm of the Danube, twenty toises in breadth, which separated them from the isles occupied by the Imperialists, flowing in a rapid current, rendered it impossible for them to dislodge the enemy from his advanced posts in the river. However, by occupying in force with two strong divisions the village of Engerau, immediately opposite to the southern extremity of the bridge, he rendered the possession of it unavailing to his antagonists, and soon after the rapid succession of more important events in other quarters, deprived this point of the importance which apparently belonged to it (1).

Retreat of the Archduke John to Raab and position which he took up there The Archduke John, in retiring from Carniola into Hungary, had taken with him part of the landwehr of that province, and detached Grulay into Croatia, where it was hoped he could maintain himself, lest these detached bodies should fall into the enemy's hands, who had now overrun those provinces. With these forces united to his own, he retired to Kormond in Hungary, which is on the right bank of the Danube; so that he was in the disadvantageous situation of being separated by that river from the main Austrian army, and exposed to any accumulations of force which Napoleon on his side of the river, might choose to direct against him. He had the advantage, however, of having the communication open in his rear with the reinforcements which were expected from the Hungarian insurrection, and, in the middle of June, he formed a junction with his brother the Archduke Palatine, who commanded that irre-
 June 13 gular force at Raab. Their united forces amounted to twenty-two thousand regular troops and eighteen thousand of the insurrection, and they took post in a strong position, on the ridges which lie in front of that town. Their right rested on the village of Szabadhegy, and the heights of the same name, their left was covered by a morass, their centre ran through the farm of Kismeyger; numerous light horse were disposed along the front of the line, while a thousand chosen troops occupied a square stone edifice still farther in advance of the centre, which was loopholed, and strengthened by a few works, besides a deep rivulet, which formed a sort of natural fosse to the post. In this position, the Archduke John resolved to give battle to the enemy under Eugene Beauharnais, who were now coming up in great strength from the west, although he had just received a despatch from his brother, the generalissimo, containing the sage instructions, by no means to fight in the open plain, but to throw himself into the intrenched camp in his rear, under the cannon of Raab, to blend the inexperienced levies with the veteran troops, accustom them to military discipline, before he trusted them against the enemy, to keep open his communication with the main army at Essling; and detach seven thousand men to Presburg for that purpose, and fight only in the event of the enemy forcing the passage of the Raab, and menacing the left of the intrenched camp (2). These wise counsels and express injunctions were alike disregarded, the officers of the Archduke John's staff being unwilling to forego the brilliant results which they anticipated from a battle, and himself reluctant, by placing his force under the immediate direction of his brother, to lose the lustre of a special command.

Battle of Raab June 14 The day following, being the 14th June, was the anniversary of the battle of Marengo; the Viceroy was naturally anxious to combat on that auspicious occasion, and the Austrian generals made no attempt to

(1) Pol iv 87, 89 Jom iii 216 Stut 246, 248.

(2) Pol iv 90, Conq xix. 172, 1

frustrate his designs. At ten o'clock the signal for battle was given, and the French advanced with enthusiasm to the attack. Grenier commanded the centre; Barraguay-d'Hilliers the left. Montbrun, with the light cavalry, Grouchy, with the heavy dragoons, were on the right; Pacthod, with his numerous division in reserve, behind the centre and left. Eugène formed his troops in columns of division in *échelon* the right in advance but, before the action had become serious, that order was abandoned by the rapid advance of the centre and left, and the battle became general in parallel lines. His forces were about thirty five thousand in number, inferior by five thousand to those of the enemy but this disadvantage was more than compensated by the experienced quality of the men, while nearly half of those opposed to them were raw levies or volunteers who had never encountered a hostile fire. The first troops which came into action were those of Serras, which attacked the square building in advance of Helmegg; the Austrians were speedily driven within the walls, but there they made a desperate resistance, and, while numbers of the assailants fell under the fatal fire from the loopholes, others sunk in the deep marshes of the rivulet, which on three sides encircled the building. In a few minutes seven hundred men perished in this disastrous manner, without one of the defences of the place being carried by the assailants. But while success was thus arrested around this formidable post, the village of Kismeyer in its rear was menaced by Durutte, who, with a chosen division of infantry, had advanced through the open ground between its houses and the buildings of Szabadhegy, and had already got abreast of the former. But he was there met by the fire of a battery of twelve pieces, the grape shot from which made wide chasms in his line, and the Austrians, profiting by the hesitation occasioned by this unexpected discharge, made a vigorous onset, which drove back the whole centre in disorder, while at the same time, Baraguay-d'Hilliers, with his Italian division on the left, checked by the murderous fire which issued from the village of Szabadhegy, was also forced to give ground, and already the cries of victory were on the whole of that part of the Austrian line (1).

Victory secured, but final victory of the day Eugène saw that the decisive moment had arrived, and he hastened to the spot to arrest the disorder. He instantly addressed a few words to the flying Italians, exhorted them to remember their victories and their glory, and, what was still more to the purpose brought forward the reserve, under General Pacthod, consisting almost entirely of French troops, to their support. The arrival of these veterans changed the face of the day. The Italians, re-animated by this seasonable support, returned to the charge, the centre and the right of the enemy were forced, and Szabadhegy carried. Upon this the Archduke John brought up his reserve, consisting of the flower of his army. Szabadhegy was recaptured and the Italians driven back in confusion again Durutte and Pacthod made good their entrance, and a third time the Imperialists expelled them at the point of the bayonet. In following up this last attack, however, the Hungarian new levies extended themselves too far, deeming victory secure, and thinking to outflank their opponents. The experienced French generals saw their error, and returned to the charge with their troops in column, carried, and finally possessed the village which had been so obstinately contested and threw the whole centre and right of the enemy into confusion. Meanwhile a furious combat of horse was going on, on the Austrian left, where Montbrun and

(1) 19th Bull. Month. 23d June 1849. Vict. et Conq. xix. 173. 176. Journ. G. 918 219. Polk. i. 92, 193.

Grouchy were opposed to the whole weight of the Hungarian horse. This formidable body of cavalry, seven thousand strong, in the first instance overwhelmed Montbrun with his division, who had advanced to support the brigade of Colbert, which was endeavouring to turn the square from a house in front, which still prolonged its defence, but Grouchy came up with his terrible cuirassiers, and charged the enemy, when blown by their pursuit, with such vigour, that they were driven back so far as to leave the heroic defenders of that now isolated post entirely to their own resources (1)

Defeat and
losses of
the Aus-
trians

Though thus left in the middle, as it were, of the French army, Hammel and the heroic defenders of the farm-house abated nothing of their resolution. Irritated at this prolonged opposition, Serras combined a new attack. He himself, with his whole division, assailed it on one side, while Roussel, with a fresh brigade, re-commenced the attack in front. Nothing could resist this last assault. Surrounded on all sides, the walls of the building were carried by escalade, the doors cut down with redoubled strokes of the hatchet, and an infuriated soldiery rushed into the building. A frightful massacre commenced. In the tumult the beams took fire, the flames spread with extraordinary rapidity, and, amidst the death-struggle between the French and Austrians, the roof fell in with a tremendous crash, and all within, friends and foes, perished. This decisive success established Eugène in a solid manner in the village of Kismeyger and centre of the enemy, who now fought only to secure his retreat. It was conducted with more order than could have been expected after so desperate a struggle, and the Archduke took refuge under the cannon of Komorn, abandoning the intrenched camp of Raab, which was immediately evacuated by some battalions of the Hungarian insurrection, by whom it was occupied. In this disastrous contest the Archduke John lost six thousand men of whom above three thousand were made prisoners, and two pieces of cannon. The loss of the French was not more than half that amount, for, though those who fell were nearly as numerous, they lost few prisoners (2)

Siege and
capture of
Raab

The battle of Raab, notwithstanding its calamitous result, was in the highest degree honourable to the troops of the Hungarian insurrection, who composed so large a portion of the Imperial army, and who, though brought into fire for the first time, for hours disputed the palm of victory with veteran troops. It was attended, however, by very disastrous consequences. Not only was the moral impression of the battle of Aspern sensibly weakened by the loss of the very next serious engagement which took place between the two powers, but the force of the Hungarian insurrection was irrevocably broken by the ill success of its first essay in arms, and the loss of the fortress and intrenched camp of Raab, which shortly after took place. The former was evacuated immediately after the battle, the latter was shortly after besieged by Lauriston, with heavy cannon drawn from the arsenal of Vienna, and taken, with its garrison of two thousand men, chiefly militia.

June 24

The possession of this fortress, though aimed only with eighteen guns, was a material advantage to the French, not only as depriving the enemy of a fortified post on the right bank of the Danube, from which they were likely to derive important advantages in the progress of the campaign, but destroying the shelter of the intrenched camp where the Hungarian insurrection might have been further trained in the military art, and brought to render the most valuable service as light troops to the regular forces, while

It gave a solid point d'appui to the right flank of Napoléon, and put it in his power to call up almost the whole force of Eugène to his own standard in the decisive action which was approaching on the plains of the Marchfeld (1).

Operations of Marmont and Macdonald in Illyria and Carniola. While these important events were securing the right wing of the French army in the Hungarian plains, Marmont and Macdonald, after severally overcoming every obstacle, were rapidly approaching with its reserves from the Dalmatian shore and the mountains of Styria. The first of these generals, who had remained in command of the Illyrian provinces ever since the treaty of Tilsit, found himself, in the early part of the campaign, entirely isolated from the French armies by the advance of the Archduke John through Carniola and Styria to the banks of the Adige. In the end of April, the Austrian general Stojekowich had been detached by that prince with eight thousand men to aid the insurrectionary movements which were preparing in the mountains of Dalmatia against April 22, 27, the French authorities and some skirmishes had taken place between the advanced posts of the opposite parties, in which he had the advantage, and the Imperialists had already descended from the hills, and made themselves masters of a considerable extent of sea-coast, including the fort of

May 6. Lusina Picolo, which brought them into contact with the English cruisers in the Adriatic, when the intelligence of the retreat of the Archduke from Italy, and the near approach of Macdonald by Laybach towards

May 1. their line of communication with Austria, rendered it necessary to commence a retreat. Marmont lost no time in following the retreating corps of

May 22. the enemy, and a severe action took place on the 23d, on the banks of the Lika, without any decisive advantage to either party. In obedience to the orders they had received, the Imperialists continued their retreat and Marmont, being now summoned up with his whole corps, to the support of

May 22. the grand army, pressed on in pursuit. A few days after, he arrived at Flume, which was abandoned without opposition, and remained there two days to rest his troops after the laborious mountain marches they had undergone. On the 3d June he entered Laybach, which was evacuated on his approach while the corps of Giselay and Chastellar, which had abandoned the Tyrol by orders from the Archduke John, in order to the concentration of the forces of the monarchy in its vitals, were painfully and by cross roads, traversing the mountains in his front, in their march towards Gratz and the Hungarian plains (2).

Extraordinary exertions of Marmont and Macdonald. These retreating generals had a most perilous task to perform in their marching eastward through Styria and Carniola, where Marmont, established at Laybach, was ready to fall perpendicularly on their flank and Macdonald, who was hastening up from Villach in Carinthia, on the traces of Eugène, threatened their rear. It appeared almost impossible that they could escape so many dangers but such was the skill of the Imperial commanders, and the activity of their troops, that they not only extricated themselves without any serious loss from this hazardous situation but very nearly inflicted an important blow upon their opponents. Chastellar, obliged to evacuate the Tyrol, had descended the valley of the Drave, and assembled his troops at Villach; from thence he made a demonstration against Klagenfurt, where the Italian general Rusca had collected a few battalions, and after some sharp fighting he reached the right bank of the Drave, and succeeded, by throwing that river between him and his

(1) *21st Bull. Month. June 30 1805. Jour. Mil.* (2) *Pol. iv 102, 117 Jour. Mil. 232, 234. Barth. 231. Vint. et Comy xix. 178, 179. Pol. iv. 102, 244, 247. 101, 112.*

pursuers, in extricating himself from his dangers. He would have been utterly destroyed if Marmont had been a little more expeditious in his movements; for had that general arrived two days sooner at Nakles, where the two roads from Klagenfurth and Villach unite, he would have interrupted the only route by which the enemy could have descended the Drave, and if Chastellar had thrown himself across the mountains into the defiles of the Muhr, he would have fallen into the hands of Macdonald, who was descending the rocky banks of that romantic stream. But every thing in war depends upon precision of calculation and rapidity of movement, and the most active and vigilant generals are frequently ignorant of what is passing on the enemy's part, within a few leagues of their headquarters (1):

Operations of Giulay in Carniola and Styria May 3 Giulay, who formed part of the army of the Archduke John, had been detached by that prince with seventeen thousand regular troops into Croatia, of which he was the Ban, to raise the landwehr of that warlike province and of Carniola, and await ulterior orders. Subsequently, the disasters and continued retreat of the Italian army, rendered it necessary for the Archduke to recall him to his standards; and Giulay had turned to such good account the few weeks which he had spent in his province, that he was prepared now to take the field at the head of twenty thousand men, of whom eight thousand were regulars. With this imposing force

June 3 he broke up on the beginning of June from Ram and Agram on the Save, and began his march northward for Marburg, with the design of joining the Archduke, whom he conceived to be still at Gratz in Styria. He mov-

June 15 ed, however, so slowly, that he did not reach Marburg till the 15th, the day after the battle of Raab, though the distance was only eighteen leagues, being not five miles a-day. Had he exerted himself as his strength permitted and the crisis required, he might have been on the 14th at Radkersburg in Hungary, which was forty-two leagues from Ram, in direct communication with that prince, and in time to share in the battle. This only required him to march ten or eleven miles a-day, no great undertaking for

June 15 veteran troops and hardy mountaineers, and had he done so, the battle of Raab would either not have been fought or been converted into a victory, and the Archduke John, with sixty thousand undiscouraged troops, would have appeared with decisive effect on the field of Wagram. The first care of a general should be to accustom his soldiers to march: Napoleon's grenadiers were perfectly right when they said it was by their legs, more than their arms, that he gained his victories (2)

Attack on Broussier near Gratz June 24 A brilliant enterprise, however, though of a subordinate character, awaited the Austrian general. General Broussier, with a French brigade, had been left to besiege the fort of Schlossberg, at Gratz, after Macdonald had left that town, and proceeded onward in the trace of the Viceroy towards the grand army, and Giulay, having learned, as he came up from the southward, the exposed situation of the besiegers, conceived the

June 22 design of surrounding and making them prisoners. On the 24th, his advanced posts were at the gates of Gratz; and Broussier, justly apprehensive of being cut off, had, two days before, raised the siege of the castle, and retired to the bridge of Weinzittel, over the Muhr, at the entrance of the valley of Bruck. Having received intelligence, however, in the course of the same day, of the real position of the main body of the enemy's forces, which

June 23 he conceived to be unable to take any part in the action which was

(2) Vict et Erz Joan, Feld 2"

Pel iv. 1"

approaching, he sent back four battalions under Colonel Gambier, who resumed his former position around the fort, and renewed the bombardment. In this situation the besiegers were attacked by a greatly superior force under

Glulay, and being entirely separated from the remainder of the troops under Broussier, their destruction appeared inevitable. The heroism of Colonels Gambier and Neagle, however, joined to the intrepidity of their troops, extricated them from their dangerous situation the Croatian land-

wehr were no match in close fight for the French veterans; a decisive charge of the bayonet checked the Imperialists in the first onset when their cartridges were exhausted, the French threw themselves into a churchyard which they defended with invincible resolution, and though weakened by the loss of half their numbers they were still gloriously combating round their eagles, when Broussier with his remaining four battalions arrived, and cut his way through to his heroic followers. In this memorable action the French lost eight, the Austrians twelve hundred men; and Napoleon in just testimony of his sense of the conduct of the troops engaged, made Colonel Gambier a count of the empire, and gave to his regiment, the 84th, the motto, "*Un contre dix*." Marmont, who had been summoned by Broussier to his assistance, arrived on the evening of the 26th before the walls of Gratz, and

immediately made preparations, in concert with Glulay, for a general

assault on the town and suburbs on the following day, but the Imperialists, in no condition to withstand so formidable an attack withdrew in the night, and the junction of the French generals was effected next day without opposition. They left merely a few battalions to continue the siege of the castle, and, pressing on with great rapidity, arrived in the island of Lobau on the 3d July, where the whole forces of Napoleon were now assembled for the decisive battle which was approaching (1)

The French Emperor, at the same time, had called Prince Eugene and the Italian army to his standards. On the 2d July he received orders to repair without delay to the general rendezvous in the island of Lobau, whither Napoleon had transferred his headquarters from the palace of Schœnbrunn, three days before. Skillfully masking his design by a large body of heavy cavalry, pushed forward to the advanced posts before Komorn, he withdrew his artillery, stores, and infantry, unperceived by the enemy, and late on the evening of the 5th reached the island of Lobau, where his arrival swelled the host to a hundred and eighty thousand men, with seven hundred pieces of cannon; while by an unhappy fatality, the Archduke John though entirely on the left bank of the Danube still remained in presence of a deserted camp in the plains of Hungary. This general concentration of the French troops in front of Essling was attended with one secondary but important effect, in restoring the southern provinces of the empire to the dominion of Austria, and opening up a direct communication with the English cruizers in the Adriatic. In proportion as Croatia and Carniola were evacuated by the advance of Marmont to the Danube, those two important provinces were regained by Glulay's troops several French detachments and depots fell into the hands of the Imperialists Laybach, with some hundred prisoners, was taken and the communication with the coast having been restored a subsidy from England was disembarked in Dalmatia and after traversing the mountains arrived in safety in Hungary to the amount of three hundred and twenty thousand pounds (2)

Before the decisive struggle on the Danube commenced, affairs had taken a more propitious turn for the French arms on the shores of the Vistula. The bold stroke of Poniatowski in throwing himself into the eastern parts of Poland and menacing Galicia, after Warsaw was taken, joined to the tardy but at length serious approach of the Russian forces, arrested the Archduke Ferdinand in his victorious career on the southern Vistula. His advanced guard had already reached Thorn, fifty leagues below the capital, when the intelligence of the march of Poniatowsky in the direction of Cracow, joined to the alarming progress of the insurrection excited by Dombrowsky in the neighbourhood of Posen, the indisposition of Prussia to take any decisive part, and the approach of Prince Gallitzin, with thirty thousand Russians, towards Lemberg and the Gallician frontiers, warned him of the necessity of retreat. Advancing to Lemberg, Poniatowsky had spread his light troops over the whole of Austrian Poland, exciting every where the national enthusiasm, and producing an alarming fermentation by the sight of the much-loved uniforms; his advanced posts had even crossed the Carpathian range, and carried consternation to within a few leagues of the Hungarian frontier, while another of his divisions, under Sokolniki, had boldly crossed the Vistula, and surprised fifteen hundred Austrians (besides eighteen pieces of cannon) at Sandomir, who were all either slain or made prisoners, and General Pelletier, with a third, by a brilliant *coup-de-main*, made himself master, by escalade, of Zamosc, though defended by a lofty rampart and deep ditch, and captured two thousand men and an arsenal of fifty pieces of cannon (1).

This succession of disasters, and still more, perhaps, the approach of the Russians under Prince Gallitzin, to the frontiers of Galicia, determined the Archduke Ferdinand to retreat. His generals had, by a sudden attack, made themselves masters of the *tête-de-pont* at Thorn, on the right bank of the Vistula, but the garrison, retiring to the body of the place on the left, burned a part of the bridge, and the Imperialists had neither the means of crossing that ample stream, nor of commencing a siege in form of that fortress. This was the extreme point of their advance. On the following day they commenced their retreat, severely harassed by the light troops which the indefatigable Dombrowski had raised in the Duchy of Posen. The Austrian garrison being withdrawn from Warsaw on the 30th May, the Polish militia, under Zayonschesk, recovered possession of that capital, and Ferdinand slowly retired towards the Austrian frontier. The indecision and procrastination of Russia were now at an end, and Alexander professed himself prepared in good earnest to adhere to his engagements at Tilsit and Erfurth. General Schaueroth commanded the advanced division of the Austrians, and Ferdinand, with reason, conceived that he might, in his retreat, avenge the check received at Sandomir, by making prisoners the Polish garrison in that town. Detaching Schaueroth, therefore, as a corps of observation, towards Lemberg, he himself, with his main body and heavy artillery, suddenly appeared before it, and having brought up his guns, burst open the gates, and his grenadiers penetrated into the streets. The Poles, however, under Sokolniki, rallied, with admirable courage, and for eight hours kept up an obstinate resistance from street to street, and from house to house, until the Austrians, wearied out and sensible the place could not long hold out, retired, with the

loss of eight hundred killed and wounded, and four hundred prisoners. Finding his ammunition exhausted, however, Sokolniki, two days afterwards entered into a treaty with the Austrian general, in virtue of which he evacuated the place, and retired to the Polish army (1).

Alarmed at the capture of a place of such importance, Poniatowsky now made the most vigorous remonstrances to Prince Gallitzin, and urged the immediate adoption of concerted measures; but, though the Russian general was now so near as materially to influence the fate of the campaign, he could not be prevailed on to take an active part, and exhibited an order of the Emperor Alexander, which forbade him to cross the Vistula. He consented, however, to occupy the country on the right bank of that river, so as to leave the Poles at liberty to prosecute their operations on the left. Relieved to a certain degree by their presence in that quarter, Poniatowsky suddenly changed his line of operations, and descended the Vistula on the right, in order to connect himself with Zayonscheck and Dombrowsky. Meanwhile, the Archduke Ferdinand received orders to direct his steps a second time towards the Grand Duchy of Warsaw, in order to support the efforts which the cabinet of Vienna at that period were making to rouse Prussia to join the alliance. Having dismantled Sandomir, accordingly, he concentrated his forces, and, while Poniatowsky moved down the right bank of the Vistula, he descended the left, and, with twenty five thousand men, advanced to Petrikau, on the Pilica. This offensive movement, however, was

not of long duration; the Archduke Ferdinand had prepared an entrenched camp near the sources of that river, at a point where two roads to Austria branch off the one by Cracow, the other by Olkusz, and was slowly advancing to occupy it, when hostilities were interrupted by the intelligence of the armistice of Znaym. Meanwhile, the Russians advanced to Cracow, and their vanguard had already occupied its gates, when Poniatowsky, jealous of the acquisition of the second city of old Poland by its most inveterate enemy, summoned all his forces to his standards, and hastened, with twenty-five thousand men, to anticipate Prince Gallitzin in that important conquest. The road was blocked up by Russian troops, who prohibited all further passage; the Poles insisted on their right to advance; the old and ill-concealed animosity of the two nations was ready to break out, and the advanced posts were already coming to blows, when Prince Gallitzin deemed it

prudent to yield, and permitted the occupation of the city by the Polish troops. There they remained during the whole of the armistice, but the military ardour of the Poles was strongly excited by this brilliant termination of the campaign; hopes long smothered began to revive of the possibility of a national restoration: recruits flocked in from all quarters to the national standards: and before the peace of Vienna Poniatowsky had forty eight thousand men on his muster rolls: besides the troops who were combating under the standards of Napoléon in the Spanish peninsula (2).

(1) Pol. I. Jan. III. 229. Viet. et Conq. xlv. 154, 152.

(2) Pol. I. 70, 75. Jan. IV. 229-240. 214 Bull. Month. 29. 30th Jan. and 8th July 1807.

Poniatowsky complained of the tardiness of the Russians throughout the campaign, were, as might easily have been anticipated, both frequent and arraigned. On the 27th Jan., he thus wrote to the Emperor R. (Julius) — "Notwithstanding the positive promise of Prince Gallitzin, to move two of his divisions across the sea on the 21st instant, he did nothing of the kind. Under pretence of failure of provisions, that measure was not carried into ef-

fect till two days after: and then with the same tardiness which has characterized all the operations of the campaign. These delays have given the Austrian corps which had been thrown forward on the right bank of the Vistula, the means of effecting its retreat without any molestation. The errors, however which, subsequent to that period, they had received, that Prince Gallitzin would not permit the Vistula, he encouraged the Archduke Ferdinand to move the greater part of his forces, or had to send five thousand more, to the Pilica, and thus secure the frontiers of the Grand Duchy of Warsaw. This has obliged me to move upon Pulawy. The arrival

Extraordi-
nary con-
centration of
the French
forces in the
island of
Lobau
July 2

These successes, however, had only a remote and inconsiderable influence on the fate of the campaign; the decisive blows were to be dealt out from the island of Lobau. There, in the first week of July, a prodigious armament was collected, and the French officers, how much soever inured to military prodigies, were never weary of admiring the immense array which the activity and foresight of the Emperor had collected for the final struggle. On the 2d July he mounted on horseback at Schœnbrunn, and rode to Lobau, where headquarters were thenceforward established, and at two o'clock on the afternoon of that day, the reinforcements began to arrive there from all quarters, and never in modern times, probably never in the history of the world, was such precision witnessed in the movements of corps converging together from such distant quarters. Hardly had Bernadotte arrived with the Saxons from the banks of the Elbe, when Vandamme appeared with the Wirtemburghers and troops of the Confederation from Swabia and the Rhenish provinces, Wrede with the Bavarians from the banks of the Lech, Macdonald and Broussier next arrived over the Alpine ridges from Carinthia and Carniola, no sooner had they taken the places assigned them, than Marmont's leading columns began to appear from the Dalmatian shores, and when they had found room in the crowded isle, the veterans of Eugene came up from the Hungarian plains and the neighbourhood of Presburg. By the evening of the 4th the whole were assembled—horse, foot, cannon, and ammunition waggons had traversed in safety the bridges which connected the island with the southern shore, and a hundred and fifty thousand infantry, thirty thousand cavalry, with seven hundred and fifty pieces of cannon, were collected in a space not exceeding two miles and a half in length, by one and three-quarters in breadth (1). This extraordinary concentration of force had inspired the troops with more than their wonted ardour, none doubted of the issue when the military strength of half of Europe was there accumulated on a single point under the guidance of Napoléon—the lines literally touched each other, and each regiment acquired fresh confidence from the animating story of its neighbour's achievements. Never since the grand army broke up in 1805 from the shores of the Channel had it been so collected together, many there met who had not shaken hands since they parted on the heights of Boulogne, and many more hearts then glowed with the joy of newly-awakened friendship (2), which were destined in a few hours to be for ever severed from each other in this world (3).

of the Russian army in Galicia having afforded them a pretext for spreading themselves over the province, has contributed materially to retard the formation of the new levies, for the Russian generals establish wherever they go Austrian authorities, who do all they can to torment the inhabitants, and to stifle every feeling which may eventually menace the interests of their sovereign."—Savary, iv 95. In another part he stated,—"The concert of the Russians with Austria is so clearly demonstrated, that, to speak plainly, it was the Polish troops whom they both regarded as enemies. It was the more difficult to prevent the effects of that intelligence, that the chiefs of the two armies acted entirely in concert, to give occasions for it to arise."—Pulaski iv 73.

(1) The French military historians give 150 000 men and 400 pieces of cannon for the total strength of the grand army before the battle of Wagram, but we have the authority of Savary (iv 100 c. 12) for the assertion, that they amounted to the number stated in the text, and Napoleon said, on

the evening of the 4th July, to the Austrian general sent with a flag of truce—"Sir, I have no doubt why you have been sent here. So much the worse for your general if he does not know that to-morrow I shall pass the Danube with the whole force you see here: there are 180 000 men, the days are long: two to the vanquished."—Savary, iv 101. See also Kausler *Atlas der Schlachten* 379.

(2) Pel iv 153, 154. Sav iv 100, 102. Join iii 258, 259.

(3) The utmost pains had been taken by the French Emperor, during the interval of hostilities at Vienna, to restore the spirit and enthusiasm of the soldiers, which had been severely weakened by the result of the battle of Aspern. Gratitudes to a large extent were awarded to the soldiers' widows, under circumstances the most likely to affect the imagination of the receivers and all who witnessed it. Not only did the Emperor himself frequently visit the hospitals, but he made his aides-de-camp regularly inspect them, at stated intervals, and after the recovery of the greater part was in some de-

Force and
disposition
of the Aus-
trian army

The Austrian army, though not equally reinforced, had received considerable accessions of strength since the battle of Aspern, and was animated by a still more profound feeling. The twenty-five thousand brave men who had fallen, or been disabled in that glorious strife, were in part recovered, or had been compensated by the corps of Kollowrath, which had come up from the vicinity of Linz: twenty thousand more had been drawn from the depôts in the interior; and fifty thousand landwehr were incorporated with the regular soldiers, and, from their constant exer- also with veteran troops, had acquired a considerable degree of efficiency. Thus, above a hundred and forty thousand men were assembled for the decisive struggle, besides the Archduke John, who, with eighteen thousand regulars and an equal number of the Hungarian insurrection, was at Presburg, ten leagues from the field of battle. If they could all have been brought to bear upon the enemy, their numbers would have equalled even the gigantic host of Napoleon: but they were far from being equally concentrated; and the Archduke Charles was by no means prepared for the extraordinary rapidity and energy which was about to be infused into their movements. On the evening of the 4th, when the whole array of the French Emperor was accumulated in Lobau, and the ranks of so many distant armies stood almost in close column on its meadows, the generalissimo had little more than half his force ready for immediate operation. The Prince of Reuss was watching the banks of the Danube, from Stockerau to Vienna, with his headquarters at Stammersdorf; Kollowrath was at Hagenbrunn, on the north-western slope of the Blauenberg: the reserve of grenadiers were at Gerarsdorf: Klenau at Essling, and in the intrenchments opposite to the bridge of Aspern; while Nordman, with the advanced guard, lay at Enzersdorf and guarded the course of the Danube as far as Presburg. Bellegarde, Hohenzollern, and Rosenberg, were at Wagram, or along the course of the Russbach, while the reserve cavalry was at Breitenlee, Aderklaa, and the villages in the neighbourhood. Thus, the Archduke's army was arrayed in two lines—the first stretching twenty leagues along the course of the Danube: the second, two leagues in the rear, on the plateau of Wagram and the heights of the Russbach. A courier was dispatched on the evening of the 4th, to summon up the Archduke John to the decisive point: but the distance was so great that he could not be expected to arrive at the scene of action till late on the following evening. Seven hundred pieces of cannon attended the army: but the cavalry had never recovered the fatal ravages of the preceding battles, and the equipment of the artillery was far from being in the perfect state in which it was at the commencement of the campaign: or as the French had become from the resources of the arsenal of Vienna. Never was more clearly demonstrated in war the vital importance of central fortifications: many of the enthusiastic recruits of Austria were now deficient in the most necessary equipments, while the French troops found all their losses amply supplied from the stores of the capital: had Vienna still held out, or its magnificent

grace effected, he distributed with great pomp a considerable gratuity to all the soldiers who had suffered. Every private received alty francs (1.2 10s.), and every officer in proportion to his rank, from 150 to 1500 francs (from L. 8 to L. 80). For several days the Emperor and his staff were particularly engaged in this pious duty; and it was accompanied by circumstances which gave it the effect which the gratuity already so considerably produced upon the mind of the men. The splendid cortege preceded the distribution in full armour, and traversed the long galleries of the hospital,

talk, preceded by the record of the exploits, in which the deeds of each were minutely entered, and followed by servants in full livery carrying large booklets, in which the money was placed. Twelve or twenty crowns pieces were deposited by the bedside of each man, taken out from the regimental funds, but the private purse of the Emperor. From raised down the list of the military veterans, as they wheeled the touch of every man's name with a y who were destined to slay under their sacred banner an opportunity of expending their little treasure could arise.—See b. iv. 25 29

concealment, thrown across, and made fast to the opposite shore, in the short space of ten minutes. The transporting and fastening of the other two required a little more time, but with such vigour were the operations conducted, under the immediate inspection of the Emperor, who never ceased an instant during the whole night to direct and animate the men, that by three o'clock in the following morning six were completed, and the troops of all arms were in full march across them. A violent fire was, during the whole time, kept up from a hundred and nine pieces of heavy cannon, disposed along each side of the salient angle formed by the northern extremity of the island of Lobau, on the Austrian lines, which fell with unprecedented fury on the village of Enzersdorf, and induced the enemy to open from all their batteries on the bridge of Aspern. In the idea that it was there the passage was going forward. Both shores soon formed a line of flame: the heavens were illuminated by the ceaseless flight of bombs, seldom fewer than twelve of these flaming projectiles were seen at once traversing the air in opposite directions. Vehement, however, as was the contest of men, it was surpassed by the elemental strife on that awful night. A tempest arose soon after it was dark, the wind blew with terrific violence, torrents of rain fell without intermission, the thunder rolled above the loudest roar of the artillery; and the frequent glare of the lightning outshone even the flames of Enzersdorf, which, set on fire by the French bombardment, burned with inextinguishable fury from the gales of the tempest. During this terrible scene, however, the cool judgment of Napoleon never for an instant lost sight of the main object in view; for several hours he walked incessantly amidst mud and water from one bridge to the other. The passage of the troops was pressed on with indefatigable activity; numerous boats, which incessantly plied to and fro, facilitated the transportation of the foot soldiers, and such was the unprecedented vigour of all concerned in the operation, that by six o'clock in the following morning, not only were all the bridges firmly established, but a hundred and fifty thousand infantry, thirty thousand cavalry, and six hundred pieces of cannon, were grouped in dense array on the northern shore between Enzersdorf and the margin of the Danube (1).

Great was the surprise of the Imperialists, at day-break on the 5th, to see not a man passed over by the bridge opposite to Aspern, but the plain further down, opposite to Enzersdorf, covered with an enormous black mass of troops, drawn up in close column, in the finest array, in such numbers as almost to defy calculation. The tempest had ceased, the mists rolled away as day approached, the sky was serene, and the sun of Austerlitz shone forth in unclouded brilliancy. His rays revealed a matchless spectacle. The shores of the Danube were resplendent with arms, cuirasses, helmets, and bayonets glittered on every side; the bridges, the isle of Lobau, the southern shore, were covered with a countless array of men, drawn up in admirable order, or pressing on in ceaseless march, while long files of artillery presented on the northern bank apparently an irresistible force to the enemy. Then appeared, in the clearest manner, the vast advantage which the French Emperor had gained by the unexampled manoeuvre of the preceding night: the river was passed, the communications with the opposite shore secured, the left flank of the Austrian position turned, all the intrenchments intended to bar the passage taken in reverse, the labour of six weeks rendered useless, the enemy cut off from his communication with Hungary and the remaining resources of the monarchy, and thrown

7 The advantage gained by the manoeuvre to the French.

beyond the wet ditch. Though this important plateau, however, constituted the strength, it was by no means the whole of the Austrian position. Their lines extended also to the westward far beyond Deutsch Wagram, along a ridge of heights, arranged as it were by nature for the defensive position of a vast army, as far as Stammersdorf and the eastern slope of the fir-clad Bisamberg, forming altogether an elevated position, about fifteen miles in length, on a series of heights facing and slightly curved towards the south (1). From their feet to the Danube, distant about nine miles, stretched out the vast and level plain of the Marchfeld. In the concave space included in this curve, at the foot of the heights, about their centre, is the village of Gerasdorf; and a few miles further, in the level surface of the Marchfeld, the villages of Aderklaa and Süssenbrunn, which thus lay about midway between the two armies, and became important points of attack, and the theatre of desperate conflict in the battle which followed.

Advance of
the French
over the
Marchfeld,
July 5.

The Archduke, in consequence of the dispersed state of his army, rendered unavoidable by the uncertainty which prevailed as to the place where the passage would be attempted, had only the grenadiers and corps of Rosenberg, Bellegarde, and Hohenzollern, sixty thousand strong, on the plateau of Wagram and village of the same name, Klenau and Kollowrath being at a distance on the Bisamberg with the right wing; and the left, under the Archduke John, twenty-five miles off, stretching towards Presburg. No serious resistance, in consequence, was made to the advance of the French over the plain; the Austrian outposts retiring as the French approached towards their central position on the hills. Napoleon's army, after the passage was effected, was drawn up between Lobau and Enzersdorf, perpendicular to the river, with its left touching the water; the concentration of the troops was such, that it resembled an immense close column, nearly two hundred thousand strong. Presently, however, the order to march was given, and the different corps advanced in a semicircular direction, like the folds of a fan, to the north, east, and west, towards Enzersdorf, Essling, Breitenlee, and Raschdorf. Masséna was on the left towards Essling and Aspern. Bernadotte, with the Saxons, towards Aderklaa; Eugène and Oudinot between Wagram and Baumersdorf; Davoust and Grouchy on the right, in the direction of Glinzendorf; while the Imperial guards, Marmont's corps, Wrede, with the Bavarians, and the heavy cavalry, were in reserve under the Emperor in person. Partial combats took place as the Imperialists fell back before this enormous force, both at Enzersdorf and Raschdorf, but no serious resistance was attempted, and the two corps of the Austrians which were in advance in the intrenchments on the banks of the Danube, fell back leisurely on the road to Gerasdorf and Neusiedel. The vast field works between Aspern and Essling were abandoned; the Imperialists retired to the heights in the rear on which the main body of their forces were stationed; and the French army, spreading out like rays from a centre, overspread as far as the margin of the Russbach the immense plain of the Marchfeld (2).

Concentration
of the
French on
the plateau
of Wagram.

At six o'clock Napoleon had come up to the plain between Raschdorf and Baumersdorf in front of the plateau of Wagram; and he then ascertained that the Archduke John had not yet arrived and could not appear on the field that day. He immediately resolved to profit by his great superiority, and commence an attack. For he had a hundred thousand men grouped in his centre, ready for instant operations;

the crest of the plateau (1); while the French army, wearied with the fatigues of that eventful day, lay down to rest in the vast plain around Raschdorf, and were soon buried in sleep.

Position and plan of Napoleon for the battle on the 5th day. So destitute was the Marchfeld, at that period, both of trees and habitations, that there was hardly a fire in the whole French army, from the extreme right to the left of the line. At midnight it became intensely cold, and it was with great difficulty that a few parcels of straw and pieces of wood could be got to make a fire for the Emperor. He had advanced with his guard to the front of the first line, during the panic consequent on the rout of the Saxons and Eugène's corps, and his tent for the night was pitched in the middle of the grenadiers and *vieux mousquetaires*. Though all around were buried in sleep, Napoleon sat up during the whole night, conversing with the marshals and generals of division, receiving reports from the different corps, and impressing upon his lieutenants the designs which he had formed. His army occupied a great right-angled triangle, of which the base rested on Aspern, Essling, and Enzersdorf; one front faced Stammerdorf, Sussenbrunn, and the slopes of the Bisamberg; the other the plateau of Wagram and Neusiedel, while the apex, pointing directly at the Austrian centre, was in front of Aderklaa. The project of the Emperor was founded on this concentration on his side, and the scattered position of his opponents on the semicircular range of heights, above fifteen miles long; from the Bisamberg to Neusiedel. Refusing and weakening his left, he determined to throw the weight of his attack upon the centre and left of the Austrians, hoping, thereby, to break their line in the point where it was weakest, by an enormous mass of assailants, and cut off the Archduke Charles from the army which, he was well aware, would speedily come up, under the Archduke John, from the neighbourhood of Presburg. With this view, a considerable dislocation of troops took place during the night; Masséna, who lay on the left around Essling and Aspern, was moved at two in the morning by his right towards Aderklaa, in front of the plateau of Wagram, leaving the single division of Boudot to guard Aspern and the bridge. Thus the whole strength of the French army was concentrated in the centre and right. Davoust being on the extreme right; Masséna next to him in front of Aderklaa; Marmont, Oudinot, Eugène, and Bernadotte, in front of the plateau of Wagram; and Bessières, with the Imperial guards and reserve cavalry, in the rear of the centre around Raschdorf (2).

The Archduke John's efforts to surmount the obstacle of his plan of attack. July 6. The brilliant success which had crowned the action on the night of the 5th, made an important change in the dispositions of the Archduke. Perceiving the determined resolution of his troops, and encouraged by the important check which they had given to the enemy, even when possessed of a considerable superiority of force, he resolved to resume the offensive, and anticipate the designs of the French Emperor by a general attack with all his forces. This resolution was taken at midnight on the 5th, and at two in the following morning orders were dispatched to the Archduke John to hasten up with all his disposable force to the scene of action. He was understood to be at Marchegg, thirteen miles from the right flank of the French army; but he might with ease arrive on the field by one o'clock in the afternoon, when it was hoped his appearance with thirty thousand fresh troops would be attended with the most important effects. Foreseeing, from the attack of the preceding evening, that the principal

(1) Vol. I. 183, 183. See iv. 104. Vict. of Essling. (2) Vol. I. 197, 198. See. III. 287. See iv. 104. 212, 201, 202. See. iv. 204. 21th Bk. Month. 1806. 197. Vict. of Essling. 2, 203. July 1807.

duke John had not yet arrived, and that the enemy had moved an overwhelming force in that direction, ordered Rosenberg to suspend his attack, and soon after, he withdrew his troops behind the Russbach but they sustained a considerable loss in their retreat, from the charges of the French cuirassiers, and the cannonade of the artillery of the guard on their flank (1).

Defeat of
Müller in
the centre.

Hardly was this alarm dispelled on his right, when Napoleon received still more disquieting intelligence from his centre and left.

The first rays of the sun had glittered on the bayonets of Klenau and Kolowrat's corps, as they descended the verdant slopes behind Stammersdorf, and joined Müller and Lichtenstein near Leopoldau, and already the sound of their cannon towards Dreitenlee and Aspern told but too clearly the progress they were making to turn the left flank of the French army. But the danger in the centre was still more pressing. Masséna, in executing his prescribed movements from the left to the right of the field of battle, had attacked Aderklaa with his leading division under Cara St.-Cyr the village was speedily carried by the gallantry of the 24th regiment but instead of merely occupying the houses, and strengthening himself in so important a point, St.-Cyr pushed through to the opposite side, and brought his troops within range of a terrible fire of grape and musketry from Dellegarde's corps, drawn up in force on the plain betwixt that and Wagram. The French, breathless with their advance were so shattered by the discharge that they suddenly recoiled, and being at the same time charged in flank by the Austrian cavalry, were pushed back in confusion into Aderklaa. At the same time the Archduke Charles, who felt the full value of his post, hastened to the spot with the grenadiers of Aspre, and charged the assailants with such vigour that they were driven out of the village at the point of the bayonet, broken in the plain beyond, and thrown back in utter disorder upon the Saxon, Baden, and Darmstadt contingents, who disbanded and fled in such confusion that they overwhelmed Masséna, who although severely bruised by a fall off his horse, was in the field in his calèche, to such a degree that he made the dragoons about his person charge them as if they had been enemies (2). Transported by the animation of the charge, the Archduke Charles pushed forward, at the head of his brave grenadiers, a considerable way in front of Aderklaa, where he found himself, almost alone so near the enemy that he heard a French officer command his voltigeurs to make him prisoner, and received a ball in the shoulder before he could regain the breathless ranks of his followers (3).

Napoleon's
measures to
arrest the
disorder.

Napoleon perceived from afar the disorder of the left of his centre, and instantly hastened to the spot to arrest it. Directing Deyoust to attack Neusiedel, and press the Austrian left, and ordering his

guards to countermarch as rapidly as possible from right to left across the whole field, which they had so lately traversed in the opposite direction, he himself set out at the gallop, followed by the thundering squadrons of his cuirassiers and horse artillery of the guard, and soon arrived at the spot, where Masséna, almost alone in his chariot in the midst of the fugitives who overspread the plain, was making brave efforts to arrest the disorder. He instantly alighted from his horse, mounted into the chariot beside the marshal, con-

(2) A young Saxon colonel, during the rout of the corps, making his efforts, prayers, and promises all ineffectual to prevail, his eye fixed upon a regiment of the French Imperial Guard which had just come up, and threw himself into the ranks, and, "I brethren, I trust to you this morn-

ding you I am sure will defend it my regiment I to be saved whatever emergency position it made to the enemy." How many instances of heroism in all nations did the brave man try to bring forth. What spirit was of soul did they bring London I volume of Company. c. 218.

(3) See iv 107, 110. Vol. i 219, 213 June, iii. 263. December 364. Arch. Charles Account.

to cover the passage of the river. Driving the enemy before them like chaff before the wind, the whole Austrian right with loud shouts, pressed on towards Enzersdorf. Startled by the unexpected sound, which was soon heard even above the thunder of the artillery in front, the French reserve parks and baggage trains were seized with an universal panic; fugitives on all sides overspread the rear of the army, and fled to the bridges, which were speedily choked up by the throng. cries of "all is lost, the bridges are taken," were already heard in the ranks; while the anxious crowds who thronged, the steeples of Vienna, and with beating hearts and speechless emotion watched the advancing fire of their columns, above all the roar of the artillery, heard the Austrian cheers, and already the thrilling voice was heard in the capital, "the country is saved (1)!"

Success of
Davoust
against the
Austrian
left wing

But Providence had decreed it otherwise; and four years more of misery and bondage were destined to punish the faults and unite the hearts of Germany. While this splendid success attended the efforts of the Austrian right, their left, against which Napoleon had accumulated his forces under Davoust, had undergone a serious reverse. This illustrious chief, who had fifty thousand admirable troops at his command, including three divisions of the reserve cavalry, had no sooner received Napoleon's directions to attack the Austrians on the plateau, than he dispatched Friant and Morand with the veterans who had gained the day at Austerlitz, to cross the Russbach below Glinzendorf, ascend the valley above Neusiedel and turn the extreme left of the enemy; while he himself, with the two other divisions, attacked that village in front; and Oudinot was ordered to keep Hohenzollern in check, in the centre of the plateau behind Baumersdorf. It required some time to execute, out of the range of the enemy's cannon, this sweep round the extremity of his position for sixty pieces of cannon, disposed along the front and eastern face of the plateau, swept the whole level ground at its feet, as far as the guns would carry. At ten o'clock, however, the two divisions of Friant and Morand had crossed the Russbach, supported by a numerous artillery and ten thousand horse, under Grouchy, Montbrun, and Arighi. Rosenberg, meanwhile, perceiving the danger with which he was threatened, had accumulated his forces in strength at Neusiedel and the angle of the plateau behind it and with his troops drawn up, facing outwards, on the two sides of a right-angled triangle, was prepared to maintain his important position against the formidable odds which was about to assail him; while the guns on the crest of the plateau behind his lines replied to the more numerous batteries of the enemy in the plain below, with vigour and effect. Morand's division came first into action, and boldly mounted the heights; but, notwithstanding the gallantry of their attack, they were driven back in disorder by the destructive fire of the Austrian cannon, and the rapid discharges of their musketry; but Friant came up to his support, and Morand, rallying under cover of his lines, recommenced a furious assault on the enemy, and after a desperate resistance, succeeded in ascending the plateau on its eastern front. Friant, at the same time passing further on, made his way to the summit. The tower of Neusiedel, however still held out, though a powerful French battery thundered against it from an adjoining height to the eastward; and the Austrian cavalry, who were drawn up at the foot of the ascent, essayed several charges against the ponderous steel-clad cuirassiers of Arighi and Grouchy. The shock was terrible; but the

(1) Archibute Charles. Official Account of W. from 1809, Reg. 1809 App. to Chron. iv. 1. 119
Vol. II. 212, 214. Vol. of Camp. 1809.

French proved at first victorious, and routed Rosenberg's horse with great slaughter; Hohenzollern's cuirassiers next came up to avenge the disaster, and Grouchy in his turn was broken and forced back; Montbrun then charged the victorious Austrians, when blown by their rapid advance, with decisive effect - and, after desperate acts of gallantry on both sides, they were compelled to follow the retrograde movement of their infantry, and abandon the eastern front of the plateau (1).

Neusiedel is taken and the Austrian left driven back While this important advantage was gained on the extreme left, a furious combat on the right was raging around Neusiedel. Davoust in person there led on the divisions Gaudin and Pacthod to the attack with extraordinary vigour - the resistance by the Prince of Hesse-Hombourg was equally obstinate, and some reinforcements dispatched by Hohenzollern, long enabled that gallant officer to maintain his ground against greatly superior forces. At length, however, the Austrians were driven by main force from the houses, and pushed back to the foot of the plateau. there they again made a stand, and for long strove with desperate resolution to make good the tower, and prevent Davoust from debouching from the village. In this terrible strife Nordman and Veczay were killed, Hesse-Hombourg, Muger, Wartachben, and almost all the Austrian generals wounded - while, on the French side, Gaudin received four wounds, and almost all his generals were struck down. At length the tower was carried by assault, and the enemy's infantry driven in disorder from the ground they had so long defended in its rear. Davoust, upon this, ordered the cuirassiers of Arighi to charge the retreating lines, and soon the slope of the plateau glittered with the dazzling white of their helmets; but they got entangled in broken ground, among the huts of the Austrian bivouacs, and the few who reached the summit were so grievously shattered by the pointblank fire of their guns, that the whole were driven headlong down, with severe loss, into the plain. Notwithstanding this success, however, Rosenberg was unable to keep his ground on the angle of the plateau, above Neusiedel, after the tower had fallen - his left was turned by Morand and Friant, who had established themselves on the crest of the plateau; and on the other side, Oudinot, transported by the enthusiasm of the moment, had converted his feigned into a real attack, and though repeatedly repulsed, had at length made his way across the Russbach, near Baumersdorf, and despite all the efforts of Hohenzollern, who was weakened by the succours sent to Neusiedel, reached the crest of the plateau (2). Threatened thus on both flanks, Rosenberg drew back in excellent order, still facing to the eastward, and forming a junction with Hohenzollern, took up a new position towards the centre of the plateau, nearly at right angles to the line of the Russbach, and covering two-thirds of its surface, while Davoust, apprehensive of being taken in rear by the Archduke John, whose approach to the field was already announced by the scouts of both armies, showed no disposition to molest him in the new line which he had occupied.

Grand attack by Napoléon from the centre Napoléon was still riding with his suite in the perilous angle in front of Aderklaa, when these alternate disasters and successes were passing on either wing of his army. The accounts which he received from his left were every moment more alarming. Officers in breathless haste arrived every ten minutes; to announce the fearful progress of the enemy in that direction. "The cannon," said one, "which you hear in the

(1) Kausler, 387 Jour iii. 272, 273 Poëte iv. 225, 228 Vict et Conq xix. 209

(2) Kausler, 387 Jour iii. 272, Pel. iv. 229, 231. Vict. et Conq. xix. 209.

rear, is that of the Austrians " the Emperor made no answer " The division Boudot is driven back into the island of Lobau," said another still no answer but his eyes were anxiously turned to the tower of Neusiedel, which was visible from all parts of the plain, and he frequently asked if the fire was on the east or west of that building At length Davoust's cannon were distinctly seen to pass Neusiedel, and the slopes of the plateau were enveloped with smoke " Hasten back to Masséna," said he to the aide-de-camp, " and tell him to commence his attack the battle is gained " At the same time he dispatched orders in all directions for offensive operations Bessières, with ten regiments of the reserve cavalry, was directed to charge the Austrian right wing, which had advanced so far into the French rear, in flank, while Masséna, who had now got back to his original ground near Aspern, assailed it in front Eugène, Marmont, and Bernadotte were to assault Wagram; Oudinot and Davoust to renew their attacks, and, if possible, drive the enemy from the plateau; while the Emperor in person prepared the decisive effort by a grand charge of infantry, cavalry, and artillery, in the centre. For this purpose, Eugène's corps, which had marched across the field from Baumersdorf, was arranged in close columns of three divisions; Macdonald in the central division, consisting of eight strong battalions; on either flank were six, drawn up in close array; behind them marched Serras's division, and Wrede's Bavarians; the light horse of the guard, and the cuirassiers of Drouot covered their flanks; a hundred pieces of cannon, chiefly of the guard, under Drouot, which had now come up from Neusiedel, admirably served, preceded the whole, and spread death far and wide while the Emperor himself with the cavalry and infantry of the old guard closed the array, on the success of which he had staked his crown and his life (1)

Decisive
advance of
Macdonald
in the
centre

Napoléon himself gave the signal to this terrible column to advance its instructions were to move right upon the steeples of Sussenbrunn, leaving Aderklaa to the right The Archduke early perceived the effort which was preparing against his centre, and made every possible disposition to resist it. The lines were doubled; the reserves of cavalry, and the right of Bellegarde's corps brought up to the menaced point; artillery on either side planted in great abundance, so as to open a cross fire on the advancing column; while the Archduke in person hastened to the spot with his whole staff, to be in a situation to act with promptitude in the terrible crisis which was approaching Hardly had they arrived, when Lauriston and Drouot's artillery approached the cannoniers, regardless of the cross fire of the Austrian batteries, advanced at the trot to within half cannon-shot, and then opened a prodigious fire from their hundred pieces, which was sustained with such rapidity, that it forced back the Austrian line immediately in front and dismounted several of their guns Taking advantage of the confusion produced by this discharge, Macdonald advanced with his column, directly in at the opening, and pierced the Imperial centre Aderklaa and Breitenlee are soon passed Sussenbrunn is menaced moving steadily forward through the wreck of guns, the dead, and the dying this undaunted column, preceded by its terrific battery incessantly firing pushed on half a league beyond the front, in other points of the enemy's line In proportion as it advanced, however it became enveloped by fire the guns were gradually dismounted or silenced, and the infantry emerged through their wreck to the front the Austrians drew off their front line upon their second, and both falling back, formed a sort of wall on each side of the French co-

lumn, from whence issued a dreadful fire of grape and musketry on either flank of the assailants. Still Macdonald presses on with unconquerable resolution : in the midst of a frightful storm of bullets, his ranks are unshaken ; the destinies of Europe are in his hands, and he is worthy of the mission. The loss he experienced, however, was enormous, at every step, huge chasms are made in his ranks, whole files are struck down by cannon-shot, and, at length, his eight dense battalions are reduced to fifteen hundred men! Isolated in the midst of enemies, this band of heroes is compelled to halt the empire rocked to its foundation : the rout of a similar body of the old guard at Waterloo, hurried Napoleon to the rock of St. Helena (1).

Reserve of
Napoleon to
support that
attack

Following with intense anxiety the advance of this column, however, the Emperor was at hand to support it. The divisions on the flank, Durutte and Paethod, which had insensibly fallen behind during the advance of Macdonald with the central column, were ordered to move forward, Serras and Wrede were hastened up to his support, and the young guard, under Reille, detached to support their attack. This last succour, however, almost exhausted the reserves of Napoleon. "Husband your men as much as possible," said he to Reille, as he gave him the command : "I have now no other reserve but the two regiments of the old guard." At the same time, Nansouty, with the cuirassiers on the left, and Walther with the dragoons on the right of Macdonald's column, received orders to charge the masses in front of them, and Oudinot, Lugène, and Marmont, to press the enemy as much as possible, towards Aderklaa and Wagram (2).

Retreat of
the Arch-
duke and
bloody en-
counters in
the course
of it

The charges of the cavalry proved most unfortunate. Hardly had Bessieres set off to execute the orders of the Emperor, when he was struck down by a cannon-shot, which tore his thigh, killed his horse, and so disfigured his whole person, that he was taken up for dead. Nansouty succeeded to the command, and led on the charge, but such was the severity of the fire which they immediately encountered, that in a few minutes twelve hundred horsemen were struck down by cannon-balls, and the whole were compelled to halt, and retire before they even reached the enemy. The dragoons on the right, under Walther, met with the same fate, and, after sustaining a grievous loss, were driven back under cover of the foot soldiers. But the infantry were more successful. No sooner did Macdonald perceive that the divisions of Paethod, Durutte, Serras, and Wrede, had come up to his flanks, and that Reille was advancing to his support, than he resumed his forward movement; and the Archduke, despairing now of maintaining his position, gave orders for a general retreat. It was executed, however, in the most admirable order : the infantry retiring by *echelon*, and alternately marching and facing about to pour destructive volleys into the ranks of the pursuers. The field of battle, as seen from the steeples of Vienna, now presented a magnificent spectacle. Masséna, upon the retreat of Kollowrath and Klenau, readily regained Essling and Aspern, and the Austrian army, in a line nearly perpendicular to the Danube, slowly and deliberately retired while the French host formed a vast line of sabres and bayonets, from the banks of the river to the summit of the plateau of Wagram, on which the declining rays of the sun glanced with extraordinary splendour. Vast volumes of smoke at intervals indicated the position of the opposing batteries, a white line of curling smoke, marked the advance and line of the infantry; and gleams of almost intolerable brightness were reflected from the helmets

(1) Kausler, 388 Pel iv 221, 221 Sav iv 113

and cuirasses of the cavalry. A bloody encounter took place at Geraradorf, which the rearguard of Kollowrath long held with unconquerable bravery; but it was at length carried by the chasseurs of the guards. Wagram yielded to the impetuous assaults of Oudinot, and two battalions were made prisoners. But, with this exception, the retreat of the Austrians was conducted with hardly any loss. The Archduke, with consummate skill, availed himself of every advantage of ground to retard the enemy; and so exhausted were the French by their efforts, that they displayed very little vigour in the pursuit. Neither cannons nor prisoners were taken; the cavalry hardly charged; but for the retrograde movement of one army and the advance of the other, it would have been impossible to have decided which had gained the advantage in the fight. Napoléon was much chagrined at this indecisive result, and suffered his ill humour to exhale in open reproaches to the cavalry generals of the guard. "Was over any thing seen like this? Neither prisoners nor guns! This day will be attended with no results." At nightfall, the Austrians occupied a line along the heights behind Stammerdorf, from which their right wing had descended in the morning, along the great road to Brunn, through Hoberndorf to Obersdorf; while the French bivouacked in the plain, three miles in their front, from the edge of the Danube near Florisdorf, perpendicularly up to Sauring, at the foot of the hills (1).

Tardy approach and retreat of the Archduke John. First appearance of his co-operation. It was towards the close of this obstinately contested battle that the Archduke John approached the field. Between three and four o'clock his columns came up to Leobensdorf and Obersiebenbrunn, while his advanced posts reached Neusiedel, and even approached Wagram, which the French troops had passed through not an hour before in pursuit of the Austrian grand army! Finding, however, upon his arrival there, that his brother had abandoned the field, and was retiring at all points towards the Blumberg, he justly conceived apprehensions concerning his own situation, left alone with forty thousand men in the rear of the grand army, and gave orders to retreat. He marched till after dark, and regained Marchegg before midnight. An incident occurred, however, soon after he retired, which demonstrated in the most striking manner the vital importance of his co-operation, and the decisive effect which might have arisen from it, had he come up, as he had been ordered, at an earlier hour of the day. The Emperor, worn out with fatigue, had lain down to rest, surrounded by his guards, in the plain between Sussenbrunn and Adersklee, when cries of alarm were heard from the rear. The drums immediately beat at all points; the infantry hastily formed in squares, the artillerymen stood to their guns, the cavalry saddled their horses. Napoleon himself mounted his horse, and asked what was the cause of the alarm. "It is nothing, sire," replied Charles Lebrun, one of his aides-de-camp, "merely a few marauders." "What do you call nothing?" replied the Emperor, warmly: "know, sir, there are no trifling events in war. Nothing endangers an army like an imprudent security. Return to see what is the matter, and come back quickly to render me an account." Meanwhile he prepared every thing for a nocturnal combat, and the aspect of affairs in the rear of the army was such as to call forth all his solicitude. The artillery, baggage-waggon stragglers and camp-followers, who crowded the rear, were flying in disorder to the Danube; the plain was covered with fugitives, the entrances of the bridges blocked up with carriages, and many who even had the river between them and the supposed

(1) Kautler 242, 248, Palet, 1. 254, 255. Arch. App. to Chron. 34. iv. 111. Viet. et Camp. 202. d. Le Charles official account Ann. Reg. 1793. 211, 212.

danger, continued their flight, and never drew bridle till they were within the ramparts of Vienna. The alarm spread like wildfire from rank to rank. the guard even was shaken. the victors for a moment doubted of the fate of the day. The ranks presented the appearance of a general rout, and yet the whole was occasioned by a single squadron of the Archduke John's cavalry, which had been far advanced towards Wagram, and, seeking to regain, as he retired, the road to Presburg, had cut down some French marauders in one of the villages on the east of the field! So vital was the line of communication on which that prince was intended to act, and so important were the results which must have ensued from his co-operation, if it had taken place, as the generalissimo was entitled to expect, at an earlier period of the day (1).

Results of the battle Such was the memorable battle of Wagram, one of the greatest and most obstinately contested of the whole war, and perhaps the most glorious in the whole Austrian annals. The loss on both sides was immense; twenty-five thousand brave men on either part were either killed or wounded without any decisive result having been obtained. The other trophies were equally balanced. the Austrian right wing had made five thousand prisoners, and two thousand of their own wounded (2) had fallen into the hands of the enemy in the centre of the plain. They were nowhere defeated, no panics disgraced their lines, no columns laid down their arms. slowly, at the command of their chief alone, in regular order they retired from the field without the loss of either prisoners or cannon, and inspiring, even to the last, dread to the enemy who followed their steps (3).

Loss of the battle was owing to the Archduke John's neglect of orders To have maintained such a conflict with greatly inferior forces, against Napoléon at the head of a hundred and eighty thousand men, was itself no ordinary distinction. But this is not all. if their forces had all joined in the action, and they had thereby been restored to an equality with the enemy, there can be no doubt the result would have been different. But for the failure of the Archduke John to come up at the period assigned to him, the battle would have terminated in a glorious and decisive victory. Had that prince made his appearance on the field either at six in the morning, when Rosenberg, in anticipation of his co-operation, advanced to Glinzendorf, or later, when Kollowrath and Klenau had routed the French left wing, and their leading columns were approaching the bridges of Lobau, or even when the fate of Europe hung in suspense on the advance of Macdonald's column in the centre, there can be no doubt that Napoléon would have been totally defeated, and possibly a disaster as great as that of Waterloo would have effected, six years before that memorable event, the deliverance of Europe. Experience in every age has demonstrated, that,

(1) Jom. iii 276, 277. Vict. et Conq. xix 215. Sav. iv 115.

(2) The 25th bulletin says the French took 20,000 prisoners, forty pieces of cannon, and ten standards, and Sir Walter Scott has heedlessly transcribed that statement [Scott's Napoleon, vi 334.] It is, however, grossly inaccurate, and proved to be so even by the warmest partisans of Napoléon. "The enemy retired," says Savary, who was by the Emperor's side through the whole battle "at four o'clock, and abandoned to us the field of battle, but without prisoners or cannon, and after having fought in such a manner as to render every prudent man cautious of engaging in a rash enterprise. we followed without pressing him, for the truth is he had not been at all cut up. He made head against us every where, and his troops were very numerous, and he had, in reality, no reason for retiring, though, fortunately for us, he did so, and

thus gave to France all the moral advantages of a victory" [Savary, iv 114, 115, 116.] Jomini says, "The Archduke retreated during the night, leaving us no other trophies but some thousand wounded or prisoners, and a few dismounted cannon. Their loss was 25,000 men, ours was about the same" [Jomini, iii 276.] Sir Walter's *Life of Napoleon* is a surprising work, considering that it was written in little more than twelve months, by an author whose life had been spent in studies of a different description. but his narrative is often little more than a transcript of the bulletins or *Annual Register*, and it is not surprising that in less than two years he could not, under severe anxiety and affliction, master what would have required twenty years, in Gibbon's words, "of health, leisure, and perseverance"—see LOCKHART'S *Life of Scott*, vii 42.

Napoleon
visits the
field of bat-
tle and
makes Mac-
donald a
marshal

The day after the battle, Napoleon, according to his usual custom, rode over the field of battle. Without the features of horror which had imprinted so awful a character on that of Eylau, it presented some circumstances of a still more distressing description. The plain was covered with the corpses of the slain; the march of Macdonald's column especially, might be traced by the train of dead bodies which lay along its course. Such was the multitude of the wounded, that they far exceeded all the efforts of the French surgeons, and of the humane citizens of Vienna, for their relief, and, four days after the battle, the mutilated remains of human beings, still alive, were found in great numbers among the rich fields of wheat with which the plain was covered. Some of these unhappy wretches endured for days together the rays of a vertical sun during the dog-days, without either food or water. Mutilated, and unable to remove the flies which fastened on their wounds, they literally became, while still alive, the prey of the insects which hover round carcasses of animals in hot weather (1). The Emperor frequently dismounted, and with his own hands administered relief to some of the wounded, and drew tears of gratitude from eyes about to be closed in death (2). The knowledge that the victory was their own, had restored all their wonted enthusiasm to the French soldiers, the wounded exclaimed *Vive l'Empereur* as he passed, and hoisted little white flags, formed by putting their handkerchiefs or an arm of their shirt on their bayonets, as well to testify their joy as to implore relief. After having traversed the field of battle, Napoleon inspected the soldiers who were about to march in pursuit of the enemy, and distributed rewards in great profusion among the most deserving. In passing he stopped and held out his hand to Macdonald. "Touch it, Macdonald, without any further grudge (3) from this day we shall be friends; and I will send you, as a pledge of my sincerity, your marshal's staff, which you won so gloriously yesterday." "Ah! sire," replied Macdonald with tears in his eyes, "we are now together for life and death." And well did the hero of Scottish blood redeem his word! Through every future change of his reign he adhered with unshaken fidelity to the fortunes of his master. He was to be found by his side, alike amidst the disasters of Fontainebleau as the triumph of Wagram; and when all the other objects of his bounty had deserted their benefactor and passed over to the enemy, he remained almost alone to support him, the latest object of his prosperous favour, but the most faithful follower of his adverse fortunes (4).

Appoint-
ment of
Oudinot
marshal of
the empire
Disgrace of
Bernadotte

Oudinot, a general, as the bulletin said, "tried in a hundred battles," and Marmont, whose campaign in Illyria and Carniola had so powerfully contributed to the success of the grand army, were at the same time elevated to the rank of marshals. Very different was the destiny which awaited Bernadotte, Prince of Pontecorvo, hitherto one of the most favoured of Napoleon's lieutenants. This chief, who had been singularly unfortunate both in his attack on the heights of Wagram

(1) D'Abbr. xii. 261, 262.

(2) "The Emperor stopped his horse beside a young officer of carabiniers, who had had his skull fractured by a cannon shot, he knelt beside him, felt his pulse, and wiped with his own handkerchief the dust from his lips and brow. A little spirits made him revive, he opened his eyes and fixed them on the Emperor, he recognised him, and his eyes filled with tears, but he was too weak to be able to sob, and soon after breathed his last."—SAVARY, iv. 119.

(3) A coldness had long subsisted between Napo-

léon and this distinguished general. He had not been employed in any considerable command since the battle of the Trebia, in 1799. Jealousy and malevolence had widened the breach occasioned by Macdonald's original disinclination to join the herd of obsequious flatterers at the Tuileries. How often does difficulty and misfortune bring to the post they are really worthy to fill, those noble minds who disdain the arts by which they are generally won!—SAVARY.

(4) Sav. iv. 119.

and village of Aderklaa, on the evening of the 5th, and his encounter with the Austrian centre on the morning of the 6th, had, with the true spirit of Gascony, his native country, glossed over his defeat by a boasting proclamation to the Saxons on the 7th, in which he professed to convey to them the Emperor's approbation for the gallantry which they had evinced on these occasions (1). Napoléon, who was both irritated at Bernadotte and the Saxons for the abandonment of Aderklaa, which it required him so much time and bloodshed to regain on the following day, and jealous of any of his lieutenants assuming his own peculiar function in the distribution of praise or blame, immediately prepared and circulated, but among the marshals and ministers alone, an order of the day, reflecting in very severe terms, both on the conduct of the Saxons and this step on the part of their chief (2).

July 9. and soon after a decree was published in the bulletin dissolving
July 20. that corps, and incorporating its soldiers with other parts of the army. Bernadotte sought a private interview with the Emperor on this painful subject, but in vain; he constantly refused to see him and the disgraced marshal immediately set out for Paris, where he was soon after employed by the minister at war, without the concurrence of Napoléon, in a very important duty, that of commanding at Antwerp during the English invasion of the Scheldt. No sooner, however, did the Emperor learn of this fresh appointment by the Government at Paris, than it too, was cancelled, and Bessières put there in his stead; even although Bernadotte's efforts, during the short period he held the command, had been eminently serviceable to the empire. These repeated indignities made a deep impression on the mind of the French marshal: they revived that ancient jealousy at the First Consul (3) which all the subsequent glories of his reign had not entirely extinguished; induced a sullen discontent at the Imperial service, which experience had shown was liable to such inconstancy made him grasp eagerly at the Swedish throne, which fortune soon after proffered to his acceptance; and, by investing the disgraced soldier with the power and feel-

(1) Bernadotte's proclamation to the Saxons was in these terms:—(General) I the day of the 5th July seven or eight thousand of you pierced the centre of the enemy's army and reached Dutch W. guns, despite all the efforts of forty thousand of the enemy supported by sixty pieces of cannon; you continued the combat till midnight, and bivouached in the middle of the Austrian lines. At day-break on the 6th, you renewed the combat with the same perseverance and to the midst of the ravages of the enemy's artillery your living cannon has remained immovable in place. The great Napoléon was witness to your devotion; he has enrolled you among his bravest followers. Honour! the fortune of a soldier consists in the performance of his duties; you have worthily performed yours. — *Bulletin of Communications*, 7th July 1809. This order of the day is inserted in all the German papers at the time — *Europa* ii. 220.

(2) Napoléon's order of the day was conceived in the following terms:—Independent of the consideration, that His Majesty commands the army in person, and that to him it belongs to distribute the success of his arms as he thinks fit to every one on this particular occasion, success was owing to the French and not to any foreign troops. The order of the day of the Prince of Poniatowski, tending to inspire false pretensions to troops of the most ordinary description, is contrary to truth, to justice, to the national honour. The success of the day of the 6th, is due to the Marshals the Duke of Alton and Oudinot who

pierced the centre of the enemy's army and the mass there (that the corps of the Duke of Alton and Oudinot turned their flank. The siege of Deutsch-Wagram was not taken on the evening of the 5th; it was not only on the morning of the 6th, at six o'clock, by the corps of Marshal Oudinot. The corps of the Prince of Poniatowski did not remain immovable in place on the 6th; the contrary it was the first to have retired. His Majesty was obliged to cover the corps of the Emperor by the division Broussier and Lamouroux, commanded by Marshal MacDonald, by the division of heavy artillery commanded by General K. Mouton and part of the cavalry of the guard. It is to that Marshal and his troops that the recognition is really due, which the Prince of Poniatowski has attributed to himself. His Majesty desires that the testimony of his displeasure may serve as an example to every marshal from arrogating to himself the glory which belongs to another. His Majesty has, nevertheless, decided that this order of the day which would doubtless destroy the Russian army (though his soldiers know well that they do not need the recognition which have been bestowed upon them, shall remain secret; and only be sent to the marshals commanding the corps d'armée. — *Bulletin* No. 1000, 10th July 1809; who seems, nevertheless, to admit that the leading fact stated in the secret order of the day by the Emperor, is well founded.

(3) *Annales*, xiii. 311

ings, of an independent sovereign, contributed in the end, in no inconsiderable degree, to the downfall of the French empire (1)

The Austrians retire towards Bohemia, Two lines of retreat were open to the Archduke after he had determined to relinquish the field, that to Olmutz and Moravia, and that to Bohemia, and so little did the French press their adversaries when the retrograde movement commenced, that the Emperor was for some time ignorant which of the two routes they had adopted. There were several reasons, however, which induced him to prefer the latter. Prague was, next to Vienna, the greatest military establishment, and contained the largest arsenal of the empire, and it stood in a country surrounded with a range of hills, which offered favourable positions for retarding the advance of an invading army. Hopes were not wanting, also, that the great naval and military armament which England had so long been preparing, would soon make its appearance, either in Flanders or the north of Germany, and that the indecision of Prussia, notwithstanding the retreat from Wagram, might be determined by such powerful support in the north of Germany. For these reasons, the line of Bohemia was selected for the retreat of the grand army, leaving to the Archduke John, with the forces under his command, and the Hungarian insurrection, the care of covering Hungary and the eastern provinces of the empire. The greater part of the army followed the high-road to Znaim, Rosenberg alone, on the extreme left, took that to Brunn by Wolkersdorf. The retreat continued all the 7th without any serious molestation from the enemy, while Napoleon, who was disquieted by the presence of so large a body as the Archduke John's army, still untouched, on his right flank, and by the menacing advance of Giulay with twenty-five thousand men from the side of Styria, towards Vienna, separated the immense army which had so lately been concentrated on the field of Wagram. Davoust, Marmont, Masséna, with Oudinot, Bessières, and the guards, being directed to follow on the traces of the Archduke Charles, the Viceroy's corps, augmented to fifty thousand men by the addition of the Saxons and Württembergers, being moved towards Presburg, to observe the Archduke John, while Macdonald's division remained in charge of the bridges of Vienna, and was prepared, with the garrison of the capital, to repel any insult that might be offered by the Ban of Croatia. No less circumspect than adventurous, Napoleon, at the same time, ordered a hundred pieces of heavy cannon to be mounted on the ramparts of Vienna, augmented its garrison to six thousand men, laid in provisions for six months, directed the formation of great new fortifications on the bridgeheads of the capital, especially at Florisdorf, where the road to Brunn and Znaim traversed the Danube, and ordered Passau, Lintz, Raab, Melk, and Gottweig, in different directions around the capital, to be put in a state of defence (2)

Retreat of the Archduke to Znaim and his position there No considerable action took place during the retreat. Masséna, however, pressed the Austrian rear-guard with all his wonted activity, and bloody encounters of inconsiderable bodies marked the track of the armies. The Archduke conducted the retreat with consummate skill, and in the most admirable order, always protecting the rear-guard, composed of formidable masses of cavalry and infantry, by a numerous artillery skilfully posted on the rising grounds with which that undulating country abounded. To accelerate his movements, and if possible throw him in some degree into confusion, Napoleon ~~had~~ ^{sent} Marmont's corps.

(1) Dom. viii. 280, 281. Pel. iv. 241, 242. Sav.

(2) Pel. iv. 242. Leon's Order, &c.

which was following Rosenberg on the road to Brunn, by a cross road to Laa, by which means he threatened to arrive at Znaym before the main

Austrian army. The Archduke no sooner received intelligence of this movement, than he fell back with all his forces, and took post at that town, on the banks of the Taya. Nothing can exceed the military position

which the environs of Znaym afford: the town itself, surrounded by walls, rests, towards the west, on the rugged precipices which border the river towards the east, on the slopes of the Lischen, the ground descends on all sides to the point of Schallersdorf, where the river turns sharp by a right angle, and flows towards Lipwitz, and the junction of the Lischen and Taya. These two streams thus enclose, as it were, a vast bastion, with a great natural wet ditch in front, about a mile long, and equally broad. The Archduke himself took post at Brenditz, which rendered him master both of the roads to Budwitz and Bohemia, and Brunn, but the slopes of Znaym were filled with troops, the bridge of the Taya barricaded, and four powerful batteries erected on the heights above to dispute the passage (1).

Strong as this position was, it was doubtful whether the Austrians would maintain themselves in it. The advanced guards of Masséna, indeed, when they first approached the bridge, were arrested by the tremendous fire of grape and musketry which issued from the wood and heights on the opposite side; but the French cannon were soon placed in such a position as to rake the Austrian batteries; the bridge was disengaged by their flanking fire; fords were discovered both above and below; and soon the attacking columns were passed over, and began to ascend the slopes on the opposite side. The Archduke withdrew his troops into Znaym; and arranged his artillery in such numbers around its walls, that, when the French leading columns arrived within reach of the fire, on the slope leading to the town, they were checked with so terrible a discharge as to be obliged to retire precipitately with severe loss. Upon this the Austrians issued forth, and took post around the town and in front of the bridge, in great strength, in a position admirable for defence, though cramped for manœuvring, and especially hazardous if a retreat was intended. A dreadful storm arose at noon, which darkened the air, and deluged both armies with such a torrent of rain, that for two hours the discharge of fire-arms was impossible, and the combat of necessity was suspended. When the atmosphere cleared, Masséna renewed his attacks on the grenadiers in front of the bridge; but he was driven back, and the Austrians, pursuing the flying enemy, regained that important passage, and made prisoners a battalion with three generals, in the village at its opposite extremity. Masséna, upon this, brought up the 10th regiment, which again won the village, forced the bridge, and being followed by a brigade of cuirassiers, who charged with uncommon resolution, drove back the enemy's column to their position in front of Znaym, with the loss of five hundred prisoners; while the French guns were brought up on the left, in great numbers, to Edleitz, from whence they took in flank the most formidable batteries of the Austrians (2).

Advance of
Marmont
and resuscita-
tion of the
army at
Znaym.

The progress of the Austrians in front of Znaym did not escape the observation of Napoleon, who had arrived during the storm at Theswitz, and established himself at the headquarters of Marmont's corps. To relieve the pressure on Masséna, who was obviously engaged with superior forces, and whose defeat would endanger the whole

(1) *Polst.* i. 281. 267. *Jour.* iv. 272. *Vict.* ii. (2) *Polst.* iv. 209. 272. *Jour.* iii. 212. *Conq.* xix. 216. 217.

army, he immediately ordered the former marshal to debouch from Theswitz, to cross the Lischen, and to ascend on the north-eastern side the plateau of Znaym. These orders were immediately obeyed, and Marmont crossed the stream and ascended the hill, but sustained a very heavy fire when he approached the town of Znaym, and came within reach of the formidable Austrian batteries arranged round its walls. Matters were thus in a very critical state, for the two corps of Masséna and Marmont were alone engaged with the whole Austrian army, except Rosenberg's corps; and Davoust and Oudinot, destined to support them, could not arrive at the theatre of action till the following morning. Nevertheless, Masséna, with his usual impetuosity, was urging the attack on the town; and already the rattle of musketry was heard in the suburbs, when the cry was heard, "Peace, peace, cease firing." Such, however, was the exasperation of the contending parties, that it was with great difficulty the action could be stopped, and when the officers arrived from the headquarters of the two armies to announce the armistice, they were wounded before the troops could be prevailed on to desist from mutual slaughter (1).

Motives
which led
the Aus-
trians to
this step

In effect, the Archduke Charles had, on the preceding night, sent Prince John of Lichtenstein to the Emperor's headquarters to propose an armistice, but Napoléon was unwilling to accept it, till he had enjoyed an opportunity of observing in person the situation of the armies. The motives which led the Austrian cabinet to take this step were sufficiently obvious. The policy of that government always has been to avoid coming to extremities—to come to an accommodation before the chances of war had become desperate; to consider the preservation of the army the grand object, and trust, by preserving it entire, to regain at some future time the advantages which might be lost at the moment by yielding to the storm. Considering another battle, therefore, fraught with the existence of the empire, and the result of the former not so decisive as to induce the enemy to refuse reasonable terms of accommodation, they deemed it the more prudent course to propose an armistice while yet the forces of the monarchy were entire, the more especially as the retreat from Wagram was not likely to induce Prussia to adopt a decisive course, and the long promised armament of Great Britain had not yet left the harbours of the Channel (2).

Arguments
for and
against the
armistice at
the French
headquar-
ters

It was not, however, till Napoléon had himself seen the positions of the contending armies, and was satisfied that the Austrians, at the moment, had the advantage, as well in the position as the concentration of their troops, that he resolved to accede to the suspension of arms (3). A council of war was afterwards held, attended by all the marshals, in the Emperor's tent, in which the important point was debated, whether the armistice should be agreed to. Opinions were much divided, and the discussion was prolonged till a very late hour. On the one side, it was contended by Berthier and the advocates for a continuance of hostilities, that it was of the last importance to take advantage of the reinforcements which had already come up, or were likely to arrive during the night, to commence a general attack on the enemy, and finish the war on the following day at a blow, that his position around Znaym, though strong was not invulnerable, that Austria was the irreconcilable enemy of France under the present regime; and that, unless deprived of the power of again injuring us, she would

(1) Pel iv 272, 274 Thib iv 350 Sav iv 124, 125

never cease to violate the most solemn treaties, when it suited her own convenience, or there was a prospect of advantage from any the most flagrant violation of the public faith. That if, by retiring in the night, as present appearances rendered probable, the Archduke should succeed in regaining Bohemia, and uniting to his standards the forces of that province, the Emperor could summon to his aid the corps of Lefebvre, Junot, and Jérôme, and the advantage would still remain on his side. That it was indispensable to put an end to these coalitions perpetually springing up, by dividing Austria, which was the centre of them all, that this was a point of much more importance than finishing the war in Spain; and that no sooner would the Emperor, for that purpose, enter the Peninsula, than a new coalition would spring up in his rear, which would embrace all the northern powers. On the other hand, it was contended by the advocates of peace, that if Prince Charles retreated, as he unquestionably might do, during the night, and gained the Bohemian mountains, there was every reason to fear a general conflagration in Germany, an open declaration from Prussia, and probably the ultimate adhesion of Russia itself, that it was evident from present appearances, not less than past events, that the real danger of France lay in the north: that an entire new system of Russian policy had been brought to light, in the course of the contest and that, in anticipation of the grand and final conflict between the south and the north, which was evidently approaching, it was of the last importance not merely to spare but conciliate Austria, and, by terminating the war in the Peninsula, not only secure the rear of France, but liberate two hundred thousand of its best soldiers from an inglorious but murderous warfare. The Emperor, after hearing according to his usual custom, both sides patiently, more fully aware than many of his generals of the precarious footing on which he stood with Russia, inclined to the latter side, and broke up the conference with the decisive words,—“Enough of blood has been shed. I accept the armistice (1).”

Limits assigned to the two armies by the armistice, July 12. No great difficulty was experienced in fixing the line of demarcation between the districts to be occupied by the two armies: their relative position, and the principle *ut possiditis* afforded too clear a rule for drawing the line between them. The French were permitted to retain possession of all Upper Austria, as far as the borders of Bohemia, including the circles of Znaim and Brunn; the whole district included by the course of the Morava as far as its confluence with the Taya; thence by the high road to Presburg, including that town; the course of the Danube as far as Raab, the river of that name, and thence by the frontiers of Styria and Carinthia to Fiume. On this principle, the citadels of Graz and Brunn, the fort of Sassenburg, the whole districts of Tyrol and Vorarlberg were to be surrendered to their arms. It was a third in point of extent, and more than a half in point of military strength, of the whole empire. The armies in Poland were to retain their respective positions. In western and northern Germany, the limits between the two powers were to be those of the states composing the Confederation of the Rhine (2).

Signature of the Emperor of Austria to sign the armistice, which it only does on the 11th. The armistice was concluded by the Archduke Charles alone, in virtue of the powers reposed in him as generalissimo: but subject to the ratification of the Emperor. The cabinet of Vienna which at that period was assembled at Komorn in Hungary, had considerable difficulty in giving their consent to it. It was proposed to take

(1) *Pol. iv* 275, 277. *Dign. xlii* 210. *Thib. ii* 250.

advantage of the distance of the French troops to act on the right bank of the Danube, to unite the forces of Giulay and the Archduke John with those of the Hungarian insurrection, and move towards Styria and Tyrol, so as to threaten the French communications, while the Archduke Charles, by retreating towards Bohemia, drew the bulk of their forces to a distance from their only base of operations. In pursuance of these views, which for a few days prevailed at the Imperial headquarters, directions were sent to the Archduke John to "disregard any orders regarding an armistice which were not bearing the sign manual of the Emperor, and take his instructions from him alone." In the course of the two following days, however, Prince Lichtenstein arrived from the headquarters of the Archduke Charles, and inspired more moderate views. The court, yielding to necessity, and desirous of gaining time to recruit its armies, await the progress of events in Spain, and the effect of the long expected English armament in the north of Germany, gave a reluctant consent; the armistice was signed by the Emperor on the 48th, and the flames of war were quenched in Germany, till they broke out with awful violence three years afterwards on the banks of the Niemen (1).

Heavy contribution levied on Austria July 17 The Austrian people were not long in receiving a bitter proof of the reality of their subjugation. On the very day after the armistice was concluded, a decree of Napoléon's imposed a war contribution of 257,800,000 francs (L 9,500,000), on the provinces occupied by the French armies, which was not a half of the monarchy, a burden at least as great, considering the relative wealth and value of money in the two countries, as an imposition of fifty millions sterling would be on Great Britain (2).

Comparison of the battle of Wagram with those of Cannæ and Waterloo The battle of Wagram bears a striking resemblance to two of the most memorable that have occurred in ancient and modern times, — of Cannæ and Waterloo. In all the three, the one party made a grand effort at the centre of his antagonist, and the final issue of each battle was owing to the success or failure of the measures adopted to defeat this central attack, by an united movement against the wings of the enemy. At Cannæ, as already noticed, it was the advance of the Roman centre, in column, into the middle of the Carthaginian army, followed by the turning of both their flanks by the Carthaginian cavalry, which brought about their ruin. At Aspern, the defeat of the French on the second day was owing to a similar hazardous advance of the French centre in close column into the middle of the Austrian line, which skilfully receded, and brought the French columns into the centre of a converging fire of a prodigious artillery (3). At Waterloo, the final defeat of the French was owing to the steadiness of the English guards, which in line arrested the advance of the old Imperial guard in column, while the concentric fire of the British batteries, now advanced into a kind of semicircle, and the simultaneous charge of a brigade of cavalry on the one side, and a line of infantry on the other, of the attacking mass, completed the final destruction of that formidable body. At Wagram the Archduke had, on a still more extended scale, prepared the means of repelling the anticipated central attack of the French in column, and converting it into the cause of total ruin. The batteries and troops in the centre were so disposed, that their awful fire at length arrested Macdonald's intrepid column; Aspern and Essling were captured on one flank, the Archduke John, with thirty thousand fresh troops, was destined to turn the other. To all appearance, the greatest defeat recorded in history awaited the French Emperor.

when the tardiness of that prince proved as fatal to the Austrians as a similar delay on Grouchy's part was to Napoléon himself at Waterloo, and victory was snatched from the grasp of the Austrian eagles when they seemed on the very point of seizing it.

Reflections on the campaign and its glorious character to Austria. The campaign of Aspern and Wagram is the most glorious in the Austrian annals—the most memorable example of patriotic resistance recorded in the history of the world. If we recollect that in the short space of three months were comprised the desperate contest in Bavaria, the victory of Aspern, the war in Tyrol, the doubtful fight of Wagram, we shall be at a loss whether to admire most the vital strength of a monarchy, which, so soon after the disaster of Ulm and Austerlitz, was capable of such gigantic efforts,—the noble spirit which prompted its people so unanimously to make such unheard of exertions—or the firm resolution of the chiefs who, undismayed by reverses which would have crumbled any other government to dust, maintained an undaunted front to the very last. We admire the courage of Darius, who, after the loss of half his provinces, still fought with heroic resolution against the Macedonian conqueror on the field of Arbela—we exult in the firmness of the Roman senate, which, yet bleeding with the slaughter of Cannæ, sent forth legions to Spain, and sold the ground on which Hannibal was encamped, when his standards crowded round the walls of the city—and we anticipate already the voice of ages in awarding the praise of unconquerable resolution to the Russian Emperor, who, undeterred by the carnage of Borodino, resolved to burn the ancient capital of his empire rather than permit it to become the resting-place of his enemies, and, when pierced to the heart, still stretched forth his mighty arms from Finland to the Danube to envelope and crush the invader. But, without underrating these glorious examples of patriotic resistance, it may safely be affirmed that none of them will bear a comparison with that exhibited by Austria in this memorable campaign.

Other empires have almost invariably sunk upon the capture of the capital. Carthage was crushed by the storm of its metropolis under Scipio Africanus; Rome sunk at once with the fall of the eternal city before the Gothic trumpet; with the conquest of Constantinople the lower empire perished—the seizure of Berlin by the allies under the great Frederic was but a transient incursion, its lasting occupation by Napoléon proved fatal to the strength of the monarchy. France, during its Republican fervour, was nearly overthrown by the charge of fifteen hundred Prussian hussars on the plains of Champagne (1) and twice saw its strength totally paralysed by the fall of its capital in 1814 and 1815; Russia survived the capture of Moscow only by the aid of a rigorous climate and the overwhelming force of its Scythian cavalry. Austria is the only state recorded in history which, without any such advantages, fought two desperate battles in defence of its independence *arma*. Its capital had fallen! To this glorious and unique distinction the imperial annals may justly lay claim; and those who affect to condemn its institutions, and despise its national character, would do well to examine the annals of the world for a similar instance of patriotic resolution, and search their own hearts for the feelings and the devotion requisite for its repetition.

Proof thereby afforded of the practical inheritance of the Austrian government. In truth, the invincible tenacity with which both the Austrian nobility and people maintained the conflict under circumstances of adversity which in every other instance recorded in history, had subdued the minds of men, affords at once a decisive refutation of the opinion so industriously propagated and heedlessly received in

this country, as to the despotic and oppressive nature of the Imperial rule, and the most memorable example of the capability of an aristocratic form of government. to impart to the community under its direction a degree of consistency and resolution of which mankind under no other circumstances are capable. It was not general misery which caused the Tyrolese to start unanimously to arms at the call of the Austrian trumpet, and combat the invader with stone balls discharged from larch trees bored into the form of cannon it was no oppressive rule which called forth the sublime devotion of Aspern and Wagram No nation ever was so often defeated as the Austrians were during the course of the Revolutionary war, but none rose with such vigour from the ground, or exhibited, in such vivid colours, the power of moral principle to withstand the shocks of fortune, to compensate, by firmness of purpose, the superior intellectual acquisitions of other states, and communicate to men that unconquerable resolution which brings them in the end victorious through the severest earthly trials The aspect of Austria Proper, especially in its mountainous regions, confirms and explains this extraordinary phenomenon. In no other country, perhaps, is so uncommon a degree of wellbeing to be seen among the peasantry; nowhere are the fruits of the earth divided in apparently such equitable proportions between the landlord and the cultivator, nowhere does ease and contentment prevail so universally in the dwellings of the poor (1). When it is recollected that this general prosperity takes place in a country where the taxation is so light as to be almost imperceptible by the great body of the people, and where the proportion of persons instructed, is, on an average of the whole empire, equal to any state of similar dimensions in Europe, and as high as the best educated nations in some provinces (2), it must be admitted, that the philanthropist has much cause to linger with satisfaction on its contemplation. It is on a different class, on the middle ranks and the aspiring children of the burghers, that the restrictions of the Imperial sway are hereafter destined to hang heavy but at this period, no heart-burnings arose from the exclusions to which they are subject, and one only passion, that of ardent devotion to their country, animated all classes of the people.

But the example of Austria in 1809, has afforded another and still more interesting lesson to mankind That country had, at that period, no pretensions to intellectual superiority commerce, manufactures, and the mechanical arts, had made little progress over its surface, literature was in its infancy, science flourished only in a few favoured spots, under the fostering care of Imperial patronage; poetry, history, philosophy, were to the great mass of the inhabitants almost unknown It had long and painfully felt the consequences of this inferiority, in the bloody contests it had been compelled to maintain with the democratic energy and scientific ability of the French Revolution How, then, did it happen that a state, so little qualified by intellectual superiority to contend with the gigantic powers of wickedness, should have stood forth with such unparalleled lustre in the contest, should have resisted alone, with such heroic bravery, the military force of half of Europe, guided by consummate ability and trained by unparalleled conquests, and, for the first time since the commencement of the struggle, made the scales hang even between the conservative and re-

(2) One in fifteen of the population over the whole empire attend the elementary schools, in some provinces, as Upper Austria, Tyrol, and Bohemia, the proportion is as high as 1 to 11 In

Switzerland, it is now 1 to 10, in Ireland, 1 to 9, in Scotland, 1 to 11, in France, 1 to 17, in Prussia, 1 to 10, in Spain, 1 to 350, in Poland, 1 to 100 in Russia, 1 to 794 — See MORAV, *Stat. de la Gr. Bretagne*, ii 333, 334

revolutionary principles? Simply because she possessed a pure, virtuous, and single-minded people because, whatever the corruptions of the capital may have been, the heart of the nation was untainted because an indulgent rule had attached the nobility to their sovereign, and experienced benefits the peasantry to their landlords, because patriotism was there established upon its only durable basis, a sense of moral obligation and the force of religious duty.

Herbert

exhibited
by France

And, in this respect, France, in the days of her adversity, exhibited a memorable contrast to Austria in the hour of her national trial.

When the evil days fell upon her, when the barrier of the Rhine was forced, and hostile standards approached the gates of Paris, the boasted virtues of Republicanism had disappeared, the brilliant energy of military courage was found unequal to the shock. Province after province sunk without performing one deed worthy of tradition. City after city surrendered without leaving one trace in the page of history. No French Saragossa proved that patriotism can supply the want of ramparts. No revolutionary La Vendée, that the civic virtues can dispense with Christian enthusiasm; no second Tyrol, that even Imperial strength may sink before the "might that alumbers in a peasant's arm." The strength of the empire was in the army alone: with the fall of its capital the power of the Revolution was at the end. The marshals and generals, true to the real idol of worldly adoration, ranged themselves on the side of success. (1) The conqueror of a hundred fights was left almost alone by the creatures of his bounty; and, like the sorcerers who crowded round the statue of Eblis when the idol was pierced to the heart by the son of Hodeirah, "the ocean vault fell in, and all were crushed."

Elevation of
the Aus-
trian
character
from past
calamities.

These considerations, in a certain degree, lift up the veil which conceals from mortal eyes the ultimate designs of Providence in the wars which so often desolate the world. If we compare Austria as she was in 1703 with Austria in 1800, we seem not merely to be deal-

ing with a different people, but a different age of the world. In the first era is to be seen nothing but selfishness and vacillation in the national councils; lukewarmness and indifference in the public feeling, irresolution and disgrace in military events. But it is well for nations not less than individuals to be in affliction. Turn to the same nation in 1800 and behold her undaunted in the cabinet, unconquered in the field; glowing in every quarter with patriotism, teeming in every direction with energy; firm in her faith, generous in her resolutions, maintaining unshaken constancy to her principles amidst unheard of disasters, fidelity to her sovereign amidst unbounded temptations. This is indeed regeneration, this is true national glory, purchased in the only school of real improvement, the paths of suffering. How many centuries of national existence did Austria go through before this mighty

(1) "The galleries and saloons, say Countess-
court, which adorned the apartments of the Em-
peror at Fontainebleau (in April 1814) were de-
serted. The marshals had retired with their little
brigades; the wind of adversity had blown,
the glittering crowd had vanished. That solitude
thrilled the heart. The retreating chief, he so
late by had never moved but surrounded by magni-
ficent courtiers, the great monarch, who had seen
kings at his feet! how lonely, except that distant
disembodied even of the interest and care of his
people! All was done, all was to be done in that
apartment! I felt the necessity of withdrawing
the Emperor from so fearful lecture. But you
got every thing ready for my departure. — Yes,
here! — My poor Countesscourt, on a charge here
if you can. I go and march! could you be

convinced it. Berthier has gone off. Countess-
court, my dear! — What, here! exclaimed I.

Berthier then, the creature of your beauty —
Berthier replied the Emperor was better than
you. You will see some day some of the marshals
employment from the Danube. I feel humiliated,
that the man whom I have raised so high in the eyes
of Europe, should have sunk so low! What is
they said of that atmosphere of glory in which
they appear reduced to the level of the great? What
about the sovereign? Think of it! those who
were created by my reign. — Such was the feeling
and gratitude of the Revolution! A general, a
tribune, the glory! Countesscourt this was it, as for
Austria — with the division of Vienna and the
slipshod of Tyrol — &c. &c. —
1817 111

change was effected, how many national sins did she expiate, what a spot of glory, not merely in imperial but in human annals, has she left! She is to reappear in the contest for European freedom; but she is to reappear as a conqueror, invested with irresistible strength, arrayed in impenetrable panoply: she shared the glories of Leipsic with Russia and Prussia, but the heroism of Aspern, the constancy of Wagram, are her own. Mankind have little concern with the mere conquest of one nation by another: it is the triumph of virtue over misfortune, of duty over selfishness, of religion over infidelity, which is the real patrimony of the human race. The heroic constancy, the generous fidelity of all classes in Austria at the close of the contest was placed by Providence in bright contrast to the treachery and selfishness of the French Revolutionists, as if to demonstrate the inability of the greatest intellectual acquisitions to communicate that elevation to the character which springs from the prevalence of moral feeling, and to show that even the conquerors of the world were unequal to a crisis, which religion had rendered of easy endurance to the shepherds of the Alps

CHAPTER LVII

WALCHEREN EXPEDITION—PEACE OF VIENNA—SECOND WAR IN TYROL—DETACHMENT OF THE POPE.

ARGUMENT

Vast Capabilities of the Scheldt for Commerce—Former Grandeur and present Importance of Antwerp—Napoleon's Designs for its amplification—Efforts always made by England to keep this great stronghold from France—Extraordinary instabilities which has led to its abandonment to France in later times—Proposals of Austria for a British Diversion—Reasons for not sending the grand British Expedition to the North of Germany or Spain—Reasons for selecting the Scheldt as the point of attack—Unhappy Delay in sending out the Expedition—It is finally resolved on in the end of May and on a very great scale—Selling and immense magnitude of the Expedition—It lands in Holland, and gains great early Success—Certainty of entire victory if Antwerp had been first attacked—Siege and Capture of Flushing—The time lost in reducing it saves Antwerp—Retention of Walcheren at first attempted is finally abandoned as impracticable—Blind injustice which frequently characterises the proceedings of the British Parliament—Percussive waste of time in the Debates in Parliament at this period—Charges against the Duke of York, and his resignation—Debates on the Walcheren Expedition—Quarrel between Lord Castlereagh and Mr Canning—Changes in the Administration—Youth and first introduction to Public Life of Mr Canning—His Character as an orator and statesman—Character of Lord Castlereagh—Elevated features of his Character—Career of Mr Perceval—His Character—Position of France relative to Russia at this period—Negotiations between France and Austria—Napoleon's reasons for secret dissimulation—Attempt to assassinate him by Stahle—Which leads to the conclusion of the Negotiation—Peace of Vienna—Its Secret Articles—Jealousy of Russia at the increase of the Grand Duchy of Warsaw by this Treaty—The Ramparts of Vienna blown up—Affairs of the Tyrol after the Armistice of Znaim—Fresh Invasion of that province by Marshal Lefebvre—Renewed resolution of the Tyrolese to continue the contest—Desperate Action at the bridge of Lodi—Defeat of Marshal Lefebvre on the Brenner—Successes in other quarters—Total Defeat of Lefebvre at Innsbruck—Hofer's Deliverance and Government of Tyrol—Preparations of Napoleon for the subjugation of the Tyrol—Successful Invasion of the country on all sides—Hofer resolves to submit, and publishes a Proclamation to that effect—And which is soon recalled by him—Last Invasion of the Tyrol, and desperate Resistance—Final Conquest of the country—Betrayal and Seizure of Hofer—His Trial and Condemnation—And Execution—Reflections on this event—Adventures of Haspinger and Spechbacher—Extraordinary Adventures and Escape of the latter—Affairs of the Holy See—Original Causes of Discontent on the part of the Pope at Napoleon—Dazzling reception of the Pope at Paris in 1805—His Request for the restoration of the Three Marches is refused—Further Encroachments of France on the Holy See—Further Demands of France and Resistance of the Pope—Increased mutual Irritation after the Peace of Tilsit—Entire assumption of the Government by the French—Fresh Outrages, and Confinement of the Pope to his palace—Annexation of the Papal States to the French Empire and Excommunication of Napoleon—Views of Napoleon in regard to the Pope and his transference to Paris—Arrest of the Pope by General Radet—Particulars of his Seizure—The Pope is conducted to Cremona and Cardinal Fieschi to Fontenay—Complete Fusion of the Roman States with the French Empire—Prejudicial Effect of these Measures on the Independence of the Church—Vast and admirable Works undertaken by the French at Rome—Reflections on the Spoilation of the Pope, as connected with Napoleon's subsequent downfall.

Vast capabilities of the Scheldt for commerce.

NATURE has formed the Scheldt to be the rival of the Thames of equal magnitude and depth with its renowned competitor flowing through a country excelling even the midland counties of England in wealth and resources, adjoining cities long superior to any in Europe in arts and commerce the artery at once of Flanders and Holland of Brabant and Luxembourg It is fitted to be the great organ of communication between the fertile fields and rich manufacturing towns of the Low Countries and the other maritime states of the world If it is not equally celebrated as the

Thames in history or romance, if all the vessels of the ocean do not crowd its quays, and its merchants are not sought by the princes of the earth; if it does not give law to all the quarters of the globe, and boast a colonial empire on which the sun never sets, it is not because nature has denied it the physical advantages conducive to such exalted destinies, but because the jealousies and perverseness of man have in great part marred her choicest gifts. Flanders was a great and highly-civilized manufacturing state, when England was still struggling between the coarse plenty of Anglo-Saxon rudeness and the insulting oppression of Norman chivalry; even in the days of Edward III and the Black Prince, the Brewer of Ghent was the esteemed ally of princes, and the political passions of our times had been warmed into being by the long-established prosperity of a commercial community; their territory was the richest, the best peopled, the most adorned by cities in Christendom, and the fine arts, arising in the wane of ancient opulence, had already produced the immortal works of Teniers, Rubens, and Vandyke, when the school of England was as yet hardly emerged from the obscurity of infant years.

Former grandeur and present importance of Antwerp ANTWERP, the key of this great estuary, gradually rose with the increasing commerce of the Low Countries, until, at the period of the Reformation, it numbered two hundred thousand inhabitants within its walls, and engrossed the whole trade of those beautiful provinces. Its noble harbour, capable of containing a thousand vessels, its extensive ramparts and citadel, among the strongest in Europe, its splendid cathedral, exceeding even St Paul's in elevation (1), its magnificent quays, bordering a river five hundred yards in breadth, which a seventy-four gun ship might navigate with safety—all conspired to render this city one of the most renowned in Europe. If the seventeen provinces had remained united under government, and the Scheldt had continued to be the artery of communication between their admirable territory, their noble cities, and the rest of the world, it must, by this time, have been one of the greatest emporiums in existence, and possibly would have borne away the palm from London itself in wealth and grandeur. But religious persecution first rent asunder that beautiful dominion, and political jealousy next completed the bars which Catholic oppression had erected against its advancement. The revolt of Holland was the natural consequence of the atrocities of the Duke of Alva, and the massacre of fifty thousand Protestants, on the scaffold and at the stake, by the Spanish Government; the closing of the mouth of the Scheldt, by the political and commercial jealousy of the Dutch, was the inevitable result and deserved punishment of the abominable cruelty which converted their most industrious and valuable subjects into successful rivals and inveterate enemies (2).

Napoleon's designs for its amplification Amidst all its degradation, however, and when its population had sunk to sixty thousand inhabitants, the eagle glance of Napoleon at once discerned the vast natural advantages and incalculable political importance of this city. No sooner had it attracted his attention, than he resolved to make it one of the greatest bulwarks of his dominions; the grand naval and military arsenal of northern Europe, the advanced post from which he might launch the thunders of his arms against the indepen-

(1) It is 451 feet high, the roof of the cathedral is 360 feet from the pavement, but more even than for these gigantic proportions is it fitted to arrest the traveller's admiration by the masterpieces of Rubens, the Taking Down and Elevating on the Cross, which it contains. Sir Joshua Reynolds justly observed, that whoever had not seen the master-

pieces of Rubens at Antwerp, could form no adequate idea either of the genius of that great artist or the power of art. The paintings in the Museum, especially, by Rubens and Vandyke, are inimitable.—MALTE-BRUN, viii 618, REYNOLDS' *Tour in Flanders, Works*, ii 264, 300. *Personal Observ.*

(2) Malte Brun,

dence and existence of England. Under his vigorous administration, every thing soon assumed a new aspect: the subjection of Holland to the Imperial sway, had already extinguished, if not the commercial jealousy of the Dutch, at least their power of interfering with the prosperity of their Flemish rival: the vessels which they had sunk at the mouth of the Scheldt, to impede its navigation, were raised: the sand banks which had accumulated for centuries cleared away: new bulwarks annexed to the works, already formidable, of the c'tadel; vast wet docks added to the harbour, capable of containing forty ships of the line: and an arsenal adequate to the equipment of half the navy of France constructed. Vast as are these works, however, and durably as they will for ever remain, monuments of the grandeur of conception and prophetic spirit of the French Emperor, they were but a small part of what he had intended for this favoured bulwark of the empire. "The works hitherto erected," said Napoléon, at St. Helena, "were nothing to what I intended at Antwerp. The whole sandy plain, which now stretches for miles behind the *Tête de Flandre* on the left bank of the river, was to have been enclosed by fortifications, and formed into a vast city: the Imperial dockyards and basins, the arsenal and magazines, were to have been constructed there: those on the right bank were to have been abandoned to private merchants. Antwerp was to me a province in itself. It is one of the great causes of my exile to St. Helena; for the required cession of that fortress was my principal reason for refusing peace at Chatillon. If they would have left it to me, peace would have been concluded. France without the frontiers of the Rhine and Antwerp is nothing (4)."

Others always made by England to keep the great stronghold from France. Antwerp is the point from which, in every age, the independence of these kingdoms has been seriously menaced. When the Duke of Parma prepared a land force in the time of Queen Elizabeth to overthrow the liberties of England and the Protestant faith: it was in the Scheldt and at Ostend that all his preparations were made. It was neither from Boulogne nor Cherbourg: from Brest nor Toulon: that Napoléon, after his profound naval combinations of 1803 had been defeated, intended to invade the British isles. The Scheldt was the point of attack. Antwerp and Flushing were the strongholds in which sixty sail of the line were to be prepared for the centre of that mighty squadron, which, by a second battle of Actium, was to strike down the mistress of the seas. A vast and skilful system of internal communication had been brought to bear upon this artery, and enabled the French to collect their naval stores and seamen without incurring the hazard of a coastwise navigation. Sensible of her danger, it had been the fixed policy of Great Britain for centuries to prevent this formidable outwork against her independence from falling into the hands of her enemies: and the best days of her history are chiefly occupied with the struggle to ward off such a disaster. It was for this that William fought and that Marlborough conquered; that Nelson died and Wellington triumphed; that Chatham lighted a conflagration in every quarter of the globe, and Pitt braved all the dangers of the Revolutionary war.

Little did any nation know where the English Government, after having for a hundred and fifty years contended for the attainment of this object: and at length secured it, by the restoration, under the guarantee of the European powers, of the seventeen provinces into one united dominion: should have voluntarily, within twenty years afterwards, undone the work of its own hands;

aided in the partition of the Netherlands into two separate states, alike incapable of maintaining their independence, one of which necessarily fell under the dominion of her enemies; and at length actually joined her fleets to the Gallic revolutionary armies to restore Antwerp, the great stronghold prepared by Napoleon for our subjugation, to the son-in-law of France, and the sway of the tricolor flag! Such a proceeding would be unparalleled in history, if it were not equalled, perhaps exceeded, by the refusal at the same time to lend any assistance to the Grand Seignior, then reduced to the last straits by the defeat of Koniah, and consequent abandonment of him to the arms of Russia, who failed not, as the price of protection, to exact the humiliating treaty of Unkiar-Skelessi, and the exclusion of the British flag from the Dardanelles and the Black Sea. Thus, in our anxiety to restore Antwerp, the fulcrum from which our independence is to be assailed in Western Europe, to France, we have surrendered Constantinople, the bulwark of the East, the key of our Eastern dominions, to Russia! The simultaneous occurrence of two such acts on the part of Government, without any mark of disapprobation, save from the reflecting few in the country, proves that there are occasions in which, under the influence of faction and in the heat of political contest, a nation may not only lose its reason, but become insensible to the strongest even of all animal instincts, that of self-preservation.

Proposals of Austria for a British diversion At the commencement of the contest in Germany, the cabinet of Vienna made the most urgent representations to the British Government on the subject of a powerful diversion by an English land force in the north of Germany, whither the Imperial grand army was originally destined, and where so many ardent spirits, smarting under humiliation and oppression, were awaiting only the appearance of an external armed force to raise the standard of general insurrection. She proposed that a diversion should be made by an expedition of Anglo-Sicilian troops on the coasts of Italy, that the military operations in the Peninsula should be continued, and that a strong effort should be made towards the mouth of the Elbe. There can be no question that the disposable forces of England, at this juncture, were equal to these operations, how extensive soever, for she had a hundred thousand regular troops, which could be ordered on foreign service, in the British islands, forty thousand of whom, in Spain, under Wellington, forty thousand in the north of Germany, and twenty thousand in the Mediterranean, might have occasioned no small embarrassment to the French Emperor, especially after he was obliged to concentrate all his forces from the extremities of his dominions, for the decisive struggle on the banks of the Danube. Domestic danger could not be alleged as a reason for declining to make such an effort, for the British islands, encircled by their invincible fleet, garrisoned by eighty thousand admirable regular, and three hundred thousand local militia, and animated with an enthusiastic military spirit, were beyond the reach of attack. Nor was time wanting, for the British Government was, in November 1808, in full possession of the resolution of the cabinet of Vienna to declare war, it was communicated to the world in the king's speech on the 15th December of that year, and hostilities were not commenced on the Inn till the 9th April following, before which time the grand expedition for the north of the vast theatre of operations might have been ready to sail from the British harbours (1)

In this momentous crisis, the cabinet St. James's was not wanting to itself, or to the noble post assigned to it in the contest of nations. Undiscouraged by

Reason for not sending the expedition to the north of Germany or Spain. the disastrous issue of Sir John Moore's expedition, they resolved not only to resume the contest with increased vigour in the Spanish peninsula, but to aid the common cause by a powerful demonstration in the north of Europe. Many reasons concurred, however, in dissuading them from adopting the proposed plan of landing in the north of Germany. Matters were entirely changed since the year 1807 when such a direction of our force was attempted and if brought to the scene of action some months earlier, might have been attended with important, perhaps decisive effects. Prussia was then in arms against France; Denmark was neutral, Russia engrossed the attention of their principal army on the Vistula or the Alle; and Austria, collecting her strength in Bohemia, was prepared, on the first serious reverse, to fall with overwhelming force on Napoleon's line of communication. Now every thing was changed. The north of Germany, strewn with the wrecks of independent states, with its principal strongholds in the hands of the enemy, could no longer be relied on for efficient co-operation with a regular army. Russia, instead of being the enemy of France, was now her obsequious ally. Denmark was animated by a more than ordinary spirit of hostility to Great Britain; and though the inclination of Prussia to extricate herself from her fetters could not be doubted, yet her military resources were severely crippled, her strongest fortresses were in the possession of the conqueror, and her government had suffered so severely from their recent ill-advised effort, that there was every reason to fear that they would now adhere to their old system of selfish indecision. A powerful army, if landed at St. Sebastian, might, indeed, paralyse all the Imperial forces in Spain and occasion the evacuation of the whole Peninsula by the troops of Napoleon but the effect of such remote success would be inconsiderable on the vital line of operations in the valley of the Danube; and if the French Emperor were there successful, he would soon regain his lost footing beyond the Pyrenees, and securely complete, with undiminished strength, from Gibraltar to Hamburg, his vast naval preparations for our subjugation (1).

Reasons for selecting the Scheldt as a point of attack. On the other hand, a variety of considerations equally powerful, concurred to recommend Antwerp as the grand point of attack. Its formidable strength and increasing importance as a great naval station and arsenal. Its close proximity to the British shores; the anxiety which Napoleon had evinced for its extension, pointed it out as the quarter from which, more than any other, serious danger was to be apprehend. Its fortifications, though extensive and formidable if in good condition were in a state hardly susceptible of defence. There was scarce any water in the ditches the rampart, unarmed with cannon, was in many places dilapidated and tottering and the garrison, of little more than two thousand invalids and coast-guards, altogether unequal to the defence of its extensive works. The regular army of France was so completely absorbed by the war on the Danube and in the Peninsula, that no considerable force could be assembled for its relief, and although, if operations in form were to be attempted an immense body of national guards would doubtless converge to the threatened point, yet there was a fair prospect of carrying the town at once by escalade, almost before the intelligence of its danger could reach the Government at Paris. Immense would be the effect, moral as well as material of such a victory. It would demonstrate that even the territory of the great nation and its strongest fortresses, were not beyond the reach of attack roll back on France

(1) Mr. Canot's Speech, Parl. Deb. xl. 333, 336. Lord Castlereagh's, *Ibid.* pp. 102.

the terrors of invasion; destroy at once the principal naval resources and fleets of the enemy; animate all the north of Germany by the prospect of a powerful army having gained a firm footing on their own shores, and intercept, by pressing dangers at home, a large portion of the reinforcements destined for the grand army. Even if Austria were finally to succumb, still the object gained would be immense; the darling naval establishment of the enemy would be destroyed, the centre of his maritime operations ruined; and his projected naval crusade against Great Britain thrown back for several years, if not altogether rendered abortive. Sound policy, therefore, recommended such a direction of our hostility, as, while it powerfully aided our allies, was conducive also to our own safety, and which, increasing the chance of a successful combination against France on the Danube, provided at the same time for the case of the Imperial eagles returning as heretofore, loaded with the spoils of Germany, to their menacing position on the heights of Boulogne (1).

Unhappy delay in the expedition But, though the cabinet of St James's thus judged rightly in selecting Antwerp as the point of attack, and magnanimously in resolving to put forth the whole strength of the British empire, without sharing in the general panic produced by the calamitous termination of Sir John Moore's expedition, yet, in one vital point, they still proved themselves novices in combination, uninstructed by the military experience even of sixteen years. Although the Austrians crossed the Inn on the 9th March, and the battle of Echmuhl was fought on the 21st April, and that of Aspern on the 22d May, it was not till the end of the latter month that any serious preparations began to be made by ministers for an expedition to lighten the load which had for two months fallen on the Imperial forces. They were deterred by a communication received from the commander-in-chief, Sir D Dundas, on the 22d of March preceding, shortly after the broken bands of Sir John Moore's army had returned from Spain, stating, that fifteen thousand men could not be spared from the home service for any foreign expedition. That veteran officer, in making, and government in acting on such a statement, proved themselves alike unequal to the station which they occupied in the grand struggle. To accomplish the vital object of beginning the campaign *simultaneously* with the Austrians, and distracting the enemy with a descent on the Scheldt, at the same time that the Archduke Charles entered Bavaria, no sacrifices could have been too great. Even if not a man could be got from the regular army, every man of the guards should have been sent, half of the militia invited to volunteer, and in this way fifty thousand admirable soldiers might with ease have been collected. It was not by never diminishing the usual domestic garrisons, and reckoning none disposable but those who had no home service to perform, that Napoléon carried the French standards to Vienna and the Kremlin (2).

The expedition is resolved on in the end of May, and on a very great scale No serious steps were taken, after this abortive enquiry as to the disposable British force, to resume the expedition till the 8th of June, when the muster-rolls of all the regiments in the British islands having been obtained, and shown a disposable force of forty thousand men, preparations in good earnest were commenced. It was still possible to bring them to bear with great effect on the vital operations on the Danube, for the news of the battle of Aspern had just reached this country, and at the same time it was ascertained, by authentic evidence, that An-

(1) Mr Canning's Speech, Parl. Deb. xvi. 338.

(2) See Sir D Dundas's Evidence, Parl Deb xv. 85, 86 App

tworp) was in the most defenceless state; that the garrison consisted only of two thousand four hundred men, of whom only fifteen hundred were soldiers, the remainder being invalids or artificers: that there were two small breaches on the ramparts, and the bastions in general not armed; the wet ditch fordable in some places, and only ten thousand soldiers in Holland, and hardly any in Flanders. But the inherent vice of procrastination still paralysed the British councils. Though every day and hour was precious, when the Scheldt was defenceless and Napoléon defeated on the Danube, no orders were given to the ordnance department to prepare battering trains till the 10th June; and though their preparations were complete, and the navy in readiness by the end of that month, the expedition did not sail till the 28th July, upwards of a week after the result of the battle of Wagram had been known in the British Islands. When it is considered that the sea voyage from the Downs to the Scheldt is not above thirty hours; that the British had thirty-five sail of the line, and transports innumerable at hand for the embarkation, that Marshal Ney embarked twenty-five thousand men, with all their artillery, in ten minutes and a half: that Napoléon, who gave his orders to the grand army to break up from Boulogne on the 1st September 1803, beheld them on the Rhine on the 33d of the same month, and black desfilé before him as a prisoner, with all his army, on the 20th October (1). It must be admitted that, notwithstanding all they had suffered from this defect (2), the British government were still rather influenced by the slowness of the Anglo-Saxon, than the fire of the Norman character.

When the expedition, however, even at the eleventh hour, did sail from the British Islands, it was on a scale worthy both of the mistress of the seas, and of one of the greatest military powers in Europe. The armament consisting of thirty-seven ships of the line, twenty three frigates, thirty three sloops, eighty two gun-boats, besides transports innumerable; and having on board thirty-nine thousand sabres and bayonets, equivalent to above forty-one thousand of all arms, with two battering trains and all their stores complete, contained above a hundred thousand combatants, and was the largest and best equipped that ever put to sea in modern times. What might it not have accomplished if conducted with vigour and directed by skill! With a British force of no greater amount, Wellington struck down the empire of France on the field of Waterloo (3).

This stupendous armament, which whitened the ocean with its sails, arrived on the coasts of Holland on the 20th of July. On the following day twenty thousand men were disembarked in the Isle of Walcheren, and speedily took possession of Middleburg, its chief town, besides driving the French troops into the walls of Flushing. At the same time, another division landed in Cadzand and expelling the enemy from that island, opened the way for the passage of the fleet, up the western or principal branch of the Scheldt. Some days afterwards, Sir Richard Strachan, who commanded the naval force, disregarding the distant and inf

fectual fire of the Flushing batteries, passed the straits with eighteen ships of the line, and soon both branches of the Scheldt were crowded with the British pendants. Not was the progress of the land forces less rapid. Ter Vere, a fortress commanding the Veergat, a narrow entrance leading into the channel which separated South Beveland, was taken, with its garrison July 30 of a thousand men. Goes, the capital of the latter island, opened Aug 1 its gates, and Sir John Hope, an officer destined to future celebrity in the Peninsular wars, with seven thousand men, pushing rapidly on, appeared before the gates of Bahrz on the evening of the 2d. Such was the consternation produced by the sudden advance and formidable forces, both naval and military, of the invaders, that this important fort, situated at the point of separation of the East and West Scheldt, and the key to both channels, was evacuated in the night by the garrison, and next morning occupied by the British troops. The success of the expedition appeared certain: more than two-thirds of the distance to Antwerp had been got over in three days, both divisions of the Scheldt were full of British vessels, the British standards were only five leagues from that fortress, and in four days more thirty thousand men might be assembled around its walls (1).

Certainty
of success if
Antwerp
had been
first at-
tacked

It is agreed by all the French military writers, that such was the weakness of Antwerp at that moment, that if the English general had taken advantage of the first moment of consternation consequent on the rapid advance of his leading column, and pushed across the narrow channel which separates South Beveland from the mainland, and marched up the right bank of the river, he would in a few hours, have arrived at the gates of the fortress, and by a *coup-de-main* carried it without the possibility of resistance (2). By crossing over to the left bank of the Scheldt, and occupying the fort of Tête de Flandre, opposite Antwerp, which could hardly have made any resistance, success was certain, for the city has no defences whatever on the left bank of the river, and the fleet could neither have got up above the Tête de Flandre, nor escaped destruction even in the

(1) Lord Chatham's Despatch Aug 2, 1807. Ann Reg 471, 479. Appendix to Chron. Vict et Cong. ix 247, 254.

(2) "Had the English advanced rapidly, either by South Beveland to Lillo and Antwerp, or with their squadron vigorously pursued ours as it withdrew up the Scheldt, they would have taken by surprise all the forts and defences of the Scheldt. Every thing induces the belief that they would have succeeded in burning our arsenals and destroying our fleet. Antwerp, like other places on the frontier, was garrisoned only by the weak depots of regiments who were combating on the Danube. Not one of them was armed. Moynet had six battalions in Flushing. Rousseau, who commanded on the left bank of the Scheldt, had only three or four thousand recruits under his orders, whom he kept at Ghent on account of the insubordination of the country. Battalions of grenadiers and chasseur of the national guards, alone were entrusted with the defence of the coasts." — PIERRE, iv 319.

"The fortress of Antwerp, ill defended and paralysed in the first moment of terror, would have easily yielded to a brisk attack." — *Vict et Cong.* ix 254.

"The coast was denuded to such a degree, that nothing could have hindered the English to disembark 30,000 men on the left bank of the Scheldt, and in three days arrive with their numerous artillery before Antwerp. Meanwhile, the remainder might have entered the Scheldt to fix our attention on

Flushing and the Isle of Cadzand. Antwerp had hardly a garrison, our fleet would have been taken by surprise, and its retreat rendered impossible, inasmuch that, by merely occupying the fort of Tête de Flandre, opposite Antwerp, on the left bank of the Scheldt, the success of the enterprise would have been certain." — JOMINI, *Vie de Napoléon*, iii 299, 300.

Napoléon has left a highly important observation on this subject. "The fleet," says he, "when the expedition arrived on the coast of Holland, was moored off Flushing. The great object of Chatham should have been to cut off the fleet from Antwerp, which would necessarily have drawn after it the destruction of both, for Antwerp had only a garrison of 3000 men. This might have been done by pushing on a corps of 6000 men through South Beveland to Bahrz the day the expedition landed, the fleet would thus have been cut off from Antwerp, and both it and that fortress must have surrendered. But, from the moment that the fleet got up to Antwerp, which it did soon after the siege of Flushing began, the failure of the expedition was certain." — Napoléon in MONTELOMME, ii 281, and i 219. — "I am of opinion," said he to O'Meara, "that if you had landed a few thousand men at first at Willemstadt, and marched direct to Antwerp, you might, between consternation of the garrison, and the uncertainty of the fleet, have taken it by a coup de main, and the expedition would have been successful." — *ibid.* i 219.

dockyards themselves, from a bombardment from the opposite side, not half a mile distant. The instructions of the commander-in-chief, Lord Chatham, were precise; and they bore that the main object of the expedition was the destruction of the ships building or afloat in the Scheldt, and of the arsenals and dockyards in Antwerp, Terneuse, and Flushing; and an ulterior or subordinate object only, the reduction of the island of Walcheren (1). But England had not at that period two Wellingtons in her service. Lord Chatham, to whom the expedition was intrusted, neither inherited the energy of his father the great Earl of Chatham, nor shared the capacity of his immortal brother, William Pitt. A respectable veteran, not without merit in the routine of official duty at home, he was totally destitute of the activity and decision requisite in an enterprise in which success was to be won rather by rapidity of movement than deliberation of conduct. Destitute of experience, unknown to fame, of indolent habits, he owed his appointment to court favour, which ministers were chiefly culpable for not resisting to the uttermost of their power. Reversing, in consequence, alike the tenor of his instructions and the dictates of common sense on the subject, he directed his force, in the first instance, to the last object with which he was entrusted; and instead of pushing on in the outset by forced marches to seize Antwerp and the forts of the river, before the enemy could collect a force for their defence, lost the precious hours, big with the fate of the campaign, in reducing Flushing, valueless as a post in advance after the fleet had entered the Scheldt, incapable of defence after Antwerp had fallen, if required as a support in case of retreat (2).

Having adopted this unhappy resolution, Lord Chatham prosecuted the subordinate object of reducing Flushing with great vigour, and success. The garrison were hotly driven into the works, with considerable loss, on the first approach of the besiegers, several sallies, afterwards undertaken, repulsed, and the artillery having been quickly landed, the trenches were armed, approaches commenced and pushed on with great rapidity. On Aug. 12. the 15th, the breaching batteries opened their fire on the land side from fifty-two heavy guns, while seven ships of the line, and a large flotilla of bomb vessels, kept up a cannonade with uncommon vigour from the sea. It was then found, what subsequent experience has since abundantly verified,

(1) = You are upon the receipt of these our instructions, to regulate with our said troops to the Scheldt, and carry into effect the following instructions in conjunction with the commander of the naval forces. The conjoint expedition has for its object the capture or destruction of the enemy's ships, either building or afloat at Antwerp or Flushing, or along the Scheldt, the destruction of the arsenals and dockyards at Antwerp, Terneuse, and Flushing, the reduction of the island of Walcheren, and rendering the Scheldt if possible no longer navigable for ships of war. — *Lord Chatham's Instructions, 16th July 1704; Parl. Deb. xv. App. No. 1.*

It appears too, from Lord Chatham's evidence before the Parliamentary committee, that he was in possession of the more detailed government plan, which was to proceed across South Beveland immediately after landing, and lead the troops at once direct on the right bank of the Scheldt, opposite Bala, and thence push on direct to Antwerp. On the 5th of August, twenty thousand men, according to his statement, ought have been collected there, "three days' march from the complete success of the expedition." — *I conceive* — say Lord Chatham — "what was intended to be done was, by leading each part of the army as was and was good in the siege of

Flushing or employed in the reduction of Walcheren, as soon as possible to send her and to proceed against Antwerp according to circumstances, which could not be distinctly known till the arrival of the expedition. The expedition, under the most favourable circumstances, might have arrived at Breda in four days from leaving the Downs on the 28th of August, the infantry and cavalry might have been disembarked at that place, and the heavy arms and ordnance in two or three days more." — *Lord Chatham's Evidence; Parl. Deb. x. 236, 239. App. Breda is only ten miles from Antwerp; and the first considerable relief movement of the enemy arrived at that town on the 11th and 12th. It is evident, therefore, that the success of the expedition was certain, if the government plan of pushing up the Scheldt with the bulk of the army having direct vision only to observe Flushing, had been complied with. But the cabinet at home appear to have not sufficiently improved upon Lord Chatham's necessity of adhering scrupulously to this plan, and for not having interrupted the siege of Antwerp when once it was commenced.*

(2) Lord Chatham's Instructions, Parl. Deb. App. No. 1. *Journal de M. de Rep. iii. 300.*

that there are no land batteries, how strong soever, which can withstand, along an equal space in front, the well-supported fire of several ships of the line. The sea defences were speedily ruined, and every gun bearing on the water silenced, the town took fire in several places, and the inhabitants, beset with a flaming tempest both from the north and south, besought the governor, as the only means of avoiding total ruin, to surrender. Such was the consternation produced by the bombardment, that after it had continued three days, and the English troops had effected a lodgment within musketshot of the rampart, the French general proposed a suspension of arms, and the town was surrendered on the 16th, with five thousand eight hundred prisoners and two hundred pieces of cannon. The total prisoners taken since the landing of the expedition, exceeded seven thousand (1)

The time

re-
fusing
Flushing
saves Ant-
werp

Hitherto Fortune seemed to have smiled on all the efforts of the expedition; but she soon showed that, like others of her sex, she reserved her favours only for the daring and the enterprising. The time lost in besieging Flushing proved fatal to all the other objects of the expedition. Indefatigable were the efforts of the French and Dutch governments, during that precious breathing-time, to direct troops to the menaced point; and in a fortnight it was beyond the reach of attack.

Aug 12

On the 12th, the King of Holland arrived at the head of his guards, and five thousand troops of the line, the generals commanding in Flanders and Picardy, dispatched an equal number, who arrived from the 14th to the 20th. Meanwhile, the fleet was removed above the town, the batteries armed; the ditches cleared out and filled with water, and the national guards of all the surrounding départements poured into the fortress. While these active preparations were going on, twenty thousand admirable troops were kept inactive in South Beveland, almost within sight of the steeples of Antwerp, and so dilatory were the proceedings of the English general, that though Flushing surrendered on the 16th, it was not till the 26th that he

Aug 26

advanced the headquarters to Bahtz, a distance not exceeding thirty miles. By that time thirty thousand of the enemy were assembled on the Scheldt, Bernadotte, who had been dispatched by the government at Paris to take the command, had put Antwerp in a respectable state of defence; the squadron was in safety; ulterior success impossible, while three thousand of the British troops were already in the hospital, and the pestilential marshes in that unhealthy district were fast exercising their malignant influence on the health of the soldiers. In these circumstances it was rightly judged by Lord Chatham and a council of war, whose opinion was unanimous on the subject, that further advance was impossible, and orders were given in the beginning of September to withdraw the whole troops into the island of Walcheren (2)

Retention of
Walcheren,
at first
attempted,
is at last
abandoned
as hopeless

It was at first thought that it would have been practicable to have retained possession of this important conquest, and doubtless, if it had been so, the acquisition would have been of the last consequence, as hermetically closing the Scheldt, and rendering useless all the vast naval preparations of the enemy in that quarter. At that particular movement, it was of the more consequence to retain possession of that island, as the negotiations with Austria were not only not yet brought to a conclusion, but it was sometimes more than doubtful, during their continuance, whether war would not again break out. In that event it would, of

(1) Lord Chat. Desp. Ann. Reg. 1809 590, 493

(2) Parl. Deb. xvi. App. 321 Lord Chatham's

Desp. Sept. 2, 1st
Chron. Jom.

course, have been of the greatest importance to keep thirty thousand of the enemy grouped under the walls of Antwerp. Fifteen thousand men accordingly were left as a garrison in the island, and the remainder of the troops returned to England. But the malaria distemper of the country, since so well known under the name of the *Waleheren fever*, proved so fatal in its ravages, that it was deemed impolitic to retain it permanently, especially after the conclusion of peace between the Austrians and French had removed the principal motive for keeping the troops in that unhealthy station. Towards the middle of September, the average number of deaths was from two to three hundred a week, and nearly half the garrison was in hospital. *Nov. 21.* Orders were therefore given to abandon the island; in the middle of November the works and naval basins of Flushing were destroyed, and before Christmas the whole was evacuated by the British troops; but it appeared from a parliamentary return, that seven thousand men were lost in the enterprise, and that nearly half the troops engaged in it brought home with them the seeds of a distemper which few were able entirely to shake off during the remainder of their lives (1).

Kindly insert this whole paragraph in the margin of the proceedings of the British Parliament. It is observed by Mr. Hallam, that the state trials of England exhibit the most appalling accumulation of judicial iniquity which is to be found in any age or country of the world, and far exceeding in atrocity any thing recorded of legal injustice in the annals even of Eastern despotism. The reason, he justly adds, is, that the monarch could not wreak his vengeance, or the contending nobles or parties destroy each other, as in other states, by open outrage or undisguised violence; and that the courts of law were the theatre and state prosecutions the engines, by which this oppression was perpetrated, and these contests of faction conducted. If the purification of the legal tribunals, which took place at the Revolution, has freed, as it undoubtedly has, the judicial ermine of England from this hideous imputation, it has only in many cases, transferred it to another quarter, and Parliament is the arena in which, from henceforth, as the contests of party were conducted, the historian is to find the traces of the indelible corruption and weakness of humanity. On no other principle, indeed, can the occasional gross injustice, and frequent political insanity of the English legislature and people, during the last hundred and fifty years, be explained; and those who hope, by rendering our institutions more democratical, to remedy these evils, would do well to become still more radical in their cure, and apply their reform to the human heart. It is a common remark in Parliament, that, in party questions, the real motive of the speaker is never divulged in debate; and that the considerations and objects which both sides have most at heart, are those which are with the greatest care withdrawn from the view. All parties have, in this way, come to reduce to perfection, in a practical form, the celebrated saying of Talleyrand, that the "great object of speech is to conceal the thought." The truth of these principles was signally illustrated in the two great objects of party contention, during the session of 1800, the accusations against the Duke of York, and the Walcheren expedition.

Printed in the margin of the proceedings of the British Parliament. That the spring of 1800 was the grand crisis of the war; that Austria and Spain were then, for the first time brought to act together in real earnest, and hurl their strength, animated by the highest degree of patriotic enthusiasm against the enemy; that

the military power of Britain had then risen to an unparalleled degree of efficiency, and was prepared, under renowned leaders, to follow up the career of victory recently opened to their arms, was universally known and acknowledged. Every man in the empire felt that the moment had arrived when Europe was to be disenthralled by one convulsive effort, or their fetters riveted for a time to which no end could be seen, on the enchained nations. What, then, at such a moment, was the grand object of consideration in the House of Commons? Was it to cement the alliance, to pour forth the treasures of England with a profusion worthy of the greatness of the occasion; and increase, by every means in their power, the efficiency of the army upon which such mighty destinies depended? Quite the reverse. The popular party in the House of Commons appeared to value the crisis only in proportion to the means which it afforded them of directing, with additional effect, their attacks upon the Government, and augmenting the difficulties experienced in the discharge of its vital duties by the executive. And at the moment when Austria was straining every nerve for the conflict, and Napoleon was preparing the forces which dealt out the thunderbolts of Eckmühl and Wagram, the British House of Commons was, for months together, occupied with no other subject but the secret springs of a few promotions in the army, and the details of the commander-in-chief's intrigue with his artful mistress, Mrs Clarke!

Charges against the Duke of York His resignation The attack on the Duke of York's administration of the army was founded upon the allegation of his having disposed of part of the patronage with which he was intrusted, as commander-in-chief, for corrupt or unworthy considerations. The debates and examinations on the subject, began in the end of January, and continued almost without the intermission of a day till the 17th March, absorbing thus nearly the whole time both of government and of the country, at the very moment when a concentration of all the national thought and energies were required for the prosecution of the gigantic campaign in progress on the Continent. But this was not all: the time thus spent was not only wasted, but it led to the most pernicious results. Nothing whatever came out against the commander-in-chief, but that he had occasionally admitted a designing and artful mistress to a certain share in the disposal of commissions; and that she made use of, and exaggerated this influence to obtain bribes, unknown to him, from the applicants for promotion. If the moralist must ever see much to condemn in the indulgence of habits which never fail in any rank to degrade the character of such as become slaves to them, the statesman must admit that a more deplorable waste of time and national interest never occurred, than when such details were for months together, at such a crisis, made the subject of legislative investigation. Mr Wardle, the mover of the enquiry, rose for a short time into a blaze of popularity, and then sunk at once to rise no more. After a fatiguing investigation and debate, which occupies above fifteen hundred pages of the parliamentary debates, the charges were negatived by a majority of 241, the numbers being 564 to 125. No man of sense, who reads the proceedings, can now doubt that this decision was well founded in the evidence, and that the Duke of York at that period was the victim of factious injustice, but, meanwhile, the public mind became violently excited, the fury of popular obloquy was irresistible, and government, deeming it necessary to yield to the torrent, the Duke sent in his resignation. This took place just four days after the attack. The commander-in-chief was officially called upon to point out the force which could be spared for the present.

March 17

March 18

March 22

Scheldt; and thus, at the very time when the most important military operations ever engaged in by England were under consideration, the ambition of selfish faction, and the fury of misguided zeal, combined to introduce new and wholly inexperienced persons to the direction of the army, and chase from its command the public-spirited prince whose judicious reforms and practical improvements had brought it from an unworthy state of depression to its present state of efficiency and glory. The deplorable postponement of the Walcheren expedition till it was too late to serve as a relief to the heroism of Austria; its calamitous issue when it was undertaken; and the abortive result of the triumphs in Spain, are thus indissolubly connected with this act of national absurdity and injustice (1).

Much in the same spirit were the debates which took place on the Walcheren expedition. No fault, indeed, could here be found with the theme of discussion: the failure of so vast an armament, fitted out at such a cost, adequate to such achievements, formed a subject worthy of the anxious investigation of the Parliament of England; and if it had elicited either generous feelings or elevated views from those who conducted the accusation, no more useful subject of contemplation to the historian could have been presented. But this was very far indeed from being the case. Though the investigation was conducted with great industry and ability, the views taken on the side of the Opposition were so overstrained and exaggerated, as to lead to no useful or practical result. Their great object was to show that the whole blame of the failure of the expedition rested with Ministers, and Ministers alone; that success was at no period, and by no efforts, attainable: that the point of attack was ill chosen, the force ill directed, and the whole cost and blood of the armament misapplied. Nothing can be clearer than that these charges were in great part wholly groundless, as the expedition was clearly directed against the most important point of the enemy's resources; the effects of success immense and vital to the national independence of England; the forces employed fully adequate to the object in view; and the general instructions given, such as would, if energetically acted upon, have unquestionably led to decisive success (2). The real points in which

(1) *Parl. Deb.* xii. 282, 1067; xiii. 1710.

Mrs. Clarke, the leading character in this mass of sexual and intrigue was a woman possessed of considerable personal attractions, and an small share of ready wit and repartee. When asked, in subsequent trial, by a cross-examining council, "pry Madam, under whose protection are you just now?" she immediately answered, bowing to the court, "under that of my Lord Chief-Justice." The court was convulsed with laughter, in which his Lordship heartily joined, and the barrister was silent.

(2) The general policy of this expedition, according to the original instructions of government was clearly established by the following documents, 1st, in Lord Castlereagh's secret instructions to Lord Chatham, previous to sailing, it was stated—"The complete success of the operation would include the capture or destruction of the whole of the enemy's ships, whether building at Antwerp or afloat in the Scheldt, the entire destruction of their yards and arsenals at Antwerp, Tervuren and Flushing, and the rendering the Scheldt, if possible, no longer navigable for ships of war. A pre-arrangement of these objects, in their fullest extent, must, in great measure depend upon the rapidity with which the enterprise is carried into execution, it has been deemed advisable to appropriate such an amount of force to this service as may enable you,

at the same time that you occupy Walcheren and South Beveland, to advance at once a considerable force against Antwerp, which may be reinforced as soon as Flushing is invested, if not actually reduced. The expedition, therefore, must be considered as not, in the first instance assuming any other character than *coup-de-main*, combining with it a powerful diversion against the enemy's communications, June 1809, *Parl. Deb.* xv. 526, 527, 528. It was proved by Col. Fyfe, the chief engineer of the army and General Milord, the commander of artillery to the expedition, that "supposing the army to have landed successfully at handriet on the 1st, 21, and 2d of August, thirty batteries might have been ready in battery to begin the bombardment of the city of Antwerp and fort on the evening of the 9th or morning of the 10th, and that both might have been destroyed if they did not surrender"—*Ibid.* 523, 548. App. 3d. The battering train was numerous amounting to seventy battering guns; seventy-four mortars.—*Ibid.* art. 1. App. End. c. 128. 13. On the 9th & 10th, there were only a few thousand troops and material ground in Antwerp, all in great state of alarm; the first reinforcement of any amount which arrived the King of Holland's guards and troops of the line, in number five thousand, who did not arrive till the 12th, and could not have entered the town if the English had been before it.—*Journal*

tion was subsequently effected, and their joint services regained for their country, their quarrel had the effect, at the time, of excluding both from administration. After an unsuccessful attempt to effect a coalition with Lords Grey and Grenville, Lord Wellesley was recalled from the embassy of Spain to fill the situation of foreign secretary. Lord Castlereagh was, two years afterwards, reinstated in office, and contributed in an essential manner to the triumphs and glories of the grand alliance; but Mr Canning, who aimed at the highest destinies, for long declined offers of employment at home, and did not appear again in official situation till after the peace (1).

Change in the Administration. A general change now took place in the administration. The Duke of Portland, whose health had for some time been declining, resigned his place as head of the government, and as the negotiation with Lords Grey and Grenville had failed in procuring their accession to the cabinet, the ministry was reconstructed entirely from the Tory party. Mr Perceval filled the place of first lord of the treasury and chancellor of the exchequer; the Earl of Liverpool was transferred from the home to the war office; Mr Ryder became home, and Marquis Wellesley foreign secretary. There can be no doubt that all these offices were filled by men of business and talent; and the cabinet, as so constructed, possessed the inestimable advantage of unity of opinion on all vital questions, and especially on the great one of the prosecution of the war — an advantage so great, that for its want, no acquirements however great, no talents however splendid, can in the long run compensate. But still the abilities of none of these statesmen, with the exception of Marquis Wellesley, were either of the highest order or the most brilliant character; and it is a remarkable circumstance, indicating the power of unity of purpose and resolution of mind, in a nation and its government, to compensate for the want of the showy qualities of the orator or the practised skill of the parliamentary debater, that the most glorious triumphs recorded in the history of England were achieved, not only when the persons possessing in the highest degree these qualities were not in the administration, but when they were actively engaged on the side of opposition (2).

Youth and first introduction to public life of Mr Canning. GEORGE CANNING, whom this abortive intrigue excluded from office for several years, was the most finished orator who had appeared in Parliament since the days of Pitt and Fox. Born of respectable, though not opulent parents, descended from an honourable line of ancestors, he was yet destitute of the advantages of rank and fortune, and owed his elevation entirely to the early display of brilliant talents at Oxford; that noble establishment, which reflects, as it were in a mirror, the empire, shaded only with a more aristocratic hue than the original, and where genius so often meets with the friends, or acquires the distinction which determines its direction in future life. Originally destined for the bar, he was reluctantly pursuing the thorny study of the law, when the fame of his oratorical talents attracted the notice of Mr Pitt, then fully alive to the importance of drawing to his standard all that he could collect of debating powers, and counteracting by the influence of Government the natural disposition of youth to range itself under the colours of Opposition. Mr Canning had originally been imbued with Whig principles, and his nearest relations were of that party; but the horrors of the French Revolution had produced that change in his mind which they induced at that period in so many of the best of mankind; the leaders of Opposition had nothing to offer him; and, upon a conference with

(1) Ann. Reg. 1809, 239. Mr Canning's Memoirs, Part. II. 1809. App. to Chemo. 517. 239. Canning's Life, I. 25, 26. Life and Speeches.

(2) Ann. Reg. 1809, 239. Canning's Life, II. 114, 115, 116.

Called by the favour of his Sovereign to a high place in the cabinet, on the change of ministry, in 1807, he conducted the lead in the House of Commons with a skill and ability which surpassed the expectations even of his friends and when the Duke of Portland resigned, and Mr. Canning and Lord Castlereagh withdrew, public opinion ratified the royal choice, which placed him at the head of administration.

Without any of the great or commanding qualities of the orator, or the profound views which distinguish the highest class of statesmen, Mr. Perceval maintained himself successfully in this exalted station, by the integrity of his character, the sincerity of his principles, the acuteness of his reasoning, and the spirit with which he combated the multifarious attacks of his enemies. Reversing the situation of the Roman Emperor (1), he would by common consent have been deemed unworthy of the lead, if he had not obtained it. Contrary to what is generally the case, he steadily advanced in reputation to the close of life and possibly his premature end alone prevented him from rising, during the eventful years which immediately followed, to the very highest place among British statesmen. His measures were decided, his spirit resolute, his heart upright. Of unimpeachable integrity in private life, a sincere Christian, a tried patriot, the nation saw without suspicion hundreds of millions pass through his hands, and he justified their confidence by dying poor. He was adverse to all the liberal doctrines of the age, and anchored his faith, perhaps with too unbending rigidity, on the existing constitution in church and state; but time has since proved that the views are not always narrow which are founded on experience, and that the most liberal doctrines are sometimes the most ephemeral. His favourite maxims were, that concession of political power to the Catholics would infallibly lead from one step to another to the overthrow of our Protestant institutions, and that no remedy could be found for the disorders and sufferings of Ireland, but in the establishment of a well-regulated system of poor laws; and great was the ridicule thrown upon such professions by many of the most learned and all the most liberal men of his time. Subsequent events, however, have in a great degree justified his penetration, and added another to the numerous instances which history affords of the eternal truth, that the only safe foundation for anticipation of the future is experience of the past, and that those, who, from adhering to this principle, are thought to be behind one age, are generally in advance of the next.

While the vast resources of England, poured forth with a profusion worthy of the occasion, were thus lost to the cause of European freedom by the tardiness with which they were brought into action, and the want of vigour with which they were directed in the field, Austria was anxiously protracting a painful negotiation, and watching every gleam in the political horizon before she finally put the seal to her degradation. The Emperor retired to Vienna, where he was soon immersed in the cares of his immense empire; while the immediate conduct of the negotiation was committed, at Altenburg in Hungary, to Metternich on the part of Austria, and Talleyrand on that of France. The situation of Napoleon was delicate, particularly in relation to Russia, with which he had repeatedly, during the campaign short as it was, been on terms bordering on hostility: but the battle of Wagram had, as if by magic, restored all the temporizing policy of the cabinet of St. Petersburg, and the relations of amity between the two

(1) = *Optimum omnium, dignum imperio, M. omni regnum* — Tacitus.

cabinets When the Emperor Francis, after the conclusion of the armistice, addressed a letter to Alexander, and another to Napoléon, these two sovereigns instantly mutually communicated their despatches and answers to each other. On this side, therefore, no obstacles were to be anticipated, and although there were at first some difficulties, and no small alarm awakened by the proposal, on the part of the French minister, to unite a portion of Galicia to the grand duchy of Warsaw, which gave instant umbrage to the cabinet and nobles of St-Petersburg, yet, in the end, this difficulty, great as it was, yielded to the thirst for territorial aggrandizement. It was agreed to give Russia a share of the spoil of Galicia, the name of Poland was never again to be revived; and the Emperor Alexander suffered himself to be persuaded, or affected to believe, that even with a considerable addition of territory, the grand duchy of Lithuania could never become an object of jealousy to the Czars of Muscovy (1).

Negotiation between France and Austria The cabinet of Vienna, which was stationed at Komorn in Hungary, prolonged the negotiation, from a latent hope that successes in Spain, on the Scheldt, or in the Tyrol, might enable it to resume hostilities with some prospect of success, or obtain some abatement from the rigorous terms which were demanded by the conqueror. These were the immediate suppression of the landwehr, the reduction of the regular army to one-half, the expulsion of all French royalists from the Austrian monarchy, and the cession of all the provinces actually occupied by the French armies. To these extravagant demands, which amounted to a total destruction of the monarchy, Count Metternich opposed the equally extravagant proposition, that every thing should be restored to the *statu quo ante bellum*. As the negotiation advanced, Napoléon employed menaces of the severest kind against the Imperial government in the event of his being again driven to hostilities, boasted much of his perfect intelligence with the Emperor Alexander, and even dropped some significant hints of his intention, if driven to extremities, to separate the three crowns which now centred on the Imperial brows, and bestow two of them on the Archdukes Charles and John. Meanwhile, the utmost care was taken to improve the military position of the army, and make every thing ready for a resumption of hostilities. magnificent reviews daily took place at Vienna, troops were incessantly forwarded from the rear to the corps in front, a grand distribution of honours and benefactions to the soldiers was made on the anniversary of the Emperor's birth-day on the 15th of August, accompanied by a decree for the erection of a column of granite of Cherbourg, on the Pont Neuf at Paris, a hundred and eighty feet high, with the inscription, "Napoleon to the French people," a vast fortress was commenced at Spitz, opposite to Vienna, and another at Raab, to serve as impregnable *têtes-de-pont* for the passage of the Danube, while, by a decree equally agreeable to the French as

(1) Bign. viii. 349, 357 Hard x. 460, 472

"My interests," said Alexander to Napoléon, "are entirely in the hands of your Majesty. You may give me a certain pledge of your friendship, in repeating what you said at Tilsit and Erfurth, on the interests of Russia in connexion with the late kingdom of Poland, and which I have since charged my ambassador to confirm."—"Poland," said Napoléon to M. Gergeli, the officer who bore the despatches to St. Petersburg, "may give rise to some embarrassment betwixt us, but the world is large enough to afford us room to arrange ourselves."—"If the re-establishment of Poland is to be brought on the tapis," replied Alexander, "the world is not large enough, for I desire nothing fur-

ther in it." The ferment was prodigious at St. Petersburg, and it was openly said in some circles that it would be better to die sword in hand, or assassinate the emperor, if he was disposed to yield, than to permit the re-union of Poland to the Grand Duchy. Napoléon was not ignorant of these alarming symptoms, and it was at length agreed that France should guarantee to Russia its new possessions—that the name of Poland and the Poles should be avoided, and three fourths of the spoils of Galicia given to Lithuania, to Russia, Under a new name, and Saxony, this was the dangerous ideas as land.—See BIGNON,

grievous to the German people, it was declared that, till the 11th April following the whole expenses of the grand army should be laid upon the conquered territories (1)

Napoleon's
plans for
secret dis-
semination. But, in the midst of all his magnificent preparations and dazzling announcements, the Emperor had several causes for disquietude, and was far from feeling that confidence in his position which he declared to the world, and held forth in his conferences with Metternich. The Walcheren expedition held all the Flemish provinces for some weeks in a state of suspense; and there was good reason to believe, that, if Antwerp had fallen, the fermentation in the north of Germany would have drawn Prussia into an open declaration of war, which would at once have revived a desperate and doubtful contest on the Danube. The Tyrol was still in arms, and had a third time totally defeated the French invaders, and made the greater part of their number prisoners. Nor were the accounts from Spain of a more encouraging description. The disaster of Soult at Oporto, to be immediately noticed, had been followed by the invasion of Estremadura and the defeat of Talavera, while, at the same time, accounts were daily received of the discord among the generals employed in the Peninsula; and the details of an alarming conspiracy in Soult's army, revealed the alarming truth that the Republican generals, like the Roman consuls, dazzled by the thrones which had been won by so many of their number, were not altogether beyond the reach of intrigues which might elevate them from a marshal's baton to a king's sceptre. "It is necessary," said Napoleon, "to hasten at any price to make peace, in order that the enemy may not gain time to profit by his machinations (2) "

Attempt to
assassinate
him by
bullet. The Emperor's desire to bring the long protracted negotiations to a conclusion, was increased by a singular attempt at assassination, which was at this period made upon his person. At the daily parades at Schonbrunn, the attention of the guards and officers of his household had been more than once attracted by a young man, who threw himself Sept. 12. in the way, and importunately demanded to be allowed to speak to the Emperor. On the third occasion, one of the gendarmes seized him rudely by the neck to move him back, and in doing so, perceived that he had something concealed in his bosom. He was searched; and it proved to be a large knife sheathed in a number of sheets of paper. Being immediately apprehended and brought before Savary, the chief of the gendarmerie, for examination, he at once avowed that his intention was to have taken the Emperor's life, alleging as a reason, that he had been assured that the sovereigns would never make peace with him, and that, as he was the stronger, the grand object of universal pacification could never be attained till he were removed. It turned out that he was the son of a Protestant minister at Erfurt, and only eighteen years old. He had seen the Emperor when he was at that town the year before; and he admitted that he had borrowed his father's horse, without his knowledge, and come to Vienna to execute his purpose. "I had chiefly studied history," said he "and often envied Joan of Arc, because she had delivered France from the yoke of its enemies, and I wished to follow her example." "The guards who surrounded me," said the Emperor, "would have cut you in pieces before you could have struck me!" "I was well aware of that," replied he, "but I was not afraid to die." "If I set you at liberty," said Napoleon, "would you return to your parents and abandon

your purpose?" "Yes," replied he, "if we had peace; but if war continued, I would still put it in execution." Struck with these answers, the Emperor, with a magnanimity which formed at times a remarkable feature in his character, was desirous to save his life, and directed Dr. Conesart, who was in attendance, to feel his pulse, to see if he was in his sound senses. The physician reported that his pulse was slightly agitated, but that he was in perfect health. The young fanatic was sent to prison at Vienna; and though the Emperor for some time entertained thoughts of pardoning him, he was forgotten in the pressure of more important events, and after his departure for Paris, he was brought before a military council, condemned, and executed. He evinced, in his last moments, the same intrepidity which had distinguished his conduct when examined before Napoleon, and his last words were, "For God and the fatherland (1)!"

Which leads to the conclusion of the negotiation This singular event contributed as much, on the French side, to the conclusion of the negotiations, as the failure of the Walcheren expedition did, on that of the Austrian cabinet. There might be more characters in Germany like Stabs in a country so profoundly agitated, and containing, especially in its northern provinces, so many enthusiastic spirits, it was impossible to measure the personal danger which the Emperor might run, if hostilities were resumed. These considerations weighed powerfully with the cabinet of Schönbrunn. Napoléon gradually fell in his demands, and though the orders given were abundantly warlike, and the marshals were all at their posts, yet it was evident to those in the secret of the negotiations, that matters were approaching to an accommodation. The demand, on the part of France, of the line from the Danube to the lake Aller, as the frontier towards Bavaria, gave rise to fresh difficulties, at the very moment when all seemed concluded; for it deprived Austria, on that side, of the mountain ridge which formed its true frontier, and gave the court of Munich the crest of the Hansruck, and part of the slope towards the eastward. But matters had gone too far to recede. The cabinet of Vienna was true to its principle of yielding when it could no longer resist (2), and Prince Lichtenstein, with tears in his eyes, signed the treaty, on the part of the Austrian government, at Vienna, on the 14th October.

Peace of Vienna By the peace of Vienna, Austria lost territories containing three millions and a-half of inhabitants. She ceded to Bavaria the Inn-Viertel, and the Hansruck-Viertel, as well as Salzburg, with its adjacent territory, and the valley of Berchtolsgraden, districts, the importance of which was not to be measured by their extent and inhabitants, but by the importance of their situation, lying on the ridge of mountains which separated the two monarchies, and taking a strong frontier from the one to bestow it upon the other. Portions of Galicia, to the extent of fifteen hundred thousand souls, were ceded to the grand duchy of Warsaw, and of four hundred thousand to Russia. and besides this, the grand duchy acquired the fortress and whole circle of Zamose, in the eastern part of the same province. To the kingdom of Italy, Austria ceded Carniola, the circle of Villach in Carinthia, six

(1) Sav iv 111, 145 Pel iv. 371 Bign viii 371, 373

An adventure of a different character befell Napoléon at Schönbrunn during this period. A young Austrian lady of attractive person and noble family fell so desperately in love with the *renown* of the Emperor, that she became willing to sacrifice to him her person, and was, by her own desire, introduced at night into his apartment. Though abundantly warm in his temperament, so far as physical

enjoyments were concerned, and noways disquieted, in the general case, by any lingering qualms of conscience about Joséphine, Napoléon was so much struck with the artless simplicity of this poor girl's mind, and the devoted character of her passion, that, after some conversation, he had her re-conducted un'ouched to her own house.

(2) Bign viii 360, 3 5 Pel iv 370, 373 Bónr viii 247, 256 Oct 11

districts of Croatia, Fiume and its territory on the sea shore, Trieste, the county of Gorizia, Montefalcone, Austrian Istria, Carina and its dependent isles, the Thälweg of the Save, and the lordship of Radzuns in the Grisons. In addition to these immense sacrifices, the Emperor of Austria renounced, on the part of his brother, the Archduke Antony, the office of grand master of the Teutonic Order, with all the rights and territories. Tyrol remained to its Bavarian masters; but the Emperor Francis stipulated for his brave and devoted children in that province, an absolute and unconditional amnesty, as well in their persons as effects (1)

In secret
articles.

In addition to these public articles, various secret ones were annexed to the treaty, of a still more humiliating kind to the house of Hapsburg. The treaty was, in the first place, declared common to Russia next, the Emperor of Austria engaged to reduce his army, so that it should not exceed a hundred and fifty thousand men, during the continuance of the maritime war. All persons born in France, Belgium, Piedmont, or the Venetian states, were to be dismissed from the Austrian service, and a contribution of 85,000,000 francs (L3,400,000) was imposed on the provinces occupied by the French troops. By a letter of Napoléon to M. Daru, the intendant-general of the army and conquered provinces, it was specially enjoined that, "from the 1st April to the 1st October, every farthing expended on the army should be drawn from the conquered provinces, and all the advances between these periods made from France, restored to the public treasury (2) "

Jealousy of
Russia at
the increase
of the
Grand
Duchy from
this treaty

The treaty of Vienna was received with marked disapprobation by the cabinet of St. Petersburg; and it was attended with a most important effect, in widening the breach which was already formed between the two mighty rulers of continental Europe. In vain Napoléon assured Alexander that he had watched over his interests as he would have done over his own; the Russian Autocrat could perceive no traces of that consideration in the dangerous augmentation of the territory and population of the grand duchy of Lithuania, and he openly testified to Caulaincourt his displeasure, referring to the date of his dismissal of General Gortschakoff for decisive evidence of the sincerity of his alliance (3). In the midst of all his indignation, however, he made no scruples in accepting the moderate portion of the spoils of Austria allotted to his share; and M. De St.-Julian, who was dispatched from Vienna to persuade him to renounce that acquisition, found it impossible to induce the cabinet of St. Petersburg to accept the sterile honours of disinterestedness. Napoléon, however, spared no efforts to appease the Czar. and being well aware that it was the secret dread of the restoration of Poland which was the spring of all their uneasiness, he engaged not only to concur with Alexander in every thing which should tend to efface

(1) See Treaty in Martens, Vol. I. 348. Ann. Reg. 1809. App. to Chron. 722. State Papers.

(2) Bign. viii. 378, 380.

The losses of Austria by this treaty were—

In Galicia, to the Grand Duchy of Warsaw	1,500,000
————— to Russia	400,000
In Germany to Bavaria, and Kingdom of Italy	1,174,830
In Italy to France and the Kingdom of Italy	400,000
	<hr/> 3,474,830

1,500,000
400,000
1,174,830
400,000

3,474,830

The population of Austria, after these losses, was 30,723,311; her frontier was destroyed, both toward France and Italy; she was entirely cut off from all communication with the sea; and last, besides all the hardships yielding customs, many of the most important sources of salt silver lead and

iron in her dominions, under Pius VI. (ii. 277) and Maria II. d. dei Tratti, (ii. 287, 298) and *Concise de France* (iii. 27, 66).

(3) *Viola* (iii. 214).

ancient recollections, but even declared that he "was desirous that the name of Poland and of the Poles *should disappear, not merely from every political transaction but even from history*" How fortunate that the eternal records of history are beyond the reach of the potentates who for a time oppress mankind (1)!

Napoléon's
secret views
in this
treaty

Napoléon afterwards reproached himself at St.-Helena, with not having, at the treaty of Vienna, divided the three crowns of the Austrian empire, and thereby for ever prostrated its power and independence; and it is certain that, at one period of the negotiation, he not only threatened to adopt this extreme measure, but entertained serious intentions of carrying it into execution. His secret thoughts seem to have been divulged in a despatch to his minister for foreign affairs, of 15th September, in which he openly avows that his desire is either to separate the three crowns, or to form a sincere and durable alliance with the Austrian empire. Provided he could obtain a sufficient guarantee for that alliance, he was willing to leave the monarchy entire, but he thought there could be no security for it unless the throne were ceded to the grand duke of Wurtzburg (2). The Emperor Francis magnanimously agreed to the sacrifice, if it could have the effect of preserving the integrity of the monarchy, but it was not afterwards insisted on by Napoléon, who began, in the course of this negotiation, to conceive the idea of connecting himself with the Cæsars in a way still more personally flattering and likely to be more politically enduring. In truth, he foresaw that a rupture with Russia was inevitable at some future period, it was with the Czar that the real battle for supreme dominion was to be fought; and he clearly perceived the policy of not weakening too far the power which would be his right wing in the conflict (3).

The ram-
parts of
Vienna
blown up

No sooner was the treaty of Vienna ratified than Napoléon set out for Paris, and arrived at Fontainebleau on the 26th of October. Before leaving the Austrian capital, however, in the interval between the signature and ratification of the treaty, he gave orders for the barbarous and unnecessary act of blowing up its fortifications. Mines had previously been constructed under the principal bastions, and the successive explosion of one after another, presented one of the most sublime and moving spectacles of the whole revolutionary war. The ramparts, slowly raised in the air, suddenly swelled, and bursting like so many volcanoes, scattered volumes of flame and smoke into the air, showers of stones and fragments of masonry fell on all sides, the subterraneous fire ran along the mines with a smothered roar, which froze every heart with terror, one after another, the bastions were heaved up and exploded, till the city was

(1) Champagne to Alexander, 20th Oct 1809
Bign viii 360

(2) "I desire nothing from Austria," said Napoléon "Gallicia is beyond my limits Trieste is good for nothing but to be destroyed, since I have Venice. It is a matter of indifference to me whether Bavaria has a million, more or less, my true interest is either to separate the three crowns, or to contract an intimate alliance with the reigning family. The separation of the three crowns is only to be obtained by resuming hostilities: an intimate alliance with the existing Emperor is difficult, because I have not an entire confidence in his resolution." I said to Prince Lichtenstein the other day "Let the Emperor cede the crown to the grand duke of Wurtzburg, I will restore every thing to Austria without exacting any thing. M de Bubna took me at my word, and said the Emperor was far from having any repugnance to such a sacrifice. I said I would

accept it, that the base put forward at Altenberg was far from being unsusceptible of modifications. Insinuate to Count Metternich that if the Emperor is, on any account, inclined to cede the throne, (report says he is weary of royalty,) I will leave the monarchy entire. With the Grand Duke I will contract such an alliance as will speedily enable me to settle the affairs of the Continent: I have confidence in the character and good disposition of the Grand Duke: I would consider the repose of the world as secured by that event. You may say I can rely on the moral probity of the Emperor, but then he is always of the opinion of the last person who speaks, such men as Stadion and Baldacci will continue to exercise influence over him. That way of arranging matters would suit me well."—NAPOLÉON TO CHAMPAGNY, 15th Sept 1809. BIGNON, viii 365 368

(3) O'Meara, ii 199 Las Cases, iii. 139 Bign viii 364, 368

enveloped on all sides by ruins, and the rattle of the falling masses broke the awful stillness of the capital. This cruel devastation produced the most profound impression at Vienna, it exasperated the people more than could have been done by the loss of half the monarchy. These ramparts were the glory of the citizens shaded by trees, they formed delightful public walks, they were associated with the most heart-stirring eras of their history they had withstood all the assaults of the Turks, and been witness to the heroism of Maria Theresa. To destroy these venerable monuments of former glory, not in the fury of assault, not under the pressure of necessity, but in cold blood, after peace had been signed, and when the invaders were preparing to withdraw, was justly felt as a wanton and unjustifiable act of military oppression. It brought the bitterness of conquest home to every man's breast the iron had pierced into the soul of the nation. As a measure of military precaution it seemed unnecessary, when these walls had twice proved unable to arrest the invader as a preliminary to the cordial alliance which Napoleon desired, it was in the highest degree impolitic and its effects were felt by Napoleon, in the hour of his adversity, with terrible bitterness. The important lesson which it has left to the world, is the clear proof which it affords of that great general's opinion of the vital importance of central fortifications. He has told us himself, that, if Vienna could have held out three days longer, the fate of the campaign would have been changed but, while this truth is perhaps the lesson of all others most strongly illustrated by the events of the war, it is the last which the vanity of kings, and the thoughtlessness of the people, will permit to be read to any useful effect (1)

Affairs of
Tyrol after
the armistice
of Znaym.

While the cabinet of Vienna was thus yielding in the strife, and the last flames of this terrible conflagration were expiring on the banks of the Danube, the Tyrol continued the theatre of a desperate conflict, and the shepherds of the Alps, with mournful heroism, maintained their independence against a power which the Austrian monarchy had been unable to withstand. Having completely delivered their country, after the battle of Aspern, from the invaders, and spread themselves over the adjoining provinces of Bavaria, Vorarlberg, and Italy (2), the brave mountaineers flattered themselves that their perils were over and that a second victory on the Danube would speedily reunite them, by indissoluble bonds, to their be-
 July 12. loved Emperor. Kufstein was besieged and on the point of surrendering, when the news of the battle of Wagram and the armistice of Znaym fell like a thunderbolt on their minds. Many of the insurgents, as was natural in such circumstances, gave up the cause as lost, and retired in deep dejection to their homes, while others, more resolute or desperate, redoubled in ardour, and seemed determined to spill the last drop of their blood rather than submit to the hated yoke of Bavaria. The chiefs of the insurrection, and the Austrian generals, who had again entered the country, were at first in a state of great perplexity, from uncertainty whether to yield to the summons of the French generals, who required them to evacuate the country, or the prayers of the inhabitants, who besought them to stand by them and defend it. The uncertainty of the soldiers, however, was removed by an order which
 20, arrived after the armistice of Znaym for them to evacuate both the Tyrol and Vorarlberg which they immediately prepared to obey but the insurgents refused to acknowledge the convention, and declared they would submit to nothing but direct orders from the Emperor of Austria, who, they

(1) *Journal* 443 210 212. *Engl.* 44, 272, 278

(2) *Idem* 44, 212

were confident, would never issue such commands, as he had promised to conclude no peace which did not secure to him the possession of the Tyrol. Such was the fury of the people, that some of the most violent proposed to seize and disarm all the Austrian troops, and put all the prisoners to death, and although Hormayer, Martin, and the real chiefs, did their utmost to calm the general effervescence and direct it to some useful object, yet they could not prevent many of the prisoners from falling victims to the ungovernable rage of the peasantry. In the midst of this heroic yet savage bewilderment, the general voice turned to Hofer, and his announcement, at a crowded assembly, that he would stand by them to the last drop of his blood, though it were only as chief of the peasants of Passeyr valley, was answered by a general shout (1), which proclaimed him "commander-in-chief of the province so long as it pleased God."

Fresh in-
vasion of
Tyrol by
Marshal
Lefebvre

Dangers, however, of the most formidable kind were fast accumulating round the devoted province. The armistice of Znaym enabled the Emperor to detach overwhelming forces against the Tyrol, and he immediately set about the final reduction of the country. Marshal Lefebvre, at the head of twenty thousand men, renewed his invasion of the Innthal by the route of Salzburg, while Beaumont, with ten thousand, crossed the ridge of Scharnitz, and threatened Innsbruck from the northern side.

July 20

Both irruptions proved successful. In the confusion produced by the withdrawing of the Austrian authorities, and uncertainty whether or not the war was to be continued, the frontier defiles were left unguarded, and both columns of the enemy appeared without opposition before the steeples

July 21

of Innsbruck. The Archduke John and General Buol, who commanded the Austrian troops, successively issued proclamations to the people,

July 29

announcing to them the conclusion of the armistice and stipulated evacuation of the Tyrol, and recommending to them to lay down their arms, and trust to the clemency of the Duke of Dantzic. Finding the people little inclined to follow their directions, Hormayer and Buol evacuated Innsbruck with all the regular troops and cannon, taking the route over the Brenner,

July 30

leaving the Tyrol to its fate. Innsbruck, destitute of defenders immediately submitted, and the spectacle of thirty thousand French and Bavarians in possession of its capital, naturally spread the belief that the war in the Tyrol was terminated (2).

Renewed
resolution
of the
Tyrolese to
continue the
contest

This, however, was very far from being the case, and Europe, amidst the consternation produced by the battle of Wagram, was speedily roused to the highest pitch of enthusiasm by the unconquerable resolution and astonishing victories of its gallant mountaineers. General Hormayer, who was well aware of the influence of Hofer over his countrymen, and despaired with reason of any further success in the contest, had used the utmost efforts to induce that renowned chief to follow him in his retreat, but all his efforts were ineffectual. Many of the chiefs, including even the renowned Spechbacher, had resolved to withdraw with the Austrian generals, but when he went to take leave of Hofer, the power of patriotic eloquence proved victorious, and he was prevailed on to remain and stand by his country to the last. Even after this acquisition, however, Hofer was still the victim of contending feelings, patriotic ardour impelling him one way, and the obvious hopelessness of the attempt another, and, in

July 29

the agony of indecision, he retired to a hermitage in the valley of Passeyr, where, amidst pines and rocks, he spent several days in solitude

(1) Gesch. A. Hofer, 521, 530. Barth, 276, 280.

(2) Gesch. A. Hofer, 334, 342. Barth, 280, 290.

and prayer Haspinger was equally undecided and meanwhile the peasants, who were full of ardour and ready on all sides to take up arms, remained inactive for want of a leader to direct them. At length, however, the latter

Anc. courageous chief had a meeting at Brixen with Martin Schenk Peter Kemmater, and Peter Mayer, at which Schenk, who was the friend and confidant of Hofer, produced a letter from him, in which he implored them to make "one more effort in behalf of their beloved country." These rural heroes mutually pledged themselves to sacrifice their lives rather than abandon the holy cause; and, having concerted measures, Haspinger took the command of the peasants (1), while Hofer, who was summoned by the Duke of Dantzig to appear at Innsbruck on the 11th of August, returned for answer, "He would come, but it should be attended by ten thousand sharpshooters."

Hostilities commenced on the 4th of August by an attack on the advanced guard of the French and Bavarians, who were descending the southern declivity of the Brenner, on the banks of the Eisach, between Sterzing and Brixen. The Tyrolese, under Haspinger, occupied the overhanging woods and cliffs which surrounded the bridge of Leditch, a little below Mittenwald, where the high-road from Bolzano to Innsbruck crosses the Eisach. The French and Bavarians, little suspecting their danger, advanced incautiously down the defile. The woods were silent—no muskets or armed men appeared on the cliffs: but no sooner was a considerable body of the enemy, under General Rouyer, engaged in the defile, than a heavy fire burst forth on all sides; and, from amidst the leafy screen, the deadly bullets of the sharpshooters brought death with every discharge into the allied ranks. The column halted, fearful to advance, yet unwilling to recede; upon which the Tyrolese, with deafening shouts, burst forth from their concealment, and, mingling with the enemy, a frightful slaughter took place. Fresh troops, however, came up from the rear; courageous discipline prevailed over unskilled valour; and the Bavarian column pushed on towards the bridge. Suddenly, a crackling sound was heard—a rattle of falling stones startled the horsemen in advance, and immediately after several gigantic firs, which had been cut, and supported huge masses of rock and heaps of rubbish on the heights above, came thundering down, and crushed whole squadrons and companies at a single blow. So awful was the crash, so complete the devastation, that both parties for a time suspended the conflict, and, amidst the deathlike silence which ensued, the roar of the Eisach was distinctly heard. Undeterred, however, by this frightful catastrophe, the French again advanced, through a murderous fire, and, surmounting the ruins which obstructed the road and covered the bodies of their comrades, forced their way on to the bridge. Already, however, it was on fire—a Bavarian horseman attempted, with dauntless intrepidity, to cross the arch amidst the flames, but the burning rafters gave way and he was precipitated into the torrent. Separated by the yawning gulf, over which there was no other passage, both parties desisted from the combat. Haspinger returned to Brixen to collect his scattered forces, and Rouyer, weakened by the loss of twelve hundred men, remeasured his steps to Mittenwald and Sterzing at the foot of the Brenner (2).

(1) Grub. A. Hof. 312, 319. Barih. 291, 302.

(2) Grub. A. Hofer. 340, 361. Barih. 301, 312.

The scene of this memorable conflict is on the high-road from Brixen to Sterzing, about a mile below Mittenwald, shortly before it crosses the bridge of Leditch. Every traveller from Italy to

Germany by Tyrol, passes through it; but how few are so of the beautiful scene! It is the wood-lad's preserve, beneath which they sell to their villages, but none the less! In the most places the scene is the most fearful but the is mistaken—see Grub. A. Hof. 302.

Defeat of
Marshal
Lefebvre on
the Bren-
ner -
Aug 4

The successful issue of this extraordinary conflict produced, as might have been expected, a general outbreak in Tyrol Hofer descended the valley of Passeyr at the head of several thousand men, and joined Spechbacher on the Gaufen, the mountain ridge which overhangs, on the west and north, the northern slope of the Brenner, and ten thousand men soon flocked to their standard The Bavarians, under General
Aug 5, 6 Steingel, made several attempts to dislodge them from this threatening position, which menaced the great road by Brixen to Italy, but they were constantly repulsed COUNT WITTGENSTEIN, an officer destined to immortal celebrity in a more glorious war, succeeded, however, in again clearing the road up the northern slope of the Brenner of the enemy, and Marshal Lefebvre, encouraged by this success, put himself at the head of his whole corps, with the intention of forcing his way over that elevated ridge to the Italian Tyrol. He had not advanced far, however, before his column, while winding in straggling files up the steep ascent, twenty miles in length, which leads to the summit of the pass, and when the vanguard had reached Steinach—was
Aug 10 attacked in numberless points at once by the peasantry, and, after an obstinate conflict, the whole, twenty thousand strong, were routed and driven back with immense loss to the bottom of the mountain. Such was the disorder, that the marshal himself arrived there disguised as a common
Aug 11 trooper, on the evening of the 11th, and his followers, horse, foot, and cannon, mingled together, were rolled down in utter confusion into Innspruck Twenty-five pieces of cannon, and the whole ammunition of the army, fell into the hands of the victors, who, gathering strength like a mountain torrent, with every tributary stream which crossed their course, soon appeared in great force on Mount Isel and the heights which overhang the capital (1)

Successes
in other
quarters
Aug 8

Similar successes in other quarters attended the efforts of the Tyrolese patriots A body of seventeen hundred men, who advanced from Landeck through the Vintchgau, with the intention of falling on the rear of Hofer's people at Sterzing, was met at Prutz by a body of Tyrolese sharpshooters, and after a protracted contest of two days, were totally defeated, with the loss of three hundred killed and nine hundred prisoners. At the same time, General Rusca advanced in the Pusterthal from Carinthia to Lienz, with six thousand men, where he gave way to the most revolting
Aug 9 atrocities, massacring every human being, of whatever age or sex, that fell in his way until at length a stop was put to his career by a body of armed peasants, who met him at the Lienzerclause, and after a bloody conflict drove him back, with the loss of twelve hundred men, to Sachsenburg, from which, hotly pursued by the increasing fury of the peasantry, he retreated across the frontier into Carinthia, so that the whole of the Pusterthal was delivered from the enemy At the same time, a body of Italian
Aug 10 troops, which had advanced from the neighbourhood of Verona, with the design of co-operating with the corps of Lefebvre in its descent from the Brenner, alarmed at the general insurrection of the valley of the Adige, fell back, harassed by a cloud of peasants, to the Italian frontier, and the whole of the southern Tyrol was restored to the arms of the Tyrolese (2).

—The author visited the scene in 1816, and he yet recollects, in all its vividness, the thrilling interest which it excited, the long black furrow, produced by the falling masses, like the track of an avalanche, was even then, after the lapse of seven years, imperfectly obliterated by the bursting vegetation which

the warmth of the Italian sun had awakened on these beautiful steeps

Total defeat
of Lefebvre
at Inns-
bruck.
Aug. 22.

Animated by these unlooked for successes, the patriots no longer stood on the defensive, but, flocking from all quarters to the standard of Hofer, assembled in great multitudes on Mount Isel, the scene of their former triumphs, and destined to be immortalized by a still more extraordinary victory. Lefebvre had collected his whole force, consisting of twenty five thousand men, of whom two thousand were horse, with forty pieces of cannon, on the little plain which lies between Innsbruck and the foot of the mountains on the southern side of the Inn. They were far from being animated, however, by their wonted spirit: the repeated defeats they had experienced had inspired them with that mysterious dread of the mountaineers, with which regular troops are so often seized, when, contrary to expectation, they have been worsted by undisciplined bodies of men; and a secret feeling of the injustice of their cause, and the heroism with which they had been resisted, paralysed many an arm which had never trembled before a regular enemy. The Tyrolese consisted of eighteen thousand men, three hundred of whom were Austrian soldiers, who had refused to follow their officers, and remained to share the fate of the inhabitants: they were tolerably supplied with ammunition, but had little provisions, in consequence of which several hundred peasants had already gone back to their homes. Spechtbacher commanded the right wing, whose line extended from the heights of Passberg to the bridges of Halle and Volders. Hofer was with the centre, and had his headquarters at the Inn of Spade, on the Schonberg; Haspinger directed the left, and advanced by Matters. At four in the morning, this brave Capuchin roused Hofer from sleep, and, having first united with him in fervent prayer, hurried out to communicate his orders to the outposts. The battle commenced at six, and continued without intermission till midnight; the Bavarians constantly endeavouring to drive the Tyrolese from their position on Mount Isel, and they, in their turn, to force the enemy back into the town of Innsbruck. For long, the contest was undecided,—the superior discipline and admirable artillery of the enemy, prevailing over the impetuous but disorderly assaults and deadly aim of the mountaineers; but towards nightfall, the bridge of the Sill was carried after a desperate struggle, and their left flank being thus turned, the French and Bavarians gave way on all sides, and were pursued with great slaughter into the town. The Bavarians lost six thousand men, of whom seventeen hundred wounded fell into the hands of the Tyrolese: while on the side of the latter, not more than nine hundred had fallen (1).

Hofer's dis-
appearance
and govern-
ment of
Tyrol.
Aug. 3.

This great victory was immediately followed by the liberation of the whole Tyrol. Lefebvre fell back across the Inn on the day after the battle, and, evacuating Innsbruck, retreated rapidly to Kufstein, and from thence to Salzburg, where his whole army was collected on the 20th. Spechtbacher followed them with a large body of peasants, and destroyed a considerable part of the rearguard at Schwaig. While Hofer made his triumphant entry into Innsbruck, and took up his residence in the Imperial castle, where his presence was very necessary to check the disorders consequent on the irruption of so large a body of tumultuous patriots into an opulent city. The entire command of the country was now assumed by this chief: proclamations were issued and coins struck in his name, as commander-in-chief of the Tyrol; and the whole civil and military preparations submitted to his directions. While exercising these exalted functions, however, he still retained the simplicity of his rustic dress.

and manners he wore nothing but his country jerkin and clouted shoes; his long beard was retained, but his broad-brimmed hat was exchanged for one with a plume and inscription to him as the commander-in-chief of Tyrol, the gift of the holy sisterhood of Innsbruck. It soon appeared, however, that their renowned chief was not qualified for the duties of government: he interfered in an irregular and capricious way, though from pure motives, with the administration of justice, and was more occupied with terminating the private quarrels of his countrymen than warding off their public dangers. Among other attempts, he spent much time in endeavouring to reconcile the disputes of married persons, an undertaking which gave him ample employment. Meanwhile, Ersenstecken and Sieberer, who had
 Sept 28 both distinguished themselves in the commencement of the war, but subsequently retired with the Austrian troops, returned to their countrymen to share at all hazards their fate: the former bore a gold medal and
 Oct 4 chain, which were presented to Hofer by the Emperor of Austria, and with which he was formally invested in the great church of Innsbruck, at the foot of the tomb of Maximilian, by the abbot of Wilten, amidst the tears and acclamations of a vast concourse of spectators; while two deputies, Muller and Schonecher, who contrived to elude the vigilance of the French sentinels who surrounded the country, and made their way to England to implore the aid of the British Government, were received with heartfelt kindness by all classes, and filled the nation, and through it the world, with unbounded admiration of their heroic exploits (1)

But darker days were approaching, and the Tyrolese war was destined to add another to the numerous proofs which history affords, that no amount, how great soever, of patriotism, and no prodigies, how marvellous soever, of valour, not even when aided by the enthusiasm of religion and the strength of mountains, can successfully maintain a protracted resistance against a numerous and well-conducted enemy, if destitute of the organization and support of a regular government. Popular enthusiasm, often irresistible in the outset, and while the general effervescence lasts, is incapable of the steady and enduring efforts necessary in combating the forces of an established monarchy. Like the French Vendéans, or the Scotch Highlanders in 1743, the Tyrolese for the most part returned home after the victory of Innsbruck, in their simplicity they thought the contest was over, now that the invaders were again chased from the valley of the Inn, and thus the frontier passes were left guarded only by a few hundred men, wholly inadequate to protect them from the incursions of the enemy. Meanwhile Napoleon, now thoroughly roused, and justly apprehensive of the fatal blow which the continued independence of this mountainous district, in the midst of his dominions, would inflict on his power, was preparing such immense forces for a renewed attack on the country, as rendered its subjugation a matter of certainty. In the south General Peyri, at the head of ten thousand men, received orders to advance from Verona, and make himself master of Trent at all hazards, Rusca was intrusted with the command of three divisions, eighteen thousand strong, who were to enter the Pustertal from Villach and Carinthia, while three
 Oct 10 Bavarian divisions, under Drouet, mustering twenty thousand veterans, were to break in by the pass of Strubs and the Salzburg frontier. These immense forces were the more to be dreaded, from their arriving simultaneously in the country at the very moment when all hearts were

(1) Gesch. A. Hofer, 376, 405 Barth 346, 360

frozen by the intelligence of the conclusion of a treaty of peace by Austria, in which the Tyrol was abandoned (1); and when the first appearance of the winter snows was driving the peasants, and their herds, from the elevated pastures in the mountains to the lower valleys, in which they might be easily reached by the invading columns.

Successful invasion of the country on all sides. Under such difficult and disheartening circumstances, it was hardly to be expected, and certainly not wished, that the resistance of the Tyrolese should be further protracted, but such was the unconquerable spirit of the people, that for three months longer they continued obstinately to contend for their independence. Their frontiers were, in the first instance, forced on all sides. Peyrl defeated a body of Tyrolese and Austrians at Ampezzo on the Adige, and, after making himself master of Trent and Roveredo, advanced to the celebrated positions of Lavis, from whence the peasants were driven with great loss. On the northern and eastern frontiers affairs were equally discouraging. Spechbacher, who occupied the important pass of Strubs, the only entrance from the Salzburg territory, with a few hundred peasants, was unexpectedly attacked at daybreak, on the 18th October, and defeated with considerable loss; and, what to him was a heart-rending misfortune, his little son, Andrew, a boy of eleven years of age, who had escaped from his place of seclusion in the mountains, to join his father in the field, was made prisoner, fighting by his side (2). Spechbacher himself was struck down, desperately wounded, and only made his escape by the assistance of his brave friends, who, fighting the whole way, carried him up the almost inaccessible cliffs on the side of the pass, where the Bavarian soldiers could not follow them. The invaders now inundated the valley of the Inn. Hofer, almost deserted by his followers, was unable to maintain himself at Innsbruck, but retiring to Mount Isel, the scene of his former victories, still maintained, with mournful resolution, the standard of independence (3).

Hofer resolves to submit, and publishes proclamation to that effect. Eugène Beauharnais, who was intrusted with the direction of all the invading columns, now issued a proclamation from Villach, in which, after announcing the conclusion of peace between France and Austria, he called on the people to submit, and offered them on that condition, an unrestricted amnesty for the past. At the same time, the Archduke John, in a proclamation, strongly counselled them to relinquish the contest, and with a heavy heart announced that no further aid or countenance could be given by the Austrian Government. In these circumstances, Hofer had no course left but that of submission: he withdrew to Steinach, from whence he wrote to General Drouot, offering to make peace; and a few days after issued a proclamation, in which he counselled the people, as peace had been concluded, to lay down their arms, and trust "to the greatness of soul of Napoléon for pardon and oblivion of the past, whose footsteps were guided by a power of a superior order, which it was no longer permitted them to resist." But, in

(1) *Gruch. A. Bader* 463, 464. *Thib.* vii. 418. *Pel.* iv. 330.

(2) Spechbacher was struck down by repeated blows with the butt-end of a musket, and, when he regarded his feet, he found his little son had been carried off from his side. Wounded and bleeding as he was, he no longer discovered his loss; then he called on his friends to return to the pass; but, for the first time, they were they refused to follow him. Little Andrew was all his father was dear, and, to convince him that he was on the right side, soldiers produced his mother and some part of his

dress, all bloody which had been lost in the struggle. On seeing them, he wept bitterly, but soon regained his composure, and married on the same day as his fellow-prisoners. At Munich, he was presented to the King, who treated him with much kindness, and placed him in the royal university. After three years, and under happy auspices, this heroic family were reinstated, under three marks and 2 sappers. *see* *Journal de la République* 1811 p. 371 372.

(3) *Gruch. A. Bader* 463, 464. *Pel.* vii. 330.

a few days after, finding that the inhabitants of his beloved valley were still in arms, and that further resistance was resolved on, he issued another proclamation, in which he ascribed his former intention to the advice of evil counsellors, and called on the people "Still to fight in defence of your native country. I shall fight with you, and for you, as a father for his children." War was then resumed at all points. but the forces brought from all sides against the Tyrol were so immense, that no hope remained to the inhabitants, but to throw, by deeds of glory, a last radiance around their fall (1).

Last invasion of Tyrol and desperate resistance Rusca and Baraguay d'Hilliers entered the Pustertal from Carinthia with twenty thousand men in the beginning of November. Unable to resist so overwhelming a force, the Tyrolese fell back, fighting all the way, to the Mulbach-clause, which they made good for two days with the most determined bravery, and were only compelled to evacuate on the third, from their position being turned by a circuitous path through the mountains. All the principal valleys were now inundated by French troops, Brixen was occupied, and the Bavarians from Innsbruck having surmounted the Brenner with little opposition, the victorious columns united at Sterzing, and, with fifteen thousand men, threatened the Passeyrthal from the eastward; while an equal force, under Peyri, followed the banks of the Adige, and approached the only remaining district in arms by the southern side. Thus the insurrection was at last

Nov 3 cooped up within very narrow limits, and, in fact, confined to Hofer's native valley. But, though assailed by forces so immense, and driven by the snow in the higher grounds down to the banks of the Adige, the peasants still showed an undaunted front, and Rusca, having incautiously advanced to the old castle of Tyrol, and dispersed part of his forces to obtain the delivery of arms from the inhabitants, he was attacked by Haspinger, aided by Thalguter and Torggler, two rustic leaders, and totally defeated, with the loss of six hundred killed and wounded, and seventeen hundred prisoners. Thalguter fell in this action, in the very moment he was taking an eagle from the enemy (2).

Final conquest of the country This unexpected success again set the whole neighbouring valleys in a flame, but the storms of winter having set in, and the mountains become covered with their snowy mantle, want of provisions compelled the inhabitants to submit. The natives of those elevated regions, who maintain themselves by the produce of the dairy or the sale of their manufactures, were ruined by the exactions of the contending armies, and beheld with despair their families threatened with famine by the burning of their houses by the French soldiers, and stoppage of the wonted supplies of grain from Italian plains. Before the middle of December, almost all the chiefs had taken advantage of an amnesty, pressed with generous earnestness upon the people by Eugène Beauharnais and Baraguay d'Hilliers, and joined a large party of Tyrolese emigrants at Waraden, while the peasants, in sullen grief, returned to their homes (3).

Betrayal and seizure of Hofer Moved with the respect of true soldiers for a gallant adversary, both these brave generals were unwearied in their efforts to induce Hofer to submit and they would have done any thing to extricate him from his perilous situation. But, though grievously depressed and perplexed, he refused to accompany his friends in their flight, or humble himself by submission to the conquerors. Retiring to his native valley he

(1) Gesch. A. Hofer, 424, 436. Barth 382, 384. Thib. vii. 411.

(2) Gesch. A. Hofer, 436, 444, Barth 384, 386.

(3) Gesch. A. Hofer, Thib. vii. 412.

cluded the search of the victors. His place of concealment was a solitary alpine hut, four leagues distant from his home, in general inaccessible from the snow which surrounded it. In that deep solitude he was furnished, by stealth, with provisions by a few faithful followers, and more than once visited by secret messengers from the Emperor of Austria, who in vain used every entreaty to induce him to abandon the Tyrol, and accept an asylum in the Imperial dominions. But Hofer steadily refused all their offers, declaring his resolution to be fixed never to abandon his country or family. He even resisted all their entreaties to shave his beard, or use any disguise which might prevent his person from being known to the enemy. At length, he was seized by a French force of sixteen hundred men, led by Donay, once his intimate friend, whom the magnitude of the reward induced to betray his benefactor. Two thousand more were in readiness to support them; the column set out at midnight, and, after marching four leagues over ice and snow, surrounded the hut at five in the morning on the 5th January. No sooner did Hofer hear the voice of the officer enquiring for him, than he quietly came to the door and delivered himself up. He was immediately bound, and marched down his beloved valley, amidst the tears of the inhabitants and the shouts of the French soldiers, to Dolzano, and thence by Trent to Mantua (1).

His trial and condemnation. On his journey, he was treated by the French officers, and particularly General Baraguay d'Hilliers, with the kindness which true valour ever pays to misfortune, and which in his case, was well deserved by the efforts he had uniformly made to protect the French prisoners who fell into his hands. On his arrival at Mantua, a court martial was immediately summoned, with General Bion, the governor of the fortress, whom he had formerly vanquished, at its head, to try him for combating against the French after the last proclamation of Eugène Beauharnais offering a general amnesty. The proceedings were very short, as the facts charged were at once admitted by the accused; but, notwithstanding this, a very great difference of opinion prevailed as to the punishment to be inflicted. A majority were for confinement: two had the courage to vote for his entire deliverance; but a telegraphic despatch from Milan decided the question, by ordering his death within twenty-four hours; thus putting it out of the power of Austria to interfere. He received his sentence with unshaken firmness, though he had no idea previously that his life was endangered; and only requested that he might be attended by a confessor, which was immediately complied with. By this priest, Manifesti, who never quitted him till his death, he transmitted his last adieu to his family, and every thing he possessed to be delivered to his countrymen, consisting of five hundred florins in Austrian bank-notes, his silver snuff-box and beautiful rosary, which he had constantly carried about with him. In the intervals of religious duty, he conversed eagerly about the Tyrolean war, expressing always his firm conviction that sooner or later his countrymen would be reunited to the Austrian Government (2).

His execution. On the following morning he was led out to execution. As he passed by the barracks on the Porta Molina, where the Tyrolean prisoners were confined, they fell on their knees and wept aloud; those who were near enough to approach his escort, threw themselves on the ground and implored his blessing. This he freely gave them, requesting their forgiveness for the misfortunes in which he had involved their country, and assuring them that he felt confident they would ere long return under the dominion of their beloved Emperor, to whom he cried out the last "Vive!" with

a clear and steady voice. On the broad bastion, a little distance from the Porta Ceresa, the grenadiers formed a square, open in the rear, while twelve men and a corporal stood forth with loaded pieces. A drummer offered Hofer a white handkerchief to bandage his eyes, and requested him to kneel, but this he refused, saying, "that he was used to stand upright before his Creator, and in that posture he would deliver up his spirit to him." Having then presented the corporal who commanded the detachment with his whole remaining property, consisting of twenty kreutzers, and uttered a few words expressive of attachment to his sovereign and country, he faced the guard, and with a loud voice pronounced the word "Fire!" On the first discharge he sunk only on one knee: a merciful shot, however, at length dispatched him (1).

Reflections
on this
event

No event in the history of Napoléon has cast a darker stain on his memory than this ungenerous slaughter of a brave and heroic antagonist. Admitting that the unutterable miseries of civil war sometimes render it indispensable for the laws of all countries to punish even the most elevated virtue, when enlisted on the side which ultimately is vanquished, with death, it can hardly be said that the resistance of the Tyrolese to the Bavarian yoke partook of that character. It was truly a national contest, the object in view was not to rise up in rebellion against a constituted government, but to restore a lost province to the Austrian monarchy. The people had been forcibly transferred only a few years before, against their will, from the paternal sway of their beloved Emperor to the rude oppression of a foreign throne, the dominion of four years could not obliterate the recollections of four centuries. In that very war Napoléon had himself issued a proclamation, calling upon the Hungarians to throw off their allegiance to Austria, and re-assert, after its extinction for centuries, their national independence (2). Hofer had never sworn allegiance to the French Emperor, he had never held office under his government, nor tasted of his bounty, yet what invectives have Napoléon and his panegyrists heaped upon the Bourbons in 1815, for visiting with severity the defection of the leaders of the French army, during the hundred days, who had done both! If Ney was murdered, because after swearing to bring back Napoleon in an iron cage, vanquished by old recollections, he gave the example, himself a marshal at the head of an army, of deserting the sovereign who had elevated him to its command, what are we to say of Hofer, a simple mountaineer, who, without employment or command under Bavaria, merely strove to restore his country to the recollections and the ties of four centuries? Even if his life had been clearly forfeited by the laws of war, a generous foe, won by his bravery, penetrated with his devotion, would only have seen in that circumstance an additional reason for sealing the glories of Wagram by an act of mercy, which would have won every noble bosom to his cause. But, though not destitute of humane emotions, Napoléon was steelled against every sentiment which had the semblance even of militating against reasons of state policy, and such was the force of his selfish feelings, that he was actuated by an indelible rancour towards all who in any degree thwarted his ambition. The execution of Hofer was the work of the same spirit which,

(2) "Hungarians! the moment has arrived to claim your independence. I offer you peace, the integrity of your territory, of your liberty, and constitutions. Your alliance with Austria has been the cause of all your misfortunes: you form the largest portion of its empire, and yet your dearest interests have always been sacrificed to the interests

of the hereditary states. Resume, then, your rank as an independent nation, choose a king who may permanently reside amongst you, who may be surrounded only by your citizens and soldiers. Hungarians! that is what Europe demands, what I offer you!"—*NAPOLÉON'S Proclamation to the Hungarians, Vienna, 13th May 1809*.
Trait. ix. 245

carrying its hostility beyond the grave, bequeathed a legacy to the assassin who had attempted the life of Wellington.

Adventures of Haspinger and Spechbacher. Peter Mayer having been tried at Betzen, was also shot, and behaved with equal heroism in his last moments. Haspinger, who put no faith either in the promises of pardon held out by Eugène or the visions of celestial succour declared by Kolb, a fanatic who was mainly instrumental in exciting the last unhappy insurrection, succeeded, after a very long time, in escaping into Switzerland, by the way of St.-Gall and Einsiedlen, in the dress of a monk, from whence he succeeded, by cross paths through Friuli and Carinthia, in reaching Vienna, where he received protection from the Emperor. Spechbacher, after the unfortunate action at the pass of Struba, where his son Andrew was made prisoner, was actively pursued by the Bavarians, who set a large price upon his head and he was frequently obliged to shift his place of concealment to avoid discovery. He was at one time surrounded in a house by a party of Bavarian soldiers, who had been led to his retreat by a faithless wretch but he escaped upon the roof, and, leaping thence, made his way into an adjoining forest, where he was secreted nearly a month, and endured the utmost pangs of hunger. Wandering in this manner, he by accident met his wife and infant children, like him flying from persecution and death, and perishing of want and cold. They at length obtained a refuge in the house of a generous peasant, in the village of Volderberg where they were concealed together several weeks; but his retreat having been discovered, Spechbacher was obliged to fly to the higher mountains, where, on one of the summits of the Elsgletscherr, in a cavern discovered by him in former times when pursuing the chamois, he lay for several weeks in the depth of winter, supported by salt provisions, eaten raw, lest the smoke of a fire should betray his place of concealment to his pursuers (1).

Extraordinary interview and escape of the latter. Happening one day, in the beginning of March, to walk to the entrance for a few minutes to enjoy the ascending sun, an avalanche, descending from the summit of the mountain above, swept him along with it down to the distance of half a mile on the slope beneath and dislocated his hip-bone in the fall. Unable now to stand, surrounded only by ice and snow, tracked on every side by ruthless pursuers, his situation was, to all appearance, desperate but even then the unconquerable energy of his mind, and incorruptible fidelity of his friends, saved him from destruction. Summoning up all his courage, he contrived to drag himself along the snow for several leagues during the night, to the village of Volderberg, where, to avoid discovery, he crept into the stable. His faithful friend gave him a kind reception, and carried him on his back to home where his wife and children were, and where his devoted domestic, George Zoppel, concealed him in a hole in the cow-house beneath where the cattle stood, though beyond the reach of their feet, where he was covered up with cow-dung and fodder, and remained for two months, till his leg was set and he was able to walk. The town was full of Bavarian troops; but this extraordinary place of concealment was never discovered, even when the Bavarian dragons, as was frequently the case were in the stable looking after their horses. Zoppel did not even inform Spechbacher's wife of her husband's return lest her emotion or visits to the place might betray his place of concealment. At length in the beginning of May, the Bavarian soldiers having left the house Spechbacher was lifted from his living grave and restored to his wife and children.

As soon as he was able to walk, he set out; and journeying chiefly in the night, through the wildest and most secluded Alps, by Dux and the sources of the Salza, he passed the Styrian Alps, where he crossed the frontier and reached Vienna in safety. There he was soon after joined by his wife and children; and the Emperor's bounty provided both for them and Hofer's orphan family, with not undeserved munificence, till, on the restoration of the Tyrol to the House of Hapsburg, they returned to their native valleys, and Spechbacher died at Hall, in 1850, of a weakness in the chest, brought on by these unparalleled hardships. Little Andrew, then a man, who had been kindly treated at the court of Munich, was promoted to an official situation in Tyrol, under the Austrian government; but the widow and children of Hofer remained under their father's roof in the valley of Passeyr (1).

Affairs of
the Holy
See

Touching as is this record of simple virtue in the mountaineers of Tyrol, another event of still more surpassing interest, of yet more momentous consequences, occurred in this eventful year. Thus was the dethronement and imprisonment of the Pope, and the annexation of the patrimony of St.-Peter and of the eternal city to the French empire.

Original
causes of
discontent
on the part
of the Pope
at Napo-
léon

When Pius VI, contrary to the usage of his predecessors, agreed to leave the Quirinal Hill and cross the Alps in the depth of winter, to place the crown on the brows of the French Emperor, he naturally expected that some great and durable benefit would accrue to himself and his successors from the unwonted act of condescension. The flattering reception which he met with at Paris, the delicate attentions of all the functionaries of the Imperial palace, and the marked regard of the Emperor himself, confirmed these flattering illusions, and the papal suite returned into Italy charmed with their visit, and never doubting that, at the very least, the restoration of the three legations in Romagna, torn from the Holy See by the treaty of Tolentino in 1797, might with confidence be relied on (2). M Fontanes, the orator of government, had enlarged, in eloquent and touching terms, on the magnificent spectacle afforded by the re-conversion of the first of European states to the Christian and Catholic faith. "When the conqueror of Marengo," said he, "conceived on the field of battle the design of re-establishing the unity of religion, and restoring to the French their ancient worship, he rescued civilisation from impending ruin. Day for ever memorable! dear alike to the wisdom of the statesman and the faith of the Christian. It was then that France, abjuring the greatest errors, gave the most useful lesson to the world. She recognised the eternal truth, that irreligious ideas are impolitic, and that every attempt against Christianity is a stroke levelled at the best interests of humanity. Universal homage is due to the august pontiff, who, renewing the virtues of the apostolic age, has consecrated the new destinies of the French empire, and clothed it with the lustre of the days of Clovis and Pepin. Every thing has changed around the Catholic faith, but it remains the same! It beholds the rise and fall of empires, but amidst their ruins, equally as their grandeur, it sees the working out of the divine administration. Never did the universe witness such a spectacle as is now exhibited. The days are past when the empire and the papacy were rival powers. cordially united, they now go hand in hand to arrest the fatal doctrines which have menaced Europe with a total subversion. may they yield to the combined influence of religion and wisdom (3)!"

l^{on}, so far from relaxing in any of his demands, was only the more aroused, by this unexpected opposition, to increased exactions from the Holy See. his troops spread over the whole Papal territory, Rome itself was surrounded by his battalions; and, within half-a-mile of the Quirinal palace, preparations were openly made for the siege of Gaëta (1).

Unshaken
firmness of
the Pope
June 11, 1806

Pius VII, however, was unshaken in his determination. "If they choose," said he, to M Alquier, the French envoy; "to seize upon Rome, we shall make no resistance, but we shall refuse them the entry to the castle of St.-Angelo. All the important points of our territory have been successively occupied by their troops, and the collectors of our taxes can no longer levy any imposts in the greater part of our territory, to provide for the contributions which have been imposed. We will make no resistance, but your soldiers will require to break open the gates with cannon-shot. Europe shall see how we are treated; and we shall at least prove that we have acted in conformity to our honour and our conscience. If they take away our life, the tomb will do us honour, and we shall be justified in the eyes of God and man (2) "

Further
demands of
France, and
refusal of
the Pope
July 8, 1806

The French minister soon after intimated, that, if the Pope continued on any terms with the enemies of France, the Emperor would be under the necessity of detaching the duchy of Urbino, the March of Ancona, and the sea-coast of Civita Vecchia, from the ecclesiastical territories; but that he would greatly prefer remaining on amicable terms with his Holiness, and with that view he proposed, as the basis of a definitive arrangement between the two governments, 1 "That the ports of his Holiness should be closed to the British flag, on all occasions when England was at war with France, 2 That the Papal fortresses should be occupied by the French troops, on all occasions when a foreign land force is debarked on or *menaces* the coasts of Italy " To these proposals, which amounted to a complete surrender of the shadow even of independence, the Pope returned a respectful but firm refusal, which concluded with these words "His Majesty may, whenever he pleases, execute his menaces, and take from us whatever we possess. We are resigned to every thing, and shall never be so rash as to attempt resistance. Should he desire it, we shall instantly retire to a convent, or the catacombs of Rome, like the first successors of St -Peter but think not (3), as long as we are intrusted with the responsibility of power, to make us by menaces violate its duties "

Renewed
mutual
irritations
after the
peace of
Tilsit

The overwhelming interest of the campaign of Jena and Eylau, for a time suspended the attention of Napoléon from the affairs of Italy, but no sooner was he relieved by the peace of Tilsit from the weight of the Russian war, than he renewed his attempts to break down the resistance of the ecclesiastical government, and was peculiarly indignant at some hints which he had heard, that the Pope, if driven to extremities, might possibly launch against his head the thunders of the Vatican. A fresh negotiation was nevertheless opened, Napoléon insisting that the court of Rome should rigidly enforce the Berlin and Milan decrees in its dominions, shut the ports against the English flag, permit and maintain a permanent French garrison at Ancona, and allow the march of French columns through their territories. The Pope expressed his readiness to accede

to these propositions, and to submit to their immediate execution, except the actual declaration of war against England. But the Emperor had other designs; and mere adherence to the continental system was far from being now sufficient. On the 2d February, a large body of French troops entered Rome which ever after, continued to be occupied by their battalions. The formidable military force with which he was surrounded, had no effect in subduing the courage of the intrepid pontiff. Calling in M. Alquier on the day of their arrival, he thus addressed him: "The Emperor insists on every thing, or nothing: you know to what articles proposed I will consent. I cannot subscribe the others. There shall be no military resistance. I will retire into the castle of St. Angelo (1) not a shot shall be fired: but the Emperor will find it necessary to break its gates. I will place myself at the entry; the troops will require to pass over my body; and the universe will know that he has trampled under foot him whom the Almighty has anointed. God will do the rest (2)." Feb. 2, 1808.

Exile
suspension
of the
government
by the
French
April 2.
March 28.

Insults and injuries continued to be heaped upon the head of the devoted Pontiff. The French troops did not, indeed, blow open the gates of the Quirinal palace: but the entire government of his dominions was taken from him. Soon after, the Papal governor of Rome, an intrepid man, Signor Cavalchini, was seized and carried

off by the French troops, and the military government of the capital was confided to the Imperial general Molli; the Papal troops were informed, in a letter from Eugène Deaubarnais, that he "congratulated them upon their emancipation from the rule of priests; that the Italian soldiers are now commanded by men who can lead them into fire; and that they are no longer

obliged to receive the commands of women or monks." Cham- Feb. 23, 1808.
pagny officially intimated to the Papal Government, "that the French troops would remain at Rome until the Holy Father had consented to join the general league, offensive and defensive, with Napoléon and the King of

Naples." while, by an Imperial decree shortly after, the provinces of Urbino, Ancona, Macerata, and Camerino, about a third of the ecclesiastical territories, were declared to be irrevocably united to the kingdom of Italy (3).

French
con-
quests, and
confinement
of the Pope
to his
palace.

Violent as these aggressions were, they were but the prelude to others still more serious. The Pope was confined a prisoner to his own palace. French guards occupied all parts of the capital; the

administration of posts, the control of the press, were assumed by their authorities; the taxes were levied for their behoof, and those imposed by the Papal government of its own authority annulled; the Papal troops were incorporated with the French, and the Roman officers dismissed. The pontiff continued, under these multiplied injuries, to evince the same patience and resignation; firmly protesting, both to Napoléon and the other European powers, against these usurpations, but making no attempt to resist them, and sedulously enjoining both his clergy and people to obey the intruded authority without opposition. CARDINAL IACCA, who was appointed

(3) B. G. II. 172, 173. Arnold, II. 179, 177.

June 18 secretary of state on the 18th June, was a prelate of powerful abilities, and that intrepid but discerning character, which, disdaining all minor methods of resistance, aimed at bringing the great contest between the throne and tiara at once to an issue on the most advantageous ground. He became on this account, in an especial manner, obnoxious to the Emperor, and, on Sept 6 attempt having been made by the French officers to carry him off and banish him from Rome, to detach the Pope from his energetic and manly councils, his Holiness, with great expressions of indignation, took him into his own apartments. They were more successful, however, in their attempt on Cardinal Antonelli, who was on the same day arrested by a sergeant and eight grenadiers, and instantly sent out of the ecclesiastical territories, while a cordon of sentinels was stationed round the Quirinal, and no one allowed to pass out or in without being strictly examined. The head of the faithful was no longer any thing but a prisoner in his own palace, but all Napoléon's efforts to overcome his constancy were unavailing. More courageous and better advised than the Bourbon princes of Spain, the venerable Pontiff remained proof alike against the menaces and the wiles of the Imperial authorities; no resignation could be extorted from him; and, without ever crossing the threshold of his apartments, he calmly awaited the decree which was to consign him to destruction (1).

Annexation
of the Ro-
man States
to the
French
Empire
Excommu-
nication of
Napoléon

The last act of violence at length arrived. On the 17th May, a decree was issued from the French camp at Schœnbrunn, which declared "that the states of the Pope are united to the French empire - the city of Rome, so interesting from its recollections, and the first seat of Christianity, is declared an Imperial and free city," and that these changes should take effect on the 1st June following.

June 10 1809

On the 10th June, these decrees were announced by the discharge of artillery from the castle of St.-Angelo, and the hoisting of the tricolor flag on its walls, instead of the venerable pontifical standard. "Consummatum est!" exclaimed Cardinal Pacca and the Pope at the same instant, and immediately, having obtained a copy of the decree, which the dethroned pontiff read with calmness, he authorized the publication of a BULL OF EXCOMMUNICATION against Napoléon and all concerned in that spoliation, which, in anticipation of such an event, had been some time before prepared by the secret council of the Vatican. Early on the following morning, this bull was affixed on all the usual places, particularly on the churches of St.-Peter's, Santa Maria Maggiore, and St.-John with such secrecy as to be without the knowledge or suspicion of the police. It was torn down as soon as discovered, and taken to General Miollis, who forthwith forwarded it to the Emperor at his camp at Vienna. The Pope expressed great anxiety, that care should be taken, to conceal the persons engaged in printing and affixing on the churches this bull, as certain death awaited them if they were discovered by the French authorities, but he had no fears whatever for himself. On the contrary, he not only signed it with his name, but had transcribed the whole document, which was of great length, with his own hand, lest any other person should be involved, by the handwriting, in the vengeance of the French Emperor (2).

Views of
Napoléon in
regard to
the Pope,
and his
transference
to Paris

Napoleon was not prepared for so vigorous an act on the part of the council of the Vatican. He received accounts of it at Vienna shortly before the battle of Wagram, and immediately resolved on the most decisive measures. For long he had meditated the trans-

(1) Cardinal Pacca, i 347, 351. Artaud, ii 186, 202. Bign vii 183, 189.

Rome, a well-conceived project had been secretly communicated to Pius VII for delivering him from his oppressors, and securing his escape on board an English frigate, which was cruising for that purpose off Civita Vecchia; but he refused on any account to leave his post. At Florence he was separated from Cardinal Pacca, who was conducted by a separate route to Grenoble, and soon after, by a special order from Napoléon, transferred to the state

Aug. 2. prison of Fenestrelles in Savoy, where, amidst Alpine snows, he
Jan. 26, 1812. was confined to a dungeon a close prisoner till the beginning of 1813, when the Emperor, after the disasters of the Moscow campaign, finding it for his interest to conciliate the Pope, the cardinal was liberated, and joined his captive master at Fontainebleau. The Pope himself was hurried across the Alps by Mount Cenis but, as he approached France, the enthusiasm of the people redoubled inasmuch that, when he reached Grenoble, his *cortège* had rather the appearance of a beloved sovereign who was returning to his dominions, than of a captive pontiff who was on his way to confinement in a
July 22. foreign land. By a singular coincidence, the enfeebled remnant of the heroic garrison of Saragossa were at that period in Grenoble; they hastened in crowds to meet their distressed father, and, when his carriage appeared in sight, fell on their knees as one man, and received his earnest benediction. A captive pope inspired to these captive heroes a respect, which they would never have felt for the mighty conqueror who had enthralled them both! Such, in generous and uncorrupted minds, is the superiority which religion bestows to all the calamities of life (1)

Napoléon has protested at St. Helena, and apparently with truth, that he was not privy to the actual seizure of the Pope: and that, when he first received the intelligence, he was at a loss what to do

with his august captive (2). But it required no argument to show, that neither Mollis nor Radet would have ventured on such a step unless they had been well assured that it would be conformable, if not to the formal instructions, at least to the secret wishes of the Emperor. and he soon gave convincing proof of that, "for as soon as he received advices of the event," says Savary, "he approved of what had been done and stationed the Pope at Savona, revoking at the same time, the gift of Charlemagne, and annexing the Papal states to the French empire (3). His Holiness remained at Savona for above three years, always under restraint and guarded, though not in prison but Napoléon, after the Moscow campaign, having received intelligence that a squadron of English frigates was cruising in the gulf of Lyon, with the design of facilitating his escape, had him removed to Fontainebleau
June 9. 12. where he was detained a prisoner till the return of the Emperor from the disaster of Leipzig, when his necessities gave rise to important negotiations with the aged prisoner, which will form the subject of future consideration. Canova, who had been sent for to Paris by Napoléon to model the colossal statue which is now to be seen on the staircase of Ampère House, interceded energetically in his behalf; but he could obtain no remission of the severe sentence; the Emperor alleging, as insurmountable charges against him, that "he was a German at heart and had refused to banish the Russians and English (4)." So tenaciously did he hold by his prey, that not even the

horrors of the Russian retreat could make him relax it he kept it firm during the campaign of Leipsic, and nothing but the crossing of the Rhine by the allied armies in spring 1814, procured the liberation of the captive pontiff.

Thorough
fusion of the
Roman
states with
the French
empire

The situation of the city of Rome was unquestionably improved by its transference from the drowsy sway of the Church to the energetic administration of Napoléon. Shortly after the annexation of the Roman states to the French empire, it was declared the

second city in the empire. To a deputation from Rome, shortly after its incorporation with the French empire, Napoleon replied, "My mind is full of the recollections of your ancestors. The first time that I pass the Alps, I desire to remain some time among you. The French Emperors, my predecessors, had detached you from the territory of the empire, but the good of my people no longer permits such a partition. France and Italy must be governed by the same system. You have need of a powerful hand to direct you. I shall have a singular pleasure in being your benefactor. Your Bishop is the spiritual head of the Church, as I am its Emperor. I 'render unto God the things that are God's, and unto Cæsar the things which are Cæsar's.'" The official exposition of the state of the empire at the close of the year, portrayed

Dec 12 in vivid colours the advantages which would arise from the government of all Italy under one system, and proclaim the fixed determination of the Emperor never to infringe upon the spiritual authority, nor ever to permit again the temporal sovereignty of the Church. In pursuance of these views, the Roman territory incorporated with the empire was speedily subjected to the whole regulations of the Imperial regime: the code Napoléon, the conscription, the continental system, were introduced in their full vigour, préfets and sous-préfets were established, and the taxes, levied according to French principles, carried to the credit of the Imperial budget (1)

Prejudicial
effect of this
measure on
the inde-
pendence of
the Church

Bossuet has assigned the reason, with his usual elevation of thought, why this spoliation of all the possessions of the supreme pontiff, by a secular power, ever must be prejudicial to the best interests of religion. "God had chosen," says he, "that the Church, the common mother of all nations, should be independent of all in its temporal affairs, and that the common centre to which all the faithful should look for the unity of their faith, should be placed in a situation above the partialities which the different interests and jealousies of states might occasion. The Church, independent in its head of all temporal powers, finds itself in a situation to exercise more freely, for the common good and protection of Christian kings, its celestial power of ruling the mind, when it holds in the right hand the balance even amidst so many empires, often in a state of hostility, it maintains unity in all parts, sometimes by inflexible decrees, sometimes by sage concessions." The principle which calls for the independence of the head of the Church from all temporal sovereignties, is the same which requires the emancipation of its subordinate ministers from the contributions of their flocks. Human nature in every rank is the same, the thralldom of vice and passion is felt alike in the cottage as on the throne, the subjection of the supreme pontiff to the direct control of France or Austria, is as fatal to his character and respectability, as the control of the rural congregations is to the utility of the village pastor. Admitting that the court of Rome has not always shown itself free from tramontane influence, it has at least been less swayed than if it had had its residence at Vienna or Paris, supposi

the conclave of the cardinals has often been swayed by selfish or ambitious views, it has been much less exposed to their effects than if it had been wholly dependent on external potentates for support. Equity in judgment, whether in temporal or spiritual matters can never be attained but by those who are independent of those to whom the judgment is to be applied coercion of vice, whether in exalted or humble stations, can never be effected by those who depend upon that vice for their support the due direction of thought can never be given but by those who are not constrained to bend to the thoughts of others It will ever be the great object of tyranny, whether regal or democratic, to beat down this central independent authority; to render the censors of morals subservient to the dominant power; and, under the specious pretence of emancipating mankind from spiritual shackles, in effect to subject them to a far more grievous temporal oppression

Vast and
unfathomable
works were
devoted by
the French
at Rome.

But, whatever effects the delirium and captivity of the Pope were likely to have produced, if they had continued long on the independence and usefulness of the Church, the immediate effects of the change were in the highest degree beneficial to the city of Rome Vast was the difference between the slumber of the cardinals and the energetic measures of Napoleon Improvements, interesting alike to the antiquary and the citizen, were undertaken in every direction The majestic monuments of ancient Rome, half concealed by the ruins and accumulations of fourteen hundred years, stood forth in renovated splendour; the stately columns of the temple of Jupiter Tonans, relieved of the load of their displaced architrave, were restored to the perpendicular from which they had swerved during their long decay the beautiful pillars of that of Jupiter Stator, half covered up with fragments of marbles, revealed their exquisite and now fully discovered proportions; the huge interior of the Colyseum, cleared of the rubbish which obstructed its base, again exhibited its wonders to the light the channels which conducted the water for the aquatic exhibitions, the iron gates which were opened to admit the hundreds of lions to the amphitheatre, the dens where their natural ferocity was augmented by artificial stimulants, the bronze rings to which the Christian martyrs were chained, again appeared to the wondering populace (1); the houses which deformed the centre of the Forum were cleared away; and, piercing through a covering of eighteen feet in thickness, the labours of the workmen at length revealed the pavement of the ancient Forum the venerable flocks of the Via Sacra, still furrowed by the chariot wheel marks of a hundred triumphs. Similar excavations at the foot of the pillar of Trojan, disclosed the graceful peristyle of columns with which it had been surrounded, and again exhibited fresh, after an interment of a thousand years, the delicate tints of its giallo anteo pillars and pavement Nor were more distant quarters or modern interests neglected The temple of Vesta, near the Tiber was cleared out; a hundred workmen, under the direction of Canova, prosecuted their searches in the baths of Titus where the Laocoon had been discovered: large sums were expended on the Quirinal palace destined for the residence of the Imperial family when at Rome Severe laws, and an impartial execution of them, speedily repressed the hideous practice of private assassination, so

(1) The interior of the Colyseum has been again filled up by the Papal Government, in order to facilitate access to the numerous churches to which it is enclosed; but the highly curious and interesting excavations which were brought to light by the French, may be seen sufficiently portrayed in several views of Rome particularly one very fine

viewing place is a view in which the Emperor work at the without the formidable force of grandeur of the temple is shown as it was at first and given the first of the Roman which is any where to be met in Rome and the scene

long the disgrace of the papal states a double row of shady trees led from the arch of Constantine to the Appian way, and thence to the Forum, surveys were made with a view to the completion of the long neglected drainage of the Pontine marshes, and preparations commenced for turning aside, for a season, the course of the Tiber, and discovering in its bed the inestimable treasures of art which were thrown into it during the terrors of the Gothic invasion (1)

Reflections on the spoliation of the Pope, as connected with Napoleon's subsequent reverses

"What does the Pope mean," said Napoleon to Eugène, in July 1807, "by the threat of excommunicating me? Does he think the world has gone back a thousand years? *Does he suppose the arms will fall from the hands of my soldiers* (2)?" Within two years after these remarkable words were written, the Pope did excommunicate him, in return for the confiscation of his whole dominions, and in less than four years more, the arms *did fall from the hands of his soldiers* (3), and the hosts, apparently invincible, which he had collected, were dispersed and ruined by the blasts of winter he extorted from the supreme pontiff at Fontainebleau, in 1815, by the terrors and exhaustion of a long captivity, a renunciation of the rights of the Church over the Roman states, and within a year after, he himself was compelled, *at Fontainebleau*, to sign the abdication of all his dominions he consigned Cardinal Pacca and several other prelates, the courageous counsellors of the bull of excommunication, to a dreary imprisonment of four years amidst the snows of the Alps, and he himself was shortly after doomed to a painful exile of six on the rock of St Helena (4)! There is something in these marvellous coincidences beyond the operations of chance, and which even a Protestant historian feels himself bound to mark for the observation of future ages. The world had not gone back a thousand years, but that Being existed, with whom a thousand years are as one day, and one day as a thousand years. And, without ascribing any deviation from ordinary laws to these events, or supposing that the common Father, "who sees with equal eye, as Lord of all," the varied modes of worship of his different creatures, had interposed in a peculiar manner in favour of any particular church, we may, without presumption, rest in the humble belief, that the laws of the moral world are of universal application, that there are limits to the oppression of virtue even in this scene of trial, and that, when a power, elevated on the ascendancy of passion and crime, has gone such a length as to outrage alike the principles of justice and the religious feelings of a whole quarter of the globe, the period is not far distant when the aroused indignation of mankind will bring about its punishment

(3) "The weapons of the soldiers," says Ségur, in describing the Russian retreat, appeared of an insupportable weight to their stiffened arms. During their frequent falls they fell from their hands and destitute of the power of raising them from the ground, they were left in the snow. They did not throw them away, famine and cold tore them from their grasp. The fingers of many were frozen on the

muskets which they yet carried, and their hands deprived of the circulation necessary to sustain the weight"—SÉGUR, ii 182

"The soldiers could no longer hold their weapons, they fell from the hands even of the bravest and most robust—the muskets dropped from the frozen arms of those who bore them"—SALGUES, *Mémoires pour servir à l'histoire générale de France sous Napoléon*, vol. xx, c 5

CHAPTER LVIII.

MARITIME WAR AND CAMPAIGN OF 1809 IN PORTUGAL AND SPAIN

ARGUMENT

Comparative Military Power of France and England at this period—Noble Spirit which prevailed at this time in the British Diplomatic Engagements—Rejection of the Proposals from Erfurth—Treaty Offensive and Defensive, between England and Spain—And with Secreta—Treaty between Great Britain and Turkey—Desponding Views on the Peninsular Contest which generally prevailed at this time in Great Britain—Argument of the Opposition against the Spanish War—Argument in support of the War by Ministers—Result of the Debate—Lights which these Discussions threw on the real Errors of the Campaign—The Government resolve to support the Spanish War and Sir A. Wellesley is sent out to Lisbon—Measures adopted to increase the Land Forces—Budget, and Naval and Military Forces of Great Britain—French Expedition sails from Brest for Basque Roads—Position of the French in Basque Roads—An Attack with Fire ships is resolved on by the English—Preparations on both sides for the Attack and Defence—Dreadful nocturnal Attack, and Destruction of the French Fleet—Attack of the Ships ashore and Destruction of part of them—Proceedings which followed in England—Character of Lord Cochrane—Capture of Martinique and St. Domingo, in the West Indies—And of the Isle of Bourbon in the East—Reduction of the Azores and the Islands by Lord Collingwood and a Land Force—Fruitless Expedition of Sir John Stuart against the Coast of Naples—Brilliant naval success of Lord Collingwood in the Mediterranean—State of Affairs in Portugal at this period and Forces of the Allies there—And in Spain—Forces and Distribution of the French in Spain—Effect in the Peninsula of the English resolution to defend Portugal and stand by Spain—Arrangements for the Siege of Saragossa—Preparations which had been made for the Defence of the place—Preparatory Dispositions of Palafox—Forces of the besiegers, and Forces at their disposal, before the trenches were opened—Assault and Fall of all the external Fortified Posts—Storming of the Convent of Santa Engracia and the Capuchins in the Ramparts—Obstinate Defence of the Town after the Walls were taken—Slow progress of the Assaults—Miseries to which the Besiegers were exposed from Pestilence—Able Efforts and Successes of Marshal Lannes on the Left of the Ebro—Capitulation of the place—Cruel use which the French generals made of their Victory—Submission of the whole of Aragon—Winter Operations in Catalonia under St. Cyr—Siege of Roses—Battle of Cardener, and Relief of Saragossa—Defeat of the Spaniards at Molins del Rey—Riding's Plan for a general Attack on St. Cyr with the whole Forces of the Province to open the way to Saragossa—Defeat of the Spaniards at Igualada—Lanswell Operations in Catalonia after this success and Retreat of St. Cyr to the north of the Pyrenees—Unsuccessful Attempt on Barcelona—Renewal of the Contest by Blake in Aragon—Scott takes the Command in that province—His Character—His defeat at Alcaniz—Approach of Blake to Saragossa—His Repulse at Maria near that town—And disgraceful Rout at Balchis—Preparations of St. Cyr for the Siege of Gerona—Unfortunate supply of Barcelona with Stores by Sea, and its Effect on the Campaign in Catalonia—Preparations of the French—Progress of the Siege—Heroic Constancy of the Garrison—Obstinate Conflicts of which it was the theatre—Efforts of the Spaniards for its Relief—Fall of Manile—Extreme Distress of the Besieged from want of Provisions—Their honorable Capitulation—Termination of the Campaign in Catalonia and Aspect of the Contest in that quarter at that period—Siege of Galicia and Asturias, after the Embarkation of the English from Corunna—Admiral Sir R. Wilton to Ciudad Rodrigo—Negotiation for an Expedition into Asturias and Successes there—Scott's Preparations for an Invasion of Porto al—His progress thence to Tras-os-Montes—Fruitless Action before Oporto—Fall of that place—First Measures of Sir Arthur Wellesley on Landing in Porto al—Morning against Soult—Passage of the Douro and Defeat of the French—Scott's hazardous Situation and disastrous Retreat—Escape into Galicia—Sir Arthur Wellesley returns to the Frontier of Estremadura—Plan of a Combined Movement on Madrid—Forces of Castile and the Army of La Mancha at this Period—Advances of the British into Spain—Preparations and Forces of the French Generals—Description of the Fastness of Talavera—Floody Action on the 27th July—Desperate Battle of Talavera—Innocent Disposition of French—and their heroic Valour—Final Victory—Reflexions on this Event—March of Soult's Army and Retreat into Sir Arthur's Rear—His plan to retreat the Attack—General Johnston's Victory and the English Withdrawal—Innocent Hazard and a fatal Retreat of the French—Lestros allowed by them in the Campaign—They retreat into Portugal—Advance of French

gas into La Mancha—His total Defeat at Ocana—Cuesta's Measures in Estremadura—His overthrow at Medellin—Disastrous State of the Spanish Affairs at this period—Reflections on the Campaign—Immense Forces developed by England in different parts of the World during its Continuance—Comparison with what it was at the Commencement of the War, and what it has since become—Causes of the remarkable Diminution of the National Force in later times—Its probable effect on the future fate of England

Comparative military power of France and England at this period ALTHOUGH the military power of France and England had never been fairly brought into collision since the commencement of the contest, and both the government and the nation were, to a degree which is now almost inconceivable, ignorant alike of the principles of war with land troops, and the magnitude of the resources for such a conflict which were at their disposal, yet the forces of the contending parties, when a battle-field was at last found, were in reality much more equally balanced than was commonly imagined. France, indeed, had conquered all the states of continental Europe, and her armies were surrounded with a halo of success, which rendered them invincible to the hostility of present power, but England and she were ancient rivals, and the lustre of former renown shone, dimly indeed, but perceptibly, through the blaze of present victory. It was in vain that the conquest of all the armies, and the capture of almost all the capitals of Europe was referred to by their old antagonists, the English rested on the battles of Crecy and Azincourt, and calmly pointed to the imperishable inheritance of historic glory. Their soldiers, their citizens, were alike penetrated with these recollections, the belief of the natural superiority of the English to the French, in a fan field, was impressed on the humblest sentinel of the army, the exploits of the Edwards and the Henrys of ancient times, burned in the hearts of the officers and animated the spirit of the people. The universal arming of all classes, under the danger of Napoleon's invasion, had spread, to an extent of which the continental nations were wholly unaware, the military spirit throughout the realm, while the recent campaigns of the army in India had trained a number of officers to daring exploits, habituated them to the difficulties of actual service, and roused again, in the ranks of the privates, that confidence in themselves which is the surest forerunner of victory. The French journals spoke contemptuously of the British conquests in the East, and anxiously invoked the time when "this general of sepoys" should measure his strength with the marshals of the empire, but this feeling of security, as is generally the case, when not derived from experience, was founded on ignorance. The chief who had fronted the dangers of Assaye, was not likely to quail before the terrors of more equal encounter, and the men who had mounted the breach of Seringapatam or faced the cannonade of Laswaree, had no reason to distrust themselves in the most perilous fields of European warfare.

Noble spirit which prevailed at this time in the British diplomatic engagements. Rejection of the proposals from Erfurth Oct. 12, 1808 If the occasional faulty direction of the national resources when the land contest began, and above all, the total ignorance of the value of time in war which universally prevailed, frequently led the British forces into disaster, and rendered abortive their greatest enterprises, the firmness with which the contest was still persevered in by the government and people, the noble spirit which dictated their national engagements, are worthy of the very highest admiration. Shortly after the Peninsular contest broke out, and when it was still rather a tumultuary insurrection than a regular warfare, proposals of peace were addressed by Alexander and Napoleon, from the place of conference at Erfurth. The basis of this proposition was the *status quo*, and it received additional lustre from being

France, and not to make peace but by common consent " When it is recollected, that this treaty was concluded after the Spanish armies had been utterly routed and dispersed by the overwhelming forces of Napoléon, when their capital was taken, more than half their provinces overrun, and on the very day when the British forces embarked at Corunna, after their disastrous retreat from Leon, it must be admitted that the annals of the world do not afford a more sublime example of constancy in adversity and heroic fidelity to engagements on the part of both the contracting parties (1)

And with Sweden Feb 8, 1808 Faithful alike to its least as its most considerable allies, the British government, at this period, concluded a new treaty of alliance, offensive and defensive, with the Swedish nation, now exposed to the most serious peril from the invasion of their formidable neighbour, and threatened alike in Finland and on the Baltic by an overwhelming force Shortly after the treaty of Tilsit, and when this danger from Russia was foreseen, a convention was concluded with the court of Stockholm, by which Great Britain and Sweden mutually engaged to conclude no separate peace, and the former power was to pay an annual subsidy of L 1,200,000 to the latter: and this agreement was confirmed by an additional convention concluded at March 1, 1809 Stockholm a year after, by which it was agreed that the subsidy should be paid quarterly, and in advance (2) But the pressure of external events prevented the latter treaty from being long carried into execution, and produced a change of dynasty in the Scandinavian peninsula, fraught with important consequences upon the general interests of Europe, which will be the subject of interesting narrative in a future chapter (3)

Treaty between Great Britain and Turkey Jan 5, 1809 Another treaty, attended with important consequences, both present and future, was about the same time contracted between Great Britain and the Ottoman Porte Since the conclusion of the peace of Tilsit, which delivered over Napoléon's ally, Turkey, to the tender mercies of Russia, only stipulating the lion's share for the French empire, and the consequent commencement of a bloody war on the Danube between the two powers, which will hereafter be considered (4), there was, in reality, no cause of hostility between England and the court of Constantinople They were both at war with Russia, and both the objects of spoliation to France, they were naturally, therefore, friends to each other Impressed with these ideas, the British cabinet made advances to the Divan, representing the mutual advantage of an immediate cessation of hostilities; and so completely had the desertion of France at Tilsit obliterated the irritation produced by Sir John Duckworth's expedition, and undermined the influence of Sebastiani at Constantinople, that they met with the most favourable reception A treaty of peace was, in consequence, concluded between England and Turkey, in the beginning of January, at Constantinople, which, relieving the Grand Signior from all apprehension in his rear, or of the maritime power of Russia, enabled the Turks to direct their whole force to the desperate contest on the Danube Nor was this treaty of less importance eventually to Great Britain By re-establishing the relations of amity and commerce with a vast empire, adjoining, along so extensive a frontier, the eastern states of Christendom, it opened a huge inlet for British manufactures and colonial produce, which was immediately and largely taken advantage of Bales of goods, infinitely beyond the wants or consumption of the Ottoman empire, were shipped for Turkey, transported up the Danube,

across the barrier of Hungary and the Albanian hills, and finding their way, carried on mules and men's heads, over the mountain frontier of Transylvania, penetrated through all Hungary and the Austrian empire. Thus, while Napoleon, intent on the continental system, which absolutely required for its success the formation of all Europe into one league for the exclusion of British merchandise, flattered himself that by his victory at Tilsit he had effectually attained that object, he had already, in the consequences of that very triumph, awakened a resistance which in a great degree defeated it; and in the aroused hostility of the Spanish peninsula and Turkey, severally delivered up to his own and Alexander's ambition by that pacification, amply compensated Great Britain for the commercial intercourse she had lost in northern Europe (1)

Depressing
view of the
Peninsular
contest
which pre-
sented
itself to
Great
Britain. But, although the constancy and resolution of the British government at this crisis was worthy of the noble cause which they were called upon to support, it was not without great difficulty that they succeeded in prevailing upon Parliament and the people to second their efforts. The dispersion of the Spanish armies, the fall of Madrid, and the calamitous issue of Sir John Moore's retreat had conspired in an extraordinary degree to agitate and distract the public mind. To the unanimous burst of enthusiasm which had followed the outbreak of the Spanish insurrection, and the extraordinary successes with which it was at first attended, had succeeded a depression proportionably unreasonable and the populace, incapable of steady perseverance, and ever ready to rush from one extreme to another, now condemned Government, in no measured strains, for pursuing that very line of conduct, which, a few months before had been the object of their warmest eulogy and most strenuous support. The insanity of attempting to resist the French power at land the madness of expecting any thing like durable support from popular insurrection; the impossibility of opposing any effectual barrier to Napoleon's continental dominion his vast abilities, daring energy, and unbounded resources, were loudly proclaimed by the Opposition party a large portion of the press adopted the same views, and augmented the general consternation by the most gloomy predictions. To such a height did the ferment arise that it required all the firmness of ministers supported by the constancy of the aristocratic party, to stem the torrent, and prevent the British troops from being entirely withdrawn from the Peninsula, and the Spanish war entirely extinguished by its first serious reverses (2)

Arguments
of the Op-
position
against the
Peninsular
war The debates in Parliament on this, as on every other occasion, exhibited a faithful picture of the sentiments entertained by the people and are interesting not merely as indicating the views adopted by the leaders of the opposite parties but affording a true image of the opinions by which the nation itself was divided. On the side of the Opposition, it was strongly argued by Lord Grenville Lord Grey Mr Ponsonby and Mr Whitbread, "That experience had now proved what might from the first have been anticipated, that the Peninsula was not a theatre on which the British forces could ever be employed with advantage; with the Pyrenees unlocked, and the road between Paris and Madrid as open as between Paris and Antwerp nothing could justify our sending thirty or forty thousand men into the interior of Spain to combat two hundred thousand. Such a measure can only be compared to the far famed march to Pa-

(1) See the treaty in Martin's Rep. v. 164th Ann. Pp. 1099-121. State Papers.

(2) Ann. Reg. 1807-25 27 April. Pp. 117-118. 27th, 221.

ris, to which it is fully equal in wildness and absurdity (1). It is clear it must rest with the Spaniards themselves to work out their own independence, and that without that spirit no army that we can send can be of any avail. The cautious defensive system of warfare which the Spanish juntas originally recommended has been abandoned, from the delusive hopes inspired by the regular armies we chose to send them, and defeat and ruin has been the consequence. As if to make a mockery of our assistance, we have sent our succours to the farthest possible point from the scene of action, and made our dépôt at Lisbon, where the French must have been cut off and surrendered, if we had not kindly furnished them with the means of transport to France, from whence they might be moved by the enemy to the quarter most serviceable for his projects.

“When the Spanish insurrection broke out, and the world looked on in anxious suspense on that great event, ministers took none of the steps necessary to enable Parliament to judge of the measures which should be pursued. In the generous enthusiasm, the confidence and prodigality of the nation outstripped even their most sanguine hopes, men, money, transports stores; all were put with boundless profusion at their disposal. How have they justified that confidence? Is it not clear that it has been misplaced? It was evident to every one that our whole disposable military force could not hope to cope single-handed against the immense armies of Napoléon, and therefore it was their bounden duty, before they hazarded any portion of our troops in the cause, to be well assured that the materials of an efficient and lasting hostility existed in the country. It was not sufficient to know, that monks could excite some of the poorer classes to insurrection, and that, when so excited, they evinced for a time great enthusiasm. The real question was, were they animated with that general resolution from which alone national efforts could flow, and was it guided and directed by those influential classes, from whose exertion alone any thing like steadiness and perseverance could be anticipated? No proper enquiry was made into these subjects. From the agents whom ministers sent out, they got nothing but false or exaggerated information, more likely to mislead than to enlighten, and the consequence has been, that immense stores were thrown away or fell into the enemy's hands, vast subsidies were squandered or embezzled, and the entire fabric of delusion and misrepresentation fell before the first shock of the Imperial forces.

“In the direction of our own troops, mismanagement was, if possible, still more flagrant. Mr Frere was obviously not a proper person to be sent to Madrid to report as to the prudence or chances of success of Sir John Moore's advance into Spain: a military man should have been there, qualified to judge of the real state of the Spanish armies, and not to send the flower of the British troops to destruction, from crediting the reports of proclamations, and the representations of interested persons. When Sir John

did arrive in Spain, in the middle of December he came in time only to be the last devoured all the Spanish armies had been dissipated before the British fired a shot. After Napoleon had arrived at Madrid, the retreat previously and wisely ordered by the English general was suspended, and a forward movement, fraught with the most calamitous results, commenced. By what influence or representations was that most disastrous change of measures brought about? That was the point into which it behoved Parliament to enquire, for there was the root of all the subsequent misfortunes. Mr Frere's despatches at that time urged him to advance, representing the great strength of the insurrection in the south of Spain and that, if he would attack the enemy in the north, the Spanish cause, then almost desperate, would have time to revive. Incalculable were the calamities consequent on that most absurd advice; for such were the dangers into which it led the British army, that within a few days afterwards, Sir John Moore was obliged to resume its retreat, and if he had not done so, in twenty-four hours more it would have been surrounded and destroyed. What has been the result of all this imbecility? A shameful and disastrous retreat, which will influence the character of England long after all of us shall have ceased to live. We never can expect to be able to meet the four or five hundred thousand men whom Bonaparte can pour into Spain when the opportunity was lost of seizing the passes of the Pyrenees, and the Peninsula was inundated with his troops, success had become hopeless, and the struggle should never have been attempted (1).

Answer of
the Minister
in
support of
the Spanish
cause.

On the other hand, it was contended by Lord Liverpool, Lord Castlereagh, and Mr Canning: "The question now is, whether we are to record a public avowal of a determination not to desert the cause and the government which we have espoused, and profess ourselves undismayed by the reverses we have sustained, which those very reverses had rendered it a more sacred duty to support. Those who inferred that the cause was desperate on account of these reverses, were little acquainted with history, and least of all with Spanish history. There it would be found, that nations, overrun just as completely as the Spaniards had been, had continued the contest for ten or twenty years; and, though constantly worsted in regular battles, had still, by perseverance and resolution, in the end proved triumphant. The cause in which they were engaged was the most interesting to humanity; it was a struggle for their liberty, their independence, and their religion; for the homes of their fathers and the cradles of their descendants. Is nothing to be risked in support of so generous an ally? Is England, so renowned in history for her valour and perseverance, to be disheartened by the first reverse, and yield the palm to her ancient rivals, whom she has so often conquered even in their own territory, merely because she was unable to withstand forces quadruple of her own arms?"

"It is a mistake, however, to assert that we have sustained nothing but disasters in the campaign. Was the conquest of Portugal; the capture of all its fortresses, arsenals and resources; the defeat and capitulation of one of the best armies and ablest marshals of France, nothing for our first essay in continental warfare? When we advanced into Spain, it was to act only as an auxiliary force; such was the express and earnest request of the Spaniards themselves, and it was the part which befitted the allies of so considerable and renowned a nation to take. Spain had made an energetic effort: she had combated with a spirit and constancy which had not distinguished greater empires and more extensive resources; she had gained triumphs which might

put northern Europe to the blush; and, if she had been unable to stand the first brunt of a power before which all the military monarchies of the Continent had sunk, it was ungenerous to reproach her with her reverses in the hour of her misfortune, unmanly to be discouraged because important victories have been followed by what may yet prove only passing clouds. It is in vain to attempt to disparage the efforts of the Spanish army and nation—those are not despicable victories which, for the first time since the French Revolution broke out, had arrested the course of its champion's triumphs, and made the conquerors of northern Europe pass under the Caudine forks: those were not contemptible national exertions which drove a French army of a hundred thousand men behind the Ebro, and brought Napoleon with two hundred thousand more from the other side of the Rhine.

“Nothing can be more erroneous than the opinion which has become general since the late reverses, that the Spaniards cannot, under any circumstances, require our assistance; that if they are in earnest in the great object of their deliverance, they must work it out for themselves, and have the means of doing so without the aid of British soldiers; and that, if they are indifferent to their salvation, no succour of ours can achieve it for them. Such a proposition sounds well, and might perhaps be founded in truth, if the Spaniards had a regular army to support and form a nucleus for the efforts of their enthusiastic peasantry, but all history demonstrates, that the resistance of no people, how resolute soever, is to be relied on for success in a protracted warfare, if entirely deprived of the support and example of regular armies. It is the combination of the two which makes a nation invincible. Spain has the one, but not the other, it is for England, so far as her resources will go, to supply the deficiency, and ingraft on the energetic efforts of newly raised forces the coolness and intrepidity of her incomparable soldiers. Unless such a nucleus of resistance remains in the Peninsula to occupy the French armies in one quarter, while organization is going on in another, no efficient resistance can be expected, because the patriot armies will be reached and dispersed, in every province, before they have acquired any degree of efficiency. How has every English patriot mourned the neglect of the fairest opportunity that ever occurred of combating the forces of the Revolution, by leaving the heroic Vendéans to perish under the merciless sword of the Republic! Taught by past error, let us not repeat it, now that resistance of the same description has arisen on a much greater scale, and under circumstances promising a much fairer prospect of success.

“The advance of Sir John Moore to Sahagun was neither undertaken solely on his own responsibility, nor solely on the advice of Mr. Frere: he had previously, from intercepted despatches from Berthier to Soult, ascertained that he would be on the Carrion on a certain day, and knew from thence that an opportunity was afforded of striking an important blow against that general when unsupported by the other French corps. About the same time advices arrived from Mr. Freie, painting in the warmest colours the resolution of the people of Madrid to emulate the example of Saragossa, and bury themselves under the ruins of the capital rather than surrender it to the French arms. Such were the concurring reasons which prompted the forward movement of the British general, and would not that general be unworthy of commanding British soldiers who would hesitate, under such circumstances, to advance to the support of his allies? On this occasion, the inestimable importance of our regular troops in the war was distinctly shown—this well-conceived plan though effected only by twenty-five thousand men, by me

line of communication, paralysed the whole hostile armies of Spain stopped at once the progress of the French corps both towards Andalusia and Portugal; gave the troops and inhabitants of these countries time to prepare for their defence, and drew Napoléon himself, with seventy thousand of his best men, into a remote corner of Spain. But for this seasonable advance, but for our assistance, the war would have been terminated in the first consternation consequent on the fall of Madrid. The sending out transports and bringing the troops home, was not the work of Government. It was the consequence of a distinct requisition from Sir David Baird that he required them; thirteen thousand men were relanded after being shipped, in consequence of that demand, and the transports, to the infinite grief of Government, sent out empty. But the cause of Spain was not yet desperate and it was neither just to that country nor our own army, which, it was to be hoped, would yet prove the stay of Europe, to assert that its honour was gone for ever. All the energy of liberty, all the sacredness of loyalty, still survived and the Spanish Revolution might yet be destined by Providence to stand between posterity and French despotism, and to show to the world that amidst the paroxysms of freedom a monarch might still be loved. If we had been obliged to leave Spain, we had left it with fresh laurels blooming upon our brows more honourable in the sight of God and man, because more purely won, than if gained in the richest field of self-aggrandizement, or amidst the securest triumphs of selfish ambition (1).

Result of the debate These generous sentiments, addressed to an assembly in a large proportion of whom the chivalrous feelings yet glowed, and who had recently caught the flame of patriotic ardour from the early glories of the Spanish war, proved triumphant with a great majority of the house and Mr Ponsonby's motion for a committee to enquire into the conduct of the campaign in Spain, was negatived by a majority of 93; the numbers being 427 to 220.

Light which these debates throw on the errors of the campaign. These debates, though they by no means assuaged the public mind after the calamitous issue of the campaign, had at least one good effect—that of demonstrating where it was that the real fault lay, and what should now be done to repair it. Nothing could be clearer when the question was sifted to the bottom, than that the advance of Sir John Moore had been an able and well-judged step; that his subsequent retreat was alike necessary and expedient; that the withdrawing Napoléon's guards from Madrid, and leading Ney and Soult to Corunna had saved the southern provinces and the cause of Spanish independence; and that, if there was any fault in its direction, it was in the unnecessary haste with which it had been conducted—a venial error, the result of inexperienced troops and a long established despondency, on military affairs, of the public mind. The real error lay in abandoning the Peninsula, if Corunna was no longer tenable and steering with the transports for England instead of making for Lisbon or Cadix. Disorganized as the army was by the sufferings of the retreat it would soon have recovered its efficiency in the quiet of the Portuguese capital: the immense stores sent out by England, would have speedily replaced its equipment and restored its *matériel*; a sense of security, the arrival of reinforcements from home would ere long have reanimated its spirit; and the French marshals would have had little to boast of if after the whole Peninsular war had been paralysed for its destruction and two of their corps had been drawn to the extremity of Galicia in its pursuit the English army had reappeared.

a few days after, at the rock of Lisbon, and, from a still more formidable central position, threatened in flank their wearied and harassed troops, scattered from the Asturian mountains to the Sierra Morena

The Government resolve to support the Spanish war and Sir A. Wellesley is sent out to Lisbon

Impressed with these ideas, the English government, after a temporary hesitation till the decision of parliament on the subject was known, took the magnanimous and fortunate resolution, still to persevere in a land contest in the Peninsula, and to send out considerable reinforcements to Portugal. The troops which had been prepared to reinforce Sir John Moore, accordingly were retained in the seaports to which they had been directed, and in the beginning of April sailed for Lisbon. The command of the expedition was given to Sir Arthur Wellesley, whom his great achievements in India, as well as recent unclouded triumph in Portugal, clearly pointed out for that arduous duty. So shaken were the minds of all, however, by the recent Peninsular disasters, and so uncertain was even government of the state of Portugal, that his instructions directed him, if, on his arrival at Lisbon, he found that capital evacuated by the British troops, to make for Cadiz. This calamitous event, fortunately, did not take place. The standard of independence still waved on the Tagus. Courageous efforts had been made during the winter in Portugal, and on the 22d April Sir Arthur landed, amidst the acclamations of the inhabitants, at Lisbon, and commenced that career which has rendered his own name and that of his country immortal. He never re-embarked there again to steer for Britain. The days were past when the English looked for safety to their ships (1). When next he set sail for England, it was from Calais with his cavalry, which had marched thither in triumph from Bayonne.

Measures to increase the land forces

To provide for the war on the gigantic scale on which, during this year, it was to be conducted, at once in Flanders, Austria, and Portugal, large supplies of men and money were requisite, and the attention of Government was early and anxiously directed to these vital objects. It had long been perceived that the true nursery for the British army was the militia, which being raised by ballot for home service only, did not excite the jealousy of a people too much attached to their liberties, to submit, save in the last necessity, to conscription for the regular army.

March 6, 1809

A bill, accordingly, was brought in by Lord Castlereagh, which soon received the assent of the legislature, which provided for raising twenty-four thousand men for the militia, by bounties of ten guineas each, paid by the public, and, if it proved insufficient, by ballot, in order to replace an equal number who had volunteered from that service into the line. This measure proved entirely successful. The bounty for enlisting into the regular army was at the same time raised to twelve guineas, and from that time till the close of the war no difficulty was experienced in raising the requisite number of men, without any forced levy, for both services—even to supply the vast consumption of the Peninsular war—so strongly was the spirit of the nation now roused against the usurpations of France, and so widely had the military spirit spread with the general arming of the people which followed the threats of Napoléon's invasion (2).

Budget and naval and military forces of Britain

The raising of supplies for a year, when operations were contemplated on a scale of such magnitude, presented difficulties of no ordinary kind, but they were surmounted without any extraordinary addition to the burdens of the people. The war expenditure amounted to L 55,000,000, the ways and means, including a loan of L 11,000,000, being

somewhat more. The total expenditure of this year, including the interest of the debt and sinking fund, was £89,522,000, while the total income was £80,525,000. The regular army amounted to 210,000 men, besides 80,000 militia, of whom 100,000 were disposable in the British islands; and the navy, manned by 130,000 seamen, numbered no less than 1061 ships of war, of which 608 were in commission, 242 were of the line, besides 42 building, and 115 of that class actually at sea (1). These numbers deserve to be noted, as marking the highest point to which the British navy had yet reached in that or any other war; and indicate an amount of naval force far superior to that of all other nations put together, and to which the world never had, and perhaps never will, see a parallel (2).

French ex-
pedition
on the coast
Brest for
Basque Roads.

The first great success which occurred to elevate the hopes of the British after the disasters of the peninsular campaign, occurred at sea. A squadron of eight sail of the line and two frigates, under Admiral Villauroux, had for some time been watching for an opportunity to elude the vigilance of the British cruisers, and escape from Brest,

in order to gain a general rendezvous assigned them by the French government in Basque Roads. The object of this movement was to chase the British blockading squadron from before l'Orient, liberate the ships there, which consisted of three ships of the line and five frigates; and, with the united force of eleven line-of-battle ships and seven frigates, make for Martinique, now threatened by a British expedition, and for the relief of which it had Feb. 21. several thousand land troops on board. On the 21st February they effected their object of sailing from Brest, and immediately steered for the south, and after some difficulty, owing to the narrow channels and shoal-waters round the Isle d'Aix, the desired junction was effected, and Villauroux found himself at the head of eleven ships of the line and seven frigates in Basque Roads. Thither he was immediately followed by the British squadron under Lord Gambier, which, being joined to the blockading squadron off l'Orient, amounted to eleven sail of the line. Alarmed by the approach of so formidable a force, the French squadron weighed anchor, and stood for March 21. the inner and more protected roads of Isle d'Aix. In performing this operation, one of their line-of-battle ships, the Jean Bart, went ashore and was lost. The British admiral immediately followed, and anchored in Basque Roads, directly opposite to the enemy, with his frigates and smaller vessels in advance; and as the close proximity of the hostile fleets, and their confined anchorage, rendered them in a peculiar manner exposed to the

danger of fireships, extraordinary precautions were adopted on both sides against that much dreaded mode of attack (1).

Position of the French in Basque Roads. The French fleet was now anchored in a very strong position. On one side they were covered by the Isle d'Aix, garrisoned by two thousand men, and batteries mounting thirty long-thirty-six pounders and several mortars, while, on the other side, the isle of Oleron, at the distance of three miles and a half, was fortified by several works, the guns of which nearly reached the range of those of the citadel of Aix. Shoals also abounded in all directions, and the French fleet, drawn up in two close lines, between the protecting forts near the shore, in a situation not unlike that of Brueys at the Nile, with this difference, that the vessels in the second line were placed opposite the openings in the first, as at Trafalgar. As any regular action with the fleet seemed hazardous in such a situation, Lord Gambier suggested an attack by means of fireships, in which the Admiralty readily concurred. Twelve fireships were immediately prepared, with extraordinary expedition, in the English harbours, and, as most of the officers consulted gave it as their opinion that the undertaking would be attended with great hazard, the execution of it was entrusted to Lord Cochrane, who considered it as attended with little difficulty, and whose cool intrepidity and inexhaustible resources, long demonstrated in a partisan warfare on the coast of France and Spain, pointed him out as peculiarly qualified for the important enterprise. He at first declined, from delicacy to the officers already in the fleet; but, being pressed by Government, accepted the command, and in the beginning of April joined the fleet in Basque Roads, where he was immediately afterwards joined by the Mediator frigate, and twelve other vessels armed as fireships (2).

Preparations for the attack on the enemy in Basque Roads. The preparations being at length completed, the different frigates and smaller vessels moved to the stations assigned to them, and, on the evening of the 11th April, advanced to their perilous service. The enemy, being aware, from the arrival of the fireships, what was intended, had made every preparation for repelling the attack, a strong boom had been drawn across the line of their fleet, at the distance of 110 yards, composed of cables and chains twisted together, and secured by anchors at either end, of the enormous weight of five tons each; while the whole boats of the fleet, seventy-three in number were assembled near the boom, in five divisions, for the purpose of boarding and towing away the fireships, and the line-of-battle ships lay behind with their topmasts on deck, and every imaginable precaution taken to avert the dreadful fate which menaced them. Nothing, however, could resist the daring of the British sailors, and the admirable skill of the officers in direction of the fireships. The wind, which was strong and blew right in upon shore, was as favourable as possible, and under its blasts the fireships got under way and bore down swiftly on the enemy's line, while the sailors in boats strained their anxious eyes to discern the last moments of the enemy's ships through the gloom. Lord Cochrane directed the leading vessel with fifteen hundred barrels of powder and four hundred shells on board. The Mediator, under the able direction of Samuel Woodbridge, filled with many combustibles, immediately followed. The admirable direction of the latter vessel, by its heroic commander, brought it down into the boom, and the whole fireships were immediately followed, made

(1) James' Naval History, vol. 10, p. 277, 279. Thib. vii. 259.

come on board his ship; and it was, in consequence, not till a quarter before eleven that the fleet weighed, and having advanced halfway, anchored again six miles from the enemy, in the belief that their ships could not be got off, and that it was hazardous, till the tide had risen higher, to venture further in amidst the intricate shoals of Basque Roads. The *Ætna* bomb and some frigates and lighter vessels were, however, moved on under the orders of Captain Bligh. Meanwhile the French fleet evinced extraordinary activity in getting their vessels off the shore, and as the tide rose several were floated and warped up the Charente. Stung to the quick by seeing his noble prizes thus eluding his grasp, Lord Cochrane, with heroic gallantry, advanced himself to the attack in his frigate the *Imperieuse*. He was quickly followed by Captain Bligh with the bomb and light vessels, and a heavy cannonade was commenced on the most exposed of the enemy's ships. The *Calcutta* of fifty guns quickly struck her colours to the *Imperieuse*, the *Ville de Varsovie* and *Aquilon* soon after yielded to the concentric fire of the other frigates, and were burned as soon as the prisoners were removed, and the *Tonnerre* was set on fire by her own crew, and blew up. So general was the consternation on the part of the enemy, that another French seventy-four, the *Tourville*, was abandoned by its crew, and might have been taken possession of by an English boat's crew, which, unaware of its condition, accidentally came very near. The *Indienne* frigate was also burned by the enemy. The other ships, however, though seriously injured, and two of them rendered unserviceable, by being thrown ashore in the tempestuous gale, were, by great efforts, got afloat during the high tides which followed the strong westerly wind that prevailed during the action, and warped into safe anchorage in the upper part of the Charente (1).

Proceedings which followed in England Lord Cochrane was deservedly made a Knight of the Bath for the admirable skill and coolness exhibited by him on this trying occasion, and there cannot be a doubt, when the French accounts are compared with the English, that, if he had had the command of the fleet, the whole enemy's ships would have been destroyed. Such as it was, the success was almost equal to that of Lord Howe in those seas fifteen years before, and it would have thrown the nation into transports of joy at the commencement of the war. But Lord Nelson had spoiled the English for any thing less than complete success, and murmurs soon began to spread against Lord Gambier for not having in a more energetic manner supported Lord Cochrane on that occasion. These were soon materially increased by the strong charges openly advanced against the commander-in-chief by Admiral Harvey, the second in command, one of the bravest captains of Trafalgar, who burned with desire to signalize himself against the enemy, and had expressed his opinion on the occasion, perhaps, with more frankness than discretion. and by Lord Cochrane intimating, that if the thanks of the House of Commons were moved to Lord Gambier, he would oppose it in Parliament. The result was, that Admiral Harvey was brought to a court-martial for the words he had uttered, cashiered, and dismissed the service, though he was shortly after restored for his gallantry at that memorable battle, with the general approbation of the navy, and Lord Gambier, after a protracted trial, was acquitted by his court-martial, and afterwards received the thanks of both Houses of Parliament, as well as Lord Cochrane and the other officers and men employed on the occasion (2).

Napoleon's opinion on this matter was very decided. "Cochrane," said he, "not only could have destroyed the whole French ships, but he might and would have taken them out, had the English admiral supported him as he ought to have done. For, in consequence of the signal made by the French admiral for every one to shift for himself, they became panic-struck, and cut their cables. The terror of the fire-ships was so great, that they actually threw their powder overboard, so that they could have offered very little resistance. Fear deprived the French captains of their senses. Had Cochrane been supported, he would have taken every one of the ships (1)." Impressed with these ideas, the French Emperor brought the officers of his lost vessels to trial; and Lafont, the captain of the *Calcutta*, was condemned and executed, and two others were sentenced to imprisonment (2).

Character of Lord Cochrane. Lord Cochrane was, after the death of Nelson, the greatest naval commander of that age of glory. Equal to his great predecessor in personal gallantry, enthusiastic ardour, and devotion to his country, he was perhaps his superior in original genius, inventive power, and inexhaustible resources. The skill and indefatigable perseverance with which, during the Spanish war, when in command only of his own frigate, he alarmed and distracted the whole coast from Toulon to Barcelona, has never been surpassed with the crew of a frigate, which did not exceed three hundred and fifty men, he kept ten thousand of the enemy constantly occupied. It was his misfortune to arrive at manhood and high command only towards the close of the war, when the enemy's fleets had disappeared from the ocean, and the glorious opportunities of his earlier years had passed away: more truly than Alexander the Great, he might have wept that there no longer remained a world to conquer. His coolness in danger was almost unparalleled even in the English navy, and in the days of Nelson and Collingwood (3). His men nevertheless had such confidence in his judgment and resources, that they would have followed wherever he led, even to the cannon's mouth. Unhappily for himself and his country, he engaged with little discretion when ashore in party politics; he stood forth as a prominent opponent of Government on various occasions, on which he unnecessarily put himself forward in contests with which he had no concern; while his strong inventive turn led him, when unemployed, to connect himself with some transactions with which his heroic qualities had no affinity. In consequence of these unhappy indiscretions and connexions, he was, towards the close of the war, brought to trial before the court of King's Bench, for a hoax practised for jobbing purposes on the Stock Exchange, and, under the direction of Lord Ellenborough, convicted and sentenced to imprisonment and an ignominious punishment, the worst part of which the better feeling of Government led them to remit. The result was that the hero of Basque Roads was dismissed the navy, bereft of his honours, and driven into the service of the South American republics, where his exploits of the most extraordinary and romantic character powerfully contributed to destroy the last relics of the Spanish empire in that quarter and establish the doubtful ascendancy of democratic fervour. But in a free country no deed of injustice, whether popular or ministerial, can permanently hurt a noble character. With the changes of time the power which had oppressed England's greatest existing naval hero passed away: another generation rose

(3) In *Barros's* *Expedition*, a woman sitting by his side in the boat, was killed by a cannon shot from one of the French vessels, when in the act of loading

through a loophole of the gun. She is described as having been so hurt by the shot that she was thrown out of the boat and overboard.

ceeded, to which his exploits were an object of admiration, his weaknesses of forgiveness, his wrongs of commiseration; one of the most deservedly popular acts of the new ministry, which succeeded to the helm after the overthrow of the Tory administration, was to restore him to the rank and the honours of which he had been deprived; and there remains now, to the historian, only the grateful duty of lending his humble efforts to aid in rescuing from unmerited obloquy the victim of aristocratic, as he has frequently done those of popular injustice (1).

Capture of Martinique and St - Domingo, in the West Indies Feb 2
The defeat and blockade of the French squadron in Basque Roads, was shortly felt in the capture of the French West India islands, to relieve which was the object of its ill-fated sortie from Brest harbour. A British expedition sailed from Jamaica, and appeared off Martinique in the end of January. The landing was effected without any resistance, and the enemy, having been defeated in a general action some days after, they were shut up in Fort Bourbon, the principal stronghold in the island, which shortly after surrendered, with three thousand men, at discretion. This was followed, some months afterwards, by a successful descent on the colony and fortress of St -Domingo, which, with two battalions of infantry, were taken by General Carmichael. Cayenne was also reduced, so that, as Cuba and the other Spanish settlements in those latitudes were now allied colonies, the French flag was entirely excluded from the West Indies (2).

And of the Isle of Bourbon to the East Sept. 21
The Isle of France in the Indian ocean, was, at the same time, strictly blockaded, and, it was foreseen, must ere long capitulate, the Isle of Bourbon surrendered on the 21st September, the French settlement on the Senegal river, on the western coast of Africa, had fallen into the hands of the English, and preparations were making on a great scale for an attack on Batavia, and the important island of Java in the Indian archipelago. Thus, in every direction, the last distant settlements of Napoléon were falling into the hands of the British, and, at the time when the triumphant conclusion of the Austrian war seemed to give him the undisputed command of continental Europe, the maritime superiority of England was producing its natural results, in the successive acquisition of the whole colonies of the globe (3).

Reduction of the seven Ionian Islands. Oct 3
Important success also attended the British arms, both by sea and land, in the Mediterranean. A powerful naval expedition was dispatched in autumn, by Lord Collingwood, with sixteen hundred land troops on board, who, after a slight resistance, made themselves masters of the seven islands of Zante, Cephalonia, Corfu, etc., which were permanently placed under the protection and sway of Great Britain. The importance of this acquisition was not at that period perceived, but, by giving Great Britain a permanent footing in the neighbourhood of Greece, and the command of Corfu, the finest harbour and strongest fortress in the Adriatic, it powerfully

(1) Lord Cochrane was tried for alleged accession to the Stock Exchange hoax, before a most able and powerful judge, Lord Ellenborough, and being convicted, sentenced to imprisonment and the pillory. There can be no doubt that the evidence tending to connect him with the facts charged was of a very strong kind, and the judge was constrained to exhibit the case in an unfavourable light against the accused to the jury. Yet the author, after hearing Lord Cochrane deliver his defence in the House of Commons, on July 7, 1814, has never entertained a doubt of his innocence, and, even if the facts charged had been distinctly brought home to him,

it was surely a most unwarrantable stretch to sentence to the degrading punishment of the pillory so heroic a character, especially for a proceeding involving no moral turpitude, and rarely, if ever, before or since made the object of punishment. This part of the sentence was immediately and most properly remitted by Government, but the result of the trial hung heavily on the hero of Basque Roads, in this country, for twenty years afterwards.

Spaniards from the direct communication with their own country, they were immediately chased by Lord Collingwood, who blockaded that port, and after a hard pursuit, the ships of war were forced to separate from the convoy, and three ships of the line and one frigate driven ashore, where they were burned by the enemy, to prevent them from falling into the hands of the British. Meanwhile, the transports, under convoy of a frigate and some smaller armed ships, in all eleven vessels, having taken refuge in the bay of Rosas, under protection of the powerful castle and batteries there, deemed themselves beyond the reach of attack. In that situation, however, they were assailed by a detachment of the British fleet, under the orders of Captain Hallowell, who at once formed the daring resolution of cutting out the whole, with the boats of the ships under his command. The arrangements for this purpose, made with the judgment and foresight which might have been expected from that distinguished hero of the Nile, were carried into effect by Lieutenant Tailour with a spirit and resolution above all praise. In sight of the fleet, the boats stretched out, the crews being at the highest point of animation, filling the air with their cheers, and rapidly advancing under a very heavy fire from the armed ships and batteries, carried the whole vessels in the most gallant style, and either burned or brought away them all (1).

Brilliant as these naval operations were, they had no decisive effect on the issue of the war. The maritime contest was decided at Trafalgar the dominion of the seas had finally passed to the British flag. It was at land that the real struggle now lay—it was for the deliverance of other nations that England now fought; it was on the soldiers of Wellington that the eyes of the world were turned.

State of
affairs in
Portugal
and forces
of the pa-
trials at
this period After the retreat of the English to Corunna, and the fall of Madrid, affairs in the Peninsula appeared wellnigh desperate. In Portugal there was merely a corps of eight thousand British soldiers, chiefly in and around Lisbon, upon whom any reliance could be placed, for though about six thousand men, under Silveira, lay in the northern provinces, and the Lusitanian legion, of half that amount, on the north-eastern frontier, yet the composition of the forces of which these detachments consisted, was not such as to inspire any confidence as to their ability to contend with regular soldiers, or defend the country in the event of a fresh invasion. Their small numerical amount compelled Cradock, in the first instance, to concentrate his forces, which he did at Passa d'Arcos, close to the mouth of the Tagus, where he might be in a situation to embark with safety, if a serious invasion should be attempted. These dispositions, however, naturally spread the belief that the English were going to abandon the country, as they had done Galicia, and tumults broke out in various quarters, arising from the dread of this anticipated desertion. Towards the end of February, however, the arrival of six thousand men from England, under Sherbrooke and Mackenzie, having augmented Cradock's force to fourteen thousand, he was enabled to take a position in advance, covering the capital, at Saccavino, which soon, by reviving confidence, had the effect of removing the public discontents (2).

And in
Spain Affairs in Spain were still more unpromising. The army of Blake, which had suffered so severely at Espinosa and Reynosa, had dwindled into eight or nine thousand ragged and half-starved troops, without either stores or artillery, who with difficulty maintained themselves in the

(1) Lord Collingwood's Despatch, Nov. 1, 1809.
Captain Hallowell, Nov. 1. Ann. Reg. 1809, 511,
515. App. to Chron.

(2) Nap. ii. 142, 159. Lond. i. 294, 295.

Galician mountains the remains of the soldiers of Aragon, about twenty thousand strong, had thrown themselves into Saragossa, where they were preparing to undergo a fresh siege; Castanos men, who had come up from Andalusia, joined to some which had escaped from Somo-Sierra and Madrid, in all, twenty five thousand strong, were in La Mancha, and had their headquarters at Toledo; while ten or twelve thousand disorganized levies at Badajoz, formed a sort of guard for the Central Junta, who had established themselves in that city after the fall of Madrid. As to the new levies in Andalusia, Granada, and Valencia, they were, as yet, too ill disciplined and remote from the scene of action to be capable of affording any efficient support to regular troops in the earlier periods of the campaign. and though, in Catalonia, there were at least fifty thousand brave men in possession of Gerona, Rosas, Taragona, Tortosa, Lerida, and a strong central range of mountains, yet they were fully occupied with the invaders in their own bounds, and without either seeking succour from, or being able to afford succour to the neighbouring provinces, resolutely maintained on their own hills an independent hostility. In all scarcely a hundred and twenty thousand men, scattered round the whole circumference of the Peninsula, without either any means of uniting with each other, any central authority to which they all yielded obedience, *Jan. 21. 1809.* or common object to which they could simultaneously be applied. At Madrid, Joseph reigned with the apparent consent of the nation: registers having been opened for the inscription of the names of those who were favourable to his government, no less than twenty-eight thousand heads of families in a few days enrolled themselves; and deputations from the municipal council, the council of the Indies, and all the incorporations, waited upon him at Valladolid to entreat that he would return to the capital and re-assume the royal functions, with which he at length complied (1).

Forces and distribution of the French in Spain. On the other hand, the forces of Napoleon were much more formidable, both from the position which they occupied, and the number and quality of the troops of which they were composed. Instead of being spread out, like the English and Spanish hosts, round an immense circumference, without any means of communicating with or supporting each other, they were massed together in the central parts of the kingdom, and possessed the inestimable advantage of an interior and comparatively short line of communication. The total French force in the Peninsula amounted, even after the Imperial guards had departed for Germany, to two hundred and eighty thousand infantry, and forty thousand cavalry, of whom two hundred and forty thousand were present in the field with the eagles. Fifty thousand of this immense force protected the great line of communication with France, which was strengthened by three fortresses, and sixty-four fortified posts of correspondence; and the corps were so distributed that they could all support each other in case of need, or combine in any common operation. The northern provinces were parcelled out into military governments, the chiefs of which corresponded with each other by means of moveable columns: repressed any attempt at insurrection, and levied military contributions on the inhabitants, to the amount not only of all the wants of their respective corps, but in some cases of immense fortunes to themselves. Nearly the whole charges of this enormous force were at the expense of the conquered provinces. Soult, with twenty three thousand effective men, lay at Coruna. While Ney with fourteen thousand, occupied Asturias and the northern coast; Lannes and Monecy, with two corps, about forty-eight thousand strong were

(1) *Emul. L. 214. 215. Rep. II. c. 8. View of Camp. vol. 215. 217. The H. 704. 205.*

charged with the siege of Saragossa; Victor was in Estremadura with twenty-five thousand, Mortier, with as many, in the valley of the Tagus; and Sebastian, who had succeeded to the command of Lefebvre's corps, observed the enemy's forces in La Mancha; St -Cyr, with forty thousand, lay in Catalonia; and Joseph, with twelve thousand guards, was at Madrid (1).

Effect in
the Penin-
sula of the
English
treaty, and
resolution to
defend Por-
tugal and
stand by
Spain

The spirits of the Spaniards, which had been sunk to an extraordinary degree by the disasters of the preceding campaign, the capture of their capital, and retreat of the English troops from Galicia, were first revived by the intelligence of the treaty so opportunely and generously concluded by Great Britain, at the moment of their greatest depression, by which she engaged never to conclude a separate peace with Napoléon, and by the resolution expressed in Parliament by the ministers, notwithstanding the gloomy forebodings of the Opposition, never to abandon the cause of Spanish independence. These cheering announcements were speedily followed by deeds which clearly evinced an unabated resolution to maintain the contest. Measures were set on foot in Portugal, evidently calculated for a protracted struggle. General

March 2

Beresford had been appointed by the Regency field-marshal in the Portuguese service, and intrusted with the arduous duty of training and directing the new levies in that kingdom. twenty thousand of these troops were taken into British pay, placed under the direction of British officers, and admitted to all the benefits of British upright administration. the Regency revived and enforced the ancient law of the monarchy, by which, in periods of peril, the whole male population capable of bearing arms were called out in defence of their country. numerous transports, filled with stores and muniments of war, daily arrived at Lisbon, which became a vast dépôt for the military operations of the kingdom, and, finally, the landing of Sir Arthur Wellesley, with powerful reinforcements from England, was regarded at once as a pledge of sincerity in the cause, and the harbinger of yet higher glories than he had yet acquired. Reanimated by these vigorous steps on the part of their ally, not less than the breaking out of the Austrian war, and withdrawing of the Imperial guard from the Peninsula, the Central Junta, which was now established at Seville, issued an animated proclamation to their countrymen, in which, after recounting the propitious circumstances which were now appearing in their favour, they strongly recommended the general adoption of the guerilla system of warfare, and renewed their protestation never to make peace while a single Frenchman polluted the Spanish territory (2).

Prepara-
tions for
the siege of
Saragossa

Saragossa was the first place of note which was threatened by the French arms. The vicinity of that place to the frontier of the empire, its commanding situation on the banks of the Ebro, the valour of its inhabitants, and the renown which they had acquired by the successful issue of the last siege, all conspired to render its early reduction a matter of the highest interest to the Emperor. After the disastrous issue of the battle of Tudela, Palafox, with about fifteen thousand regular troops, had thrown himself into that city, but their number was soon augmented to thirty thousand, by the stragglers who had taken refuge there after that rout, to whom were soon joined fifteen thousand armed but undisciplined peasants, monks, and mechanics. The enthusiasm of this motley crowd was inconceivable, it recalled, in the nineteenth century, the days of Numantia and Saguntum.

(1) Belmas, i. 37, 38. Imp. Must. Rolls, Nap. ii. App. Nos. 1, 2.

(2) See proclamation in Belmas, i. App. No. 2: App. Lond. i. 294, 295. 142, 159.

The citizens of the town were animated by the spirit of democratic freedom; the peasants of the country by that of devout enthusiasm; the monks by religious devotion—the soldiers by former glory—all by patriotic fervour. By a singular combination of circumstances, but which frequently occurred during the Spanish war, the three great principles which agitate mankind—the spirit of religion, the fervour of equality, the glow of patriotism—were all called into action at the same time, and brought to conspire to stimulate one common resistance; and thence the obstinate defence of Saragossa and its deathless fame (1)

Preparations which had been made for the defence of the place. The defences of the place had been considerably strengthened since the former siege. The weak or ruined parts of the wall had been repaired, additional parapets erected in the most exposed situations, the suburbs included in new fortifications, barriers and trenches drawn across the principal streets, and the houses loopholed; so that, even if the rampart were surmounted, a formidable resistance might be anticipated in the interior of the town. General Doyle, of the English service, had, ever since the termination of the first siege, been indefatigable in his efforts to strengthen the place—a large quantity of English muskets were distributed among the inhabitants—ammunition, stores, and provisions, were provided in abundance; the solid construction of the storehouses diminished to a considerable degree the chances of a successful bombardment; and one hundred and eighty guns distributed on the ramparts gave token of a much more serious resistance than on the last memorable occasion. Such was the confidence of the Aragonese in the strength of the ramparts of Saragossa, the unconquerable spirit of its garrison, and the all powerful protection of our Lady of the Pillar, that, on the approach of the French troops to invest the town, the peasants from all quarters flocked into it, burning with ardour, and undaunted in resolution, so as to swell its defenders to fifty thousand men, but bringing with them, as into Athens when besieged by the Lacedæmonians, the seeds of a contagious malady, which among its now crowded dwellings spread with alarming rapidity, and in the end proved more fatal even than the sword of the enemy (2)

Preparatory disposal of Palace. Palafox exercised an absolute authority over the city, and such was the patriotic ardour of the inhabitants, that all his orders for the public defence were obeyed without a moment's hesitation, even though involving the sacrifice of the most valuable property, or dearest attachments of the people. If a house in the neighbourhood was required to be demolished to make way for the fire of the ramparts, hardly was the order given than the proprietor himself levelled it with the ground. The shady groves, the delicious gardens in which the citizens so much delighted fell before the axe: in a few days the accumulated wealth of centuries disappeared in the environs of the town before the breath of patriotism. Palafox's provident care extended to every department—his spirit animated every rank: but such was the ardour of the people that their voluntary supplies anticipated every requisition and amply provided for the multitude now accumulated within the walls—terror was summoned to the aid of loyalty, and the fearful engines of popular power, the scaffold and the gallows, were erected on the public square where some unhappy wretches, suspected of a leaning to the enemy were indignantly executed (3)

implicit credence, that the Emperor had been defeated, several of the marshals killed, and that Don Francisco Palafox, brother to the commander-in-chief, was approaching with a powerful army to raise the siege. In truth, Don Philippe Perena, a guerilla leader, had succeeded in drawing together six thousand peasants, with whom he kept the field in Aragon, and disquieted the rear of the French army; and, although neither the numbers nor composition of this force was such as to give them any serious alarm, the knowledge of its existence had a surprising effect in supporting the efforts of the besieged, who now stood much in need of such encouragement, from the crowded condition of the population shut up within the narrow circle of the old walls, and the fearful ravages which contagious maladies were making among an indigent and suffering multitude, driven into crowded cellars to avoid the terrible and incessant fire of the enemy's bombs and cannon-shot (1).

Storming of
the convents
of Santa
Eugracia
and the
Capuchins
in the town.

Matters were in this state when Marshal Lannes arrived, entrusted by Napoleon, who was dissatisfied with the progress made, with the general direction of the siege, and the command of both the corps employed in its prosecution. The influence of his master-mind speedily appeared in the increased

energy of the attacks, and more thorough co-operation of the troops engaged in the undertaking. Several nocturnal sorties attempted by the Spaniards to retard their progress towards the convent of Santa Eugracia, which itself formed a prominent part of the wall towards the river, having failed to stop the besiegers, an assault on that quarter was ordered by Marshal

Jan. 27. Lannes on the 27th at noon. Two practicable breaches had been made in that quarter; and a third nearer the centre of the town in the convent of Santa Eugracia. The tolling of the great bell of the new tower warned the Saragossans of the approach of the enemy, and all instantly hastened to the post of danger. Hardly had they arrived when the assaulting columns appeared at the breaches, vast crowds of daring men issued from the trenches, and with loud shouts rushed on to the attack. Such was the vigour of the assault, that, after a hard struggle, the French, though twice repulsed, at length succeeded in making themselves masters of the convent of St. Joseph; while, in the centre the attacking column on Santa Eugracia after reaching the summit of the breach, was hurled headlong to its foot by a gallant effort of the Spanish soldiers. Returning again, however, with redoubled vigour to the charge, they not only penetrated in but made themselves masters of the adjoining convent where in spite of the efforts of the besieged to dispossess them, they maintained themselves till evening. All night the tocsin rang incessantly to call the citizens to the scene of danger (2) and devoted crowds rushed with indomitable courage to the very mouth of the enemy's guns; but though they fought from every house and window with the most desperate resolution they could not drive the assailants from the posts they had won.

The walls of Saragossa had now gone to the ground and an ordinary garrison having lost its military defences, would never have thought of prolonging the contest. But the valour of the inhabitants remained and from the ruins of all regulated or acknowledged modes of defence, emerged the redoubtable warfare of the people. On the very next day the commander of their engineers, San Genis a town of equal professional skill and resolution fell on the battery of Palafox. Though his

retaining their swords, horses, and baggage, and the soldiers their knapsacks, that private property and public worship should be respected, and the armed peasants dismissed. Situated as the besieged were, these terms could not be regarded but as eminently favourable, and an enduring monument of their heroic constancy; but such was the spirit which still animated the people, that they murmured loudly at any capitulation, and it was with difficulty that the ruling junta prevented an insurrection during the night, for the purpose of continuing the contest till the last extremity (1).

Religious appearance of the town where war rendered. Same on both sides. On the following day at noon, twelve thousand men, for the most part pale, emaciated, and livid in hue, marched out, and having surrendered their arms, which they had hardly strength left to hold, to their courageous enemies, were sent into the besiegers' camp, where they received the rations of which they stood so much in need. The French troops then marched into the town and never had such a spectacle before been exhibited in modern times. Six thousand dead bodies still lay unburied in the streets, among the fragments of buildings, or around the churches, half the houses were in ruins; infants were striving in vain to get nutriment from their dying mothers from the vaults and subterraneous rooms a few squalid persons of both sexes, like ghosts, were issuing, drawing the corpses, hardly distinguishable save by their stillness from the persons who bore them the pestilence spread almost visibly from those living charnel houses, alike on friend and foe around. Fifty-four thousand human beings had perished during the siege, of whom only six thousand were killed by the sword or fire of the enemy; the awful plague had carried off the rest. Sixteen thousand sick, for the most part in a dying state, encumbered the town when hostilities ceased, and filled every quarter with woe. The French had three thousand killed and twelve thousand wounded during the struggle (2). Fifty days of open trenches had been borne by a town defended by nothing but a single wall half that time the contest had continued with more than forty thousand besiegers after that feeble defence had fallen, and the town, in a military sense, was taken. Thirty-three thousand cannon shot, and sixteen thousand bombs, had been thrown into the place yet at the close of the siege the assailants were only masters of a fourth of the town; thirteen convents and churches had been taken, but forty remained to be forced. It was domestic pestilence, not foreign arms, which subdued Saragossa. Modern Europe has not so memorable a siege to recount; and to the end of the world, even after Spain and France have sunk before the waves of time and all the glories of modern Europe have passed away, it will stand forth, in undecaying lustre, a monument of heroic devotion, which will thrill the hearts of the brave and the generous throughout every succeeding age (3).

Great loss which the French incurred in the capture.

The lustre which the French arms justly acquired by the energy and perseverance which they had displayed during this memorable siege, was much tarnished by the cruel or rapacious conduct of the chiefs by whom it had been concluded. Don Basilio Porriero, the

(1) Ca. 113, 117 Regent 47 52. Tor 212, 213. Don Pedro Rio, 230, 231.

(2) Regent says the French lost was three thousand only but without specifying whether it was killed, or killed and wounded, and it seems but that it is the former only—men otherwise who he would never have written. It is recorded, like a forty-eight thousand French, headed by Lannes, would have been received for 67½ day of open trenches, by resistance which cost them only

three thousand men—see Rio 119 121 and *Memorias Hist. de la Guerra de España* p. 275 182. In fact, we have the authority of Lannes for the same saying that French troops to 117, 118 & of the commandment of the siege was twenty-two thousand strong could only see the loss of a hundred men—see p. 114 115.

(3) *Ed. in. c.* 310 317 Ca. 113, 115 Don Pedro Rio 212 213, 214, 215, 216 Don Pedro Rio 212 213, 214, 215, 216

the preceding campaign, when Duhesme, as already noticed, had withdrawn to Barcelona after the failure before Gerona, there remained to the French in that province only that important fortress, garrisoned by eight thousand, and the citadel of Figueras, by four thousand men (1). Napoléon, however, had no intention of allowing the eastern gate of Spain to slip from his grasp, and even while the first siege of Gerona was still going forward, he was collecting a fresh corps at Perpignan to relieve those who were shut up in Barcelona, and confided the direction of it to Marshal St.-Cyr. That accomplished officer took the command in the end of October. Napoléon's parting words to him were brief but characteristic. "Preserve Barcelona for me; if it is lost, I cannot retake it with eighty thousand men." St.-Cyr crossed the frontier on Nov. 3, 1808, the 5th November, and advanced towards Rosas, the siege of which he immediately commenced. His forces consisted at first of thirty thousand, though they were some months afterwards augmented to forty-eight thousand men; but they were a motley group of Italians, Germans, and Swiss, upon some of whom little reliance could be placed, and the marshal felt great discouragement at entering with such a force a mountainous province, where eighty thousand men were said to be in arms. But his forebodings were in a great degree groundless. The patriot force in the province was by no means in the brilliant condition which the Spanish journals represented. To the first burst of patriotic exertion, had succeeded the usual depressing reaction when the effort is over, and the necessity for sustained sacrifices and organized armies is felt. Great part of the peasants had returned to their homes; the local juntas were disunited and had, in a considerable degree, fallen into incapable hands. A large part of the prodigal supplies of England had been embezzled or misapplied by the cupidity of the Spanish agents (2), to whom they had been consigned; while the English co-operation from Sicily, which was anxiously looked for, had been intercepted, by demonstrations of Murat against Sicily, which had the effect of retaining Sir John Stuart and ten thousand British troops in that island.

Large of Rosas. Rosas, however, was too strong a place to fall without a vigorous resistance, and it was supported by means of defence which rarely fell to the lot of the Spanish besieged cities. The Excellent of seventy-four guns, with two bomb vessels lay in the bay within cannon-shot of the town. Lord Cochrane came up in his frigate the Imperieuse, in the middle of the siege, and the fortifications, though old, were regular and respectable. The citadel and the fort of Trinidad, a mile and a quarter distant were the strongest points, though they were both commanded by the mountain ridges above the town, and the garrison consisted of nearly three thousand men. The town which was hardly fortified was soon taken; but the citadel and Fort Trinidad made a stout resistance. Heavy guns were at length brought up close to the walls of the latter, and a large breach made in the ramparts, upon which the Spanish governor declared the post no longer tenable but Lord Cochrane who had just arrived, and to whose ardent spirit such scenes of danger were an actual enjoyment, immediately threw himself into it and, by his courage and resources, prolonged a defence which otherwise would have been altogether desperate. Two assaults were repulsed by this intrepid officer and his undaunted seamen with very great slaughter but meanwhile, a practicable breach was effected in the citadel; and a sally, attempted on the night of the 23d having failed to ar-

the preceding campaign, when Duhesme, as already noticed, had withdrawn to Barcelona after the failure before Gerona, there remained to the French in that province only that important fortress, garrisoned by eight thousand, and the *citadel of Figueras*, by four thousand men (1). Napoléon, however, had no intention of allowing the eastern gate of Spain to slip from his grasp, and even while the first siege of Gerona was still going forward, he was collecting a fresh corps at Perpignan to relieve those who were shut up in Barcelona, and confided the direction of it to Marshal St.-Cyr. That accomplished officer took the command in the end of October. Napoléon's parting words to him were brief but characteristic. "Preserve Barcelona for me. If it is lost, I cannot retake it with eighty thousand men." St.-Cyr crossed the frontier on Nov. 1. 1808. the 5th November, and advanced towards Rosas, the siege of which he immediately commenced. His forces consisted at first of thirty thousand, though they were some months afterwards augmented to forty-eight thousand men but they were a motley group of Italians, Germans, and Swiss, upon some of whom little reliance could be placed, and the marshal felt great discouragement at entering with such a force a mountainous province, where eighty thousand men were said to be in arms. But his forebodings were in a great degree groundless. the patriot force in the province was by no means in the brilliant condition which the Spanish journals represented. To the first burst of patriotic exertion, had succeeded the usual depressing reaction when the effort is over, and the necessity for sustained sacrifices and organized armies is felt: great part of the peasants had returned to their homes; the local juntas were disunited, and had, in a considerable degree fallen into incapable hands. a large part of the prodigal supplies of England had been embezzled or misapplied by the cupidity of the Spanish agents (2) to whom they had been consigned; while the English co-operation from Sicily, which was anxiously looked for, had been intercepted, by demonstrations of Murat against Sicily, which had the effect of retaining Sir John Stuart and ten thousand British troops in that island.

Siege of Rosas. Rosas, however, was too strong a place to fall without a vigorous resistance, and it was supported by means of defence which rarely fell to the lot of the Spanish besieged cities. The Excellent, of seventy four guns, with two bomb vessels, lay in the bay within cannon-shot of the town. Lord Cochrane came up in his frigate, the Imperieuse, in the middle of the siege; and the fortifications, though old, were regular and respectable. The citadel and the fort of Trinidad, a mile and a quarter distant, were the strongest points, though they were both commanded by the mountains rising above the town, and the garrison consisted of nearly three thousand men. The town, which was hardly fortified, was soon taken; but the citadel and Fort Trinidad made a stout resistance. Heavy guns were at length brought up close to the walls of the latter, and a large breach made in the ramparts, upon which the Spanish governor declared the post no longer tenable; but Lord Cochrane who had just arrived, and to whose ardent spirit such scenes of danger were an actual enjoyment immediately threw himself into it and, by his courage and resources prolonged a defence which otherwise would have been altogether desperate. Two assaults were repulsed by this intrepid officer and his undaunted seamen with very great slaughter: but, meanwhile a practical breach was effected in the citadel and a sally, attempted on the night of the 23d having failed to at-

rest the progress of the besiegers (1), the place surrendered with its garrison, still 2400 strong, on the following day, but Lord Cochrane succeeded in getting the whole garrison of Fort Trinidad in safety on board his vessel

Dec 15 - Having his retreat and communication in some degree secured by this success, St.-Cyr moved on to the relief of Barcelona, where General Duhesme, with eight thousand men, was shut up by the Spanish armies, and reduced to great straits for want of provisions and military stores. It has been already mentioned (2), that two roads lead from Perpignan to Barcelona, one going through Hostalrich and Gerona, and the other by Rosas and the sea-coast. To avoid the destructive fire of the English cruisers, St.-Cyr chose the mountain road; trusting to his resources and skill to discover some path through the hills, which might avoid the fire of the first of these fortresses. On arriving at the point of danger, a shepherd discovered an unguarded path by which Hostalrich might be turned, which was accordingly done, though not without a very harassing opposition from the Spanish light troops. Next day, however, after their circuitous route was over, and they had regained the great road, they encountered the main body of the Spanish army under Vivas and Reding, who had collected fourteen thousand men, half regulars and half armed peasants, in a strong position at Cardadeu, to bar his progress; while seven thousand men, under Lazan, who had issued from Gerona, hung upon their rear, and Milans, with four thousand men, supported by clouds of Somatenes, or armed peasants, infested the wooded hills on either flank. The French force on the spot was fifteen thousand infantry and thirteen hundred horse, while the whole Spanish force, if collected together, even after providing for the blockade of Barcelona, would have exceeded forty thousand stationed in a rocky and wooded country, traversed only by narrow defiles, a situation of all others the most favourable for irregular or half-disciplined troops. Napoleon, in such circumstances, would have raised the blockade of Barcelona, as he did that of Mantua, in 1796, and fallen with his whole force on the invader, who could scarcely have escaped destruction, a result which would have changed the whole face of the campaign, and possibly of Europe. But Vivas was not Napoleon, and the Spanish generals deemed no such concentration of all their means necessary. Elated with their advantages, they anticipated an easy victory, and were already, in imagination, renewing the triumphs of Baylen. St.-Cyr, however, soon showed he was very different from Dupont. Uniting his troops into one solid mass, with orders to march headlong on, without firing a shot, he bore down with such vigour on the enemy's centre, that in half an hour they were totally defeated, with the loss of five hundred killed and two thousand wounded, besides all their artillery and ammunition. Lazan and Milans came up just when the action was over, and instantly retired to the shelter of Gerona and the mountains. Arrived two hours sooner, they might have inspired hesitation in the enemy's column, given time for their whole forces to come up, and Cardadeu had been Baylen. Such is the value of time in war (3).

Defeat of the Spaniards at Molinos del Rey

Nothing now remained to prevent the relief of Barcelona by St.-Cyr, which was effected the day after, and the junction of Duhesme with his troops completed. The Spaniards had been so thoroughly dispersed by their defeat, that the general-in-chief, Vivas, had escaped by a cross mountain path on board one of the English cruisers, and Reding, the

(2) *Ante*, vi 352, 353

second in command, who was left in the direction of the fugitives, could with difficulty, two days afterwards, rally ten thousand foot and nine hundred horse to the south of Barcelona. In a few days, however, these troops swelled to twenty thousand men, and took post at Molinos del Rey, where, at day-break on the 21st, they were attacked by St.-Cyr with such vigour, that in half an hour they were totally routed, and dispersed in every direction. Such was the swiftness of their flight, that few were killed or wounded, but twelve hundred were made prisoners, and all their magazines, stores, ammunition, and artillery, fell into the hands of the victors. Among these were fifty pieces of cannon, three millions of cartridges, sixty thousand pounds of powder, and a magazine containing thirty thousand stand of English arms. The whole open country was, after this great defeat, abandoned by the Spaniards: twelve thousand took refuge in the utmost disorder in Taragona, while five thousand fled to the mountains in the interior, where they conferred the command on Reding, who, undismayed by so many disasters, immediately commenced, with unshaken constancy, the re-organization of his tumultuary forces. But the discouragement of the province was extreme and Lord Collingwood, who, from the British fleet in the neighbourhood, took a cool survey of the state of affairs, at once saw through the exaggerated accounts of the Spanish authorities, and declared that the elements of resistance in the province were all but dissolved (1).

These disasters in Catalonia powerfully contributed to the fall of Saragossa, by extinguishing the only force from which any relief to its distressed garrison could have been obtained. Thus far, therefore, the successes of St.-Cyr had been most signal, and the immediate reduction of the province might reasonably have been expected. But that able commander experienced, in his turn, the exhausting effects of this interminable warfare. While he lay at Villa Franca refitting his troops, and forming a park of artillery out of the spoils captured from the enemy, the Spaniards recovered from their consternation, and in several guerilla combats regained in some degree their confidence. In engaging the enemy the junta at Taragona, elected from the democratic party during the first tumult of alarm and revolt consequent on the defeat of Molinos del Rey, displayed the utmost vigour: preparations for defence were made on such a scale as precluded all hope of a successful siege; and the confluence of disbanded soldiers who had escaped from the rout, soon raised the force within the walls to twenty thousand men, while an equal force at Gerona and in the intervening mountains debarred the French all access into the hilly region to the westward. But a perception of their strength, notwithstanding all the disasters they had experienced, again proved fatal to the Spaniards: the cry for succour from Saragossa met with a responsive echo in the citizens of Taragona and the breast of the brave Reding, who resolved at all hazards to make an attempt for its relief. The plan which he adopted was ably conceived, and failed only from the indifferent quality of the troops to whose execution it was intrusted. Fifteen thousand men under Castro, who lay outside of Taragona, were to move forward so as to interpose between St.-Cyr and Barcelona; Reding, with ten thousand more, issuing from the town was to stand their front, while the Somatenes (2), from all quarters, were summoned to descend from their hills to co-operate in the grand attack, from which the total destruction of the enemy was confidently and universally anticipated.

Defeat of
the Span-
iards at
Igualada
Feb 17

To withstand this formidable concentration of forces, St.-Cyr had nominally forty-eight thousand men at his disposal, but of these only twenty-three thousand were concentrated under his immediate command at Villa Franca in the Llobregat, the remainder being either detached to keep up the communications, or sick and wounded in the rear. But such a body, under such a chief, had little to apprehend from the ill-combined efforts of forty thousand Spaniards, in part irregular, over a line of fifteen leagues in circumference. The moment that St.-Cyr saw the enemy's forces accumulating around him, he took the judicious resolution to act vigorously on the offensive, and break the enemy's centre before their wings

Feb 16

could come up to its relief. With this view, he broke up from Villa Franca with the division of Pino, and joining his generals of division, Chabran and Chabot, formed a force in all eleven thousand strong.

Feb 17

Early on the morning of the 17th, he commenced a vigorous attack on Castro's troops at Igualada, who, being completely surprised, were speedily put to the rout, and having thus broken through the enemy's line, he left the two former divisions at that place, and advanced against Reding,

Feb 24

who was issuing from Taragona with ten thousand men. Though assailed by superior forces, the brave soul of Reding retreated with reluctance, but he felt the necessity of doing so, and with great difficulty he contrived to collect the greater part of his army, about twelve thousand men, with which he slowly moved, hardly shunning a combat, towards Taragona. On the following morning, however, he encountered St.-Cyr with fifteen thousand men at Valls, and after a short combat was totally routed. Two thousand men were killed or wounded, the whole artillery taken, and Reding, who fought heroically to the very last, so severely wounded, that he had great difficulty in regaining Taragona, where he soon after died. The loss of the French did not exceed a thousand men. Such was the popular ferment against Reding, when he arrived at that fortress, that he with difficulty escaped destruction from the populace, though he had discharged his duty better than any man in his army (1).

Languid
operations
in Catalonia
after this
success and
retreat of
St.-Cyr to
the north
of the pro-
vince
Feb 27

After this decisive victory, the regular war in Catalonia was at an end, and such was the general consternation which it produced, joined to the fall of Saragossa, of which intelligence was received at the same time, that, if St.-Cyr had pushed on immediately to Tortosa, it too would have fallen into his hands, almost without resistance. As it was, he made himself master of Reuss, an impor-

tant commercial city, second only in size and importance to Barcelona, and containing ample resources of every kind. There were taken, also, several thousand sick and wounded, whom St.-Cyr, with generous, though perhaps not altogether disinterested humanity, as he hoped to transplant the seeds of pestilence into the place, sent into Taragona to Reding, a step which led to a convention, by which it was agreed that the wounded on either side should not be regarded as prisoners, but allowed to remain where they were, and re-join their respective armies upon their recovery. an admirable arrangement, which it is devoutly to be wished could be extended to all civilized

March 19

warfare. Want of provisions, however, compelled the French general to leave the plains of Taragona, of which he was not yet in a condition to undertake the siege; and, approaching the French frontier, he drew near to Vich, with a view to make preparations for the siege of Gerona, which he meditated (2).

Concealed
desert retreat
on Barce-
lona.
March 10.

Upon this retreat, the Somatenes, who had never ceased to maintain themselves in the mountains, even after the disaster of Valls, issued in all directions from their retreats, and increasing in audacity with a few partisan successes, not only regained possession of the whole open country to the south of Barcelona, but pushed parties up to the walls of that fortress. The object of this movement was, to lend a hand to a strong party within the town, who were conspiring to gain possession of some of the gates, and deliver them to the patriots; and the English squadron, under Lord Collingwood, at the same time approached to co-operate in the enterprise, and cannonaded the works towards the sea. It failed, however, from the accidental defeat of a body of the Somatenes, who were advancing towards the walls but such was the alarm inspired by this attempt, that

April 1. Duhamel took the resolution of compelling all the principal Spanish functionaries to take the oath of allegiance to King Joseph, and upon their courageous refusal, twenty-nine of the principal citizens were forthwith sent prisoners to Montjuic; from which they were soon after dispatched by St.-Cyr into France. But this severity, so foreign to the usual character of that officer, failed in producing any effect. on the contrary, the fortitude of these intrepid magistrates, in enduring captivity rather than abandon their sovereign and oath, spread the flame afresh over the country; Taragona, Lerida and Tortosa, recovered from their consternation, and took separate measures for their defence, and the guerillas multiplied to such a degree in the mountains that the French army was soon master of no ground but what itself occupied within the walls of Barcelona, or at Vich deserted of its inhabitants on their approach, where St.-Cyr was making preparations for the siege of Gerona (1)

Removal of
the command
by Blake to
Aragon.
May 24.

To such a degree were the spirits of the rural population, especially in the mountainous districts, elevated by the retreat of St.-Cyr from the neighbourhood of Taragona to the foot of the Pyrenees, that Blake, who, on the death of Reding, was appointed captain general of the three provinces of Aragon, Catalonia, and Valencia, deemed the opportunity favourable for making a forward movement, to recover his lost ground in the first of these provinces. With this view, he advanced from the mountain region around Lerida towards the plain of Aragon; and having arrived on the banks of the Cinca, a mountain torrent which descends from the mountains on the Catalonian frontier to the Ebro, he found eight companies of chosen infantry separated from the remainder of the brigade to which they belonged, and succeeded in making the whole prisoners. This success elevated the hopes of the peasantry in the highest degree, and encouraged Blake to attempt the deliverance of Saragossa and the entire expulsion of the French from the province. He was confirmed in the hope that this was practicable by the great reduction of their troops on the Ebro: Bessières' corps having been moved to Valladolid and Old Castile in the beginning of April, to keep up the communications on the great road from Bayonne; and Junot alone left to make head against the Aragonese around Saragossa. Such had been the ravages which the sword of the enemy and the pestilence consequent on the siege had made in the ranks of this corps that at this time, instead of twenty four thousand, who crowded round its standards at the commencement of the siege, it could not muster more than ten thousand combatants; and they were in such a state of depression from the privations and dangers

(1) See H. 267 312. St.-Cyr 177 332. St.-C. H. 22, 23. Calaneo, p. 2, 11

to which they had been exposed (1), that little reliance could be placed on them in presence of an enterprising enemy

Suchet takes the command in Aragon his character. Junot, who was taken ill at this juncture, and had never recovered, in the Emperor's estimation, his defeat by the English in Portugal, was superseded by SUCHET, a young general of division, hitherto unknown in high command, but whose great exploits and almost unbroken success threw a radiance round the declining years of the empire. Though not of the school of those illustrious chiefs, who, roused to greatness during the struggles of the Republic, afterwards sustained with such lustre the fortunes of the Empire, he was distinguished by a capacity which rendered him better qualified than any one of them to attain the summit of military glory. Unlike Murat, Ney, and many other leaders, whose brilliant actions were performed chiefly, if not entirely, when executing the orders of the Emperor, and when surrounded by the halo of his fame, he early showed remarkable ability in separate command, and evinced those resources in difficulty, and that resolution in adversity, which, more than the splendour of success, are the tests of real military greatness. He has been characterised by Napoléon as "the first of his generals, as having grown in capacity, in later times, in a manner which was altogether surprising (2)," and after making every allowance for the feelings which must have been roused in the Emperor's mind, by the manner in which he was deserted by many of his other marshals in the period of his adversity, enough remains durably engraved on the tablets of history to prove, that Suchet was not undeserving of this magnificent eulogium. Nor were his civil qualities less remarkable than his military - the order and regularity which he introduced into the provinces which his arms had subdued, were justly regarded as in the highest degree admirable, and while they completely relieved the Imperial treasury of all the expense of his armaments, they secured for him the gratitude and affection of the inhabitants subject to his rule, even at the very time that he was inflicting the deepest wounds on the fortunes of their country

Defeat of the French at Alcaniz

The first essay in arms, however, of this celebrated chief, was unfortunate, and so unpromising was the aspect of affairs, shortly after he entered on the command in Aragon, that nothing but the greatest courage and capacity could have saved the French cause in the province from total ruin. Collecting all the disposable forces which he could muster, to avenge the affront received on the banks of the Cinca, and stop the progress of the enemy in that quarter, Suchet issued from Saragossa, and soon came up with the enemy, who had made himself master of Alcaniz, which he occupied with twelve thousand men. The French general had eight thousand infantry, and seven hundred horse, but the superior discipline of his troops gave him hopes of an easy victory. The action began by an attack by the French on the Mount of Las Horcas, in the centre of the Spanish line, which was assailed by three thousand of their best men, but the assault was repulsed without much difficulty by Blake's infantry and artillery, and Suchet, apprehensive of still greater disasters with troops so seriously discouraged, drew off, after a short combat. Such, however, was the disorder which prevailed, that though they were not pursued, a panic, originating in a false report spread by a drummer in the night, threw the whole army into confusion, and they fled pell-mell into Samper, as if utterly routed (3). In this disgraceful affair, the French lost nearly a thousand men, the Spaniards

not three hundred and such was the dejected state of the troops, that Suchet was compelled to fall back to Saragossa, where it required all his moral courage to withstand the general clamour for a total evacuation of Aragon.

Approach of Blake to Saragossa. Had the Spanish general been at the head of well-disciplined troops who could be relied on for operations in the level country, he might, by Suchet's admission, have accomplished the entire expulsion of the French from Saragossa; but the event proved that Blake judged wisely in not compromising his army, which had still very little of the consistency of regular soldiers, and was almost destitute of cavalry, in the level plains of the Ebro. For a fortnight after the battle he did nothing but march his troops from one position to another, sedulously endeavouring, during that period, to instruct them in the rudiments of the military art: and at length he deemed them sufficiently improved to hazard a conflict in the flat country. Suchet, meanwhile, expecting a siege, had been strengthening the Monte Torrero and suburbs of Saragossa, on the southern bank of the Ebro, and strenuously endeavouring to restore the spirit of his soldiers: but the event did not put the strength of his fortifications to the test. In the middle of June, Blake, at the head of seventeen thousand men, approached Saragossa, and the French general marched out with ten thousand men and twelve guns to meet him. The battle was fought under the walls of the capital: Aragon was the prize of the victor: but the enthusiasm of the Spaniards in such a situation was no match for the discipline, and now restored spirit of the French. (1) Blake had imprudently detached five thousand of his best troops under Arezaga, to Botorrita, with the design, at that time so common with the Spaniards, of surrounding the enemy; so that, for the shock of battle, he had only twelve thousand men to rely on: and they were decidedly inferior, not merely in the steadiness of the foot soldiers, but in the number and quality of their cavalry.

Indecisive action at Maria, close to Saragossa. He began the action by extending his left, with the design of outflanking his opponent; but this movement was quickly checked by a rude charge of Polish lancers, on the flank of the advancing wing, which threw it back in disorder on the second line. Suchet took advantage of this success, to move forward his whole centre and right against the enemy, at the same time refusing his left. A precipitous ravine separated the two armies along this part of the line: the French infantry plunged into the hollow, and rapidly scaling the opposite heights, boldly advanced against the enemy: they were received, however, with so violent a fire of grape and musketry, as drove them back into the shelter of the ravine. Suchet immediately reinforced the attacking troops by two battalions of Polish infantry who again led on the charge. A violent storm at this instant arose, and concealed the two armies from each other, though separated only by a very short distance; but, during this obscurity, Suchet was preparing his decisive movement: and no sooner had it cleared away than he made a rapid charge with two regiments of horse on the Spanish right: overthrew their cavalry which were there stationed, and got possession of a bridge in the rear by which the retreat of the army could alone be effected. The victorious horse now turned fiercely, supported by the infantry of the left which quickly came up on the Spanish centre, which nevertheless resisted bravely: and by the aid of its numerous artillery, for long made good its ground against the combined attacks of the French centre and right. At length, however, some regiments stationed there pressed at once in front and flank: having given way the general ordered the whole to retire: and the retreat by the bridge the only one practicable for the guns, being cut off, they were all taken, (2)

the number of twenty. Favoured by the broken ground, however, almost all the troops withdrew in safety, and were rallied at night by Blake, at Botorrita and reunited to Arezaga, from whom in an evil hour they had been separated. The French lost about eight hundred, the Spaniards a thousand men in this battle, but it decided the fate of Aragon for the remainder of the campaign, and by its results restored the French superiority on both banks of the Ebro (4).

Disgraceful
route of the
Spaniards
at Belchit6

It quickly appeared how completely the spirit of the French army had been raised, and that of the Spanish depressed by this reverse. Next day, Blake, reinforced by Arezaga's troops, was much stronger than when he had first fought, while the French were nearly a thousand weaker, and the artillery of the fresh division almost compensated that which had been lost on the preceding day. Blake withdrew with these troops, still fourteen thousand strong, to Belchit6, and Suchet, having, by great exertions, collected twelve thousand, followed and attacked them. The Spanish army was skilfully posted in a strong position among the sloping banks and olive groves which surround that town; Blake harangued his men before the enemy came up, and they promised a vigorous resistance. Nevertheless, hardly had the fire commenced, when a French shell having fallen on a Spanish ammunition waggon and blown it up, the nearest battalion disbanded and fled, the next immediately followed the example; the contagion ran like wild-fire along the whole line, and soon Blake was left alone with his staff and a few officers. Such was the rapidity of their flight that few prisoners were taken, and fewer still were killed or wounded, but the whole remaining guns, ten in number, with all the caissons, fell into the enemy's hands, and the Spanish army was entirely dispersed. A few broken bands reached Lerida and Mequinenza in Catalonia, but the greater part returned to their homes, and the elements of all regular resistance were extinguished in Aragon for the remainder of the war (2).

St. Cyr's
preparations
for the siege
of Gerona

St.-Cyr, meanwhile, was actively preparing for the siege of Gerona. The design of the Emperor was, that Verdier should be entrusted with the direction of the siege, and St.-Cyr with that of the covering army, but the former of these generals, who had failed at Saragossa, and was most anxious to retrieve his character by a signal victory in the present instance, was unwilling to begin till assured of success, and urgent that his attacking force, which did not at first exceed ten thousand men, should be reinforced by a division of the general-in-chief's army; a proposal which St.-Cyr at first refused, from a just sense of the risk to which such a small body as would remain to him would be exposed, in the midst of so vast a host of enemies as was in arms in Catalonia. This produced an angry correspondence between the two generals, which terminated in Verdier appealing directly to Napol6on, who ordered St.-Cyr to place three thousand infantry, five hundred horse, and a corps of artillery and sappers at his disposal; a dislocation of force which reduced the covering army to fifteen thousand men, and raised the besieging to the same amount (3). These reinforcements

(3) The exact force employed by the besiegers in this memorable siege, and the covering army, was as follows. —

Forces employed in the siege, viz

Infantry and cavalry,	14,400
Artillery,	1,200
Do 7th corps,	551
Engineers,	211

Total in the siege,
Army of observation, cavalry and infantry, .

having left Verdier without excuse in any longer delay, he resolved forthwith to commence the siege; and the investment was completed by the Spanish outposts being all driven in on the 1st June. But this disagreement between the two generals produced a coldness, which essentially injured their mutual co-operation, and protracted, beyond what might otherwise have been required, the duration of the siege (1)

Unfortunate supply of Barcelona with stores by sea. An untoward event occurred at this time, even on the element on which Great Britain had hitherto been victorious, which had a most calamitous effect on the war in Catalonia. Notwithstanding the extreme vigilance and admirable arrangements of Lord Collingwood, Admiral Cosmao, with a valuable convoy, succeeded in eluding the English blockading squadron, and escaping from Toulon, from whence he made straight for *May 3.* Barcelona into which he threw his supplies, and got back without sustaining any serious injury. The garrison of that important fortress, from being in a state of extreme want, especially of stores and ammunition, were, by this seasonable reinforcement, put in a state of such affluence that they

were not merely in a condition to sustain a long siege, but could spare ample supplies of stores of all kinds to the besiegers, which arrived safe before Gerona, under the protection of six of St. Cyr's battalions, detached for that purpose from the covering force; and by relieving the general-in-chief of all anxiety in regard to Barcelona enabled him to give his undivided attention to the important duty with which he was more immediately connected (2)

Preparation of the garrison for defence. "Whoever speaks of a capitulation or surrender shall be instantly put to death." Such were the words of an order of the day, on the 5th May, with which Alvarez, governor of Gerona, announced his resolution to hold out to the last extremity. Nor did the spirit of the garrison and inhabitants fall short of these heroic sentiments. Animated by the recollection of their former glorious resistance, the citizens had taken the most energetic steps to second the efforts of the regular soldiers; and had formed a corps, composed of the whole male population, without distinction of rank or age, whose duty was to support, by every possible means, the defence of the garrison. There, too, as at Saragossa, the women, even of rank and station, were formed into companies to bear away and tend the wounded; and at every breath of air their risings were seen to float amidst the bayonets of the soldiers. The patron saint of the town St. Narcissus, was declared generalissimo of the armies, and the utmost efforts were made to exalt the courage of the besieged, by the belief that his celestial aid would extend the same protection to the town which he had already shown in the former siege, and as had been displayed five hundred years before, when Philip the Bold, who besieged the place, had, according to the old chronicles, had his army destroyed by a miraculous cloud of locusts. Nor were more worldly means of defence neglected: the garrison of three thousand men was animated with the best spirit; the ramparts were plentifully lined with artillery, and provisions for a siege of many months duration already provided. The town stands on a steep declivity, rising up from the right bank of the Ter, which terminates in a bluff precipice on which are situated several forts which constitute the real strength of the place. The upper town is only defended by a single wall fifteen feet high; the lower, which is more exposed, has the protection of a rampart, wet ditch and outworks. The crest of the hill is occupied by three forts, called the Capucines; and on the north, the

town is commanded by a fort called Montjuich, standing on a rocky eminence, and separated from it by the valley of Galligau. This fort, which had the advantage of bomb-proof casemates, and cisterns, and magazines, was tolerably fortified, and was garrisoned by nine hundred brave men, resolved to defend themselves to the last extremity, while the rocky nature of the ground, round both it and the forts of the Capucines, rendered the formation of approaches a matter of great labour and difficulty (1)

Progress of
the siege
June 29

The first serious attack of the enemy was directed against Montjuich, and the towers which formed its outworks were carried by assault on the 19th June. About the same time, a convoy of a thousand cattle, destined for the garrison, fell into the hands of the French; and the near approach of St.-Cyr with his covering force, raised the troops which might be employed in the siege to thirty thousand men. After this, the breaching batteries continued to thunder incessantly on the walls of the fort for a fortnight, and a large breach having been at length effected, an assault was attempted early in July, which was repulsed with severe loss

July 4

July 8 Three days afterwards, and when the breach had been enlarged, and the adjoining defences ruined by the incessant fire of sixty pieces of cannon, the attack was again renewed with a very large force, but although the French, in close column, twice returned to the assault with great courage, they were on both occasions repulsed. The Spaniards had so barricaded the summit of the breach, that it was impossible to surmount the obstacles, and the flanking fire of a half-moon and ravelin on either side, tore the assailants in pieces, and finally drove them back with the loss of a thousand killed and wounded. Taught, by this bloody repulse, the quality of the enemy with whom he had to deal, St.-Cyr now confided himself to the surer operations of sap and mine, and a month was consumed in that subterraneous warfare; without any material progress being made in the reduction of the place (2).

Fall of
Montjuich,
and obsti-
nate con-
flicts of
which it
was the
theatre
Aug 12

Meanwhile, St.-Cyr carried by storm Palamos, a small town built on a rocky promontory running into the sea, a day's march from Gerona, from which the besieged had occasionally derived supplies. This detachment, and the accumulation of force round Gerona, having reduced the covering army on the side of Hostalrich and Barcelona to eight thousand men, the Spanish generals, notwithstanding their numerous defeats, were tempted to try the relief of the place. While the preparations for this purpose were going on under the direction of Blake, the mining operations and fire of the besiegers against Montjuich continued with such violence, that its buildings and defences were entirely ruined, and the fort being no longer tenable, it was evacuated in the middle of August, and the garrison withdrawn into the town. The defence of this external post was of sinister augury for the ultimate issue of their undertaking to the besiegers, for though garrisoned only by nine hundred men, it had withstood thirty-seven days of open trenches, two assaults, had sustained the fire of twenty-three thousand cannon shot, and two thousand bombs, and had cost the assailants three thousand men. Hardly one of the garrison was unhurt, five hundred had been killed or seriously wounded. Elated with this success, however, Verdier boasted in his public despatches that Gerona could not now hold

"A drummer had been placed near the breach to beat the alarm when a shell was approaching. As he was doing so, a cannon shot carried off part of his

thigh, and lacerated his knee in a dreadful manner. When the attendants, however, approached to convey him to the hospital, he said, 'No! though wounded in the leg, I have still arms left to beat the drum, and warn my friends of the bombs.'—TOMAZZO, 384.

out fifteen days but in making this assertion, he underrated both the resolution of the besiegers and the resources of the Spaniards for the relief of the place (1)

Efforts of the Spaniards for the relief, which are enumerated, Sept. 2. Although the lower town was commanded in many parts by the fire from Montjuich and the forts of the Capucines, and its defences on that side consisted only of an old weak wall; yet the governor and inhabitants continued to make the most resolute defence, and every inch of ground which the besiegers gained, was won only by hard fighting and profuse bloodshed. Meanwhile, Blake, having made his arrangements for the relief of the town, the attempt was made, and with perfect success, on the first of September. Claros and Novira, two Somatens chiefs, had previously excited great alarm on the French frontier, by their attack on a convoy coming up to the relief of Figueras, which was constantly blockaded by the Miquillets and Blake having concerted measures with them, approached with nine thousand men from the side of Hostalrich, while four thousand infantry and five hundred cavalry, under General Condé with a convoy of two thousand beasts of burden, each laden with flour, unknown to the enemy, approached from the same direction, and Claros and Novira threatened the besiegers posts on the north, from the side of Figueras. With such skill were these operations conducted, that the enemy found himself assailed in every quarter, except that by which the convoy was to enter and St.-Cyr, conceiving that the raising of the siege, not the revictualing of the town, was intended, drew off his troops to the points menaced, to such a degree, that the convoy entered safe, amidst the transports of the inhabitants, with hardly any fighting; and Condé having left three thousand of his men to reinforce the garrison, withdrew in safety with the remainder to Hostalrich, whither Blake soon after retired, with the bulk of his forces (2)

Remark on the history of the besieged. To have relieved the besieged in presence of fifteen thousand disposable French troops, headed by such a general as St.-Cyr, with soldiers discouraged by repeated defeats, was no small subject of congratulation to the Spaniards, and reflected great honour on the perseverance and skill of Blake; but it speedily appeared that the supplies thus received, without having given them the means of permanent deliverance had only prolonged for an additional period the duration of their sufferings. The supply of provisions introduced taking into view the number of extra mouths brought along with them did not exceed a fortnight's consumption; and the spirits of the besieged, which had been elevated to an extraordinary degree by the first appearance of succour and anticipated from it a total deliverance were proportionally depressed when they beheld the friendly standards on all sides recede from the view and the French, without being disturbed, resume their menacing positions round the city. The fire of the breaching batteries was recommenced on the 11th September with redoubled fury; a sortie to destroy the most advanced works of the besiegers though attended at first with some success was finally repulsed with loss; and three enormous breaches having been made in the walls, a general assault was made a few days after, and led to a struggle supported on both sides with unparalleled resolution (3)

Exposition of the ground immediately before the city. Alvarez had skillfully prepared all the means not only of defence but of succouring the wounded bringing up supplies to the points of danger, and relieving with fresh troops the defenders of the

breaches; but, able as were his previous dispositions, and heroically as he discharged, on that eventful crisis, all the duties of a commander and common soldier, the town must have sunk under the fury of the assault, if his efforts had not been seconded by the whole population. At the sound of the drums, which beat in all the streets, and the mournful clang of the tocsin which rung in the churches, the whole inhabitants poured forth, men and women, monks and children, hastened with perfect regularity, without either trepidation or confusion, to the posts assigned them; and, amidst the fire of two hundred pieces of artillery, calmly awaited death in the service of their country. Never was a more sublime spectacle beheld in modern times: silently they took up their stations, neither shouts nor cries were heard, but the bright expression of every eye revealed the sacred ardour by which the whole were animated. At half-past four in the afternoon, three massy columns advanced to the breaches, while a terrific fire of artillery swept the ramparts by which they were flanked, now almost entirely denuded of their parapets. Three times did the assailants, animated with heroic courage, mount to the summit of the breaches, and three times were they repulsed by the invincible firmness of the garrison. Such was the fury with which their defenders were animated, that often finding the discharge of fire-arms too slow a method of defence, they threw down their muskets, and lifting up great stones with both hands, hurled them down upon the enemy. At length, after a hard struggle of three hours' duration, the assailants drew off, leaving the breaches covered with their slain, and weakened by the fall of sixteen hundred men (1).

Extreme
distress of
the besieged
from want
of provi-
sions

The dreadful loss sustained in these bloody assaults, and the undaunted countenance of the garrison, induced St -Cyr, after this, to convert the siege into a blockade, and trust for the final reduction of the place to the certain effect of famine, and the continued fire of artillery, which would ruin every habitation which it contained. With this view, the lines round the town were drawn still closer than before, and every effort was made to exclude the casual introduction of small bodies of troops, which had occasionally taken place, notwithstanding all the vigilance of the besiegers, since the commencement of the siege. Blake, on the other hand, being sensible that the garrison was reduced to great straits from want of provisions, assembled fourteen thousand men, and made a second attempt for its relief. Meanwhile, the besiegers were suffering almost as much from want of supplies as the besieged, the Somatenes on all the neighbouring hills rendering the supply of the army extremely hazardous, and the vigilance of Lord Collingwood having intercepted and destroyed the large squadron which sailed from Toulon for their relief. But the failure of Blake's attempt to throw any effectual supplies into the place, relieved the one party as much as it depressed the other. St -Cyr, more on his guard on this occasion, interposed with the bulk of his covering force between the besiegers' lines and the quarter from which the convoy was approaching, and the whole, consisting of two thousand beasts of burden, with the exception of a hundred and seventy which penetrated, with O'Donnell, at the head of a thousand men, into the town, fell into the enemy's hands, while Blake was driven off with the loss of three thousand of his best troops. This was a fatal blow to Gerona: plenty, thereafter, reigned in the one camp, as much as want in the beleaguered fortress. Secure within his impregnable lines, St.-

Sept 26

Cyr, as he has himself told us, waited quietly till time, fever, and famine, should subdue the resistance of the enemy (1)

Recall of St. Cyr's last moments of the place rendered him insupportable. Oct. 5. He was not permitted, however, himself to reap the fruit of this prudent but inglorious policy. The slow progress of the siege and the frequent repulses of the assaults were little suited to the impatient mind of Napoléon, who recalled St.-Cyr, and sent Marshal Angereau to assume the command. On the same day on which he arrived, O'Donnell, with his brave band, fearful of augmenting the distress of the besieged by additional mouths, again made his way out of the place and reached Blake's quarters in safety. But the failure of provisions and supplies of all sorts was now daily making it more apparent that the fall of this heroic town could not much longer be averted. The hospitals were crowded with sick and wounded—beds, attendants, and medicines, were wanting—a malignant fever, as at Saragossa, had broken out, and was daily carrying off great numbers, both of the soldiers and citizens—the magazines of corn and flour were almost exhausted, and the inhabitants were seeking the miserable resource of inferior animals—the capture of a third great Oct. 1. convoy collected at Hostalrich for the relief of the place, and the defeat of O'Donnell's force, which formed its escort, both deprived the besieged of present relief, and supplied the besiegers in plenty with all sorts of provisions; while the transference of a large portion of Junot's corps from Aragon to the beleaguering force, and the arrival of powerful reinforcements from France cut off all hopes of ultimate deliverance. Still the heroic governor, and his worthy companions in arms continued their resistance for two months longer, with hopeless but unsubdued resolution: all offers of capitulation were sternly rejected, and it was not till provisions of all sorts were entirely exhausted, and the inhabitants, almost dying of famine, and having consumed every vestige of food in the city, had been reduced to the deplorable and unparalleled necessity of feeding on their own hair that the word capitulation was for the first time pronounced in the city. Even in that woful extremity, and when seven large breaches were guarded by detachments of soldiers hardly able to bear the weight of their own arms, and more resembling ghosts than living men, Angereau did not venture to attempt an assault, but Alvarez, whom no necessity how cruel soever, could induce to think of a surrender, was seized like Palafox, with the prevailing fever, and soon reduced to the last extremity; and his successor, Holzar, felt the necessity of entering into negotiations for the surrender of the place. Angereau, too happy to gain possession of it on any conditions, willingly granted honourable terms to the besieged and on the 12th December, Gerona opened its gates to the conqueror. When the French marched in they gazed with amazement on the proofs which were every where presented of the devoted courage of the garrison and inhabitants. The town was little better than a heap of ruins; the streets ungrazed and intersected in all quarters by barricades—were lined by half destroyed edifices; unburied bodies lying about in all directions, putrid pools yet stained with blood spread a pestilential air around; the survivors of the inhabitants pale and emaciated resembled spectres haunting a city of the dead. Almost all the heads of families had fallen, the women with child but without every twin perished; numbers of infants at the breast had starved from want of nourishment. Nine thousand persons had died during the siege, within its walls, in

the service of their country, of whom four thousand were citizens, being nearly a third part of their whole number (1)

Extraordi-
nary nature
of their
defence

Carnot has observed that the siege even of the greatest fortresses in modern times has seldom been prolonged beyond six weeks; and yet Gerona, with its feeble ramparts, held out seven months, of which six and a half were of open trenches. The besiegers directed against the place the fire of forty batteries, armed by above a hundred and eighty pieces of cannon, from which were thrown into the town, during its continuance, eighty-thousand cannon-balls and twenty thousand bombs. The greater part of the guns of the besiegers were rendered useless by constant discharges, or dismounted by the fire of the town. Fifteen thousand men had perished by the sword or disease around its walls. Four thousand three hundred men were made prisoners in the town including its heroic governor, Alvarez, then in the last stage of fever. With brutal harshness, Augereau, without regard to his noble defence or lamentable condition, had him shut up alone in a dungeon of Figueras, where he soon after died, under circumstances which made the Spaniards suspect assassination, although his state of debility probably rendered that last act of atrocity unnecessary. But, as Colonel Napier, with the true spirit of a soldier, observes, "As long as virtue and courage are esteemed in the world, his name will be held in veneration, and if Augereau forgot what was due to this gallant Spaniard's merit, posterity will not forget to do justice to both (2) "

Termination
of the
campaign in
Catalonia
and aspect
of affairs at
that period
in that
quarter

The fall of Gerona terminated the campaign in Aragon and Catalonia. The Cortes, assembled at Seville, in just commemoration of the unparalleled constancy displayed by the besieged both in that town and Saragossa, passed decrees awarding extraordinary honours to the inhabitants and garrisons of both, and to the illustrious chiefs, Palafox and Alvarez, by whom their defence had been conducted, and after the peace, Castanos, then governor-general of Catalonia, repaired to Figueras, and constructed an appropriate monument to the last of these heroes in the dungeon where he had expired. But these successes gave the enemy a firm footing both in Aragon and Catalonia, and the elements of resistance in those provinces were now reduced to a desultory guerilla warfare in the mountains, and the siege of the remaining strongholds in the latter province, still in the hands of the Spaniards. The whole fortresses of Aragon had fallen into the hands of the enemy. and although Taragona, Lerida, Tortosa, and the other fortified cities of Catalonia were still in the possession of the patriots, yet it soon became painfully apparent, that their means of regular resistance in the field were exhausted. Shortly after the fall of Gerona, Augereau having sent all the monks of the town off as prisoners of war into France, marched against the irregular mass, in front of Hostalrich, which had so long disquieted the operations of the besiegers. Two brigades sufficed to defeat six thousand of them, on the ridge of La Jonquieris. Souham dispersed the bands of Rovera and Claros at Olot and Campredon, and got possession of Ripoll, their principal manufactory of arms, at the same time, Pino, with his Italian division, routed a corps of four thousand mountaineers, while Augereau himself, having, by these successes, re-established his communications with France, marched against the principal Spanish army, under Blake, whom he woisted at the Col-di-Sespina, and drove towards Taragona, which enabled him

to draw his forces around Hostalrich, and commence the blockade of that fortress. Suchet, at the same time, was making preparations for the sieges of Taragona and Lerida, so that every thing announced vigorous and decisive operations in that quarter of the Peninsula, early in the ensuing year (1)

State of
Orléans and
Astoria
after the
evacuation
of the
English at
Corunna.

While Aragon and Catalonia were the theatre of these memorable events, Soult and Ney, in Galicia, were slowly reaping the fruit of their successful operations, which had terminated in the expulsion of the English from the north of Spain. Both parties for a time appeared exhausted—the Spaniards, bent to the earth by the flight of their allies and the loss of Corunna and Ferrol, the two strongest and most important places on the northern coast of the Peninsula, were sunk in the deepest affliction, and for a considerable time gave hardly any signs of life; while the French, almost equally exhausted, rested without any attempt at further exertion, in the important fortresses which they had conquered. Romana alone, with the remnant of Blake's army, which had been routed at Reynosa, still maintained in the recesses of the mountains, the standard of independence: but his forces were reduced to six or eight thousand men, without either cannon, stores, or resources of any kind: the soldiers were without shoes, almost without clothes, and nothing but the devoted patriotism of their chief and the extraordinary tenacity of the men, preserved the country from total subjugation. Fearful of permitting even such a wasted hand to keep the field, Soult moved a division against him; but the brave Spaniard retreated by Orense, to the rugged mountains on the Portuguese frontier; and having thus got beyond the reach of his pursuers, resolved to maintain himself, like Pelayo in the days of the Moors, in the inaccessible ridges of his country, and await the issue of events, to re-appear again in the field in its support (2)

Advance of
Sir R. Will-
son to Re-
dín, and
return of
Joseph to
Madrid.

Meanwhile, Sir Robert Wilson, with the Portuguese levies which he had trained and disciplined, advanced beyond the Spanish frontier, and took post near Ciudad Rodrigo, in Leon. When the news of Sir John Moore's embarkation arrived he sent his guns, as a measure of precaution, to Alcantara in the rear, but remained himself in the neighbourhood of that fortress, where he was soon joined by Don Carlos d'España a Spanish chief with a few followers; and though their united force was too weak to undertake any operation of importance, yet, by merely remaining where they were, and showing a bold front in a moment of such disaster, they did good service, and kept the spirits of the province from sinking under their misfortunes. And truly the aid of such chivalrous spirits as this gallant officer, to whom scenes of danger were a source of pleasure, was necessary to prevent the cause of Spanish independence from appearing altogether hopeless amidst the defection of many who should have taken the lead in its support. Addresses, as already mentioned, had been forwarded to Joseph Bonaparte at Valladolid from all the incorporations and influential bodies at Madrid, inviting him to return to the capital and resume the reins of government; registers had been opened in different parts of the city, for those citizens to inscribe their names who were favourable to his government; and in a few days thirty thousand signatures, chiefly of the more opulent classes, had been inscribed on the lists: and in obedience to these flattering invitations, the intrusive king had entered the capital, with great

Jan 22 1809 pomp, amidst the discharge of a hundred pieces of cannon, and numerous, if not heartfelt demonstrations, of public satisfaction—a memorable example of the effect of the acquisition of wealth, and the enjoyment of luxury, in enervating the minds of their possessors, and of the difference between the patriotic energy of those classes, who, having little to lose, yield to ardent sentiments without reflection, and those in whom the suggestions of interest, or the habits of indulgence, have stifled the generous emotions of our nature (1)

Prepara-
tions for the
invasion of
Portugal by
Soul't and
Victor

Meanwhile, Napoléon, whose ardent mind could as little endure repose in any of his lieutenants as in himself, sent orders to Soul't, while he still lay with the bulk of his corps at Ferrol, to prepare immediately for the invasion of Portugal. The plan for this purpose was formed by the Emperor on a grand scale, and apparently promised certain success. Soul't himself was to move, with four divisions of infantry and ten regiments of cavalry, numbering in all twenty-five thousand combatants present with the eagles, direct upon Oporto; on the road he was to be joined by Lorson, with five thousand more; Lapisse, with nine thousand, was to menace the country from the side of Leon; while Victor, with thirty thousand, who was stationed at Merida, on the eastern frontier of the kingdom, was to co-operate from the side of Estremadura, and take a part in the combined movement on Lisbon. Thus sixty thousand men, from different quarters, were to invade Portugal, in which at that time, there were not more than fourteen thousand British and an equal number of native troops, all in a state of extreme discouragement at the reverses in Spain, and the embarkation of the army from the shores of Galicia. So little did Napoléon anticipate any serious resistance in this undertaking, and so deeply was the future career of the British in the Peninsula shrouded from his view, that he calculated that, on the 5th February, he would be at Oporto, and, on the 16th, before Lisbon, after reducing which, and driving the English into the sea, he was to co-operate in an expedition against Andalusia, and follow in the footsteps of Dupont to the shores of the Guadalquivir. After reading a despatch from Soul't, giving an account of his operations in Galicia and the battle of Corunna, he said, "Every thing proceeds well: Romana cannot exist a fortnight longer—the English will never make a second effort—in three months the war will be at an end. Spain may be a la Vendée, but I have tranquilized la Vendée. The Romans conquered its inhabitants, the Moors conquered them, and they are not nearly so fine a people now as they were then. I will settle the government firmly, conciliate the nobles, and cut down the people with grape-shot. They say the country is against me, but there is no longer a population there, Spain is, in most places, a solitude without five men to a square league. I will let them see what a first-rate power can effect (2) "

Soul't's
march
through
Galicia
towards
Oporto

Soul't commenced his march from Vigo, on the coast of Galicia, in the beginning of February, and reached Tuy, on the shores of the Minho, on the 10th of the same month. The river being deep and rapid, and at that season of the year a raging flood, it was no easy matter to pass it in presence of several thousand Portuguese ordenanzas, who occupied the opposite bank, which in that quarter formed the frontier of their country. At length, a small flotilla, secretly appeared in the tributary stream of the Tamuga, was sent down during the night, and ferried three hundred soldiers over to the Portuguese shore, but they were instantly

(1) South, ii. 24, 33. Nallerto, ii. 287, 301. Pieces Just.

stragglers, that they took few prisoners, and such was the reciprocal feeling of hatred excited in the breasts of the natives, that when the French entered Braga after their victory, they found it totally deserted by its inhabitants (1).

No force now existed in the northern provinces to arrest the progress of the invaders, for though Silveira, at the head of ten thousand men, still kept his footing in the mountains on the Eastern frontier, yet he was rather in their rear, and it was not to be expected that his irregular force could interpose any serious obstacles in the way of their further advance towards the Douro. Thither, accordingly, Marshal Soult bent his steps, after resting his troops some days at Braga, and on the 28th he appeared on the north bank of that river, before Oporto. The means of defence were there very considerable, and the inhabitants were animated with the most unbounded hatred of the French, both from experience of former wrongs and recent injuries, but regular soldiers and arrangements were wanting to turn to proper account the ardent passions and fervent zeal of the people. The Bishop of Oporto was at the head of affairs, a warlike and courageous prelate, whose patriotic zeal, not less than political ambition, had shone forth conspicuous since the first French invasion of the Peninsula. A series of field-works, dignified with the name of an entrenched camp, had been thrown up on the north of the city, which were armed by one hundred and fifty pieces of cannon, and fifteen hundred regular troops had been collected as a reserve to support any part of the line which might require assistance. The people were animated with the most enthusiastic spirit, all night the tocsin sounded from the churches, and at daybreak on the 29th, being Good-Friday, a tumultuous body of twenty-five thousand men hurried forth and occupied the redoubts. But such a crowd of urban citizens, even though animated by an ardent spirit, is seldom capable of withstanding, except behind regular ramparts, the assault of disciplined soldiers. Having completed his arrangements, and distracted the enemy's attention by demonstrations against his flanks, Soult bore down with the weight of his force against their centre; two redoubts, which flanked the main road in that quarter, were carried after a stout resistance, and the fire from thence having raked great part of the remainder of the Portuguese line, a general panic took place, and the whole rushed in wild confusion into the town. The French cavalry instantly charged the flying mass, now incapable of opposing any resistance, through the city, the horsemen galloped, cutting them down in vast numbers, to the edge of the Douro, such was the multitude which thronged the bridge, that part of it sunk under the weight, and hundreds were precipitated into the river, but even after this catastrophe, the crowd from behind pressed on to avoid the bloody sabres of the Imperial dragoons, and forced those in front headlong into the waves. Boats hastily collected to receive the wretched throng, were as quickly sunk by the fire of the French artillery, which had now come down to the water's edge, and discharged grape incessantly on the living stream, the river was covered with dead bodies, among which, numbers of those of women and children were to be seen, and, before the French made themselves masters of the town, four thousand corpses encumbered the banks of the Douro. Even in this extremity, however, some traces of the ancient Portuguese valour were to be discerned, and a body of two hundred devoted patriots, who had taken refuge in one of the neighbouring churches of the city, resolutely refused all proposals of surrender, and were slain to the last man. When the French sol-

(1) Opérations de M. Soult, 115, 142. Belm. 7. 63, 64. Tor. 11. 330, 3

diers were fairly masters of the town, their passions were strongly excited in addition to the usual fury of an assault, by the cruelties which had been exercised by the inhabitants on some of the prisoners who had fallen into their hands; and although Marshal Soult exerted himself to the utmost to arrest the disorders, tranquillity was not restored until about eight thousand Portuguese had fallen, and the city had undergone all the horrors which are usually the fate of towns taken by storm (1).

Whilst Soult was thus, amidst blood and carnage, forcing a hateful domination upon the northern provinces of Portugal, Marshal Ney, who had been left in charge of Galicia and Asturias, was maintaining a harassing and desultory warfare with the undaunted mountaineers of those rugged provinces. The Marquis Romana, after his check at Monterey already noticed, had desisted in the direction of Pont Ferrada, on the great road from Benevente to Corunna and having accidentally discovered a French twelve-pounder, and some ammunition and balls in a hermitage near Villa Franca, he took advantage of it to commence an attack upon the castle of that town, garrisoned by a French battalion, and after a

March 27 siege of seven days forced it to capitulate. Eight hundred prisoners were taken on this occasion—a success which loudly magnified by common rumour, so elevated the spirits of the Spaniards in these mountainous regions, that, in less than a fortnight, twenty thousand men hastened to Romana's standards. Upon this, Ney, who deemed it high time to put a stop to this alarming progress, marched out of Corunna at the head of ten thousand men, with the design of giving battle to the Spanish general wherever he could find him. He advanced to Lugo, the point where the chief roads of the country intersect each other; but Romana, who had no intention of hazarding his raw troops, who were totally destitute of artillery or cavalry, in a general action with the French veterans, suddenly shifted his quarters, and leaving Galicia with part of his troops, entered Asturias with the bulk of his forces with the design of rousing the population and animating the resistance of that province. Ney followed upon his footsteps, and marched across the

April 20 mountains to Oviedo, the capital of the latter province. King Joseph, who deemed it of the highest importance to stifle in the outset the formidable insurrection which, on the appearance of Romana, broke out in that quarter, on account of its vicinity to the great line of communication with France directed at the same time against it considerable forces from other quarters. Kellerman, who came up from Leon with nine thousand men, crossed the lofty ridge of May 12. Pajares a few days after, and having put to flight a corps of two thousand Spaniards who attempted to dispute the passage, descended to Pola in the

May 29 neighbourhood of Oviedo; while, in three days afterwards, Bonnet with a third column, eight thousand strong made his appearance at the passage of the Deba, on the coast road, and threatened the Asturian capital, by the highway from France. Balis teros, who with ten thousand of Romana's troops, endeavoured to defend the passage of that river, was defeated with the loss of two thousand men. These strong divisions had been largely reinforced by the troops of Mortier's corps which had been transferred to Orléans after the fall of Saragossa and had its headquarters at Valladolid. The concentration of such formidable forces rendered it impossible for the

May 30 Spaniards to defend Oviedo. Ney arrived on the 31st of May on the Nora, and forced the bridges of Pennastor and Tallón, and on the day following entered Oviedo. Meanwhile Romana, having left General Balasteros

(1) Tom. II. 242. 244. Chap. 291. 297. *Relat. de la Camp. de 1808.* tom. 211. 212. *Annuaire* 1808. 211.

in command of his troops, who retired from the valleys into the higher and inaccessible parts of the mountains, embarked at Gijon on the day following, and made sail for Ribadio, on the northern coast of Galicia, from whence he made his way across the hills to his brave followers, who still maintained themselves on the mountains in the interior of that province, and, joining his old soldiers near Mondonedo, reappeared in undiminished strength in the valley of the Sil. Astonished at his active adversary having thus escaped him, Ney lost no time in retracing his footsteps, and marched direct for Lugo, and on the 29th met Marshal Soult at that place, whither he had arrived on his retreat from Portugal, after his defeat by Sir Arthur Wellesley, in the manner to be immediately noticed (1).

To complete the picture of the state of affairs in the adjoining provinces of Spain, when Sir Arthur's memorable career began, it remains to notice the situation of Estremadura and New Castile after the departure of Napoléon from the Peninsula.

Total defeat of the army of the centre at Ciudad Real After the fall of Madrid, the Duke del Infantado, who commanded the army of the centre, which had fallen back towards La Mancha, with great difficulty collected twenty thousand men at Cuença in that province. So little, however, were the Spanish generals at this period aware of their inferiority to the French troops, notwithstanding all the disasters which they had undergone, that no sooner had he received accounts of the march of Napoléon with his guards and Ney's corps to attack Sir John Moore on the Carrion, in the end of December, than, deeming the capital now denuded of its principal defenders, he advanced to co-operate in the movement upon it. Victor having received early intelligence of his approach, set out to meet him with fourteen thousand foot and three thousand horse, and having defeated the advance-guard under Venegas, at Jan 4 Tarazona, the whole fell back to a strong position in front of Ucles, Jan 10 where they awaited the attack of the enemy. The battle took place on the Jan 13 15th January, and proved one of the most disastrous of the whole war to the Spanish troops. Victor, perceiving that the left of the enemy was the weakest point of their line, threw the bulk of his forces against that wing; it was speedily routed, and the reinforcements which Venegas sent up to its support were successively driven back. The whole army now retreated, but this retrograde movement was speedily converted into a disorderly flight by the impetuous charges of the terrible French dragoons. Fifteen were slain on the spot, nine thousand prisoners taken, with lery, standards, and baggage of the army. This battle destroyed the remains of the Spanish regular army, and the host which collected by Cartaojal, who was appointed to succeed the Duke in the command in the defiles of the Sierra Morena, were almost and inexperienced levies, upon whom no reliance whatever could be placed. The French disgraced their victory by the most inhuman cruelty after subjecting the clergy and principal inhabitants of Ucles to carnage, bound sixty-nine, two and two together, and massacred them in the Reign of Terror, some even in the public slaughter-houses, hundred women, the wives or daughters of the victims, who made resound with their shrieks at this atrocious iniquity, were delivered immediately after, to the passions and brutality of the soldiers, and numbers of the prisoners taken in battle, on the plea of reprisals, murdered in cold blood.

Rest of
the Span-
ish army
at Ciudad
Real.

After this disaster, the Spanish armies who had escaped from the rout of Ucles, and fled from the Somo-Sierra pass, fell back in two divisions; one towards the Sierra Morena, on the road to Seville the other, in the direction of Merida and Almaraz, with a view to the support of Badajoz. The first was under the command of Cartaojal the latter of Cuesta. Cartaojal, when his whole detachments were called in, had still, in the end of February, sixteen thousand infantry and three thousand horse, with which he observed the French under Sebastiani, who lay with fifteen thousand men at Toledo while Cuesta, with fourteen thousand infantry and two thousand cavalry, was opposed to Victor on the Tagus, in Estremadura. The Duke d'Albuquerque commanded the advanced division of Cartaojal's army, consisting of nine thousand foot soldiers and two thousand horse, with which he advanced in the middle of February towards Toledo from Carolina in the Sierra Morena, where the remainder of the corps lay. This ill-concerted attack with part only of the Spanish force, depressed by defeat, on a superior body of the enemy, flushed with victory, led to the result which might easily have been anticipated. Sebastiani hastily assembled twelve thousand men, with whom as the enemy approached Toledo, he gave battle at Ciudad Real, and routed them in half-an-hour, with the loss of a thousand slain, all their guns, and three thousand prisoners. The remainder fled into the Sierra Morena, where they were quickly reinforced by new levies from Andalusia and Grenada (1), and Sebastiani, satisfied with his success, quickly resumed his position in the capital of la Mancha.

Rest of the
army of
Cuesta at
Medina de
Victor.

A still greater disaster awaited the army collected in Estremadura, under the orders of Cuesta. This general, though a brave old veteran, was unhappily of a headstrong and obstinate disposition, and being imbued with his full share of Castilian pride and ignorance, was equally incapable of taking counsel from the lessons of experience, or yielding to the advice of abler persons than himself. These peculiarities, which appeared painfully conspicuous in the course of the campaign, on the first occasion when he acted in concert with Sir Arthur Wellesley, soon brought about a very serious disaster on the plains of Estremadura. Early in March Victor received orders from Joseph at Madrid forthwith to pass the Tagus, in order to co-operate in Napoleon's design of the general attack upon Portugal, while, at the same time Laphse, who, with a division of eight thousand men, was stationed near Salamanca, was ordered to move and advance to Abrantes. Cuesta, at this time, lay on the banks of the Tagus, and occupied the famous bridge of Almaraz—a noble structure, five hundred and eighty feet long, and one hundred and thirty four high, built by the town of Plasencia during the reign of Charles V, and which vied with the greatest works of the Romans in solidity and grandeur. But as the enemy had possession of the bridges of Talavera and Arsobizbo, further up the river, it was impossible to prevent them from crossing; and the destruction of one of the arches by Cuesta's order was to be lamented, as it destroyed a precious monument of former greatness, without contributing in any material degree to present security. Cuesta, finding himself assailed along the line of the Tagus by twenty thousand infantry and three thousand cavalry with forty two guns, fell back at all points, and, crossing the ridge of mountains which separates the valley of the Tagus from that of the Guadiana, took post at Medellin on the latter river where he contrived, by rallying all his detachments, to collect twenty thousand infantry, four thousand horse, and twenty pieces of cannon. The bridge

(1) Reg. I. 208. 212. Tow. II. 279. 282. Edm. I. 64. 65.

of Medellin was not seriously contested by the Spaniards, who were drawn up in the form of a half moon, in a line about a league in breadth, a little to the south of the river. Notwithstanding his inferiority in numbers, having only fifteen thousand foot and three thousand horse on the spot, Victor immediately advanced to the attack. The right wing of the Spaniards, where their best troops were placed, made a brave resistance, and for two hours not only held the enemy in check, but sensibly gained ground, and already the shouts of victory were heard in that quarter. Encouraged by these favourable appearances, Cuesta moved forward his centre, which also drove back the enemy, and deeming the victory now secure, the Spanish general sent forward his cavalry to charge. No sooner had they come into fire, however, than the whole horse, instead of charging the enemy, turned about and fled, trampling the victorious infantry under foot, and spreading disorder and alarm through the whole rear. The consequence of such a flight in an army, composed in great part of new levies, was immediately fatal. Great part of the Spanish army took to flight. Still, however, the victorious centre stood firm, and gallantly, by a point-blank discharge, repelled the first efforts of the victorious French dragoons, but Victor, upon this, instantly brought up cannon, and made such gaps in their ranks by his volleys of grape, that the French dragoons succeeded in breaking in, and then the whole army took to flight. The French horse pursued the fugitives for several miles, with great slaughter. The whole Spanish artillery fell into the hands of the victors, and their total loss, in killed, wounded, and prisoners, did not fall short of ten thousand men, while that of the French did not exceed a tenth part of the number. So complete was their rout, that Cuesta, who fled with a few horsemen into the recesses of the Sierra Morena, could not, for some days after the battle, rally a single battalion of infantry; and nothing but the strength and intricacy of those mountains, and the vague apprehension excited by the disaster experienced in the last campaign by Dupont, beyond them, prevented Victor, in the first moments of dismay occasioned by this victory and that of Ciudad Real, from penetrating into that beautiful province, and planting the French eagles in triumph on the minarets of Seville (1)

*Situation
and views of
Soulé at
Oporto at
this period*

While these disastrous events were prostrating the Spanish strength on the plains of La Mancha, and on the banks of the Guadiana, Marshal Soult lay inactive at Oporto, and was far from making that use of his important conquest which might have been expected from his vigour and ability. He had made himself master, indeed, of an opulent commercial city, abounding in resources of all kinds, and containing one hundred and ninety pieces of heavy cannon, besides immense warlike stores and magazines, and his advanced posts, pushing forward to the south of the Douro, subdued the whole country as far as the Vouga. But not only had the obstinate hostility of the population considerably weakened his army during its march from Galicia, but strongly impressed him with the risk of advancing farther into a country animated by such feelings, until he received more accurate accounts of the force and intentions of the English army, and advices of the co-operation of Lapisse and Victor on the eastern frontier of the kingdom. Nor was this all. While he himself overcame all hostility in front, the elements of a most serious resistance had again sprung up in the country he had passed, and blows of no inconsiderable magnitude had been struck, both by the Spaniards and Portuguese, on the fortified posts and detachments left in his rear. The Galician insurgents, taking advantage of the

absence of Soult in Portugal, and Ney with the greater part of his corps in Asturias, had collected in great strength round the depots and armed stations in the southern parts of their province ¹ Tuy, containing the principal reserve of Soult's corps, and Vigo, garrisoned by thirteen hundred men, left in guard of the military chest, were soon surrounded each by several thousand

armed peasants; and although the former, after a blockade of several weeks, was relieved by succours dispatched from Oporto, the latter, with its whole garrison and treasure, fell into the hands of the Spaniards. A still

more serious blow was struck by Silveira with his Portuguese levies, who had taken refuge, on the French invasion, in the wildest recesses of Tras-os-Montes. That enterprising officer, issuing from his retreat as soon as the French had passed on, suddenly appeared before Chaves, now filled with the sick and magazines of their army, entered the town without opposition, and in four days afterwards made himself master of the castle, with

thirteen prisoners. Encouraged by this success, he advanced on the traces of the French army reached Braga, which he evacuated upon hearing of the fall of Oporto, and crossed over to the valley of the Tamega (1), where he made himself master of the important town and bridge of Amarante, a pass of great strength, the possession of which barred the principal line of communication from the Douro to Tras-os-Montes, and the northern provinces of the Peninsula

But, in addition to these untoward circumstances, the situation of Soult, both from the intrigues with which he was surrounded, and those in which he himself was engaged, was one of a very peculiar and almost unprecedented kind. While the example of thrones having been won by soldiers' hands in the case of Napoléon Murat and more recently, Jérôme and Joseph, had inspired the marshal with extravagant ideas of the destiny which might await him in his Lusitanian provinces, the dreadful privations which they had recently undergone, and the apparently interminable extent of the wars in which the Emperor was engaged, had laid the foundations of a wide-spread disaffection among his followers. Thus a double set of intrigues was going forward in the army at Oporto at the same time. While the French party in the northern provinces of Portugal were preparing an address, which, in a few days, was signed by thirty thousand persons, to Soult, praying him to assume the sovereignty of their country, and that officer, yielding to the flattering illusion, was preparing proclamations in the name of Nicholas I, King of Portugal (2), and endeavouring, though without success, to gain the consent of his generals of division to the usurpation, a numerous body of superior officers in his army were organizing the ramifications of a vast conspiracy among the troops, the object of which was to revolt against the authority of Napoléon, restore a republican government in France, seize Soult and such officers as should adhere to his fortunes, and put a stop to the devastating wars which he was waging, to the detriment alike of his own country and the world. Secret advances, in relation to both these projects, were made to Sir Arthur Wellesley soon after he landed; but that cautious general, without implicating himself or his government in such dark designs, continued steadfast in his plan of terminating all these chimerical

"It is certain that a proclamation was printed at Soult's headquarters, addressed to the generals of division, to be published as an order of the day in

which he announced himself King of Portugal and Algarve, subject only to the approval of the Emperor, of which he entertained no doubts. Deterred one of his generals, who positively refused as well as Lannes to go into the project, long afterwards showed a copy of this proclamation at Paris. — *Tre D.* vii. 615. 617.

projects, by expelling Soult from Portugal by force of arms (1); while Napoléon wisely and magnanimously overlooked the whole affair, and wrote to Soult that "he recollected nothing but Austerlitz," where he had particularly distinguished himself (2)

First mea-
sures of
Wellington,
in Portugal
April 22

It was in this situation of affairs in Spain and Portugal that Sir Arthur Wellesley, who shall hereafter be called WELLINGTON, LANDED AT LISBON, and from this time forward, the historian, in narrating the annals of the Peninsular campaigns, instead of a confused and involved narrative of separate actions and operations, which no art can render interesting to the reader, and which it requires no small effort in the writer himself to apprehend, finds himself embarked on a connected and consecutive stream of events, at first inconsiderable, and scarcely attended to in the shock of vast armies on the Danube, but which steadily increased in depth and magnitude, until it attracted the attention of all Europe, and finally overwhelmed the empire of Napoléon in its waves

Reasons for
marching
against
Soult at
Oporto

Two different plans of operation presented themselves to the choice of the English general, when he took the command in Portugal. The first was to move to the eastward, and combine an attack on Victor, with Cuesta, in the valley of the Tagus. This plan, which was strongly recommended by the Spanish general, had the advantage of striking at once at the heart of the enemy's power, and by compelling the concentration of his principal forces to cover Madrid, would prove a seasonable relief to the patriot bands in all quarters, and prepare the means of renewed resistance in the remote provinces, especially of Andalusia. Wellington was not insensible to the importance of these considerations; and he declared, two days after his arrival in Portugal, that he was convinced "the French would be in serious danger in Spain, only when a great force shall be collected which shall oblige them to collect their troops, and a combined operation of the force in this country, with that under Cuesta, may be the groundwork of such extended operations." But, on a more mature consideration, it was justly deemed more expedient to commence operations by clearing the northern provinces of Portugal of the enemy. Much dissatisfaction would, with reason, be excited in that country, if, while one-third of its territory was still in the hands of the enemy, a portion of the native and all the allied forces should be employed in a foreign operation; the English army might be exposed to considerable hazard, if, while far advanced into the interior of Spain, its line of communication were to be menaced by the advance of Soult from Oporto, and it was of no small consequence, in a war in which so much depended on opinion and early success, to engage at first in an operation within the compass of the British army alone (3), rather than one in which much would depend on the co-operation of the Spanish forces, too clearly proved, by woful experience, to be incapable of bearing in the field the shock of the Imperial legions.

Marches
against
Soult

Operations against Soult being resolved on in the first instance, Wellington moved his force in two columns into the north of Portugal. The right, consisting of six thousand foot and one thousand horse, under Beresford, was to advance by Viseu and Lamego, towards the upper Douro, in order to co-operate with Silveira, who, it was hoped, still held the line of the Tamego, and the important bridge of Amarante, and thus turn Soult's left flank and cut him off from any retreat by _____ or at _____

(1) Tor ii 344, 345 Wellington to Lord Castlereagh, 7th May, 1809 Gur iv 288

(2) Sav iv, 128

(3) Well to 247 and 249, to

Tras-os-Montes to Astorga and Leon the left, under Wellington in person, after assembling; at Coimbra, consisted of fifteen thousand infantry and sixteen hundred cavalry, was to move direct by the Vouga upon Oporto. Hopes were entertained that a considerable part of Soult's army might be cut off in its retreat from the Vouga to the Douro and measures had been very skilfully taken to surprise the enemy and secure that object but Soult got information of the approach of the English, and the conspiracy in his own

May 2. army, just in time to prevent the catastrophe; the principal leaders were suddenly arrested, and the troops rapidly withdrawn behind the Douro, the bridge over which at Oporto was prepared for firing, and all the boats that could be discovered brought over to the northern bank of the river. At the same time, Lobson was dispatched to the rear, with a strong division, to clear the banks of the Tamega, and secure the bridge of Amarante and, after some days' sharp fighting, he succeeded in that object, and dislodged Silveira from that important post (1). Mackenzie, meanwhile, with three thousand British and four thousand Portuguese troops, was moved forward to Alcantara and the eastern frontier of the kingdom, to observe Lapasse and Victor, and afford some protection to that exposed part of the Portuguese dominions.

Passage of
the Douro.
May 12.

The British advanced posts fell in with the enemy on the 11th May; but, by a rapid retreat, they succeeded in extricating themselves from a situation of some peril, crossed the Douro, and burned the bridge of boats at Oporto. The English standards soon appeared in great strength on the southern bank, and the French battalions lined the northern shore but the broad Douro rolled between the hostile forces, and it appeared next to impossible, without either bridge or boats, to cross the river in face of a nearly equal force. Early on the morning of the 12th, however, General Murray succeeded in collecting some boats four miles up at Avintas; and three boats having, by great daring, been obtained by Colonel Waters, by crossing in a small skiff opposite the seminary at Oporto, twenty-five of the Buffs were quickly ferried over in the first boat, and the two others rapidly following, about a hundred men got a footing under cover of that building unperceived by the enemy. The anxiety of the people, however, soon drew the enemy's attention to the spot; and no sooner were the red coats perceived, than a tumultuous noise of drums and shouts was heard in the city, and confused masses of the enemy were seen hurrying forth in all directions, and throwing out clouds of sharpshooters, who came furiously down upon the seminary. The building was soon surrounded; the fire of the enemy visibly augmented faster than that of the British; General Paget, who commanded the Buffs, was struck down severely wounded; the eager gesticulations of the citizens from the houses on the opposite bank, implored relief for their bereaved allies, now apparently doomed to destruction. So violent was the struggle, so critical the moment, that Wellington himself was on the point of crossing to share the dangers of his advanced guard; and it was only the entreaties of his friends, and his own just confidence in General Hill, the second in command, which prevented him from doing so. By degrees, however the fire of the British artillery, consisting of twenty guns, placed on the heights of Villa Nova, on a projecting promontory of the southern bank, opposite the seminary, became so powerful, that it drove the enemy from all sides of the building, excepting the iron gate on the north, where the Buffs were a match for them. Some daring citizens crossed over with large boats to Sherbrooke's

(1) Well to Mackenzie 10 May 1809. *Gen. In.* 263 and 272. *Xap. II.* 213-5. *Tor. II.* 311, 312.

division, further down the river, which was soon ferried over in large bodies; and hesitation became visible in the French columns, which was increased to confusion, when Murray's columns, on the extreme right of the British, began to appear and threaten their communication with Amarante and the great line of retreat. Horse, foot, and cannon, now rushed tumultuously towards the rear, the city was hastily evacuated, amidst the enthusiastic cheers of the people. Hill's central column, now strongly reinforced by the passage of the 48th and 66th regiments, debouched fiercely from the seminary, and, by repeated volleys on the flank of the flying columns, threw them into utter confusion, and nothing but the inactivity of Murray on the right, who did not make the use he might of his advantageous position on the flank of the retreating host, preserved them from total ruin (1). As it was, they lost five hundred killed and wounded, five guns, and a large quantity of ammunition, in the action: seven hundred sick were taken in the hospital, and fifty French guns in the arsenal; and so complete and unexpected was the surprise, that Wellington, at four o'clock, quietly sat down to the dinner and table service which had been prepared for Marshal Soult.

Soult's
hazardous
situation

To have crossed such a river as the Douro, in presence of such a general as Soult, with a force little, if at all, superior to his own, was a most brilliant opening of the campaign, and was justly regarded as reflecting as much credit on the daring and skill of the young English general, as it cast a shade on the vigilance and circumspection of the veteran French marshal. But Napoleon's troops were, beyond all others, capable of remedying such a disaster, and, notwithstanding the confusion into which they had been thrown by their precipitate retreat, before night-fall order was restored, and the army securely rested under the protection of a vigilant and powerful rearguard. Next morning Soult was quietly resuming his march for Guimaraens, in the direction of Amarante, when he received the stunning intelligence that that important post; commanding the only bridge and defile over the Tamega, and the only line of retreat practicable for artillery, was already in the hands of the enemy. In effect, Beresford, having crossed the Douro further up, had attacked Loison's outposts at Amarante on the morning of the 12th, with such vigour that he fell back from that post in the direction of Oporto, and met the retreating columns evacuating that city late at night. Soult's situation now seemed all but desperate: the well-known strength of the bridge of Amarante precluded the hope that it could be forced with discouraged and retreating troops, now that it was held by regular British and Portuguese soldiers: the great road to Braga was already in the possession of the enemy, as they held Oporto, from which it issued, and it could be regained only by cross hill roads, totally impracticable for artillery, and almost unpassable for mules or horses. Yet not a moment was to be lost: already the British outposts began to appear, and the thunder of their horse artillery was heard at no great distance. The energy of the French general, however, now fully aroused, was equal to the crisis. He instantly resolved to abandon his artillery, ammunition, and baggage, and make his way, with all imaginable expedition, across the mountains to the Braga road. This resolution was immediately adopted, all the powder which the men could not carry was blown up near Penafiel on the morning of the 15th, and the French army, abandoning its whole carriages, rapidly ascended the valley of the Sousa by roads almost impracticable, even for the cavalry, rejoined Loison at Guimaraens, and continuing its passage over the mountains, and leaving

Braga on its left, at length retained the great road at San-Joad del Roy, a short way beyond that town (1)

His dis-
tressed
retreat
and
escape
from
Oporto.
Notwithstanding the sacrifice of the whole *matériel* however, Soult's retreat was extremely disastrous, even to the soldiers of his army. When he rejoined Lolson at Guimaraens, it became necessary to sacrifice all the artillery and ammunition belonging to that division heavy rains, ever since the 15th, impeded the progress of the troops through the mountains, the stragglers multiplied at every step frightful defiles, beside raging torrents, formed their paths; the shoes of the soldiers were worn out they could hardly bear their arms and, with the whole remaining mules and horses, all the sick and wounded fell into the hands of the British. The streams, every where swollen by the excessive floods, were unpassable, except by their bridges, and the arch of Ponte Nova, over the roaring torrent of the Cavado, was the only line of retreat which lay open, after the occupation

May 1. of the road to Braga by Wellington, and Amaranto by Doreford. This bridge was occupied, and had been partially destroyed by the peasants unless it could be regained, the hour of surrender had arrived; for the army was struggling through a narrow defile between awful precipices, almost in single file. Wellington, in close pursuit, thundered in the rear, and would infallibly attack on the following morning. In this extremity, the heroic courage of Colonel Duloué, who, in the dark, with twelve grenadiers, crept along a narrow ledge of masonry which was left of the arch, surprised the Portuguese guards, and made himself master of the bridge, extricated the army from this apparently hopeless situation, and opened up the road to Fontalegre, where the whole arrived perfectly exhausted and in woful plight, late

May 2. In the evening of the 17th Soult continued his retreat across the
May 20. Galician frontier, reached Orense on the 20th, and on the day fol-
May 21. lowing met Ney at Logo, who had returned from his Asturian expedition,

and dislodged an irregular body of twelve thousand peasants who were blockading three French battalions in that place. "His condition," says Jomini, "was much more disastrous than that in which General Moore had traversed the same town six months before (2)." The French disgraced this gallant retreat by savage cruelty the peasants were massacred, and their houses burned by them along their whole line of march, without remorse (3) but their own losses were very severe, amounting to about a fourth part of the whole troops, which were attacked on the Douro, besides all their artillery, ammunition, and baggage, and even a considerable part of their muskets.

Wellington
and
his
troops
proceeded
for
operations
in
Portugal.
After this important success, Wellington returned to Oporto, from whence he moved his troops forward as rapidly as possible to Abrantes, and engaged in active preparations for co-operating with Cuesta, and advancing through Estremadura towards Madrid. Victor had not improved his important victory at Medellin so much as might have been expected, especially considering the great amount and excellent quality of his cavalry, which were of inestimable importance in the level plains which run up to the foot of the Sierra Morena. But the operations of the English general were impeded for above a month by the want of money of which, at this period, he bitterly complained; and which led him to suspect at the time that government had engaged in an enterprise beyond their strength. In truth, however, the finances of Great Britain, as the event proved, were fully equal to the strain, and the difficulty arose entirely from

the extraordinary scarcity of *specie*, at that crisis, in the British islands, arising partly from the profuse issue of paper to carry on the prodigious mercantile operations and national expenditure of the period, and partly from the vast consumption and requisitions of the French and Austrian armies during the campaign on the Danube. At the same time, the want of warlike experience was severely felt in the army, both on the part of the officers and soldiers. The commissariat, in all its branches, was very defective. Released, by a month's intermission from active operations, from the excitement and dangers of actual warfare, the troops gave themselves up to disorders of every kind, plunder was universal along their line of march, the country, for miles on either side, was filled with stragglers, and the instant the common men got out of the sight of their officers, outrages were committed without end on the defenceless inhabitants, who had hailed their arrival as deliverers. To such a height did these evils arise, that Wellington, in several regiments, directed the roll to be called every hour, he largely augmented the powers and force at the disposal of the Provost Marshal, and in the bitterness of his heart, more than once wrote to government, that the British army, "excellent on parade, excellent to fight, was worse than an enemy in a country, and liable to dissolution alike by success or defeat (1)." Doubtless the large arrears of pay due at this time to the army, amounting to £ 500,000, and in several regiments to two months' pay, contributed in a great degree to this disgraceful state of things, and it is interesting to trace the early difficulties of that commander in training his troops to the duties of real warfare, who afterwards declared, in the just pride of experienced achievement; "that with the army he led from Spain into France, he could have gone any where and done any thing." But these facts are highly valuable, as demonstrating how essentially the military is an art dependent upon practice for success. how little even a rigid discipline, gallant officers, and admirable equipment, can compensate for the want of actual experience, what difficulties the commander had to contend with, who was compelled thus to educate his officers and his soldiers in presence of the enemy, how much allowance must be made for the disasters of the Spanish troops (2), who, without any of those advantages, were at once exposed to the shock of the veteran legions of Napoleon; and what must have been the sterling courage of those men, who, even when thus experienced, were never once brought in the Peninsula into fair combat with the enemy, that they did not successfully assert the inherent superiority of the Anglo-Saxon race.

Plan of a
combined
movement
on Madrid
June 27

Remittances to an adequate amount in gold bars and specie, having, in consequence of the pressing representations of the English general, been at length obtained, on the 25th June, for the army, and a more efficient system of control established by his unceasing vigilance among the troops, Wellington, in the end of that month, commenced his march from Abrantes, in the direction of Alcantara and the Spanish frontier. His plan at first was, that Cuesta should maintain himself in some strong position towards the foot of the Sierra Morena, and if possible amuse Victor so as to retain him in that quarter, to the south not only of the Tagus, but the Guadiana, while he himself moved on Plasencia and Talavera, so as to cut off his retreat to Madrid, and prevent his junction with the forces of Sebastiani in La Mancha, or Joseph in the capital. This plan, however, which had every thing to recommend it, was found to be impracticable from the obstinacy of

(1) Curwen iv 407 Well to Castlereagh, 17th May, 7th June, 16th June 1809 iv 343, 352, 407, 2

Cuesta, who refused to retire any farther back than the banks of the Guadiana, and the impossibility of finding any position there, where there was the least chance of his making a successful stand if attacked by Victor. The English general, therefore, was compelled to alter his views, and adopt the more

July 1. hazardous plan of a junction and combined operation of the two armies. With this view, the British army marched by Castelbranco, Coria, and Plasencia; while the Spanish advanced to the same point by the bridges of Almaraz and Arsobizbo. Victor fell back as Wellington advanced, and the two

July 20. armies effected their junction at Oropesa, on the 20th July; while Sir Robert Wilson, with his brave Lusitanian legion and three thousand Spaniards, advanced on their left, from the Alberche to the mountains of the Escorial, with whom he approached and actually put himself in communication with Madrid. The forces which thus menaced the capital were very considerable: the English were twenty-two thousand strong, of whom three thousand were cavalry, with thirty guns. Cuesta had thirty-two thousand infantry and six thousand horse, with forty-six cannon. And Venegas, who was to advance on Toledo, and join the other two armies in the neighbourhood of the capital, was at the head of twenty-three thousand infantry and three thousand cavalry—in all above eighty-five thousand men, but of different nations, independent of each other, and of whom the British alone could be relied on for movements in the field in presence of the enemy. Beresford, meanwhile, with fifteen thousand Portuguese, established his headquarters at Fuente Guinaldo near Ciudad Rodrigo, but his duty was merely to protect the frontier from insult, and observe the enemy at Salamanca, not take any active part in the important operations which were in contemplation (1).

The approach of forces so considerable, all converging towards the capital, produced an alarming fermentation, the sure proof as Jomini observes, of the judgment with which the enterprise had been conceived. Joseph no sooner received intelligence of the formidable forces with which he was menaced, than he dispatched the most pressing orders to Soult and Ney, who were at Astorga on the frontiers of Leon, and Mortier, who lay at Valladolid, to unite their forces and descend as rapidly as possible through the pass of the Puerto de Banos, which forms the only line of communication through the great central chain of Spanish mountains from the valley of the Douro to that of the Tagus, to Plasencia, so as to menace the communications of the English army with Lisbon; he himself, leaving only three weak battalions in the Retiro, marched with six thousand of his guards and five thousand other troops towards Toledo, which was

July 22. signed as the general rendezvous of all his forces; Sebastiani was hastily ordered to the same place, whither also Victor fell back from Talavera. Before doing so, however, Victor narrowly escaped destruction on the 23d, when the British troops were all in readiness for the attack, and Victor alone was exposed to their blows. The events which followed leave no room for doubt, that if Wellington had attacked, even unsupported by the Spaniards on that day, he would have gained a glorious victory. But it could have led to no beneficial result, menaced as the British army was by the descent of an overwhelming force in its rear. Cuesta refused to fight on that day as his troops were not prepared; and next morning, when the columns of attack were formed at daylight, the enemy had disappeared, having retired in the night in the direction of Toledo (2).

Joseph advancing to Talavera, by repeated victories, and under the direction of experienced officers, Joseph deemed himself sufficiently strong to resume the offensive, and, contrary to the strenuous advice of Jourdan, and, indeed, the dictates of common sense on the subject, gave orders to advance, before the co-operation of Soult, Ney, and Mortier, who could not arrive on the Tagus before the 1st of August, could be relied on. He quickly repulsed the advanced guards of Cuesta, which, elated by the continued retreat of the French before them, were advancing in a disorderly manner, dreaming of Madrid and the Pyrenees, and, on the 26th, the French troops, driving Cuesta's advanced posts before them, reappeared in great strength in front of TALAVERA. The English general had only sent two brigades in pursuit of the enemy beyond the Alberche, having already begun to experience that pressing want of provisions and the means of transport, which soon had such important effects on the issue of the campaign; and, in consequence, resolved not to advance with the main body of his force beyond that stream, till some arrangement was made for the supply of these necessary articles. The whole allied army took post at Talavera, in a battle-field well calculated by the diversity of its character for the various qualities of the troops who were there to combat for the independence of the Peninsula. On the right, the dense but disorderly array of the Spaniards, with their flank resting on the Tagus, occupied the town and environs of Talavera, with the olive woods, intersected with inclosures, which lay along its front, filled with light troops, and their numerous artillery planted in an advantageous position along the front of their line, and commanding all the avenues by which it could be approached. Far beyond the inclosures, the British stood in the open field on the left, on the uneven ground which extended from the olive woods to the foot of the hills, forming the first range of the Sierra de Montalban. A deep ravine, in the bottom of which flowed the Portina rivulet, lay at the foot of these hills, and formed the extreme British left, the streamlet turning sharp round, and winding its way through to the Tagus at Talavera, ran across the front of the whole allied line. On the heights, on one side it, the French were placed in a strong position, with their batteries on the right, placed on some lofty heights overlooking a great part of the field of battle: right opposite to them stood the British line, on a similar ridge of eminences, and their guns also sweeping the open slope by which they were to be ascended. In the centre, between the two armies, there was a commanding hillock or mount, on which the English had begun to construct a redoubt, and on which some Spanish guns were placed, it was evident, that on its possession the fate of the approaching battle, would in a great degree depend (1).

Bloody
battle on
the 27th
July

About three o'clock on the afternoon of the 27th, Victor's advanced guards approached the British outposts, stationed beyond the Portina streamlet, and immediately commenced an attack. Some of the English regiments, which had then seen fire for the first time, were thrown into confusion by the suddenness of the onset, and Wellington, who was with the advanced posts, narrowly escaped being made prisoner while ten thousand Spaniards on the right, were so alarmed by the French light cavalry riding up to them and discharging their pistols, that they broke after a single discharge of their muskets, and flying tumultuously several miles to the rear, gave out that all was lost. Wellington, however, brought up some veteran troops to the scene of danger, and checked the disorder, while at the same time the British advanced posts, covered by the brave 48th regiment, and 5th battalion of the 60th, retired to the position of the main body on the other side of the stream. Encouraged by this success, Victor, as night approached, was induced to hazard an attack on the English left, stationed on their line of heights, and for this purpose Ruffin was ordered to charge with his division, supported by Villatte, while Laplace fell on the German Legion on their right, so as to prevent assistance being rendered from the other parts of the line. The forces which thus were brought into action by the French, were above twenty thousand men, and the assault was so quick and vigorous, that though Colonel Donkin gallantly repulsed the corps which attacked his front, his left flank was at the same moment turned by several French battalions, who, having advanced unperceived through the valley, suddenly appeared with loud shouts on the heights in his rear. General Hill, however, with the 20th regiment, charged them without an instant's delay, and drove them down the hill, and immediately bringing up other battalions, formed a convex front, facing outwards, which effectually covered the British left. It was full time; for Laplace, soon after, opened a heavy fire on the German Legion on the right, and fresh battalions of Ruffin's division, emerging from the hollow, resolutely advanced to storm the heights on the left. It was now dark: the opposing lines approached to within thirty yards of each other, and the frequent flashes of the musketry enabled the dauntless antagonists to discern each other's visages through the gloom. For a few minutes the event seemed doubtful but soon the loud cheer of the British soldiers was heard above the receding roar of the musketry, and the French fell back in disorder into the hollow, while Laplace drew off on the right and the soldiers, on either side, worn out with fatigue, sunk into sleep around the fires of their bivouacs (1).

Drop the
battle on
the 28th.

Not discouraged by this bloody repulse, which cost him above eight hundred of his best troops, Victor, contrary to the opinion of Jourdan, who contended strenuously that all offensive operations should be suspended till Soult was sufficiently near to threaten the enemy's communications, prevailed on Joseph to permit him to renew the battle on the following morning. The centre of the British being deemed too strong, by reason of the ravine which covered their front, it was determined to renew the attack on the heights on the left. At eight o'clock, Ruffin's division again advanced to the attack, supported by Villatte's, and the French troops with an intrepid step ascended to the summit of the hill, while the artillery on both sides kept up a vehement fire, and soon made frightful chasms in the opposing ranks. Having gallantly made their way to the summit, the French instantly closed

with Hill's division, and for half an hour a desperate struggle took place, in the course of which Hill himself was wounded, and his men were falling fast: but the French loss was still greater, insensibly their line gave ground, and at length, being forced back to the edge of the slope, the whole broke, and were hurled in wild disorder to the foot of the hill. Fearful, from these repeated attacks, that the enemy would at length succeed in turning his left, Wellington placed his cavalry at the entrance of the valley, obtained from Cuesta the succour of Bassecourt's division, which was stationed on the hills beyond its outer side, and two guns to reinforce Hill's batteries, which were bravely served by the Spanish gunners and rendered good service during the remainder of the day (1).

Temporary
suspension
of the battle
during the
heat of the
day

The extreme heat of the day now for a few hours suspended the combat, during which the lines were re-formed on both sides, the ammunition waggons replenished, and the wounded withdrawn to the rear. In this interval Joseph held a council of war, in which Jourdan again renewed his counsel that they should retire to the Alberche, and Victor urged that they should recommence the attack. The latter advice prevailed, chiefly in consequence of the arrival of a courier from Soult, announcing that he could not arrive at Plasencia till the 4th August, and the threatening advance of Venegas, who was already near Aranjuez. Meanwhile, the troops on either part, overcome by thirst, straggled down in great numbers to the streamlet which ran in the bottom of the ravine which separated the two armies: not a shot was fired, not a drum was beat, peaceably the foemen drank from the opposite banks of the same rill, and not unfrequently the hands which had so recently before been dyed in mutual slaughter, were extended and shaken across the water in token of their mutual admiration of the valour and constancy displayed on both sides. Wellington, meanwhile, was seated on the grass on the top of the hill which had been so obstinately contested, eagerly surveying the enemy's movements, which indicated a renewal of the conflict with redoubled forces along the whole line. At this moment Colonel Donkin rode up to him, charged with a message from the Duke d'Albuquerque, that Cuesta was betraying him. Calmly continuing his survey, Wellington desired Donkin to return to his brigade! In a few minutes a rolling of drums was heard along the whole French line, the broad black masses of the enemy appeared full in view, and preceded by the fire of eighty pieces of artillery, fifty thousand men advanced to the attack (2).

Heroic
valour of
the British

The French columns came down then side of the ravine at a rapid pace, and though a little disordered by crossing the stream, mounted the opposite hill with the utmost intrepidity. On the extreme British right, Sébastien's corps fell with the utmost fury on General Campbell's division, and by their loud cries indicated the confidence of immediate victory, but their attack was in column and the English were in line, and then the inherent vice of that arrangement became at once apparent. The British regiments which stood against the front of the mass, drawn up three deep, kept up an incessant rolling fire on the enemy, while those on either side, inclining forwards and directing their fire against both flanks of the column, soon occasioned so frightful a carnage that even the intrepidity of the Imperial veterans sunk under the trial, and the whole broke and fell back in confusion. On rushed Campbell's division, supported by two regiments of Spanish infantry and one of cavalry, who were inspired with unwonted steadiness

(1) Wel Desp 29th July Gurw iv 506 Vict et Cong xix 285, 286 Jom iii. 345, 346 Nap: ii. 396, 400

(2) Lord Castlereagh's Speech, 1st Feb 1809, Parl Deb xv 293 Vict et Cong xix 285, 286; Nap. 398, 401. Wel Desp Gurw iv, 506. 507

by the example of their allies, and pushing the disorganized mass before them, completed their discomfiture, and took ten pieces of cannon. At the same time, Ruffin and Villatte's divisions were descried marching across the valley on the enemy's extreme right. In order to turn by the foot of the Sierra do Montalban, that blood-stained hill which they had in vain sought to carry by assault. Wellington immediately ordered the 1st German hussars and 23d dragoons to charge the column in the bottom of the valley. On they went at a canter, but soon came to a hollow cleft which lay right across their path, and which seemed impossible to cross. The veteran German Arensteheld, with characteristic coolness, reined up his men on the edge of the hollow; but Seymour, at the head of the 23d, with true English hardihood, plunged headlong down, and though half of his men fell over each other in wild confusion in the bottom, where Seymour was wounded, the survivors, under Ponsonby, coming up by twos and threes, charged right on, and disregarding the fire of Villatte's columns, through which they passed, fell with inexpressible fury on Strolz's brigade of chasseurs in the rear, which, unable to resist the shock, opened its ranks to let them through. The heroic British dragoons, however, after this marvellous charge, were assailed, when blown and disordered by success, by a regiment of Polish lancers and a body of Westphalian light horse, and broken with great slaughter. The survivors, not half of those who went into action, found shelter on the broken ground behind Bassecourt's division of Spanish infantry on the mountains beyond (1).

Their immediate danger and final victory.

While these terrible conflicts were going on in the two wings of the army, the centre, where Sherbrooke commanded, and the German Legion and guards were placed, was exposed to a still severer trial. The great batteries, mounting fifty guns, which there stood right opposite to the British line, at the distance of only half cannon-shot, made fearful chasms in their ranks, and the English guns, greatly inferior both in number and weight of metal, could make no adequate reply. Under cover of this fearful storm, Laplisse's division crossed the ravine in their front, ascending the opposite hill concealed by the smoke, got close to the British line, and already set up the shouts of victory. They were received, however, by a close and well-directed volley, followed by a general rush with the bayonet, which instantly threw the assailants back in great confusion, and the guards, following fast on their heels, not only drove them down the hill, but crossed the rivulet at the bottom, and were soon seen in disorderly array streaming up the opposite bank. Here, however, they met the enemy's reserve, who advanced in close order through the throng; powerful batteries, discharging grape, tore down whole ranks at every discharge on one flank, and some regiments of cavalry threatened the other. The guards, thus sorely pressed, gave way and fled in confusion. The disorder quickly spread to the Germans on their flank, and the whole British centre appeared broken. The danger was imminent: but Wellington, who had foreseen the consequences of the gallant but inconsiderate advance of the guards, had provided the means of restoring the combat. Instantly pushing forward the 48th regiment which was in reserve, he directed it against the right flank of the French, who, in their turn, were somewhat disordered by success. When this gallant regiment got into the throng beyond the stream, it was so beset by the crowd of fugitives, that it became necessary to open the ranks to let them through: but immediately closing again, it advanced in beautiful array against the flank of the pursuing French, and, by a destructive volley, compelled them

(1) *Vict. et Camp.* 218. 219. 222. *Rep.* 41. 481. 483. *Revue* 215. *Well. Disp.* 25th July 1808. 1. 204.

to halt. The guards and Germans immediately rallied, faced about, and renewed their fire, and Cotton's brigade of light cavalry having come up on the other flank at the same time, the advance of the French was effectually checked in the centre. This was their last effort: their columns now drew off in good order, and retired across the Alberche, three miles in the rear, which was passed in the night. Shortly after the firing ceased, a frightful incident occurred: the grass, dried by the excessive heat, accidentally took fire, and, spreading rapidly over part of the field, scorched cruelly numbers of the wounded of both armies (1).

Such was the glorious battle of Talavera, the first for a century past in which the English had been brought to contend on a great scale with the French, and which in its lustre equalled, in its ultimate effects exceeded, the far-famed days of Crecy and Azincourt. Two-and-twenty thousand British had engaged for two successive days, and finally defeated above forty-five thousand French, for the aid which the Spaniards afforded in the battle was very trifling, and not more than ten thousand of the enemy, including the King's guard remained to watch their lines in the olive woods of Talavera, who never fired a shot. Seventeen pieces of cannon, several tumbrils, and some hundred prisoners, taken in fair fight, were the proud trophies of this hard-fought action. The loss on both sides was enormous, but greater on that of the French than the British, owing to their much superior numbers and their system of attack in close column. The latter lost 6268 in the two days: that of the French is now ascertained, from the returns in the war office, to have been 8794 (2). "This battle," says Jomini, "at once restored the reputation of the British army, which during a century had declined. It was now ascertained that the English infantry could dispute the palm with the best in Europe." In vain the mercantile spirit, which looks for gain in every transaction, and the virulence of faction, which has ever accompanied the noblest events in history, fastened on this far-famed field, complained of the subsequent retreat, and asked for durable results from the laurels of Talavera. These cold or selfish calculations were answered by the exulting throb of every British heart, the results asked for were found in the subsequent glorious career and long-continued security of England. Far from every generous bosom be that frigid spirit which would measure the importance of events only by their immediate gains, and estimate at nothing the lasting effect of elevation of national feeling! Character is the true strength of nations: historic glory is their best inheritance. When the time shall come that the British heart no longer thrills at the name of Talavera, its fruit will indeed be lost, for the last hour of the British empire will have struck.

*March of
Sault, Ney,
and Mortier
into Wel-
lington's
rear*

On the day following the battle, General Craufurd, with three thousand fresh troops, joined the English army and replaced nearly half of those who had been disabled in the battle. This gallant band had, at the distance nearly of sixty miles from the field of battle, met several Spanish runaways from the action of the 27th, who told them the English army was defeated and Lord Wellington killed. Pressing on only the more eagerly from this intelligence, Craufurd, after giving his men a few hours' rest and withdrawing fifty of the weakest from the ranks, hurried on with the utmost expedition with the remainder, and reached Talavera at eleven in the morning of the 29th, having passed over, in regular order,

sixty-two English miles in the preceding twenty-six hours a march which deserves to be noted as the greatest made by any foot soldiers of any nation during the whole war, as that made by Lord Lake with the English cavalry, before the battle of Furruckabad, was the extreme stretch of horsemen (1). But, notwithstanding this seasonable reinforcement, Wellington had soon sufficient cause for anxiety for, on the 2d August, as he was preparing to march to Madrid, intelligence arrived that Soult, with a very large force, had penetrated, without opposition, through the Puerto de Bances, the Spaniards stationed in that important pass having abandoned it without firing a shot, and entered Plasencia, directly in the British rear and on the line of their communications with Lisbon, with thirty four thousand men (2).

Known to
Gallia and
Astoria
which had
led to this
force coming
to Wellington.

This formidable and unlooked-for apparition, had been occasioned by the concentration of the whole forces of Soult, Ney, and Mortier, in consequence of the pressing orders of Joseph, who, after uniting near Salamanca, had descended by forced marches through Leon and the mountains forming the northern barrier of Estrema-

dura, and appeared just in time to interfere with decisive effect on the theatre of the vital operations on the banks of the Tagus. Their concentration at this crisis was owing to a very singular and fortuitous chain of events. Soult, after he had brought the ghastly crowd which formed the only remains of his once splendid corps to Lugo, and delivering the garrison imprisoned there by the Galicians, deeming himself not strong enough to effect any thing among the rugged mountains of that province, and having no magazines or stores to recruit his troops, resolved to make the best of his way into Old

June 27. Castle and having set out in the end of June for Benavente and Zamora, he put his troops into cantonments on the Esla in the beginning of July. Meanwhile Ney, thus left in Galicia, had experienced a variety of disasters. After the conference at Lugo with Soult, he had moved towards Vigo with a view to regain possession of that important fortress and seaport, and stifle the insurrection which, from the aid of several ships of war in the harbour, was there daily becoming more formidable. To reach it, however, he required to pass the bridge of St.-Payo in the valley of Soto-Mayor, where the road crosses the river Octaven. The Spaniards, ten thousand strong, with several pieces of heavy cannon, were there entrenched in a strong position on the opposite side of the river; the bridge was cut; and several gun-boats, manned by English sailors, at its mouth, a short way further down, prevent-

July 7. ed the passage from being turned in that direction. Driven thus to carry the passage by main force, Ney led on his troops gallantly to the attack but the well-sustained fire of the Spaniards defeated all his efforts. He renewed the assault next day with no better success, and despairing of forcing the position, he retired with the loss of three hundred men. Discouraged by this reverse, and finding himself abandoned by Soult in a country swarming with enemies, and extremely difficult for military operations, Ney resolved to abandon Galicia. He was the more confirmed in this resolution from the opinion which he entertained, that he had been scandalously deserted and left to perish by Soult and under the influence of these mingled feelings of disappointment and indignation he abandoned Ferrol and Corunna, and,

July 22. collecting all his detachments, evacuated the whole province, and
July 26. reached Astorga in the end of July. Asturias had previously been evacuated by Kellerman and Donnet who had arrived at Valladolid on the

(2) Wellington to Lord Exmouth, August 4.
Corr. in 221 MSS. Pap. in 112, 113.

June 20. 20th June, in order to co-operate in the siege of Ciudad Rodrigo, which at that period was in contemplation, after Santander had been carried
 June 10. by assault by the Spaniards some days before, and retaken, with
 June 10. great slaughter, by the latter of these generals. Thus, by a singular combination of circumstances, at the time when Wellington made his grand advance towards Madrid, Soult, Kellerman, and Bonnet, with above thirty thousand men, were assembled in the north of Leon, ready to descend on his line of communication with Lisbon, and Ney was rapidly following in their footsteps from the extremity of Galicia (1)

Wellington, thus menaced by a superior force in rear, at the same time that an army defeated, but still superior in number, lay in his front, had still the advantage of a central position between the two, and, if the quality of the whole allied forces had been alike, and he had commanded the whole, he had the means of striking the some redoubtable blows on the right and left, with a force inferior upon the whole, but superior to either taken singly, which Napoleon dealt out in 1796 to the converging Austrian columns which descended from the Alps for the relief of Mantua. This was the more feasible, as Joseph's army, which fought at Talavera, had been divided after the action; the King, with Sebastiani's corps, the reserve and royal guards, having marched towards Madrid, now threatened on the one side by Venegas, who had occupied Aranjuez and passed Toledo, and on the other by Sir Robert Wilson, who was within seven leagues of the capital, and in communication with it. Doubtless, if Wellington had been at the head of fifty thousand British troops, he would have attempted, and probably with success, that resolute game. But, though the allied force at Talavera was of that numerical strength, dear-bought experience had demonstrated, that no reliance could be placed on any part of it in the field, except the twenty thousand English soldiers. The British general and his whole troops had now seen the Spanish army, and the illusion which had formerly prevailed on the subject had been dispelled. Their artillery, it was ascertained, was for the most part well trained, and had rendered good service on some important occasions, but their cavalry was wretched, and their infantry, though courageous when resisting an attack, totally unfit to perform movements under fire or in presence of the enemy, without falling into confusion. In these circumstances, it was apparent that a prudent defensive policy was the only one which promised a chance of success with an army in great part composed of such troops, but this was precisely the system which the ignorance and presumption of the Spanish generals rendered them incapable of adopting. Wellington, therefore, to avoid being attacked both in front and rear at the same time, deemed it necessary to divide the allied army, and he offered to General Cuesta either to stay with the wounded at Talavera, or march to the attack of Soult, as he chose. The Spanish general preferred remaining where he was, and Wellington, in consequence, set out from Talavera, on the 5d August (2), taking with him the whole British army, and leaving about two thousand of their wounded in the hospital at Talavera, under charge of the Spanish army.

Hardly, however, had the last of the troops left the blood-stained banks of the Alberche, when intelligence arrived that Cuesta was making preparations to abandon Talavera and the English wounded, and at five o'clock Wellington received official intimation that the Spanish general had actually put his intentions in execution, and was

(1) Behn. 1. 80, 83. Tor 11. 349, 353. Nap 11. 324, 328

(2) Well Des Gurw 17. 521, 534. Nap 11. 340, 350. Nap 11, 415,

moving after the British army, leaving nearly half the wounded to their fate. Apprehension of being attacked, at the same time, both by Victor and Soult, was assigned as the motive of this proceeding but the real fact was, that the Spanish general entertained well-grounded apprehensions of the stability of his own force, when left to defend an important position against

August 2. such an enemy as he had seen fight at Talavera, and he felt no chance of safety but in close proximity to the British force. Advice was received at the same time of the arrival of Soult at Naval Moral, on the high-road leading to the bridge of Almaraz, and that his force, which was hourly increasing, was already thirty thousand strong. In these circumstances, Wellington wisely resolved to alter his line of march, and, quitting the road by Almaraz and Alcantara, to move across to the bridge of Arzobispo, and take up a defensive position on the line of the Tagus. This resolution was in

August 3. *stantly acted upon* the troops debilitated to the left, and passed the bridge in safety the Spaniards rapidly followed after them; and the bulk

August 4. of the allied army reassembled at Deleitosa, on the south of the

August 5. Tagus, on the following day. The bridges of Arzobispo and Almaraz were destroyed, and a rearguard of Spaniards, with thirty guns, left to defend the former passage. But the French corps, in great strength, were now

appearing on the banks of the Tagus. Soult, with three corps, mustering already thirty four thousand men was in the neighbourhood of Almaraz and

August 6. Victor, with twenty five thousand, attacked and defeated the Spaniards at Arzobispo, by crossing the Tagus at a ford a little above the broken bridge, with eight hundred horse, and captured all their guns. Nothing now appeared capable of preventing the junction of the whole French armies, and the attack of sixty thousand excellent troops on the allied army, already suffering from extreme want of provisions, exhausted by fatigue, and little capable of withstanding so formidable a force. But the object of delivering Madrid being accomplished, and the allies driven to the south of the Tagus, the French generals had no inclination for further active operations. Their soldiers, worn out with continued marching, stood much in need of repose; the recollection of Talavera checked the hope of any successful enterprise to the south of the Tagus, while its shores were guarded by the victors in that hard fought field and the great accumulation of troops around his banks exposed them, equally with the allies, to extreme suffering from want of provisions. These considerations pressing equally on both sides, produced a

August 7. general separation of force, and suspension of operations, after the combat of Arzobispo. Cuesta, disgusted with his reverses, resigned the command, and his army was broken into two parts; ten thousand were dispatched towards Toledo to reinforce Venegas, who was now bombarding that city, and twenty thousand under the command of the Duke d'Albuquerque, remained in the neighbourhood of the English army, in the mountains which separate the valley of the Tagus from that of the Guadiana. The French armies also separated: Joseph returned with his guards, Dessolles' division, and Sebastiani's corps, to drive Venegas from Toledo, while Soult and Mortier remained at Talavera, Oropesa, and Plasencia; and Key retraced his steps to Leon and the neighbourhood of Ciudad Rodrigo. But so favourable an opportunity never occurred again of breaking down the English power in the Peninsula; and Napoleon—who never ceased to lament to the last hour of his life that the advice of Soult was not followed, who wished to take advantage of this concentration of five corps, in all ninety thousand combatants, in the valley of the Tagus, and march at once on Coria and Lisbon—soon after

dismissed Jourdan from his situation of major-general to Joseph and conferred that important situation on Soult (1)

Defects of Spaniards at Puerto de Banos and Almonacid The justice of this opinion appeared in a still more striking manner, from the proof which was soon afforded of the inefficient character of those corps threatening Madrid, which had caused such alarm in the mind of Joseph, as to lead him to break up the noble force which he had latterly accumulated in the valley of the Tagus. Ney, in his way back from Plasencia, met unexpectedly, in the Puerto de Banos, the division of Sir Robert Wilson, consisting of three thousand Portuguese and as many Spaniards, who were winding their way amidst rocks and precipices, from the neighbourhood of Madrid to the Portuguese frontier, with which, being ignorant of the strength of the enemy, he endeavoured to stop the French corps. The result of a combat so unequal, might easily have been anticipated, Wilson was, after a stout resistance of three hours, dislodged and thrown back on the Portuguese frontier, with the loss of a thousand men. More important operations took place at the same time in the plains of La Mancha. Venegas, during the concentration of the French forces at Talavera, had not only with one of his divisions occupied Aranjuez, with its royal palace, but with two others was besieging and bombarding Toledo. No sooner was Joseph relieved, by the retreat of the English from Talavera, from the necessity of remaining in force on the Alberche, than he moved off, with Sebastiani's corps and Dessolles' division, to attack him.

August 4 Deceived as to the strength of his adversary, whose force he imagined did not exceed fourteen thousand men, the Spanish general resolved to give battle, and awaited the enemy in a good position at Almonacid. The French had twenty-four thousand foot and four thousand horse in the battle, the Spaniards about an equal force, but the difference in the quality of the troops in the opposite armies soon decided the contest. Encouraged by the ardour of his men, who demanded, with loud cries, to be led on to the combat, Sebastiani commenced the attack without waiting for the arrival of Dessolles' division, a division of Poles, under Sulkowski, attacked a hill, the key of the position, on which the Spanish left rested, while the Germans under Laval assailed it in flank. The crest of the mount was speedily won, and the Spanish left fell back on their reserve, consisting of the soldiers of Baylen, but they rallied the fugitives and stood firm, while Venegas, charging the victorious French in flank, threw them into confusion, and drove them back in great disorder. Victory seemed to declare in favour of the Spaniards, when the arrival of Dessolles and Joseph, with the reserve, restored the combat. Assailed both in front and flank by fresh forces, when still disordered by success, the Spanish troops, after a sharp conflict, fell back, the old Moorish castle of Almonacid, where the reserve was stationed, was carried, after a bloody combat (2), and Venegas, utterly routed, was glad to seek refuge in the Sierra Morena, with the loss of thirty-five guns, nearly all his ammunition, and six thousand killed, wounded, and prisoners, but the loss of two thousand men on the side of the victors, proved with what unwonted steadiness the Spaniards had fought on this occasion.

Sufferings of the English army, and their return to the Portuguese frontier For nearly a month after their retreat to the southern bank of the Tagus, the English army remained undisturbed in their position on that river, with their headquarters at Deleitosa, and Wellington, informed of the return of Ney to was ex-

preparing to resume offensive operations on its northern bank with which view; he was busied in repairing the broken arch over the Tagus at Almaraz, when the total failure on the part of the Spaniards to provide subsistence for the English troops, rendered a retreat to Badajoz, and the vicinity of their own magazines, a matter of absolute necessity. From the moment the English troops entered Spain, they had experienced the wide difference between the promises and the performance of the Spanish authorities; and we have the authority of Wellington for the assertion, that, if the Junta of Truxillo had kept their contract for furnishing 240,000 rations to the English army, *the allies would, on the night of the 27th July, have slept in Madrid (1)*. But, for the month which followed the battle of Talavera, their distresses in this respect had been indeed excessive, and had reached a height which was altogether insupportable. Notwithstanding the most energetic remonstrances from Wellington, he had got hardly any supplies from the Spanish generals or authorities, from the time of his entering Spain; Costa had refused to lend him ninety mules to draw his artillery, though at the time he had several hundreds in his army doing nothing: the troops of all arms were literally starving during a month which followed the junction of the two armies, on the 22d July, they had not received ten days' bread: on many days they got only a little meat, without salt, on others nothing at all: the cavalry and artillery horses had not received, in the same time, three deliveries of forage, and in consequence a thousand had died, and seven hundred were on the sick list. These privations were the more exasperating, that during the greater part of the time, the Spanish troops received their rations regularly both for men and horses. The composition of the Spanish troops, and their conduct at Talavera and on other occasions, was not such as to inspire the least confidence in their capability of resisting the attack of the French armies: their men, hardly disciplined and without uniform, threw away their arms and dispersed, the moment they experienced any reverse, and permitted the whole weight of the contest to fall on the English soldiers, who had no similar means of escape. These causes had gradually produced an estrangement, at length a positive animosity between the privates and officers of the two armies: an angry correspondence took place between their respective generals, which widened the breach; and at last Wellington, finding all his representations disregarded, intimated his resolution to withdraw the British troops to the frontiers of Portugal, where they might be maintained from their own magazines. The Spanish authorities, upon this, made the most earnest protestations of their wish to supply the wants of the British soldiers, and offered to divide the magazines at Truxillo with them or even put them entirely at their disposal. But Wellington had ascertained that this boasted resource would not supply the army for one day; his troops were daily becoming more sickly; and justly deeming its very existence at stake if these evils any longer continued, the English general, on the 22d August, gave orders for the army to retire across the mountains into the valley of the Guadiana, where it took up its cantonments in the end of August, the headquarters being at Badajoz. But the malaria of that pestilential district, in the autumnal months soon produced the most deleterious effect on the health of the soldiers; the noxious vapours which exhaled from the beds of the rivers, joined to the cessation of active habits, and consequent circulation of the bilious secretion through the system rendered fevers alarmingly frequent; seven thousand men were soon in hospital,

of whom nearly two-thirds died, and the sands of the Guadiana proved more fatal to the army than the sword of the enemy (1).

Success of
the Span-
iards at
Tamanes

Being perfectly aware of the inability of the Spanish armies to contend with the French veterans, Wellington now earnestly counselled their leaders to adopt a different system of warfare, to avoid all general actions, encamp always on strong positions, and fortify them, when in the neighbourhood of the enemy, and make the best use of those numerous mountain chains which intersected the country in every direction, and afforded the means of avoiding the numerous and terrible Imperial horse (2). An example soon occurred of the beneficial effects which would have resulted from the general adoption of this system. Ney's corps, which had been delivered over to General Marchand, when that marshal returned himself unto France, lay in the plains of Leon, near Ciudad Rodrigo, and the army formerly commanded by the Marquis Romana, having at length emerged from the Galician mountains, and arrived in the same neighbourhood, the French general adopted the resolution of bringing him to action. After a variety of marches, the Duke del Parque, who had just been appointed to the command of the army, took post in the strong position of Tamanes, in the mountains on the northern side of the Puerto de Banos, where he was at-
Oct 24 tacked, in the end of October, by Marchand, with twelve thousand men. The French troops commenced the attack with all their wonted spirit, anticipating an easy victory, and at first gained considerable success; but the main body of the Spanish army, trained in the campaign of Galicia to a mountain warfare, falling back to their strong ground, made a vigorous resistance, and from behind inaccessible rocks showered down a murderous fire on the assailants. After a sharp conflict, the unusual spectacle was exhibited of the French eagles receding before the Spanish standards, and Marchand drew off with the loss of fifteen hundred men and one gun; while the Duke del Parque gave decisive proof of the reality of his success, by advancing immediately after the action, and taking undisputed possession of Salamanca, with five-and-twenty thousand men (3).

Events
which led to
the battle of
Ocana

This transient gleam of success, instead of inducing the Spaniards to persevere in the cautious policy to which it had been owing, and which Wellington had so strenuously recommended, inspired them with a presumptuous self-confidence, which proved their total ruin. The success gained by the Duke del Parque at Tamanes, and the junction of his followers to those of Ballasteros, who had come down from Asturias with eight thousand fresh troops, gave such disquietude to the French, from their close proximity to their principal line of communication with Bayonne, that they deemed it necessary to withdraw part of Mortier's corps from Estremadura, and this inspired the Central Junta with the hope that they might now undertake, with some prospect of success, their long-cherished project of re-
Nov 3 covering Madrid. Arceizaga, accordingly, who had been appointed to the command of the army of Venegas, which, by great exertions, and the junction of the greater part of Cuesta's force, had been raised to fifty thousand men, of whom seven thousand were cavalry, with sixty pieces of cannon, moved forward, in the beginning of November, from the foot of the Sierra Utrana, and soon arrived in the plain of Ocana, where Milhaud lay with the advanced guard of Sebastiani's corps. Encouraged by their great superiority of numbers, the
Nov 12 Spanish horse fell with great vigour on the French division; but

Tor. iii. 134, 137

Milliaud was at the head of those redoubtable cuirassiers who had appeared with glory in all the great battles of Europe since the accession of Napoleon; and, after a short encounter, he routed the enemy with severe loss, and contrived to keep his ground in front of Aranjuez and the Tagus, till the great body of the army came up to his assistance. In effect, Joseph soon arrived with part of the corps of Soult and Mortier, and the royal guards, which raised his force to thirty thousand men, of whom five thousand were horsemen and lancers, with fifty guns. The Spanish general, whose ignorance of war was equal to his presumption, now perceived his danger, and took post on the best ground within his reach to give battle; but it was essentially defective, and proved one great cause of the unheard-of disaster which followed. The left wing, fifteen thousand strong, was placed *behind* a deep ravine, which it could not cross without falling into confusion. The centre was in advance of the town of Ocana, and the right *in front* of the same ravine, which ran along the whole line, so that the one wing was without a retreat in case of disaster, the other without the means of attacking the enemy in the event of success (1).

Totally unequal to such a crisis, Arceizaga took post at break of day in one of the steeples of Ocana, behind his centre, where he remained during the whole battle, neither giving orders nor sending succour to any part of his line. Thus left to themselves, however, his troops at first made a gallant defence. Laval's division was the first which advanced to the attack, preceded by Senarmon's terrible battery of thirty guns, the effect of which had been so severely experienced by the Russians at Friedland. The Spanish troops in the centre, however, stood firm, and with loud shouts, awaited the onset of the enemy, while their guns in position there kept up a heavy and destructive cannonade upon the advancing columns; and such was the weight of their fire, that the leading ranks of the assailants hesitated and fell back. Soult and Mortier perceiving the disorder, instantly hastened to the spot, and brought up Gerard's division, and, opening their ranks to let the fugitives through, presented a front of fresh troops, in admirable order to the combat. The prompt succour thus afforded restored the battle, and soon gave the French a glorious victory. The right wing of the Spaniards, severely pressed by Sebastian's corps, was compelled to retreat behind the ravine, in front of which it stood at the commencement of the battle, while the dense lines of the Spanish left, posted behind the impassable gully in their front, were compelled to remain inactive spectators of the rout, arising from the whole enemy's force being thrown on their centre and right. The troops which had repulsed Laval were compelled to retire through the town of Ocana, where Arceizaga was chased from his steeple, and instantly took to flight. On the right, Sebastian, by penetrating between the town and the extreme Spanish right cut off six thousand men, and obliged them to surrender. The line, now broken in every part, rushed in wild disorder towards the rear, followed by the terrible French dragoons, who soon drove ten thousand men into a space behind Ocana, having only one outlet behind, where the throng was soon so great that escape was impossible, and almost the whole were made prisoners. The army upon this, dispersed in all directions, while the French cavalry, spreading out from Ocana like a fan, thundered in pursuit over the wide and desolate plains which extend to the south towards the Sierra Morena. Twenty thousand prisoners, forty-five pieces of cannon, and the whole ammunition of the army, were the fruits of this glorious battle, which lasted only four hours, and in which the victors fired only 100 can-

(1) Xisp. Ill. 79. 80. Journ. Ill. 359. 360. Tow. Ill. 344. 345. et Conq. xix. 307.

non-shot Wearied with collecting prisoners, the French at length merely took their arms from the fugitives, desiring them to go home, telling them that war was a trade which they were not fit for, and such was the wreck of the army, which lately numbered fifty thousand combatants, that, ten days after the battle, Areizaga could not collect a single battalion to defend the passes of the Sierra Morena (1)

Route of the
Duke del
Parque at
Alba de
Tormes

This astonishing victory would doubtless have been immediately followed by the passing of the Sierra Morena, and probably the total extinction of all regular resistance on the part of the Spaniards, had it not been that the position of the English army at Badajoz rendered it imprudent to engage in those defiles, through which it might be difficult to retrace their steps, in the event of a powerful force from Estremadura advancing to cut off the communication with Madrid. Joseph, therefore, highly elated with this victory, which he hoped would at length put an end to the contest, returned with the greater part of his army in triumph to the capital, where his government was now established on a solid basis; and all the elements of resistance in New Castile being now destroyed, the whole revenue of the province was collected, and the administration conducted by the intrusive government. A similar catastrophe soon after gave them a like command over the population and the resources of Leon and New Castile. In that province, the Duke del Parque, finding the force in his front considerably diminished by the collection of the French troops to oppose the incursion of Areizaga to Ocana, advanced towards Medina del Rio Seco, in order to assist in the general movement on the capital. He attacked a body

Nov 23

of ten thousand French on the 25d of November, and gained considerable success. But, in two days after, the enemy was strongly reinforced by some of the troops who had combated at Ocana, and who immediately spread the news of that dreadful event, as much to the elevation of the one as to the depression of the other army. The Spanish general, upon this disastrous intelligence, immediately retreated, but his troops were so extremely disheartened by this great defeat in the south, that on the following day, when Kellermann, with a body of horse, came up with the army near Alba de Tormes, the Spanish cavalry fled the moment the enemy appeared,

Nov 25

without striking a blow. The infantry, however, stood firm and made a stout resistance, which enabled the Duke to effect his retreat without any considerable loss, notwithstanding the repeated charges of the French horse upon his flank. Such, however, was the depressed state of the troops, that, at daybreak on the following morning, when a French patrol entered the town in which they were lying, the whole Spanish army took to flight and separated in all directions, leaving their whole artillery, ammunition, and carriages of every sort, in the hands of the enemy. So complete was their dispersion, that for some days the Duke del Parque was left literally without an army. But the Spanish troops, whose constancy in adversity was as worthy of admiration as their unsteadiness in the field was remarkable, again rallied round the standard of their chief, and in a fortnight the Duke, who had retired to the mountains to the south of Ciudad Rodrigo, again found himself at the head of twelve or fifteen thousand men, but for the most part unarmed, without cannon or ammunition, and literally famishing from want (2)

As these terrible blows had dispersed the only forces in the field which the

th 144, 146

Transfer of the British army to the frontier of Beira Spaniards had, worthy of the name of armies; and, as the event had now clearly proved what he had long foreseen, not only that they were incapable of maintaining war themselves in the field with the French; but that, by their inability to perform movements in presence of the enemy, they could not be relied upon to form a part in any combined system of operations, Wellington perceived clearly that henceforth the protection of Portugal must form his main object; and that, if the deliverance of the Peninsula was ever to be effected, it must be by the forces which rested on the fulcrum of that kingdom. He wisely resolved, therefore, to move his army from the banks of the Guadiana, where it had already suffered so severely from the autumnal fevers, to the frontiers of the province of Beira, where it might at once recover its health upon higher and hilly ground, guard the principal road to the Portuguese capital from the centre of Spain, and watch the formidable force, now nearly thirty-six thousand strong, which the French had collected in the neighbourhood of Ciudad Rodrigo. In the beginning of December, therefore, Wellington, after having repaired to Seville and concerted measures with the Junta there, moved his army to the neighbourhood of Almeida and the banks of the Aguada, leaving only a comparatively small force at Elvas and in the Alentejo, to co-operate with the Spaniards in Estremadura; and at the same time commenced those formidable lines at Torres Vedras and in front of Lisbon, which he had long contemplated and which at length permanently arrested the hitherto irresistible torrent of French conquest (1).

Distracted state of the Spanish affairs at this period. These movements closed the bloody and eventful campaign of 1809 in the Peninsula; and, certainly, never since the beginning of the world had a war occurred presenting more objects worthy of the admiration of the patriot, the study of the statesman, and the observation of the soldier. The sieges of Saragossa and Gerona, where forty thousand ill-disciplined troops, supported by the heroic inhabitants of these towns, had inflicted a greater loss upon the French than the whole military force of Austria in the field of Wagram, had afforded memorable examples of what could be effected by the feelings of religious and patriotic duty, when brought into the conflict under circumstances where the usual advantages of discipline and prowess could immediately decide the contest. On the other hand, the long train of disasters which the Spaniards had since incurred in every other quarter, terminating in the frightful catastrophe of Ocana, had demonstrated, in equally striking colours, the total inability of undisciplined troops, even when animated by the most ardent zeal in behalf of their independence and the greatest possible advantages of a mountainous country, to withstand the attacks of a powerful, disciplined, and well-directed enemy. That the Spanish people were brave, was evident from the courage with which they withstood, and on many occasions repulsed, the first attacks of the French veterans; that they were hardy, was demonstrated by the privations which they underwent with unshaken constancy; that they were zealous in the cause of their country was clear from the multitudes who in every quarter thronged to its standards; that they were enduring in adversity, was manifest from the unparalleled tenacity with which they maintained the contest after reverses and under circumstances which would have overwhelmed the resistance of any other people. Yet, with all these admirable qualities, they had every where proved unfortunate, and could not point to one single province rescued by their efforts from the grasp of the enemy. For it was evident that

(1) *Well. Desp. Care* v. 361 and *Desp.* 20th October 1809, v. 374, 375. *Ann. L.* 252.

the deliverance of Galicia and Asturias was to be ascribed, not to the arms of Romana and the mountaineers of those provinces, brave and indomitable as they were, but to the disciplined battalions of Wellington, which first, by depriving Soult's corps of all its equipments, compelled him to evacuate that province, and afterwards, by threatening Madrid, forced the French generals to concentrate all their forces for the defence of the capital—a memorable example to succeeding ages, both of the astonishing effects of patriotic ardour in supporting the cause, when properly directed, of national independence, and of the total inadequacy of mere popular efforts to effect the national deliverance from serious dangers, if not directed by a strong government, and resting on the foundation of national forces, previously disciplined and prepared for the contest

It was a clear perception of these truths, joined to the comparatively small force which he had at his disposal, and the extraordinary difficulty either of providing men or money in Great Britain for additional troops, which was the ruling principle in the campaigns of Wellington, that are to form so brilliant a part in the subsequent chapters of this history. With a force seldom exceeding thirty thousand British soldiers, and which could rarely bring, after the usual deductions, above twenty-five thousand into the field, he had to maintain a contest with six French corps, the whole of which, if necessary, would concentrate against his army, and which could bring into the field, after amply providing their rear and communications, at least one hundred and fifty thousand combatants. The Spanish armies, at different periods during the campaign that was past, had indeed been numerous, their officers daring, and many had been the reproaches cast upon the English general for at last declining to join in the rash operations which terminated in the disasters of Ocaña and Alba de Tormes. But it was now manifest to all the world that any such operation could have terminated in nothing but disaster, and that, if the English corps of twenty-four thousand men had advanced in the close of the year towards the Spanish capital, the consequence would have been, that the French generals would immediately have concentrated their whole forces upon it, as they did upon Sir John Moore, and that, if it escaped destruction at all, it could only have been by a retreat as disastrous and destructive as that to Corunna. The undisciplined state of the Spanish armies rendered this a matter of ease; for they were incapable, in the field, of moving to attack the enemy without falling into confusion, and any progress which their desultory bands might make in other provinces during such concentration of their troops, would only expose them to greater disasters upon the separation of the French forces after the destruction of the English army.

Immense as were the obstacles with which Wellington had to contend, in striving for the deliverance of the Peninsula with such allies, against such an overwhelming superiority of force, the difficulty became still greater from the different modes in which the respective armies carried on the war. The British, according to the established mode of civilized warfare, at least in modern times, maintained themselves chiefly from magazines in their rear, and when they were obliged to depend upon the supplies of the provinces where the war was carried on, they paid for them just as they would have done in their own country. In consequence of this circumstance, and the distance to which they were to be conveyed, the expense of carrying on war, with even a considerable force, on the continent, was severely felt. Already the cost of even the small army which

gal, was about L.250,000 a month. The French, on the other hand, by reverting to the old Roman system of making war maintain war, not only felt no additional burden, but experienced the most sensible relief by their armies carrying on hostilities with foreign states. From the moment that his forces entered a hostile territory, it was a fundamental principle of Napoleon's, that they should draw nothing from the French exchequer; and, while the people of Paris were amused with the flattering statements of the moderate expense at which their vast army was maintained, the fact was carefully concealed that the whole troops engaged in foreign service—that is, two-thirds of the whole military establishment of the empire—were paid, fed, and lodged, at the expense of the countries where hostilities were going forward. To such a length was this system carried, that we have the authority of the Duke of Wellington for the assertion, that the cost of the pay and hospitals for the French army, in Spain alone, was greater than the sum stated in the French Budget for the year 1809, as the expense of their whole military establishment (1).

These causes produced a total difference in the modes in which the generals of the two armies were obliged or enabled to carry on war. The English, paying for every thing which they consumed, found their difficulties and expenses increase the farther they advanced from the coast, and, when they got into the interior of the Peninsula, any considerable failure in their supplies, or any blow struck by the enemy at their communications, threatened them with total ruin. The French, on the other hand fearlessly plunged into the most desolate provinces, totally regardless of their flanks or rear, and, without magazines or communications of any kind, contrived to wrench from the inhabitants, by the terrors of military execution, ample supplies for a long period, in a country where a British regiment could not find subsistence for a single week. "The mode," says the Duke of Wellington, "in which they provide for their armies, is this: they plunder every thing they find in the country; they force from the inhabitants, under pain of death all that they have in their houses for the consumption of the year without payment, and are indifferent respecting the consequences to the unfortunate people. Every article, whether of food or raiment, and every animal and vehicle of every description, is considered to belong of right and without payment to the French army, and they require a communication with their rear, only for the purpose of conveying intelligence and receiving orders from the Emperor (2)."

It may readily be conceived what advantages an enemy acting on these principles must always possess over another conforming to the good old fashion of taking nothing but what they can pay for. So, also, will fraud or violence, if directed by talent or supported by power, almost always gain the ascendancy in the first instance in private life, over the unobtrusive efforts of honest industry. But the same moral law is applicable to both: mark the end of these things, alike to the private villain and the Imperial robber. What the French military historians call the circumspection and caution of the British general, was the necessary result of those principles of justice and perseverance, which, commencing with the reverses of the Spanish campaign, were destined, ere long, to rouse mankind in their favour, and lead to the triumph of Vittoria and the Moscow retreat. The energy and fearlessness which they justly admire in their own generals, were the consequence of the system which, destroying the half of every army in the course of every cam-

paign, was destined, in the end, to exhaust the military strength of the empire, and bring the powers of Europe in irresistible force to the banks of the Seine

Notwithstanding all these untoward circumstances, and the difficulties necessarily arising from the co-operation of the armies of three independent kingdoms in one campaign, Wellington, even after the retreat from Talavera, had no fears of the result, and repeatedly wrote, both to the British and the Spanish governments, that he had no doubt he should be able to deliver the Peninsula, if the Spanish generals would only adhere to the cautious system of policy which he so strongly inculcated (1) Their course was perfectly clear. It was, to use the mattock and the spade more than the sword or the bayonet; to take advantage of the numerous mountain ranges which the country afforded to shelter their armies, and of the admirable courage of their citizens behind walls to defend their strongholds. In a word, they had nothing to do but to follow the course by which the Scotch, on eleven different occasions, baffled the English armies, numbering from fifty to eighty thousand combatants in each invasion, who had crossed the Tweed; and by which Washington, at every possible disadvantage, at length worked out the independence of the American States. But to this judicious system the ignorance and infatuation of the Central Junta, joined to the presumption and inexperience of their generals, opposed invincible obstacles. No disasters could convince them that they were not superior to the French troops in the open field, and so elated were they by the least success, that no sooner did they see the Imperial armies receding before them, than, hurrying from their mountain fastnesses with a rabble almost undisciplined, and without even uniform, they rushed into conflict with the veterans against whom the armies of Austria and Russia had contended in vain. Nothing could be expected from such a system but the result which actually took place, viz the total destruction of the Spanish armies, and the throwing the whole weight of the contest in future upon the British and Portuguese forces

Rashness
and folly of
the Spanish
rulers

And, though the success which attended her efforts had not been proportioned to the magnitude of the exertions which she made, yet England had no reason to feel ashamed of the part which she had taken in the contest. For the first time since the commencement of the war, she now appeared with troops in the field adequate to her mighty strength, and it affords a marvellous proof of the magnitude of the British resources, that this display should have been made in the seventeenth year of the war. The forces by land and sea which she put forth in this year, were unparalleled. With a fleet of two hundred and forty ships of the line, and nearly eleven hundred vessels of all sizes, she maintained the undisputed command of the waves, blockaded every hostile harbour in Europe, at once chased the Toulon squadron ashore at the mouth of the Rhone, burned the Brest fleet amidst the shallows of Basque Roads, drove the Russian navy under the cannon of Cronstadt, and still found thirty-seven ships of the line wherewith to strike a redoubtable blow at the fleets in the Scheldt. With a hundred thousand regular troops, she maintained her immense colonial empire in every part of the world, and, as it suited her convenience, rooted out

Vast efforts
of Great
Britain during
the
campaign

(1) "I declare, that if they had preserved their two armies, or even one of them, the cause was safe. The French could have sent no reinforcements which could have been of any use, time would have been gained, the state of affairs would have improved daily, all the chances were in our fa-

your; and in the first moment of weakness, occasioned by any diversion on the continent, or by the growing discontent of the French with the war, the French armies must have been driven out of Spain"—WELL, *Disp. Gu.*

the French flag from their last transmarine possessions with one hundred and ninety thousand more, she swayed the sceptre of Hindostan, and kept in subjection her seventy millions of Asiatic subjects with four hundred thousand regular and local militia she amply provided for the safety of the British islands, while, with another hundred thousand gallant disposable soldiers, she carried on the war with unexampled vigour on the continent of Europe, menaced at once Antwerp, Madrid, and Naples, and was prevented only by the dilatory conduct of her general from carrying off, in triumph, thirty ships of the line from the Scheldt, and by the failure of the Spanish authorities to provide supplies, from chasing the Imperial Usurper from his palace at Madrid. The Roman empire never had such forces on foot; they exceeded those wielded by Napoleon in the zenith of his power. To say that the latter enterprises, in the end, miscarried and terminated in disappointment, is no real reproach to the national character. To command success is not always in the power of nations, any more than of individuals. Skill in war, as in pacific enterprises, is not to be attained but by experience. The best security for ultimate triumph is to be found in the spirit which can conceive, and the courage which can deserve it; and the nation, which, after such a contest, could make such exertions, if not in possession of the honours, was at least on the path to the fruits, of victory.

Comparison with what is what at the outset of the war and has there become. Thirty years have now elapsed since this astonishing display of strength in the British empire took place, and it is interesting to observe what, during that period, has been the change upon the national force and the means of asserting the independence of the country. If again called in question by foreign aggression. The intervening period has been one, it is well known, either of unprecedented triumphs or of unbroken tranquillity. Five years of successful combats brought the war to a glorious issue; five-and-twenty years of subsequent uninterrupted peace have increased in an extraordinary degree the wealth, population, and resources of the empire. The numbers of the people during that time have increased nearly a half; the exports and imports have more than doubled; the tonnage of the commercial navy has increased a half; and agriculture, following the wants of the increased population of the empire, has advanced in a similar proportion. The warlike establishments of other states have undergone little or no diminution. France has nearly four hundred thousand men in arms; Russia six hundred thousand, besides forty ships of the line constantly in commission, and ready for service. What then, with such resources, and exposed to such dangers, is the establishment which Great Britain now maintains when on the verge of a war in both hemispheres?

Her army of three hundred thousand regular soldiers and militia, has sunk down to ninety-six thousand men: her fleet of two hundred and forty ships of the line has dwindled away to twenty in commission, fifty-eight in ordinary, and twelve building—in all, ninety. Her Indian army, which in 1826 numbered two hundred and ninety thousand, has declined to one hundred and eighty thousand combatants, while the population and extent of her Asiatic possessions are hourly on the increase. Her regular and local militia have entirely disappeared. All this has taken place, too, at a time when the wants and necessities of the empire in every quarter of the globe have rapidly augmented, and the resources of the state to maintain an adequate establishment are at least double what they were thirty years ago. Nay, to such a length has the public mind become deluded, that it was lately seriously stated by an intelligent and upright Lord of the Admiralty, in his place in Parliament that “it could not be said that Great Britain was defenceless, for that she had

ships of the line, and three guard-ships ready to protect the shores of land," being just one-third of the force which Denmark possessed to protect the island of Zealand (1), when her fleets and arsenals were taken by Britain in 1807. There is not, perhaps, to be found so remarkable an instance of the decay of national strength, consequent upon prosperity, in the history of the world (2).

"In the youth of a state," says Bacon, "arms do flourish; in the middle age of a state, learning; and then both of them together for a time: in the declining age of a state, mechanical arts and manufactures (3)." "If a nation," says Spolton, "be not made of iron, it will soon be reduced to powder by the political economists (4)." Thus the progressive of the great republics of the world is not only seen in the empire, but in the decline of a state, and in the progress of the world.

Henrics, and the maturity crowned by the genius of Shakspeare and Newton, the conquests of Nelson, and the triumphs of Wellington, to terminate at last in the selfishness of pleasure, or the timid spirit of mercantile opulence? Are the glories of the British name, the wonders of the British empire, to be overwhelmed in the growth of manufacturing wealth, and the short-sighted passion for commercial aggrandizement? Without pretending to decide on these important questions, the solution of which, as yet, lies buried in the womb of fate, it may safely be affirmed that the topic now alluded to affords deep subject for consideration both for the British patriot at this time, and the philosophic observer in every future age of mankind. The moralist, who observes how rapidly in private life excessive prosperity saps the foundation of individual virtue, will perhaps be inclined to fear that a similar cause of corruption has, at the period of its greatest exaltation, blasted the strength of the British empire. The historian, who surveys the indelible traces which human affairs every where exhibit of the seeds of mortality, will probably be led to fear that the days of British greatness are numbered, and that, with the growth of the selfish passions springing out of long-continued and unbroken good-fortune, the virtue to deserve, the spirit to defend it, is gradually wearing out of the realm.

But, when the days of party strife have passed away, and the events of this time have been transferred into the records of history, all will probably concur in thinking that the immediate cause of this extraordinary decline is to be found in the long-continued and undue preponderance, since the peace, of the popular part of the constitution, and the extraordinary duration and violence of that passion for economical reduction, which always springs from the ascendancy, for any considerable time, in the national councils, of the great body of mankind. It is not surprising that such limited views should be entertained by the popular party in Great Britain, when all the eloquence of Demosthenes failed in inducing the most spiritual democracy of antiquity to take any steps to ward off the imminent dangers arising from the ambition of Philip; and all the wisdom of Washington was unable to communicate to the greatest republic of modern times sufficient strength to prevent its capital being taken, and its arsenals pillaged, by a British division not four thousand five hundred strong. And, without joining in the outcry now directed against either of the administrations which have recently ruled the state, on account of a prostration of the national defences, of which it is easier to see the dangers than to provide the remedy, and in which all parties, save the few far-seeing patriots who had courage to resist the general delusion and steadily opposed, amidst general obloquy, the excessive and disastrous reductions which were so loudly applauded, will probably be found to be nearly equally implicated, it is the duty of the historian to point out this memorable decline for the constant observation of future ages. Posterity will perhaps deduce from it the inference that present popularity is seldom the reward of real wisdom; that measures calculated for the benefit of future ages are hardly ever agreeable to the present; and that the institutions which compel the rulers of the state to bend to the temporary inclinations of the people in opposition to their ultimate interests, bear in themselves the seeds of mortality, and were the unobserved, but certain cause of the destruction of the greatest power which had existed in the world since the fall of the Roman Empire.

CHAPTER LIX.

CAMPAIGN OF TORRES VEDRAS, AND YEAR 1810.

ARGUMENT.

Greatness of Napoléon's Situation after the Battle of Wagram—The want which he felt of heirs and historic descent—Different alliances which were the object of his choice—Disclosure of his resolution for a Divorce to Joséphine at Fontainebleau—Speech of the Emperor on the occasion—Joséphine's dignified Answer—Proposals made to the Emperor Alexander for his Sister—Napoleon proposes to Marie-Louise, and is accepted—Journey of Marie-Louise to Paris—Pique of the Emperor Alexander on the occasion—Character of Joséphine—and of Marie-Louise—Journey of the Emperor and Empress to Belgium—Conflagration of Prince Schwartzberg's Ball-room—Strange Intrigue and Disgrace of Fouché—Rupture with Louis Bonaparte, and his abdication of the Throne of Holland—Incorporation of Holland with the French Empire—General consternation in England at the result of the last Campaign—Debates in Parliament against the continuance of the War in the Peninsula—Arguments of the Opposition against the Continuance of the Peninsular War—Arguments of the Ministry in support of it—Resolution of Parliament, and Supplies for the year—Important Effect which these gloomy Views in England had upon the policy of the French Government—Conquest of Andalusia by Soult—Rapid and able March of Albuquerque, which saves Cadiz—Operations in Catalonia—Fall of Lerida and Mequinenza—Preparations for the Grand Attack on Portugal by Masséna—Wellington's Views for the defence of Portugal, and ultimate deliverance of the Peninsula—His magnanimous resolution to discharge his duty, notwithstanding all the clamour with which he was assailed—Comparative Forces of the two armies at the commencement of the Campaign—Extraordinary difficulties with which Wellington had to contend—Siege and Fall of Ciudad Rodrigo—Siege and Fall of Almeida—Retreat of Wellington into the interior of Portugal—He crosses the Mondego, and occupies the ridge of Busaco—Battle there—Bloody defeat of the French—Masséna turns the position, and Wellington retires to Torres-Vedras—Description of the Lines and Position there—Junction of Romana, and admirable position of the British Troops—Continued Distresses, and ultimate Retreat of the French to Santarem—Arrival of Reinforcements from England, and ultimate Retreat of Masséna—Operations in Estremadura, and Investment of Badajoz—Defeat of Mendizabel—Fall of Badajoz—Operations to raise the siege of Cadiz—Battle of Barrosa—Inaction of La Pena, and return of the troops to the Isle of Léon—Various Actions during the Retreat—Blockade of Almeida, and Efforts of Masséna for its Relief—Battle of Fuentes d'Onoro—Obstinate Nature of the Fight, and Danger of the English—Ultimate Failure of Masséna, and his Retreat—Reflections on this Campaign—Cruelty of the French during their stay in Portugal—Its incalculable Importance—Exhibits the first Example of the stopping of the Revolutionary Torrent—Magnanimity of Wellington in adhering to the System he had laid down

Greatness of Napoléon's situation after the battle of Wagram

THE result of the campaign of Wagram had elevated Napoléon to the highest point of greatness, in so far as it could be conferred by present strength and grandeur. Resistance seemed impossible against a power which had vanquished successively the armies of Prussia, Russia, and Austria, contest hopeless with a state which had emerged victorious from eighteen years of warfare. The conflict in the Peninsula, it was true, still lingered; but disaster had every where attended the Spanish arms, and it only seemed to await the choice of the Emperor when the moment was to arrive that was to see their efforts finally subdued, and the French eagles planted in triumph on the towers of Lisbon. If the maritime war yet continued, it was only because England, with now seemingly unavailing obstinacy, maintained a hopeless contest, and, if she was still the mistress of the waves, that sterile supremacy had been attained by the sacrifice of all the objects for which the dominion of the earth had ever been coveted. More truly than in the time of the Roman Emperors, the inhabi-

tants of Albion were now severed from the civilized nations of the world, and the celebrated line of the poet—

Penitus divos acbe Britannes,

seemed, after the revolution of seventeen hundred years, again to present a faithful description of the situation of the British Isles

What, then, was wanting to a sovereign surrounded with such magnificence, to a chief wielding such awful power? Historic descent, and ancestral glory: and for this one defect, even all the achievements of Napoléon afforded no adequate compensation. In vain the orators of the empire dwelt with deserved emphasis on his marvellous exploits. In vain they pointed to Europe subdued by his arms, the world entranced by his glory—the present could not always fascinate mankind, the splendour of existing greatness could not entirely obliterate the recollection of departed virtue. Faintly at first, but still perceptibly, the grandeur of ancient days glimmered through the blaze of modern renown. As the whirl of the Revolution subsided, the exploits of the monarchy returned again to the recollection; the rapid fall of almost all dynasties recorded in history founded on individual greatness, recurred in painful clearness even to superficial observation, and in the next generation, the claims to the throne, even of the heir of Napoléon's glory, might be overbalanced by those of an infant who had succeeded to the majestic inheritance of fourteen hundred years. The Emperor was too clear-sighted not to perceive those truths: the policy of his imperial government was calculated to revive the sway of those natural feelings in the breasts of the people; but it was difficult to make them stop at the desired point, and the danger was obvious, that the feeling of awe and veneration with which he endeavoured to make them regard the throne, might insensibly, in the next age, revive the ancient feelings and attachments of the monarchy. The necessity of having descendants to perpetuate his dynasty was apparent, and for this object he was prepared to sacrifice the dearest attachment of his existence; but he required heirs who might unite the lustre of former descent with the brightness of recent achievements, and exhibit on the throne an enduring example of that fusion of ancient grandeur with modern interests, which it was the object of all the institutions of the empire to effect. He succeeded in his wish—he exhibited to the astonished world the spectacle of a soldier of fortune from Corsica, winning at the sword's point a daughter of the Cæsars; the birth of a son seemed to realize all his hopes, and blend the imperial blood with the exploits of a greater than Charlemagne; and yet, such is the connexion often indissoluble, even in this world, between injustice and retribution, and such the mysterious manner in which Providence renders the actions of men the unconscious instruments of its will, that from this apparently auspicious event may be dated the commencement of his downfall—the birth of the King of Rome was coeval with the retreat of Masséna from before the lines of Torres Vedras, the first occasion on which the Imperial arms had permanently recoiled in continental warfare—and in the jealousy excited in the Russian cabinet by the preference given to the Austrian alliance, is to be found the ultimate source of his ruin. “That marriage,” said Napoléon “was the cause of my destruction; in contracting it, I placed my foot on an abyss covered over with flowers (1)”

Different alliances which were the object of his choice The Emperor had long meditated the divorce of the Empress, and his marriage with a princess who might afford him the hopes of a family. Not that he felt the unconcern so common with sovereigns in making this momentous separation, his union with Joséphine had not been founded on reasons of state, or contracted with a view to political aggrandizement: it had been formed in early youth, based on romantic attachment; it was interwoven with all his fortunes, and associated with his most interesting recollections, and though impetuous in his desires, and by no means insensible on many occasions to the attractions of other women, his homage to them had been the momentary impulse of desire, without ever eradicating from his heart its genuine affection for the first object of his attachment. But all these feelings were subordinate with Napoleon to considerations of public necessity or reasons of state policy, and though he suffered severely from the prospect of the separation, the anguish which he experienced was never permitted for an instant to swerve him from the resolution he had adopted. The grandeur of his fortune, and the apparent solidity of his throne, gave him the choice of all the princesses of continental Europe, and the affair was debated in the council of state as a mere matter of public expedience, without the slightest regard to private inclination, and still less to oppressed virtue. For a moment an alliance with a native of France was the subject of consideration, but it was soon laid aside for very obvious reasons; a princess of Saxony was also proposed, but it was rather recommended by the absence of any objections against, than the weight of any reason for its adoption. At length it was resolved to make advances to the courts both of St. Petersburg and Vienna, and, without committing the Emperor positively to either, to be determined by the march of events, and the manner in which the proposals were received, from which of the two imperial houses a partner for the throne of Napoléon was to be selected (1).

Disclosure of the resolution for a divorce to Joséphine at Fontainebleau It was at Fontainebleau, in November 1809, after the return of the Emperor from the battle of Wagram, that the heart-rending communication of this resolution was first made to the Empress. She had hastened to meet Napoléon after his return from that eventful campaign, but, though received at first with kindness, she was not long of perceiving, from the restraint and embarrassment of his manner, and the separation studiously maintained between them, that the stroke which she had so long dreaded was about to fall upon her. After fifteen days of painful suspense and anxiety, the fatal resolution was communicated to her, on 30th of November, by the Emperor himself. They dined together as usual, but neither spoke a word during the repast, their eyes were averted as soon as they met, but the countenance of both revealed the moral anguish of their minds. When it was over, he dismissed the attendants, and, approaching the Empress with a trembling step, took her hand and laid it upon his heart. —“ Joséphine,” said he, “ my good Joséphine, you know how I have loved you, it is to you, to you alone, that I owe the few moments of happiness I have known in the world. Joséphine, my destiny is more powerful than my will, my dearest affections must yield to the interests of France ” —“ Say no more,” cried the Empress, “ I expected this, I understand, and feel for you, but the stroke is not the less mortal ” With these words she uttered piercing shrieks, and fell down in a swoon. Dr. Corvisart was at hand to render assistance, and she was restored to a sense of her wretchedness in her own apartment. The

(1) Thib. vii. 99, 101. Montg. vii. 4. Bign. ix. 63, 6.

Emperor came to see her in the evening, but she could hardly bear the emotion occasioned by his appearance. How memorable a proof of the equality with which happiness is bestowed on all classes of men, that Napoleon, at the summit of earthly grandeur, and when satiated with every human felicity, confessed that the only moments of happiness he had known in life (1), had been derived from those affections which were common to him with all mankind; and was driven to a sacrifice of them, which would not have been required from the meanest of his subjects.

Copy of the Emperor on the occasion of the divorce A painful duty now was imposed on all those concerned in this exalted drama, that of assigning their motives, and playing their parts in its last stages, before the great audience of the world; and, certainly, if on such occasions the speeches are generally composed for the actors, there never was one on which nobler sentiments were delivered, or more descriptive perhaps of the real feelings of the parties. On the 15th of Dec. 18.

December, all the kings, princes, and princesses, members of the Imperial family, with the great officers of the empire, being assembled in the Tuilleries, the Emperor thus addressed them:—“The political interests of my monarchy, the wishes of my people, which have constantly guided my actions, require that I should leave behind me, to heirs of my love for my people, the throne on which Providence has placed me. For many years I have lost all hopes of having children by my beloved spouse the Empress Joséphine: that it is which induces me to sacrifice the sweetest affections of my heart, to consider only the good of my subjects, and desire the dissolution of our marriage. Arrived at the age of forty years I may indulge a reasonable hope of living long enough to rear, in the spirit of my own thoughts and disposition, the children with which it may please Providence to bless me. God knows! what such a determination has cost my heart; but there is no sacrifice which is above my courage, when it is proved to be for the interest of France. Far from having any cause of complaint, I have nothing to say but in praise of the attachment and tenderness of my beloved wife. She has embellished sixteen years of my life: the remembrance of them will be for ever engraven on my heart. She was crowned by my hand: she shall retain always the rank and title of Empress; but, above all, let her never doubt my feelings, or regard me but as her best and dearest friend (2).”

Joséphine dignified answer Joséphine replied, with a faltering voice and tears in her eyes, but in words worthy of the grandeur of the occasion, “I respond to all the sentiments of the Emperor in consenting to the dissolution of a marriage which henceforth is an obstacle to the happiness of France: by depriving it of the blessing of being one day governed by the descendants of that great man, evidently raised up by Providence to efface the evils of a terrible revolution and restore the altar, the throne and social order. But his marriage will in no respect change the sentiments of my heart. The Emperor will ever find me his best friend. I know what this act, commanded by policy and exalted interest, has cost his heart: but we both glory in the sacrifices which we make to the good of our country: I feel elevated by giving the greatest proof of attachment and devotion that was ever given upon earth.” When my mother “said Eugene Beauharnais “was crowned before the nation, by the hands of her august husband she contracted the obligation to sacrifice her affections to the interests of France. She has discharged, with courage and dignity, that first of duties. Her heart has been often torn by beholding

(1) *Revue* liv. 312, 311. *Ann. de Jouv.* liv. 2, 1.

(2) *Moniteur* F. 6, 1818. F. 27. liv. 37, 32.

difference of their religion, and other reasons still more insignificant, such as, whether Napoléon was qualified to become a father. "A princess of Russia," said she, "is not to be wooed and won in a few days: two years hence it will be time enough to come to the conclusion of such an affair." She concluded by demanding a Russian chapel and priests in the Tuilleries, and a delay of a few months to improve the age and overcome the scruples or timidity of the young princess (1).

Napoléon
proposed to
Marie
Louise, and
it was accepted. "To adjourn is to refuse," said Napoléon. "besides, I do not choose to have foreign priests in my palace, between my wife and myself. He instantly took his determination: he saw that a refusal was likely to ensue, and he resolved to prevent such a mortification by himself taking the initiative in breaking off the Russian negotiation. Before the

Jan. 24. expiry of the ten days even, fixed by Caulaincourt for the ultimatum of Russia, secret advances were made by Maret, minister of foreign affairs, to Prince Schwartzberg, the Austrian ambassador at Paris: the proposals were eagerly accepted. As soon as this was known, the question of a Russian

Feb. 1. or Austrian alliance was publicly mooted and debated in the council of state by the great officers of the empire, and, after a warm discussion, decided in favour of the latter, on a division: Napoléon professed himself determined entirely by the majority; and five days before the answer of Russia

Feb. 6. arrived, requesting delay, the decision of the cabinet of the Tuilleries had been irrevocably taken in favour of the Austrian alliance. So rapidly were the preliminaries adjusted that the marriage contract was signed at Paris, on the model of that of Louis XVI and Marie Antoinette, on the 7th, and

Feb. 7. at Vienna on the 18th February; and on the 14th March the marriage was celebrated at Vienna with great pomp: Berthier demanding the hand of the Archduchess Marie-Louise, and the Archduke Charles standing proxy for Napoléon (2).

January of the Empire.
Marie
Louise in
Paris. On the day after the ceremony the new Empress set out from Vienna, and was received at Braunau, the frontier town of Austria, by the Queen of Naples: and there she separated from her Austrian attendants, and continued her journey by slow stages, and surrounded with all the pomp of Imperial splendour, and all the fatigue of etiquette, to the neighbourhood of Paris. Notwithstanding all the political advantages of the alliance, her departure was the occasion of great regret at Vienna; a large portion of the people openly murmured against the sacrifice of a daughter of Austria to the state necessities of the time; they regarded it as worse than the cession of the Illyrian provinces, more disgraceful than the abandonment of Hofer to the vengeance of the conqueror; and even the continuance of the war appeared preferable to the humiliating conditions by which it was thought peace had been obtained. In France, on the other hand, all the public authorities vied with each other in demonstrations of loyalty and enthusiasm; the choicest flowers awaited her at every stage: crowds of respectful spectators lined the streets of all the towns through which she passed: this great event was regarded as at once the final triumph, and closing the gulf of the Revolution by winning for its victorious leader the daughter of the first family in Europe and mingling the lustre of descent with the grandeur of Napoléon's throne. "She is not beautiful," said the Emperor, on a subsequent visit to Joséphine, when he saw her miniature, "but she is the daughter of the Cæsars." These honourous words more than compensated every deficiency: the sinister presage, arising from the fate of Marie Antoinette, was forgotten, and

(1) Bign. ix. 65. 72. T. A. h. vol. 101. 181.

(2) Bign. ix. 65. 72. T. A. h. vol. 101. 181.

the most intoxicating anticipations were formed of the consequences of this auspicious union (1).

According to the programme of the etiquette to be observed on the occasion, the Emperor was to meet the Empress at Compeigne, and immediately return to Paris, while she proceeded to St.-Cloud, where she was to remain till the marriage was celebrated. but the ardour of Napoléon broke through these formalities, and saved both parties the tedium of several day's expectation. After the example of Henry IV, when he went to Lyon to met his bride, Marie de Medicis, on her journey from Italy, he had no sooner received intelligence of her approaching Compeigne, where he then was, than March 28 he went to meet her at the next post, and when she came up, springing out of his carriage, he leaped into that of the Empress, embraced her with more than youthful vehemence, and ordered the postilions to drive at the gallop to the Palace of Compeigne. He had previously enquired of the legal authorities, whether, if a child were to be born without the formal marriage being celebrated, it would, after its conclusion by proxy, be legitimate, and being answered in the affirmative, he took this method of cutting short all the fatiguing ceremonies of the occasion. The Empress was by no means displeased at the unexpected ardour, as well as young appearance of her husband, and next day, it is affirmed, her attendants hardly knew their former mistress, so much had she improved in ease and affability from the establishment of her rank, and the society of the Emperor. The marriage was celebrated with extraordinary pomp at St.-Cloud on the 1st April: on April 1 the day following, the emperor and Empress made their solemn April 2 entrance into Paris, amidst the roar of artillery, the clang of bells, and the acclamations of three hundred thousand spectators. They received the nuptial benediction at the Tuileries, four Queens held the train of Marie Louise. all the splendour of riches, and all the brilliancy of arms, were exhausted to give magnificence to the occasion. But though the *Moniteur* was filled for several months with congratulations on the event, and all the flowers of rhetoric, and all the arts of adulation were exhausted in flattery, the people evinced no real enthusiasm after the spectacles were over, and in the multitude of gorgeous heralds, plumed pages, and arm-emblazoned carriages, which were every where to be seen, the few remaining Republicans beheld the extinction of their last dreams of liberty and equality (2)

The hand of Napoleon, however, was too important an element in the balance of European power to be given away, without leaving deep traces in the minds of those who deemed themselves slighted on the occasion, and it soon appeared to what incalculable consequences this marriage might ultimately lead. Alexander, though not particularly solicitous about the connexion, was yet piqued in no ordinary degree at the haste with which the Austrian alliance had been concluded, and in an especial manner mortified at the hand of his sister having been in effect discarded, while yet the proposal for it was under consideration at St.-Petersburg. This feeling was so strong, that it was apparent even through all the congratulations of the Imperial court, and all the practised dissimulation of the Emperor. "We are pleased with this event," said Romanzoff, the chancellor of the empire, to Caulaincourt, "we feel no envy at Austria, who have no cause of complaint against her, every thing that secures her tranquillity and that of Europe cannot but be agreeable to us" "Congratulate the Emperor," said

(1) Thib viii 108. Bign ix 79, 82 Las Cas i viii 109, 120. Bign ix. 79, 86 Las Cases, i 330 330.

(2) *Moniteur*, March 28, April 3, 1810 Thib,

Alexander, "on his choice he wishes to have children, all France desire it this alliance is for Austria and France a pledge of peace, and on that account I am enchanted at it. Nevertheless it is fortunate that the objection of age so soon disposed of the affair. If I had not taken the precaution to speak to the Empress only in my own name, as of an event which by possibility might arise, what effect would now have been produced? Where should we now have been if I had not scrupulously attended to her rights? What reproaches might I not have justly addressed to you? The delays of which you so much complained, were therefore the result of prudence. Have you been equally considerate? Were you not conducting two negotiations at once? How was it possible that the marriage could have been concluded at Paris on the 9th February, almost before the arrival of the messenger from St. Petersburg, dispatched on the 21st January, after the lapse of the ten days allowed for our ultimatum, and who was the bearer only of a proposal for further delay, to overcome the scruples of the Empress and Archduchess? If the difference of religion had been an insurmountable objection, you should have said so at first. It is beyond measure fortunate that the age of the Archduchess could not be got over. In this instance, as when the same subject was talked of at Erfurth, it was your Emperor who spoke first. I only interfered in it as a friend; personally I may have some reason to complain, but I do not do so? I rejoice at whatever is for the good of France." When such was the language of the Emperor, it may be conceived what were the feelings of St. Petersburg and how materially the discontent of the court weakened the French influence, already so hateful to the nobles and the people. These details are not foreign to the dignity of history: they are intimately blended with the greatest events which modern Europe has witnessed; for though governed in his conduct in general only by state policy, and a perfect master of dissimulation, Alexander was scrupulously attentive to his private honour; the coldness between the two courts soon became apparent; but such is the weakness of human nature, alike in its most exalted as its humblest stations, that possibly political considerations might have failed to extricate the cabinet of St. Petersburg from the fetters of Tilitt and Erfurth, if they had not been aided by private pique; and Napoleon been still on the throne, if to the slavery of Europe, and the wrongs of the Emperor had not been superadded, in the breast of the Czar, the wounded feelings of the man (1).

*Character
of Josephine*

Few persons in that elevated rank have undergone such varieties of fortune as Josephine, and fewer still have borne so well the ordeal both of prosperity and adversity. Born at first in the middle class of society, she was the wife of a respectable but obscure officer; the Revolution afterwards threw her into a dungeon, where she was saved from the scaffold only by the fall of Robespierre; the hand of Napoleon elevated her successively to every rank, from the general's staff to the Emperor's throne; and the same connexion consigned her at the very highest point of her elevation, to degradation and seclusion; the loss of her consequence, the separation from her husband, the sacrifice of her affections. Stripped of her influence, cast down from her rank, wounded in her feelings, the divorced Empress found the calamity, felt in any rank, of being childless. The envenomed dart which was to pierce her to the heart. It was no common character which could pass through such marvellous changes of fortune unmarked by any decided stain, unsullied by any tears of suffering. If, during the confusion of all moral ideas consequent on the first triumph of the Revolution,

her reputation did not escape the breath of scandal, and if the favourite of Barras occasioned, even when the wife of Napoléon, some frightful fits of jealousy in her husband, she maintained an exemplary decorum when seated on the Consular and Imperial throne, and communicated a degree of elegance to the court of the Tuileries, which could hardly have been expected, after the confusion of ranks and ruin of the old nobility which had preceded her elevation. Passionately fond of dress, and often blamably extravagant in that particular, she occasioned no small embarrassment to the treasury by her expenses, but this weakness was forgiven in the recollection of its necessity to compensate the inequality of their years, in the amiable use which she made of her possessions, the grace of her manner, and the alacrity with which she was ever ready to exert her influence with her husband to plead the cause of suffering, or avert the punishment of innocence. Though little inclined to yield in general to female persuasion, Napoléon both loved and felt the sway of this amiable character, and often in his sternest fits he was weaned from violent measures by her influence. The divorce and marriage of Marie Louise produced no estrangement between them. In her retirement at Malmaison she was frequently visited and consulted by the Emperor, they corresponded to the last moment of her life; and the fidelity with which she adhered to him in his misfortunes, won the esteem of his conquerors, as it must command the respect of all succeeding ages of the world (1).

And of
Marie
Louise

Born in the highest rank, descended from the noblest ancestry, called to the most exalted destinies, the daughter of the Cæsars, the wife of Napoleon, the mother of his son, Marie Louise appeared to unite in her person all the grandeur and felicity of which human nature is susceptible. But her mind had received no lofty impress, her character was unworthy of the greatness of her fortune. She had the blood of Maria Thérèse in her veins, but not her spirit in her soul. Her fair hair, blue eyes and pleasing expression, bespoke the Gothic blood, and the affability of her demeanour, and sweetness of her manner, at first produced a general prepossession in her favour. But she was adapted for the sunshine of prosperity only, the wind of adversity blew, and she sunk before its breath. Young, amiable, prepossessing, she won the Emperor's affections by the naïveté and simplicity of her character, and he always said that she was innocence with all its sweetness, Joséphine grace with all its charms. All the attractions of art, says he, were employed by the first Empress with such skill, that they were never perceived, all the charms of innocence displayed by the second with such simplicity, that their existence was never suspected (2). Both were benevolent, kind-hearted, affectionate, both, to the last hour of his life, retained the warm regard of the Emperor, and both possessed qualities worthy of his affection. If her husband had lived and died on the imperial throne, few Empresses would have left a more blameless reputation; but she was unequal to the trials of the latter years of the empire. If her dubious situation, the daughter of one Emperor, the wife of another, both leaders in the strife, might serve her excuse for not taking any decided part in favour of the national independence on the invasion of France, the misfortunes of her husband and son had claims upon her fidelity which should never have been overlooked. The wife of the Emperor should never have permitted him to go into exile alone, the mother of the King of Rome should never have forgotten to what destinies her son had been born. What an object would she, after such sacrifices, returning from St.-Helena after his death, have formed

(1) Las Cases, i. 330. *Bour passion*

(2) Las Cases, i. 330, ii. 112.

in history! Force may have prevented her from discharging that sacred duty; but force did not compel her to appear at the Congress of Verona, leaning on the arm of Wellington, nor oblige the widow of Napoleon to sink at last into the degraded wife of her own chamberlain.

Journey of the Emperor and Empress to Belgium. Shortly after his marriage, the Emperor set out with his young bride for the Low Countries. They proceeded by St.-Quentin, Cambrai, and Valenciennes, to Brussels, every where received with adulatory addresses, passing under triumphal arches, and entering cities amidst the roar of artillery. But other cares than the civil government of his dominions, other designs than the amusement of the young Empress, occupied the mind of the Emperor. The war with England still continued; maritime preparations were necessary for its subjugation. Antwerp was the centre of these preparations. It was from the Scheldt that the mortal stroke was to be dealt out. The first care of the Emperor, therefore, was to visit the citadel, fortifications, and vast naval preparations at this important point. An eighty gun ship was launched in his presence, and one of the new forts erecting on the left bank of the river, beyond the Tête-de-Flandre, was called by the name of Marie Louise, which it still bears. He had every reason to be satisfied with the works in progress, thirty ships of the line, nearly as great a fleet as that which was destroyed at Trafalgar, were ready for sea in the docks. From Antwerp the Emperor descended the Scheldt to Flushing and Middleburg, where he gave directions for extensive works and fortifications, that were to do more than repair the devastations that were committed by the English in the Island of Walcheren. They afterwards returned by Ghent, Lille, Calais, Boulogne, and Havre de Grace, to Paris, which they reached on the 1st of June. Napoleon there assisted in the interment of the body of Marshal Lannes at the Chapel of the Invalids at Paris. The direction of this journey, undertaken so shortly after his marriage, revealed the secret designs of the Emperor. Naval preparations, the conquest of England, were uppermost in his thoughts; and if any additional arguments were necessary to vindicate the Walcheren expedition, it would be found in the direction he gave to this journey (1).

Dreadful catastrophe at Prince Schwarzenberg's ball July 8. A deplorable event occurred shortly after, which recalled the recollection of the lamentable accident that had occurred on the occasion of the marriage of Marie-Antoinette, and was regarded of sinister augury for the marriage of the young Empress. Prince Schwarzenberg, the Austrian ambassador at Paris, gave a magnificent ball on the 8th of July, at which the Emperor and Empress, and the whole court were assembled. From the great number of guests expected on the occasion, it was deemed necessary to enlarge the accommodations of his hotel. The great dancing-room was fitted up in the most sumptuous manner, in a temporary building behind, and the festoons and drapery, in particular, excited universal admiration. By accident, one of the gauze curtains took fire from a lamp in its vicinity, and in an instant the flames spread over the whole roof and interior of the structure. The coolness of Napoleon was as conspicuous here as in the field of battle; he immediately sought out the Empress, took her quietly by the arm and led her out of the danger. Many persons however, were scorched by the flames, or wounded by the falling of the beams, and some of them died afterwards of the injuries. But all lesser considerations were forgotten in the dreadful fate of the Princess Pauline of Schwarzenberg, the sister-in-law of the ambassador. This amiable person had been

one of the last of the company who escaped from the burning room with her daughter in her hand. Both had got out in safety, but in the confusion the child was separated from her mother, and the latter, conceiving that she had been left behind in the scene of danger, rushed, with generous devotion, back again into the burning saloon, and was crushed by the falling of the beams. So fierce were the flames that the place where the unfortunate princess had perished, could only be discovered by a gold ornament she had worn on her arm, which resisted the conflagration. This frightful incident excited a deep sensation in Paris, chiefly from its being regarded as a prognostic connected with the marriage of the Empress; but history must assign it a nobler destiny, and record the fate of the Princess Schwartzemberg as perhaps the noblest instance of maternal heroism recorded in the annals of the world (1).

Singular
intrigue and
fall of
Fouché This period was rendered remarkable by the fall of one of the ministers of Napoléon, who had hitherto exercised the most unbounded influence in the internal concerns of the empire. Fouché, whose talents for intrigue, and thorough acquaintance with the details both of Jacobin conspiracy and police administration, had hitherto rendered him a necessary part of the Imperial administration, fell into disgrace. The immediate cause of this overthrow was the improper use and undue extension which he gave to a secret proposition at this time made to the British Government, by Napoléon, for a general peace. The Dutch ambassador was the agent employed in this mysterious communication, and the proposals of Napoléon went to surrender to the English almost the entire government of the seas, provided that that power would surrender to Napoléon the uncontrolled government of the continent of Europe. In his secret conferences with the French agent on this subject, Marquis Wellesley insisted strongly on the prosperous condition of the British empire, and its ability to withstand a long period of future warfare from the resources which the monopoly of the trade of the world had thrown into its hands. These views singularly interested Napoléon, who had more than one agent employed in the transaction. This secret negotiation was discovered by Fouché, and either from an excusable desire to get to the bottom of the views of the British Cabinet on the subject, or from an insatiable passion for intrigue, which could not allow any such transaction to go on without assuming its direction, he took upon himself, without the knowledge or authority of the Emperor, to open a secret negotiation directly with Marquis Wellesley. The agent employed in these mysterious communications was M. Ouvrard, a man of considerable skill in intrigue, and whose vast monetary transactions had already produced such important effects in the early part of Napoleon's reign (2). Ouvrard repaired to Amsterdam, where he entered into communication with an Irishman of the name of Fagan, in London. Labouchere, an agent of the King of Holland, who had formerly been on a similar mission to the British government, was also employed in the transaction, and he communicated it to his sovereign Louis, by whom it was revealed to Napoléon at Antwerp. Ouvrard was in consequence arrested, immediately after Napoléon's return to Paris, and closely interrogated by the Emperor. It was proved from this examination, and from the documents found in his possession, that the basis of Fouché's propositions were, that the government of the continent of Europe should be surrendered to Napoleon, and that of all the transmarine states and the seas to England, with the exception of South America, which was to be made over to the French Emperor. In order to accomplish this double spoliation,

(1) *High* 159, *Thib.* viii, 128, 129.(2) *Ante*, v 303

a French army of forty thousand men was to be embarked on board an English fleet, and charged with the reduction of North America to the government of Great Britain, and of South America to that of France. Extravagant as these propositions may appear, it is proved by a holograph note of Napoleon himself, that they had been made by the Minister of Police to the English government (1) "What was M. Ouvrard commissioned to do in England?" said Napoleon to Fouché, when examined before the council "To ascertain," replied he, "the disposition of the new minister for Foreign Affairs in Great Britain, according to the views which I have had the honour of submitting to your Majesty" "Thus then," replied Napoleon, "you take upon yourself to make peace or war without my knowledge Duke of Otranto, your head should fall upon the scaffold" Upon consideration, however, Napoleon was inclined to adopt less rigorous measures He was fearful of exhibiting to the world any instance of treachery in the Imperial government, and perhaps not altogether at ease concerning the revelations which Fouché, if driven to extremities, might make regarding his own administration He limited the punishment of the fallen minister, therefore, to deprivation of his office of Minister of Police, which was immediately bestowed on Savary, Duke of Rovigo (2) To break his fall, Fouché was, in the first instance, declared Governor of Rome, and he set out from Paris shortly after for that destination; but the recall of his appointment overtook him before he arrived at the eternal city he stopped short at Leghorn, and, in his despair, took his place in a vessel with a view to seek for refuge in America The sufferings he had undergone, however, from sea-sickness, in the outset of his passage, ultimately deterred him from carrying that intention into effect. He remained in Tuscany, determined to take his chance of Napoleon's vengeance rather than incur the certain misery of a voyage across the Atlantic. He obtained, soon after, permission to return to Aix, in Provence, where he lived for some time in retirement, and, at length, the necessities of his situation obliged Napoleon again to have recourse to his assistance, and he took a prominent part in the subsequent course of events, which ultimately brought about the overthrow of the empire (3)

A still more important consequence resulted from the journey of Napoleon to the Low Countries, in the resignation of Louis, and annexation of Holland and the Hanse Towns to the French empire Napoleon had long been dissatisfied with his brother's government of the Dutch provinces; for that sovereign, sensible that his subjects' existence depended on their commerce, had done all in his power to soften the hardships of their situation, and had not enforced the Imperial decree against English trade with the rigour which the impatient disposition of the Emperor deemed necessary The displeasure arising from this cause was much increased by the immense importations of English merchandise and colonial produce, which took place into the north of Germany and the States of Holland, in consequence of the absence of the French guards from the coast during the campaigns of Wagram and the Wachteren expedition; an importation so enormous, that, chiefly owing to its influence, the British exports, which in 1804

(1) Note of Xep. 2 to July 1810

(2) The Emperor said to the spy who producing him Minister of Police "I have put you in a dangerous place because I have found I could no longer rely upon him. He was taking precautions against me when I had no design against him and attempting to establish communication for himself at my expense. He was constantly endeavouring to divide my law-

tutions, in order to prevent me from uniting them. I have become reserved towards him, he became the dupes of intrigues, and so after getting into a trap. You will soon see that he is in that spirit that he understood without my knowledge to make peace between France and England" — p. 211.

(3) *Mém. de Savary*, t. 4. 117 118; t. 12, 24, 25. *Tableaux*, 177, 123. *Revue*, 175, 112.

had been only L.50,587,990 were raised in the succeeding year to L.46,292,652 (1). Determined to put an end to such a state of matters, which he deemed entirely subversive of his continental policy, so far at least as Holland was concerned, as well as with a view to prepare the minds of the Dutch for the general incorporation which he meditated, Napoléon compelled Louis, March 16 by a treaty concluded in the middle of March, to cede to France its whole territory on the left bank of the Rhine, including the isles of Walcheren, South Beveland, Cadsand, and the adjacent territory on the continent to the left of that river, which was formed into a department under the name of that of the Mouth of the Scheldt (2). At the same time, it was intimated to the King of Holland, that he must relinquish all intercourse, direct or indirect, with England, and consent to his coasts being entirely guarded by French soldiers

Incorporation of Holland with the French empire This cession, however, was but the prelude to more important advances. During the Emperor's visit to Antwerp, he became more than ever convinced of the expedience of incorporating the whole

of Holland with the French empire, and many letters, in the most haughty style, were written by him to the unfortunate King of Holland in the course of his journey back to Paris, evidently intended to make him in despair re-

May 16 sign the crown. The last, from Lille, on 16th May, concluded with these words — "It is high time that I should know definitively whether you are determined to occasion the ruin of Holland. write no more to me in your accustomed phrases, for three years you have been constantly repeating them, and every successive day has proved their falsehood. This is the last letter in my life I will ever write to you." Matters soon after came to a crisis: Oudinot, with a French army twenty thousand strong, crossed the frontier, and rapidly advanced towards Amsterdam. Louis, who had a thorough reliance on the affections of his Dutch subjects, who knew what mortifications he had undergone on their account, at first thought seriously of resistance; but upon the assurance of his generals that it was hopeless, he abandoned

July 1 the attempt. It was next proposed to imitate the conduct of the Prince Royal of Portugal and fly to Batavia, but this project was relinquished as impracticable, and at length the unhappy monarch came to the determination of resigning in favour of his son, the Prince Royal, Napoléon Louis (3). Having executed this deed, he set out in the night from Haarlem for Tophitz in Bohemia, having first taken the precaution to order that the resignation should not be published till he had quitted the kingdom. The publication of this unexpected resolution excited universal consternation in Holland; but every one foresaw what soon after turned out to be the denouement of the July 9 tragedy. On the 9th July, a decree appeared, incorporating the whole kingdom of Holland with the French empire

Napoléon's public and private motives for this step "Obliged," as the report preceding the decree set forth, "to make common cause with France, Holland bore the charges of such an association without experiencing any of its advantages. Its debt, fixed on so inconsiderable a territory, was above a fourth of that of the whole empire. Its taxes were triple what they were in France. In such a state of matters, the interest of Holland loudly called for its annexation to the Empire: nor was the interest of France less obvious in the transaction. To leave in foreign hands the mouth of the Rhine, the Meuse, and the Scheldt, would be to render the French commerce and manufactures tributary to the pos-

cessor of those estuaries. The present incorporation, on the other hand, completes the empire of Napoleon and his system of war, policy, and commerce. It is a step necessary to the restoration of his marine; in fine, it is the most

Aug. 1. decisive stroke which he could deliver to England." Louis protested against the measure, as destructive alike of the interests of Holland Dec. 12, 1806. and the rights of his son; and with much dignity refused the provision of two millions of francs a year (£80,000) fixed on him by a supplemental decree of the Senate in December following. Prince Louis, his son, repaired to Paris, where he was kindly received by the Emperor, who had been much annoyed by the scandal which this family rupture would occasion in the world. His words, at his first interview with his disowned nephew, were as characteristic of his private feelings, as his public declaration on the subject was descriptive of the ruling principles of his policy. "Come, my son, I will be your father. you will lose nothing by the exchange." The conduct of your father has wounded my heart. When you are grown up, you will discharge his debt and your own. Never forget in whatever position you may be placed by my policy and the interest of my empire, that your first duties are towards me, your second towards France; all your other duties, even to the people whom I may confide to your care, must be postponed to these (1)."

Flight of
Napoleon
to America.

The resignation of Louis was the source of great distress to Napoleon, on which he forcibly enlarged, even in the solitude of St. Helena. But it was soon followed by an event which still more

nearly affected him. For some years past his brother Lucien and he had been on distant terms; and he could ill brook the sturdy, but honest feeling which induced that disinterested republican to refuse honours and royalty, when bestowed by the Imperial hand. Their rupture became irreconcilable by the refusal of Lucien to divorce his wife, an American by birth, to whom he was tenderly attached, in order to receive a princess suggested by the political March, 1806. views of the Emperor. He withdrew first to Rome, where he lived several years in privacy, devoted to poetry and the arts; and when the Roman States were incorporated with the French empire, he resolved to take refuge in the United States, in order to be altogether beyond the reach of his Aug. 2, 1806. brother's imperious temper. He set sail, accordingly, for America, but was taken prisoner by two English frigates, and conducted to Malta, from whence he obtained liberty to reside on his parole in the British dominions. He fixed his residence in the first instance at Lindlow in Shropshire, where he continued to devote his whole time to literary pursuits, and the completion of an epic poem on Charlemagne, which had long occupied his Dec. 28, 1806. attention. Shortly after this voluntary expatriation, he purchased the villa of Thorngrove, near Worcester, where he lived in affluence and elegant retirement, till the conclusion of the war. About the same time letters were intercepted by the Spanish guerillas, from Joseph, in which he bitterly complained of the rigorous mandates which he received from the Emperor, and the perpetual mortifications to which he was exposed, and declared that if he could do so, he would willingly resign the crown and retire to a private station (2). Thus while the Emperors of Russia and Austria, dazzled by the blaze of his military glory, were riving with each other

(1) Memoirs, 187-189. Thib. vol. 122, 124. March 233-234. Sup. lib. at 29-30.

(2) = I enclose an intercepted letter from Joseph to Napoleon, which seems to me to be an interesting document as has yet appeared. It shows that he treats his brothers as tyrannically as he does other

people, and gives ground to hope that he is surrounded by a more devoted and loyal band of the old soldiers of the Austrian empire. — W. Hall, vol. 1. p. 100. — Li. Harwood, 1812. June 1812. — See Memoirs, vol. 33.

for the honour of Napoléon's hand, his own brothers, whom he had raised from the dust to thrones, from a practical acquaintance with his tyrannical government, were seeking in preference the security of private life, and voluntarily took up their abode with his enemies rather than incur any longer the vexations of his imperious disposition (1).

General
consterna-
tion in
England at
the results
of the last
campaign

The retreat of Wellington from Talavera, and the unsuccessful issue of the preceding campaign, excited the most desponding feelings in a large proportion of the inhabitants of Great Britain. The people of that country, although now strongly imbued with the military spirit, enthusiastic in the support of the war, and passionately desirous of military renown were still mere novices in the military art, and totally incapable of appreciating the merits of a system of defence which was to last for years, and in which ultimate success was to be purchased by a cautious system of defensive policy, and frequent retirement before the enemy in the outset, till the Peninsular troops were trained to fight, and something approaching to equality in the field could be attained. Following the usual bent of popular bodies, to form their opinions from present impressions, the people never considered that a vast and admirably disciplined corps, like the French army, which had grown up with the victories of fifteen years, and was now drawn from the military strength of almost all Europe, could not be successfully resisted but by a steady perseverance at first in the most cautious policy they forgot that it was by delay that Fabius restored the Roman affairs. Their idea of war was a victory followed by an immediate advance to the enemy's capital, and the moment that a retreat commenced they abandoned themselves to the most unmanly depression, and gave over all for lost, because the military power which had conquered all Europe, was not at once crushed by twenty thousand English soldiers.

Address of
the city of
London for
an inquiry
into the
conduct of
Wellington

These feelings, characteristic in all ages of the great body of the people, who are usually governed by present occurrences, and incapable, when left to their own direction, of the steady foresight and sustained efforts indispensable in every department for durable success, were called forth with extraordinary violence in Great Britain in the beginning of 1810, by the unsuccessful result of the Walcheren expedition, and the successive retreats of Sir John Moore and Lord Wellington, at the close of the preceding campaigns. In proportion to the unbounded hopes and expectations excited by the brilliant success of the first contest in the Peninsula, was the despondence which universally prevailed at the ultimate discomfiture of the English arms, and the apparently unprofitable waste of British gallantry, and above all, the innumerable defeats and disasters of the Spanish armies, which had now, seemingly, completely destroyed all hopes of successful resistance in the Peninsula. The Opposition, as usual, took advantage of these feelings, to excite the people to such a manifestation of public opinion, as might compel the termination of the war in the Peninsula, and ultimately hurl the ministers from office. The temper of the public mind, at this period, and the feelings of the Opposition on the subject, may be judged of by the fact, that the Common Council of the city of London, not merely petitioned Parliament against the bill brought in by ministers for granting Lord Wellington an annuity of £2000 a-year, in consideration of the valour and skill he had displayed in the battle of Talavera, but prayed the King for *an enquiry* into the circumstances connected with the failure of the late expedition into the interior of Spain. The expressions made use of

(1) *Thib. viii* 147, 148

on this occasion deserve to be recorded, as containing a memorable example of the well known truth, that real greatness in public life, has rarely been attained but by those who, at one period, have resolutely acted in opposition to the opinions and clamours of the great body of the people, and that not unfrequently the acts of their life which have given them the most durable reputation with posterity, are those which have occasioned the most violent outcry and obloquy at the moment. The common council stated, "admitting the valour of Lord Wellington, the petitioners can see no reason why any recompense should be bestowed on him for his military conduct. Profiting by no lessons of experience, regardless of the influence to be drawn from the ^{see 1. 1799.} disgraceful convention of Cintra, and calamitous retreat of Sir John Moore, a third army, well equipped, under the orders of Sir Arthur Wellesley, was precipitated into the interior of Spain, with the same ignorance of the force and movements of the enemy. After a useless display of British valour, and a frightful carnage, that army, like the preceding one, was compelled to seek its safety in a precipitate flight, before an enemy, who, we were told, had been conquered—abandoning many thousands of our wounded countrymen into the hands of the French. That calamity, like the others, had passed without any inquiry, and, as if their long-experienced impunity had put the servants of the Crown above the reach of justice, ministers have actually gone the length of advising your Majesty to confer honourable distinctions on a general, who has *thus exhibited with equal rashness and ostentation nothing but a useless valour*." This address having been offered to the ^{see 2. 1810.} King, is not to be found in the Parliamentary history, or Annual Register, though a petition of a similar character was presented to Parliament against the grant of Wellington's pension; but it was eagerly transcribed from the English daily papers into the columns of the *Messenger* (1), where it now remains among many other documents which their authors would now willingly consign to oblivion, but which history, looking to the encouragement of strenuous virtue under unmerited obloquy, in future times, deems it its first duty to bring prominently into light.

When such was the temper of the Opposition party throughout the kingdom, it may well be conceived that their leaders in Parliament were not slow in taking advantage of a state of public opinion which promised such great results to themselves, and threatened such discomfiture to their antagonists. The preceding campaign in Spain, accordingly, was the subject of long and interesting debates in both houses of Parliament; and the study of them is highly important, not merely as indicating the extent to which general delusion may prevail on the subject of the greatest events recorded in history, but as illustrative of the difficulties with which both Wellington and Government had to struggle in the further prosecution of the Peninsular campaign.

On the part of the Opposition it was strongly urged, on repeated occasions, by Lord Crenville, Lord Grey, Mr. Ponsonby, and Mr. Whitbread, that, "admitting it was proper to bestow rewards where great public services had been performed it is difficult to see upon what ground the battle of Talavera can be considered as of that character. If a decisive overthrow has been achieved such as that of Maida, it may be proper to confer such a distinction even although no durable results follow from the laurels of victory; but where that is not the case, and the contest has terminated in something like a drawn battle, it

(1) *Messenger* 27th Jan. 1810. See also City of London's Petition to Commons Feb. 24. 1810. *Parl. Deb.* 609.

is reasonable to ask, when no subsequent advance has taken place, what evidence have we that a victory at all has been gained? Now, what was the case at Talavera? The enemy's army was neither dispersed nor overthrown, and, therefore, that test of success was wanting. Then what was the grand object of the campaign? Unquestionably to advance with the aid of the Spanish armies to Madrid, and, so far as that object from having been gained, that we ourselves were in the end obliged to abandon our sick and wounded, and retire with disgrace, first behind the Guadiana, and ultimately within the frontiers of Portugal. Nor was this all. By his disastrous retreat Lord Wellington left the flanks of his army unsupported, and the consequence was, that Sir Robert Wilson, though a most able and gallant officer, was defeated on the one flank at Escalano, and Venegas, with the best army that the Spaniards had, underwent a total overthrow at Ocana.

"Granting to Lord Wellington the praise of being an able, active, and enterprising officer, his conduct at the battle of Talavera was not such as to entitle him to the character of a good general. It was clear that the strong ground on the left had not been adequately taken possession of or secured, and the charge of cavalry in the valley was injudicious, leading, as it did, to a very heavy loss, without any adequate advantage. If the Spaniards on the right were really the incapable body of troops which might be inferred from his Lordship's despatches, what must have been the temerity of the general, who, supported by such troops, could advance into the heart of the enemy's territory? If they were incapable of moving in the presence of the enemy, why did he leave to them the important duty of defending the post of Talavera, and the British wounded? And if this was done because a still greater force, under Soult, threatened our rear and communications, on what principle can we defend the conduct of a general who could thus move so far into the enemy's country, without having done any thing to secure his flank or rear, or how affirm that the dispositions of the inhabitants of the country are with us, when they gave no intelligence of the concentration and march of three French corps, and their approach to the theatre of war was for the first time made known by their threatening, and all but cutting off our retreat to Portugal?

"Such has been the effect of want of supplies and disease upon the British army after their retreat into Portugal, that hardly nine thousand men remained capable of bearing arms to defend the frontiers of that kingdom. This was a deplorable result to succeed immediately what, we were told, had been a glorious victory. There is something inconceivable in the difficulties alleged by the English general in regard to the providing supplies for his army. How was it that the French generals experienced no such difficulty? After the battles of Austerlitz, Essling, and Wagram, then operations never were cramped by the want of provisions. How did this happen? Because they boldly pushed forward and seized the enemy's magazines. It argues a total want of organization, foresight, and arrangement, to be thus checked in all our operations by the alleged difficulty of obtaining that which it is the first duty of every prudent general to provide for his soldiers. In fact, the French sent out small parties after their victories, and thus obtained supplies, while we were utterly unable to do any thing of the kind after our alleged triumphs.

"Unhappily for the country, the same ministers who had already so disgracefully thrown away all the advantages of the Spanish war, are still in power. And they have derived no wisdom whatever from the failure of all their preceding efforts. It is now plain that they could no longer look either

for co-operation, or efficient government, or even for the supplies necessary for their own troops in that country. Repeated disasters, unprecedented in history for their magnitude and importance, have at length taught us the value of the Spanish alliance, and the capability of that nation to maintain a war with France. They could not plead ignorance on this subject, for it was expressly stated in a letter of Mr Secretary Canning to Mr Frere, that 'we had shed our best blood in their cause, unassisted by the Spanish Government, or even the good will of the country through which we passed.' When Government determined, in opposition to all the dictates of prudence, to continue the war in the Peninsula, they took the most injudicious possible mode of carrying it on, by directing Lord Wellington to advance into Spain, if it could be done consistently with the interests of Portugal. By doing so, we made the Spaniards abandon the system of guerilla warfare, in which they had uniformly been successful, and take up that of great battles, in which they had as uniformly been defeated. And when we did enter into war on that great scale, what have we done to support it? Why, we sent twenty-five thousand men under Wellington to Portugal, forty thousand to perish in the marshes of the Scheldt, and fifteen thousand to make a useless promenade along the coasts of Italy. These forces, if united together, would have formed a noble army of eighty thousand men, which would have effectually driven the French from the Peninsula. Instead of this, by straining at every thing, we have gained nothing, and disgraced ourselves in the eyes of the world, by putting forward immenso forces, which have in every quarter experienced defeat. If the war is to be conducted in this manner, better, far better, to retire from it at once, when it can be done without ruin to our own forces, than persist in a system of policy which has no tendency but to lure the Spaniards by the prospect of assistance, from their true system of defensive warfare, and then leave them exposed, by our desertion, to the sad realities of defeat (1)."

Amount of the actual contribution to support the war On the other hand, it was answered by Lord Wellesley, Lord Liverpool, Lord Castlereagh, and Mr Perceval,—“The object of the British general was first, to expel the invaders from Portugal; and next, to attempt the deliverance of the Spanish capital. The first object was attained by the passage of the Douro: an achievement as rapid and able as any recorded in military history, and which exposed the invading force to disasters fully equal to those which had been so loudly dwelt on in Sir John Moore's retreat. When Wellington advanced into Spain, he had a fair prospect of success, and he neither could nor was entitled to anticipate, the refusal of Guesta to co-operate in the proposed attack on Victor, before Sebastian and the king came up, which if executed, as he suggested, would unquestionably have led to a glorious and probably decisive overthrow. As to the merits of the battle itself. It is alike unfair and ungenerous to ascribe the whole credit to the troops and allow nothing to the skill, resolution, and perseverance of the commander, who with half the enemy's force achieved so memorable a triumph. Did no glory redound from such a victory to the whole British name? Has it not been acknowledged, even by the enemy, to have been the severest check which he had yet sustained? Is it to be reckoned as nothing in national acquisitions, the striking a blow which gives a spirit to your soldiers that renders them well-nigh invincible? What territorial acquisitions followed the victories of Creecy, Poliers, or Azincourt; and yet can there be the least doubt that these glorious days have contributed more to the sub-

sequent tranquillity of England, by the renown with which they have surrounded our name, than the permanent acquisition of vast provinces?

“But, in truth, it is a total mistake to assert that no benefit to the common cause has accrued from the battle of Talavera. What else was it that arrested the course of French conquest in the Peninsula, gave a breathing time to the south to prepare fresh armies; liberated Galicia and Asturias from their numerous oppressors? What else prevented the invasion of Portugal, and gave time for the equipment, disciplining and organizing of the Portuguese forces? It is in vain to suppose that an immense military force, like that of France in Spain, can be permanently arrested, but by pitched battles and serious disasters, and, accordingly, the consequence of the march of the English army to Talavera has been, that the French have been stopped in their incursions into every part of the Peninsula, and instead of a vigorous offensive, have been driven to a cautious defensive in every quarter. It may be quite true that the advantages thus gained, and which were of such a magnitude as was, in the opinion of Lord Wellington, sufficient to have rendered the Spanish cause absolutely safe, if conducted with prudence and wisdom, may have been in a great measure thrown away, perhaps altogether lost, by the blamable imprudence and rashness with which they have subsequently rushed into conflict with the enemy in the open plain, and the dreadful overthrows which their inexperienced troops have consequently received. But neither Lord Wellington, nor ministers, are responsible for these consequences, for not only were these subsequent efforts of the Spaniards undertaken without the concurrence of the British government, or their general in Spain, but in direct opposition to the most strenuous and earnest advice of both; and, if the counsel given them had been adopted, the Spaniards would have possessed a powerful army of fifty thousand men to cover Andalusia, which would have rendered any attempt at the subjugation of that province hopeless, while the disciplined English and Portuguese armies retained a menacing position on the frontiers of Castile.

“It is true, that experience has now demonstrated, that very little reliance is to be placed in the Spanish army in the field, in pitched battles, and, above all, that they are almost universally unfit to make movements in presence of the enemy. This defect was anticipated, to a certain degree, from the outset, although it could not be denied that Lord Wellington, from the appearance and experience of Cuesta's army, had good reason to be dissatisfied with the inefficiency of his troops during the short campaign in Estremadura. But it does by no means follow from that deficiency, that it is now expedient to abandon the war in the Peninsula. If, indeed, it had appeared that the spirit of patriotism had begun to languish in the breasts of the Spaniards; if miscarriages, disasters, and defeats had broke their courage, or damped their ardour, then it might indeed be said that further assistance to them was unavailing. But there is still life in Spain, her patriotic heart still beats high. The perseverance with which her people have returned to the charge after repeated overthrows, reminds us of the deeds of their fathers in the days of Sertorius, and the Moorish wars. The sieges of Saragossa and Gerona have emulated the noblest examples of ancient patriotism. The generous and exalted sentiments, therefore, which first prompted us to aid Spain, should still inspire us to continue that aid to the last. The contest in which she is engaged is not merely a Spanish struggle. The fate of England is inseparably blended with that of the Peninsula. Shall we not therefore stand by her to the last? As long as we maintain the war there, we avert it from our own shores. How often in nations, above all, how often in Spain, have the ap-

parent symptoms of dissolution been the presages of new life—the harbingers of renovated vigour? Universal conquest, ever since the revolution, has been the main object of France. Experience has proved that there are no means, however unprincipled—no efforts, however great, at which the government of that country will scruple, provided they tend to the destruction and overthrow of this country. Now, then, is this tremendous power to be met, but by cherishing, wherever it is to be found, the spirit of resistance to its usurpation, and occupying the French armies as long as possible in the Peninsula, in order to gain time until the other powers of Europe may be induced to come forward in support of the freedom of the world (1)!”

No division took place in the House of Commons on the conduct of the Peninsular war, but in the House of Lords ministers were supported by a majority of 32, the numbers being 63 against 33 (2).

^{Reflections on this decision.} In reviewing, with all the advantages of subsequent experience, the charges here advanced against Government and Lord Wellington, it seems sufficiently clear that the only part of the charges that were really well founded, consisted in the considerable British force which was uselessly wasted on the coast of Italy. That the Walcheren expedition was wisely directed to the mouth of the Scheldt, can be doubted by none who recollect that there was the vital point of the enemy's preparations for our subjugation; that thirty ships of the line, and immenso naval stores were there already accumulated and that Napoléon has himself told us that he regarded Antwerp as of such importance to his empire, that he lost his crown rather than give it up. That success was easily attainable with the force employed, has already been sufficiently demonstrated by the opinions of all the French military writers, and even of Napoléon himself (3). That the prosecution of the war in Spain was not merely expedient, but necessary, must be evident to every rational person, from the consideration, that without our assistance the Peninsula would immediately have been subdued, the whole forces of Europe, from the North Cape to Gibraltar, arrayed against the British dominions, and that at least two hundred thousand French troops would have been ordered across the Pyrenees, to menace the independence of this country, from the banks of the Scheldt and the heights of Boulogne. But it is impossible to make any defence for the unprofitable display of British force on the shores of Italy. The expedition under Sir John Stewart was perfectly useless as a diversion in support of Austria, as it did not sail till the middle of June, at which time the whole forces of Napoléon were collected for the decisive struggle on the shores of the Danube. The ten thousand British troops thus wasted in this tardy and unavailing demonstration, would probably have cast the balance in the nearly equal-poised contest in the Spanish peninsula. Landed on the coast of Catalonia, they could have raised the siege of Gerona, and hurled M. St. Lyr back to Ronciglion. United to the force of Wellington, they would have brought his standards in triumph to Madrid. But, ignorance of the incalculable value of time in war, and of the necessity of concentrating their forces upon the vital point of attack, were the two grand defects which want of warlike experience had, at that time, impressed upon the British cabinet, and thus they sent Sir John Stewart to the coast of Italy, when it was too late to aid the Austrians and kept him away from Spain, when he would have been in time to have materially benefited Wellington.

Important
effect which
these
gloomy
views in
England
had on the
conduct of
the French
Govern-
ment

Severely as the Government and Wellington were cramped by the violent clamour thus raised against the conduct of the war, both in Parliament and throughout the country, one good and important effect resulted, which was not at the time foreseen, and probably was little intended by the authors of the outcry. This was the impression which was produced upon the French government and people, by the publication of these debates, as to the total inability of England to continue the struggle on the continent with any prospect of success. The constant repetition in Parliament, and in all public meetings, of the dreadful burdens which oppressed England from the continuance of the war, and the unbounded extent of the calamities which had befallen her armies in the last campaign, naturally inspired the belief, either that the contest would speedily be terminated by the complete destruction of the English forces, or that the British nation would interfere, and forcibly compel the government to abandon it. This opinion was adopted by Napoléon, who trusted to these passionate declamations as an index to the real feeling of Great Britain, and who, having never yet been brought into collision with the English troops, was ignorant alike of the profound sense of the necessity of resistance which animated the great body and best part of the people, and of the prowess which an admirable discipline, and their own inherent valour had communicated to their soldiers. All the speeches on this subject in Britain were ostentatiously quoted in the *Moniteur*, and they compose at least a third of the columns of that curious record for the year 1810. The Emperor was thus led to regard the war in the Peninsula as a contest which could, at any time he pleased, be brought to a conclusion, and which, while it continued, would act as a cancer that would wear out the whole strength of England, and to this impression, more perhaps than to any thing else, is to be ascribed the simultaneous undertaking of the Russian and Spanish wars, which proved too great a strain upon the strength of his empire, and was the immediate cause of his ruin.

Resolution
of Parlia-
ment, and
supplies of
the year

Having thus come to the resolution of continuing the war with vigour in the Peninsula, Government applied for, and obtained, the most ample supplies from Parliament for its prosecution. The termination of the contest in every other quarter by the submission of Sweden to Russia, which will be immediately noticed, enabled them to concentrate the whole forces of the nation upon the struggle in Portugal, and thus to communicate a degree of vigour to it never before witnessed in British history. The supplies to the navy were £20,000,000, those to the army were above £21,000,000, besides £5,000,000 for the ordnance. No new taxes were imposed, although a loan to the amount of £8,000,000, besides a vote of credit to the extent of £5,000,000 more, was incurred. The land forces were kept up to the number of two hundred and ten thousand, and the ships in commission in the year were 107 of the line, besides 620 frigates and smaller vessels. The British navy at that time consisted of 240 ships of the line, besides 56 building, and the total numbers were 1019 vessels. The produce of the permanent taxes for the year 1810 was £59,744,000, and the war taxes and loans £40,000,000. The total expenditure of the year rose to the enormous sum of £94,000,000 (1).

campaign
in Spain.

him of all disquietude in Germany, Napoleon deemed it high time to accomplish the entire subjugation of the Peninsula. With this view, he moved a large portion of the troops engaged in the campaign of Wagram, amounting to one hundred and twenty thousand men, across the Pyrenees, and arranged his forces in nine corps, besides the reserve on the Ebro, under the most renowned marshals of the empire. Twenty thousand of the Imperial guard even marched from Chartres and Orléans towards the Bidassoa, a large body of Polish and Italian troops assembled at Perpignan and entered Catalonia, and an immense battering train of fifty heavy guns and nine hundred chariots, took the road from Bayonne to Burgos. The Emperor even went so far as, in his discourse to the Senate on December 2d, to announce his intention of immediately setting out for the south of the Pyrenees (1). Such was the magnitude of the reinforcements, that they raised the total effective French force in Spain, which, in the end of 1800, had sunk to two hundred and twenty-six thousand men, to no less than three hundred and sixty-six thousand, of whom two hundred and eighty thousand were present with the eagles, and fit for service. Out of this immense force he formed two great armies, each composed of three corps destined for the great operations of the campaign: the first, comprising the corps of Victor, Sebastiani, and Mortier, with Dessolles' reserve, mustering about sixty-five thousand men, under the command of Soult, was destined for the immediate conquest of Andalusia; the second, consisting of the corps of Victor, Ney, and Junot, consisting of eighty thousand men, which assembled in the valley of the Tagus, was charged in the first instance with the siege of Ciudad Rodrigo, and ultimately with the conquest of Portugal. Notwithstanding the enormous amount of these forces, the Emperor adhered rigidly to his system of making war support war: he reduced to 2,000,000 francs (£80,000) a month, the sum to be drawn from the Imperial treasury for all his troops in the Peninsula, leaving the whole remaining funds for their sup-

(1) "When I shall have well beyond the Pyrenees, I shall expand its former and pursue into the ocean its usual stream, definite, and swift. The liberty of my race will be the victory of the genius of good over that of evil; of moderation, order, and civility over I know not what and how I direct or govern. My friendship and my protection will be to the tranquillity and happiness to the people of Spain. — Discourse of the Emperor to the Legislature at Madrid, December 21, 1809 — *Voyageur*, 2d Dec. 1809.

port to be drawn from the provinces to the south of the Pyrenees, which were of course exposed to the most unheard-of spoliation. To such a length was this system of regular extortion carried, that separate military governments were formed in each of the provinces of Biscay, Navarre, Aragon, Catalonia, Old Castile, and Leon, the object of which was to render the whole resources of the country available for the clothing, feeding, and pay of the soldiers; and so completely did they intercept the revenue which should have been enjoyed by Joseph at Madrid, that he had literally nothing to depend upon but the customs collected at the gates of the capital. Yet with all this machinery to extort money from the people, and with this enormous army to collect it, the resources of the country were so thoroughly exhausted, and the ruin of industry was so universal, that the troops were generally in the greatest want, their pay was almost every where thirteen months in arrear: the ministers at Madrid were starving from the non-payment of their salaries; the King himself was without a shilling, and it was as much from the necessity of finding fresh fields of plunder, as from military or political views, that the simultaneous conquest of Andalusia and Portugal was attempted (1).

Prepara-
tions for the
invasion of
Andalusia
by the
French

The Spanish government was in no condition to withstand so formidable an irruption. After the destruction of the army of the centre at Ocaña, they had been unequal to the task of organizing a fresh force capable of defending the defiles of the Sierra Morena against so vast a host. Areizaga, indeed, had contrived, even in the short time which had elapsed since that dreadful overthrow, to collect twenty-five thousand fugitives in those celebrated passes, who repaired to their standards after their former dispersion, with that extraordinary tenacity after defeat, which has always formed so remarkable a feature in the Spanish character, but they were so completely dispirited and disorganized, as to be incapable of opposing any effective resistance. The central Junta was in the utmost state of debility, without either unity of purpose, vigour of counsel, or resolution of conduct, destitute alike of money, consideration, or authority, it was utterly unable to stem the dreadful torrent which was about to burst upon Andalusia. The disaster of Ocaña had called again into fearful activity all the passions of the people, but misfortune had not taught wisdom, nor did danger inspire resolution. A decree was hastily passed to raise a hundred thousand men, which was followed a few days after by another, to distribute a hundred thousand poniards, Blake was recalled from Catalonia to command the army of Murcia; intrenchments were thrown up in the defiles of the mountains at a pass of vast strength, called the Despinas Perros, where Areizaga, with twenty-five thousand men, was stationed. Echivevaria had eight thousand at Helen, a little in the rear, and the Duke de Albuquerque had fifteen thousand good troops behind the Guadiana in Estremadura. But the forces in the important defiles of the Sierra Morena under Areizaga, were in such a disorderly state, that no reliance could be placed upon them, even in defending the strongest mountain position, and if once driven from their ground, it was easy to foresee that their immediate dissolution was at hand (2).

Conquest of
Andalusia
and Murcia
by the
French

The French troops, during the three first weeks of January, collected in great force in the plains at the foot of the northern front of the Sierra Morena, under the nominal command of Joseph, but really directed by Marshal Soult, and on the 20th they put themselves in

(1) Behn i 103, 105. Jones iii 407, 409. Nap. i 101, 102. Well. Desp. vi, 552. Vict. of Conq. viii, 250, 257. Jones iii, 409.
* * 4, 5.

motion along the whole line, directing *their masses chiefly against the defile of Despinas Perros, and the pass of Puerto del Rey, which were the only passes by which the passage could be effected*. Hardly any resistance was made at either point. Dessolles carried the Puerto del Rey at the first charge, the troops who were defending it having retired precipitately, and dispersed at Navas de Tolosa, the scene of the desperate battle between the Moors and

Jaen. 20. Christians six centuries before. At the same time, Gazan's division mounted upon the right and left of the hills commanding the frightful gorge of the Despinas Perros, and soon drove the Spanish troops from the sides of the defile. No sooner was the road opened, than Mortier poured through with his horse, foot, and cannon, in great strength, and united with Dessolles' division, who had carried the Puerto del Rey, that very night at Carolina, on

Jaen. 21. the southern side of the mountains. Next day they passed over the field at Baylen, and arrived at Andujar. Meanwhile Sebastiani, with his division, passed, after some fighting, through the pass of Villa Nueva de Los Infantes, and descended to the upper part of the valley of the Guadalquivir (1)

Having thus accomplished the passage of the mountains, which was the only obstacle that they apprehended, the French generals divided their forces. Sebastiani, with the left wing, advanced against Jaen and Granada, while Soult, with the corps of Mortier and Victor, moved upon Cordova and Seville. Both irruptions proved entirely successful. Sebastiani, with the left wing, soon made himself master of Jaen, with forty-six pieces of cannon; while Aréizaga's army, posted in the neighbourhood, fled and dispersed upon the first appearance of the enemy, without any resistance, and, pursuing his

Jaen. 27. advantages, the French general entered Granada amidst the apparent acclamations of the people, and completely dissolved the elements of resistance in that province. At the same time Joseph, with the centre advanced to Cordova, which was occupied without bloodshed, and pushing on with little intermission, appeared before Seville on the 30th. All was confusion and dismay in that city. The working classes, with that ardent patriotism which often in a great crisis distinguishes the humbler ranks in society, and forms a striking contrast to the selfish timidity of their superiors, were enthusiastic in the national cause, and loudly called for arms and leaders to resist the enemy. But the higher ranks were irresolute and divided. The grandees, anxious only to secure their property or enjoy their possessions, had almost all sought refuge in Cadix, and the junta, distracted by internal divisions, and stunned by the calamities which had befallen their country, had almost all taken to flight, and left the city without a government. Thus, although there were seven thousand troops in the town, and the people had every disposition to make the most vigorous resistance, there were no leaders to direct their efforts; and this noble city, with its foundery of cannon and

Jaen. 31. immense armaments, became an easy prey to the enemy. On the 31st

Feb. 1. Seville surrendered, and on the day following, Joseph entered that city in triumph. A few days afterwards, Mülhaud, with the advanced guard of Sebastiani's corps, pushed on to Malaga. The armed inhabitants in that city made a brave but an equally ineffectual resistance; nothing could withstand the impetuous charges of the French cuirassiers; and after sustaining a loss of five hundred killed, Malaga was taken, with a hundred and twenty pieces of cannon, and a large quantity of stores of all sorts (2)

Rapid and
able march
of Albu-
querque
which saves
Cadiz

These rapid successes appeared to have put an end to the war in Andalusia; but at this critical juncture, a bold and fortunate movement of the Duke de Albuquerque saved Cadiz, and prolonged the contest in the southern parts of the Peninsula. In the end of January, several members of the Central Junta had straggled into that town in their flight from Seville: but so completely denuded of their authority and consideration, that they could be regarded as little better than private individuals. Feeling the necessity of resigning a power which they had exercised to so little purpose, they passed a decree, vesting the government, in the meanwhile, in a regency of six persons, and containing various important enactments for the convocation of the Cortes, which will be the subject of consideration, when the proceedings of that body are noticed in a subsequent chapter. Meanwhile, however, the danger was so imminent, that this great city, the heart of the Spanish war, the seat of government, and of the whole remaining naval and military establishments of the south of Spain, would fall into the enemy's hands, in the *interregnum* between the cessation of the one, and the establishment of another ruling power. The new regency was proclaimed on the 31st, but already a rival authority, self-constituted, under the name of the Junta of Cadiz, elected under the pressure of necessity on the flight of the Central Junta from Seville, and composed almost entirely of the mercantile class, exercised a power greater than the regency of the kingdom, and threatened to paralyse the public defence, by the partition between two rival and conflicting authorities. From these dangers they were rescued by the vigour and resolution of Albuquerque. This able chief, perceiving at once, after the forcing of the Sierra Morena, that Seville was lost, and that the only chance for the kingdom was to save Cadiz, took upon himself, with true moral courage, the responsibility of disobeying his orders, which were to move to Almada and support the Spanish left in the mountains there, and, after disposing of half his forces, by throwing them into Badajoz, he himself, with the other half, consisting of eight thousand infantry and six hundred horse, set off by forced marches by Llerena and Guadalcana for Cadiz (1).

The fate of Europe hung upon his steps, for, if the French had succeeded in making themselves masters of that city before his arrival there, and thereby extinguished the war in the south of Spain, there was hardly any chance that Wellington would have been able to maintain his ground against the united force of the armies of Soult and Masséna in the mountains of Portugal. Every thing depended on rapidity of movement, for the Imperial generals were equally alive themselves to the vast importance of getting possession of the island of Leon, it was literally a race between the two armies which should first reach its walls, and the Spanish troops, when they arrived on the banks of the Guadalquivir, fell in with the French advanced posts pushing on for the same destination. But the French, who had much the least ground to go over, were needlessly tardy in their movements; in ten days they only advanced a hundred miles, and by marching night and day with extraordinary rapidity, Albuquerque got first, and late on the evening of the 3d of February entered Cadiz from Xeres, and instantly broke down the bridge of Zuazo, over the canal at Santa Petri, which separates the Isle of Leon from the adjoining continent of Andalusia. It was full time, for hardly was this done when the advanced posts of Victor were seen on the side of Chiclana; and next morning the French battalions appeared in great

strength on the opposite shores of the straits. The arrival of Albuquerque, however, diffused universal joy, and between the troops which he brought with him, the garrison of Cadiz, and the disbanded soldiers who flocked in from all quarters, his force was raised to fourteen thousand Spanish troops. The most urgent representations were made by the regency for assistance from Portugal; five thousand British and Portuguese soldiers were speedily dispatched by Wellington, and arrived in safety at Cadiz. Confidence was soon restored, from the magnitude of the garrison, the firm countenance of the English soldiers, and the assistance of the British fleet in the bay, and the government at Cadiz, undimmed by the conquest of the whole of Spain still presented, with heroic constancy, an undaunted front to the hostility of Napoleon, leading on the forces of half of Europe (1)

*Operations
1. Cadiz,
Suchet's
Bulwers
before Valen-
cia.* While these important events were extinguishing the war to the south of the Sierra Morena, circumstances of considerable importance and extremely detrimental to the Spanish cause, were occurring in Aragon and Catalonia. In the first of these provinces, Suchet, having received considerable reinforcements from France, undertook an expedition against Valencia at the same time that Joseph was engaged in his grand enterprise against Andalusia. His army advanced in two columns; and as the Spaniards had no forces capable of withstanding him in the field *March 2.* he arrived without resistance under the walls of Valencia. He had come unprovided with heavy artillery, and in the hope that the inhabitants, intimidated by the fall of Seville and conquest of Andalusia, would hasten to make their submission to the conqueror and had already entered into correspondence with several persons of consideration in the city, who had promised to surrender it on the first summons. But the plot was discovered, the leaders arrested; and one of them executed and the government of the city being in the hands of determined patriots, all proposals for a surrender were resolutely rejected. Meanwhile, the guerrillas, who had wisely avoided an encounter with the French troops in the field, collected in great numbers around their flanks and rear, and cut off their supplies, and straitened their communications to such a degree that the French general, after remaining five days before the town, in expectation of a capitulation, was obliged to retrace his steps, not without danger, to Saragossa, which he reached on *March 17.* the 17th of March. This check proved very prejudicial to the French interests in the east of Spain, and almost counterbalanced, in its effect upon the population of Aragon and Catalonia the fall of Seville and conquest of Andalusia, for the Spaniards were, beyond any other people in Europe, regardless of the events of the war, and were elevated or depressed, not in proportion to its general aspect upon the whole, but the events in the provinces with which they were immediately connected (2)

*Fall of
Buenavista.* This check before Valencia, was not the only one which the armies of Napoleon experienced at this period, in this quarter of the Peninsula. Ever since the reduction of Gerona, the arms of Augereau had been unsuccessful in Catalonia; and Napoleon loudly complained, with some appearance of justice, that the great force which he had accumulated in that quarter, and which was now not less than fifty thousand men had produced no result at all commensurate to the efforts which had been made to equip and augment it. The Spanish general, Campoverde, in the absence of Augereau, who had gone to Barcelona, attacked and destroyed a detachment of six

hundred men which had been placed at Santa Perpetua, to keep up the communication between that fortress and Hostalrich, but this success, which gave extraordinary encouragement to the Catalonians, was balanced by a defeat which O'Donnell received in the neighbourhood of Vich in the middle Feb 20 of February, when the Spanish loss amounted to three thousand men. In consequence of this disaster, the Spaniards were obliged to take shelter under the cannon of Taragona, and Hostalrich, which had been blockaded for two months, was closely beset, and at length reduced to the last extremity from the want of provisions. The brave governor, Estrada, however, who had borne every privation with heroic constancy, disdained to submit, even in that extremity, and at midnight, on the 12th of May, sallied forth to cut his way, sword in hand, through the blockading force; and although he himself fell, with three hundred men, into the hands of the enemy, the remainder, to the number of eight hundred, got clear off, and embarking in vessels sent to receive them, joined with the bands of their countrymen in Taragona. The possession of Hostalrich, however, was of great importance to the French, as, having got possession now both of it and Gerona, they were masters of the great road from Roussillon to Barcelona (1)

Siege of
Lerida, and
action at
Margalef

The return of Suchet from Valencia, however, and the arrival of Marshal Macdonald with considerable reinforcements from France, soon restored the French ascendancy in Catalonia. That active general resolved to take advantage of these favourable circumstances, to undertake the siege of Lerida, a fortress situated between the mountains of Aragon and Catalonia, and which in ancient times had been the scene of the memorable combats between Cæsar, and Afranius and Petreius, the lieutenants of Pompey. The garrison of this important place consisted of nine thousand men, and the governor, when summoned to surrender, at first made a gallant reply, stating, that "Lerida had never looked to any thing but its own ramparts, for defence," but the vigour of his resistance was by no means in proportion to these professions. The investment was effected in the beginning of April, and the operations were conducted with such vigour, that this celebrated place, which had twice in previous wars repelled its assailants, made a much less respectable defence than might have been expected. Its importance, however, induced the Catalonians to make the utmost efforts for its relief. O'Donnell, who commanded the Spanish forces in the province, collected eight thousand chosen infantry and six hundred horse, with which he approached its walls, and on the 25d of April, drew near to the French outposts round the town. They were at first driven in, but the Spaniards being quickly assailed by General Bousard, with two regiments of cuirassiers, the whole were thrown into confusion, and totally defeated, with the loss of three guns, a thousand killed, and five thousand prisoners (2).

April 23

Fall of
Lerida
May 14

This disaster enabled Suchet to commence his operations in form, before the fortress, and the breaching batteries opened with great force upon the rampart on the 12th of May. The fire soon made three practicable breaches, and at night the besiegers took the outwork of Fort Garden. Next day the assault took place at all the breaches, and although the Spanish fire at the first was so violent that the heads of the French assaulting columns staggered, yet, at length, the vigour of the assailants prevailed over the resolution of the besieged, and the French troops made way through all quarters. And now commenced a scene of horror

(2) Nap Conq xx.

In the bloody annals of the Peninsular war Suchet directed his troops, by a concentrate movement, to drive the citizens of every age and sex towards the high ground on which the citadel stood; and the helpless multitude of men, women, and children, were gradually driven into the narrow space occupied by that stronghold. In the general confusion, the governor was unable to prevent their entrance nor was it possible, perhaps, for any resolution to drive back a helpless multitude of women and children upon the bayonets of the enemy. No sooner, however, were they shut in, than the French general directed a powerful fire of howitzers and bombs upon the crowded citadel, which was kept up with extraordinary vigour during the whole night and succeeding day. These projectiles, thrown in amongst a wretched multitude of men, women, and children, for whom it was impossible to provide either shelter or covering, produced such a tragic effect, and spread such unutterable woe in the narrow space, that the firmness of the Spanish officers yielded ^{May 14.} under the trial. At noon, next day Garcia Conde, the governor, hoisted the white flag, and the garrison surrendered to the number of above seven thousand men, with a hundred and thirty pieces of cannon, and vast stores of ammunition and provisions. The sudden fall of this celebrated fortress gave rise at the time to strong suspicions of treachery on the part of the governor but they seem to have been unfounded, and the capture of the citadel is sufficiently explained by the diabolical device adopted by Suchet—a refinement of cruelty which, as Colonel Napier justly observes, is not authorized by the laws of civilised war, and which, though attended, as the excesses of wickedness often are, by success in the outset, did not fail to produce disastrous results to the French arms in the end, and contributed, along with the abominable cruelty of Augereau who hung peasants taken in arms on great gibbets erected on the road side, all the way from Gerona to Figueras, to exasperate the feelings of the people, and prolong the war in that province long after the period when, under a more humane system, it might have been terminated (1).

^{Part of} Taking advantage of the consternation produced by this frightful ^{event.} catastrophe, Suchet immediately proceeded against the castle of Mequinenza, a fortress situated upon the top of a steep rock, seven hundred feet high, lying at the confluence of the rivers Segra and Ebro. The difficulty of carrying on operations against a stronghold situated upon such a height and the extreme hardness of the rock in which the trenches were to be made, were insufficient to arrest the indefatigable activity of the French general. The engineer officers had reported that the siege was altogether impracticable, but he nevertheless resolved to attempt it, and by the vigour of his resolutions speedily overcame every difficulty. The investment of the fort was effected on the 10th of May. During the next fortnight a road practicable for artillery was, with incredible labour, cut through the rocks of the neighbouring mountains, for the distance of above two miles and at length the breaching batteries established within three hundred yards of the place on ^{June} the night of the 1st of June. The approaches were blown out of the solid rock by the indefatigable perseverance of the French sappers and ^{June 1} miners, and on the night of the 4th of June the town was carried by escalade. This advantage precluded the garrison from all chance of escaping by the Ebro, to which they before had access. The breaching batteries were now advanced close to the castle walls, and the fire was kept up with extra-

June 8 ordinary vigour on both sides until the morning of the 8th, when a great part of the rampart having fallen down, and left a wide aperture, the garrison surrendered with forty-five guns, and two thousand men (1). At the same time, Napoléon, who had been extremely displeased with Augereau, for retiring during the siege of Lerida from the position which had been assigned to him to cover the besieging forces, and who had, by retreating to Barcelona, exposed Suchet's corps to the attack which it sustained from the enterprising O'Donnell, recalled him from Spain, and he was succeeded by Marshal Macdonald, who conducted the war in Catalonia both with more judgment and less ferocity. Such had been the incapacity of Augereau in the latter months of his command, that he not only failed in his great object of covering the siege of Lerida, but exposed his troops, by dispersing them in small bodies in different stations, to be cut up in detail, by the indefatigable activity and skilful rapidity of General O'Donnell. This able chief, with the remains of the army which only a few weeks before had been routed at Vich, surprised and put to the sword a battalion in Villa Franca, cut off nearly a whole brigade, under Schwartz, at Manreza; and so straitened the enemy for provisions, as compelled Augereau himself, though at the head of nearly twenty thousand men, to take refuge in Girona (2), with the loss of above three thousand men. It is impossible, in contemplating the vigorous efforts thus made by the Spaniards in Catalonia, and the heroic courage with which they maintained the war, against every disadvantage, and deeply dyed almost every French triumph with disaster, not to feel the most poignant regret at the want of military discernment in the British government, which detained at this critical period ten thousand English troops, amply sufficient to have cast the balance, even against the skill and energy of Suchet, in useless inactivity on the shores of Sicily.

Wellington's views for the defence of Portugal, and ultimate deliverance of the Peninsula. While Andalusia was thus at once prostrated before the enemy, and the balance on the eastern coast of Spain, notwithstanding a more resolute resistance, was inclining slowly, but sensibly, in favour of the French arms, Wellington was steadily laying the foundations of that invincible defence of Portugal, which has justly rendered his name immortal. The result of the short campaign in Talavera, had completely demonstrated to him that no reliance could be placed on the co-operation in the field of the Spanish armies, and that, although the aid of their desultory forces was by no means to be despised, yet it would be much more efficacious when they were left to pursue the war in their own way, and the existence of the English army was not endangered, by the concentration of the whole disposable resources of the enemy, to repel any regular invasion of Spain by their forces. He saw clearly that the Spanish government, partly from the occupation of so large a portion of their territory by the enemy, and the consequent destruction of almost all their revenue, partly from the incapacity, presumption, and ignorance of the members of administration and generals of the army, was totally incapable of either directing, feeding, or paying, their troops, and consequently that their armed bands could be regarded as little better than patriotic robbers, who exacted alike from friends and foes the requisite supplies for their support. Wisely resolving, therefore, to put no reliance on their assistance, he determined to organize in Portugal, the means of the most strenuous resistance to the enemy, and to equip in

that Kingdom a body of men, who, being raised by the efforts of English officers to the rank of real soldiers, might, with the assistance of the British army, and by the aid of the powerful means of defence which the mountain ranges with which the country abounded afforded, maintain on the flank of the French armies in the Peninsula a permanent resistance. With this view he spent the winter in sedulously filling up the ranks, and improving the discipline of the Portuguese soldiers; and the opportune arrival of thirty-one thousand stand of arms and suits of uniform from England in the spring of 1810, contributed greatly to their improvement and efficiency. The British army was daily increasing in strength and orderly habits, from the continued rest of the winter: while the rapid progress of the vast fortifications which Wellington had directed to be constructed, in the October preceding at Torres Vedras, and in interior lines between that and Lisbon, afforded a well-grounded hope, that, if manned by adequate defenders, they would prove impregnable, and at length impose an impassable barrier to the hitherto irresistible progress of the French armies (1).

Extraordinary difficulties to which Wellington was exposed.

The difficulties, however, with which the English general had to contend, in the prosecution of these great designs, were of no ordinary kind, and would unquestionably have been deemed insurmountable by almost any other commander. The British government itself had been seriously weakened, and its moral resolution much impaired, by the external disasters of the year 1809 and the internal dissensions in the cabinet to which they had given rise. The unfortunate success of all their enterprises, and especially the Walcheren expedition, had not only materially diminished their popularity, but brought them to the very verge of overthrow; and the clamour raised by the opposition in the country against any further prosecution of the war on the continent was so loud and vehement, and supported by so large a proportion of the middle classes, that it required no ordinary degree of firmness to persist in a system exposed to such obloquy, and hitherto attended with such disaster. In addition to this, the unfortunate dissension between Lord Castlereagh and Mr. Caning had banished from the cabinet the two men whose genius and firmness were most adequate to encounter the difficulties with which they were surrounded. The place of the former, as Secretary at War, had been inadequately supplied by Lord Liverpool, a statesman possessed, indeed, of sound judgment, admirable temper in public debate, and great tact in directing the government during ordinary periods, but without the firmness of character and clearness of perception which belong to the highest class of intellect, and therefore unfitted to take a great and commanding lead in opposition to the current of public opinion, in the most trying crisis of the war. In civil transactions, Mr. Perceval the head of the administration, was indeed bold and intrepid; but being bred a lawyer, and accustomed only to pacific concerns, he was in a great degree ignorant of military affairs, and did not possess sufficient confidence in his own judgment on these matters, to take a due share in the responsibility of the mighty contest in which the nation was engaged. Thus though the government had fortitude enough to continue the struggle in the Peninsula, notwithstanding the retreat from Talavera the loud clamour of the Opposition, and subsequent destruction of the Spanish armies; yet they did so rather in compliance with the clear opinion expressed by Wellington that the British army could keep its ground in Portugal, than from any conviction of their own on the subject; and they repeatedly stated that they

threw upon him the whole responsibility connected with the maintenance of the English forces on the continent of Europe (1).

In addition to these difficulties, which necessarily arose from the popular form of the government in Great Britain, and which are the price that every free country pays for the vast advantages of a general discussion on public affairs, the English general had to contend also with extraordinary obstacles arising from the weakness and perversity of the Portuguese authorities. Notwithstanding the most vigorous representations which Wellington made to the members of the regency there, of the necessity of completing the regiments to their full nominal amount, faithfully collecting and applying the revenue, and impartially punishing all magistrates of whatever rank, who shrunk from, or neglected their duty, the utmost degree of weakness, inefficiency, and corruption prevailed in every part of the civil department in the state. The people, indeed, were generally brave, determined, and even enthusiastic in the cause, but the persons in office partook, in a most remarkable degree, at once of the corruption of aristocratic, and the weakness of democratic, authority. The country was, in one sense, in a state of convulsion, but the spirit of the movement was, as Wellington observes, anti-Gallican, not democratic: the authorities who had been elected during the first fervour of the Revolution, were for the most part drawn from the dignified clergy or old nobility; and they were not only in a great measure ignorant of business, or influenced by local interests and prejudices, but entertained a nervous terror of losing their popularity, a feeling which is, of all others, the most effectual extinguisher to the utility of any public officer. Even during Masséna's invasion, they measured the stability of the country, and the probable issue of the contest, not by the number of troops whom they could bring into the field, or the magazines and equipments which they had provided for the army, but by the lists of persons who attended their levees, and the loudness of cheers which they received when passing through the streets of Lisbon. A government consisting of the aristocratic party, elected or supported by mere popular favour, is the weakest and least burdensome of all governments, one composed of Jacobin adventurers, who have risen to public eminence in the midst of democratic convulsions, the most fearfully energetic and oppressive. Hence, although the numbers taken into British pay were nominally thirty thousand, and twenty thousand more were to be raised from the resources of Portugal, yet, between the two, never more than thirty thousand could be collected round the English standards, and although the monthly expenses of the campaign had risen to L 376,000, yet the allied army was never able to bring more than fifty-two thousand men into the field (2).

It is in the firm resolution to strive at least to overcome all these obstacles, and the magnanimous determination to risk at once his popularity, military renown, and chances of glory, rather than either abandon his duty or deviate from the plan by which he saw it could alone be discharged, that the brightest page in the career of Wellington is to be found. He was fully informed of the violent outcry raised against him by the opposition in England. No person was so well

(1) Well Desp 7th April, 1810 Garw vi 21, 28, 49, v 274, 275, 280, 335.

"The state of opinion in England is very unfavourable to the Peninsula. The ministers are as much alarmed as the public, or as the opposition pretend to be; and they appear to be of opinion, that I am inclined to fight a desperate battle which

is to answer no purpose. Their instructions are clear enough, and I am willing to act under them, although they throw upon me the whole responsibility of bringing away the army in safety, after staying in the Peninsula till it is necessary to evacuate it."—Desp. 21st

(2) Well L

aware of the irresolution and terror of responsibility which existed in the British government, and none knew better the corruption, not only of the Portuguese Regency, but of almost all the civil functionaries in their dominions. In these difficult circumstances, however, he did not despair. Disregarding alike the clamour of the populace, both in Portugal and Great Britain, the efforts of faction, and the strength of the enemy, he looked to nothing but the discharge of duty. His principles and resolution at this time cannot be better expressed than in his own words.—"I conceive that the honour and interests of the country require that we should hold our ground here as long as possible; and, please God, I will maintain it as long as I can, and I will neither endeavour to shift from my own shoulders on those of the ministers the responsibility for the failure, by calling for means which I know they cannot give, and which, perhaps, would not add materially to the facility of attaining our object; nor will I give to the ministers, who are not strong, and who must feel the delicacy of their own situation, an excuse for withdrawing the army from a position, which, in my opinion, the honour and interest of the country require they should maintain as long as possible. I think that if the Portuguese do their duty I shall have enough to maintain it, if they do not, nothing that Great Britain can afford can save the country; and, if from that cause I fail in saving it, and am obliged to go, I shall be able to carry away the British army (1)?"

The British general had need of all his firmness and heroic sense of duty, for the forces which Napoleon was preparing for the subjugation of Portugal were immense. The three corps of Ney, Marmont, and Junot, which were under the immediate command of Marshal Masséna, consisted of eighty-six thousand men present with the eagles all veteran soldiers (2). A reserve of twenty-two thousand, under Drouot, was at Valladolid, and might be relied on to supply any waste in the main body; while General Serras, with fifteen thousand, covered the right of the army on the Esia, towards Benerente and Leon, watching the army of Galicia, and resting on the fortress of Astorga, which, after a protracted siege, April 22, 1810, had at length yielded to the arms of Napoleon. The rear and communications of the French army were covered by Dessières with twenty-six thousand men, including sixteen thousand of the young guards, who occupied Biscay, Navarre, and Old Castile (3).

The force which Wellington had at his disposal was little more than the half of this immense host, and the troops of which it was composed, with the exception of the English soldiers, could not be relied upon as equal in combat to the enemy. The British troops, organized in five divisions, with the cavalry under General Cotton, consisted of twenty

two thousand infantry, and three thousand horse, and the Portuguese regular troops, whom General Beresford had trained and rendered most efficient, amounted to about thirty thousand more. These forces were supported by a large body of militia, of whom nearly thirty thousand might be relied upon for desultory operations, but it was impossible to bring them into the field in regular battle with any chance of success. After making allowance for the necessary detachments in the rear, and the sick, the largest force which Wellington was ever able to collect in this campaign on the frontiers of Portugal, opposite Ciudad Rodrigo, was thirty-two thousand men, while General Hill, who was stationed at Thomar and Abrantes to guard the valley of the Tagus, had about thirteen thousand more, of whom nearly two thousand were horse. Thus, for the defence of Portugal, Wellington could only collect, at the very uttermost, forty-five thousand regular troops, which might be increased to fifty thousand when the army drew near its reserves at Lisbon, while Masséna had fully eighty thousand men under his immediate command, supported by reserves and flanking forces, from which he could draw forty thousand more (1)

Siege and
fall of
Ciudad
Rodrigo

Marshal Masséna arrived on the 1st of June, took the command of the army and immediately invested the fortress of Ciudad Rodrigo. General Crawford, who commanded the English advanced guard, fell back, according to Wellington's orders, after making a gallant resistance, across the Agueda, leaving the Spanish fortress to its own resources. The investment was immediately formed, and, on the 23th, breaching batteries commenced their fire with great effect upon the place, Wellington instantly hastened to the spot, and took post on the Agueda with thirty-two thousand men. That was a trying moment for the English general, perhaps the most trying that he ever underwent. He was at the head of a gallant army, which burned with desire to raise the siege. He had promised the Spaniards, if possible, to effect it. The governor and the garrison were making a brave defence, the sound of their cannon, the incessant roar of the breaching batteries was heard in every part of the English lines; his own reputation, that of his army, his country, appeared to be at stake, but Wellington refused, resolutely refused, to move forward a man to succour the place. He was charged, not with the defence of Ciudad Rodrigo merely, but with that of Portugal, and, eventually, with the safety and independence of the British empire. If he had descended into the plain with thirty-two thousand men, half of whom were Portuguese, who had never seen a shot fired, to attack sixty-six thousand French, of whom ten thousand were admirable horse, who formed the covering force, he would have exposed his army, and, probably the cause of European independence, to certain destruction. Like Fabius, therefore, he persevered in his cautious course, disregarding alike the taunts of the enemy, the cries of the Spaniards, and the reproaches of his own troops. Though grievously affected by the necessity of abandoning the fortress to its fate, he never swerved from his resolution. The French, thus undisturbed in their operations, soon brought the siege to a successful issue (2). The fire kept up from their batteries was so violent, that, on the 10th of July, several practicable breaches were made in the walls, and, on the next day, as resistance and relief were alike hopeless, the governor surrendered the place, with his garrison of four thousand men, 125 guns, and great stores of ammunition, after having made a most gallant defence (3).

Combat on
the Coa,
and strike
at the fall of
Almeida.

Having thus secured this important fortress, in which he deposited the heavy train and reserve parks of his army, Masséna lost no time in moving forward across the frontier, while Wellington, in pursuance of the system he had adopted, retired before him, leaving Almeida also to its fate. *Before its investment took place, however, a very gallant action occurred between the French advanced guard and General Crawford, who commanded the British rearguard, four thousand five hundred strong, on the banks of the Coa. Crawford, during the whole siege of Ciudad Rodrigo, had with this small force maintained his position on the French side of that stream and he maintained it even when they approached Almeida. He was there assailed, on the 21st of July, by a French force of twenty thousand infantry and four thousand cavalry, with thirty guns. The river in the rear could be passed only by a single bridge; but by the great steadiness of the men, and the resolution with which the light troops fought, they succeeded in crossing the ravine without any considerable loss. No sooner were they passed, however, than the French, with extraordinary gallantry, dashed across the bridge but the head of the column was swept away by the terrible fire of the British infantry and artillery; and after a bloody combat of two hours, a heavy rain separated the combatants, and Crawford retired with his division to the main body of the army. In this bloody affair, both parties sustained a loss of between four and five hundred men. All obstacles to the investment of Almeida being now removed, it took place on the following day. The trenches were opened on the 15th of August. The fire of the place was at first extremely well sustained; and as the garrison consisted of four thousand Portuguese regulars and militia, and the governor, General Cox, was a man of known resolution, a protracted resistance was expected. But these anticipations proved nugatory, in consequence of a frightful catastrophe, which, at the very outset of the bombardment, deprived the besieged of all their means of defence. At daybreak of the 26th, Aug. 26, a heavy fire commenced upon the place from sixty-five guns, to which the garrison replied during the whole forenoon, with great vigour and effect but, at five o'clock in the evening, a bomb was thrown, which accidentally fell into the great magazine of the fortress, containing one hundred and fifty thousand pounds of powder. The terrible explosion which followed, blew up the cathedral, the principal edifices in the town, a large part of the houses, and occasioned many breaches in the ramparts. The consternation produced by this frightful catastrophe was such, that on the same evening

under which he lay, at this period, of abandoning the Garrison of Ciudad Rodrigo, and the vast importance of the existing system, which he then persisted in well stated in a dispatch from the English general, and a passage in the Spanish historian, Tarreno, which are equally honourable to the feelings of both. "Nothing can be more irksome to me than the operations which have been carried on for the last year; and it is very obvious, that continuance of the same cautious system will lose the little reputation which I had acquired, and the good opinion of the people of the country. Nothing, therefore, could be more desirable to me personally than that either the central should be given up at once, or that it should be reinforced with a force so sufficient as to render all opposition hopeless. I either saw the strategy heaped upon me by the ignorance of our country as well as of this, and by those of this whom I am obliged to force to exertion, and who, after all, will be but imperfectly protected in their persons and property, would fall upon the Government. But seeing, I

do, more than a chance of final success, if we can maintain our position in this country although probably some of our troops from our cautious defensive system, I should not do my duty by the Government, if I did not form them of the real situation of affairs, and urge them, with humanity, to be greater exertions. — *Dispatch* 17th August 1812. G. W. 314, 317. — "We feel ourselves bound to say, says Tarreno, — that Wellington on that occasion acted as a prudent captain, if to retire the siege it was necessary to risk a battle. His forces were not superior to those of the enemy; and his troops and the Portuguese were not sufficiently disciplined to be able to manoeuvre with effect in presence of such a force as he felt. — but considering — in themselves to go into battle with the enemy. The battle of Salado, would only be as at Ciudad Rodrigo, but not decided the issue of the war. If lost, the English army would have been totally destroyed — the road to Lisbon laid open, and the Spanish cause nearly shaken, if not struck to the ground." — *Tarreno*, lib. 377

the garrison mutinied, and compelled the governor, who had retired into the town, to surrender; and on the following day the garrison, still consisting of three thousand men, were made prisoners, and a hundred and fifteen pieces of heavy cannon taken (1).

Retreat of
Wellington
into the
interior of
Portugal

Wellington now retreated down the valley of the Mondego, and the dispositions of Massena soon showed that he was to follow in the same direction; the extraordinary difficulties experienced by Junot, in 1808, in his advance into Portugal by the road of Abrantes, having deterred the French general from penetrating into the country by that route. For the same reason, Regnier's corps, which had been posted in the valley of the Tagus opposite to Hill's division, marched rapidly across the mountains from the valley of the Tagus to that of the Mondego; upon which Hill, moving parallel to him, crossed the Tagus at Villa Velha, and moved swiftly to join Wellington by the pass of Espinola. The French marshal's instructions had been to invade Portugal at the same time by both banks of the Tagus, but, as the English general was possessed of an interior line of communication by the bridge of Villa Velha, over the Tagus, he justly deemed it too hazardous an experiment to attempt such a division of his force in presence of an enterprising enemy, who might suddenly fall with superior force upon one division of his forces, when detached by a broad river from the other. The whole French force, accordingly, was ordered to assemble in the valley of the Mondego, on the 16th of September, and Wellington, having ascertained that the enemy were concentrating all their forces, immediately ordered Hill to join him with the right wing of the army. This important movement through the

Sept 21

mountains was effected with great expedition, and on the 21st the two corps of the allied army completed their junction on the Alva, in the valley of the Mondego. Meanwhile ten thousand militia, under General Trant, were collected in the mountains between that river and Oporto, and already occupied the defiles leading to Lamego. The most peremptory orders had been given by the retreating general to lay waste the country, destroy the mills, and deprive the enemy of all their means of subsistence (2).

He crosses
the Monde
go and
takes post
at Busaco

Meanwhile, however, the continued retreat of the English troops, and the multitude of fugitive peasants and proprietors who flocked into Lisbon, produced the utmost consternation in that capital. Wellington soon felt the necessity of making an effort to support the drooping spirits of the people, and inspire additional energy into the Governments of both countries. He therefore resolved to take post on the first favourable ground which might present itself, and as Massena was descending the valley of the Mondego, by the northern bank of the river, he crossed his whole army over, and took post on the summit of the ridge of Busaco. This mountain range runs from the northern shores of the Mondego in a northerly direction, about eight miles, where it unites with the great ridge which separates the valley of the Mondego from that of the Douro. Thus this Sierra forms a natural barrier, running across the northern bank of the Mondego, and the same ridge continues along the same mountains under the name of Sierra da Murcella, which runs in a southerly direction till it joins the great chain which

Sept 26

separates the valley of the Mondego from that of the Tagus. On the summit of the northern portion of this range, Wellington collected his whole army on the evening of the 26th, in all about fifty thousand men, while Mas-

Masséna, with seventy-two thousand, lay at its foot, determined to force the passage (1).

Battle of
Busaco
Sept. 21. The French marshal was not ignorant of the strength of the position which the English general had now assumed, or of the perilous nature of the situation in which he was placed, for, while lying at the foot of the ridge of Busaco, he received intelligence that Colonel Tranter had, with ten regiments of militia, attacked the reserved artillery and military chest near Tojal, and captured the whole, with eight hundred prisoners, and already the communication by the Spanish frontier was entirely cut off by the Portuguese light parties. But the orders of the Emperor were pressing, and he was well aware that fight he must, at whatever disadvantage (2). Next day collecting, therefore, all his force, Masséna commenced a desperate attack upon the English position, at daybreak of the morning of the 27th. The British army, during the night, lay in dense masses on the summit of the mountain. The sky was clear, and the dark rocky eminences, rising on both sides of the pass, were crowned by the fires of innumerable bivouacs. The veterans in the English army, accustomed to similar scenes of excitement, slept profoundly on their stony beds; but many of the younger soldiers, who were now to witness a battle for the first time, were kept awake by the grandeur and solemnity of the scene around them. As the first streaks of dawn were beginning to appear over the eastern hills, a rustling noise was heard in the wooded dells which ran up to the crest of the mountains. It arose from the French outposts, who, stealing unobserved during the night, had thus got close to the outposts of the English position without being perceived. The alarm was instantly given, and the troops started to their arms at all points. It was full time, for in few minutes more, the French in two massive columns were upon them. Ney, with three divisions numbering full twenty-five thousand combatants, advanced against the British left, by the great road leading to the convent of Busaco; while Regnier, with two, moved by St.-Antonio de Cantara, against their right, about three miles distant. The first, headed by Loison's division, preceded by a cloud of light troops, came rapidly up the wooded hollow which leads to Busaco, and the British sharpshooters, driven before them, soon emerged from the woods, breathless and in disorder. Crawford, whose division stood at that point, had stationed his artillery most advantageously to play upon the enemy during their ascent from the hollow; but though the guns were worked with extraordinary rapidity nothing could stop the undaunted advance of the French troops. Emerging bravely from the hollow, they stand upon the edge of the mountain. The British artillery is quickly drawn to the rear. The shout of victory is already heard from the French line, when suddenly, Crawford, with the 43d and 52d regiments, springing out of a hollow behind the highest part of the ridge, where they lay concealed, appeared on the summit, and eighteen hundred British bayonets sparkled on the crest of the hill. The head of the French column instantly fired, but in vain. It is broken and driven back. Both its flanks are overlapped by the English line, and three terrible discharges,

(1) *Well. Mem.* vii. 250; vi. 415, 416. *Ann. Hist.* 429-430. *Map Hist.* 221, 222, 223.

(2) I see interpreted better from Kyprianos at this period, to Masséna he says, "Lord Wellington has only eighteen thousand men. He has only six thousand, and it would be ridiculous to suppose that thirty thousand French, if the latter do not strike but fall

boldly on, after having well observed where the blow may be given. You have two thousand men, and have more so much riding as to make very few fatigued. Leave all thousand resting and proportion of guns between French, English, Portuguese, and Russians, and with the rest commence operations."—*Ibid.* vi. 251, 252.

within a few yards distance, drove them headlong down, in wild confusion, with dreadful loss, to the bottom of the hollow (1).

Bloody defeat of the French The attack on the British right by the two divisions of Regnier's corps, met with no better success. The ground in that quarter was indeed of comparatively easy ascent, and although the British and Portuguese skirmishers opposed a vigorous resistance, and twenty pieces of cannon played incessantly on the advancing column, yet nothing could arrest the ardour and gallantry of the French, who mounted with an intrepid step up the hill, and after routing a Portuguese regiment stationed before them, established themselves on the summit, and were beginning to deploy to the right and left. At this instant, however, when the British position in this point appeared to be almost carried, and the third division, part of which had been forced to give way, could with difficulty maintain itself against the dense and intrepid column which had forced itself into the centre of its line, General Leith and General Picton brought up their divisions, and charged them with such vigour, that the enemy, after a desperate struggle, were hurled down the hill, the British firing upon them as long as their muskets would carry, but not pursuing, lest their ranks should be broken, and the crest of the hill be again won. The other French division of Regnier's corps, which advanced up a hollow way, a little to the left of his main column, was repulsed by the left of Picton's division, before they reached the summit of the mountain. After these bloody defeats, the French made no attempt again to carry the top of the hill, though Loison and Marchand maintained a long and obstinate conflict in the hollows at its foot, but their efforts were effectually held in check by the brigades of Pack and Spencer, and at length, towards evening, Masséna, wearied of the fruitless butchery, drew off his troops, after having sustained a loss of eighteen hundred killed and three thousand wounded among whom were Generals Foy and Merle, while the total loss of the allies was not above thirteen hundred men (2).

Important results of this battle The battle of Busaco produced an astonishing effect at the time at which it was fought, and, in its ultimate consequences, was beyond all question one of the most important that took place in the whole Peninsular war. It, for the first time, brought the Portuguese troops into battle with the French, and under such advantageous circumstances as at once gave them a victory. Incalculable was the effect produced by this glorious triumph. To have stood side by side with the British soldiers in a pitched battle, and shared with them in the achievement of defeating the French, was a distinction which they could hardly have hoped to attain so early in the campaign. Wellington judiciously bestowed the highest praises upon their conduct in this battle, and declared in his public despatch, "that they were worthy of contending in the same ranks with the British soldiers in this interesting cause, which they afford the best hopes of saving." It may safely be affirmed that on the day after the battle, the strength of the Portuguese troops was doubled. The sight of this auspicious change dispelled every desponding feeling from the British army. No presentiments of ultimate discomfiture were any longer entertained. The plan of defence which the far-seeing sagacity of their chief had formed revealed itself to the meanest sentinel in the ranks, and the troops of every nation prepared to follow the standard of their leader wherever he should lead them, with that ready ala-

et Conq xx

crispy and undoubting confidence which is, at once, the forerunner and the cause of ultimate triumph (1)

Wellington has since declared, that he expected that the battle of Bussaco would have stopped the advance of Masséna into Portugal; and that, if the French general had been governed by the principles of the military art, he would have halted and retired after that check and the English general wrote to Romana immediately after the battle, that he had no doubt whatever of the success of the campaign (2). But fortunately for England and the cause of European freedom, Masséna was forced on by that necessity of advancing in the hazardous pursuit of doubtful success which afterwards drove Napoleon to Moscow, and is at last the consequence and the punishment, both in civil and military affairs, of revolutionary aggression. Impelled by this necessity, the French marshal, finding that he could not carry the English position by attack in front, resolved to turn it by a flank movement; and accordingly, on the following day, he moved on his own right, through a pass in the mountains which led to Sardo, and brought him on the great road from Oporto to Coimbra and Lisbon. To attempt such a flank movement with an army that had sustained so severe and bloody a check, in presence of a brave and enterprising enemy, was a hazardous undertaking but the French general had no alternative but to run the risk, or remeasure his steps to the Spanish frontier. Wellington, from the summit of the Bussaco ridge, clearly perceived the French troops defiling in that direction on the evening of the 28th, but he wisely resolved not to disturb the operation. By attacking the French army when in march, he might bring the Portuguese levies into action under less favourable circumstances, than those in which they had recently fought, and which might weaken, or destroy their moral influence. His policy now, was to leave nothing to chance. Behind him were the lines of Torres Vedras, now completely finished, and mounted with six hundred guns before which he was well convinced all the waves of French conquest would beat in vain. He immediately gave orders accordingly for the army to retire to their stronghold. The troops broke up from their position at Bussaco on the 30th, and driving the whole population of the country within their reach before them, retired rapidly by Coimbra and Leiria to Torres Vedras, which the advanced guards reached on the 8th October, and the whole army was collected within the lines on the 13th. The French followed more slowly, and in very disorderly array, while Trant, with the Portuguese militia, came up so rapidly on their rear, that on the 7th of October he made himself master of Coimbra, with above five thousand men, principally sick and wounded who had been left there. This disaster, however, made no change in the dispositions of the French marshal. Pressing resolutely forward, without any regard either to magazines of which he had none, or to his communications in the rear, which were entirely cut off by the Portuguese militia, he marched headlong on, and arrived in the middle of October in sight of the lines of Torres Vedras, of which he had never before heard, but which now rose in appalling strength to bar his further progress towards the Portuguese capital (3).

Description
of the Lines
of Torres
Vedras.

The lines of Torres Vedras, on which the English engineers had previously been engaged for above a twelvemonth and which have acquired immortal celebrity from being the position in which the

desolating torrent of French conquest was first permanently arrested, consisted of three distinct ranges of defence, one within another, which formed so many intrenched positions, each of which must be successively forced before the invading force could reach Lisbon. The first, which was twenty-nine miles long, extended from Alhandra on the Tagus to Zezambre on the sea-coast. The second, in general about eight miles in the rear of the first, stretched from Quintella on the Tagus, to the mouth of the St -Lorenza, in the sea. The third, intended to cover a post embarkation, extended from Passo d'Arcos on the Tagus, to the Tower of Jonquera on the coast. Within this interior line was an intrenched camp designed to cover the embarkation of the troops, if that extremity should become necessary, and it rested on Fort St -Julian, whose high ramparts and deep ditches rendered any attempt at escalade impracticable; so that, in the event of disaster, the most ample means were provided for bringing away the troops in safety. Of these lines, the second was incomparably the strongest, and it was there that Wellington had originally intended to make his stand, the first being meant rather to retard the advance of the enemy and take off the first edge of his attack, than to be the permanent resting place of the allied forces, but the long delay of Masséna at the sieges of Ciudad Rodrigo and Almeida, had given so much time to the English engineers, that the first line was completed, and deemed susceptible of defence, when the French arrived before it. It consisted of thirty redoubts placed on a ridge of heights, on which were mounted, in all, 140 guns, the great redoubt of Sobral, in the centre, on which was mounted forty-five pieces of heavy cannon, was perched upon an eminence that overlooked the whole exterior lines, and from which signal-posts communicated over their whole extent; an admirable road, running along the front of the position, enabled one part of the army to communicate rapidly with the other, the highways piercing through this terrible barrier were all pallisadoed, the redoubts, armed with chevaux-de-frize, and a glacis cut away to make room for their fire, and the intervening spaces which were not fortified, formed into encampments for the troops, under shelter of the guns of one or other of the redoubts, where they might give battle to the enemy with every prospect of success. On the whole lines, no less than 600 pieces of artillery were mounted on 150 redoubts (1). Neither the Romans in ancient, nor Napoléon in modern times, have left such a monument of their power and perseverance, and they will remain in indestructible majesty to the end of the world, an enduring monument of the grandeur of conception in the chief who could design, and the nation which could execute such a stupendous undertaking.

Junction of
Romana,
and admi-
rable posi-
tion of the
British
army

The situation of the English army on this astonishing position, was as favourable as the ground which they occupied was carefully fortified. By drawing so close to the centre of his power, Wellington had greatly augmented the physical strength of his forces. Strong reinforcements arrived from England just after the troops entered the lines, and the Marquis Romana, who was summoned up by Wellington to concur in the defence of the last stronghold in the independence of the Peninsula, joined on the 20th of October with five thousand men. There were now about thirty thousand English troops in the front line, besides twenty-five thousand Portuguese, and five thousand Spaniards, in all sixty thousand men, perfectly disposable and unfettered by the care of the body of marines that had been sent out from

while a
lia

(1) Belm 1 133, 135. Nap. iii 351, 359. Jom. iii. 433, 434

madura and Lisbon, and the Portuguese heavy artillery corps, formed a mass of nearly sixty thousand additional combatants, of great value in defending positions, and manning the numerous redoubts which were scattered through the positions. Altogether, before the end of October, one hundred and thirty thousand men received rations within the British lines; twenty ships of the line, and a hundred large transports, provided the sure means of drawing off the army in case of disaster, and yet, such were the inexhaustible resources which the vigour and activity of Government had provided for this enormous warlike multitude, that not only was no want experienced during the whole time that the army lay in the lines of Torres Vedras but the combatants of all descriptions, and the whole pacific multitude who had taken refuge with them, amounting with the population of Lisbon to at least four hundred thousand more, were amply provided with subsistence, and the troops of every description never were so healthy or in such high spirits. Military annals in no age of the world, have so stupendous an assemblage of military and naval strength to commemorate in such a position and it was worthy of England, which had ever taken the lead in the cause of European deliverance, thus to stand forth, with unprecedented vigour, in the eighteenth year of the war (1)

Continued distresses and ultimate retreat of the French Masséna, with all his resolution, paused at the sight of this formidable barrier, and employed several days in reconnoitring the lines in every direction, while his troops were gradually collecting at the foot of the intrenchments; and much time was consumed in endeavouring to discover a weak point in which they could be assailed with some prospect of success. But, although the outer line exhibited a front in several places many miles in length, without any intrenchments—and the orders of Napoleon were positive that he should immediately attack if he had the least chance of success (2), yet the great advantage derived by the allies from the redoubts with which their position was strengthened, and which enabled the English general to throw his whole disposable force upon any point that might be assailed, rendered it evidently hopeless to make the attempt. In the centre of the British army, twenty-five thousand men were encamped close round the great redoubt of Sobral, upon the Monte Agraca, which could have reached any menaced point of the line in two hours. The French general, therefore, contented himself with sending off Foy, under an escort, to Paris, to demand instructions from the Emperor. Meanwhile, the contest was reduced between the two armies to the question—Who should starve first. Masséna, fondly hoping that Wellington would quit his lines to attack him in his own position, or that the British Government, or the Regency at Lisbon, would be intimidated by the near approach of his army and abandon the contest, held out for above a month, until he had consumed every article of subsistence which the country occupied by his troops afforded; and his troops, severely weakened by disease, were reduced to the last stage of starvation and misery. The Portuguese militia, fifteen thousand strong, drew round his rear, and became so adventurous, that they cut off all his communications, and confined his troops to the resources of the ground which they actually occupied. Yet such was the power of squeezing the resources out of a country which long practice had given to the French generals, that we have the authority of Wellington for the assertion, that Masséna contrived to maintain sixty thousand men, and twenty thousand horses, for two months

(1) Nap. III. 252, 259. Belin. I. 131, 135. Wall. Mem. Gouv. vii. 297, 298. Jour. G. 422, 423. Vict. et Camp. v. 191, 192.

(2) Jour. G. 423.

in a country in which he could not have maintained an English division, with all the advantages of British wealth, and of the favourable inclination of the inhabitants (1). At length, however, every article in the country being consumed, and the inhabitants, whom the French had oppressed, as well as themselves, reduced to utter starvation, Masséna broke up from his position on the 14th of November, and, for the first time since the accession of Napoleon, the French eagles commenced a lasting retreat (2).

Positions of the French at Santarem, and ultimate retreat of Masséna No sooner was the joyful report brought in by the outposts that the French army was retiring, than the British issued from their intrenchments, and Wellington commenced a pursuit at the head of sixty thousand men. Desirous, however, of committing nothing to chance in a contest in which skill and foresight was thus visibly in a manner compelling fortune to declare in his favour, he did not press the French rearguard with any great force, but dispatched Hill across the Tagus to move upon Abrantes, while the bulk of the army followed on the great road by Cartaxo, towards Santarem. But Masséna, whose great military qualities were now fully awakened, had no intention of retreating to any considerable distance, and after having retired about forty miles, he halted his rearguard at the latter town, and there, with much skill, took up a position eminently calculated to combine the great objects of maintaining his ground in an unassailable situation, and at the same time providing supplies for his army. A strong rearguard was rested on Santarem, a town with old walls, situated on the top of a high hill, which could be approached only by a narrow causey running through the marshes formed by the Rio Major and the Tagus. While this formidable position, the strongest in Portugal to an army advancing from the westward, effectually protected his rear, the main body of his troops was cantoned behind in the valley of the Zezere, the rich fields of which, giving food to a hundred and ten thousand inhabitants, afforded ample supplies of grain, while the extensive mountains on either side yielded a very great quantity of cattle. The question of attacking the enemy in this strong ground was again well considered by Wellington, but finally abandoned, from a conviction that such an attempt could not, from the flooded state of the marshes on either side, succeed without immense loss, and that to hazard it, would be to expose the allied army to the chances of war, while certainty of ultimate success was in their power. Wellington, therefore, contented himself with taking up a position in front of Santarem, and narrowly watching the Tagus, on which the French marshal was preparing boats, and all the materials for passing the river. If he could have succeeded in that enterprise, and transported the seat of war into the Alentejo, he would have reached a country hitherto untouched, and offering resources of every kind for his array. But Wellington anticipated his design, and detaching Hill with two divisions to the opposite bank of the Tagus, where he was reinforced by a large part of the militia of that province, guarded the banks of the river so effectually, and established batteries upon all the prominent parts with such skill, that the French generals found it impossible to effect the passage. Thus Masséna was reduced to maintain his army entirely from the resources he could extract from the northern bank of the Tagus, and although he was joined by Drouet's corps with ten thousand men in the end of December, yet he did not deem himself in sufficient strength to attack the English army. Meanwhile the British Government, fully apprised

(2) Masséna's Report to Napoleon, 29th Oct

1810 Belm 1 App 2

299

at last to the vast importance of the war in Portugal, and the fair hopes of conducting it to a successful issue, made great efforts to reinforce their army. The troops embarked were delayed by contrary winds for above six weeks after they had been put on board; but at length they set sail on the 20th of February, and landed at Lisbon on the 2d of March (1). No sooner did the French marshal hear of their arrival, than he broke up with his whole forces, taking the road through the mountains to Almeida and Ciudad Rodrigo; and Wellington, still keeping Hill, with two divisions in the Alentejo, to render assistance to the Spaniards, who were at this time hard pressed in Estremadura, commenced the pursuit with forty thousand British and Portuguese troops.

Operations
of Soult in
Estrema-
dura.

It was hard to say whether the position of the French or English general was most critical, when Masséna thus, in good earnest began his retreat from Portugal; for such, during the winter, has been the progress of the French in Estremadura, that it was extremely doubtful whether the English would not speedily be threatened by invasion by a formidable army on the side of Elvas and the Alentejo. Napoleon was no sooner informed of the serious aspect of the war in Portugal, than he ordered Soult to confide to Victor the tedious duty of blockading Cadiz, while he himself should march with all his disposable forces upon Estremadura and Badajoz. In pursuance of these directions, that able chief set out from Seville on the 2d of January, with twenty thousand men, taking the road by Llerena for Badajoz. The troops which Romana had left under Mendizabel in that province, after he himself joined Wellington at Torres Vedras, consisted only of two Spanish divisions of infantry, and a brigade of Portuguese cavalry, not amounting in all to twelve thousand combatants. Too weak to oppose any resistance to Soult's considerable force, these troops which were under the command of Mendizabel and Ballasteros, retired under the cannon of Badajoz and Olivenza. Four thousand men, imprudently thrown, without any provisions, into the latter fortress, surrendered after twelve days, on Jan. 22. the 22d of January; and Soult, then collecting all his troops, took up his position before Badajoz. No sooner was he informed of the danger of that important fortress, than Wellington resolved to dispatch Romana, with the two divisions which had so seasonably joined him at Torres Vedras to co-operate in its relief. Just as he was preparing, however, to set out on this important expedition, this noble Spaniard, at once the bravest, the most skillful, and most disinterested of all the Peninsular generals, was seized with a disease in the heart, of which he suddenly died at Cartaxo (2). His loss was severely felt by the Spanish army; for Mendizabel, who succeeded to the command, was totally disqualified for the duty with which he was intrusted. On the 30th of January, the Spanish divisions from Wellington's army joined the remainder of Mendizabel's troops, with which, Feb. 2. in the first week of February, he took up a position under the cannon of Badajoz, with his right resting on the fort of St. Christoval, forming one of the outer walls of that city. The arrival of this formidable reinforcement rendered Soult's situation extremely critical; for the necessity of keeping up his communications had reduced the forces under his command to

(1) Well. Disp. 3d Jan. 1811; and Mem. Hil. 478. 479. 480. Sup. Hil. 302. 401. 452. 453. Belim. I. 163, 165. Mem. Hil. 451. 451. March 2.

(2) "In Romana said Wellington, "the Spanish army have lost their brightest ornament, its country's most upright patriot, and the world the most strenuous and ardent defender of the cause

in which we are engaged; and I shall always acknowledge with gratitude the assistance which I received from him, as well by his operations as by his counsel, since he had been joined to the army." — Well. Disp. 2d Jan. 1811. Cas. II. 139.

sixteen thousand men, and the Spaniards, with a force nearly equal, occupied a strong position, resting on the cannon of the fortress (1).

Total defeat
of Mendizabel
at the
Gebora

From this critical position he was soon relieved, by the astonishing negligence and fatuity of the Spanish general, which brought destruction on his own army, and ultimately occasioned the fall of that important fortress, with the protection of which he was entrusted, to be regained only hereafter by torrents of English blood. Wellington had repeatedly advised Mendizabel to strengthen his position under the walls of the place with entrenchments, in order that he might possess an impregnable station from which he might co-operate in its defence, and, if he had done so, he would unquestionably have preserved it for the Spanish arms. Such, however, was his ignorant presumption, that he deemed it wholly unnecessary to follow this advice, and as his position was separated from that of the French by the Guadiana and the Gebora, both of which were flooded with rains, he contented himself with breaking down a bridge over the latter stream, and left his army in negligent security on its bank. On the 18th of February, however, Soult, observing that the water of the rivers had declined, conceived the audacious design of crossing both and surprising the Spaniards amidst their dream of security. Late on that evening, he forded the Guadiana at the French ferry, four miles above the confluence of the Gebora. That stream, however, was still to cross, but next morning, before day-break, the passage was accomplished under cover of a thick mist, and, as the first dawn broke, the Spanish outposts near the ruined bridge, were alarmed by the tirailleurs, who already were on the opposite bank. The cavalry forded five miles further up, and speedily threatened the Spanish flank, while Mortier, with six thousand foot, assailed their front. The contest was only of a few minutes' duration. Horse, foot, and cannon, were speedily driven together in frightful confusion into the centre (2), the cavalry cut their way through the throng and escaped; but the infantry were almost all cut down or taken. Mendizabel fled with a thousand men to Elvas, two thousand got into Badajoz, but eight thousand, with the whole artillery, were taken, and not a vestige of the army of Estremadura remained in the field.

Siege and
fall of
Badajoz

Soult immediately resumed the siege of Badajoz, but with little prospect of success, for the ramparts were of great strength, the garrison was nine thousand strong, amply supplied with provisions, and the extreme necessities of Masséna's army on the Tagus, rendered it more than doubtful whether he would not speedily be driven to a retreat, and Beresford be seen approaching with two English divisions to raise the siege. From this difficulty he was again relieved by his good fortune, and the treachery of the Spanish governor of the fortress. Manecho, who first had the command, was a veteran of approved courage, and so far from being discouraged by the rout of the Gebora, he vigorously prepared for his defence, and gave out that he would rival the glories of Gerona and Saragossa. But this gallant Spaniard was unfortunately killed a few days after the fire began, and Imaz, who succeeded to the command, was a man of a very different stamp. Without vigor or resolution to keep up the spirits of his troops, he was, what was rare among the Spaniards, accessible to bribes from the enemy. Under his irresolute management, the enemy's works rapidly advanced, the rampart was breached, and the fire of the place considerably weakened, though the enemy's batter

Gurw viii. 278, and 3

ing guns were only six, of which one was dismounted. Still the breach was impracticable, provisions were plentiful, the garrison was yet eight thousand strong, a great disaster had befallen the French in Andalusia, and advices had been received by three different channels from Wellington, that Masséna was in full retreat, that Beresford, with twelve thousand men, was rapidly approaching, and that in a few days he would be relieved. Don Juan García, the second in command, was clear in a council of war, to hold out. Camerío, the chief of the artillery, was of the same opinion, but though Imax voted with them in the council, he, on the same day, shamefully surrendered the place with eight thousand men and a hundred and seventy guns (1).

Operations
before
Cadix.
Battle of
Barrosa.

Soult had no sooner crowned with this marvellous success his short but brilliant campaign, in which, with a force not exceeding twenty thousand men, he had carried two fortresses, and taken or

destroyed an equal number of the enemy, than he returned with all imaginable expedition to Andalusia, where his presence was loudly called for by a disaster, all but decisive, which had occurred to the blockading force before Cadix during his absence. Sir Thomas Graham, who commanded the British and Portuguese troops in that city, was encouraged by the great diminution of force under Victor, in consequence of Soult's absence, for the opposite shores of the bay, to try an expedition, with a view to raise the siege. The allies sailed on the 21st, and landed at Algeiras on the day following, an

Feb. 22.

attack was fixed for the 28th February, but, owing to the preva-

Feb. 23.

lence of contrary winds, it did not take place for a week later. Graham had collected four thousand British infantry and two hundred horse at

Tárrifa

and on the 20th, La Peña landed with ten thousand Spanish troops; and, taking the command of the whole allied force, moved against the ene-

my. In a few days his force was increased by the guerillas who came in from every direction to twelve thousand foot, and eight hundred horse; but mean-

while, the French had collected their troops from all quarters, and fifteen thousand men were assembled round the standards of Victor before Cadix,

March 1.

besides five thousand at Medina Sidonia, and other places in his rear. The allies, however, noways daunted, advanced to raise the siege; and on the 5th reached the heights of Barrosa, about four miles from the mouth

of the Santi Petri, when Victor came out of his lines to give them battle (2).

March 6.

General Graham was extremely anxious to receive the attack on the heights of Barrosa, where his little band would have had an

excellent position to repel the enemy. La Peña, however, ordered him to move through the wood of Bermeya towards the sea-coast, but no sooner did

he commence this movement, than the Spanish general followed after him, leaving the important ridge of Barrosa, the key of the whole ground, un-

occupied. The moment Victor was apprised of this, he directed his whole disposable force, about nine thousand strong, of the divisions Ruffin, Laval,

and Villatte, all veterans inured to victory, with fourteen guns to attack the heights. Some Spanish troops, whom they met on their ascent, were quickly

overthrown; and Graham, while still entangled in the wood, was apprised by the torrent of fugitives which came after him that the heights were won.

March 6.

and the enemy posted on the strong ground on his rear. An ordi-

nary general would have thought only in such a crisis of retreating to the

Isle of Leon, and extricating himself as rapidly as possible from his perilous situation, but Graham, who had the eye, as well as the soul, of a great com-

(1) See iv. 21. 22. Kapp. iii. 450. 451. v. 2. Deep. vii. 462. 463; and Deep. xvi. March, 1811. Ger. ii. 371.

(2) Graham's Des. 6th March, 1811. Ger. vii. 213. Sup. iii. 440. See i. 21. 22.

mander, at once perceived, that to attempt this in presence of such an enemy, with the Spaniards in full retreat (1), and already out of sight, would rapidly bring on disaster. He instantly took his line ten guns, under Major Duncan, wheeled about, and commenced a destructive fire on the enemy's masses, who were now descending the hill, and the infantry, hastily formed into two columns, under Colonel Wheatley and general Dikes, faced about and advanced to meet the foe.

Victory of the English The onset at both points was exceedingly fierce, the French, as usual, came on in column, preceded by a cloud of gallant light troops, who concealed the direction of their attack by a rapid fire, but when Laval's division, which advanced unchecked, even by the admirably directed fire of Duncan's guns, at length reached the British line, they were met by a determined charge of the 87th and 28th regiments, broken and driven back, with the loss of two guns and an eagle. The routed division fell back on their reserve, but they too were thrown into disorder, and the battle won on that side. Meanwhile Dikes's division was not less successful against Ruffin's division, which was still on the brow of the hill. The guards, supported by two British regiments, there boldly mounted the steep. Ruffin's men, confident of victory, descended half-way to meet them, and with loud shouts the rival nations met in mortal conflict. The struggle was very violent, and for some time doubtful, but at length the French were forced back to the top, and ultimately driven down the other side with extraordinary slaughter. Ruffin, and Chaudon Rousseau, both generals of division, being severely wounded and taken. The two discomfited wings retired by converging lines to the rear, and soon met. They tried to retrieve the day, but in vain. Duncan's guns, with a close and rapid fire, played on their ranks, Ponsonby, with his two hundred German horse, charged their retiring cavalry, overthrew them, and took two more guns, and if La Pena had sent merely his eight hundred Spanish cavalry, and powerful horse artillery, to the fight, Victor must have sustained a total defeat, and raised the siege of Cadiz. But not a man did that base general send to the aid of his heroic allies, though two of his battalions, without orders, returned to aid them when they heard the firing, and appeared on the field at the close of the day. The French thus withdrew without further disaster, and Graham, thoroughly disgusted with the conduct of the Spanish general, some days after re-entered the Isle of León, bringing with him in triumph six French guns, one eagle, and three hundred prisoners, after having killed and wounded two thousand of the enemy, with a loss to himself of only twelve hundred men. La Pena speedily followed his example. The bridge of Santi Petri was again broken down. Victor cautiously resumed his position round the bay, where he was soon after joined by Soult returning from his victorious expedition into Estremadura, and the battle of Barrosa remained without result, save that imperishable one, which arises from the confidence which it communicated to the British arms, and the glory which it gave to the British name (2).

Various actions during the retreat Immediate, however, as well as ultimate results, attended the retreat of Masséna from his position at Santarem. Having exhausted the last means of subsistence which the country he occupied would afford, and finding his marauders at length returning on all sides empty handed from their excursions, this veteran commander commenced his retreat. He chose for its line the valley of the Mondego, and the road of Al-

Almeida; but, as this required a passage in presence of the enemy, of the range of mountains which separates that valley from that of the Zézere, where the French army lay, of an army encumbered with an immense train of artillery, and ten thousand sick, the operation was one which must necessarily be conducted with great caution. The great military talents of the hero of Aspern here shone forth with the brightest lustre. Forming his army into a solid mass, under the uniform protection of a powerful rearguard, commanded by Ney, he retired slowly and deliberately, without either confusion or forced marches, and constantly availing himself of the numerous strong positions which the country afforded, to take his stand in such a manner that he required to be dislodged by a flank movement of the pursuing force, which necessarily required time, and gave opportunity for the main body and carriages to desile quietly in the rear.

Two days were necessarily occupied at first by Wellington in watching the enemy, as his line of retreat was not yet declared, that he had assembled Ney's corps near Leyria, as if menacing the lines of Torres Vedras. But no sooner did it clearly appear that he had taken the line of the Mondego, and was retiring in good earnest, than the whole allied force to the north of the Tagus was put in motion after him. The bulk of his forces was directed by Wellington on Leyria, whither also the reinforcements, six thousand strong, were moved, which had recently arrived from England, in order to stop the enemy from moving on Oporto and the northern provinces of the kingdom. To gain time, the French general offered battle at Pombal which obliged Wellington to concentrate his troops, and bring up the two divisions which had been sent across the Tagus to relieve Badajoz but, no sooner were seven divisions united, than he retired, and a slight skirmish alone took place between the two armies. On the 13th, Ney, with the rearguard, stood firm at Redinha, at the mouth of a long desile, through which the main body of the army was retiring and the splendid spectacle was exhibited of thirty thousand men marching in an open plain against this position. At their approach, however, they retired without any considerable loss (1).

Colimbra at this period appears to be the point towards which the French were tending but the fortunate occupation of that town at this juncture, by Trant's militia, and the report which, though erroneous, was believed, that the reinforcements for the British army had been forwarded by sea to the mouth of the Mondego, and had arrived there, induced Masséna to change the line of his retreat, and he fell back towards Almeida by the miserable road of Miranda del Corvo. Frightful ravages everywhere marked his steps; not only were the villages invariably burnt, and the peasants murdered who remained in them, but the towns of Leiria and convent of Alcobaca were given to the flames by express orders from the French headquarters. But these barbarities soon produced their usual effect of augmenting the distresses of the retreating army, the narrow road was soon blocked up by carriages and baggage waggons; confusion began to prevail; distress and suffering were universal; and nothing but the absence of two divisions of his army, which Wellington was obliged again to detach across the Tagus to stop the progress of Soult, and secure Elvas, after the fall of Badajoz, saved the enemy from vigorous attack and total ruin. But as the retiring mass was, after that large deduction, considerably stronger than the pursuing, Wellington did not press the army, as he might have done had he possessed an equal force; and Masséna arrived at Celorico, grievously distressed and almost destitute, but without any serious fighting, and

(1) Map III. 452, 465. Edm. I. 165, 166. Well. Disp. Corvo vol. 411.

from Elvas, where headquarters had been established, and drew up his covering army, about thirty thousand strong, including sixteen hundred cavalry, on the summit of a vast plateau, between the Turones and the Dos Casas; the left at Fort Concepcion, the centre opposite Alameda, the right at Fuentes d'Oñoro. The whole line was five miles in length, and the front was difficult of access, by reason of the Dos Casas flowing in a deep ravine across nearly its whole extent (1).

Combat of
Fuentes
d'Oñoro.
May 2.

No sooner had the enemy formed on the ground on the afternoon of the 3d, than they commenced a vigorous attack on the village of Fuentes d'Oñoro, which was occupied by five battalions. So vehement was their onset, so heavy their cannonade, that the British were forced to abandon the streets, and with difficulty maintained themselves on a craggy eminence at one end, around an old chapel. Wellington, upon this, reinforced the post with the 21st, 71st, and 70th regiments, which charged so vigorously down the streets that the enemy were driven out with great loss; and these battalions occupied the village throughout the night, the French retaining only a small part of its lower extremity. On the following day Masséna collected his whole army close to the British position, and made his final dispositions for the attack. The Cda, which ran along the rear of nearly their whole line, was in general bordered by craggy precipices, so that, if the allied army could be thrown into confusion, their retreat appeared almost impracticable. The convoy of provisions, destined for the relief of Almeida was at Gallegos, seven miles in the rear, ready to move on as soon as the road was opened. For this purpose the grand attack was to be made from the British right, where an entrance to the plateau, on level ground, could be found for the whole front of their position was covered by the rugged ravine of the Dos Casas, which separated the two armies in front, and was in most places wholly unpassable for cavalry, and in some even for infantry. With this view, three divisions of infantry, twenty four thousand strong and nearly all the cavalry, were, late on the evening of the 4th, drawn to the extreme French left, and posted, so as to attack at daybreak the British right flank, on the neck of land, about three miles broad, where the plateau on which their army rested joined the level heights between the source of the Turones and the Dos Casas (2).

Battle of
Fuentes
d'Oñoro.

Early next morning the attack was commenced with great violence on the British right, under General Houston, near Poco Velho, and the enemy speedily drove them out of that village. Don Julian Sanchez, who commanded a body of three thousand guerillas on the extreme British right, immediately retired across the Turones; and Monthron, finding the plain now open, fell with above four thousand admirable cuirassiers on the British and Portuguese horse, not twelve hundred strong. They were gallantly met and partially checked by the allied cavalry under General Charles Stewart, who took the colonel of one of the regiments, La Motte, prisoner in the *mêlée* with his own hand; but the combat was too unequal, and after a gallant effort our horse were driven behind the cover of the light division and Houston's troops. Monthron instantly swept, with his terrible cuirassiers round the now exposed infantry; Houston's men rapidly formed square and repelled the attack but so swift was the French onset, that ere a similar formation could be effected by the seventh division, the shock of steel was upon them; and though the Chasseurs Britanniques and some of the 1st run-

wick infantry, with admirable steadiness, taking advantage of a ruined wall, repelled the charge *in line*, yet some were cut down, and Captain Ramsay's troop of horse artillery was entirely surrounded. All gave them over for lost. but, after they had for a while been concealed from the view, by the glancing throng of cuirassiers, an English shout was heard, and that noble officer was seen bursting through the throng, his horses bounding with their guns over the plain, and the mounted gunners in close order protecting the rear (1). But still the progress of the enemy in this quarter was very evident, the British right was turned and broken through, and it was apparent, that, unless the ground lost could be regained, or a new defensive position defying attack taken up, the battle would be lost (2)

Obstinate nature of the fight Wellington's position was now in the highest degree critical. in his rear were the ravines of the Turones and the Coa, extremely rugged and difficult of passage, while his right, the key of his position, commanding the entrance of the plateau, from the small body of cavalry at his disposal, was unable to make head against the enemy. In these circumstances he took a hazardous resolution, but which the admirable steadiness of his troops enabled him to execute with perfect success. He drew back the whole centre and right wing of his army, the left remaining firm at Fuentes d'Onoro, as the pivot on which the backward wheel was formed, in order to take up a new position facing to the original right of the line, and nearly at right angles to it, on a ridge of heights which ran across the plateau, and stretched from the ravine of Dos Casas to that of the Turones. Such a retreat, however, in the course of which the outer extremity of the line had to retire four miles over a level plateau, enveloped by a formidable and victorious cavalry, was most hazardous, the plain over which the troops were retiring was soon covered with carriages and fugitives from the camp followers, and if any of the divisions had given way, the enemy would have burst in upon them with such force, as would have sent the disorderly multitude headlong against some of its own squares, and thrown the whole into irreparable confusion. Meanwhile a fierce contest was going on in Fuentes d'Onoro, where the three victorious regiments who had held it two days before, after a gallant resistance, were pierced through, Colonel Cameron, of the 71st, mortally wounded, and the lower part of the town taken (3)

Masséna's ultimate failure But in that dread hour, perhaps the most perilous of the whole war for England, she was saved by the skill of her chief and the incomparable valour of her soldiers. Slowly, and in perfect order, the squares of the 1st, 7th, and light divisions, retired for many miles, flanked on either side by the terrible cuirassiers of Monthlun, flushed with the newly won glories of Wagram (4), pressed in rear by the columns and batteries of Ney's corps, which had broken the Russian army at Friedland (5). In vain their thundering squadrons swept round these serried bands, and the light of the British bayonets was, for a time, lost in the blaze of the French cuirasses; from every throng the unbroken squares still emerged, pursuing their steady way amidst a terrific fire, the seventh division successfully accomplished its long semicircular sweep, crossed the Turones, and took up its ground between that stream and the Coa; the centre of the army soon gained the ridge of heights for which it was destined, while the left, with invincible firmness, still made good the crags and chapel of Fuentes d'Onoro. When the whole

had taken up their ground, Masséna recoiled from the prospect of attacking such an enemy as he had now combated, posted in dense masses on a ridge not two miles in length, and covered on either flank by a steep ravine; and, confining himself to a cannonade along its front, redoubled his efforts on the left, where he sent the whole division of Drouot against the village of Fuentes d'Onoro. But though the fighting was most desperate all day in that quarter, though the enemy at one period had got possession of nearly the whole, and his skirmishers penetrated through on the other side towards the main position, the British always retained part of the houses and at length, when the concentration of his forces enabled Wellington to reinforce his left by fresh troops, they were driven through the streets with great slaughter by a charge of the 71st, 79th, and 88th regiments on which occasion perhaps alone in the war, the bayonets crossed, and the Imperial guards (1), some of whom were lifted from the ground in the shock, and borne backward a few paces in the air, were forced to give ground before the Highland regiments. Night put an end to the slaughter in this quarter: the British retained their position around the chapel and on the crags, and the French retired across the Dos Casas. Fifteen hundred men had fallen, or were made prisoners, on both sides; and yet neither could claim decided advantage.

Masséna's evacuation of Almeida, and his retreat. May 9. Though the British lost ground on all points but the extreme left during this battle, and were certainly nearer experiencing a defeat than in any other action in Spain, yet the result proved that they had gained their object. Masséna lingered three days in front of

the allied position, which Wellington strengthened with field works, and rendered altogether unassailable. At length, despairing of either forcing or turning the British lines, he retreated across the Agueda, leaving Almeida to its fate: having first sent orders to the governor, General Brennier, by an intrepid soldier, named Tillet, to blow up the works, and endeavour to effect his retreat through the blockading force. These directions were obeyed with

May 10. surprising skill and success. At midnight on the 10th, this brave man blew up the bastions, and rallying forth marched swiftly and bravely forward to the Barba del Puercio, which he had ascertained was the most unguarded point of the allied line. The fourth regiment which was ordered to occupy that point, did not receive its orders in time and when it did unfortunately missed its road in the dark, and the consequence was, that Brennier, with eleven hundred of his gallant followers, got clear off, and joined Masséna near Ciudad Rodrigo (2) but four hundred were killed or made prisoners in crossing the deep chasm of the Barba del Puercio. Wellington, on the day following, took possession of Almeida, in which the artillery was en-

May 11. tire, but several large chasms existed in the walls, Masséna withdrew to Salamanca and the banks of the Tormes, and the last act in the eventful drama of the invasion of Portugal was terminated.

Reflections on this campaign, and criticism of the French. The retreat of the French from Portugal, a model of military skill and ability on the part both of the soldiers and commanders, was disgraced by a systematic and deliberate cruelty which can never be sufficiently condemned. We have the authority of Wellington for the assertion that "their conduct was throughout the retreat, marked by a barbarity seldom equalled, never surpassed. Even the towns of Torres Novas, Thomar, and Pernes, in which the headquarters had been for several months and in which the inhabitants had been invited by promises of safety to remain

(1) Well. Disp. 21b May 1811. Cam. 911 517. (2) Well. Disp. Cam. L 511. Nap. L. 512. 513. R. p. L. 513, 514. Jour. L. 496 497. V. 2, 4. 521. V. 2, of Cam. 512, 513. Jour. L. 522. Cam. 511.

were plundered, and in part destroyed, on the night the retreat began; and they have since burnt every town and village through which they passed (1). A single incident will illustrate the horrors of such a system of warfare better than any general description, and it comes from a gallant eye-witness, whose graphic powers are never called forth by mawkish sensibility, or indignant feelings excited by undue hostility towards his adversaries.—“A large house, situated in an obscure part of the mountains, was discovered filled with starving persons. Above thirty women and children had sunk, and, sitting by the bodies, were fifteen or sixteen survivors, of whom only one was a man, but all so enfeebled as to be unable to eat the little food which we had to offer them. The youngest had fallen first, all the children were dead, none were emaciated in the bodies, but the muscles of the face were invariably drawn transversely, giving the appearance of laughing, and presenting the most ghastly sight imaginable. The men seemed most eager for life, the women appeared patient and resigned, and even in this distress had arranged the bodies of those who first died with decency and care (2).” Such is ambition in its most terrible form, such the result of the atrocious system which, under the specious pretence of making war support war, consigns the innocent inhabitants of invaded countries, old men, women, and children, to ineffable misery, starvation, and death. Doubtless such horrors have in every age attended serious and long-continued hostility, and they are sometimes unavoidable where great bodies of men, inflamed by violent passions, are brought into collision, but it is the peculiar and characteristic disgrace of the French Revolutionary armies, that they were not merely permitted, but enjoined by the commanders; and that those atrocities, which in other armies spring from the licence or brutality of the soldiers, and the officers labour assiduously to prevent, were with them systematically acted upon by all ranks, and flowed from the system which, impressed upon the generals by the rapacity of government, was by them reduced to a regular form, and enjoined in general orders emanating from headquarters (3).

Grant of
Parliament,
and sub-
scription for
the Portu-
guese in
England

But these unheard of atrocities, thus communicated to vast armies by a regular system of plunder, and exercised on a great scale in every part of Europe, were at length producing their natural effects. Unspeakable was the indignation excited in the Portuguese peasantry by such revolting cruelties, and, although the inefficiency and desire for popularity in the regency at Lisbon for long paralysed the efforts of the country, and rendered in some degree unavailing the ardent spirit of the people, yet the most perfect unanimity prevailed among the rural inhabitants, and the British were supported in their enterprises by the peasantry with a cordiality and fidelity which were alike honourable to both nations. Wellington has told us, that, in no single instance, were the humbler ranks in Portugal discovered in any correspondence with the enemy, that the prisoners, though in some instances obliged to join the French ranks, all deserted on the first opportunity to the standard of their country, that the Portuguese peasants, though of such different habits, agreed admirably with the English soldiers, and that, though great numbers of crimes were committed, especially at first, by the disorderly Irish, who formed so large a part of many newly sent out regiments, yet

(3) Well Desp vii 188, 196

“The convent of Alcobaca was burnt by orders from the French headquarters. The bishop’s palace, and the whole town of Leyria, where General

Drouet had his headquarters, shared the same fate, and there is not an inhabitant of the country, of any class or description, who has had any communication or dealing with the French army, who has not had reason to repent of it.”—WELLINGTON to LORD LIVERPOOL, 14th March 1811

it was next to impossible to get the natives who had suffered to come forward and give evidence against them (1). These are truly noble traits in national character, and, combined with the heroic stand which, under British guidance, they made against their tremendous enemy, despite all the weakness and imbecility of their rulers, prove that materials for greatness exist in the Peninsula, if the time shall ever arrive when the spirit and energy of the higher ranks, then altogether wanting, shall equal the courage and virtue of the people.

Nor were these noble qualities in the Portuguese peasantry even then without their reward. Their bravery and their suffering excited the warmest sympathy in Great Britain, the enthusiasm of all classes, ever readily awakened in the cause of woe, was roused to the highest pitch: a grant of a hundred thousand pounds by parliament, to the sufferers by the French invasion, was passed without a single dissentient voice in the House of Commons; private subscription in every town and village of the empire soon trebled its amount, and the noblest qualities in our nature, patriotism and charity, excited by the heart-stirring course of events to the very highest pitch, poured forth from two perennial fountains a stream of mingled energy and benevolence, which was, because it deserved to be, invincible (2).

Immense was the effect produced by the glorious termination of the war in Portugal, on the British nation and the whole of Europe. The French armies had at length been brought to a stand; and that apparently irresistible torrent of conquest, which had hitherto flowed over the whole of Europe, was now, to all appearance, permanently arrested. Experience had proved, that, by combining military discipline and regular forces, with vast exertions and patriotic enthusiasm, a barrier could be opposed to revolutionary aggression: the failure of Austria, in her late heroic attempt, was forgotten in the still more recent triumph of England. Russia contemplating a similar attack upon her own independence, watched with intense anxiety the interesting struggle, and beheld, in the defensive system and triumph of Wellington, both the model on which her defensive preparations should be formed, and the best grounds to hope for a successful issue from her own exertions. But the effect produced in England was still greater, and, if possible, more important. In proportion to the breathless suspense in which the nation had been kept by the advance of Masséna, and the confident predictions of immediate success, with which it had been preceded, from many in the British Islands, and all on the continent, was the universal joy which prevailed when the prospect of unlooked for success began at last to dawn upon the nation. The battle of Busaco first flashed through the gloom of general despondence occasioned by the retreat of Wellington into the interior of Portugal; but its cheering light soon faded, and the public mind was more violently agitated than ever, when, after such a triumph, the retreat was still continued to the close vicinity of Lisbon. But when Wellington at last took his stand and through the thick clouds, with which the horizon was beset, the lines of Torres Vedras were seen dimly rising in stupendous and impregnable strength, the general enthusiasm knew no bounds. The advantages of the British position hitherto altogether unknown, save to its chief, were now at once revealed. It was seen that England possessed an unconquerable stronghold in which she might securely place her resources, where her armies, how numerous soever, would be amply provided for by her fleets: while the forces of Napoleon how

(1) *Well. Despatch* Nov. 1, 1805, 379 and vol. 163.

(2) *Ibid.* p. 8, 1814, 27 Feb. Feb. 1811, 167.

great soever, would either fall at the foot of the intrenchments, or perish of famine in the desert which they had created around them. The profound observation of Henry IV, "If you make war in Spain with a small army, you are beaten, with a large one, you are starved," arose in vivid importance to their recollection, and the nation ceased to despair in a contest, in which the very magnitude of the enemy's force had at length been turned with decisive effect against him (1)

Error of
Napoléon in
the cam-
paign, and
its cause

There can be no doubt that the simultaneous invasion of Andalusia and Portugal, in a military point of view, was a capital error on the part of Napoléon. It was a direct deviation from his own principle, of bringing all the disposable forces to bear upon the decisive point. The line of the Tagus was the quarter where the decisive blow was to be struck. If Soult, with sixty thousand men, had invaded the Alentejo at the same time that Masséna, with eighty thousand, poured down the valley of the Mondego, it is extremely doubtful whether even the strength of Torres Vedras would have enabled Wellington to maintain his ground at Lisbon. No one knew better than the French Emperor that the passage of the Sierra Morena was an eccentric movement, which strengthened the enemy's chances of success at the vital point, but he was driven to adopt it by the political necessities of his situation. France could not, with safety, be more heavily taxed, the central provinces of Spain were utterly exhausted, fresh resources were indispensable, and the simultaneous invasion of Andalusia and Portugal was resorted to in the prospect of obtaining their hitherto untouched fields of plunder. Crime and oppression may for long prove victorious, but they bear in themselves the seeds of their ultimate punishment, and they are constrained to bring those seeds to maturity by the efforts which they make for their own advancement (2)

Views of
Government
on the cam-
paign

Government at home were far from being equally impressed with Wellington, during the progress of the campaign, with the chances of ultimate success, they were not aware of the vast strength of the Torres Vedras position, and although they sent out all the succours which he demanded, yet they did so rather in deference to his wishes, and from respect to his opinion of the hope of success, than from any belief of their own that his anticipations were well founded. When he drew near to Lisbon, their anxiety was very great, and it was well known, that, for a considerable time, they expected that every arrival from that capital would bring the account of his embarkation. Yet, even in that contemplated extremity, they did not despair of the contest, they provided a vast fleet of ships of the line and transports capable of bringing off the British and Portuguese army, with a great number of the inhabitants who were implicated in the war, and gave orders to their general, that if he was driven from Lisbon, he should take refuge in Cadiz, and renew the war in Andalusia, from the basis of that city and Gibraltar (3). This resolution was worthy of the highest admiration, it rivals the noblest instances of Roman constancy, and should make us overlook many previous instances of insensibility to the right mode of carrying on the contest which had arisen from their long inexperience of military combination. And although we, judging with all the advantages of subsequent experience, may occasionally feel surprised at the gloomy feelings which at times pervaded both government and the nation, when the dawn of European deliverance was beginning to appear before the hazy Torres Vedras, yet it cannot be denied, that, judging from the

(1) Well Desp viii 76 77

(2) Well Desp viii 286

(3) W i

much grounds for their prognostications and recollecting in what disaster all previous expeditions to the continent had terminated, when engaged only with a part of Napoléon's force, there was little room for hope now that they were assailed by the whole. But from the generality and apparently solid ground for this opinion is to be drawn the brightest eulogium on the unshaken determination of the chief, which never faltered in the contest, and the clearest proof of the loftiness of the intellect which could discern, through the gloom, the shadow of coming events, and find in its own strength the means of their accomplishment.

Magnanimous principle by which Wellington was guided.

Those, whether in public or private life, who take expedience for the principle of their conduct, are often sadly perplexed what course to adopt, because in the complicated maze of human events, they cannot see clearly to what end its conclusions point. Those who take duty for their guide are never at a loss, because its dictates are clear, and wholly independent of the changes of fortune. Ordinary observers too often judge of the future by the past, and act on the principle that subsequent events are to be exactly similar to those which have preceded them. It belongs to the highest class of intellect to combine with the experience of the past the observation of the present to perceive that human events are indeed governed, in all ages, by the same principles, but that new elements of power are perpetually rising into action and that, in every state of human affairs, an under current is flowing in an opposite direction from that on the surface, bringing salvation to the miserable, and often destined to confound the anticipations of the prosperous. Wellington possessed both the moral principle, and the intellectual power, requisite for the leader of such a contest as that in which he was now engaged. Alike fearless of danger, and unmoved by obloquy he looked merely to the discharge of duty: undismayed by the fall of Austria and Russia, he still did not despair of the cause of European freedom; and, with comparatively inconsiderable resources, prepared, in a corner of Portugal the means of hurling back an enemy who had two hundred and fifty thousand disposable soldiers in the Peninsula at his command. He saw that force originally had drawn forth the powers of the French Revolution; that force had sustained its growth but that force was now undermining its foundations and that the power which was based on the misery of every people among whom it penetrated, could not fail of being at length overcome, if combated by an energy equal to its own, accompanied by a forbearance commensurate to its rapacity. Strenuously urging, therefore, all whom he could direct to the most vigorous exertions, he as scrupulously abstained from the abuses of power. His efforts to repel the enemy were not greater than those he made to control the license and restrain the disorders of his own army: he preferred a small force regulated by order and maintained by justice, to a great one elevated on the fruits of rapine. He thus succeeded in at last combating the Revolution with its own weapons, and at the same time, detaching from them the moral weakness under which it laboured. He met it with its own forces but he rested their efforts on a nobler principle. France had conquered Europe, by assailing virtue with the powers of intellect, guided by the fire of genius, and stimulated by passions of wickedness; but Wellington conquered France, by raising against it the resources of wisdom, sustained by the constancy of duty, and directed by the principles of virtue.

CONTENTS OF VOLUME VIII.

CHAPTER LX

DOMESTIC HISTORY OF GREAT BRITAIN FROM 1809 TO 1812

Character of the Age of George the Third—Character of the English, French, and German Literature during that period—Character of George the Third—His mental Alienation—Proceedings in Parliament on that Event—Arguments for and against Proceeding by a Bill or by Address—Ministers are Continued in Power—Negotiation with Lords Grey and Grenville in January 1812—Assassination of Mr Perceval—Causes which prevented the Return of the Whigs to Office—Characters of George the Fourth, Lord Liverpool, and Sir Francis Burdett—Committal of the latter to the Tower, and Riots on that event—General Commercial Distress in 1811—State of the English Criminal Law, and Character of Sir Samuel Romilly—Monetary Changes during 1809 and 1810—Bullion Report, and Debates upon it in the British Parliament—Character of Mr Huskisson, and Tendency of his Commercial System—Debates on the Orders in Council, and their Repeal—Character of Lord Brougham as a Statesman and an Orator—Debates in Parliament on the Continuance of the Spanish War—Budget of 1811 and 1813—Negotiation for an Exchange of Prisoners with France—Causes of its Failure—Expedition against Java, and Completion of the Destruction of the Colonial Possessions of France —P 1—70

CHAPTER LXI

PROCEEDINGS OF THE CORTES —WAR IN SPAIN, JANUARY 1810—FEBRUARY 1812

Proceedings in Spain for the Formation of the Cortes—Causes which led to its Extreme Democratic Character—Constitution of 1812—Vast Effects which it has had on the South of Europe, and in the New World—Wellington's Opinion of, and Predictions regarding, it—Negotiations between Napoléon and Joseph for the Partition of Spain—Forces of France in the Peninsula in Spring 1811—Commencement of the Siege of Cadiz, and Operations in Catalonia—Siege and Fall of Tortosa—Capture of Figueras by the Spaniards—Commencement of the Siege of Taragona—Long-continued and desperate Defence of the Besieged—It is carried by Assault—Blockade and Re-capture of Figueras by the Spaniards—Suchet's Advance into Valencia—Siege of Saguntum—Battle of Saguntum, and Fall of that Fortress—Attack on Valencia—Its Surrender with the whole Army of Blake—Reflections on Suchet's Campaigns —P 71—131

CHAPTER LXII

CAMPAIGN OF WELLINGTON ON THE PORTUGUESE FRONTIER—1811

First Siege of Badajoz—General Description of the relative Forces in the Peninsula at this period—Advantages which the English enjoyed—Immense Forces which were at the Disposal of the French General—Causes which led to their Want of Success against Wellington—The precarious and destitute Condition of the King—Jealousy of
other—Absurd Division of the Resources of the Country by N
his

—Dreadful Severity of the French Military Decrees—General Spirit of Resistance which they produce throughout Spain—Wellington's Difficulties—Imbecility of the Regency at Lisbon, and of the Portuguese Authorities—Jealousy and Weakness of the Spanish Government—Extreme Difficulty of getting Supplies *in specie* from England—Battle of Albuera—Its great moral Results—Raising of the Siege of Badajoz by Wellington—Transfer of the Seat of War to the frontier of Beira—Operations in the East and North of Spain at this period—Wellington's Investment of Ciudad Rodrigo—Approach of the French Armies to raise the Siege—Retreat of Wellington, and Action of Elbiron—Both Armies go into Cantonnements—Surprise of Gérard at Arroyo de Molinos—Defeat of the French at Tarifa—Important ultimate Effects of this Campaign.—P. 172—181

CHAPTER LXIII

FIRST INVASION OF SPAIN BY WELLINGTON JANUARY TO NOVEMBER 1812.

Siege and Fall of Ciudad Rodrigo—Siege of Badajoz—Dreadful Assault by which it is carried—Irruption of Marmont into Beira—Incorporation of Catalonia with the French Empire—Destruction of the Bridge of Almaraz by General Hill—Advance of Wellington to Salamanca—Siege and Capture of the Forts there—Wellington advances to the Deane—Movements on both sides—Retreat of Wellington to Salamanca—Battle there and total Defeat of Marshal Marmont—Advance of Wellington to Madrid—Raising of the Siege of Cadix, and Evacuation of Andalusia by Marshal Soult—Wellington moves towards Burgos—Unsuccessful Assault of the Castle there—Retreat of Wellington and Hill to Salamanca—And thence to Ciudad Rodrigo—Severe Losses sustained during the Retreat—Reflections on the great Results of this Campaign.—P. 182—219

CHAPTER LXIV

SKETCH OF THE TURKISH EMPIRE—WAR BETWEEN THE OTTOMANS AND RUSSIANS FROM 1808 TO 1812

Distinguishing Features of Oriental and European Civilisation—System of Oriental Government—Manners, Habits, Virtues and Vices of the East—Causes which have counteracted the manifold Evils of their civil institutions—Physical Description and Statistical Details of the Turkish Empire—Ottoman mode of carrying on War—And Natural Strength of their Frontier towards Russia—Dethronement and Death of Sultan Selim—And Accession of Mustafa to the throne at Constantinople—A Second Revolution and Deposition of Mustafa—A Third Revolution and Accession of Sultan Mahmood—Negotiations between the Russians and Turks in 1808—Campaign of 1809—And Annexation of Wallachia and Moldavia to the Russian Empire—Campaign of 1810 and Advance of the Russians to Schumla—Their Unsuccessful Operations before that Place—Siege of Roudschouck—Dreadful Repulse of the Assault on that Place—Battle of Eutika, and Capture of the Turkish Camp—Capitulation of Roudschouck, and Conclusion of the Campaign—Draught of half of the Russian Army from the Danube into Poland—Campaign of 1811 on the Danube—Battle of Roudschouck, and Evacuation of that Fortress by the Russians—Blockade of the Turkish Army near that Place—Its Surrender—Treaty of Bucharest—Character of Sultan Mahmood—And Reflections on the Possibility of Regenerating the Turkish Empire.—P. 220—250

CHAPTER LXV

ELEVATION OF BERNADOTTE TO THE THRONE OF SWEDEN—AND CAUSES WHICH LED TO THE WAR BETWEEN FRANCE AND RUSSIA IN 1812

Description of the Swedish Peninsula—Character and Institutions of the Swedes—Invasion of Finland by the Russians—Fall of Sweden—Dethronement of Gustav and Appointment of the Duke of Sudermans as his Successor—Renewal of the War with Russia—Invasion of the Swedes and Peace with that Power—Character and Early History of Bernadotte—

Continued Encroachments of Napoleon in the Centre of Europe—Commencement of the differences between France and Russia—Mutual Grievances and Recriminations on both sides—Birth of the King of Rome—Tyranical Conduct of Napoléon towards Sweden—Consequent Alienation of Bernadotte, and his Secret Treaty with Russia—Ultimatum of that Power towards France—Treaties between France, Prussia, and Austria—And Reflections on the Dreadful Contest that was approaching —P 297—321

CHAPTER LXV

ADVANCE OF NAPOLEON TO MOSCOW, JUNE—OCTOBER 1812.

Immense Preparations of Napoléon for the Russian War—Forces which he had Collected for that Purpose—Forces of the Russians—Passage of the Niemen, and Commencement of the Campaign—Advance of Napoléon to Wilna, and Great Losses sustained by him in the March there—Operations of Napoléon against Bagration's Army—Operations of Wittgenstein on the Dwina—Retreat of Barclay de Tolly to the Dwina, and thence to Smolensko—Junction of the Russian Armies there—Battle of Smolensko, and Dreadful Losses of the French—Battle of Valentina—Continued Retreat of the Russians towards Moscow—Appointment of Kutusoff to the Supreme Command—Battle of Borodino, in which the Russians are worsted—Their continued Retreat to Moscow—Description of that Capital, and Preparations for Burning it—Conflagration of Moscow, and effect it produced on the Russian Army —P 322—380

CHAPTER LXVI

RETREAT FROM MOSCOW

Reflections on the General Conquest of the Southern by Northern Nations—Admirable Position acquired by Kutusoff on the Road to Kaluga—Increasing Difficulties of the French at Moscow—Unsuccessful Attempt at a Negotiation with the Court of St -Petersburg—Napoléon resolves to Retreat—Defeat of Murat at Winkowo—Commencement of the French Retreat, and Battle of Malo-Jaroslwitz—The French fall back on the Smolensko Road—Disasters of the Retreat, and Commencement of the Great Frosts—Arrival of the French at Smolensko—Parallel March of Kutusoff with the main Russian Army—Napoléon continues the Retreat from Smolensko—Operations of Wittgenstein on the Dwina—Storming of Polotsk—Arrival of Tchichagoff on the Beresina—Capture of Minsk and Bridge of Borissow—Battles at Krasnoi, and Immense Losses of the French—Imminent Danger of Napoléon as he approaches the Beresina—Arrival of Wittgenstein and Tchichagoff—Napoléon's admirable Plan of Passing the River—Dreadful Horrors of the Passage and Losses of the French—Departure of Napoléon for Paris—Increase of the Cold, and Destruction of the greater part of the French Army—Napoléon's Arrival at Wilna, and Interview with the Abbé de Pradt—Retreat of the French to the Niemen—Heroic Conduct of Marshal Ney—Generous Conduct of the Emperor Alexander at Wilna—Termination of the Campaign—And Reflections on it—Errors of the French in ascribing Napoléon's Disasters to the Burning of Moscow, or the Severity of the Cold—Real Causes of his Overthrow —P 381—435

of the Opposition against the Spanish War—Answer by Lord Wellesley and Lord Liverpool—Reflections on this Debate, and on the conduct of the Opposition on this subject—Their long-continued Insensibility to the Glory of England—Budget, and Naval and Military Forces of 1811—Budget, and Naval and Military Forces for 1812—Second Decennial Census of the People—Negotiation for an Exchange of Prisoners with France—Immense Accumulation of French Prisoners in Great Britain—Failure of the Negotiation—Was ending to Napoleon—Description and Vast Importance of Java—Expedition against the Island, and its Reduction—Storming of the Outworks of Fort Cornelius—Storming of the Lines of Fort Cornelius itself—Surrender of all Java—Reflections on the Total Destruction of the French Colonial Empire—Superiority of Colonial to European Conquest—Importance of the Preceding Domestic Detail of British Transactions.

Vast Importance and Interest of the reign of George III.

THE reign of George III embraces, beyond all question, the most eventful and important period in the annals of mankind.

Whether we regard the changes in society, and in the aspect of the world, which occurred during its continuance, or the illustrious men who arose in Great Britain and the adjoining states during its progress, it must ever form an era of unexampled interest. Its commencement was coeval with the glories of the Seven Years' War, and the formation, on a solid basis, of the vast colonial empire of Great Britain. Its meridian witnessed the momentous conflict for American independence, and the growth, amidst Transatlantic wilds, of European civilisation. Its latter days were involved in the heart-stirring conflicts of the French Revolution, and overshadowed by the military renown of Napoleon. The transition from the opening of this reign to its termination, is not merely that from one century to the next, but from one age of the world to another. New elements of fearful activity were brought into operation in the moral world during its continuance, and new principles for the government of mankind established never again to be shaken. The civilisation of a new world, in this age, was contemporary with the establishment of new principles for the government of the old: in its eventful days were combined the growth of Grecian democracy with the passions of Roman ambition; the fervour of plebeian zeal with the pride of aristocratic power; the blood of Marius with the genius of Cæsar; the opening of a nobler hemisphere to the enterprise of Columbus, with the rise of a social agent as mighty as the press, in the powers of Steam.

But if new elements were called into action in the social world, of surpassing strength and energy, in the course of this memorable reign, still more remarkable were the characters which rose to eminence during its continuance. The military genius, unconquerable courage, and enduring constancy of Frederick, the ardent mind, burning eloquence, and lofty patriotism of Clatham; the irrepressible integrity, sagacious intellect, and philosophic spirit of Franklin; the disinterested virtue, prophetic wisdom, and imperturbable fortitude of Washington; the masculine understanding, feminine passions, and blood-stained ambition of Catharine, would alone have been sufficient to cast a radiance over any other age of the world. But bright as were the stars of its morning light, more brilliant still was the constellation which shone forth in its meridian splendour, or cast a glow over the twilight of its evening shades. Then were to be seen the rival genius of Pitt and Fox, which, emblematic of the antagonist powers which then convulsed mankind, shook the British senate by their vehemence, and roused the spirit destined ere long, for the dearest interests of humanity, to array the world in arms; then the great soul of Burke cast off the unworthy fetters of ambition or party, and, fraught with a giant's force and a prophet's wisdom, regained its destiny in the cause of mankind; then the arm of Nelson

casts its thunderbolts on every shore, and preserved unscathed in the deep the ark of European freedom, and, ere his reign expired, the wisdom of Wellington had erected an impassable barrier to Gallic ambition, and said even to the deluge of Imperial power, "Hitherto shalt thou come, and no further, and here shall thy proud waves be stayed." Nor were splendid genius, heroic virtue, gigantic wickedness, awaiting on the opposite side of this heart-stirring conflict. Mirabeau had thrown over the morning of the French Revolution the brilliant but deceitful light of democratic genius; Danton had coloured its noontide glow with the passions and the energy of tribunitian power, Carnot had exhibited the combination, rare in a corrupted age, of republican energy with private virtue, Robespierre had darkened its evening days by the blood and agony of selfish ambition, Napoleon had risen like a meteor over its midnight darkness, dazzled the world by the brightness of his genius and the lustre of his deeds, and lured its votaries, by the deceitful blaze of glory, to perdition.

In calmer pursuits, in the tranquil walks of science and literature, the same age was, beyond all others, fruitful in illustrious men. Dr. Johnson, the strongest intellect and the most profound observer, of the eighteenth century; Gibbon, the architect of a bridge over the dark gulf which separates ancient from modern times, whose vivid genius has tinged with brilliant colours the greatest historical work in existence; Hume, whose simple but profound history will be coeval with the long and eventful thread of English story, Robertson, who first threw over the maze of human events the light of philosophic genius, and the spirit of enlightened reflection, Gray, whose burning thoughts have been condensed in words of more than classic beauty, Burns, whose lofty soul spread its own pathos and dignity over the "short and simple annals of the poor," Smith, who called into existence a new science, fraught with the dearest interests of humanity, and nearly brought it to perfection in a single lifetime, Reid, who carried into the recesses of the human mind the torch of cool and sagacious enquiry; Stewart, who cast a luminous glance over the philosophy of mind, and warmed the inmost recesses of metaphysical enquiry by the delicacy of taste and the glow of eloquence, Watt, who added an unknown power to the resources of art, and in the regulated force of steam discovered the means of approximating the most distant parts of the earth, and spreading in the wilderness of nature the wonders of European enterprise and the blessings of Christian civilisation,—these formed some of the ornaments of the period during its earlier and more pacific times, for ever memorable in the annals of scientific acquisition and literary greatness.

But when the stormy day of revolution commenced, and the passions were excited by political convulsion, the human mind took a different direction, and these names, great as they are, were rivalled by others of a wider range and a bolder character. Scott then entranced the world by the creations of fancy, and, diving deep into the human heart, clothed alike the manners of chivalry and the simplicity of the cottage with the colours of poetry, the glow of patriotism, and the dignity of virtue. Byron burst the barriers of wealth and fashion, and, reviving in an artificial age the fire of passion, the thrill of excitement, and the charm of pathos, awakened in many a breast, long alive only to corrupted pleasures, the warmth of pity and the glow of admiration (1). Campbell threw over the visions of hope and the fervour of philan-

(1) It is only, however, in his descriptions of nature, and a few of his reflections, that this high praise is due. Generally speaking, his sentiments and character exhibit a chaos of ill regulated pas-

sion, which never will be intelligible but to the spoiled children of gence—that is, a limited

or interesting
"indul"

thropy, the sublimity of poetic thought and the energy of lyrical expression; and, striking deep into the human heart, alone of all the poets of the age has, like Shakspeare and Milton, transplanted his own thought and expression into the ordinary language of the people. Southey, embracing the world in his grasp, arrayed the heroism of duty, and the constancy of virtue, with the magnificence of Eastern imagination and the strains of inspired poetry. While the sparkling genius of Moore, casting off the unworthy associations of its earlier years, fled back to its native regions of the sun, and blended the sentiment and elevation of the West with the charms of Oriental imagery and the brilliancy of Asiatic thought.

But the genius of these men, great and immortal as it was, did not arrive at the bottom of things: they shared in the animation of passing events, and were roused by the storm which shook the world; but they did not reach the secret caves whence the whirlwind issued, nor perceive what spirit had let loose the tempest upon the world. In the bosom of retirement, in the recess of solitary thought, the awful source was discovered, and Æolus stood forth revealed in the original Antagonist Power of wickedness. The thought of Coleridge, even during the whirl of passing events, discovered their hidden springs, and poured forth in an obscure style, and to an unheeding age, the great moral truths which were then proclaiming in characters of fire to mankind. Wordsworth, profound and contemplative, clothed the lessons of wisdom in the simplicity of immortal verse. Mackintosh, rising, like Burke in maturer years, above the generous delusions of his yet inexperienced life, wanted only greater industry, and a happy exemption from London society, to have rivalled Thucydides in the depth of his views, and a biographer like Boswell, to have equalled Johnson in the fame of his conversation. While Chalmers, bringing to the cause of truth and the interests of humanity a prophet's fire and an orator's genius, discerned in the indifferent or irreligious spirit of the former age, the real cause of the dangers of the present; and in the spread of Christian instruction, and the prevalence of religious principle, the only power that ever has, or ever will, successfully combat, either in political or social evils, the seductions of passion, the delusions of error, and the powers of wickedness.

The French and German writers, justly proud of the literary fame of their own countries during this memorable reign, will hardly allow that their illustrious authors should be grouped around the throne of George III. and will point rather to the Revolution, the empire of Napoléon, or the War of Independence, as marking the period on continental Europe. But by whatever name it is called, the era is the same; and if we detach ourselves for a moment from the rivalry of nations and anticipate the time in future days when Europe is regarded by the rest of the world as a luminous spot, exceeding even Greece in lustre, and from whence the blessings of civilisation and the light of religion have spread over the globe, we shall feel reason to be astonished at the brightness of the constellation which then shone forth in the firmament. It is pleasing to dwell on the contemplation like the age of Pericles in Grecian, or of Augustus in Roman story, it will never again be equalled in European history. But the most distant ages will dwell upon it with rapture, and by its genius the remotest generations of mankind will be blessed.

Its moral character In no age of the world has the deterring effect of long-continued prosperity, and the regenerating influence of difficulty and suffering on human thought, been more clearly evinced. The latter part of the eighteenth century, the reign of Louis XV, the Regent Orleans, and Louis XVI,

were characterised by a flood of self-liness and corruption, the sure forerunners in the annals of nations of external disaster or internal ruin. Fancy was applied only to give variety to the passions—genius to inflame, by the intermixture of sentiment, the seductions of the senses—talent to obscure the Creator from whom it sprung. The great powers of Voltaire, capable, as his tragedies demonstrate, of the most exalted as well as varied efforts, were perverted by the spirit of the age in which he lived. He wrote for individual celebrity, not eternal truth; and he obtained, in consequence, the natural reward of such conduct,—unbounded present fame, and, in some respects undeserved, permanent neglect (1). The ardent and more elevated, but unsteady mind of Rousseau disdained such degrading bondage. The bow bent too far one way, recoiled too far another, and the votaries of fashion, in an artificial age and a corrupted capital, were amused by the eloquent declamations of the recluse of Meillerie on the pristine equality of mankind, the social contract, and the original dignity of the savage character. Raynal, deducing the principles of humanity from the wrong source, traced with persuasive fervour, but with no prophetic foresight, the establishments of the European in the two hemispheres, and, blind to the mighty change which they were destined to effect in the condition of the species, diffused those pernicious dogmas which have now blasted the happiness of the negro race both in the French and English colonies, and sought to deduce, from the commencement of the vast change destined to spread the Christian faith over the wilderness of nature, arguments against its celestial origin. Every department of thought, save one, was tainted by the general wickedness and blindness to all but present objects which prevailed. Man's connexion with his Maker was broken by the French apostles of freedom; for they declared there was no God, in whom to trust in the great struggle for liberty. "Human immortality," says Channing, "that truth which is the seed of all greatness, they derided. To their philosophy man was a creature of chance, a compound of matter, a worm soon to rot and perish for ever. France failed in her attempts for freedom, through the want of that moral preparation for liberty, without which the blessing cannot be secured. Liberty was tainted by their touch, polluted by their breath, and yet we trusted it was to rise in health and glory from their embrace (2)." In the exact sciences alone, dependent upon intellect only, the native dignity of the human mind was asserted, and the names of D'Alembert, La Grange, and La Place, will remain to the end of the world among those who, in the loftiest subjects of enquiry, have extended and enlarged the boundaries of knowledge.

Influence of
the French
Revolution
on general
thought in
France

But more animating times were approaching fast. Corruption had produced its inevitable fruits, and adversity, with its renovating influence, was about to pass over the moral world. The Revolution came with its disasters and its passions, its overthrow of thrones and destruction of altars, its woes, its blood, and its suffering. In the general deluge thus suddenly falling on a sinful world, the mass of mankind in all ranks still clung to their former vices. They were, as of old, marrying and giving in marriage, when the waters burst upon them. But the ark of salvation

(1) Every bookseller in France and England will now bear testimony to the fact, that there is no voluminous writer whose works remain so dead a stock as those of Voltaire, and this is decisively proved by the extremely low price which the numerous editions of his works bear. His tragedies are noble works, and will live for ever, but his romances have already descended to the vault of all the Capulets. His historical writings, compared with those

in France which followed the Revolution, appear lifeless and uninteresting. His sceptical dogmas, so far from being regarded as the speculation of a powerful mind in advance, are now seen to have been the blindness of a deluded one, in rear of the momentous age to which his later years were prolonged.

(2) Character of Napoleon

had been prepared by more than mortal hands. The handwriting on the wall was perceived by the gifted few to whom Providence had unlocked the fountains of original thought; and in the highest class of intellect was soon to be discerned the elevating influence of trial and suffering upon the human mind. While the innumerable votaries of Revolution, borne along on the wild stream which had burst from the corruptions of previous manners, were bending before the altar of Reason, Châteaubriand ventured to raise again, amidst the sneers of an infidel age, the standard of ancient faith, and devoted the energies of an intrepid, and the genius of an ardent mind, to demonstrate its relation to all that is beautiful, or great and elevating, both in the moral and material world. Madame de Staël, albeit nursed in the atmosphere of philanthropic delusion, and bred up with filial piety at the feet of Gamaliel, arose, amidst the tears of humanity, to nobler principles; combined the refinements of sentiment with the warmth of eloquence and the delicacy of taste, and first announced, in a philosophic survey of human affairs, the all important truth, that there are but two eras in the history of the species—that which preceded and that which followed the establishment of Christianity. Seeds, whether for good or evil, sown in the human mind, generally take half a century to bring their fruit to maturity and in the general profligacy and irreligion of the urban population in France since the Revolution, is to be discerned the havoc prepared by the labours of Voltaire and the Encyclopædists, and the long-continued corruption of previous literature. But the nobler fruits of the suffering of the Revolution are already apparent in the highest class of intellect, whence change whether for good or evil ever originates. Guizot has brought to the history of civilisation the light of true philosophy and the glow of enlightened religion. Cousin, in the midst of philanthropic labour and vast information on the vital question of education, has arrived at the eternal truth, that general instruction, if not based on Christian principle, is rather hurtful than beneficial, because it opens new avenues to moral corruption without providing the only antidote which experience has proved to be effectual in correcting it. Lamartine, gifted at once with an orator's fervour and a poet's fire, has traced in strains of almost redundant beauty the steps of an enlightened European pilgrim to the birthplace of our religion and the cradle of our race. May the seeds scattered by these illustrious men not fall on a barren soil and perish by the wayside, nor yet be choked amidst briars but bring forth good fruit, in some fifty fold, some eighty, and some an hundred (1)!

Literature of Germany is a younger branch of the same illustrious family but from the time that her language has been cultivated by native writers, she has advanced in the great race of mind with extraordinary rapidity. Last of the European surface to be turned up by the labours

(1) Sir James Mackintosh, thirty years ago, on surveying this remarkable change in French literature and deplored that it had not then made its power and amongst English writers. "Twenty years ago," says he, "the state of opinion seemed to indicate an almost total destruction of religion in Europe. Ten years ago, the state of political events appeared to show a more advanced stage in the progress towards such a destruction. The reaction has begun every where. A mystical spirit prevails in Germany; a partial religion is persecuted by men of genius in France. It is adopted in some measure by Madame de Staël, who finds it, even by the help of her reason, in the nature of man. If she cannot so deeply perceive it in the nature of things. In England, no trace of this tendency are discover-

able among men of letters,—perhaps because they never went so near the opposite extreme, perhaps also because they have not suffered from the same misfortune."—Mackintosh's *Memoirs*, l. 499. What a curious and instructive passage to be written thirty years ago, midway between the experience of the French and the commencement of the English Revolution! The days of sobriety, earnest, and suffering, have come to England from the effects of that very opposite change in which Sir James Mackintosh himself, in his later days, from the excess of party, against his better judgment, was led to converse; and with them, the resurrection of the religious spirit in the works of philosophy, literature and philanthropy of the kind of which he then was led to complain.

of the husbandman, her soil has been found to teem with the richness of a virgin mould, and to exhibit the sparkling of hitherto untouched treasures. In reading the recent poets and great prose writers of that country, we feel as if we had arrived at a new mine of intellectual wealth; the northern nations, with fresh ideas and powerful expression, have again burst into the almost exhausted world of thought, and the long sway of Grecian or Roman dominion has been modified by a second infusion of Gothic energy. However it may be explained, the fact is sufficiently proved by the most cursory survey of the history of mankind, that the human mind is never quiescent: that it frequently lies fallow, as it were, for a long succession of ages, but that, during such periods, former error is forgotten, and ancient chains worn off, and that original thought is never so powerful, and important truth never so clearly revealed, as when the light of day is again let in to hitherto unexplored regions of the mind. The ages of Bacon and Shakspeare in England, of Machiavel and Leonardo da Vinci in Italy, of Pascal and Descartes in France, are sufficient to demonstrate the general justice of this principle.

Long illustrious in the walks of philosophy, holding for centuries a distinguished place in the republic of science, the birthplace of printing and gunpowder, the two most powerful agents in the cause of freedom ever communicated to mankind (1); the country of Kepler and Copernicus, of Euler and Leibnitz, Germany had not till the last half century explored the riches of her own tongue, or developed in native literature the novel and fervent ideas which had long been working in her bosom. But this was at length done; and her literature started at once into life with the vigour of youthful energy, and the strength of an armed man. Klopstock, obscure but sublime, poured forth the spirit of mystical Christianity in touching and immortal strains. Goethe, simple yet profound, united the depth of philosophical thought to the simplicity of childish affection, and, striking with almost inspired felicity the chord of native reflection, produced that mingled flood of poetic meditation and individual observation, which has rendered his fame unbounded in the Fatherland. Wieland, without the religious fervour of the first of these writers, or the deep reflection of the second, has charmed every imagination by the brightness of his fancy, the richness of his language, and the sparkling freshness which he has thrown over all the subjects which his magic pencil has touched. Schüller uniting the ardour of a soldier to the soul of a statesman and the graphic hand of an historian, has portrayed the shades of former times with dramatic power, and in a noble spirit, while the ardent soul of Goerner, awakened by the trumpet of Germany's deliverance, has poured a hero's soul and a patriot's heart into lyric verse, which will endure as long as the memory of the struggle by which it was inspired.

Her poets Nor have the efforts of thought in the Fatherland been confined to poetic effusion. Her prose writers in the calmer walks of philosophy and literature, the vigour of the human mind has been equally conspicuous, and a new light has been already thrown, alike on present speculation and past events, by the mingled originality and perseverance of the German character. Niebuhr, uniting to the prodigious industry of the German scholar an instinctive sagacity in discerning truth and apprehending the real springs and state of far distant events, which is perhaps unrivalled, has thrown a new and important light on the earlier periods of Roman annals, and though his history, generally

(1) Of printing this will be generally admitted, the experience of a few generations will place it beyond a doubt. Of gunpowder, at present, as generally denied. This is not the place to demonstrate the proposition.

obscure, sometimes perplexed, and too often overloaded with insignificant details; can never rival in general popularity the heart-stirring legends to which the page of Livy has given immortality, yet his profound observation and marvellous penetration have rendered his work the most valuable contribution to the stock of ancient knowledge which modern times have produced. Hoeren, not perhaps with equal learning or knowledge, has thrown a clearer if not a more original light over the general history of ancient nations and demonstrated how much remains still to be done on subjects apparently exhausted by previous industry, when the vigour of real talent and the force of an original mind are applied to its elucidation. The peculiar turn of the German intellect, abstract, contemplative, and often visionary, appears in the writings of Kant; and the reader, in tolling through his obscure pages, cannot but feel both how many new ideas have been poured into the world of thought by the Gothic race, and how much their importance has been diminished by being turned into the realms of ideal contemplation, instead of being devoted to objects of real usefulness.

Perhaps future ages, in comparing the philosophy and literature of England with that of Germany and France, at the commencement of the nineteenth century, will regret that the first has, especially in later times, so exclusively devoted its energies to objects of physical utility, practical importance, or ephemeral amusement, to the neglect of those higher and more lasting purposes which spring from the elevation of national feeling and the purity of national thought: that the direction of the second, cramped by the despotic nature of almost all the governments in the empire, has been so strongly directed to abstract speculation, imaginary feeling, or visionary perfection, to the neglect of those more heart-stirring and momentous topics which bear directly on the well being of society, or the amelioration of the human race: and that the genius of the last, still perverted, save in a few gifted spirits, by the sins and depravity of the Revolution, has been so much lost in the wildness of extravagant fancy, or blinded by the passions of disappointed ambition. And, if we could conceive an era in which the freshness of German thought and the power of German expression, united to the acuteness of French observation and the clearness of French arrangement, were directed by the solidity of English judgment and the sway of English religion, it would probably be the brightest which has ever yet dawned upon the human race.

Public
debate to
which Geo.
III. was
called.

Inferior to many, perhaps all the illustrious men whose names have been mentioned, in intellectual power or literary acquisition, GEORGE III. will yield to none in the importance of the duties to which he was called, or the enduring benefits which he conferred upon the human race. His it was to moderate the fervour which burst forth in the world; to restrain within due bounds the sacred fire which was to regenerate mankind, and prevent the expansive power destined to spread through the wilderness of nature the power of European art, and the blessings of Christian civilisation, from being wasted in pernicious attempts, or converted into the frightful sources of explosion and ruin. Vain are all the forces bequeathed to man, if the means of governing them are not at the same time bestowed. The power of steam was known for six thousand years, but it was applied to no useful purpose till the genius of Watt discovered the secret of regulating it: the force of the wind produces only shipwreck and devastation, if the steady hand of the pilot is wanting to direct the impulse which it communicates to the vessel. It was the fate of George III. to be called to the throne of the only free empire in existence during the age of revolutions; to be de-

tioned to govern the vast and unwieldy fabric of the British dominions, when torn at one period by internal convulsion, and menaced at another by external subjugation, to be doomed to combat, from the commencement to the end of a reign extending over more than half a century, the revolutionary spirit, veiled at one period under the guise of liberality and philanthropy, flaming at another with the passions and the terrors of a burning world

Consequences
which would
have ensued
if his character
had been
different

Of the incalculable importance of directing the government of such a country at such a period, with the steady hand of patriotic wisdom, we may form some estimate from observing what had been the consequences of the bursting forth of similar passions at the same time, in other states, where a corresponding regulating power was wanting, and where democracy, through the infatuation of the higher orders, and the delusion of the throne, obtained an early and a lasting triumph. France exhibited the prodigy of a monarch yielding to the wishes, and a nobility impregnated from the very first with the passions, of the people, and in the horrors of the Revolution, the devastation and subjugation of Europe, and the general ultimate extinction of all moral principle, and every element of freedom within its bounds, is to be found an awful example of the consequences of admitting such a power unrestrained to act on human affairs. Republican feelings, sobered by English habits, and directed by English principle, gained a glorious triumph in America, and the fabric of Transatlantic independence was laid with a moderation and wisdom unparalleled in the previous annals of the world. But subsequent events have given no countenance to the belief that such institutions can, in a lasting manner, confer the blessings of freedom on mankind, and rather suggested the painful doubt, whether the sway of a numerical majority, at once tyrannical at home and weak abroad, may not become productive of intrigues more general, and insecurity as fatal, as the worst oppression of despotic states. Placed midway between these two great examples of democratic triumph, England still exhibits, though with diminished lustre, the rare combination of popular energy with aristocratic foresight. She is neither trampled under the hoofs of a tyrant majority, nor crushed by the weight of military power, her youth have not been mowed down by the scythe of revolutionary ambition, nor her renown tarnished, save of late years, by the vacillation of multitudinous rule. Gratefully acknowledging the influence in the continuance of those blessings, which is to be ascribed to the prevalence of religious feeling, the moderation of general opinion, and the habits of a free constitution, it would be unjust not to give its due weight to the personal character of the monarch who swayed the English sceptre when the conflagration burst forth, and the advisers whom it led him to place about the throne. And if any doubt could exist on the subject, we have only to look to 1851, and reflect what would have been the fate of the cause of freedom throughout the world, if, when France was convulsed by the passions of Jacobin ambition, England had been blinded by the delusion of the Reform mania, and surrendered to the guidance of a conceding monarch, a reckless ministry, and an insane people.

Character
of Geo III

Although neither the intellectual powers nor mental cultivation of George III were of a very high order, yet no monarch was ever better adapted for the arduous and momentous duty to which he was called, or possessed qualities more peculiarly fitted for the difficulties with which, during his long reign, he had to contend. Born and L.
gloried, as he himself said, in the name of Briton. Edu

of the Protestant religion, he looked to their maintenance not only as his first duty, but as the only safeguard of his throne. Simple in his habits, moderate in his desires, unostentatious in his tastes, he preferred, amidst the seductions of a palace, the purity and virtues of domestic life. His education had been neglected—his information was not extensive—his views on some subjects limited; but he possessed, in a very high degree, that native sagacity and just discrimination, for the want of which no intellectual cultivation can afford any compensation, and which are so often found more than adequate to supply the place of the most brilliant and even solid acquisitions. He inherited from his father the hereditary courage and firmness of his race. On repeated occasions, when his life was attempted, he evinced a rare personal intrepidity; and when he proposed, during the dreadful riots of 1780, to ride at the head of his guards into the midst of the fires of his capital, he did no more than what his simple heart told him was his duty, but what, nevertheless, bespoke the monarch fitted to quench the conflagration of the world. Though quick in conversation, as kings generally are, he could not be said to have an acute mind; and yet the native strength of his intellect enabled him to detect at once any sophistry which interfered with the just sense he always entertained of his public or religious duties. When Mr Dundas, in the course of conversation on the Catholic claims, previous to Mr Pitt's retirement on that ground in 1800, urged the often repeated argument, that the Coronation oath was taken by him only in relation to his executive duties, he at once replied, "Come, come, Mr Dundas, let us have none of your Scotch metaphysics."

His great moral courage and his feelings.

But his firmness and principle were of a more exalted cast than what arises from mere physical resolution. No man possessed moral determination in a higher degree, or was more willing, when he felt he was right, to take his full share of the responsibility consequent upon either supporting or resisting any measure of importance. The firmness which he exhibited on occasion of the run upon the Bank and the mutiny of the *Acrot*, in 1797, brought the nation safely through the most dangerous crisis of recent times. His inflexible determination, in 1807, to admit no compromise with the Catholics regarding the Coronation oath, averted for twenty years that loosening of the constitution in Church and State, under which the nation has since so grievously laboured. When resisting, almost alone, Mr Fox's India Bill in 1783, he expressed his determination rather to resign his crown, and retire to Hanover than permit it to become a law: and the result has proved both that he had correctly scanned on that occasion the feelings of the English people, and rightly appreciated the probable effect of the proposed measure on our eastern empire, and the balance of the constitution in this country. He was obstinate, and sometimes vindictive in his temper, tenacious of power, and contrived, throughout his whole reign, to retain in his own hands a larger share of real authority than usually falls to the lot of sovereigns in constitutional monarchies. But he had nothing permanently cruel or oppressive in his disposition; he freely forgave those who had attempted his life; and stood forth, on every occasion, the warm supporter of all measures having a humane or beneficent tendency. This inflexible disposition however, sometimes betrayed him into undue obstinacy; and his well-known determination to admit no accommodation with the American insurgents, prolonged that unhappy contest for years after even his own ministers had become aware that it was hopeless: yet even such a resolution had something magnanimous in its character. It is now well known, that, but for the incapacity of the generals in command of his armies, his firmness would have

been rewarded with success; and all must admit, that his first words to the American minister who came to his court after the peace,—“I was the last man in my dominions to acknowledge your independence, but I will be the first to support it, now that it has been granted,”—were worthy of the sovereign of a great empire, whose moral resolution misfortune could not subdue, and whose sense of honour prosperity could not weaken

Selecting, out of the innumerable arts which flourished in his dominions, that on which all others were dependent, he concentrated the rays of royal favour on the simple labours of the husbandman. Equalling Henry IV, in the benevolence of his wish (1), and outstripping both him and his own age in the justice of his discrimination, he said that he hoped to live to see the day, not when all his subjects could merely read, but “when every man in his dominions should have *his Bible* in his pocket” Like all men in high situations, during a period of popular excitement, of a really upright and conscientious character, he was, for a considerable period of his reign, the object of general obloquy, and to such a length was this carried, that open attempts to assassinate him were repeatedly made when he appeared in public, but he long survived, as real virtue generally does, this transient injustice. When a jubilee was appointed in the year 1809, for the fiftieth year of his reign, the nation unanimously joined in it with thankfulness and devotion, and the more advanced of the present generation still look back to the manly and disinterested loyalty with which, in their youth, the 4th of June (2) was celebrated by all classes with a feeling of interest, increased by the mournful reflection, that, amidst the selfish ambition and democratic infatuation of subsequent times, such feelings, in this country at least, must be numbered among the things that have been.

Mental
alienation of
the King in
the close of
1810
Nov 2, 1810 The reign of the venerable monarch, however, who had awakened these feelings of loyalty among his subjects, was now drawing to a close. The health of the Princess Amelia, his favourite daughter, had long been declining, and she breathed her last after a protracted illness, which she bore with exemplary resignation, on the 2d November 1810. The anguish which the King underwent on this occasion was such, that it produced a return of the alarming mental malady which in 1788 had thrown the nation into such universal grief. Parliament met on the 1st November, in consequence of the Monarch's inability to sign any further prorogation, but, as the alarming indisposition of his majesty had for some time been a matter of notoriety, it was deemed advisable to adjourn from time to time, in the hope which was for some time held out of a speedy recovery. These hopes, however, having at length vanished, and the mental aberration of the monarch having assumed a fixed character, it became necessary to apply to Parliament on the subject, and on the 20th December, Mr Perceval brought forward the subject in the House of Commons (3).

Proceedings
in Parlia-
ment on
that event
Dec 20 1810 The basis of the proposition was the resolutions which were the groundwork of Mr Pitt's Regency bill, concerning which there was so vehement a debate in 1788, and they were as follows —1 That the King, being prevented by indisposition from attending to the public business, the personal exercise of the royal authority has been suspended, 2 That it is the right and duty of Parliament, as representing all the estates of the people of the realm, to provide the means of supplying the defect in such a manner as the exigency of the case may seem to them to require;

(1) That he might live to see the day when all his subjects had their fowl in the pot

(2) The birthday of George III

(3) Ann Reg 1811, p 17

3) That for this purpose the Lords and Commons should determine in what manner the royal assent should be given to bills which had passed both Houses of Parliament, and how the exercise of the powers and authorities of the Crown should be put in force during the continuance of the king's indisposition. The great feature of all these resolutions was, that they were a proceeding by *bill*, and not by address, and although such a course involved the anomalous absurdity of the royal assent being held to be validly interposed by commission, under the authority of Parliament, to a bill for regulating the royal functions, and settling the party by whom they should be exercised, at a time when the royal person was incapable of adhibiting such consent yet such an assumption of power by Parliament was thought no unwarrantable stretch in such circumstances, when the Legislature was *de facto* resolved into two of its elements, and yet the actual existence of the monarch precluded the heir-apparent from ascending the throne by hereditary succession. It was intimated, at the same time, that it was the intention of Government to bring forward a bill, vesting all the powers of the Crown in the Prince of Wales, to administer the affairs of the country in the name and on the behalf of his Majesty, under no other restriction except such securities for the safety and comfort of the royal person, and the easy resumption of his authority in the event of recovery, as might appear necessary, and a certain restriction for a limited time of the prerogative of creating peers. These propositions were the subject of anxious debate in the two Houses of Parliament, and the arguments advanced on both sides are worthy of notice even in an European history as involving the fundamental principles on which constitutional monarchy are rested. The first proposition passed unanimously the second, deciding the right of Parliament to supply the defect, did the like, with the single dissentient voice of Sir Francis Burdett; but upon the third, which declared that Parliament should proceed by bill to fix the person who was to exercise the royal authority, the Opposition took their stand. An amendment, that an address should be presented to the Prince of Wales praying him to take upon himself the royal functions, was proposed by Mr. Ponsonby, and on it the main debate took place (1).

On the part of the Opposition, it was urged by Mr. Ponsonby, Sir Samuel Romilly, and Earl Grey — "The case which at present calls for the interposition of Parliament, is the absence of the king, by power; and that not owing to his abdication or the failure of heirs, but the incapacity of the existing monarch to execute the duties of the royal office. In dealing with so delicate a matter, one bordering so closely on the very foundations of government, it is of the last importance to adhere to the rules established by former precedent, and, in the absence of positive enactment proceed in the paths of ancient usage. What, then, in similar circumstances, have our ancestors done? At the Restoration in 1661, the basis of the whole change was the letter and declaration of Charles II from Dreda and this declaration, with the letter from the king which accompanied it, was delivered on the 25th April; and between that and the 29th of May, when the Restoration took place, an application was made from the Commons to the Lords to put the Great Seal in activity, as, without it, the proceedings of the courts of law were stopped; but this the House of Peers declined, and the Commons, sensible that their application was absurd and unconstitutional, gave up the proposition. Again, at the Revolution, when James II had left the country, and the throne was thereby vacant, what did

Parliament do? Did they proceed by bill to settle the person who was to succeed to the crown, and go through the farce of affixing the Great Seal to an act when there was no sovereign on the throne? No. Even in that extreme case, when the liberties and religion of the whole nation were at stake, and constitutional principles were so well understood from the recent discussion they had undergone, during the great Rebellion and at the Restoration, they never dreamt of such an anomaly, but contented themselves with simply addressing the Prince of Orange to call a Parliament, and, when it assembled, they read the great compact between king and people, the Bill of Rights, and immediately proclaimed William and Mary King and Queen of Great Britain. If proceeding by address was the proper course in the greater cause and on the greater emergency, it must be considered sufficient in the lesser.

“With regard to the proceeding by bill, its absurdity is so manifest, that the only surprising thing is, how it ever could have been thought of. It is matter of universal notoriety, that every bill must have the royal assent before it becomes law, and, if that is the case in ordinary instances, how much more must it hold in that most momentous of all legislative enactments, the succession of the crown. Now, by 55d of Henry VIII, the royal assent must be given by the King personally in Parliament, or by commissioners appointed by letters-patent under the royal sign-manual. Is his Majesty at present capable of giving his consent in either of these ways? Confessedly not, and if so, then the proposed bill, though it may have passed both Houses of Parliament must ever want the authority of law. On what pretence, then, can we assume to do by fiction, and by an artificial and oppressive proceeding, what, in point of fact, is universally known to be impossible? Other precedents in older times, still more precisely in point, might be quoted, but these considerations seem so decisive of the matter at issue, as to render their examination unnecessary.

“It may be conceded that the two Houses of Parliament, and they alone, have the right to supply a deficiency, whether temporary or permanent, in the executive, but the question is, what is the proper and constitutional form for them to proceed on on the occasion? It is just as possible to tell the heir-apparent what restrictions are to be imposed to his authority, in the address which calls upon him to exercise the functions of royalty, as in the bill which confers its powers upon him. If it is deemed advisable to place the custody of the Monarch in the hands of the Queen, and to give her majesty the appointment of the great officers of his household, as well as the power of taking the initiative in restoring him to the throne upon his convalescence, is it to be presumed that the Prince Regent, even when he had assumed the powers of royalty, in consequence of the address of the two Houses, would refuse his concurrence to such an arrangement? It is true, in this way the limitations which Parliament may deem necessary upon his authority, may not form fundamental parts of the Regent's authority; but you have just the same security that he will assent to them as to any other bill which has passed both Houses, as to which there is no instance of a rejection since the Revolution. It is no answer to these objections to say, the same thing was done in 1788, and that precedent should now be followed. The times, the circumstances of the empire, were essentially different in the two cases: then the chief danger apprehended was from the royal prerogative, now a crippled executive is the greatest calamity which the country, beset with dangers, could encounter (1).”

Answer by
the Ministry.

On the other hand, it was contended by Mr Canning, Mr Perceval, and Lord Castlereagh—"Not the right and power of Parliament to supply the present defect; but the mode of exercising it, is in question. That great, and serious difficulties lie in the way of either of these methods, may at once be admitted; but the question is, not whether either mode of proceeding, is unexceptionable, but to which the least objections can be stated. It is no fault of ours that we are placed in a situation at once painful and perplexing—our duty is to deal with these difficulties in the most legal and constitutional manner of which existing circumstances will admit. To object to either of the methods of proceeding by bill or address, its own inherent difficulties and embarrassments, is only to say, in other words, that we are placed in a situation in the highest degree perplexing. That, however, is not our own act, but that of Providence, and we must deal with it as our ancestors have done. Every catastrophe which suspends or dissolves the hereditary succession to the throne, is necessarily involved in such difficulties—the only point for consideration is, what is the best mode of getting out of them?"

"Now, what precedent does former usage afford to guide us in such perplexities? The example of the Restoration cannot with any propriety be referred to on this question; because then an exiled monarch was to be restored to a right of which he had been forcibly and unjustly deprived, and an acknowledged title to be simply proclaimed and re-established. Can this be affirmed to be the predicament in which we stand at this moment? Unquestionably not—for we have now no pre-existing right to declare, but a contingency unforeseen by the existing law to provide for. Then as to the precedent of the Revolution, splendid and cheering as the recollection of that great event must always be to Englishmen, it will be wise in Parliament, before they permit their feelings to be carried away by it, to consider well whether it has any application to the circumstances in which we are now placed. Was the object of Parliament, at that period, to provide for the care and custody of the person of the monarch? Was it to provide for his return to the government of the country upon his restoration to health? Was it to erect a temporary sovereignty during the incapacity of the monarch, who, it was hoped, would soon be restored to health? Was it not, on the contrary, to provide *against* the restoration of James; to erect a barrier against his return, and defend the Crown, which they proposed to transfer, against the hostile approach of its ancient possessor?"

"The argument, founded upon the incompetency of applying the Great Seal to an act of parliament during the incapacity of the sovereign, is founded on no logical principle. Admitting that a fiction of law is adopted—an irregular and absurd proceeding, if you will, carried on when two branches of the legislature authorize the symbol of the consent of the third to be affixed to their bill without its knowledge or consent—does not this arise necessarily from the melancholy event which for a time has resolved Government into two of its elements, and compelled them to provide themselves for the public service with the presumed or feigned consent of the third only? It is surely a singular remedy for the unfortunate incapacity of one branch of the constitution to proceed unnecessarily to incapacitate the remaining branches. The proceedings at the time of the Revolution were wise, just, and necessary, because there was no other mode of proceeding practicable at that period, when Government was dissolved, and no legislative measure, even in the most informal style, could be adopted; but, because such a proceeding was proper then, does it follow that the same precedent should be followed

now, when no such necessity exists? And is not the proposal to do so, in the forcible language of Mr. Burke, 'to make the extreme medicine of the constitution its daily bread?'

"We have now a Parliament full, free and so constituted as to be fully competent to provide for the exigency that exists. What analogy is there between such a situation, and that at the Revolution, when the very convocation of a Parliament was the first step to be taken, and that could only be done by address to the Prince of Orange? Admitting the absurdity of applying the Great Seal, in the king's name, to a bill which has passed both Houses, when there is no sovereign on the throne, the same difficulty exists in as great a degree to the whole proceedings of the Regency during the king's life, which, contrary to the fact, speak in the king's name, and profess to utter his will. The question of a regency, it is historically known, was discussed at the Revolution, and rejected as unsuitable to the circumstances which then existed, and this renders that precedent directly hostile to the proceeding by address in the present instance. So standing the older precedents, and such being the equal balance of difficulties, or incompetencies, on either side, what remains for us but to act upon the latest and most important authority, that of Parliament on the King's illness in 1788, which was adopted after the fullest discussion, in circumstances precisely parallel to the present, and with the assistance of all the light to be derived from the greatest constitutional lawyers and statesmen who ever adorned the British Senate (1)?"

Upon this debate, Parliament, by a large majority in both houses, supported the resolutions proposed by ministers, that is, the proceeding by bill, the numbers being in the Commons 269 to 157, in the Lords 100 to 74 (2)

The details of the Regency bill were afterwards brought forward, and discussed with great spirit and minuteness in committees of both Houses of Parliament. Most of the clauses were adopted with no other than verbal alterations, but a protracted debate took place on the clause which proposed to lay the Regent for twelve months under certain restrictions, especially in the royal prerogative of creating peers, or calling the eldest sons of peers to the Upper House by writ. These restrictions, however, for that period, were inserted in the bill, by a majority in the Lower House of 24; the numbers being 224 to 200—a majority which fell on the matter of the limitation as to creating peers, to 16 in the Commons, and in the Lords to 6. This rapid diminution of the ministerial majority clearly indicated what an insecure tenure ministers now had of their places, and how strongly the now confirmed malady of the Sovereign, and the known partiality of the Prince of Wales for the Whig party, had come to influence that numerous party in Parliament—the waverers—in the line of policy they thought expedient to adopt. The Queen, by the bill, had the appointment of all the offices connected with the King's household, and certain forms were prescribed in which she was to take the initiative for paving the way for his restoration, or, in the event of his convalescence. But in the all-important matter of the appointment of a ministry, the Regent was invested, without any restriction, with the whole Royal prerogative, and it was universally thought that the first use he would make of his newly acquired power would be to dismiss the present ministry, and call Lords Grey and Grenville to the head of the ministry. Thus the bill appointing the Regent passed the House of Lords on

Jan 29

Feb 6

the bill appointing the Regent passed the House of Lords on January, by a majority of 100 to 74.

February the Royal assent was given by commission, and the Great Seal, the object of so much contention, affixed to the bill, upon which the Prince of Wales immediately entered on the whole functions of royalty, by the title of the Prince Régent (1)

Remarkable On calmly considering the subject of this vehement contention **sides taken** and narrow division in both Houses of Parliament, it cannot but **on this** strike the most inconsiderate observer how remarkable it was **occasion by** that the two great parties who divided the state, took upon this **the Whigs** conditional question sides diametrically opposite to what might have been **and Tories** expected from their previous principles—the Whigs supporting now, as in 1788, the doctrine of the hereditary inherent right of the heir-apparent to the regency, during a contingency not provided for by the Act of Settlement or constitution, and the Tories exerting all their efforts, equally as in the days of Mr Pitt, to negative the heir-apparent's claim *de jure* to the Regency, and to confer it on him by Act of Parliament only, and under such restrictions as to the two Houses of the Legislature might seem expedient. A memorable instance of how much, even in the brightest days of national history, the greatest men in public life are influenced by considerations of interest to themselves or their party, in preference to adherence to the political principles which they profess and of the ease with which the most conscientious intellects are insensibly brought round by the still small voice of private advantage or public ambition.

Reflection But if the merits of the arguments adduced on both sides on this **on the** occasion are considered, without reference to the objects of present **merits of** advantage which either party had at heart, no doubt can be entertained that the Whigs, both in reason and on precedent, had the best of the dispute. Admitting that the constitution, as it at present exists, was originally formed by an exertion of the national will in opposition to or in constraint of the views of the reigning monarch, still no one can doubt that the occasions on which reference is to be made to Parliament to appoint the supreme executive magistrate, are extreme ones, and that recourse is not to be had to that *ultimum remedium* except in cases where no other mode of solving the difficulty and carrying on the government can be discovered. In Mr Burke's words, to act otherwise would be to make the extreme medicine of the constitution its daily bread. An event so little contrary to the ordinary course of events, that it unhappily occurred twice during the life of the same monarch—viz. *the insanity or utter incapacity of the reigning sovereign*,—can hardly be said to be an extreme case, unprovided for by the constitution, which call for a recurrence to first principles, and warrants two branches of the legislature in disposing of the third and the executive magistracy. The right of hereditary succession—the fundamental principle of the monarchy—interferes with to the smallest possible extent at the Revolution, and then recognised *de facto* on the firmest basis, clearly points out the mode of solving the difficulty. The heir-apparent, if of competent age to undertake the government—if not, the party entitled by law to the regency on his minority—is the person to whom the interim duty of conducting the executive devolves, leaving it to Parliament to make what provision they please for the custody of the person of the fatuous monarch.

The picture The result which followed this interesting discussion in both **Regent chosen** Houses of Parliament was such as was little anticipated and which, **shows the** if foreseen, might possibly have inverted the sides which the Ministerial party and Opposition respectively took upon its merits. From **Ministers in power**

Feb. 12.

the connexion which, during his whole life, had subsisted between the Prince of Wales and the Whig party, and the close personal intimacy in which he had long lived with its principal leaders, it was universally expected that his first act, upon being elevated to the office of Prince Regent, would have been to have sent for Lords Grey and Grenville, and intrusted them with the formation of a new administration. In fact, the anticipation of this had, towards the close of the year 1810, sensibly weakened the Ministerial majority in both Houses of Parliament, and, by inspiring Government with the belief that their tenure of office was drawing to a close, and that an opposite system would immediately be embraced by their successors, had impaired in a most serious manner, and at the most important crisis, their efforts for the prosecution of the war. The despatches of Wellington, during the momentous campaign of 1810 and the commencement of 1811, are filled with observations, which, however guarded, show that he felt he was not supported at home as he ought to have been, that Government threw upon him the whole responsibility connected with the continuance of the Peninsular struggle, and were either desponding of success after the disastrous termination of the Austrian war, or deemed exertion and expenditure thrown away, from a secret impression that their ministerial career was nearly at an end, and that all continental resistance would immediately be abandoned by their successors. It was therefore matter of no small surprise to all parties, and perhaps to none more than to the minister to whom it was addressed, when the Prince Regent, immediately upon being invested with the powers of royalty, wrote a letter to Mr Perceval, announcing that he had no intentions of making any change in the Administration, and the speech to Parliament which he immediately afterwards delivered, differed in no respect, either in regard to sentiments or expression, from what might have been anticipated had George the Third still been discharging the functions of royalty (1)

Discontent which this gives to the Whig party Although this communication assigned as the reason, and the *sole* reason, for the Regent continuing the Tories in office, "the irresistible impulse of filial duty and affection to his beloved and afflicted father, which led him to dread that any act on his part might, in the smallest degree, have the effect of interfering with the progress of his sovereign's recovery," yet the determination it contained to continue the present Government in their places, even for a limited period, gave great umbrage to the leaders of the Whig party. They complained that, as he was unrestricted in the choice of his ministers, no sufficient reason existed for the continuance in office of those to whom he had always been politically opposed, and they entertained an apprehension, which the event proved to be not unreasonable, that the habits of official communication with some of the Administration, and the social talents of others, might go far to obliterate that repugnance to the Tory party which the Prince had hitherto evinced. It was generally expected, however, that he would still revert to his earlier friends when the year during which the restrictions imposed by Parliament came to an end, and the opinion was confidently promulgated by those supposed to be most in the Regent's confidence, that February 1812 would see the Whig party entirely and permanently in office (2)

The event, however, again disappointed the hopes entertained by the Opposition. Early in January 1812, the Administration sustained a loss by the resignation of Marquis Wellesley, the foreign secretary, and the reasons for this step were, that the Ministry, of which Mr I

VIII.

(2) Ann. Reg.

negotiations with Lords Grey and Grenville in January 1812, to form a Ministry proved abortive.
 Jan. 14, 1812.
 Feb. 19.

could not be prevailed upon to carry on the war in the Peninsula on such a scale as was either suited to the dignity of the kingdom, or calculated to bring that contest to a successful issue. The Prince Regent, however, earnestly pressed his lordship to retain the seals of office, which he consented to do in the mean time; but when the restrictions expired in February, and still no disposition to make a change of Ministry was evinced, the resignation was again tendered, accompanied by a statement that the new Administration should be formed on an intermediate principle between instant concession to, and perpetual exclusion of, the Catholics, and with the understanding that the war was to be carried on with adequate vigour. This second resignation was accepted; and Lord Castlereagh was appointed foreign secretary in his stead; and in the mean time the Prince Regent, through the medium of the Duke of York, opened a communication with Lords Grey and Grenville, the object of which was to induce them, and some of their friends, to form part of the Government on the principle of mutual concession and an extended basis. It was soon discovered, however, that the differences between the leaders of the Whigs and Tories were insuperable, and the result was that the negotiation came to nothing; and a motion by Lord Boringdon in the House of Peers, for an address to the Prince Regent, praying for the formation of a ministry upon an extended basis, was negatived by a majority of seventy-two. From what transpired in this debate, it was evident that a more vital question than even that of the conduct of the foreign war, now was the obstacle to the formation of a coalition ministry, and that Catholic emancipation, to the ultimate concession of which it was known Lord Wellesley was favourable, was the real point upon which irreconcilable differences existed, both in the Cabinet and between some of its ministers and the throne (1).

Assassination of Mr. Perceval.
 May 11.

A dreadful and unexpected event, however, soon after gave rise to a renewal of the negotiation, and opened the way apparently for the restoration of the Whigs to office, by the destruction of their most formidable and uncompromising opponent. On the 11th May, as Mr. Perceval was entering the lobby of the House of Commons, at a quarter past five o'clock, he was shot through the heart, and immediately afterwards expired. A cry arose, "Where is the villain who fired?" and immediately a man of the name of Bellingham stepped forward, and making no attempt to escape, calmly said, "I am the unfortunate man; my name is Bellingham; it is a private injury; I know what I have done. It was a denial of justice on the part of Government." He was immediately seized, and carried to the bar of the House of Commons, in which assembly, as well as in the Lords, the greatest agitation prevailed when the calamitous event became known; and both Houses immediately adjourned. A message of condolence was shortly after voted to the Prince Regent; and on the 15th, Lord Castlereagh on the part of the Government, proposed, and Mr. Ponsonby, on that of the Opposition, seconded, a vote of £50,000 to the family of the deceased minister, and £2000 a year annuity to his widow. It appeared, to the honour of this disinterested statesman, who had for years directed the exchequer of the most opulent empire in the world, that not only had he taken advantage of none of the means of enriching himself which were in his power, but had not even been enabled to make that moderate provision for his family of twelve children which ordinary men, who have been successful in the legal profes-

sion; generally do. These provisions, to the honour of the Opposition and of human nature be it said, passed the House without a single dissentient voice, though a debate took place upon the subsequent grant of £.5000 a-year to the eldest son of Mr Perceval, after the demise of his mother, which was however, carried by a large majority (1); and a monument to his memory, at the public expense, voted in Westminster Abbey.

Trial and execution of the assassin The trial of the assassin, as the courts were sitting, and no lengthened citation of the prisoner is required by the English law except in cases of high treason, took place on the 15th, four days after the murder. He was found guilty, and executed on the 18th in front of Newgate. His demeanour, both on the scaffold and in prison before his death, was firm, calm, and self-possessed, he engaged in his religious exercises with fervour, but uniformly persisted in denying his guilt, alleging that the death of Mr. Perceval, which he always admitted, was a proper retribution for his neglect of his application for redress of private injuries. An attempt to prove him insane at the trial failed, and indeed his whole demeanour, though it indicated a degree of excitement on the subject of his real or supposed wrongs, which amounted to monomania, was by no means such as to indicate that amount of mental derangement which renders an insane person irresponsible for his actions. It afterwards appeared, from the production of a letter on the subject from Lord Leveson Gower, the British ambassador at St.-Petersburg at the time, in the House of Commons, that, though he had sustained great patrimonial losses in England and Russia, yet they had arisen chiefly from his own intemperate conduct and language, and that his supposed claims for indemnification against the British Government, and their alleged injustice in disregarding them, were entirely visionary. But though, in all probability, the result to the unhappy man would have been the same, and public justice in the end would have required his execution, it must always be regarded with regret, as a stain upon British justice, that the motion made, and earnestly insisted in by his counsel, to have the trial postponed for some days, to obtain evidence from a distance to establish his insanity, was not acceded to, that a judicial proceeding, requiring beyond all others the most calm and deliberate consideration, should have been hurried over with a precipitance which, if not illegal, was at least unusual, and that so glorious an opportunity of exhibiting the triumph of justice over the strongest and most general feelings of resentment, should have been lost from a desire to accelerate, by a few days only, the trial of the criminal (2).

Renewal of the negotiation with the Whigs This tragic event re-opened to the Whigs the path to power, for not only was the most determined opponent of them, and of the Catholic claims, now removed, but a general wish was felt and openly expressed in the nation for the formation of an administration on an extended basis, which, sinking all minor points of dispute, and embracing the leading men of both parties, should combine the whole talent of the nation in one phalanx, for the prosecution of the great contest in which it was engaged. This idea, so natural and apparently feasible to men inexperienced in public affairs—so impracticable to all acquainted with their real character, and the vital questions on which irreconcilable differences exist between equally able and conscientious statesmen—had got at this period such hold of the minds of the people, that repeated motions were made in Parliament, after Mr. Perceval's death, for the formation of a cabinet embracing

(1) Ann Reg. 1812, 75, 79 Parl Deb xxiii. 186, 199.

(2) State Trials, 1812, xvi 341-7 Ann Reg. 1812 Chron. 73, 75, 304, 307

May 10. the leading men of ability in all parties. On the 20th May a motion for an address to the Prince Regent, praying him to construct a cabinet on this principle, brought forward by Mr Stuart Wortley, (now Lord Wharncliffe) and supported by the whole strength of the Whigs, was carried against Ministers by a majority of four, the numbers being 174 to 170. The subject

June 1. was afterwards resumed with extraordinary anxiety, on more than
 — 2. one occasion, in both Houses of Parliament; and in the course of
 — 12. these discussions it transpired, both that the Prince Regent had taken the most decisive steps to carry into effect the wishes of the nation, and that the grand difficulty which obstructed the formation of a united administration was the question of Catholic emancipation. Lord Wellesley first received a commission to form a Government, and when he failed, that arduous duty was intrusted to Lord Molra. Lord Wellesley professed his willingness to take office on the principle of concession to the Irish Romanists, of adequate vigour in the Peninsular war, and of a union of parties in the Cabinet; but this principle the Prince Regent was not inclined to admit, and it was firmly rejected by Lord Liverpool and the Tories in office. and, after some discussion, his royal highness, through Earl Molra, conveyed a wish to Lords Grey and Grenville that they and their friends should form a leading part of the Administration. Conferences took place accordingly the differences about the Catholics of Ireland and the American war were got over every thing appeared on the eve of a satisfactory adjustment, and no obstacles remained to prevent the return of the Whigs to power, on all the principles for which they had so long contended, when the negotiation was suddenly broken off, and the Tories were once more firmly seated in office, by one of those unforeseen and trivial obstacles which so often in the affairs of state derange the calculations of the wisest statesmen, and yet decide the fate of nations (1)

Difficulty respecting the officers of the household or chamberlain's office. In the course of Earl Molra's discussions with Earl Grey and Lord Grenville, which from the first were conducted with the most perfect candour and good faith on both sides, a difficulty occurred as to the appointment of the great officers of the royal household, which had not previously been anticipated, but proved fatal to the whole negotiation, and to which events in subsequent times have given an unlooked-for degree of interest. It had generally, though not always, been the practice for the chief officers of the household to be changed with an alteration of Ministry upon the principle that a Government could not be supposed to possess the royal confidence, and must necessarily be hampered and restricted in its measures, when persons belonging to an opposite and hostile party were in daily, and almost hourly, communication, on the most intimate terms, with the sovereign. The Whig peers in order to prevent such a difficulty arising in a more advanced stage of the Administration stated it as an indispensable condition of their accession to office, that they should enjoy the same privileges in this respect which had been exercised by their predecessors on similar occasions, and this preliminary led to secret conferences, more curious even than what passed at the public negotiations. "Are you prepared," said Lord Molra to the Prince Regent "to concede the appointment of the household to the leaders of the new Administration?" "I am," answered the Prince. "Then" replied the chivalrous nobleman, "not one of your present servants shall be displaced. It is enough for the crown to yield the principle, without submitting also to the indignity of the

removal " To complete the extraordinary chances which traversed this momentous negotiation, Mr Sheridan, to whom Lord Yarmouth, on the part of the lords of the household, intrusted a message stating their readiness to solve the difficulty by resigning, delayed to deliver this message till it was too late, in the hope of securing for his party a triumph over the throne, and Lord Moira, upon the part of the Prince Regent, declined to make any such concession a fundamental condition of the Administration, and thus the negotiation was broken off (1)

JUNE 8

The Prince, irritated at what he deemed an unwarrantable interference with the freedom of choice and personal comforts of the sovereign, and acting under the direction of Lord Moira, who thought he had yielded all that could be required of the crown, immediately appointed Lord Liverpool First Lord of the Treasury All the existing ministers were continued in their places, including Lord Castlereagh in the important one of Minister of Foreign Affairs, and the Tories, lately so near shipwreck, found themselves, from the strong intermixture of personal feeling in the failure of the negotiations which had excluded their rivals, more firmly seated in power than ever. Lord Yarmouth, the highest officer in the household, whose exclusion

JUNE 11

from office was probably the principal object which the Whig leaders had in view, in insisting so much on this condition, afterwards stated in the House of Lords, that both he himself, and also all the other officers in the palace, were prepared to have resigned their offices the moment the arrangements for the formation of a new Ministry were completed; and that all they wished for was, that they themselves, and their sovereign, should be saved the pain of a dismissal (2)

Reflections
on this sub-
ject

In reflecting, with all the lights of subsequent experience, on the singular failure of this important negotiation, it is impossible to doubt that Lords Grey and Grenville were right in the conditions which they so firmly insisted on as a condition of their taking office It is no doubt easy for the satirist to inveigh against the eagerness for patronage, which induces public men, after all questions of policy and principles of government have been adjusted, to break off negotiations merely because they cannot agree upon who is to have the disposal of domestic appointments, and Mr Sheridan had a fair subject for his ridicule, when he said that his friends the Whigs had fairly outdone James II, for he had lost three crowns for a mass, whereas they had lost the government of three kingdoms for three white sticks But all this notwithstanding, it is sufficiently clear that the Whigs, who could not have foreseen the intended resignation of the Tory officers of the household, were right in stipulating for a power, if necessary, to remove them Household appointments, of no small moment even to private individuals, are of vital consequence to kings, and still more to queens The strongest intellect is seldom able to withstand the incessant influence of adverse opinions, delicately and skilfully applied by persons in intimate confidence, and possessing numerous opportunities for successfully impressing them If no man is a hero, still less is he a sage, to his *valet de chambre* It is in vain to say, that the private inclinations of the sovereign are to be consulted in preference to the wishes of his responsible ministers Household appointments in a palace are, in truth, political situations, and must be in harmony with the principles of government which public opinion or external circumstances have rendered necessary for the country To decide otherwise, is to impose upon Ministers

423, and Papers Ibid. App 1 43 and Ann. Règ. 1812, 84, 90.

(2) Lord Yarmouth's speech, Parl. Deb xxiii.

the responsibility of office without its power; and held up one government to the country as regulating its public concerns, while another is in secret directing all its movements.

But the failure of this momentous negotiation suggests another and a still more serious subject of consideration. All the great questions of policy, both in external and internal concerns, had been arranged between the sovereign and the new Ministry. The difficulties of Catholic emancipation, the Peninsular contest, and American concession, had been satisfactorily adjusted, and a vital change in the government and policy of the country on the point of taking place, when it was prevented, and Mr. Pitt's system continued as the ruling principle, by a mere contest about the appointment of three household officers! Yet what mighty interests, not only to Great Britain but the human race, were then at stake and what wondrous changes in the course of events must have ensued, if this seemingly providential difference about the household officers had not arisen! The contest with France, after a duration of nearly twenty years, had at length reached its crisis. The rock of Sisyphus, rolled with such difficulty to the summit of the steep, was about to recoil. The negotiation with the Whigs was broken off on the 6th June. On the 15th of the same month, Wellington crossed the Portuguese frontier, and commenced the campaign of Salamanca (1); while, on the 25d, Napoleon passed the Niemen, and threw his crown and his life on the precarious issue of a Russian invasion (2). The expulsion of the French from the Peninsula, the catastrophe of Moscow, the resurrection of Europe, were on the eve of commencing, when the continued fidelity of England to the cause of freedom hung on the doubtful balance of household appointments!

If a change of Ministry had taken place at that time, the destinies of the world would probably have been changed. The Whigs, fettered by their continued protestations against the war, could not, with any regard to consistency, have prosecuted it with vigour. Their unvarying prophecies of disaster from the Peninsular contest, would have paralysed all the national efforts in support of Wellington; their continued declamations on the necessity of peace, would have led them to embrace the first opportunity of coming to an accommodation with Napoleon. Alexander, mindful of their refusal of succour after the battle of Eylau, would have been shaken in his resolution after the battle of Borodino. Sweden, unsupported by English subsidies, would not have ventured to swerve from the French alliance. The occupation of Moscow would have led to a submission destructive of the liberties of Europe or the retreat, unthreatened, from the north, would have been spared half its horrors. At latest, peace would have been concluded with the French Emperor at Prague. Wellington would have been withdrawn with barren laurels from the Peninsula. Europe yet groaning under the yoke of military power, and the dynasty of Napoleon still upon the throne. In contemplating the intimate connexion of such marvellous results with the apparently trivial question of household appointments in the royal palace of Great Britain the reflecting observer, according to the temper of his mind will indulge in the vein of pleasantry or the sentiment of thankfulness. The disciples of Voltaire recollecting how a similar court intrigue arrested the course of Marlborough's victories in one age, and prolonged the popular rule in Great Britain in another, will inveigh against the subjection of human affairs to the direction of chance the caprice of sovereigns, or the arts of courtiers; while the Christian philosopher, impressed with the direc-

tion of all earthly things by an Almighty hand, will discern in these apparently trivial events the unobserved springs of Supreme intelligence; and conclude, that as much as royal partialities may be the unconscious instruments of reward to an upright and strenuous, they may be the ministers of retribution to a selfish and corrupted age.

Character of George the Fourth George IV, who, probably from personal rather than public considerations, was led to take this important step in the outset of his government, had the good fortune to wield the sceptre of Great Britain during the most glorious reign in its long and memorable annals; and yet no sovereign ever owed so little to his own individual wisdom or exertions. The triumphs which have rendered his age immortal were prepared by other hands, and matured in a severer discipline. It was his good fortune to succeed to the throne at a time when the seeds sown by the wisdom of preceding statesmen, the valour of former warriors, and the steadiness of the last monarch, were beginning to come to maturity, and thus he reaped the harvest prepared, in great part, by the labours of others. Yet justice must assign him a considerable place in the august temple of glory constructed during his reign: if the foundation had been laid, and the structure was far advanced, when he was called to its direction, he had the merit of putting the last hand to the immortal fabric. To the vast and unprecedented exertions made by Great Britain towards the close of the contest, he gave his cordial concurrence, he resisted the seducing offers of peace, when they could have led only to an armed neutrality; and, by his steady adherence to the principles of the Grand Alliance, contributed in no slight degree to keep together its discordant elements, when they were ready to fall to pieces, amidst the occasional disasters and frequent jealousies of the last years of the war. The unprecedented triumphs with which it concluded, and the profound peace which has since followed, left little room for external exploits during the remainder of his reign, and the monarch was of too indolent a disposition, and too limited a range of intellectual vision, to influence those momentous internal changes which ensued, or take any part either in advancing or retarding the vast revolution of general thought which succeeded to the excitement and animation of the war. Yet history must at least award to him the negative merit of having done nothing to accelerate the changes which grew up with such extraordinary rapidity during that period, so fertile in intellectual innovation, of having been the last man in his dominions who assented to that momentous change in their religious institutions, which first loosened the solid fabric of the British empire, and of having left to his successors the constitution in state, at a period when it was seriously menaced by domestic distress and general delusion, unimpaired either by tyrannic encroachments or democratic innovations.

His private disposition and character

If, from the comparatively blameless and glorious picture of George IV's public administration, we turn to the details of his private life, and the features of his individual character, we shall find less to approve and more to condemn. Yet even there some alleviating circumstances may be found, and the British nation, in the calamities which hereafter may ensue from the failure of the direct line of succession, can discern only the natural result of the restrictions, equally impolitic and unjust, which it has imposed, in their dearest concerns, on the feelings of its sovereigns. His talents were of no ordinary kind, and superior to those of any of his family. It is impossible to see the busts of the sons of George III in Chantilly being at once convinced that the Prince of Wales has

ery,

head of the group (1) His tastes were cultivated he had a high admiration for the great works of painting his ear in music was exquisite, and although his passion in architecture was rather for the splendour of internal decoration than the majesty of external effect; yet the stately halls of Windsor will long remain an enduring monument of his patronage of art in its highest branches The jealousy which generally exists between the ruling sovereign and the heir-apparent, early brought him into close connexion with the leaders of the Whig party; and, for nearly fifteen years, Carlton House was the grand rendezvous of all the statesmen, wits, and beauties, whom jealousy of the reigning power had thrown into the arms of the Opposition. This circumstance had a material influence on his future character Accustomed from his earliest youth to the society, not merely of the most elegant but the most intellectual men of his age the companion not less than the friend of Burke and Fox; of Grey and Sheridan, he soon acquired that skill and delicacy in conversation which such intercourse alone can communicate, and shone with the reflected light which so often, in those habituated to such society, dazzles the inexperienced beholder, and supplies, at least during the hours of social intercourse, the want of original thought or solid acquisitions Yet his talents were not entirely imbibed from the brilliant circle by which he was surrounded His perceptions were quick; his abilities, when fairly roused either by the animation of conversation or the lustre of external events, considerable and many of his holograph letters are a model of occasional felicity both in thought and expression (2) His features were handsome; his figure, in youth, graceful and commanding and both then and when it was injured in maturer years by the hereditary corpulence of his family, his manners were so perfectly finished, that he was universally admitted to deserve the title which he acquired, of the First Gentleman in Europe

But with these, no inconsiderable qualities it is true in a sovereign, the meed of praise due to his memory is exhausted, and there remains nothing but to do justice to the faults, and draw no screen over the many frailties of his character Thrown from the outset of life into the vortex of dissipation, without the necessity for exertion, which, in an humbler rank, or on a more arbitrary throne, so often counteracts its pernicious effects, he soon became an ardent votary of pleasure; and without descending to the degrading habits to which that propensity often leads, he only rendered its sway on this account the more tyrannical and destructive to his character Profuse, extravagant, and unreflecting, he not only was, throughout his whole life before he mounted the throne, drowned in debt, but the systematic pursuit of refined enjoyment involved him in many discreditable and unfeeling, some dishonourable, acts. Dissipation and profligacy in youth, indeed, are so usual in princes, and arise so readily from the society with which they are surrounded, that they are to such persons peculiarly difficult

(1) This is decisively established by the testimony of no ordinary observer and certainly no partial judge It may give you pleasure," said Lord Byron to Sir Walter Scott, "to hear that the Prince Regent" saluted me you to me was conveyed in language which would only suffer by my translating to I describe it; and with a tone and taste which gave me a very high idea of his abilities and accomplishments, which I had hitherto considered as confined to powers, certainly superior to those of any I ever knew."—*See the letter he was received, July 6 1812. Letters of Scott* to 402

(2) The following holograph note from the Prince

Replied to the Duke of Wellington accompanied the appointment of the latter as Field Marshal See the battle of Vittoria—Your glorious conduct is above all human praise, and for aye my reward I know no language the world could possibly express to me I feel it a nothing left to say but devoutly to offer up my prayer of gratitude to Providence, that it has, in its own patent bounty, blessed my country and myself with such great You have read me among the trophies of your great all from the all of French marshals, and I send you in return that of England.—The Prince to Wellington, 21 July 1813—*Letters* to 533.

of resistance, but the passions of George IV, fretting against the unjust restrictions of the Marriage Act, led him into delinquencies of a more serious kind. His conduct towards Queen Caroline, whatever the demerits of that princess may have been, was unpardonable, for it began to be unjust before those demerits could have been known, and continued to be unfeeling after misfortune had expiated them by suffering, and if it be true, as is generally believed, that he gained possession of the person of a most amiable and superior woman, Mrs Fitzherbert, by a fictitious or elusory marriage ceremony, and afterwards made, as he certainly did, his friends in Parliament deny its existence, and subsequently deserted her, he was guilty of an act which passion cannot extenuate and royalty should not excuse. The last days of this fortunate monarch and systematic voluptuary were chiefly spent at Windsor, in the seclusion of elegant society, intermingled with the brilliancy of conversational talent, and if its noble halls were the scene of meretricious ascendant, at least they were not disgraced by open profligacy. Decency and seclusion threw a veil over irregular connexions, and justice must admit that subjection to female charms was in his case more than usually pardonable, from the unjust laws which had deprived him of a free choice in virtuous attachments, and the calamitous union which had denied him the blessings of domestic and filial love.

Character of Lord Liverpool It is a singular circumstance, that the statesman who with his sovereign was thus elevated to the helm at a crisis of unexampled difficulty, and when the national prospects were to all appearance gloomy in the extreme, was almost from the moment of his elevation borne forward on an uninterrupted flood of success, and that, though inferior in capacity to many of the great characters who had preceded him in the struggle, he exceeded them all in the felicity of his career, and the glorious events which, under his administration, were so deeply engraved on the monuments of history. Much of this extraordinary prosperity is doubtless to be ascribed to his singular good fortune. He had the almost unprecedented felicity of being called to the highest place in government at the very time when the tide, which is ever discernible in the affairs of men, was beginning to turn, when the stream-flow of Napoléon's triumphs was turning into ebb, and when the constancy of Britain, long conspicuous in adverse, was to be rewarded by the gales of prosperous fortune. Like his royal master George IV, he thus reaped, with little exertion of his own, the fruits of the seed sown by the efforts of others; and was called, during his long ministry, rather to moderate the vicés consequent on excessive prosperity, than to sustain the national spirit under the trials of long-continued and searching adversity.

His merits and public services Justice, however, must assign to Lord Liverpool, if not the highest, at least a considerable place among the great men who threw such imperishable glory over the annals of Britain during the latter period of the war. His capacity could not have been the least, who stood foremost in rank through those memorable years, granting to Alexander, Wellington, and Castlereagh, the merit of having been the main instruments in the deliverance of Europe, the British premier may at least justly lay claim to the subordinate but important merit of having strenuously supported their efforts, and furnished them with the means of achieving such important triumphs. His judgment in counsel, temper in debate, and conciliation in policy, seconded admirably their heroic efforts. The resources brought upon the fortunes of Europe at the close of the war, and employed since the beginning of the world, and if the success of them at his disposal, no small wisdom and skill were

which he made of them. Notwithstanding all their successes, the allied sovereigns were sometimes, from the jealousies and separate interests inherent in so vast a coalition, exposed to serious divisions; and on these occasions the judgment and prudence of Lord Liverpool were of the highest service to the common cause. He could not be called a powerful debater, and his speeches made little impression at the time on either House of Parliament; but they abounded in matter and sound argument, and few afford, on a retrospect, a more luminous view of the principles which swayed the Government at many of the most important periods of the war. His private life was irreproachable, his domestic habits pure and amiable; and, like all the great statesmen of that heroic period, he long held the highest offices, and disposed of uncounted wealth, without a spot upon his integrity, or having conferred a more than moderate share of patronage on his connexions.

*His weak-
ness and
virtue.* He held a respectable place, however, in the second class of states-
men only, and did not belong to the master-spirits of mankind.

He had not sufficient vigour of character, or reliance on his own judgment, to take a decided line in any arduous crisis. His maxim always was to temporize and avoid difficulties, rather than brave the danger in the outset. Under a calm and dignified deportment, and the most unruffled suavity in debate, he concealed an anxiety of temper and dread of responsibility, which appeared conspicuous at the council board, and rendered him unfit to hold the helm in any period of real danger. He had neither the ardour of genius, nor the strength of intellect, nor the heroism of valour in his character. Clear-sighted as to immediate, his vision was defective as to remoter dangers. Judicious and prudent in counsel in ordinary times, he was a dangerous adviser in cases of difficulty, and exercised a ruinous influence on the ultimate fortunes of his country. He was mainly instrumental in introducing after the close of the war, that seductive policy which purchases present popularity by sacrificing future resources, and wins the applause of the existing multitude by risking the censure of the thinking in every future age. The popularity, accordingly, of his government, during the fifteen years that he remained Prime Minister, was unprecedented: opposition seemed to have disappeared in Parliament, as it was thought to have expired in the country. But, amidst all these seductive appearances, the elements of future discord were preparing: the Sinking Fund was fatally encroached upon, amidst the general applause of the unthinking multitude; indirect taxes, the pillar of public credit, were repealed to an unnecessary and ruinous extent; a vast and uncalculated monetary change spread unheard-of discontent through the industrious classes; the people were habituated to the pernicious flattery that their voice is wisdom, and must be obeyed; and out of the calm which was thought to be perpetual, arose the tornado which changed the constitution.

*Restoration
of the Duke
of York to
the com-
mand of the
army May
23, 1811.* The year 1811 beheld the extinction of the absurd and exaggerated discontent against the Duke of York, which, for faction's purposes, had been raised two years before. Colonel Wardle, the principal agent in producing the clamour, had long since returned to obscurity; the want of the Duke's long acquaintance with the business of the Horse Guards, and active zeal for the interests of the army, had long been severely felt; and, on the 23d May 1811, after somewhat more than two years spent in a private station, he was again, with the general concurrence of the nation, and the universal approbation of the army, reinstated in his office of commander-in-chief, which he held during the whole remainder of the war. The subject was brought forward by Lord Milton in Parliament shortly after it occurred; but the result only tended to demonstrate, in the most decisive

House, and strongly contended, though in vain, that Parliament had no legal power to punish a person of their own authority for an offence cognizable in the ordinary courts of justice, even though it did contain a libel on their proceedings, and that the warrant of commitment was illegal and a breach of the liberties of the subject. The House overruled these arguments by a majority of 155 to 14. Upon this Sir Francis published a letter to his constituents in *Cobbett's Weekly Register* which, among other passages of strong invective, declared that the real question was, "Whether our liberty be still to be secured to us by the laws of our forefathers, or to lie at the absolute mercy of a part of our fellow-subjects, collected together by means which it is not necessary for me to describe. They have become by burgage tenure, the proprietors of the whole legislature, and in that capacity, inflated with their highflown and fanciful ideas of majesty, they assume the sword of prerogative, and lord it equally over the king and people (1)." (1) 1

The House of Commons, upon this letter being brought before them, passed a resolution, by a majority of 100 to 42, that Sir Francis be committed to the Tower. Great doubts were entertained in the first instance by the Speaker, whether his warrant, which

was immediately issued, would authorize the breaking open of Sir Francis's house, which was barricaded, and where he remained without moving out. The Attorney-General, (Sir T. Gibbs,) however, gave it as his opinion that entry might be made good by force, if it could not otherwise be obtained; and the Sergeant-at-Arms accordingly, on the day following, forced his way in by the aid of a police force, supported on the outside by the military. Sir Francis was found in his library, surrounded by his family, and employed in making his son translate *Magna Charta*. Having made such a show of resistance as to demonstrate that he yielded to compulsion, he was conveyed under a military escort to the Tower, where he remained a prisoner till the close of the session of Parliament. Serious riots occurred, and some lives were lost on the evening of the day on which the imprisonment took place, chiefly in consequence of an erroneous report which was spread that the

Tower guns had fired upon the people. Sir Francis afterwards wrote an intemperate letter to the Speaker on the alleged illegality of the proceeding, which, however, the House had the good sense, having exhausted their powers of chastisement, to pass over without further notice. Meanwhile, the imprisoned baronet received a great variety of addresses from various popular assemblies in the kingdom, and the House of Commons was deluged with petitions for his liberation but they continued firm and Sir Francis remained in confinement till the prorogation of Parliament, when the power of the assembly which committed him having ceased, he was of course liberated. Great preparations for his triumphal procession through the city to his residence in Piccadilly, were made by the populace, and serious apprehensions of disturbances were entertained but he had the good sense or humanity not to bring his partisans into the risk which such a demonstration would have occasioned, by returning privately to his home by water. He afterwards brought actions at law against the Speaker of the House of Commons, for damages on account of illegal seizure house-breaking and imprisonment; and against Lord Mordaunt, the Governor of the Tower for unwarrantable detention; and the case was argued with the greatest ability by the Attorney-General on the one side and Sergeant (afterwards Mr Justice) Holroyd on the other. The Court of King's Bench (2), however, sustained the

(1) *Ann. Reg.* 1810, 72, 79.

causes contributed to produced this distressing result; but among them the least influence is to be imputed to the Continental System of Napoleon, to which his panegyrists are willing to ascribe the whole. The real causes were very different; and either arose necessarily from the progress of society, or might have been easily avoided by a more prudent policy on the part of the British merchants and Government. Machinery at that period had taken one of its great starts in the application of its powers to manufacturing industry. The mule and the spinning-jenny the vast improvements of Arkwright and Cartwright, had been added to the immortal discovery of Watt and the operative classes, in great part deprived of their employment by the change, brooded in sullen exasperation at innovations which they regarded, not without some show of reason, as destructive of the subsistence of themselves and their families. The vast export trade, which had risen to the unprecedented amount of nearly £47,000,000 sterling in the year 1800, in consequence of the withdrawal of the French coast-guard from northern Germany, to restore the fortunes of the empire on the Danube, had engendered a spirit of speculation which regarded the exports to continental Europe as unbounded, and terminated in a cruel reverse, from the confiscation of a fleet of above three hundred merchantmen, having on board goods to an immense amount, in the Baltic, in November 1810, by order of the Emperor of Russia. But, above all, the natural irritation of the American Government at the unbounded vexations to which they were exposed by both the belligerent powers from the operation of the Berlin and Milan decrees, and the Orders in Council, had produced, on the part of the Government of the United States the Non-Inter-course Act in February 1811, whereby all commercial connexion both with France and England, was terminated, and the vast market of the United States, worth all other foreign markets put together, which took off British manufactures to the amount of above thirteen millions sterling, was entirely lost. To complete the causes of general distress which then pressed upon the nation, the harvests of 1810 and 1811 were so deficient, that in the last of these years the importation amounted to 1,471 000 quarters, to purchase which the enormous sum of £4,271 000, chiefly in specie, was drained out of the country (1). These causes, joined to the excessive drain of specie arising from the vast expenditure and boundless necessities of the war, both in Germany and the Peninsula, in the year 1809, produced a very great degree of commercial distress through the whole of 1811; and the reality of the defalcation, and the alarming decline in the market for our manufacturing industry, appeared in the most decisive manner from the returns of exports, which sunk in that year to twenty-eight millions, being fifteen millions less than they had been in the preceding year, and much lower than they had sunk since the renewal of the war (2).

So general and pressing was the public distress, and so over-whelmed by the public distress, in particular, the embarrassments in which the commercial classes were involved, that Parliament, in spring 1811, with great

tion to the 1st January 1814, was passed into a law, rendering the breaking of frames a capital offence, and with such energy was this law carried into operation, that no less than seventeen men were condemned to death, and executed in the court-yard of the castle of York, at one time, for crimes connected with these disturbances. This dreadful but necessary example had the effect of stopping these dangerous riots, which, like other undisguised inroads on life and property, however formidable in the vicinity where they occur, are never dangerous in a national point of view, if not aided by the pusillanimity or infatuation of the middle and higher ranks; and, before the end of the year, all disposition even to these excesses died away under the cheering influence of the extended market for manufacturing industry, which arose from the opening of the Baltic harbours, and the animating events of the Russian campaign (1).

Character of Sir Samuel Romilly Among the senators in the Opposition ranks who distinguished themselves by their resistance to this increase, even for a limited period, of the number of capital offences in English law, and who devoted the energies of a powerful mind and the warmth of a benevolent heart, to the end of his life, to effect a reduction in its sanguinary enactments, was **SIR SAMUEL ROMILLY**. This great lawyer, and truly estimable statesman, was of French descent but his parents had settled in London, where his father carried on business as a jeweller and he had the merit of raising himself, by his unaided exertions, from the respectable but comparatively humble sphere in which they moved, to the most exalted station and society. He was called to the bar in 1783 and it was impossible that his perseverance and logical precision of argument could have failed of raising him to eminence in that profession, where talent in the end never fails to overbear all competition; and he was highly distinguished, and in great practice in Chancery, before he was heard of beyond the legal circles of the metropolis. His reputation, however, at length procured for him more elevated destinies. In 1806 he was made solicitor-general by Mr Fox, and elevated to the rank of knighthood and at the same time he took his seat in Parliament as one of the members for Queensborough, thus adding another to the long array of illustrious men, on both sides of politics, who have been ushered into public life through the portals of the nomination boroughs, which the Reform Bill has now for ever closed. He took an active part in many of the most important debates which subsequently occurred in Parliament, particularly those on the slave trade, the regency, and Catholic emancipation and he had already attempted, and in part effected, a great improvement in the law of bankruptcy (2), when his attention was attracted by the state of the criminal law, to the amelioration of which, during the remainder of his parliamentary career, his efforts were chiefly directed (3).

His political principles were those of the Whig party but he was alike free, by character and professional success, from factious ambition; and the improvement of the human race was the object for which his philanthropic heart beat to the latest hour of existence. Exemplary and affectionate in the relations of private life, he contrived, in the midst of all the labours and anxieties consequent on his legal and parliamentary career, to find time for domestic society. The seventh day of rest was never broken in upon by his labours and when making twelve thousand a-year at the bar and actively discharging his duties in the House of Commons, he contrived to keep up

his acquaintance with all the literature of the day, as well as the studies of his earlier years (1), a fact which, however inexplicable to those who are unaccustomed to such exertions, is verified by every day's experience of those who are, and which arises from the circumstance, that to the mind trained to intellectual toil, recreation arises rather from change of employment, or a new direction to thought, than entire cessation from labour.

Condition of English criminal law at this period. The condition of the English criminal law at this period was, indeed, such as to call for the serious attention of every real friend to his country and mankind. Political power having for a long, almost immemorial period, been really vested in the wealthier classes, either of the landed or commercial orders, penal legislation had been mainly directed to the punishment of the crimes which had been found by experience to be dangerous to their possessions, and had, in consequence, been founded on no principle, and regulated by no justice. Every interest in the state, during the course of several centuries, had by turns enjoyed influence sufficient to procure the passing of laws denouncing capital punishments against the perpetrators of crimes peculiarly hostile to its own property; and these successive additions to the penal code were silently acquiesced in by all other classes, upon the understanding that a similar protection would be extended to them when circumstances seemed to render it necessary. Thus the landholders, whose influence had so long been predominant in the Chapel of St.-Stephen's, had obtained a huge addition to the catalogue of capital punishments for offences trenching on their freeholds. The trading classes had been equally diligent in having the punishment of death affixed to theft from the person, within shops, or from warehouses or manufactories. Shipmasters and merchants had done the same for the protection of their interests, and so strongly were the dangers of forgery felt in a mercantile community, that it had come to pass into a sort of axiom, which obtained assent, that nothing but that terrible sanction could preserve from fearful invasion the rights of the great body of traders throughout the empire.

Results which had arisen from its neglect The result of this separate and selfish system of legislation had come to be, that, in 1809, when Sir Samuel Romilly set about the reformation of this blood-stained code, the punishment of death was by statute affixed to above six hundred different crimes, while the increasing humanity of the age had induced so wide a departure from the strict letter of the law, that out of eighteen hundred and seventy-two persons capitally convicted at the Old Bailey in seven years, from 1805 to 1810, only one had been executed. All those concerned in the prosecution of offences, combined their efforts to mitigate in practice its sanguinary enactments. Individuals injured declined to give information or prosecute, unless in cases of serious injury, or when their passions were strongly roused, witnesses hung back from giving explicit evidence at the trials, lest their consciences should be haunted by the recollection of what they deemed, often not without reason, as little better than judicial murder, jurymen made light of their oaths, and introduced a most distressing uncertainty into the result of criminal prosecutions, and even judges often caught at the evanescent distinctions which the acuteness of lawyers had made between offences, and willingly admitted the subtleties which were to save the offender's life. The consequence was, that not more than two thirds of the persons committed for trial were convicted, the remainder, after contracting the whole contagion of a prison, were let loose upon the world, matured in all the habits of im-

(1) Personal knowledge.

quilty and the depraved criminals, seeing so many chances of escape, before and after apprehension, ceased to have any serious fears for the uncertain penalties of criminal justice (1)

Principles
law which
Sir Samuel
Romilly and
Sir James
Mackintosh
contended.

The principles, on the other hand, for which Sir Samuel Romilly, and, after his lamented death in 1818, Sir James Mackintosh contended, were, that the essential quality of criminal law, without which all its provisions would be of little avail, was *certainly* that, to attain this, the cordial co-operation of all classes of society, as well as the activity of the constable and the diligence of the prosecutor, was requisite; that this co-operation could never be secured, unless the punishments affixed by law to offences were such as to offer no violence to the feelings of justice which are found in every bosom and that these feelings would never have been implanted so strongly as they are in the human heart, if the interests of society had required their perpetual violation. These principles, which require only to be stated to command the cordial assent of every intelligent mind, have since been fully carried into effect in every part of Great Britain; the penalty of death has come to be practically abolished for almost every offence except murder and secondary punishments have been apportioned out, as accurately as the vast simultaneous growth of crime rendered practicable, to the real merits of the offences to which they were affixed. If the result has hitherto exhibited no diminution, but on the contrary been coexistent with a vast increase in the sum-total of delinquencies, it has at least produced a most gratifying decrease in the more atrocious and violent offences; a much greater degree of certainty has been introduced into criminal proceedings; and in Scotland, in particular, where the system of penal jurisprudence has long been established on a far better footing than in England, the certainty of punishment to the guilty, and of acquittal to the innocent, has attained a height unparalleled in any other age or country of the globe (2). With the diminution of its sanguinary enactments however, the English criminal law has felt the difficulty of secondary penalties; the multitude of convicts who required transportation, has caused the evils and sufferings of the penal settlements to increase in an alarming degree; and society at home, overburdened with a flood of juvenile delinquency, has long laboured under the evils of inadequate jail accommodation, for which all the efforts of philanthropy, and all the improvements of prison discipline, have hitherto proved an inadequate remedy.

Important in their ultimate effects as were these beginnings of interior reformation, of which society, from the important changes which it underwent during the progress of the war, stood so much in need, they yet yielded, in the magnitude of their present consequences, to the three great subjects of internal debate in Parliament and the nation, during the years 1811

and 1812, viz. the Question of the Currency, the Repeal of the orders in Council, and the Prosecution of the War in the Peninsula

Review of the measures of Mr Pitt, connected with the currency It has been already noticed (4) how Mr Pitt, driven by hard necessity, had adopted the momentous step of suspending cash payments in February 1797, and that, after more than one temporary act had been passed, postponing the period for their resumption, it was at length enacted, by the 44 Geo. III c 1, that the restriction in favour of the Bank should continue till six months after the conclusion of a general peace Allusion has also been more than once made to the prodigious effect which this unavoidable measure had in raising prices and vivifying industry during the war (2); and no one can doubt that it was in the great extension of the currency, which took place from 1797 to 1810, that the resources were mainly found, which provided both for the long-continued efforts with which it was attended, and the gigantic expenditure of its later years Now that the true principles which regulate this important subject have, from long and dear-bought experience, come to be so well understood, it may readily be conceived how the increase of the Bank issues, from eleven millions in spring 1797 to twenty-one millions in 1810, and twenty-seven millions in 1815, must have tended both to alter the prices of commodities of all sorts throughout the empire, and to induce the extraordinary and unprecedented vigour which was conspicuous during all that period, both in our foreign commerce and internal industry, and which supported the vast and long-continued national efforts (5)

Monetary changes during 1809 and 1810 In the course of the years 1809 and 1810, however, the combinations of a variety of causes produced an extraordinary demand for an enlarged currency for domestic transactions, at the very time that the whole gold, and great part of the silver specie of the country, were drained off for the purposes of foreign warfare. The prodigious increase in the exports and imports during these years, in consequence of the opening of the German harbours in the former, and of the smuggled trade to the Bal-

tic in the latter, which has been already noticed (1), necessarily required an extended circulation; and the influence of that demand speedily appeared in the enlarged issue of bank notes, as well as the extraordinary increase in commercial paper discounted at the Bank of England for the whole of that period the former of which, from fourteen millions in 1808, had risen to twenty-three millions in the beginning of 1811 while the latter, during the same time, had advanced from thirteen to twenty millions. Yet such was the scarcity of specie in Great Britain during these years, in consequence of the absorbing demand which the Austrian and Spanish wars occasioned for the precious metals, that the bullion coined at the Bank during both put together, was little more than six hundred thousand pounds. The immense drain of specie to the Peninsula, to meet the expenses of the war, had gone on progressively increasing, until, in the end of 1810 it had risen to the enormous amount of £420,000 a-month, or £3,010,000 a-year. The money thus required could be transmitted only in coin or bullion, as English paper would not pass in the interior of Spain; and, although Government made the most strenuous exertions to collect specie for the service of the army, yet they could not by all their efforts obtain it in sufficient quantities; and such as they could get was transmitted at a loss, from the exchanges, of nearly thirty per cent. The demand for specie on the Continent, during and before the Austrian war, had been such, that gold had almost entirely disappeared from circulation, both in France and Germany and even silver could hardly be procured in sufficient quantities to meet the ordinary necessities either of Government or the people (2).

This singular and anomalous state of matters naturally and strongly roused the attention at once of Government, the commercial classes, and all thinking men in Great Britain at this period. The simultaneous occurrence of a vast increase of foreign trade and domestic industry, with a proportional augmentation of the paper currency, and the total disappearance of specie of every kind from circulation, was a phenomenon so extraordinary, that it attracted, as well it might, the anxious attention of the Legislature. A committee was appointed to enquire into and report on the subject, in the Session of 1810; and it embraced many of the ablest men, on both sides of politics, who then sat in Parliament. Mr. HORNER, whose premature and lamented death, some years afterwards, alone prevented him from rising to the highest eminence on the Opposition side, was the chairman and took the leading share in the preparation of the memorable report which the committee prepared on the subject. But Mr. Canning and Mr. HENKISSON were also among its members; and in the intimate connexion which took place between these eminent men on both sides of politics, during the long and arduous examinations of evidence in the course of their investigations, is to be found the first appearance and unobserved spring of an element in the financial and commercial policy of Great Britain, attended with consequences of unbounded importance in the future history of the British empire. The opinions of the majority of the Committee were embodied in certain resolutions, moved by Mr. Horner, its chairman, which were strenuously supported by the whole Whig party; while those of the minority which were entertained also by Government, were embraced in counter resolutions, brought forward by Mr. Vansittart, and backed by all the strength of the Administration (3).

Arguments In favour of the Bullion Report by Mr Horner and Mr Huskisson On the part of the Opposition, it was urged by Mr. Huskisson, Mr Horner, and, with one exception (1), by Mr Canning —“ The facts on which the present question hinges are sufficiently ascertained, and cannot be disputed on the other side. It appears, from the evidence which was laid before the Committee that, under the existing laws in force anterior to the period of the Bank restriction, no contract or undertaking could be legally satisfied, unless the coin rendered in payment shall weigh in the proportion of $\frac{22}{27}$ parts of 5 pennyweights, 8 grams of standard gold, for each pound sterling, nor in silver coin for any sum exceeding L 25, unless such coin shall weigh in the proportion of $\frac{22}{27}$ parts of a pound troy of standard silver for each pound sterling. When it was enacted by the authority of Parliament in 1797, that the payment of the promissory-notes of the Bank of England should be suspended, it was not the intention of the Legislature that any alteration should take place in the value of such promissory-notes, but it now appears that the actual value of the promissory-notes of the Bank of England, measuring such value by weight of standard gold and silver, has, for a considerable period, been much less than what is established by law as the legal tender in payment of any money contract; that the fall which has thus taken place in the value of Bank of England notes, has been occasioned by a too redundant issue of paper currency both by the Bank of England and the country banks, and that the excess has originated in the want of that check on the issues of the Bank of England, which existed before the suspension of cash payments

“ The exchanges with foreign countries have, for a considerable period, been unfavourable to this country in the highest degree. But although the adverse circumstances of our trade, and the large amount of our military expenditure abroad, may have contributed to turn our exchanges with the continent of Europe against us, yet the extraordinary degree in which they have been depressed for so long a period, can have arisen only from the depreciation which has arisen in the relative value of the currency, as compared with the money of foreign countries. The only way of guarding against these manifold dangers, is by a vigilant watch being kept up by the Bank of England on the foreign exchanges, as well as the price of bullion, with a view to regulate the amount of its issues. But the only certain mode of providing against an excess of paper currency, is by establishing by law the legal convertibility upon demand of all such currency into the lawful coin of the realm. It may not be expedient to make such a change suddenly, but it must be done ere long, and two years appears to be a reasonable time within which the alteration may with safety be effected, instead of the period of six months after the ratification of a definite treaty of peace, which is established at present by law

“ The necessity of having recourse to such a measure is obvious. A pound of gold, and L 46 14 6 being equal to each other, and in fact the same thing under different names, any circulating medium which purports to represent that amount of silver ought by law to be exchangeable at will for a pound of gold. But under the operation of the Bank Restriction Act, a pound of gold

(1) Mr Canning, in general, coincided with the whole views of Mr Huskisson and the majority of the Bullion Committee, and he supported their principles in a speech of uncommon power and singularly lucid argument. But he dissented from them upon one very material practical point, viz the period which it was expedient Parliament should fix for the resumption of cash payments. The Committee reported in favour of an uncondi-

tional resumption in two years from the time of the debate, (May 1811,) and Mr Huskisson and Mr Horner strenuously contended for that period, but Mr Canning deprecated so sudden a return to a cash standard during the continuance of hostilities, and in lieu of it should take place. The term of six years it stood at. Deb xix 114

has now come to be equivalent to L.50 in paper currency. The difference, therefore, between L.50 and L.46 14 6, or L.9 8 6, is the measure of the depreciation of the currency, or the amount which every creditor in an old obligation, dated prior to the year 1707, to the extent of L.50, loses if his debtor now pays up his debt in the paper currency—that is to say, every creditor of that standing loses just a fifth by the present state of matters. It would be monstrous to imagine that so gross an injustice ever was intended by Parliament when they established as a temporary measure, and under the pressure of unavoidable necessity, the currency of Bank paper as a legal tender. What could have been the consistency of the legislature, which, leaving unrepealed and unmodified the regulations which take away the character of a legal tender from every guinea weighing less than the legal standard of 5 dwts. 8 grains, should give it to a bank note, purporting to be of the same denomination, but the real value of which at this moment is only 4 dwts. 14 grains, or in other words, about three shillings *less* than the lightest guinea which is allowed to pass in payment? Yet this is precisely what the Act of 1707 has now come in practice to produce, and the question is whether this anomalous and unjust state of matters can be allowed to continue? To sell or to buy guineas at a higher rate than 21s. each, in bank paper is an offence at present punishable by fine and imprisonment; but though the penalties attach to the unhappy holder of a heavy guinea, the fortunate possessor of a *light* one is entitled by law to sell it for what it will bring, which is about 21s. 3d. Can there be a more absurd state of matters, or one more directly operating as a bounty on clipping, defacing and melting down the coin; and need it be wondered at, if, with such temptations held out by the operation of law to the commission of these offences, the gold coin has entirely disappeared from circulation?

“By the common consent of mankind in all civilized countries the precious metals have been received as the fittest standard for measuring the value of all other commodities, and are employed as the universal equivalent for effecting their exchange. Gold in this country, as silver is in *Hamburg*, is really and exclusively the fixed measure of the rising and the falling of all other commodities in reference to each other. The article itself which forms this standard, never can rise or fall in value with reference to this measure—that is, with reference to itself. A pound weight of gold never can be worth a pound and a quarter of gold. A bank note, on the other hand is not a commodity—it is only an engagement for the payment of a certain specified quantity of money. It cannot vary its value in exchange for any commodity, except in reference to the increase or diminution of such commodity in gold. Gold, therefore, is the test by which the value of bank notes must be tried, and if a bank note, as stated by the witnesses in the evidence, instead of being worth the standard value of 5 dwts. 3 grains of gold, is only worth 4 dwts. 8 grains—it is really worth only the latter amount of gold in exchange for any other commodity. A general increase of prices therefore, is not an indication of the depreciation of its currency. Such an effect may be produced by many other causes, as for example, an increase in the supply of the precious metals, but every considerable or durable increase in the price of the precious metals, which form the basis of a currency, cannot be ascribed to any thing but the depreciation of such currency even if the price of all other commodities were to be falling at the same time.

“Depreciation of a currency may be produced either by the standard coin containing less of the precious metal which forms that standard, than it is certified by law to contain, or by an excess in the amount of that currency

The first effect took place to a great extent in the reign of William III, when the quantity of precious metals in the current coin was about thirty *per cent* less than it was certified to contain. To that evil a remedy was applied by the re-coinage in 1773, and since that time this evil has not been felt in this country. The existing depreciation, therefore, must be occasioned by excess. Such depreciation cannot exist for any length of time in any country, unless its currency consists partly of paper, partly of the precious metals. If the coin itself be undepreciated but nevertheless the currency is so, which is the present case, that can arise only from an excess in the paper circulating at par with the coin. The necessary effect of such a state of things is, that gold will be sent abroad to the better markets which are there to be found. And the only possible way of applying a remedy to this evil is to compel the Bank to pay in gold, and give the market price for guineas. By so doing, indeed, you will at first subject that establishment to a loss equal to the difference between the market and the mint price of that metal; but the effect of this will be in the end, to force it to contract its issues, and restore the value of the currency, and, till that is done, whatever it gains by avoiding this liability, is just so much lost to the holders of its notes (1)."

On the other hand it was maintained by Mr. Vansittart, Lord Castlereagh, and Mr. Perceval — "It is a matter of equal regret and surprise to behold a Committee, composed of gentlemen so sagacious and well-informed, so conversant in business, and respectable in every point of view, arrive at conclusions so very opposite to those which the evidence before the Committee, as well as the good sense of the nation, has long since pointed out for general adoption. The last resolution is the substantial practical recommendation of the Bullion Committee; the other resolutions are only explanatory and introductory, and might, with perfect innocence and safety, be placed unanimously on the journals. It is the resumption of cash payments, within a definite and not distant period, which is the real point at issue, and all argument is misapplied which is not directed in the first, as well as last instance, to that leading point. We are all agreed that a mixed circulation of bank-notes, convertible at pleasure into cash and coin, is the most desirable circulating medium which can be conceived, because, if properly regulated, it possesses the solidity of a metallic with the cheapness of a paper currency. We differ only about the means, and the fit season, for returning to this state. The Bullion Committee are for attempting it positively and absolutely, without regard to consequences, or even practicability. We are for waiting till a violent and unnatural state of things shall have ceased, during the continuance of which our object cannot be gained, while the attempt would only aggravate the evil.

"The foundation of all our reasonings on this subject must be an appeal to experience, and the resolutions which we are to submit to the House are, therefore, not abstract propositions, but a statement of facts. The fundamental position on the other side, viz. that there is a certain fixed and definite standard of value arising from a given weight and purity of the precious metals being used in the formation of coin in this country, is erroneous. Any sum under L 25 may, it is notorious, be legally discharged in silver coin; and such is the degree in which the silver coin of various denominations now current has been worn away by use, or diminished by fraud, that the actual amount of silver which a creditor holding an obligation under that sum will receive, may vary from 5 lbs. 5 oz. 15 dwt. to 8 lbs. 15 dwt., according as he

receives his payment in the worn sixpence or the fresh crown-pieces of the realm. The Act of 1774, limiting the legal tender of silver to sums below £25, expired in 1783, and from that time down to 1789, obligations to any amount might have been discharged in these clipped and worn out sixpences, then current and such coins are still in practice the great circulating medium by which the transactions of the country are carried on. Even in regard to the gold coin, no fixed standard was introduced till 1774; so that all the boasted fixity of that part of the currency dates only from that comparatively recent period.

"The right of establishing and regulating the legal money of the kingdom, at all times vested in the sovereign or the crown, with concurrence of Parliament, cannot be abrogated but by the same authority. The promissory-notes of the Bank of England, however, have hitherto passed in common estimation, and in the usual transactions of men, as equivalent to gold. Although at various periods, both before and after the Bank restriction, the exchanges between Great Britain and other countries have been unfavourable to Great Britain and, as a matter of course, in such periods the market prices of gold and silver have risen considerably above the mint prices, and the coinage of money at the mint has been unavoidably either partially or wholly suspended. Such unfavourable exchanges and rises in the price of bullion have usually occurred in the course of foreign wars, when the metallic currency was all carried abroad to conduct the operations of our fleets and armies; as during the wars of William III and Queen Anne, the greater part of the Seven Years' War, and the American war. These causes all conspired together to produce the extraordinary pressure upon the Bank in February 1797, and rendered unavoidable the suspension of cash payments at that period and they again occurred with still greater severity in the two years which preceded the peace of Amiens. In these instances, the unfavourable state of the exchanges, and the high price of bullion, do not appear to have been produced by the restriction of cash payments, or any excess in the issue of notes; inasmuch as all the instances, except the last, occurred previously to any restriction on such cash payments; and because the price of bullion has frequently been highest, and the exchanges most unfavourable, at periods when the issues of the bank-notes have been considerably diminished, and they have been afterwards restored to their ordinary rates though those issues have been increased.

"During seventy-eight years, ending with January 1797, the price of gold has been at and under the mint price for twenty-eight years, and above the mint price fifty years, and during that period the price of standard silver has been at and under the mint price three years and two months only. The exchange with Hamburg fell, during the three latter years of the American war, full eight per cent, and the price of foreign gold rose from £5, 17s to £4 2s an ounce, and the price of dollars nearly in the same proportion. While the bank-notes in circulation were, during the same period, diminished from nine to six millions. Again, in December 1804, the rate of exchange with Hamburg rapidly rose to 54, and the price of gold fell to its former standard of £5, 17s before February 1787. The amount of bank notes in February 1787, was £8,600,000 and in February 1791 £11,700,000; and between these years the sum of £10,700,000 was coined in gold and yet the exchange with Hamburg rose three per cent. The bank notes which in February 1795 were £11,500,000, were reduced in February 1797 to £8,600,000 during which time the exchange with Hamburg fell three per cent; and on the 1st February 1798, they were increased to £15,200,000, during which pe-

riod the exchange had risen nine per cent. Examples of this sort prove to a demonstration how extremely fallacious is the idea that the unfavourable state of the foreign exchanges is to be ascribed to any excess in the issues of paper at home : they show that the exchanges depend on a variety of other circumstances independent of the home currency, and not unfrequently they are highest when the paper circulation is most abundant

“ It is not difficult to perceive what are the circumstances, in our foreign relations, which have produced the present unfavourable state of the exchanges. The trade with the Continent has, from the effect of Napoléon’s decrees against British commerce, become hazardous, precarious, and expensive; it is every where loaded with excessive charges. the trade with America has been precarious and interrupted, the naval and military expenditure has for some years been very great, and the price of grain, owing to a succession of bad crops, has during the same period been very high. Any one of these causes is sufficient to account for the drain of specie from this country, much more the whole taken together.

“ The amount of the currency of the country must bear a certain proportion to its trade, revenue, and expenditure. Now, the average amount of exports, imports, and revenue of England, for some years past, has been so great as absolutely to require an enlarged circulation; for all the three have nearly doubled since the period when the Bank restrictions were first imposed. If the average amount of bank-notes in circulation at the two periods is compared, it will be found not to have advanced in the same proportion (1). And how, when our metallic currency was drawn abroad by the necessities of foreign commerce and warfare, was the ordinary circulation of the country to be supplied, and its immense transactions conducted, if the increase in bank-notes, now so loudly complained of, had not taken place?

“ The extraordinary circumstances in which the kingdom has lately been placed, therefore, are amply sufficient to account for the unfavourable state of the exchanges, without any change in the internal value of the currency, or any reason being afforded for its contraction. It is highly important, indeed, that the restriction as to payments in cash should be removed as soon as the political and commercial relations of the country shall render it compatible with the public interest, but under the present situation of the state, in all these particulars, it would be highly dangerous to do so before the period fixed by law, namely, six months after the conclusion of a definitive treaty of peace.

“ There is a depreciation of bank-notes compared with legal coin, and there is a depreciation compared with the price of commodities. But the depreciation on which the Bullion Report so largely dwells, is a depreciation different from either of these. It is a depreciation compared with the money of other countries. What is the meaning of such a depreciation, when no one ever imagined that Bank of England paper could pass current any where but in Great Britain? What would be the effect of an order upon the Bank just now to resume cash payments in two years? Would it not be to compel them to purchase gold coin at any loss, in order to meet the certain drain about to come upon them? All the witnesses examined be-

fore the Committee agree in this, that there is an irresistible tendency at present in the guineas of England to go abroad. Some ascribe it to the necessity of cash remittances to meet the balance of trade, others to the demand for gold on the continent but all concur in the fact, and the state of the foreign exchanges sufficiently demonstrates its reality. Now, then, is the Bank of England to be able singly to stand the torrent produced by the commercial and political relations of the whole globe? Is it fair, equitable, or prudent, to expose that establishment to the certainty of the enormous loss consequent on such a contest? And is this a time to make an experiment so hazardous to the solvency of Government and the credit of the nation, when the empire is engaged in the eighteenth year of a costly war waged for its very existence, and every guinea that can be spared from its domestic necessities is absolutely requisite to maintain the expensive contest in the Peninsula, which alone averts the horrors of invasion from the British shores?"

Upon a division, Mr Horner's resolutions were lost by a majority of 76—the numbers being 75 to 151; and the counter resolutions of Mr Vansittart were, a few days after, carried by a majority of 40—the numbers being 42 to 82 (1).

Reflections on this subject. Discourse of resumption of cash pay. merits of this period. May 4. Few subjects in the modern history of England have been discussed both in and out of Parliament with more vehemence and ability than this Bullion Report—and none was ever fraught, both in its immediate and ultimate effects, with more momentous consequences (2). In fact, the very existence of the nation was at stake in the discussion—and it may now with safety be pronounced that if the arguments urged by Mr Horner, Mr Huskisson and the Bullion Committee, had proved successful, and Parliament had acted upon their recommendations, the national independence must have been destroyed, and England rendered a province of France long before the Moscow catastrophe arrived. The very fact on which their whole argument was rested, viz. that the difference between the market and the mint price of guineas had come to be 23 per cent was decisive against the practicability of restoring cash payments, at least till the pressure of the war had come to an end—for what must have been the effect of a compulsitor to pay in gold purchased by the Bank at such a loss, and issued to the public at such a profit? Evident ruin to that establishment, bankruptcy to the Government, and an abandonment of all our enterprises, vital to the state in which the empire was engaged. Wellington, deprived of all his pecuniary resources in Spain, would have been compelled to withdraw from the Peninsula. In the mortal struggle between insolvency at home and disaster abroad. All our foreign efforts must have been abandoned. A force as great as that which drew back Hannibal from the scenes of his triumphs in Italy, would have forced the British hero from the theatre of his destined triumphs in Spain. The crash in England would have come precisely at the crisis of the war—cash payments would have been resumed in May 1813, just after the battle of Lützen—and on the eve of the armistice of Prague; Napoleon, relieved from the pressure of Wellington's veterans, would have made head against the forces of the north; Austria, in such unpromising circumstances, would never have joined the coalition. Russia exhausted and discouraged, would have retired to her forests. Germany, unarrayed by British subsidies, would have remained dormant in the strife; and the sun of European freedom would have sunk, perhaps for ever, beneath the wave of Gallic ambition.

(1) Mr Vansittart's Resolutions, A. J. 13, 1811. Parl. Deb. 15, 73, 74, 15, 919 &c.

(2) Parl. Deb. 15, 1123, and 1, 127.

Even if, by prudential measures and great efforts on the part of the Government and the Bank, an immediate catastrophe had been avoided, there can be no doubt that the resumption of cash payments at that crisis must, at no distant period, have proved fatal to the finances and public credit of Great Britain. Experience has now cast a broad and steady light on this subject. It is known that the adoption of this step in 1819, enforced and carried out as it was by the suppression of small notes in 1826, changed prices at least 55 per cent, that the holders of commodities and property of all descriptions found their capital diminished by that amount in the course of a few years, that debts, augmented in the same proportion, speedily proved fatal to all the labouring fortunes, whether in land or money, over the country; that bankruptcies, to an unparalleled extent, diffused ruin and misery through the industrious classes, and that the general distress and difficulties of the middle ranks of society produced that wide-spread feeling of discontent, which, ignorant of the real cause of its suffering, and fanned into a flame by the spirit of faction, gave rise to the conflagration which brought about the great organic change in 1832. If such have been the effects of this momentous step in a period of profound peace, universal commerce, and comparatively light national burdens, what must have been its results if it had occurred in the crisis of the war, and in the presence of Napoléon, with the income-tax forcibly extracting all the surplus profits of the people, commerce to continental Europe almost closed by the military power of France, and a gigantic naval and military establishment exhausting all the resources of the state, and yet alone preserving the nation from foreign subjugation?

Errors of
Mr Huskisson
and his
party

The fundamental error of Mr Huskisson and the Bullion Committee on this subject, consisted in the principles, which they laid down as axioms, that the measure of the depreciation of the currency was to be found in the difference between the market and the mint price of gold, and that the cause of the high price of the precious metals was to be sought for in the over issue of paper, rather than the absorption of specie in foreign states. Both positions, it has now been proved by experience, were erroneous, or rather embraced only a part of the truth; and, what is singular enough, the first erred chiefly from underrating the depreciation arising from excessive issue, on which the Bullion Committee themselves so strongly founded. Assuming the depreciation to be measured by the difference between the market and the mint price of gold, they estimated it at 25 per cent, whereas there can be no doubt that it was at that period nearer 75 per cent, and a revulsion of prices in most articles, to nearly half that amount, took place upon the resumption of cash payments when the bill of 1819 came into operation. In fact, the relative money and mint price of the precious metals had nothing to do with the question of depreciation of the currency, for, as bank-notes never sunk in value compared with specie, whatever party-spirit may have affirmed to the contrary, the measure of the depreciation which undoubtedly took place was to be sought for, not in the relative value of the metallic and paper currency, but in the diminished value of the *whole currency*, gold, silver, and paper, when compared with that of all other commodities, and the proof of that was to be found in the fact, not that gold was at a premium of 25 per cent, but that wheat had, on an average of ten years preceding, advanced 100 per cent, and was then selling 110 shillings the quarter. The high premium on gold, on which so much stress was laid, was evidently owing to the political or natural causes which, at that period, caused the precious metals to be all drained out of the country, and we who have seen the Bank of England reel, and the United States Bank of America

fall (1), under the effects of the drain of L.6,000,000 sterling from the vaults of the former of these establishments to purchase grain from continental Europe in 1839, for the consumption of the British islands, can feel no surprise that gold was at an extravagant premium in 1810 and 1811 in London, when L.4,171,000 was, in the former of these years, sent out of the country for grain alone and in both years, above L.6,000,000 was annually remitted to the Peninsula, in specie and bullion, for the service of the English and Portuguese armies.

It is remarkable that a measure fraught, as every one now sees, with such obvious and utter ruin both to the nation and the individuals of whom it is composed, was at that period supported by the ablest men in Parliament, and many of the profoundest thinkers in the country; that the report which recommended such a perilous and destructive change was for above twenty years held up as the model of political wisdom; and that the Ministry who, by resisting it, saved their country from destruction, more perhaps than by any act in their whole career, incurred the imputation, with the great bulk of the succeeding generation, of being behind the lights of the age. It is the more remarkable that the general delusion should so long have prevailed on the subject, when it is recollected, not only that the true principles of this apparently difficult but really simple branch of national economy, which are now generally admitted, were at the moment most ably expounded by many men both in and out of Parliament (2); and that, in the examination of some of the leading merchants of London before the parliamentary committees on the subject, the truth was told with a force and a precision which it appears now surprising how any one could resist (3). This memorable example should always be present to the minds of all who are called upon, either theoretically, or practically, to deal with so momentous a subject as the monetary concerns of a nation; and, while it is calculated to inspire distrust in abstract or speculative conclusions, when unsupported by facts, it points in the clearest manner to the wisdom of adhering to those common-sense views which experience has suggested to practical men, and which, however apparently irreconcilable at the moment to speculative principle, will generally be found to emanate from it in the end, and to have arisen from some unobserved element acting, with a force imperceptible to the philosopher but most cogent to the merchant, on the great and complicated maze of human transactions.

(1) In Mr. Biddle's late paper on the causes of the suspension of cash payments by the United States Bank in October 1839 the principal reason assigned was the drain upon the Bank of England of silver the preceding year from the vast importation of grain, in consequence of the bad harvest in Great Britain. In 1838, and the consequent contraction of the British circulating medium, and pressure upon the money market of America.

(2) Particularly by Sir John Sinclair whose sagacious mind early and clearly perceived the fatal effect of the proposed suspension of cash payments at that critical period, especially on that great national interest—agriculture, in the support and improvement of which his long and useful life was devoted.—See *Life of Sir John Sinclair* B. 2d, by G. J. and the Rev. John Sinclair chaplain to the Bishop of London; a work full of able information both historical and political, by an author who unites to the talents and industry necessary in his family the accomplishments of a heir the knowledge of divine and the philanthropy of Christian.

(3) The following is the evidence given on the subject of the high price of bullion by Mr. Cham-

bers, before the Committee of the House of Commons.

I the examination of M. Chambers, gentleman who deservedly enjoys the reputation of great intelligence and extensive information in the commercial world:—Q. And the silver goes abroad?—A. At the Mint price of standard gold in this country how much gold does Bank of England note for one pound represent? I d. 11, three grains.—Q. At the present market price of 14 1/2 per ounce how much gold do you get for bank note of one pound? Four d. 11, eight grains.—Q. Do you consider Bank of England note for one pound under three percent. discount as an exchangeable in gold for what it represents of that metal? I do not consider gold to be a fairer standard for Bank of England notes than badger or brown cloth.—Q. You are not prepared.—A. It represents twenty shillings of that metal at the exchange price it is at, unless a man's life, L. 28. Mr. Chambers adds, he does not see this trading doctrine to meet by and by, and is not satisfied, and all who stand up for the adulterated and of bank paper however disguised their language must ultimately come to the same issue.—End.

Birth and early history of Mr. Huskisson WILLIAM HUSKISSON, who first rose to great and deserved celebrity in the course of these important discussions, was a statesman whose career belongs to the pacific but momentous period which intervened between the close of the war and the passing of the Reform Bill, but he was too eminent a man, and exercised too powerful an influence on the fortunes of his country, to be passed over without remark in the annals of Europe during the French Revolution. He was descended from a family of ancient standing but moderate fortune in Staffordshire, and received the elements of education in his native county. He was early sent over to receive the more advanced branches of instruction at Paris, under the direction of Dr. Gem, physician to the British Embassy at that metropolis, and he arrived there in 1789, just in time to witness, and in some degree share, the enthusiasm excited by the capture of the Bastille in that year. The intimate acquaintance which at this period he formed with Franklin and Jefferson, as well as the popular leaders in the Club of 1789, of which he was a member, had a powerful influence on his character, which was never obliterated through life, and eventually no inconsiderable effect on the fortunes of his country, to the chief direction of the commercial concerns of which his great abilities ultimately raised him. He was first brought into Parliament in the close of the year 1796, for the borough of Morpeth, under the nomination of Lord Carlisle, and about the same time appointed Under-Secretary of State for War and the Colonies, in which laborious and important situation his business talents were speedily discovered, and he enjoyed the intimate friendship, and was often called to the private counsels, both of Mr Dundas and Mr Pitt. He retired from office with Mr Pitt in 1801, along with Mr Canning, with whom, throughout life, he maintained the closest intimacy, but was reinstated in the situation of Secretary to the Treasury on Mr. Pitt's return to power in 1804, which important trust he continued to hold, with the exception of the brief period when the Whigs were in power, down to the retirement of Mr Canning from Downing Street in September 1809, when he withdrew from Government with his brilliant friend, and became a leading member of the liberal section of the Tory party, now in avowed hostility to the Administration. In 1814 he was appointed a Commissioner of the Woods and Forests, and from that time till his appointment to the important office of President of the Board of Trade in January 1825, he devoted his attention almost exclusively to subjects of trade, navigation, and political economy, in which his vast information gave him great weight, and of which, even before he became a cabinet minister, he had acquired almost the exclusive direction. The return to cash payments, by the celebrated Bill of 1819, the reciprocity treaties, and abandonment of the navigation laws, and the free-trade system, were mainly occasioned by his influence; and he continued, whether in or out of office, almost entirely to direct the commercial concerns of the nation, till the time of his death, which was occasioned by the frightful accident of the railway train passing over his body on the day on which the line from Liverpool to Manchester was first opened, on 15th September 1850 (1).

His character and great abilities He was the first of that class of statesmen who have arisen with the prodigious increase in the commercial transactions and industrial activity of Great Britain in later times, and whose attention is chiefly devoted to the material interests and statistical details of the nation. He was not endowed by nature with any remarkable oratorical abilities, he had great powers of thought and application, but neither the fire of genius nor the

soul of poetry in his character, and though in the later years of his life he was listened to with profound attention on both sides of the House, yet this respect was owing rather to the vast stores of varied information which he never failed to bring to bear upon the subject of debate, and the luminous views which he advanced regarding it, than any faculty of captivating a mixed audience with which he was gifted. His reasoning faculties were of a very high order; and there is no statesman of that period to whose arguments the historian can now so well refer for an exposition of the principles which, during the interval between the peace and the Reform Bill, governed the commercial and maritime policy of England. He first brought to bear upon legislative measures the resources of statistical research and to the industry and perseverance requisite for such an undertaking, he united the rarer faculty of philosophic reflection, and the deduction of general principles from an immense detail of particular instances. He was never taken unawares on any subject of that description: the details of the parliamentary returns were ever present to his memory; and, by the skilful use which he made of them in debate, he acquired, for the last ten years of his career, a weight in the House of Commons on all subjects connected with trade and navigation which was well nigh irresistible.

His errors. Adam Smith has said that he had no great faith in political arithmetic; and although nothing is more certain than that the principles of the Baconian philosophy will be found in the end to be applicable to this, as to every other subject of human enquiry, and that a careful examination of facts is the only sure test of the truth or falsehood of any particular opinion, yet here, as elsewhere, principle must be the guide to enquiry; it is only by persons thoroughly imbued with rational views that these valuable results can be obtained. While to the world in general statistical returns will present an unmeaning mass of figures, and to the speculative politician they may often become a fruitful source of error. Statistics are to the science of politics what the observations of Tycho Brahe were to astronomy; but it requires the mind of a Kepler to deduce from them the true philosophic conclusions. The reason is, not that the returns are incorrect, or the figures err, but that such a variety of circumstances enter into the formation of the general result, that the chances are, that, in the outset of statistical enquiry, and before the true causes have been separated from the imaginary ones by experience, conclusions altogether fallacious will often be deduced from perfectly correct premises. Certain it is, that with all the accuracy and extent of Mr Huskisson's information on mercantile subjects, and all the force of his reasoning powers, his conclusions were in great part erroneous; and that to his influence more perhaps than that of any other individual, is to be ascribed the false direction of British policy for the last twenty years, alike in regard to monetary, commercial, and colonial affairs. Experience, the great test of truth, has now demonstrated this in the most decisive manner.

His erroneous political principles, and their destructive effects. He strenuously advocated the return to a metallic currency in 1810, before any serious progress had been made in the reduction of the debt contracted during the paper one; and the result has been that the nation has been permanently disabled from paying it off; and the fall in the money price of all property to the extent of a third produced such a storm of discontent as overthrew the old constitution of the empire. He strenuously advocated the conclusion of reciprocity navigation treaties with the powers of northern Europe; and the result has been that our shipping with them has been reduced in fifteen years to a fourth of its amount, while theirs with us has been quadrupled in the same period, without any

advantage whatever having been gained for our manufacturing interests to counterbalance so serious a disadvantage. He strenuously advocated the reduction of the duties on various articles of foreign manufacture, and the result has been that a severe wound has been inflicted on domestic industry, without foreign jealousy having in so much as a single instance relaxed aught of the burdens on British productions. He strenuously advocated the propitiation of foreign mercantile powers in the same stage of civilisation as ourselves, even if the consequence should be the discouragement and irritation of our own colonies; and the result has been, without the slightest relaxation of their prohibitions, a general neglect of those vast colonial interests in which Great Britain can alone find a permanent market for its manufactures, and which, according as they are attached by durable cords to the parent state, or severed from it, must ultimately become either an unbounded source of its strength, or the immediate cause of its ruin (1)

Debates on
the repeal
of the Or-
ders in
Council

Another subject which occupied a large portion of the attention of Parliament during the years 1811 and 1812, was the repeal of the Orders in Council, which was now anxiously pressed upon Government, both by the opposition and the principal manufacturing cities in the empire; and in which a statesman, reserved for the highest destinies in future days, HENRY BROUGHAM, first rose to distinguished eminence

State of, the
question so
far as neu-
tral powers
were con-
cerned.

It has been already noticed that the British Government—justly irritated at the Berlin and Milan decrees, which Napoléon, in the intoxication consequent on the overthrow of Prussia in 1806, had fulminated against English commerce—issued the celebrated Orders in Council, which in effect declared that no ship belonging to any neutral power should be permitted to enter the ports of any country under the government of France, unless it had previously touched at a British harbour (2). Between these rigorous orders on the one hand, and the peremptory French decrees on the other, the trade of neutral states was wellnigh destroyed, for they had no means of avoiding the penalty of confiscation, denounced against them by the one power, but by adopting a course which immediately exposed them to the same risk from the other. The only neutral power which at this period carried on any considerable carrying trade was America, but it did so to a great extent, and that commerce promised daily to become greater and more profitable to its citizens, from the mutual rage of the belligerents, which threw the only traffic which could be maintained between them into the hands of the only neutral state in existence. Deeply, therefore, did both the people and Government of the United States feel themselves injured by these acts on the part of France and England, and, in despair of bringing either of these powers back to a more reasonable and civilized species of hostility, they had recourse to measures calculated to withdraw from any intercourse with either. A general embargo was first laid on all American shipping within their harbours, which was soon after succeeded by a Non-intercourse Act, which prohibited all intercourse between the United States and either France or England. The particulars of these acts, and the abor-

(1) Table showing the progress of exports to, and shipping with, the countries with which reciprocity treaties have been concluded, compared with those with whom there have been no such treaties, and the British colonies

I indulged a sanguine hope, that before this volume went to the press, the valuable returns on this head moved for in the House of Commons in March last, by my esteemed friend J. C. Colquhoun of Kilmont, would have been published, and which will throw the most important light upon the erro-

neous policy which has caused so much commercial distress in Great Britain for the last twenty years, and the simultaneous causes which have counteracted their effect, arising out of the unprecedented growth of its colonial empire. But the returns moved for have not yet been laid before Parliament, and therefore I am under the necessity of foregoing the pleasure of laying that valuable document before the public in this edition

(2) *Ante*, vi, 167

the diplomatic efforts which were made to re-establish a good understanding between the two nations, will be given in the sequel of this work (1) Suffice it to say, that the Non-Intercourse Act continued in force through the whole of 1810 and 1811, and that the cessation of all exports to the United States, which then took off British produce and manufactures to the extent of no less than thirteen millions sterling, powerfully contributed both to the extraordinary falling-off in the exports of the latter of these years, and to the general discontent and suffering in the manufacturing districts, which have been already noticed (2) Committees were appointed to take evidence on the subject early in 1812 in both Houses of Parliament; and their members, among whom Mr Brougham, Mr Baring, and Mr Huskisson took the lead, exerted themselves with extraordinary vigour in prosecuting the enquiry. A great number of petitions against the Orders in Council, chiefly from the large manufacturing towns interested in the trade with America, were presented. Early in June the subject came on for discussion in the House of Commons, and the debates which followed were of the utmost importance, as illustrating the real effect, on the national interests, of the extraordinary species of warfare in which the empire was now engaged (3)

On the part of the Opposition, it was argued with uncommon ability by Mr Brougham, Mr Baring, and Mr Ponsonby. "The question at issue, though one of unexampled importance, is of very little intricacy: the evidence is of immense extent and apparently interminable details; but a few minutes' debate must be sufficient to demonstrate where the only safe or honourable path is to be found. The table of the House has groaned under the mass of petitions presented—the hearts of the members have been harrowed by the details of general suffering which have been established in evidence. Numerous disorders in different parts of the country have arisen out of this general distress; it has even driven large bodies of men to the absurd expedient of endeavouring to revive an obsolete law of Elizabeth, for magistrates fixing the rate of wages; while the more enlightened sufferers under the restrictions of the times, have sought some relief in what would prove a most inadequate remedy, the extension of a free trade to India and China. The Potteries have demanded permission to send their porcelain to China; and the ancient and respectable city of Newcastle has earnestly entreated that it may be allowed to ship coal for the stores and hothouses of Calcutta! These various projects, some to a certain extent feasible, others utterly absurd and visionary, only prove the magnitude of the evil which is so generally felt, and remind us of the awful accounts of the plague, when, in the vain effort to seek relief, miserable men were seen wildly rushing into the streets, and madly grasping the first passenger they met, to implore his help. The dreadful amount of the present distress is proved by all the witnesses. It comes upon us in a thousand shapes; it exhibits the same never-ending yet ever varying scene of heart-rending suffering. The wants of the poor have been proved to be so pressing that they have been forced to part with their whole little stock of furniture; pawn their blankets, their beds, their very clothes off their backs; and the prodigious mass of moveable articles thus brought at once into the market, has produced a decided depression upon prices even in the London market. Great as was the general distress during the scarcity of 1800 and 1801, it is described by a host of witnesses as having been as nothing compared to that

(1) *Supra*, ch. lxxl.

(3) *Ann. Reg.* 1810 253, 254; and 1812 51, 52.
Edin. Rev., 327, 318.

which now prevails for then there was a want only of provisions, but wages were high and employment abundant, whereas now the want of money meets and aggravates the want of food.

“The returns of exports and imports during the last two years completely account for this extraordinary woe. Nay, they exhibit a decay in national industry, which might have been expected to produce a still more heart-rending and wide-spread suffering. Comparing the whole amount of trade, both exports and imports, (which is the only fair way of reckoning), there is a falling off compared with 1809, of thirty-six millions, with 1810 of thirty-eight. In British manufactures alone, the decline from 1809 to 1811 is sixteen millions—taking in colonial produce, it is no less than twenty-four millions as compares with 1809, and twenty-seven as compared with 1810. This reduction is unparalleled in British annals; it outstrips all the efforts of financiers or treasury-clerks to conceal, and stands forth an imperishable monument of the infatuation in the policy of the Government which has brought such calamities on the nation.

“It is in vain to talk of substitutes for the North American trade, the loss of which has been the main cause of these grievous evils. The Brazil market, the South American market, have been tried, and both have terminated in nothing but disappointment. We neither know their wants nor do they require our manufactures. The smuggling trade to the United Provinces through Canada at first afforded some relief, but, since the continuance of our prohibitory system has exasperated the North American population, even this resource has failed us. As a necessary consequence of this total stoppage of all our best foreign markets, the home trade has become depressed in a most remarkable degree. Goods of all sorts, destined for the consumption of foreign states, have been thrown back upon the home market from inability to find any extraneous vent for our manufactures; and then the diminution in the amount of our exports, great as it is, affords an inadequate representation of the real depression of our industry, for it frequently has happened that goods, which had paid duty as exports, and even crossed the Atlantic, have been thrown back upon our own market, and sold at a ruinous loss to all concerned, for domestic consumption. It is in vain, therefore, that, in this unexampled depression of our foreign sales, we turn to the home market for relief; for there the magnitude of our external losses has produced a ruinous glut, and every effort made to find a vent among our own inhabitants but adds to the general distress.

“Let it be shown, indeed, that the national honour or security is involved in upholding the Orders in Council, and all these arguments go for nothing, nay, it becomes the first duty of every patriot, at any hazard, even that of the total ruin of our manufactures, to concur in their maintenance. But has this been shown to be the case? Nay, is it not evident that their repeal is called for alike by what is due to the national character, and the preservation and stability of our naval power? It is unnecessary, in discussing this question, to go back to the legality or illegality, the justice or injustice, of the paper blockades of long lines of the enemy's coast, to which Napoléon constantly refers the origin of this calamitous species of warfare. Admitting that it may be both just and legal to do so, the question is. Is it *expedient* to assert and enforce such rights at a time when it involves us in such calamities? History proves that, on many occasions, these rights, though never abandoned, have been quietly passed over *sub silentio*, where the assertion of them would have interfered with national interests, or impeded national advantages. This was done at the peace of Utrecht, in the American war, and by express

acts of the Government in 1793 and 1794. The point now is whether this is an occasion when, without surrendering our maritime rights, it is expedient for a time to waive their consideration? Now, what is the commerce which we sacrifice for the vain honour of preserving these rights? Why, it is no less than the vast North American market—a market now taking off thirteen millions' worth of our produce, and worth, in the estimation of the most competent witnesses, all foreign markets put together. The returns in that market are as sure, the bad debts as few, as in the former trade with Holland. The extent, steadiness, and rapid increase of the trade between England and North America, is easily accounted for. The inhabitants of the United States are connected with us by origin, language, and habits; their tastes go along with their inclinations, and they come to us, as a matter of course for such manufactured articles as they require. There is not a cabin or loghouse in their vast territory, in which you do not meet with British produce; while the rapid increase of their population, which doubles every thirty years, and in which, nevertheless, there is not a single pauper to be found, offers a boundless field for future increase. It is not a figure of speech, but the simple truth, to assert, that, circumstanced as the two countries are, there is not an axe falls in the woods of America, which does not put in motion some shuttle, or hammer, or wheel in England. It is the miserable shuffling, doubtful traffic to the north of Europe and the Mediterranean that we prefer to the sure, regular, and increasing North American trade—a trade placed beyond the reach of the enemy's power, and which supports at once all that remains of the liberty of the seas, and gives life and vigour to its main pillar within the realm—the manufactures and commerce of England.

"Look to the other side of the picture. If you continue the cessation of intercourse with America much longer, the inevitable consequence will be, that the Americans will be driven to the necessity of supplying themselves with manufactures. They have the means of doing so within their own bounds: coal and water carriage in abundance are to be found in their territory; and the vast fortunes already accumulated in their seaport towns, prove that they are noways deficient in the true commercial spirit. We can have no jealousy of America, whose armies are yet at the plough, or making since your policy has so willed it, awkward though improving attempts at the loom; whose assembled navies could not lay siege to an English man-of-war. The nation is already deeply embarked in the Spanish war; let us not, then, run the risk of adding another to the already formidable league of our enemies, and reduce ourselves to the necessity of feeding Canada with troops from Portugal, and Portugal with bread from England (1)."

Such was the weight of these arguments, and such the strong foundations which they had in the necessities of the times and the evidence laid before both Houses of Parliament, that Government made very little resistance to them. It was merely urged by Lord Castlereagh and Mr. Rose—"No question, more vital both to the national security and the commercial interests of the country, ever came before Parliament; and there can be no doubt that a case of grave distress to the manufacturing interest has been made out by the evidence. Nay, there is reason to believe that, if the North American market is not speedily opened, that suffering will be augmented. Even admitting, however, that the repeal of the Orders in Council would occasion the abrogation of the Non Importation Act still it

Argument
on the other
side by the
Ministers.

abstracted which prevented pieces of material and money as the English to supply.

(1) *Parl. Deb.* xliii. 272.
The argument of Lord Castlereagh, of which the preceding sketch is but the skeleton, is one of the

does by no means follow that the original imposition of these Orders was not called for by necessity, and justified by expedience. Is it to be expected that Great Britain is tamely to submit to the iniquitous decrees of France without any retaliation?—without attempting, at least, to inflict upon that state some part of the suffering which it has brought upon this country? As against France, that system has perfectly succeeded, and severely as our commerce has suffered in the struggle, theirs has undergone a still more remarkable diminution. From the official accounts published by the French Government, it appears that, even with their population of nearly forty millions, the total amount of their manufactures for the home market and exportation was only, in 1810, L.54,000,000 sterling; while that of Great Britain and Ireland, with only seventeen millions of souls, was L.66,000,000. With the exception of the year 1811, which was one of great depression, arising from temporary causes, the preceding years, when the Orders in Council were in operation, were periods of extraordinary and unprecedented prosperity. The average of our exports to continental Europe, for three years previous to the issuing of the Orders in Council, was L.57,000,000; that for the three years subsequent, L.25,000,000. Can more decisive proof be imagined that the machinations of the French Emperor for our destruction have not only failed in their object, but recoiled upon himself?

“The hostile feelings of the American Government have now made the Orders in Council a pretext for breaking off all commercial intercourse with this country, and doubtless that interruption is one great cause of the distress in which the mercantile interests are now involved. But such an interruption could not have been calculated upon; and, in the ordinary course of human events, it would not have occurred. Reason and equitable feeling should have taught the Americans, that the Orders in Council were adopted by the English Government as a measure of retaliation only, that they were issued subsequent to the Berlin decree, under the pressure of necessity; and if these defensive measures proved, as doubtless they did, injurious in a very high degree to the interests of American commerce, their enmity should have been directed against France, the primary cause of this destructive system of hostility, instead of this country, which merely in its own defence was driven to its adoption.

“Never was a country which, when forced to embrace such a system, evinced a more sincere desire to prosecute it in the way least injurious to neutral powers; an instance of which is to be found in the Order of 1809, limiting the blockade to France and the powers under her immediate control. The License system, when properly understood, was no departure from the principles of the Orders in Council, not a fifth of the licenses issued were intended to evade those Orders, four-fifths were occasioned by the relief which the enemy himself required from the stringent effects of our measures. We did, however, offer to forego all the advantages of the License trade, and revert to the strict measure of 1807, if the Government of the United States would repeal the Non-importation Act, but they have hitherto shown no disposition to embrace such a proposition.

“The Prince Regent long ago issued a declaration, bearing that, as soon as the Berlin and Milan decrees were repealed, the British Government would forthwith withdraw the Orders in Council, and the French Cabinet has recently communicated to the American Government a resolution apparently consenting to abandon the decrees, if the British orders were at the same time repealed. That declaration, however, is not sufficiently explicit to enable the English Cabinet to act upon the assurance it contains, in particular,

It appears to be virtually abrogated by the sweeping declaration of the Duke of Bassano, that the Berlin and Milan decrees should remain in full force till the maritime assumptions of this country were abandoned. But the British Government is fully disposed to receive the olive branch tendered, whether in good or doubtful faith, by the French ruler who is willing for a time to suspend the Orders in Council, if the American Government will repeal the Non importation Act. The sincerity of France will thereby be put to the test; and a breathing-time gained in the midst of this mortal hostility, during which an opportunity would be afforded for a return to a more civilized species of warfare. If the experiment fails, and France persists in her frantic devices, we must return to our retaliatory system; but if driven to do so, we shall at least have shown every disposition to concede to all just demands of the neutral powers and such a return would, it is to be hoped, not lead to any interruption of the amicable intercourse between this country and its Transatlantic offspring, which it is the curse of both countries should ever have been broken (1) "

Repeal of
these pro-
cesses in
Parliament. No division ensued upon this debate, Mr Brougham contenting himself with congratulating the country upon the prospect of speedily getting rid of these obnoxious orders, and the Ministry upon the manly course they had adopted regarding it. In truth, it was evident, after the declarations of both the English and French Governments, that no real object of contention remained between them or at least that both might, with perfect consistency with their national honour and recorded declarations on the subject, recede from the virulent system of hostility which they June 21. had adopted. A fortnight after there appeared in the Gazette an order absolutely and unequivocally revoking the Orders in Council; but with a declaration that, if the Americans do not, after due notice, revoke their interdictory acts against British commerce, the revocation should become null, and the original orders revive. This just and manly concession, however, came too late the democratic party in America had gained entire possession of the public mind a contest with England, at all hazards, was resolved on: and, before the conciliatory act of the British Government had crossed the Atlantic, war was actually declared (2)

Repeal of
this
subject. It is evident, on a dispassionate review of this great debate, and the mighty interests which were wound up with it, that the repeal of the Orders in Council, at the period it took place, was a wise, and indeed necessary measure, and that the greater part of Mr Brougham's arguments were well founded. The observation of Mr Canning in the course of the discussion, was perfectly just that the Orders in Council were a political, not a commercial measure; and the moment that the evil induced by their continuance exceeded the benefit to be expected from it, the hour for their repeal had arrived. That this period had arrived in 1812, was decidedly, proved by the great falling off in the commerce of the preceding year. Hence, indeed, might reasonably have been entertained that the neutral states seeing how evidently Great Britain stood upon the defensive in the maritime quarrel would have stood aloof from engaging in it especially when it was recollected how much more closely their interests were wound up with the maintenance of pacific relations with this country than with any of the continental powers. America, in particular, which traded with Great Britain to the extent of £45,000,000 a year, and with France not to the extent of £1,000,000 annually, had the most vital interest to preserve pacific relations with the na-

(1) Parl. Deb. vol. 172. 438.

(2) Ann. Reg. 1812. 82. 86.

tion with whom so great a portion of its commercial intercourse was conducted. The whole arguments, so forcibly urged by Mr. Brougham, as to the vast importance of the American trade to the English manufacturers, applied still more strongly to the impolicy of the United States coming to a rupture with this country, as the proportion which the English trade bore to the sum-total of their commerce was much greater than the American bore to the aggregate of ours. But still, when the experiment had been made, and it had been proved by the result that the United States were willing to undergo the loss of such a traffic rather than submit to the English Orders in Council, it became to the last degree impolitic to continue them any longer. For America had infinitely greater resources whereon to subsist during such a suspension of intercourse than the British empire; and in the struggle which can starve longest, the manufacturing state, the workshop of the world, like a besieged town, is sure to suffer more than the nations which have drawn their lines of circumvallation around it.

History, in the general case, has to deal only with the dead, and it is seldom either just or delicate to mingle with the historical gallery of departed greatness the portraits of living genius. There are some instances, however, in which this obvious rule must be infringed upon, where the impress communicated to the events of an age by one individual has been so powerful, that his character has become historical property even before his active agency has ceased on the theatre of human affairs. Such a character, in a military and political view, is the Duke of Wellington, and such, in a moral and social one, is Lord Brougham. This very remarkable man is descended from an old and respectable family in Westmoreland, from whom he inherited the ancient castellated mansion from which he afterwards took his title; and he received the rudiments of his education at the High School of Edinburgh, where his father had for some years resided. Thence, at an early age, he went to the far-famed university of that city, over which the names of Stewart and Playfair at that period threw an unusual splendour, and where a band of gifted spirits were then arising, many of whom have since shone forth with extraordinary lustre on the great stage of the world. Lord Jeffrey, the most celebrated critic of the age in which he lived, Sir Walter Scott, the greatest of human novelists, Lord Lansdowne, the not unworthy successor of Pitt in the direction of the British finances, Mr. Horner, whose early and lamented death alone prevented him from rising to the highest place in the councils of his country; Lord Brougham, who, for good or for evil, has made the schoolmaster's rod superior to the marshal's baton; formed some of the members of a society, in which other men, not less distinguished for energy and talents, were then prominent, whose powers are, it is to be feared, destined to be buried in that common charnel-house of genius—the Bar and Bench of the country (1). He was called to the bar at Edinburgh in 1804, and soon attracted notice by the energy of his character, and the fearlessness and occasional sarcasm of his demeanour. But that capital was too limited a theatre for his growing powers. And able an original work, which he published in 1802, on the colonial policy of Great Britain, early attracted the notice of Mr. Pitt, a series of powerful and original papers in the *Edinburgh Review*, gave token of the vast influence which he was

(1) To those who have the felicity of enjoying the acquaintance, or still more the friendship of Lord Corehouse, Lord Moncreiff, Lord Mackenzie, or Lord Cockburn, it is needless to say that nothing but a wider theatre of action, closer proximity to

the Legislature, or greater leisure for literary pursuits, were necessary to have raised them to the same general eminence which the philosophers, statesmen, and historians of their country, in the last and present age, have attained.

destined to exercise on public thought, and his removal to Westminster a few years afterwards, placed him in a situation where legal celebrity was not inconsistent with senatorial advancement.

^{The character of his} He first obtained entrance into parliament, like all the great men of his day, for a close borough, then in the gift of Lord Carlisle but his manner was unprepossessing, his voice harsh, and he was far at first from coming up to the exalted anticipations formed by his friends, and subsequently realized, of his future career. The unconquerable perseverance of his disposition overcame all obstacles, and ultimately obtained for him, if not the avowed at least the real lead on the Whig side in the House of Commons. His practice at the bar, though considerable, and brilliant from the political character of the cases in which he was chiefly engaged, was not first rate and both in legal knowledge and forensic judgment he was never deemed equal to his redoubted antagonist on the northern circuit, Sir James Scarlett now Lord Abinger. But in energy of character, invincible perseverance, versatility of talent, force of expression, and sarcastic power, he was far beyond any barrister or statesman of his day; and if his judgment had been equal to his ability, or his discretion to his information, and his vast capacity for exertion had always been directed to objects consistent with each other, and of permanent utility rather than passing interest, he would have left a name in history, as he unquestionably has exercised an influence on his own age second to none in the modern annals of Great Britain.

^{The fallacy and error} But inconsistency and want of foresight have always been the bane of his public character. He has signally promoted some great causes, as that of legal reform; but it is hard to say, upon reviewing the opinions which he has advocated at different periods of his life, whether he has most injured or benefited others which he had still more at heart. He was the steady advocate of Negro freedom, general education, universal toleration, and social amelioration; yet there is hardly a measure in the end destructive to these great interests of which he has not, at some period of his career, been the ardent supporter. He has been through life the most resolute enemy of the slave trade, and deserves the lasting thanks of every friend to humanity for his noble efforts to root out that execrable traffic; but he not less strenuously advocated the abolition of slavery in the British West India Islands in 1833; and, by so doing, he has doubled the slave trade in extent, and quadrupled it in atrocity throughout the globe (1). He besought the House of Peers on his bended knees to pass the Reform Bill, though the opponents of that measure drew their strongest arguments from his own earlier writings on the subject; and his whole efforts for the last five years have been directed to demonstrate the unhappy effects of the kind of government which that great change necessarily brought upon the country. He was the warm and consistent supporter of Catholic emancipation; but his exertions have of late been equally vigorous and effective in demonstrating the bad consequences which its concession have hitherto at least had upon social amelioration in the one Island, and the general system of government in the other. He has always been the sincere and powerful supporter of popular instruction; but by directing it chiefly to intellectual acquisitions, he turned that mighty lever to visionary objects, and placed it beyond the reach or without the in-

(1) The number of slaves landed in Cuba and Brazil have since the late war, the latter increased and since the former it is 153,000 but it is more than double the whole of the slaves who were the immediate consequence of the late war.

force of the law has been that not only the whole of the slaves who were landed in the West India Islands but the whole of the slaves who were landed in the West India Islands have been landed in the West India Islands.

terest of the great body of the people, while, by severing it from religious instruction, he deprived it of the chief blessings which it is fitted to confer upon mankind. He is possessed of extraordinary intensity of vision for present objects and immediate interests, but far from being equally clear-sighted as to ultimate consequences, or the permanent welfare of humanity.

His character as an orator

His style of speaking presents the most extraordinary contrast to the abstract ideas which he entertains, and has powerfully expressed, as to the perfection of eloquence. No man feels more strongly the masculine simplicity of ancient oratory, or has better described the injurious effect sometimes even of a single epithet on the majesty of thought; while none more constantly weakens the force of his own intense and vivid conceptions by variety and redundancy of expression. He objected to the addition which the imagination of Tasso made to the sublime image of Dantè (1), and yet he seldom fails to overwhelm the reader by exaggerations of the same idea under different forms, till the original impression is wellnigh obliterated. No one more happily or forcibly strikes the iron upon the head in the outset, but none, by a repetition of slant blows, more frequently mars its force, or alters its direction. His long practice of addressing juries, or assemblies of ordinary capacity, has proved injurious to his efforts to reach the highest style of eloquence. Every idea, if at all felicitous, is, in his hand, torn to rags. He forgets that those who read his speeches will not be equally obtuse with those who heard them, "que les gens habiles s'entendent à demi-mot." On this account, his fame with posterity, that is, the reading and thinking few, will be by no means equal to that which he has enjoyed among his contemporaries, that is, the hearing and unthinking many. Irony and sarcasm constitute his strongest arm in oratorical contests; and there he is unrivalled even by Pitt or Canning. His speeches to juries were often models of vehement and powerful declamation; but his judgment as a counsel was far from being equal to his talent as a barrister, and in more than one instance he has supplied what was wanting on the side of the prosecution by his imprudence in calling witnesses for the defence (2). His information is immense, and his powers of application unbounded; but his knowledge on subjects of philosophy rather extensive than accurate,—of law, varied than profound. He has always been distinguished by the warmest filial and domestic attachments, and a purer ray of glory than even that which is reflected from his senatorial

(1) *Al guisa di Leon quando si posa*

To which Tasso added the line,

GiRANDO gli occhi, et non movendo il passo

Critics may differ as to whether the beautiful image in the last line, does or does not detract from the majestic simplicity of the first, but Lord Brougham unequivocally condemns it as destroying the grandeur of the Florentine bard. See Lord Brougham's Address to the Students at Glasgow. *Lord Rector's Addresses*, Glasgow, 1830. A most interesting collection, as well from the celebrity of the statesmen and philosophers called to that eminent station, as from the progressive change in the character of thought, which their successive compositions evince, from the philosophic silence on religion, characteristic of the days of Hume, with which it commences, to the devotional glow descriptive of those of Chalmers, with which it concludes, and which only wants the admirable address of Sir James Graham, in 1838, to be one of the most instructive monuments which the literature of Europe during and after the French Revolution has produced, of the vast effect of that great event in bringing men back, by necessity and suffering, to the best and noblest sentiments of their nature.

(2) It is well known that the character of the chief witnesses for the prosecution, in the case of Queen Caroline, was so bad, that no reliance could be placed on their testimony, and on this fact Lord Brougham has never failed to descend in the most unmeasured terms whenever he could by possibility introduce the subject. He has not so frequently told, however, what is equally well known, that it was the evidence of the witnesses whom he himself put into the box, Lieutenants Flyn and Hownam, whose character was above suspicion, that in the end left no doubt of the Queen's guilt in the mind of any person capable of weighing evidence.—See *Parliamentary Debates*, 1820, III, 459—543, *New Series*. Yet this unhappy princess was possessed of some amiable, and many charming qualities, and in better hands might, in Mr. Canning's words, have been "the life, and grace, and ornament of society." "She is," says a personal and disinterested acquaintance, Sir Walter Scott, "a charming princess, and lives in an enchanted place; and I cannot help thinking her prince must labour under some malignant spell to deny himself her society."—See *Lockhart's Life of Scott*, p. 99.

achievements, is to be found in the steadiness with which, though often erring in judgment, he has ever supported the interests of freedom and humanity; and the indefatigable ardour which has enabled him, amidst a multiplicity of professional and official duties which would have overwhelmed any other man, to devote his great powers to the illustration of the wisdom of God from the works of nature.

The prosecution of the war in the Peninsula, and the changes of continuing it with success, was the last of the momentous subjects which occupied the British Parliament during the sessions of 1810 and 1811 and none present more interesting matter for retrospect.

On the part of the Opposition, it was strenuously argued by Mr Ponsonby, Earl Grey, and Lord Grenville — “It is a painful task to refer to predictions formerly made and despised, now unfortunately realized. How disagreeable soever it may nevertheless be, from a reference to past disasters, to anticipate future calamities, it has now become a bounden duty to do so — and that the more, that it is not a mere barren censure of past errors to which such a retrospect leads, but a solemn injunction to rescue the country in future from similar calamities. Is Parliament to sit year after year passive spectators of wasteful expenditure, and the useless effusion of the best blood of the country, in hopeless, calamitous, and disgraceful efforts? What return is due to the gallant army which has made such noble sacrifices? Is it not a sacred duty imposed upon Government to see that not one drop more of blood is wasted in a cause where no thinking man can say, that by any possibility such dreadful sacrifices are made with any prospect of advantage to the country? Is it agreeable or consistent with the character of men of common intelligence, to submit to be fed from day to day with the tale of ‘unprofitable successes’—of imaginary advantages to be gained by our army for ourselves or our allies? Is there any one who in his conscience believes, that even the sacrifice of the whole British army would secure the defence of Portugal? If such a man there be it may with confidence be affirmed, not only that he is unfit to be intrusted with the government of the country but even incapable of transacting public business in any deliberative assembly

“In a financial point of view, the cause of the Peninsula is utterly hopeless. Can any man who looks at our immense exertions for the last seventeen years, assert that the annual expenditure of from three to four millions in its defence, has not been absolutely lost to Spain, fruitless to Portugal and of no advantage whatever to this country? In fact, so utterly hopeless is the cause, that nothing short of a divine miracle can render it effectual to its proposed object. But there are higher considerations than those of mere finance, which call upon us instantly to abandon this sanguinary and unprofitable struggle. The utter impossibility of defending Portugal with the British army, aided by the Portuguese levies, is so apparent, that it is a mockery of common understanding to argue on the subject. In former instances when Portugal was attacked the forces of the enemy were divided. But now they are wholly unoccupied in the north, and may be directed with fatal and unerring effect against that country. Is there any man bold enough to assert that the British army in Portugal aided by the native force maintained by our subsidies, will be sufficient to resist such an attack? What reliance can be placed on this subsidiary force unpractised in the operations of war and wholly ignorant of military discipline, except what they may pick up from their British officers? That Portugal can be defended by such a force is a thing absolutely impossible. If our troops do not take refuge in their ships

before six months is over not a British soldier will remain in the Peninsula except as a prisoner of war.

“Has any thing been done to rescue the Portuguese people from the miserable state of thralldom in which they have been kept by their Government, nobles, and priests, and to develop that ardent popular spirit from which alone history teaches us a vigorous national resistance is to be expected? Here has been a glorious opportunity for raising the Portuguese nation from that wretchedness and degraded condition to which centuries of mental ignorance and civil oppression have reduced them. Here was a task worthy of the greatest statesmen, suited to a wise and liberal policy—to an enlarged and generous spirit—to the free institutions of a free Government. Nothing has been done with this view: the Portuguese are in as degraded a state as when the French eagles first approached the towers of Lisbon. Was it possible to expect a national spirit to arise when nothing was done to elicit it? And without such a spirit among the people, was it not, if possible, more hopeless than from other views to expect that any successful resistance could be made?”

“The Portuguese levies, upon whom so much reliance is placed, might in time, perhaps, hereafter become good soldiers, and be capable of acting with regular troops. But when the corruption, weakness, and imbecility of the Government are taken into view, every one must be convinced of the total impossibility of obtaining any native force capable of active co-operation with the British army. What assistance have we ever obtained from the Spanish armies, notwithstanding the high-sounding promises with which they have deluded the English troops into their territories? To expect any thing better from the Portuguese, is to put all experience at defiance. They may be useful as light troops, but cannot act with regular soldiers. Portugal, instead of being defensible from its mountains, is perhaps the most indefensible country in Europe. The experience not merely of the last seventeen years, but of the last few months, have amply demonstrated the total inefficacy of mountain ranges as a barrier against the vast forces and bold tactics of modern war. What defence has the Sierra Morena proved against the invasion of Soult? It is not by any such defences that Portugal is to be saved from the fate which has overtaken all the military monarchies of Europe. Disguise it as you will, the real question at issue is, whether the army at this moment in Portugal is to be sacrificed, as those under Sir John Moore and Lord Chatham have been, and unless the House intervenes, from a just sense of its own duty not less than of the national honour, disasters yet greater than either of these, and probably irreparable, await the British empire.

“Our victories are perpetually held up as monuments of our eternal glory, and Maida, Corunna, Vimeira, and Talavera, are everlastingly referred to as the theme of undying congratulation. But what have any of these boasted triumphs done for the people of the country where they were won, or for the general issue of the war? Maida handed over the Neapolitans to the tender mercies of an irritated and cruel enemy, Corunna sacrificed Moore only to deliver over Galicia to the Gallic armies, Vimeira was immediately followed by the disgraceful convention of Cintra, and Talavera was at best but an exhibition of rash confidence and victorious temerity. Honours have been conferred upon Sir Arthur Wellesley, for whom and for his country it would have been much more honourable if he had never changed his name. His conduct in Spain seemed the result of infatuation. After defeating Soult, he recrossed the Douro to form a junction with Cuesta, and when that was effected he remained unaccountably inactive, till Soult was so far recovered

as to be able to paralyse all his efforts, by descending into his rear after the battle of Talavera, and when forced to retreat, he retired to an unhealthy province at an unhealthy season, where he remained some months till his army had lost a third of its amount from malaria fever. If these are the consequences of your triumphs, what may be anticipated from your defeats (1)?”

Answer by
Lord Wellesley and
Liverpool.

To these arguments it was replied by Lord Wellesley, Lord Liverpool, and Mr Perceval—“The arrangements now proposed, proceed on the same principles with the whole efforts hitherto made and sanctioned by large majorities in both Houses of Parliament. What has hitherto occurred to induce us to swerve from this course, or depart from those principles which have invariably influenced our alliance with the peninsular kingdoms to the present hour? The royal message proposes to take thirty thousand Portuguese into British pay. Has not such a course been strenuously recommended by Mr Fox and Mr Windham, when Portugal was endangered, when they were in power in 1806? Why are we to be now called upon to depart from this policy, adopted by our greatest statesmen of all parties; to abandon Portugal to her fate at the very time when she is making the greatest efforts to avert subjugation? What advantage is to be gained from thus casting over our counsels the hue of despair? Are we to tell our allies that the hour of their fate has arrived; that all attempts to assist them are in vain, and that they must bow the neck and submit to the yoke of a merciless invader? That, indeed, would be to strew the conqueror's path with flowers to prepare the way for his triumphal march to the throne of the two kingdoms. Is it for this that so much treasure has been expended, so much blood has been shed? The spirit of the Spanish people is still excellent, their resources are far from exhausted: those of Portugal are untouched; our gallant army has never yet sustained a defeat; and is this the time to retire with disgrace from the contest? Will he who never risks a defeat ever gain a victory? Let us not, therefore come to any resolution which can countenance Portugal in relaxing her exertions, or justify Spain in considering her condition hopeless. And yet what other result could be anticipated if we were now to withdraw from the Peninsula before Portugal is so much as invaded, or the shock of war has even come upon us?

“The circumstances under which the war has commenced in the Peninsula, form a glorious contrast to those that pervade all the other nations of the continent. Spain was the first country that exhibited the example of a general rising of its population against the invasion and usurpation of the French ruler. In other countries he has been opposed by the armies alone; and, when they were overwhelmed, the states were conquered. But in Spain the resistance has proceeded from the whole people; and the hopes founded on their efforts are not to be dashed to the ground by the disasters of two or three campaigns. The country presents, beyond any other, physical advantages for such a stubborn system of warfare from the vast desert or rocky tracts and numerous mountain ridges with which it abounds; while the history and character of the people afford room for well-grounded hopes, that they will not in such a contest belie the character which they acquired in the Moorish wars. No point can be imagined so favourable for the *place d'armes* of the British force as the Tagus, lying as it does on the flank of the enemy's communications, and in such a position as to afford a

central point, equally adapted for secure defence or offensive operations

“ If the defence of Portugal is really of that desperate character which is represented, let a motion be brought forward at once to abandon that country to its fate. Will the gentlemen opposite support such a motion, and thereby sacrifice at once all the blood and treasure which have been expended in defence of the Peninsula? Will they bring invasion home at once to our own doors? Have we gained nothing by the contest in its bloody fields? Is it nothing to have maintained a doubtful struggle with the conqueror of continental Europe for so long a period, to have stood the tide of conquest heretofore, so fearfully rapid, and to be able to say that still, in the third year of the war, our standards wave in undiminished security over the towers of Lisbon? We have gained that which is at once more honourable and more precious than empty laurels, the affection and confidence of the people both in Portugal and Spain, affection so great, that there is not a want of the British soldier's in the former country that is not instantly and gratuitously supplied, confidence so unbounded, that the Government of the latter have offered to put their fleet at the disposal of the British Admiral. War has its chances and its reverses as well as its glories we cannot gain the latter if we shun the former; but surely never did nation win a brighter garland than England has done during the Peninsular contest, and never was nation bound by stronger ties to support a people who with such heroic resolution have, during three years, borne the whole weight of Napoléon's military power (1) ”

“ Is it ungenerous to represent the whole people of the Peninsula as having achieved nothing worthy of memory. Have the defenders of Saragossa and Gerona no title to the admiration of posterity? Where else have three hundred thousand Frenchmen been constantly engaged in active warfare for three years, without having yet effected its subjugation? True, Spaniards have been often defeated; true, their chief provinces have been overrun, but after every defeat fresh armies have sprung up, and all history cannot produce an example of a more heroic resistance than this ‘ degraded ’ people have opposed to the invader. Nor has our co-operation been in time past unavailing, nor will it prove in time to come fruitless. Sir John Moore's advance arrested the conquest of the south of Spain, and postponed for more than a year the irruption into the Andalusian provinces. Lord Wellington's attack on Soult expelled the French from Portugal, and restored Galicia and Asturias, with the fleet at the Ferrol, to the patriot arms, his advance towards Madrid has drawn all the disposable forces of the enemy into the plains of La Mancha, and at once protected Portugal and given a breathing time to Spain. The British army, headed by Wellington, and supported by forty thousand Portuguese, directed by British officers, is not yet expelled from the Peninsula, and it will require no ordinary force of the enemy to dislodge such a body from their strongholds near Lisbon (2) ”

Upon this debate Parliament supported Ministers in their resolution to continue the war, in the Lords by a majority of 30⁵, the numbers being 124 to 94; and in the Commons by a majority of 96, the numbers being 265 to 167 (5).

When the Eastern sage was desired by a victorious Sultan to give him an inscription for a ring, which should, in a few words, convey the advice best calculated to moderate the triumph of prosperous, and diminish the depres-

Reflections on this doctrine and the conduct of the Opposition on the subject.

sion of adverse fortune, he wrote the line—"And this too shall pass away." Perhaps it is impossible to find words more universally descriptive of human affairs, or of that unceasing change from evil to good, and from good to evil, which, alike in private life and the concerns of nations, appears to be the destiny of all sublunary things.

It is from inattention to this perpetual revolution, not of fortune, but of moral causes controlling it, that the greatest political calamities, and most of the greatest political errors, in every age, have been owing. The Opposition in the earlier part of Wellington's career, were subject to their full share of this general weakness. They thought that things would continue permanently as they then were—that Napoleon's greatness was to be as durable as it had been irresistible; and that the experienced inability of any European power to combat his land forces, had, for the lifetime of the whole existing generation at least, established his empire beyond the possibility of overthrow. Judging from the past experience of that conqueror, there can be no doubt that these views were founded in reason: and yet the world was on the eve of the campaign of Salamanca and the Moscow retreat. The error of the Opposition consisted in their insensibility to the change which was supervening in human affairs, and to the new principles of vigour on the one side and weakness on the other, which were rising into action from the effects of the very triumphs and reverses which appeared to have indelibly fixed the destiny of human affairs. The perception of such a change, when going forward, is the highest effort of political wisdom; it is the power of discerning it, which, in every important crisis, distinguishes the great from the second rate statesman—the hero from the temporizing ruler of mankind. Alone of all his contemporaries, Wellington saw and acted on this conviction, the Government at home, gifted with less penetration, or fewer opportunities of observation, were far from sharing in his confidence as to the result, though they had the magnanimity to persevere in their course, even when they had little hopes of its success. The glorious triumph to which it led, and the enduring reward which their constancy obtained, adds another to the many instances which history affords, where heroism of conduct has supplied the want of intellectual acuteness, and where the ancient maxim has been found good, that "true wisdom cometh from the heart."

Their long insensibility to the glory of England.

The prolonged, obstinate, and most formidable resistance which the Whig party made to the prosecution of the Spanish war in its earlier stages, was an error of judgment, which only showed that they were not gifted with the highest political quality,—that of seeing futurity through the shadows of present events. But when the tide had obviously turned—when success had in a durable way crowned the British arms, and the waves of Gallic ambition had permanently receded from the rocks of Torres Vedras—their conduct was of a more reprehensible cast; it became the fit subject of moral censure. With slow and unwilling steps they receded from their favourite position as to the impossibility of defending Portugal: they still heaped abuse upon Ministers for their conduct in the contest, although it was chiefly blameable, in time past, from having been too much framed on their advice; it was a cold and reluctant assent which they yielded even to the merits of Wellington himself. This insensibility to national glory, when it interfered with party ambition—this jealousy of individual greatness when it obscured party renown—proved fatal to their hopes of accession to power during the lifetime of the generation which had grown up to manhood in the revolutionary war. Doubtless it is the highest effort of patriotic virtue to exult at successes which are to confirm an adverse party in power,—doubtless no

small share of magnanimity is required to concede merit to an opponent who is withering the hopes of individual elevation. But nations, from men acting on the great theatre of the world, have a right to expect such disinterestedness; it is the wisest course in the end even for themselves, and experience has proved that in every age really generous hearts are capable of such conduct. When Wellington lay at Elvas, in May 1811, he received a letter from Mr. Whitbread, retracting, in the handsomest manner, his former strictures, and ascribing them, probably with perfect justice, to the imperfect information on which his judgment had been founded. The English general expressed himself highly gratified, as well he might, with this generous conduct (1), but it does not appear that so noble an example was followed by any other of the Whig leaders; and on this occasion unhappily, as on many others, the exception proves the rule.

Having determined to prosecute the war in the Peninsula with undiminished vigour, Parliament voted to Ministers ample supplies in the year 1811 for its prosecution. No less than £19,540,000 was voted for the navy, and £25,869,000 for the army, besides £4,333,000 for the ordnance, and £2,700,000 for the support of the Portuguese forces. The permanent taxes amounted to £58,252,000, and the war yielded above £23,000,000 and the loan was £16,636,000, including £4,500,000 for the service of Ireland. The total Ways and Means raised on account of Great Britain were £80,600,000, and £10,509,000 on account of Ireland—in all £90,909,000. This income, immense as it was, fell short of the expenditure of the United Kingdom, which that year reached £92,194,000. The army numbered 220,000 soldiers in the regular forces, 81,000 militia, besides 340,000 local militia; and the navy exhibited 107 ships of the line in commission, besides 119 frigates. The total vessels of war belonging to the United Kingdom were 1019, of which no less than 240 were of the line (2).

(1) "I was most highly gratified by your letter of the 29th April, received last night, and I beg to return you my thanks for the mode in which you have taken the trouble to inform me of the favourable change of your opinion respecting affairs in this country. I acknowledge that I was much concerned to find that persons for whom I entertained the highest respect, and whose opinions were likely to have great weight in England and throughout Europe, had delivered opinions, erroneous as I

thought, respecting things in this country, and I prized their judgments so highly, that, being certain of the error of the opinion which they delivered, I was induced to ascribe their conduct to the excess of the spirit of party. I am highly gratified by the approbation of yourself and others, and it gives me still more pleasure to be convinced that such men could not be unjust towards an officer in the service of the country abroad."—WELLINGTON to SAUNDERS WHITEHEAD, Esq., 23d May 1811.—GLAW, vii 585

1812,

*Budget, and
naval and
military
services for
1812.*

The supplies voted for the succeeding year, 1812, were still greater, and kept pace with the increasing magnitude of the contest which the campaign of Salamanca had commenced, and the deliverance of the Peninsula in good earnest was attempted. The net produce of the permanent taxes in that year was no less than £40,000,000, of the war £20,000,000, in all £60,000,000 and £29,268,000 was raised by loan, including £4,500,000 for the service of Ireland, and £2,500,000 for that of the East India Company, guaranteed by Government. The public expenditure was on a proportionate scale the sums expended for the navy were £20,500,000, for the army £23,000,000, besides £4,22,000 for the ordnance the loans to Portugal, Spain, Sweden, Sicily, and Russia, amounted to £5,318,000, while the interest of the national debt amounted to £23,121,000; and still no less than £13,482,000 was applied to the sinking fund. The navy, during this year, consisted of 778 ships of all sizes, of which 250 were of the line, and 102 line-of-battle ships, and 131 frigates in commission. The army numbered 227,000 regular soldiers under its banners, besides 70,000 regular, and 355,000 local militia. It seemed as if, as the contest continued and the scale on which it was conducted was enlarged, the resources of the empire so far from declining, widely expanded (1)

*Second
decennial
census of
the People*

The second decennial census of the population took place in the close of 1811, and was reported to Parliament in January 1812. It exhibited an increase of 1,500,000 since the former number in 1801, being at the rate of about 13½ per cent annually over the whole empire. So great an augmentation, considering the protracted and bloody hostilities in which the nation had so long been engaged in every quarter of the globe and the heavy drain on the male population both for foreign and colonial service, *justly excited the surprise and called forth the congratulation of Parliament and the nation; and this important fact was then for the first time elicited, that war, though generally considered as the scourge of the species,*

failure of
the negotia-
tion was
owing to
Napoleon.

No other testimony than that of Napoléon himself is requisite to demonstrate the unreasonable nature of the pretension on his part, which led to this melancholy result. "Supposing," said he, in speaking of the comparative merit of the troops composing the French and allied armies previous to the battle of Waterloo, "that one English soldier was to be placed against one French, you would require two Prussian, or Dutch, or soldiers of the Confederation to counterbalance one Frenchman (1)." Now, if two Prussian or German regular soldiers were required to counterbalance one Englishman or Frenchman, unquestionably four Spanish or Portuguese undisciplined recruits would have been barely sufficient for a similar counterpoise. Nothing, therefore, could have been more unreasonable than the demand on the part of the French Government, which ultimately proved fatal to the negotiation, yet so much was Napoléon blinded by egotistical feelings on this subject, that he made the conduct of the English Cabinet in the transaction a bitter subject of complaint to the latest hour of his life; and actually had the address to persuade his troops that their long detention in English prisons was the fault of the British Government, when it was entirely his own, and he had left them to starve there, which would have been their fate but for the humane interposition of the very Government which in this transaction he was loading with obloquy (2).

Description of
and vast
importance
of Java

The other memorable event of the period, apart from the never-ending maze of European politics, was the successful expedition undertaken against Java in the close of 1811, and the capture of the *last colonial possession* of the French empire. This noble island, in itself a kingdom, is no less than 640 miles long, from 80 to 140 broad, and contains above two millions of inhabitants. Its surface, agreeably diversified by hill and dale, and rising in the interior into lofty mountains, presents situations adapted for almost every variety of vegetable production, whether in the temperate or torrid zones, while its admirable situation in the centre of the Indian Archipelago, midway between India and China pointed it out as the emporium destined by nature for almost the whole of the lucrative Eastern commerce. So rich is its soil, so varied its capabilities, that it now produces sixty thousand tons of sugar, and five million pounds of pepper for exportation annually, besides furnishing rice and other grains for the support of its numerous inhabitants, and yielding a lucrative commerce of cinnamon, nutmeg, and other spices, to its European masters. It was early acquired, and had been for centuries in the hands of the Dutch, who, carrying to the East the habits and partialities of their own swampy territory, built their capital, Batavia, in a low unhealthy situation, and intersected it with canals, which rendered it doubly dangerous. Such, however, are the advantages of its situation, and of its noble harbour, esteemed the finest in the Indian Archipelago, that, notwithstanding its pestilential atmosphere, it contains nearly

(1) 9th Book of Nap. Mem 61

(2) Bigu ix 145, 146 Parl Deb xx 623, 631 Ann Reg 1811, 76 Las Cases, vii 39, 40

Napoléon's account of these transactions was as follows — "The English had infinitely more French than I had English prisoners. I knew well that the moment they had got back their own, they would have discovered some pretext for carrying the exchange no farther, and my poor French would have remained for ever in the hulks. I admitted, therefore, that I had much fewer English than they had French prisoners, but then I had a great number of Spanish and Portuguese, and by taking them into account I had a mass of prisoners, in all, conside-

rably greater than theirs. I offered therefore to exchange the whole against the whole. This proposition at first disconcerted them, but at length they agreed to it. But I had my eye on every thing. I saw clearly that if they began by exchanging an Englishman against a Frenchman, as soon as they got back their own they would have brought forward something to stop the exchange. I insisted therefore that three thousand Frenchmen should at once be exchanged against one thousand English and two thousand Portuguese and Spaniards. They refused this, and so the negotiation broke off." — LAS CASES, vii, 39, 40.

two hundred thousand inhabitants. But the cool breezes on the heights in its vicinity, offered many salubrious situations which the eager European thirst for gold has hitherto unaccountably neglected, while the lofty hills and pastoral valleys in the interior present numerous spots for human abode, where the burning rays of the sun are tempered by the fresh-blown mountain air, and the glowing skies of the east shed their radiance over the rich foliage and green slopes of European scenery (1).

Expedition against the island, and its capture

This splendid island was the last possession beyond the seas which remained to the French empire, of which it had become a part upon the incorporation of Holland in 1810. Its reduction had long been an object of ambition to the British Government, and in 1802 the preparations for the expedition were so far advanced that the command was offered to Sir Arthur Wellesley, then Governor of Mysore, by whom it was refused, as interfering with the important duties of that responsible situation. The Mahratta war which soon after broke out, with its immediate consequences, the contest with Holkar, involved the Indian Government in such a maze of hostility, and so seriously embarrassed their finances, that it was not till 1819 that the project could be seriously revived. It was then, however, set about in good earnest and, to give additional *éclat* to the expedition, Lord Minto, the Governor-general of India, resolved to accompany it in person.

Dec. 6, 1819. In the close of 1810, the Isle of Franco surrendered to a combined naval and military expedition from Bombay, and the enemy was completely rooted out of his possessions in the Indian ocean. Those in the Eastern archipelago were the next object of attack. The islands of Amboyna and Banda having been reduced by the British arms, a powerful expedition against Java was fitted out at Madras in March, consisting of four British and five native regiments of infantry, with a regiment of horse and a considerable train of artillery; in all, ten thousand five hundred men, under the command of the gallant Sir Samuel Auchmuty. The expedition effected a landing at the village of Chillingching, about twelve miles to the east of Batavia, in the beginning of August. The principal force of the enemy, which consisted of about ten thousand men, was collected in the intrenched camp of Fort CORNELIUS, a position strongly fortified by art and nature, and defended by numerous redoubts, surrounded by strong palisades, and mounting two hundred and fifty pieces of cannon (2).

Scouring of the outworks of Fort Bat.

The chief force of the French and Dutch was, in this formidable position, under their commander General Jansens; but a considerable detachment, about three thousand strong, occupied a more advanced post, also strengthened by field-works, two miles in front of the main body. Neither of these positions, however, commanded the road to the capital which was accordingly occupied without opposition a few days after the landing; and from thence the troops advanced against the enemy's advanced work, and drove them from it with great spirit, under shelter of the cannon of Fort Cornelius; the grenadier company of the 76th, as in every Eastern field of fame, heading the attack. When the victorious troops, however, came in sight of that stronghold, they were checked by the fire from its outworks, and the boldest paused at the sight of the difficulties which they had to encounter. The enemy, strongly intrenched occupied a position between the great river Jacatra and the Slangen, an artificial water

(1) Malte-Brun, liv. 413, 415. *Voyage*, Jan. 61. Indes Orient. 43.

course, neither of which was fordable. The front of this position, thus secured on either flank from attack, was covered by a deep ditch strongly palisadoed, within which were seven large redoubts, all planted with a formidable array of heavy artillery, garrisoned by a body of regular troops, much superior to the attacking force. Batteries were speedily raised opposite to these fortifications, which, though armed with guns inferior to those of the enemy both in number and calibre, shortly did great execution from the superior rapidity and precision of their fire. The season, however, was too far advanced, and the heat too violent to admit of regular approaches, and, notwithstanding the strength of the intrenched camp, the English general resolved on an assault, which was fixed for daybreak on the 26th (1).

At midnight on the 25th, the assaulting columns moved from the trenches under the command of a most gallant and experienced officer, Colonel Gillespie. The right, under his own immediate direction and that of Colonel Gibbs, was directed against the enemy's redoubts beyond the Sloken, and had orders, if they succeeded in carrying them, to endeavour to force their way across the bridge which united that outwork to the main intrenchments, the left, under Colonel M'Leod, was to follow a path on the bank of the Jacatra, and commence an attack on that side when the firing was heard on the other flank, while the centre, under General Wetherall, was to endeavour, in the general confusion, to force its way across the ditch in front. Notwithstanding the early hour and secrecy of the attack, the enemy were on the alert, and under arms at all points, but the devoted gallantry of the British troops, aided by the unflinching steadiness of the sepoys, overcame every obstacle. All the attacks proved successful. Colonel Gillespie, after a long detour through an intricate country, came on the redoubt on the right, stormed it in an instant, notwithstanding a tremendous fire of grape and musketry; and, passing the bridge with the fugitives, also carried the redoubt next in order, though defended in the most obstinate manner by General Jansens in person. The British column then divided into two, one under Gillespie himself, the other under Colonel Gibbs, supported by Colonel Wood, at the head of the heroic 78th, which, though long opposed, now burst in with loud shouts in the front of the lines, and successively carried the works on either hand while Colonel M'Leod, on the extreme left, also forced his way into the redoubt which rested on the Jacatra, and gloriously fell in the moment of victory. With equal judgment and valour, Gillespie lost not a moment in leading on the victorious troops to the attack of the enemy's park of artillery in the rear, which, with all the troops that defended it, fell into the hands of the conqueror. The victory was complete, though the severe loss sustained by the British, amounting to 872 killed and wounded, showed how obstinately it had been contested. The carnage of the enemy within the works was very great, above a thousand were buried on the field, besides multitudes cut down in the pursuit, and five thousand prisoners taken. No less than four hundred and thirty pieces of cannon were found in the intrenched camp, of which two hundred and eighty were mounted on the batteries and redoubts the total pieces taken then, and in the citadel of Batavia and the outworks previously stormed, amounted to the enormous number of 264 brass, and 304 iron guns and mortars, besides ammunition and military stores to an incalculable amount (2).

Surrender
of all Java
Sept. 26

This splendid exploit was soon after followed by the capitulation of the remaining troops who had escaped with General Jansens

(1) Sir S. Auchmuty's Desp. Ann. Reg. 1812, 226. App. to Chron. James vi. 32, 33.

(2) Sir S. Auchmuty's Desp. Ann. Reg. 1812. App. to Chron. 226, 236, James, vi. 24.

from the rout at Fort Cornelius, and who, notwithstanding all his efforts, found it impracticable to prolong his defence. The whole of this noble island thus fell under the dominion of the British, (which, it must always be regretted, was relinquished by a misplaced generosity at a future time;) and Lord Minto said with great, but not unfounded pride, in his despatches to the British Government on the occasion, that "now the French flag was nowhere to be seen flying from Cape Comorin to Cape Horn (1) "

Reflections on the total destruction of the French colonial empire.

Such was the termination of the maritime war between England and Napoléon; thus was extinguished THE LAST REMNANT of the colonial empire of France. There is something solemn and apparently providential in the simultaneous march of these great powers to universal dominion on their respective elements, and in the establishment of the colonial empire of Great Britain on a scale of grandeur which embraced the whole earth in its arms. No such result could have been anticipated at the commencement of the contest still less could it have been hoped for amidst the multiplied disasters with which its progress was attended. The maritime forces of England and France were very nearly matched at the opening of the war united to those of Spain, the latter were superior Gibraltar was only re victualled during the American war by the nautical skill of Lord Howe; and Plymouth beheld, for the first time in English history, its harbour blockaded by the triumphant squadrons of France and Spain. The colonial empire of France in 1792, though not equal, was a fair rival to that of England. In the West Indies, she possessed St. Domingo, an island then yielding colonial produce equal to that of all the British West India islands put together at this time (2); in the East, her flag or that of her allies waved over the Cape of Good Hope, the Isle of Bourbon, the Isle of France, Java, and the Malaccas, midway stations apparently set down for the transit of the commerce of the East to the European shores; while on the continent of Hindostan, her influence almost equalled that of England herself, and on the banks of the Jumna a force was organized, under French officers, superior to any which British energy could bring to bear against it (3). What was it, then, which subverted this vast and growing colonial empire; which gave to the arms of England, amidst continual European disasters, a succession of maritime triumphs, unparalleled in the days of Marlborough or Chatham; and led to the total destruction of the Asiatic and American possessions of France, at the very time when Napoléon's forces had acquired universal dominion on the continent of Europe? Evidently the French Revolution on the one hand, and the constancy of England on the other those mighty agents which at once dried up the maritime resources of the one country, and quadrupled the naval power of the other; which poured forth a host of ardent democrats on the plains of Europe, and sent forth the British fleets conquering and to conquer on the waves of the sea; which nursed in England the heroic spirit of Conservative freedom, and extricated in France the irresistible energy of democratic ambition.

(1) Ann. Reg. 1812. 168.

(2) It yielded £12,000,000 worth of colonial produce—the whole British islands in 1823 so only £22,000,000; and in 1828, in consequence of the emancipation of the slaves, it did not produce £17,000,000. The total West India produce of the British West India islands

	Value of the whole	Value of the islands
In 1828 was	221,700	61,700
1829	178,200	42,400
Falling off	91,500	19,300

(3) They had 22,000 infantry and 270 guns, all commanded by French officers, and trained in the European method. *See also* in 74

Even if the contest had terminated at this point, the fortunes of the British empire, though overshadowed at the moment by the grandeur of Napoléon's continental victories, must now appear to the reflecting eye to have been on the ascendant. England, by wresting from her rival all her colonial settlements, had made herself master of the fountains of the human race. In vain France recounted the fields of European fame, and pointed to the world filled with her renown, the Continent subjugated by her arms, it was the seats of ancient civilisation, the abode of departed greatness, which were thus subdued. Great Britain had cast her anchor in the waters of the emerging globe, her flag waved on the infant seats of civilisation, her seed was spreading over the future abodes of mankind. The conquest of the world which had been, however superior in present lustre, could never equal in durable effect the settlement of the world which was to be. There was to be found the ark which bore the fortunes of humanity, there the progenitors of the Greece, and the Rome, and the Europe yet to come, there the tongue which was to spread the glories of English genius and the pride of English descent as far as the waters of the ocean extend. But the contest was not to terminate here. The rival powers thus nursed to greatness on their respective elements, thus alike irresistible on the land and the sea, were now come into fierce and final collision. England was to launch her legions against France, and contend with her ancient rival on her own element for the palm of European ascendancy, the desperate struggle in Russia was to bring to a decisive issue the contest for the mastery of the ancient world. We are on the eve of greater changes than have yet been traced on the pages of this eventful history—fiercer passions are to be brought into collision than those which had yet stirred mankind in the strife; sacrifices greater recounted, glories brighter recorded, than had yet shed lustre on the human race.

Long, and to some uninteresting, as the preceding detail of the domestic transactions of Great Britain from 1810 to 1812 may appear, it will not to the reflecting reader be deemed misplaced even in the annals of European story. Amidst the multiplied scenes of carnage, the ceaseless streams of blood, which characterise the era of Napoléon, it is consolatory to linger on one spot of pacific disquisition. To the eye wearied with the constant mastery of nations by physical strength, it is refreshing to turn to one scene where mind still asserted its inherent superiority, and in moral causes was yet to be found the source of the power which was ultimately to rule mankind. Independent of the vast intrinsic importance of the questions which then agitated the British mind, and their obvious bearing upon the social interests which now are at stake in all the commercial communities of the globe, their influence on the contest which was then pending was immediate and decisive. The crisis of the war truly occurred in the British islands at this period. If any of the great questions then in dependence, had been decided in a different manner from what they actually were by the English Parliament, the issue of the war—the fate of the world, would have been changed. The accession of the Opposition to power when the restrictions upon the Prince Regent expired in 1812, the adoption by the House of Commons of the recommendations of the Bullion Committee, the abandonment by Government of the Peninsular contest, in pursuance of the strenuous arguments of their Parliamentary antagonists, would, any one of them, have speedily terminated the contest in favour of the French Emperor, crushed the rising spirit of Russia, extinguished the arm of England, and affected, by the destruction of

destiny of the human race. Not less than on the fields of Leipsic or Waterloo did the fortunes of mankind hang suspended in the balance during the debates on those momentous subjects; interests more vital, consequences more momentous than any that were contemplated by their authors, hung upon the lips of the orators, and quivered on the decisions of the statesmen. It is this which gives the debates of the British senate at this period their enduring interest. It is this which has rendered the chapel of St.-Stephen's the forum of the human race. The military glory of England may be outshone by the exploits of future states; her literary renown may be overshadowed by the greatness of subsequent genius; but the moral interest of her social contests, mirrored in the debates of Parliament, will never be surpassed; and to the end of time the speeches of her illustrious statesmen will be referred to as the faithful image of those antagonist powers which alternately obtain the mastery in human affairs, and on the due equipoise of which the present happiness, as well as future advancement, of the species is mainly dependent.

CHAPTER LXI.

PROCEEDINGS OF THE CORTES.—WAR IN SPAIN.

JANUARY 1810—FEBRUARY 1812.

ARGUMENT.

Singular mixture of good and evil in human affairs—Agency by which it is brought about—Ultimate effects of the Blockade of Cadiz—Vast consequences it has produced in the World—Regulations laid down for the Convocation of the Cortes—Enactments regarding its Passing of Laws—Character of the Population in Cadiz, and the Municipality within its walls—Persecution of the Members of the Central Junta—Circumstances which preceded and attended the Assembling of the Cortes—Its Election is based on Numbers, not Interests—Election of its Supplementary Members—Final Election of the Cortes itself—Its Opening, and early Proceedings—Proclaims the Sovereignty of the People—Fresh assumptions of Supreme Power by them—Decree on the Liberty of the Press—Appointment of a Committee to frame a Constitution—Their Heroic Conduct in holding out against France—And rigid adherence to the Romish Church—Principles of the Constitution of 1812—Powers of the King—Constitution of the Cortes—Its vast effect in stimulating Political Passion in the Peninsula—Manner in which the New Constitution was received in Spain—Wellington's clear Perception and curious Predictions on the effects of the Cortes and new Constitution—His still clearer Opinion on the Subject, after visiting Cadiz in spring 1813—Abortive attempt to effect the Liberation of Ferdinand VII—Military condition of the French in Spain, in Spring 1810—Napoléon's intentions as to Dismembering Spain at this period—Negotiation between him and Joseph for its Partition—Efforts of the Spanish Envoys to prevent it—Joseph in disgust at length Resigns the Crown—Terms of Accommodation between him and Napoléon—Prosperous Condition of the French at this period in Spain—Force assembled in Cadiz by the Allies—Spanish and British Forces in the Peninsula—Description of Cadiz—Arrival of the British Troops, and first Measures of Defence—Noble Defence of Matagorda by the British—Increased means of Defence accumulated in Cadiz itself—Description of the French lines round the city—Position of the French and Spanish Armies in Andalusia and Grenada—Operations in Catalonia, and preparations for the Siege of Tortosa—Forces and dispositions of the Spaniards in that Province—Macdonald's first Operations in Catalonia—Brilliant success of O'Donnell in the North of the Province—Repulse of Macdonald at Cardona, and his Retreat to Gerona—Suchet's exertions preparatory to the Siege of Tortosa—Commencement of the Siege—Description of that Fortress—Its Siege—Fall of the Place—Important consequences with which it was attended—Preparations for the Siege of Taragona—Renewed Vigour of the Catalonians in the War—Attempt to surprise Barcelona, and Capture of Figueras by them—Unsuccessful attempt of Campoverde to relieve the Place—Burning of Manresa and Action at that Place—Suchet's Reasons for Persisting in the Siege of Taragona—Description of that Fortress—Commencement of the Siege—Preparations for Storming of Fort Olivo—It is carried by storm—Vigorous preparations of the Spaniards for a protracted Defence—Progress of the Siege, and preparations of the Spaniards to Raise it—The Approaches are brought up to the Lower Town—It is carried by Assault—Fruitless Attempt to Raise the Siege, and Failure of Succours from England—Preparations for Storming the Upper Town—Its Success—Disgraceful Cruelty of the French to the Citizens—Immense Results of this Siege—Suchet's next Operations—Description of Mont Serrat—Storming of its Convent—Blockade and Surrender of Figueras—Invasion of Valencia by Suchet, and Preparations for its Defence by the Spaniards—Description of Saguntum—Siege and Unsuccessful Assault of that Fort—A second Assault is also Defeated—Perilous Situation of Suchet after this repulse—Successes of the Guerillas in Aragon—Advance of Blake to Raise the Siege—Battle of Saguntum—Delay of Suchet there, till he received reinforcements—He at length approaches and invests Valencia—The Spaniards are defeated and thrown back into the Town—Siege and Fall of Valencia—Immense Results of this Conquest—Complete Subjugation of the Province—Honours and Rewards bestowed on Suchet and his troops—Reflections on these Campaigns of Suchet—Painful Feelings on the Conduct of England in this part of Spain—Causes of the Weakness of the British Government at this period—Insecure Tenure Ministers had of their Offices—Its Principal Cause—Surprising Result of these Circumstances on the Ultimate Fate of Napoléon

So intimately blended together are the links in the great chain of human affairs, and so mysterious the bond which unites in this sublunary state the co-existent principles of good and evil, that it is impossible to find any period

*Antagonist
power of
good and
evil in
human
affairs.*

where these antagonist powers have not been at work, and where unseen causes have not been preparing a vital change in the fate of nations or the fortunes of mankind : In the darkest moments of the French Revolution, the seeds of revived religion and renewed loyalty were widely scattered among mankind, in the most depressing period of the conquest of Napoleon, the principles of resistance were acquiring increased energy, and suffering was preparing in silence the renovation of the world. The period we are now considering was no exception to the general law. At the moment when the constancy of England and the heroism of Russia were preparing the emancipation of the Continent from French oppression, and the delusions of democracy were disappearing in northern Europe before the experience of its effects, and about to yield to the aroused indignation of mankind, a new principle of evil was springing up in the last asylum of European independence, destined to revive in another quarter the worn-out flames, and perpetuate a frightful civil war for a quarter of a century in the Spanish peninsula, and while Great Britain was securely laying the foundations of a colonial empire, which was to embrace the earth in its grasp and civilize mankind by its wisdom, the vast Indian possessions of the Spanish monarchy were breaking off from the parent state, and the frantic passions of ill regulated freedom were preparing desolation and ruin for the boundless realms of South American independence.

*Agency by
which those
in brought
about.*

That there is no rose without its thorn, and no thorn without its rose, is a maxim in private life which the concurring voice of all ages has proclaimed, and every man's experience who has seen much of human affairs must probably have confirmed. The law of nature seems to be of universal application and unceasing activity; for we can distinctly trace its agency in every transaction, whether individual or political, in the page of history or in common life around us, and perpetually witness its effects alike in the trials of individuals and the discipline of nations. In the very events which at one period are most the objects of our desire, whether as communities or private men, we can subsequently trace the unobserved causes of our distresses; in the evils which we at the time regarded as altogether overwhelming, we afterwards discern with thankfulness the secret springs of our blessings or improvement. Inexperience or infidelity alone will discover in this mysterious system the blind operations of chance, or the antagonist agency of equal and opposing supreme powers. Reason equally with revelation tells us, that such is necessarily the condition of a world composed of free agents in a state of moral probation; that if the good principles alone were brought into action, it would be heaven—if the bad hell; and that the mixed condition of mankind, and the perpetual agency of the causes of evil amidst good and of good amidst evil, necessarily arise from that inherent tendency to wickedness as well as aids to virtue, which we have inherited from our first parents, or derived from revelation. The pride of intellect, the visions of philanthropy, will to the end of time chase against this simple truth, and contend, on the principle of unlimited perfectibility, for a relaxation of every restraint, except what itself imposes, on human action. But it is the only principle which will ever afford any solution of the otherwise inexplicable maze of human affairs. Experience the great test of truth, is perpetually demonstrating its universal application. Suffering, wide-spread and inevitable never fails to chastise any attempt to elude its obligations—and the more widely that one generation deviates from it in their actions, the more closely will the next adhere to it in their opinions.

Ultimate effects of the blockade of Cadiz. Never was the truth of these principles more clearly evinced than in the contrast between the immediate and ultimate results which followed the arrival of the French before Cadiz in 1810. Europe with admiration beheld the able and energetic march of the Duke of Albuquerque, which, outstripping the celerity of the French legions, preserved the last bulwark of Spanish independence for the arms of freedom (1). The subsequent assembly of the Cortes within its impregnable ramparts, promised to give that unity to the Spanish operations of which they had hitherto so grievously felt the want, at the same time that it presented a national authority with which other powers might treat, in their negotiations for the furtherance of the common cause, while the English people, variously affected by philanthropic ardour or mercantile interest, beheld with undisguised satisfaction the progressive emancipation of the South American colonies, and fondly anticipated, some a renovation of the Southern Hemisphere, others a boundless extension of the field for British speculation, in the regenerated states of the New World. Yet from these very events, so fortunate at the moment in their immediate effects, so apparently auspicious in their remote consequences, have arisen results to the last degree pernicious, both to the Spanish peninsula and the British empire

Vast effects it has produced in the world. The establishment of the Cortes within the walls of Cadiz brought it under the direct influence of the democratic mob of a great and corrupted city - the revolutionary passions revived with the immediate subjection of supreme power to their control, and the constitution of 1812 bequeathed to the Spanish peninsula the fatal gift of a system of government, alike impracticable for the country at large, and seducing to the urban constituencies, for whose interest it was intended. The severance of the Spanish colonies from the parent state, to which the mercantile jealousy of the Cadiz Government speedily gave rise, spread the revolutionary passions through a people unfit, either from their habits, intelligence, or descent, for the blessings of freedom - the bright dawn of their independence was speedily overcast with clouds, and the now wasted and distracted South American states, the successive prey of a race of tyrants too numerous for history to record, remain an enduring monument of the utter impracticability of applying to a Roman Catholic population and Celtic race, those institutions which are overspreading the world with the Protestant faith and the Anglo-Saxon descent. Nor has England suffered less in this audacious attempt to war against the character of men and the laws of nature, consequences, to the last degree disastrous, have flowed both to her people and her constitution from the independence of the Spanish colonies, in promoting which she took so prominent a share - her wealth, guided by deluded, or the prey of unprincipled hands, has been absorbed to an unparalleled extent in South American speculations. The loss of fifty millions, lent to their faithless insolvent republics, or reckless and improvident companies, brought on the great commercial crisis of 1825, the entire abandonment of the South American mines, from the bankruptcy of those who worked them, altered by fully a third the value of money over the globe, and, joined to the suppression of small notes in Great Britain by the bill of 1826, added a third to the whole debt, public and private, of the British empire; and, from the general distress and suffering thence arising, has sprung that wide-spread discontent and chaos of unanimity in favour of some organic change, which in its ultimate effects altered the old English constitution. Out of the walls of Cadiz, in 1810

(1) *Ante*, vii 409

and 1811, has issued the cloud which now overspreads the world the fierce passions which have ever since drenched the Peninsula with blood; the guilty ambition, which has halved in numbers, and almost reduced to barbarism, the South American population, the restless energy which overthrew the constitutional freedom of the restoration in France; the turbulent spirit which overturned the tempered aristocracy and government of property in England

*Regulations
lead down
for the con-
vocation of
the Cortes,
Jan. 1810.*

Little dreaming of the momentous consequences dependent on their actions, the Spanish authorities in the Isle of Leon, animated with unconquerable resolution, and a spirit of resistance which seemed to augment with the straits to which they were reduced,

proceeded to the formation of a Cortes for the regulation of the constitution. It has been already mentioned that the Central Junta, after their expulsion from Seville in January 1810, had passed a decree, vesting the interim go-

vernment in a regency of six persons, which was proclaimed in Cadiz on the 31st, and laying down the principles by which the convocation of the Cortes was to be regulated (1). These were of the utmost importance, and materially influenced the character of the subsequent proceedings. By the first, the ancient constitution of that body was altered, and, instead of assembling as of old in three chambers, they were to meet in two the one called the Popular, the other the Dignified Assembly. A still more important enactment was passed, relative to the mode of supplying the members of such provinces of the monarchy as, from their distance from the place of assembly, or from being in the possession of the enemy, could not assemble for the purpose of choosing representatives. It was provided, with a view to the choice of deputies to represent those provinces of America or Asia which could not, by reason of their distance, be summoned in time, that the regency should appoint an electoral junta, composed of six persons, natives of those regions, who should choose, by a double ballot, twenty-six deputies out of a list of persons, also natives of the same districts, who happened to be at that time in Spain, made up by a committee of the Cortes. In like manner, to fill up the representation of the provinces in the occupation of the enemy, another electoral junta was appointed by the regency, composed of six other individuals, natives of those districts, who were to choose, by a double ballot, four members for each of such provinces out of a list furnished by the Cortes. The provinces, in regard to which representatives were to be chosen in this manner, comprised the whole of Spain, with the exception of Galicia, Asturias, and part of Catalonia; so that the great majority of the Cortes was necessarily composed of persons elected in the city of Cadiz; and the powers of the assembly thus elected were sufficiently extensive, for they embraced a general remodelling of the whole laws and constitutions of the monarchy (2).

*Assemblies
regarding
the passing
of laws
by the Cortes.*

With regard to the legislative business of the assembly, it was provided that all propositions for changes in the laws should be submitted, in the first instance, to the two chambers, and, if passed by them, be sent up to the regency, in place of the crown, for approval; but the regency might, in the first instance, refuse their consent, and remit the bill to the chambers for reconsideration. If, however, it was then approved by two-thirds of both houses, it was to return to the regency, who were bound to adhibit their signature to it within the space of three days, on the expiry of which it became law, with or without the royal sanction (3).

Character
of the popu-
lation in
Cadiz, and
the munici-
pality
within its
walls
Jan 29

Strongly as these fundamental provisions savoured of popular restrictions on the royal authority, their effect became doubly powerful from the circumstances of the city, and character of the population, in which the sittings of the Cortes took place. The Junta, immediately before the resignation of their authority passed two resolutions, by the first of which the liberty of the press was established in the most ample manner during the whole sitting of the Cortes, and in the place of its deliberations, while, by the second, none of their own members were declared eligible for the approaching national convention. After their resignation, and before the assembly of the Cortes, the regency of six, to whom the supreme authority had been confided, insensibly sunk into insignificance, and the Municipal Junta of Cadiz, elected by the whole householders of the city, rapidly rose to the highest influence and consideration. It may easily be conceived what was the character of a municipality elected, in a great commercial city, by universal household suffrage in a moment of mingled terror, enthusiasm, and patriotic fervour. Its population of a hundred and fifty thousand souls, increased at that period by nearly a hundred thousand strangers, who had taken refuge within its impregnable walls, from all parts of the Peninsula, naturally democratic in its tendency, was then in the most violent state of effervescence; the Central Junta, under whose government so many disasters had been experienced, had fallen into universal obloquy; and the ardent, inexperienced multitude, who had lost or suffered so much in the course of the contest, not unnaturally concluded that they were all to be ascribed to the ignorance or incapacity of former rulers, and that the only chance of salvation for the country was to be found in the substitution of the vigour of popular for the imbecility of aristocratic direction (1).

The great majority of the Municipal Junta accordingly was, from the very first, strongly tinctured with republican sentiments. Their incessant object was to augment their own power, and depress that of every other authority in the state; and nothing but the presence of the large military force of the allied nations within the fortress, amounting to twenty-seven thousand men, prevented them from breaking out into all the excesses of the French Revolution. Though restrained in this way from such atrocities, however, the revolutionary action soon became so violent as to gain the entire civil direction of the Government clubs, in which democratic sentiments of the most violent kind, uttered amidst thunders of applause, abounded in all quarters of the city. The public press shared in the general excitation. The most licentious and profligate works of the French metropolis were translated, sold at a low price, and greedily devoured by the excited populace. One of the most popular journals indicated the public feeling by taking the title of the "Spanish Robespierre," and when the few members of the Junta, who really were elected by the provinces, arrived at Cadiz in the beginning of March, the torrent had become irresistible, and they found themselves instantly swept away by a wave of democratic fury (2).

Persecution
of the mem-
bers of the
Central
Junta
Feb 1810

The principal members of the late Central Junta which had governed Spain, if not with credit or success, at least with constancy and courage during fourteen months of almost continued disasters, were speedily exposed to persecution and violence from this infuriated party. Count Tilly and Don Lorenzo Calvo were arrested and thrown

into prison on a charge of treason to the Spanish cause, on grounds so clearly futile and unfounded, that public opinion, excited as it was, could not support the measure, and the latter was acquitted and liberated after a long confinement by the Cortes. All the other members of the Junta were proceeded against in the same vague manner, and searched or imprisoned without the vestige of ground but that, which they shared with all Spain, of having been unfortunate. The clamour of the multitude, prevailing alike over the dictates of justice and the principles of reason, insisted on their immediate prosecution with the utmost rigour of the law. Even the venerable name and great services of Jovellanos could not protect his person from contumely, or avert an iniquitous decree which banished him without trial to his own province, there to be placed under the surveillance of the police. Such was the grief which he felt at this undeserved severity, that it embittered his few remaining days, and brought him speedily to the grave. Tilly died in prison without a trial. Calvo, one of the heroes of Saragossa, who had been thrust into a dungeon without a bed in it, was brought to trial after the Cortes met, and acquitted. So violent, however, was the public effervescence, that the British ambassador felt relieved by the imprisonment of these unfortunate functionaries lest the populace should anticipate the march of legal proceedings, and take the wreaking of their vengeance into their own hands (1).

Cortes-
sessions
which pro-
ceeded and
continued till
the assembly of
the Cortes. Having got possession of the government of the country, the regency and municipality of Cadiz were in no hurry to accelerate the assembly of the Cortes, by which a rival and possibly paramount legislative power might be established in the very seat of their authority. By the decree of the 20th January, that national assembly stood convoked for the 1st March, "if the national defence would permit;" but these words were sufficiently vague to let in the continued blockade of Cadiz as a reason against convoking the Cortes, and furnished a decent pretext to the regency for delaying their assembly. The promised time, accordingly passed over without any thing being done. Loud clamours in consequence arose both among the inhabitants of Cadiz and various deputies from the juntas of different provinces, who had taken refuge within its walls; and the ferment June 12, at length became so violent, that the Government deemed it necessary to yield to the torrent, and issued a decree for the convocation of the Cortes. Great difficulties, however, were experienced in determining the principle on which the members were to be summoned, and still more in filling up the returns of deputies from the districts occupied by the enemy. Another question of still more importance was, whether the Cortes should sit in a single, or in two chambers, as the decree of the late Junta had provided. At length, after a vehement discussion it was determined that the ancient mode of election should be completely changed and that the assembly should sit in a single chamber (2).

The mode of election formerly had been various in different provinces; but in all, the principle of the representation of, and election by, the three orders had been more or less clearly established a principle, indeed, which was universal in the middle ages in all the European communities, and may be considered as the distinctive mark of European civilisation.

The division
is based on
noblesse, not
territory. It was followed and given effect to by the division of the Cortes into the three chambers, or *estamentos* of the nobles, the clergy, and the commons, each of which had a negative on any legislative measure. The members for the boroughs were in general chosen by their magistrates,

(1) *See* Vol. III. 186, 187. *Smith* iv. 254 and 256.

(2) *See* Vol. III. 312, 313. *Smith* v. 75.

not their inhabitants; but there was no fixed rule, and ancient custom regulated the franchise and its mode of exercise. It was now determined, however, by the regency, in opposition to the strenuous advice of the illustrious Jovellanos, that the principle of the elections should not be as of old, the representation of ranks or of *orders*, but of *individuals*, and as a consequence of this, that the elective franchise should be thrown to every Spaniard domiciled in the country, of the age of twenty-five years. One deputy was to be returned for every fifty thousand souls in the rural districts; one by every borough which formerly returned a member; and one by every provincial junta, in consideration of their services during the war. The whole of the deputies, thus elected by universal suffrage, were to sit in one chamber: the nobles and the church had no separate representatives. In this assembly, therefore, the Dukes of Medina Cœli, or Del Infantado, or the Archbishop of Toledo, had no more influence than a simple mechanic. How long would the institutions of England, with its calm judgment, old habits, and Anglo-Saxon descent, withstand the dissolving influence of a *single* constituent assembly vested with unbounded legislative power, elected and conducting business in such a manner? Not one week. What, then, was to be expected from the fervent spirit and inexperienced ambition of Andalusia, suddenly invested with supreme uncontrolled power, under the burning sun, and within the beleaguered walls of Cadiz (1).

Election of the supplementary members of Cortes Perilous as were the elements of legislation thus thrown together in the national assembly of Spain, the danger was materially augmented by the steps taken to fill up the supplementary members for the provinces beyond seas, and those in the occupation of the enemy:

Sept 8 By an edict published in the beginning of September, it was provided that the number chosen from the provinces beyond seas should be twenty-eight, and for the conquered provinces forty, and that both the electors and the elected should be taken from the persons belonging to those districts who had then taken refuge in Cadiz. Thus, one part of the Cortes was composed of deputies chosen by universal suffrage in the cities and provinces of Spain yet unoccupied by the enemy; and the remainder made up of refugees, selected by the same promiscuous mode of choice from the excited crowd who encumbered the streets of that great commercial emporium. No restrictions of any sort were imposed on the choice of any of the members. It was only necessary that the deputy should be above twenty-five, born in the province for which he was chosen, and unconvicted of any crime. It is remarkable that a proceeding so perfectly novel and revolutionary as this formation of the Cortes, to which the entire remodeling of the Spanish constitution was entrusted, not only met with no opposition at Cadiz but was cordially supported by men of all parties, even the most exalted functionaries, and the staunchest supporters of the ancient order of things. another proof among the many which history affords, that revolutions are diseases of the national mind, which, however they may be strengthened by the discontents or suffering of the lower orders, really originate in the infatuation of the higher (2), and that the class who invariably put the fatal weapon into the hand of the masses, are those who are ultimately to be swept away by their fury.

Election of the Cortes itself

The deluded patriots who had thus conceded irrevocable power to a faction totally unfit to wield it, were not long of perceiving the

consequences to which their blind trust in republican virtue in a corrupted society were likely to lead. As the day for the elections and filling up the supplementary seats drew nigh, the public effervescence hourly increased. Clubs, juntas, assemblies, resounded on all sides—the press multiplied in extent and increased in violence; and that general anxiety was felt, which, by a strange instinct in the moral, equally as the physical world, precedes the heaving of the earthquake. It was soon found that the torrent was irresistible, rank, experience, age, learning, consideration, were almost every where disregarded in the candidates; and republican zeal, loud professions, vehement declamation, impassioned eloquence, constituted the only passports to public favour. Before the elections, three-fourths of which were conducted within the walls of Cadix, were half over, it had become evident that the democratic party had acquired a decisive ascendancy. Then, and not till then, a large proportion of those who had supported or acquiesced in these frantic innovations, became sensible of their error, tried to pause in their career, and soon began to declaim loudly against the Cortes of their own creation. But it was too late—popular passion was not only excited, but unchained; and the march of revolution had become inevitable, because aristocratical ipsatuation had installed democratic ambition in supreme power (1).

*Original
and partly
proceedings
of the
Cortes.
Sept. 24.*

On the 24th September the Cortes thus constituted commenced its sittings; that was the first day of the Spanish Revolution. They began, like the French National Assembly in 1789, with religious ceremonies, and the forms of the monarchy. High mass was celebrated in their presence by the Archbishop Bourbon, and an oath binding them to maintain the Roman Catholic faith, the integrity of the monarchy, the rights of Ferdinand VII, and the national institutions, so far as not requiring amendment, administered to and taken by all the members. From thence they adjourned to the hall prepared for their reception in the principal theatre of the city; and then it soon appeared that the influence to which they were exposed would speedily prove fatal alike to the religion, the monarchy, and the constitution of the country. The saloon was spacious and elegant; but the immense crowds of both sexes who occupied, as spectators, the upper tier of boxes, and the vehement applause with which all the most violent republican sentiments were received, soon demonstrated that the Cortes were to be subjected to that external seduction and intimidation which a popular assembly is rarely, if ever, able to resist. From the outset, accordingly, the character of their proceedings was pronounced; it at once appeared that a new era in the domestic history of the Peninsula had arisen. The preceding movement, although violent and sanguinary, had, with a few local exceptions, been of a different character—it was national and anti-Gallican—this was social and democratic. Though still engaged in the French war, and resisting with unconquerable firmness alike the open hostility and insidious propositions of the French ruler, the principal object of the Cortes after this was not foreign but domestic; it was not external independence but internal reform on which their hearts were set; and, trusting to the impregnable walls of Cadix for their immediate security, and to the English arms for their ultimate deliverance, they concentrated all their efforts upon the dissemination of republican institutions, and the establishment of republican ascendancy in their country. In this effort they were from the very first completely triumphant, and incalculable results in both hemispheres have flowed from their success (2).

(2) *For* vol. 33, 363 *Marx* 27 28.

Proclaim the sovereignty of the people The very first resolution with which the Cortes commenced was decisive of the character of the Assembly, and destructive of the institutions of a mixed monarchy. It bore, "That the deputies who compose the Congress, and represent the Spanish nation, declare themselves legitimately constituted in the general and extraordinary Cortes, *in which is placed the national sovereignty.*" The members of the regency were required to swear obedience "to the sovereignty of the nation, represented by the Cortes, and to obey its decrees." These, and many similar resolutions, were carried unanimously amidst the loud applause of the members and galleries; the debates were prolonged till midnight, amidst a delirium of unanimity; extempore speeches, unknown hitherto in Southern Europe, fraught with eloquence, bespoke at once the ability and fervour of the speakers, and the Regency, with the exception of the Bishop of Orense, who had courage enough to resist the innovation, abandoned by all, and confounded by the violence of the torrent, took the oath at four in the following morning, and thereby virtually converted the monarchy into a "democracy (1)."

Fresh assumptions of supreme power by the Cortes Having gained this great triumph, the Cortes were not long of following up the advantage. On the very next day, it was declared that they should be addressed by the title of majesty, and that all the authorities, civil, ecclesiastical, and military, should take the oath in the same terms as the regents had done. Alarmed at the responsibility thus imposed upon them by so excited an assembly, the regency anxiously requested an explanation of the meaning of the Cortes in this particular, but all that they could obtain was a vague declaration, "that their duties embraced the security and defence of the country, and that the responsibility which was exacted from the members of the regency excluded only the absolute inviolability of the person of the King." The Bishop of Orense, with patriotic fervour, endeavoured to stem the torrent: he openly combated the oath exacted from the regency, and denounced in no measured terms the usurpation of supreme power of which the Cortes had been guilty. No one, however, had courage sufficient to imitate the example of his firmness, and, after several months spent in fruitless resistance, he was forced to submit, and withdrew to his diocese in Galicia, to shun, if he could not prevent, the approaching calamities. The regents being wholly destitute of real authority, and subject to the responsibility of office without its powers, shortly resigned their situations, and they were immediately banished from the Island of Leon, and ordered to reside each in distant places. New functionaries were appointed, more obsequious to the will of the popular assembly; but one of them had the courage to refuse the oath of sovereignty to that body, and it was universally felt that they were merely puppets in the hands of their imperious masters (2).

Decree on the liberty of the press The most momentous topic which can occupy the attention of a popular government—the liberty of the press—early attracted the notice of the Cortes. In the debates which ensued on this interesting subject, the different parties assumed a regular form and consistency, and it soon appeared how little the ardent spirits who had obtained the command in its deliberations, were inclined to pause in their career from the most awful example which history afforded of the perils attending it. One member openly expressed a wish for a "Christian Robespierre," another declared that "*un piquenno*" Robespierre was what was required, a person who might establish a system of terror somewhat more moderate than had been used in

(1) Tor. iii. 361, 375 South vi. 84, 87

(2) Tor. iii. 377, 391. South. v. 87, 94.

France. "Caustics," it was said, "is what is called for matters must be carried on with energy: heads must be struck off, and that speedily more Spanish blood requires to be shed than French." "The hatchet of the executioner is the only answer to oppose to such arguments," said an infuriated priest, "I am willing to undertake the office of such a debater. We have been assembled six months, and not one head has fallen." These extreme opinions, it is true, were not approved by the majority of the Assembly and several speakers, having the eloquent Argüelles at their head, referred to England as the great example of the unconquerable energy which the freedom of the press can communicate to a nation, at the very time that it spreads the antidote to the passions and the errors of an excited democracy. But the very fact of such opinions being advocated by any party, however extreme, in the legislature, was a clear indication of the perilous torrent which had been let loose; and it was already but too evident that in this, as in all other social contests during the advance of a Revolution, the most violent opinions were likely to be the most successful. After a protracted debate, which lasted four days, the freedom of the press was established, under no other qualification than the exception of offences against religion, which were still to be taken cognizance of by the ordinary ecclesiastical courts, and a certain responsibility for individual or political delinquencies, which were to be adjudicated upon in a certain court erected for the purpose. The decree was promulgated in the middle of November; and there immediately issued from the press such a deluge of journals and ephemeral pamphlets, and such unmeasured vehemence of language, as demonstrated both how anxiously the Spanish urban population had thirsted for political discussion, and the imminent danger which they would run from the draught when first administered (1).

At this period, also, there arose those important discussions between Spain and the South American colonies, which terminated, after a protracted contest and the shedding of oceans of blood, in the independence of those vast and highly interesting states. This topic, however, is too vast for casual discussion, and must be reserved for a subsequent chapter, when it will form the leading subject of consideration (2).

It is remarkable that, from the very first opening of the Cortes, they manifested an impatient anxiety to abolish the separate institutions and privileges of the different provinces of Spain; and the "Fueros" of Biscay and Navarre were, in an especial manner, the object of their jealousy. The desire to extinguish them, and establish one uniform constitution for the whole monarchy, formed one of the leading objects of the party in the Spanish cities who urged on the assembly of the Cortes. In pursuance of this desire, a committee was appointed to draw up a constitution on a uniform and systematic plan; and on its preparation, as might naturally have been expected, the principal attention of all parties at Cadiz was afterwards fixed. It cannot be denied that the project of establishing a perfect equality of civil rights between the members of the same community is equitable in theory, and apparently feasible in practice; but experience has proved that it is, of all other things, the most difficult to carry with safety into execution; and that, unless the inhabitants to whom it is applied are homogeneous in point of race, and equally advanced in point of civilisation it is likely to produce the most disastrous effects upon the whole fabric of society (3).

(1) March 94, 95. (2) See infra, c. 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100.

(3) See infra, c. 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100.

tion of the assembly in which it originated. Supreme sovereignty was declared to reside in the nation; the Roman Catholic faith to be the sole religion of the state; the supreme legislative power to reside in the Cortes. That assembly was alone empowered to vote taxes and levies of men,—to lay down regulations for the armed force,—to nominate the supreme judges,—to create a regency in case of minority, incapacity, or other event suspensive of the succession,—to enforce the responsibility of all public functionaries,—and to introduce and enact laws. During the intervals of the session, the Cortes was to be represented by a permanent commission or deputation, to which a considerable part of its powers was committed, especially the care of watching over the execution of the laws and conduct of public functionaries, and the convocation of the assembly in case of need (1).

Powers of the king. The person of the king was declared inviolable, and his consent was requisite to the passing of laws; but he could not withhold his consent more than twice to different legislatures; if presented to him a third time, *he was forced to give his sanction*. He had the prerogative of pardon, but circumscribed within very narrow limits; he concluded treaties and truces with foreign powers, but they required for their ratification the consent of the Cortes; he had the command of the army, but all the regulations for its government were to emanate from the same body; he nominated the public functionaries, but from a list only furnished by the Cortes. The king was not to leave the kingdom nor marry without their consent; if he did so, he was to be held as having abdicated the throne. The nomination of the judges of the tribunals, to whose exclusive cognizance the conduct of public functionaries was subjected, was reserved to the same assembly. For the assistance of the king in discharging his royal functions, a privy council, consisting of forty members, was appointed by him out of a list of one hundred and twenty presented by the Cortes: they could not be removed but by that body; and, in that number, there were only to be four grandees and four ecclesiastics. All vacant situations in the church, the bench and the diplomatic departments, in like manner, were filled up by the king from a list of three presented to him by the Cortes; and he was bound to consult the privy council all matters of importance, particularly the conclusion of treaties, the of laws, the declaration of war, and the conclusion of peace (2).

Composition of the Cortes. Important as these institutions were in their tendency, and strongly as they savoured of that democratic spirit amidst which they were cradled, they yet yielded in magnitude to the vitality of the changes in the election and composition of the Cortes, which were established by the same constitution. It was carried by a large majority that the assembly should sit, as it was then constituted, in a single chamber, without, as of old, any separate place of assembly for the clergy or nobles, or any veto or power of rejection being vested in their members apart from those of the commons. Population was made the basis of representation: it was declared that there should be a member for every seventy thousand souls; and that every man above the age of twenty-five, a native of the province, or who had resided in it for seven years, was qualified alike to elect or be elected. No property was for the present insisted on as a qualification; but it was left to future Cortes to legislate on this important point. The election of members took place by three successive steps of parishes, districts, and provinces; but the boroughs, who sent members to the ancient assemblies, and the juntas who were admitted to the representation in the present, were alike excluded. The Amer-

rican colonies were placed on a perfect equality, in the article of representation, with the European provinces of the monarchy, the ministers, councillors, and persons in the household of the king, were excluded from a seat in the assembly, the Cortes were to assemble every year, and sit at least three months for the dispatch of business; no member of it was to be capable of holding any office under the crown, it was to be re-elected every two years, and no individual who had been the member of one assembly, could be re-elected till a different legislature had intervened, so that the new Cortes, every two years, was to present an entire new set of members from that which had preceded it (1).

Its vast
effect in
stimulating
political
passions in
the Peninsula

Such was the famous constitution of 1812—the Magna Charta of southern revolutionary Europe—the model on which the subsequent democratic constitutions of Spain, Portugal, Piedmont, and Naples, in 1820, were framed, the brand which has filled the world with its flames, and from the conflagration raised by which both hemispheres are still burning. To an Englishman practically acquainted with the working of a free constitution, it is needless to expatiate on the necessary effect of vesting such powers in the people of an old state. If he reflects how long the institutions of England, habituated as she has been to the strain by, centuries of freedom, would withstand the influence of universal suffrage, annual Parliaments, the abolition of the House of Peers, the withdrawing of the legislative veto from the sovereign, an entire change of legislators every two years, and the practical vesting of the disposal of all offices of importance in the House of Commons; he will easily understand what must have been the result of such a system among a people of mixed blood and hostile passions, of fiery temperament and towering ambition, long subjected to despotism, wholly unused to freedom; among whom political fervour was as yet untamed by suffering, and philanthropic ardour uncooled by experience; where property, accumulated in huge masses among the nobles and clergy, was but scantily diffused through the middle classes; and instruction was still more thinly scattered among any ranks of the people. But it was the fatal peculiarity of this constitution, that it so obviously and immediately opened the avenue to supreme power to the urban constituencies, and so entirely shut out and disinherited the rural nobility, and ecclesiastic orders and rural population, that it necessarily bequeathed the seeds of interminable discord between these classes to future ages, because it gave a definite object and intelligible war-cry to the minority, massed together and in possession of the principal seats of influence, in towns, while it established a system altogether insupportable to the majority, tenfold greater but scattered and destitute of defence or rallying points in the country.

Manner in
which the
constitution
was received
in Spain

The reception which the new constitution met with in Spain, was such as might have been expected from so great an innovation in a country in which the urban constituencies were so zealous for innovation, and the rural inhabitants were so firmly attached to the institutions of their fathers. At Cadiz, Barcelona, Valencia, and in general all the great towns, especially those of a commercial habit, the enthusiasm of the people at this great addition to their power was loudly and sincerely expressed: in the lesser boroughs in the interior, and in all the rural districts, where revolutionary ideas had not spread, and the ancient faith and loyalty were still all powerful, it was the object of unqualified hatred. In vain the partisans of the new *regime* sought to persuade the people that the constitution was but,

a return to the old usages of the monarchy, cleared of the corruptions and abuses of ages; the good sense of the country inhabitants revolted at the idea that the King of old had been merely a puppet in the hands of the populace; the clergy could never see a confirmation of their privileges in institutions which, on the other side of the Pyrenees, had led to their total overthrow; the nobles beheld, in the concentration of all power in the hands of an assembly elected by universal suffrage, the certain forerunner of their total ruin. The provinces in the occupation of the French, who had sent no representatives to the Isle of Leon, embracing three-fourths of the monarchy, loudly complained that their rights and privileges had been wrest from them by an assembly almost wholly elected at Cadiz, to which they were entire strangers. Thus, the whole country population were unanimous in their detestation of the new order of things: and it was easy to foresee that, if the matter were to be determined by the nation itself, it would be rejected by an immense majority: but the partisans of the new constitution, though few in number, were incomparably better organized and favourably situated for active operations than their antagonists; and, being already in possession of all the strongholds of the kingdom, it was hard to say to which party, in the event of a struggle, victory might ultimately incline (1).

Wellington's clear perception and constant prediction of the effects of the Cortes and new Constitution. Wellington, from the very first, clearly perceived, and loudly denounced, the pernicious tendency of these measures on the part of the Spanish Cortes, not merely as diverting the attention of the Government from the national defence, and wasting their time in fruitless discussions when the enemy was at their gates; but as tending to establish democratic principles and republican institutions

in a country wholly unfitted for them, and which would leave to future ages the seeds of interminable discord in the Spanish monarchy. His prophecies, which are to be found profusely scattered throughout the latter volumes of his correspondence, little attended to at the time from the absorbing interest of the contest with Napoleon, have now acquired an extraordinary interest, from the exact and melancholy accomplishment which subsequent events have given to his predictions. Before the Cortes had been assembled six weeks, he expressed to his brother, Henry Wellesley, then ambassador at Cadiz, his apprehensions that they were about to follow the usual course of democratic assemblies, and draw to themselves, in opposition to the wishes of the great bulk of the nation, the whole powers of government (2). As they advanced in their career, and experience began to develop the practical result of their administration in the provinces, he repeatedly expressed his conviction of the general dissatisfaction which they had excited (3).

But after his visit to Cadiz, on occasion of being appointed generalissimo of the Spanish armies in January 1813, he denounced, in the strongest terms, the wretched government, at once tyrannical at home and weak abroad,

(1) Martineau, l. 89, 100.

(2) The natural voice of all popular assemblies of the Spanish Cortes, among others, is to adopt democratic principles, and to vest all the powers of the state in their own body; and this assembly must take care that they do not run in this tempting groove, as the wishes of the nation are decidedly for a monarchy. By a monarchy there is a man to govern; and their inclination to any other form of government, and their assumption of the power and prerogative of the state into their own hands, would immediately deprive them of the confidence of the people, and render them worse government, and more despotic, because more numerous than the

real Junta. — Wellington to Wellesley, 7th Feb. 1812. See above, l. 1, 2.

(3) Letter 11, Feb. 1812, n. 26.

— The Cortes are a popular very ignorant, and in my opinion extremely so. Nothing can be more craft, shrewd, and honest, or than these doctors representing the persons who have seized the money is so expensively that the population is impoverished and produced one who with any knowledge of the true situation of the country. It appears as if they were all drunk; I think so, and spend a great deal of money on the subject. — Wellington to Wellesley, 10 Jan. 1812. See above, l. 1, 2.

which the furious democracy of that city had produced, and predicted the ruinous effect, both upon the fate of the war and the future prospects of the monarchy, of the constitution which they had established (1) His words, after a close personal view of the working of the democratic constitution, are deserving of profound attention, as marking the impression produced on an intellect of the highest order, by a state of things arising from the success of popular ambition, and therefore of lasting interest to mankind. "The greatest objection which I have to the new constitution is, that in a country in which almost all property consists in land, and there are the largest landed proprietors which exist in Europe, no measure should have been adopted, and no barrier provided, to guard landed property from the encroachments, injustice, and violence, to which it is at all times liable, but particularly in the progress of revolutions. The Council of State affords no such guard, it has no influence in the legislature; it can have no influence over the public mind. Such a guard can only be afforded by the establishment of an assembly of the great landed proprietors, such as our House of Lords, having concurrent powers with the Cortes, and you may depend upon it, there is no man in Spain, be his property never so small, who is not interested in the establishment of such an assembly. Unhappily, legislative assemblies are swayed by the fears and passions of individuals; when unchecked, they are tyrannical and unjust, nay, more, it frequently happens that the most tyrannical and unjust measures are the most popular. Those measures are particularly popular which deprive rich and powerful individuals of their properties under the pretence of the public advantage; and I tremble for a country in which, as in Spain, there is no barrier for the preservation of private property, excepting the justice of a legislative assembly possessing supreme power. It is impossible to calculate upon the plans of such an assembly they have no check whatever, and they are governed by the most ignorant and licentious of all licentious presses, that of Cadiz. I believe they mean to attack the royal and feudal tenths, and the tithes of the church, under pretence of encouraging agriculture; and finding the contributions from these sources not so extensive as they expected, they will seize the estates of the grandees (2) " "Our character is involved in a greater degree than we are aware of, in the democratical transactions of the Cortes, in the opinion of all moderate well-thinking Spaniards, and, I am afraid, with the rest of Europe. It is quite impossible such a system can last what I regret is, that I am the person who maintains it. If the King should return, he also will overturn the whole fabric if he has any spirit, but the gentlemen at Cadiz are so completely masters, that I am afraid there must be another convulsion "

Policy of
the British
Govern-
ment re-
garding the
Cortes

The British Government were well aware, while democratic frenzy was thus reigning triumphant at Cadiz, from the despatches of their ambassador there, the Honourable H. Wellesley, as well as from Wellington's information of the dangerous nature of the spirit

(1) It is impossible to describe the state of confusion in which affairs are at Cadiz. The Cortes have formed a constitution very much on the principle that a painter paints a picture, viz. to be looked at, and I have not met one of its members, or any person of any description, either at Cadiz or elsewhere, who considers the constitution as the embodying of a system according to which Spain is or can be governed. The Cortes have in form divested themselves of the executive power, and appointed a regency for that purpose but the regency are in fact the slaves of the Cortes, and neither have either communication in a constitutional way with each

other, nor any authority beyond the walls of Cadiz. I wish that some of our reformers would go to Cadiz to see the benefit of a sovereign popular assembly, calling itself "Majesty," and of a written constitution. In truth, there is no authority in the state except the libellous newspapers, and they certainly ride over both Cortes and Regency without mercy."

—WELLESLEY TO F.

which had thus been evolved, that they had a task of no ordinary difficulty to encounter, in any attempt to moderate its transports. The Spanish people, long and proverbially jealous of foreign interference, had recently evinced this peculiarity in so remarkable a degree, that even when defeated in a hundred encounters, and bleeding at every pore from the want of any general competent to stem the progress of disaster, and give unity to the operations of their different armies, they still refused to give the command to the British hero who had arrested at Talavera the tide of success, and rolled back from Torres Vedras the wave of conquest, even though he has recorded his opinion, that, if they had done so, he could have saved their country as he did Portugal (1). In these circumstances, any *decided or marked interference* on the part of Great Britain with the proceedings either of the Cortes at Cadix, or of the regency in its formation, would not only, in all probability, have totally failed in its object, but possibly cooled their ardour in the cause of independence, and thrown the party in Spain, in possession of the few remaining strongholds it possessed, headlong into the arms of the enemy. In these circumstances, the British Cabinet, albeit noways insensible to the dangers of the republican government which had thus grown up, as it were, under their very wing at Cadix, and its strange inconsistency with their own principle, as well as those on which the war had been conducted, nevertheless deemed it expedient not to intermeddle with the internal affairs of their ally, and to comply literally with the advice of Wellington, "to keep themselves clear of the democracy, and to interfere in nothing while the government was in their hands, excepting in carrying on the war and keeping out the foreign enemy" (2).

It was chiefly with a view, however, to obtain a legitimate head for the government at Cadix, and if possible extricate Spain by legal means from the abyss into which she was falling, that the English Cabinet at this time made a serious attempt to effect the deliverance of Ferdinand VII from his imprisonment at Valençay. The captive king, and his brother Don Carlos, were there detained, living sumptuously, but so narrowly watched as to render their escape apparently impossible. Notwithstanding all the vigilance of the police, however, the British Government contrived to communicate with him by means of the Baron Kolli, a man of skilful address and intrepid character in whom the Marquis Wellesley had entire confidence. The project for their deliverance, when on the point of succeeding, was betrayed by an agent to whom a subordinate part in its execution had been committed. Ferdinand himself revealed the plot to his jailers, and Kolli was arrested and committed to Vincennes. He refused, however, with unshaken constancy, to divulge any thing which could involve either Ferdinand or the British Ministry. But the French police took advantage of the discovery they had made, to endeavour to entrap the royal captives into some hazardous attempt by means of a false Kolli, who was despatched to Valençay; but the penetration of the Spanish king detected the disguise, and nothing followed on the insidious attempt (3).

The military condition of the French in Spain, notwithstanding the disastrous issue of the expedition into Portugal, had been essentially improved,

(1) — I understood the Spanish Government must perhaps offer me the command of their army. If they had done so, I got and built a gun, and they had not previously to work the first and say their army, the 23 or would have been saved; but it would have been too late to have such an arrangement of

the battle of Oporto had not been fought on December 1st 1810. The capture of the 1st. Co. was on 21st.

so far as the command of the resources of the country went, in the course of the campaign of 1810. The successful irruption of Soult into Andalusia, in its commencement, had given them the entire command of the resources of that opulent province, and although the dispersion of force which it occasioned, in consequence of the continued resistance of Cadiz, proved in the end, as the event showed, extremely detrimental to their interests in the Peninsula; yet in the first instance it greatly augmented their resources, and diffused the pleasing hope which seems to have gained possession of all the counsellors of Joseph, that the war was at length approaching its termination. So completely did hostilities appear to be concluded to the south of the Sierra Morena, that Joseph Bonaparte crossed that formidable barrier, published at Cordova an ominous decree, in which he declared, that if Spain "became again the friend of France, it was for the interest of Napoléon to preserve its integrity, if not, to dismember and destroy it;" entered Seville amidst the acclamations of the higher class of citizens, who were fatigued with the war and hopeless of its success, received from the civic authorities there the standards taken at the battle of Baylen, accepted the services of a royal guard, organized for his service in the southern provinces, and, amidst the apparent transport of the people, arrived at the lines before Cadiz, and made the tour of the bay almost within reach of the Spanish batteries. Seduced by these flattering appearances, the benevolent monarch appears for a time to have trusted the pleasing hope that his difficulties were at an end; that all classes of Spaniards would at length rally round his standard, and that, supported by his faithful population, he might at length obtain not merely the shadow but the substance of a throne, emancipated from the burdensome tutelage of his imperial brother (1).

Napoléon's
intentions
as to dis-
membering
Spain at
this time
Feb 8

But if Joseph for a brief period gave way to this pleasing illusion, he was not long of being awakened from it by the acts of Napoléon himself. Early in February a decree was issued by him, which organized into four governments the provinces of Catalonia, Aragon, Biscay, and Navarre; and charged the military governor of each of them with the entire direction of affairs, civil and military. The police, the administration of justice, the collection and disposal of the revenue, were intrusted to them equally with the warlike arrangements of the provinces; and the fundamental condition on which this more than regal power was held by the marshals was, that they should make no demands on the Imperial Treasury, and that the provinces under their command should feed, clothe, lodge, and pay the numerous French corps who occupied their territory. Deeper designs, however, than the temporary occupation of a portion of the Spanish monarchy, the whole of which was overrun by his troops, were involved in this decree of the Emperor; and what these designs were are explained in a letter at the same period from the Duke of Cadore (Champagny) to the French ambassador at Madrid — "The intentions of the Emperor is to unite to France the whole left bank of the Ebro, and perhaps the territory as far as the Douro. One of the objects of the decree is to prepare for that annexation, and you will take care, without letting a hint fall as to the designs of the Emperor, to prepare matters for this change, and facilitate all the measures which his Majesty may take to carry it into execution." Thus Napoléon, after having solemnly guaranteed the integrity of Spain, first by the treaty of Fontainebleau to Ferdinand VII, and again by that

Feb 19, 1810

of Bayonne to Joseph, was now preparing, in violation of both engagements, to seize a large part, and which commanded the whole remainder of its territory, by the spoliation of his own brother, whom he had put upon the throne (1)

Exposition
between
Napoleon
and Joseph
for the dis-
member-
ment of
Spain.

Notwithstanding all the precautions of the Emperor, however, to keep his designs secret, they transpired so far as to awaken in Joseph the most anxious solicitude as to the preservation of his crown, and the integrity of his dominions. To avert the stroke as far as possible, under pretence of congratulating his brother on

his marriage with the Austrian archduchess, he despatched M. Asanza to Paris, an intrepid and able Spaniard, zealous for the interests of his country, and peculiarly solicitous of preserving the province of his birth, Navarre, for the crown of Castile. Asanza, on his arrival at Paris, found that the expence of the Spanish war, which it was said had already cost the Imperial Treasury above two hundred millions of francs (L.8,000,000), was the great subject of complaint with the Cabinet of St.-Cloud; and without openly divulging the project of incorporating with France the territory north of the Ebro Champany made no secret of the wish of the Emperor to obtain, and his right to demand, more valuable indemnities than the barren satisfaction of having placed an incapable and prodigal brother on the throne of Madrid. When Asanza pleaded strongly for the integrity of Spain, and the obligation of the Emperor to support his brother, he was openly told by the Imperial Minister, that, strong as the Emperor's obligations to the members of his family were, his obligations to France were still stronger; and that "Joseph would do well to recollect that he held in his power the Prince of Asturias Ferdinand, whom he was strongly tempted to send into Spain, and who would make no scruple, as the price of his liberty, to cede the required provinces, or any thing else which might be required of him." Asanza, unable either to fathom the secret intentions or get any satisfaction as to the public deeds of the Emperor returned downcast to Madrid, where general gloom had succeeded to the first transports of joy among the adherents of Joseph at the conquest of Andalusia; and unequivocal acts on the part of Napoleon soon demonstrated his real designs, and at what price he estimated the phantom of a king which he had established in Spain. A new decree, in addition to that which had created the four military governments already established, formed two new ones, embracing the whole country to the north of the Douro; the first, comprising the province of Burgos; the second, those of Valladolid, Palencia, and Toro: and this was soon followed by a second, which gave Soult the exclusive direction of the army and the provinces to the south of the Sierra Morena. Thus, while Suchet was actively conducting the work of conquest in Catalonia and Valencia, and Soult was living in more than regal magnificence at Seville the unhappy Joseph almost destitute of resources, lingered on, a shadow at Madrid, without either being entrusted with the duties, or enjoying the splendour of royalty (2)

Exerts of
the French
campaig-
ne in
1808.

Napoleon's favourite project of securing the northern provinces of Portugal for himself soon assumed a more tangible form, and became the subject of open negotiation with the Cabinet of Madrid.

In this negotiation the plenipotentiaries of Spain in vain appealed to the

The letters of Asanza to the Court of Madrid are

interrupted by the general for which he fled to Cadix, and published by the Army of England, Spain, and France, before he died. About 1818 there was the slightest doubt as to the authenticity of some early number of the Reg. de. 276.

treaty of Bayonne, by which the integrity of the monarchy was guaranteed :
 Champagne replied, in the name of the Emperor, and from his notes, that
 the convention of Bayonne had *de facto* disappeared, by the majority of its
 members having passed over to the insurgents, that Spain owed a large in-
 demnity for the sacrifices in men and money which he had made in her be-
 half, and that, as she could never repay the debt, he must insist on the ces-
 sion of the whole provinces to the north of the Ebro, including Catalonia, for
 ten years. Finding the Emperor resolute, the Spanish plenipotentiaries
 strove only to gain time. The more pressing concerns of the north engrossed
 his attention, and, before his dominion in the Peninsula was so well esta-
 blished as to render it practicable to carry the transference formally into
 effect, the whole country was reft from both by the arms of England, and the
 star of Napoléon set for ever behind the snows of Russia (1).

Such, however, was the destitution to which the Court of Madrid
 was reduced, during the whole of the winter of 1810 and spring of
 1811, that in January 1811, Joseph intimated to Napoléon "that
 the French marshals intercepted his revenue, disregarded his or-
 ders, insulted his government, and oppressed and ruined his country. He
 himself had been appointed to the throne of Spain without his own consent ;
 and, though he would never oppose the Emperor's will, yet he would not live
 a degraded king, and, therefore, he was ready to resign, unless the Emperor
 would come in person and remedy the evils." Struck with the decision of
 this announcement, and the obvious justice of the complaints on which it
 was founded, the Emperor so far interposed in behalf of his unhappy brother,
 as to fix, by an imperial edict, the monthly sums at which the allowance of
 the whole military officers of the Peninsula, from the marshals, go-
 vernors of provinces, to the sub-lieutenants, should be fixed ; and directed
 that 500,000 francs (L 20,000) should be remitted monthly from Paris to de-
 fray the most urgent demands of his household. This relief, however, proved
 altogether insufficient. The whole civil functionaries of the Crown were seven
 months in arrear of their salaries ; the public treasury was empty, the king
 had not money at his disposal to give a respectable dinner to the ambassa-
 dors, and he was incessantly besieged with complaints of oppression, which
 he had no means of relieving. To such a height at length did the mortifica-
 tions of the Court of Madrid arrive, and so completely were all the royal re-
 venues intercepted by the legal or illegal exactions of the marshals, that, in
 the beginning of May, Joseph set out with his resignation in his
 pocket, and, to Napoleon's no small embarrassment, arrived in Paris to lay it
 at his feet. Thus was the prodigy exhibited, not merely of three brothers of
 a soldier of fortune in Corsica being elevated by that soldier to European
 thrones, but of two of them, Louis and Joseph, being reduced to such mor-
 tifications, by his imperious temper and rigorous exactions, that they re-
 nounced their crowns to escape them, while a third, Lucien, had taken refuge
 from his persecution in the dominions of his most persevering and inveterate
 enemy (2).

Napoléon, who was well aware what a subject of scandal these
 divisions in the Imperial family would afford to Europe, and how
 strongly they would confirm the declamations of the English press
 against the insupportable nature of his rule, did his utmost to
 appease the incensed monarch. Partly by argument, partly by persuasion,

(1) Dign ix. 285, 287 Hard. xi. 154, 155.

(2) See Joseph's papers taken at Vittoria Nap.
 iv 517, 533. App

partly by threats, he prevailed on the fugitive king to place again on his head his crown of thorns; and, after some weeks' residence at Paris, he returned to Madrid, having concluded a private treaty, which in some degree obviated ^{July 1812.} the most intolerable of his grievances. By this compact it was stipulated that the Army of the Centre should be placed directly under the orders of the King of Spain: he was to receive a quarter of the contributions levied by the marshals in their several provinces, for the maintenance of his court and government, and for the support of the Army of the Centre, and of the Spaniards who had enlisted in his service, who amounted to nearly thirty thousand men; and the half million of francs, hitherto given monthly to the king, was to be increased to a million. But the Emperor would not relinquish the military direction of the war, or the command of the provinces by his marshals; and they were still to correspond with Berthier, and take all their directions from the Tuilleries. Napoleon also strongly counselled the convocation of a Cortes at Madrid to consider the state of the nation, and form a set-off against that assembled in the Island of Leon, which he characterised as ^{June 1811.} "a miserable canaille of obscure agitators." With these promises and injunctions Joseph was for the time pacified; and he returned to Madrid in July, where his situation appeared for a while to be improved by the suc- ^{July 11.} cesses of Marshal Suchet in the east of Spain. But the promised remittances from Paris were never regularly made; the former disputes with the marshals about the contributions revived, the project of the Cortes was adjourned from Wellington's successes in the next campaign; and, in less than two years, nothing remained of Joseph's government but the recollection of the oppression of which he was the impotent spectator, and the privations of which he had been the real victim (1).

^{Progression} ^{condition of} ^{the French} ^{at the} ^{period in} ^{Spain.} While the Governments of France and Spain were thus arranging between themselves the proportions in which they were to share between each other the spoils of the Peninsula, and Napoleon was securing the lion's share to himself, a lingering but unconquerable resistance was still presented in the few strongholds which remained in the hands of the patriots. It was in a very few quarters, however, that the contest was continued: the greater part of the country was subdued; its resources were almost all at the conqueror's disposal; and, in a military point of view, the conquest might be considered as complete. Both the Castiles, with the capital, were in the victor's power. Andalusia and Grenada, with their rich and hitherto untouched fields of plunder, were at his disposal; and the whole northern provinces, including the passes of the Pyrenees, the whole of Aragon, and the greater part of Catalonia, were strongly garrisoned by his troops. The recent successes in the latter province, particularly the fall of Gerona, Hostalrich, Lerida, and Mequinenza, had both opened to the French arms the road from Perpignan to Barcelona, and established them in a solid manner on the Ebro; and nothing was wanting but the conquest of Tortosa and Tarragona to enable Suchet to carry his victorious arms into Valencia, and subject the whole eastern provinces to the Emperor's sway. On the other side, they were still excluded from the kingdom of Portugal, and a disastrous campaign had followed the invasion of that country; but the English armies appeared in no sufficient strength to disturb them beyond the Spanish frontier: and the possession of Ciudad Rodrigo and Badajoz promised to secure the Castiles against any serious incursion from their ancient antagonists in that quarter. Great as the extent of territory occupied by the French generals

(1) Xep. i. 123, 127. F. per. when at Valencia. Ibid. iv. 311, 314, 317.

was, the forces at their disposal were fully equal to their command. Seventy-five thousand men in Andalusia, under the command of Soult, maintained the blockade of Cadiz, retained the whole provinces to the south of the Sierra Morena in subjection, and watched over the security of Badajoz, on the Portuguese frontier fifty thousand were still ready in Leon to assemble round the standard of Marmont, who had succeeded Masséna in the command of the army of Portugal, while sixty thousand more, under Bessières, at Valladolid, Biscay, and Leon, watched the Spanish force at the entrance of the Galician defiles, and secured the important line of communication by Vittoria to Bayonne; while in the eastern provinces, Macdonald, with forty-five thousand men, lay at Gerona and Hostalrich, guarding the important entrance by Perpignan into Catalonia: Suchet, after providing for all his fortresses, could still bring thirty thousand excellent troops into the field for active operation, besides leaving twenty thousand in the garrisons of his government; and twenty thousand more under Joseph and Jourdan at Madrid, and fifteen thousand under Regnier, in Estremadura and La Mancha, overawed the capital, and maintained the communication between the different parts of this immense military establishment (1).

The vital point of resistance to all this stupendous array, was to be found within the walls of Cadiz, but, though the force there was nearly twenty thousand strong, yet it was composed of such various nations, and in great part so disorganized and depressed, that little reliance could be placed on it, even for the defence of that last stronghold of Spanish independence. Five thousand English and Portuguese, who arrived immediately after the French troops appeared before its walls in February 1810, from Lisbon and Gibraltar, under General Stewart, were excellent soldiers; but the remaining fourteen thousand, composed of the refugees

from Seville, and the gallant men who had come up under Albuquerque (1), were in the most miserable state, without shoes, pay, or clothing, and hardly any remaining ammunition. The regency was without vigour or consideration: the public stores were shamefully dilapidated by private cupidity; and such was the general despondence and confusion which prevailed, that if Victor's troops had immediately, on their arrival at the bay, pushed on and attacked the defences on the isthmus which connected the city with the mainland, they in all probability would have carried it, and, but for the arrival of the English troops, certainly would have done so. As it was the exterior forts on the mainland side of the bay were abandoned and dismantled in the general consternation; and from Fort Matagorda, the most advanced and important outwork on their side, the French bombs could reach the upper harbour and a considerable part of the city (2).

Spanish and English forces in the Peninsula. In the other quarters of Spain, appearances were, if possible, still more unpromising. Twenty-five thousand men indeed, in Valencia, and twelve thousand in Murcia, still hoisted the colours of independence; but their composition, equipment, and discipline were so wretched, that military discernment could already anticipate, what the event soon proved, that no reliance was to be placed on them in the field, and but little in the defence of fortified places. In Catalonia, though a desultory warfare was still kept up in the mountains, no force existed capable of keeping the field in the level country; and the campaign was in reality reduced to the sieges of Tortosa and Tarragona the last important strongholds which the Spaniards possessed in that province. While in Galicia, the new levies, nearly fifteen thousand strong, were unable, from their want of discipline, to emerge from their mountain defiles: and the guerilla parties in the central provinces, though exceedingly harassing to the enemy's communications, were detached from each other, and altogether inefficient as a force in regular warfare. Thus eighty or ninety thousand men, for the most part ill-disciplined, and worse equipped, shut up in fortified places along the sea-coast, and altogether detached from each other, were all that remained of the Spanish forces to contend with above three hundred thousand French soldiers, admirably equipped, under the guidance of veteran generals, masters of all the entrances into and main roads through the country in possession of its principal strongholds, and the whole interior lines of communication through its provinces. In these circumstances, it required not the gift of prescience to foresee that the weight of the contest would fall on the English and Portuguese army; and that unless Wellington, with his fifty thousand disciplined soldiers, could strike a decisive blow at the heart of the enemy's power, the cause of the Peninsula, and with it the hope of European independence, was lost (3).

Description of Cadiz. Cadiz, the keystone of the brave but disjointed arch of resistance which still encircled Spain, was a city, the natural strength of which had, from the most remote ages, rendered it an important object in the Peninsular wars. The Gaditane Isle, or Isle of Leon, indeed, is by nature so strong as to require but little assistance from art to become altogether impregnable. It consists of an island, three leagues long, and one and three quarters broad, in the form of an irregular triangle situated in the sea, at the mouth of the Guadaleta river: and separated from the adjacent continent by the Santa Petri channel, an arm of the sea nine miles long, about three

(1) *Ann.* ii. 402.(2) *Thib.* i. 218, 220, and *Suppl.* sup. 172.(3) *Edin.* L. 181. 184. 5. *in Conn.* L. 18.*Edin.* L. 181. 184. 5. *in Conn.* L. 18.176 *Edin.* L. 181. *Tor.* i. 104. 177.

hundred yards wide, and of depth sufficient to float a seventy-four, which receives the waters of all the streams that descend from the heights on the mainland, and is bounded on the continent by salt marshes of still greater breadth. The great road from Cadiz to Seville crosses this channel and marsh by the bridge of Zuazo, which on the approach of the French was broken down, and which was defended by powerful batteries on either side. The arsenal Caraccas stands on the extremity of the Isle of Leon, nearest to the bridge and mainland, but from the breadth of the marsh it could not be reached save by water or bombardment, and on the other side of the bridge, the castle of Santa Petri commanded all the opposite shore and approaches to the marsh. The whole Isle of Leon is composed of a salt marsh, with the exception of the ridge on which the town of Isla, containing eighteen thousand inhabitants, is placed, and the Sandhills at the opposite extremity, running out into the sea, on which Cadiz is built, which in general numbers eighty, but was then encumbered by a hundred and fifty thousand souls. The great road by the bridge of Zuazo, which runs through the town of Isla, is elevated on, and runs for two leagues along a narrow isthmus, between the Atlantic on the one side, and the inner salt marsh of the island on the other, and it is cut in various places by ditches, and intersected by redoubts, which, presenting successive points of defence, rendered attack from without extremely difficult, even if the bridge of Zuazo and town of Isla had been carried. At the close of all, Cadiz itself, situated at the extremity of the isthmus, arose, strongly fortified on that side, the neck of land which approached it was exposed to the concentric fire of numerous and formidable batteries, and an advancing enemy would be exposed to a flanking fire from the vessels of war on the one side, and gun-boats on the other. Nearly two thousand guns in all were mounted on the immense circuit of the works; but many of them were unskilfully constructed, and not less than thirty thousand men were requisite to provide them with proper garrisons. The promontory of the mainland which approaches nearest to the city, was armed by two strong forts, called the Trocadero and Matagorda, but even if they were carried by the besiegers, the immense batteries of the Puntales stood directly opposite, on the other side of the channel, at the distance only of twelve hundred yards, while the nearest parts of Cadiz itself were still four thousand yards, or nearly two miles and a half, from the most advanced point to which the besiegers' batteries could be pushed (1).

Arrival of
the British
troops, and
first mea-
sures of
defence

General Stewart arrived at Cadiz with 2000 British troops from Gibraltar on the 11th February, and in a few days 2000 more English and Portuguese were received from Lisbon, who were welcomed with loud acclamations by the inhabitants, impending danger having completely extinguished the hitherto inveterate jealousy entertained by the Spaniards of foreign interference. They found the people zealously engaged in exertions to repair and strengthen the fortifications, and multitudes, in particular, labouring day and night in cutting a deep ditch across the chaussee, on the isthmus leading to Cadiz, in the narrowest part—so as to bring both seas to its foot—and constructing strong walls of masonry and batteries on either side. Their efforts, however, though stimulated by all the ardour of patriotic enthusiasm, were ill directed, confusion and dilapidation pervaded every part of the public administration; and such was the ignorance of the Spanish engineers of the plainest principles of the military art, that while they had abandoned the strongholds of the Trocadero and Ma-

(1) For iii 195, 197. Nap. iii. 173, 175. Hard. xi 144. Vict. et Conq. xx, 10, 11.

Matagorda, from whence the enemy's shells could reach the city, they had pushed their advanced posts on the road to Seville, a mile and a half beyond the Zuazo bridge; that is, into a situation where they were exposed to attack on either flank, and where defeat would endanger the bridge itself, and the whole extensive defences of the Isle of Leon (1)

Feb. 22.
Public de-
struction of
Matagorda
by the British.

The first care of General Stewart after his arrival was to regain Fort Matagorda, where batteries were already constructing to bombard Cadiz. This important service was successfully performed by Captain McLean, at the head of 130 seamen and marines. Its dismantled works were hastily restored, and guns planted on the ramparts, which not only silenced the field pieces of the enemy directed against them, but severely galled their advancing works on the Trocadero Point. The whole efforts of the French were therefore directed to regain possession of this fort on the mainland; and with such vigour were their operations conducted, and such resources for refuge did they find in the arsenal of Seville, that, in a few weeks, they had fifty pieces of heavy cannon placed in battery against its walls while a Spanish seventy-four and armed flotilla, which had hitherto co-operated in the defence, were obliged, by a tempest of red-hot shot, to slip their cables and move across to Cadiz. The feeble rampart soon gave way before this tremendous weight of metal; but though the walls were ruined, and the enemy's balls flew so thick that a flag-staff bearing the Spanish colours was broken six times in an hour, and at last they could only be kept flying by being nailed to the corner of the rampart, yet the heroic little garrison, with their dauntless commander, Captain McLean, still maintained their ground, and from the midst of the ruins kept up an unquenchable fire on the besiegers. For six-and-thirty hours this marvellous resistance was prolonged, till at length General Graham who had succeeded to the command of the British troops in the Isle, seeing that half of that band were killed or wounded, withdrew them in boats to the opposite side, and the bastions after being blown up were abandoned to the enemy (2)

Increased
burden of
defence re-
maining
in Cadiz.

The brave resistance of this little band of heroes proved the salvation of Cadiz, and eventually exercised a material influence on that of the civilized world. For fifty-five days they had held the post on the enemy's side, and in the midst of his batteries; and by simply maintaining it they had prevented any attack being made in other quarters. During this important interval the panic had subsided in Cadiz; the British troops had been augmented to 8000 men by reinforcements from Lisbon and Gibraltar, six millions of dollars, recently arrived from Mexico, had replenished the public treasury; heavy taxes on houses within, and imports into, Cadiz furnished a small permanent revenue; the Spanish garrison was considerably augmented by volunteer battalions raised in the city, and numerous detachments brought by sea from different points in the coast; the whole ships of war had been brought round from Ferrol and thirty thousand men in arms within the walls, supported by a fleet of twenty-three ships of the line of which four were British, and twelve frigates, were in a condition not only to defy any attack, but to menace the enemy in the lines which they were constructing round the bay. Victor, who was at the head of the blockading

A remarkable instance of female heroism occurred at this siege. A vigorous wife named Betton was in conversation with the wounded men, when a drummer-boy was ordered to fetch water from the

well of the fort. On going out the hero followed under the cover of the bar against which she took the rear of her gun; and when it was shot in she was not hurt. Her husband, who bore the same name, was killed. She was the only woman who was not killed in the siege. *London & Co. 1811. and Thib. of a British & Co. 1811. 1811.*

columns traversed the country in all directions, repressing the guerilla chiefs, levying contributions to defray the heavy expenses of the generals, and plundering the paintings which now form the unrivalled collection of the works of the Spanish masters in Marshal Soult's hotel at Paris. Though the forces at the disposal of the French generals were altogether irresistible in the field, and gave them the entire command of the open country, yet the Spaniards in the mountains were still unsubdued. Romana and Ballasteros in the Sierra Morena, to the south of Estremadura. Blake and Elío on the confines of Murcia; and numerous bodies of armed peasants in the mountains of Bonda still maintained a desultory resistance, cut off the French detachments when they ventured too near their fastnesses, and preserved afloat the standard of independence, which might again be unfurled if happier days should dawn upon their country. To such a degree were the French irritated *they* and annoyed by this harassing warfare, that Soult, on the 9th May, issued a proclamation, declaring "the army of King Joseph the only regular Spanish force and the whole patriot bands as armed banditti, to whom no quarter should be given;" and this enactment was carried into effect by the burning of several villages, and execution of their inhabitants, who had taken part in the insurrection. The regency for some time made no reprisals; but the exterminating system being continued, they at length issued a decree, declaring that for every Spaniard thus murdered three Frenchmen should be put to death and this resolution having in some instances been acted upon, a stop was at length put, at least in the south, to this inhuman species of hostility (1).

Operations in Catalonia. Preparations for the siege of Tarragona. While a noble constancy amidst misfortunes was thus exhibited within the ramparts of Cadiz, and the standard of independence floated only in the south of the Peninsula in inaccessible deserts, or on the summit of the mountains, Suchet was commencing that energetic and skilful campaign which proved so fatal to the Spaniards on the east of Spain. It has been already noticed with what ability he had effected the reduction of Lerida and Mequinenza, and how much his successes were paralysed, by the disasters of Augereau, in the northern parts of the province (2). Napoleon was so highly gratified by these successes, and mortified by the simultaneous reverses, that he resolved to intrust his successful lieutenant with the important mission of completing the reduction of the province, and to deprive the unsuccessful one of his command. Augereau accordingly was recalled and Macdonald, restored to favour by his glorious exploit at the battle of Wagram (3), appointed to the direction of the northern parts of the province. Two great roads alone existed at that period in Catalonia, the one from Barcelona to Saragossa, the other by the sea-coast from Perpignan, by Gerona, Barcelona, Tarragona, Tortosa, and Peniscola, to Valencia. Of the first road the French, since the fall of Lerida, were entirely masters but the second was in their power only as far as Barcelona. Napoleon directed his lieutenants to proceed immediately to the reduction of the remaining strongholds on this line, the success of which would at once give him the command of the great communication along the east coast of Spain, and deprive the enemy of the succours which they were constantly deriving from the English vessels. Macdonald was to command the covering force, while to Suchet was given the immediate direction of the attacking army (4).

Forces and dispositions of the Spaniards in Catalonia. But although active operations were thus resolved on in the eastern provinces, and the two French marshals, after leaving a sufficient number in garrison, could bring nearly sixty thousand excellent troops into the field, yet it was no easy task which awaited them in executing the commands of the Emperor. The Spaniards in Catalonia, under O'Donnell and Campoverde, were above twenty thousand strong, and this force was capable of being increased to double the amount for a particular enterprise, by the concourse of the peasants, all of whom were armed, and to whom dire necessity had taught the art of quitting their houses, and taking refuge in the hills on the approach of the enemy. The upper valleys in Aragon and Catalonia were entirely in the hands of the Spaniards; and, descending from their mountain fastnesses, where, from the absence of roads, pursuit was hardly practicable, they alike straitened Suchet's quarters in the former province, and threatened Macdonald's communication with Barcelona in the latter. Though the road from Gerona to that capital was only forty miles long, it was highly dangerous from the number of narrow defiles with which it abounded, and the many rivers it had to cross; and so formidable were the armed bands who hung upon its flank, that the re-victualling of the fortress, which was kept in a constant state of blockade by the patriots, required a covering force of 8000 or 10,000 men. To add to the difficulties of the French generals, the battering train for the reduction of Taragona was preparing at Toulon, and required to come from France. Transport by sea was impossible, from the vigilance of the British cruisers, and not only was their conveyance by land along the sea-coast both difficult and dangerous, from the vicinity of so many valleys issuing upon it swarming with armed men, but, even if these were successfully passed, the ridge of mountains which separated the neighbourhood of Barcelona from Tortosa and the valley of the Ebro, was in the hands of the Somatenes, and its principal passes, the Col de Balaguer and the Col del Alba, were strongly guarded by detachments of regular troops, while the neighbouring fortress of Taragona, which the Spaniards had internally strengthened, and from whence ample supplies by sea could be obtained, operated as an advantageous base for their defensive operations (1).

When Macdonald succeeded Augereau in the command of the army in northern Catalonia, he found the troops in a state of frightful insubordination, carrying on in a most inhuman manner, and inflicting on and receiving from the unhappy peasants every species of atrocity, the sad legacies of the cruelty and violence of his predecessor. His first care was, by the establishment of discipline, to endeavour to bring them back to more humane habits, and greater regularity of conduct, but the injuries given and received on each side were too recent, mutual exasperation too violent, to enable him to restore the conventional usages of civilized war. It was still a matter of extermination, and even on both sides with a mutual cooperation. Having in one day, however, by a wholesale severity, restored the discipline of his army, which was hardly needed for preservation, and though, by the absence of force of ten thousand men, he retarded in his object, yet the delays occasioned by the incessant attacks, and the early half exhausted when he himself was obliged to return with his camp to the rugged ascent of Gerona. In Jul

(1) *Tor* iii. 312, 223, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

voy to relieve the again famished city forced the Garriga pass on the
 Aug. 2. 18th, and entered Barcelona that night. Early in August he again
 set out with a third convoy, which he also delivered in safety in that fortress;
 and, finding that the northern parts of the province were entirely exhausted
 by those repeated requisitions, he now moved to the southward, forced the
 pass of Ordal with sixteen thousand men, and established himself for a few
 Aug. 14. days at Reuss, in the middle of a little plain near Taragona, while
 Campoverde, with the main body of the Spanish forces, withdrew under the
 canon of that fortress. Finding, however, that the resources of Reuss and
 its vicinity were soon exhausted, and that the Spanish irregulars were draw-
 ing round him in all directions, and straitening his foraging parties, he again
 broke up; and, after making a feint towards the Col do Balaguer, turned
 sharp to the left, and overthrowing all opposition penetrated through the
 defile of Mont Blanch, and, descending into the plain of Urgel, entered into
 communication with Suchet, who lay at Lerida, in that vicinity, busily en-
 gaged in preparations for the siege of Tortosa (1)

Brilliant
 career of
 O'Donnell
 in the north
 of Catalonia. O'Donnell no sooner learned that Macdonald, with a considerable
 part of his forces, had crossed the mountains, and taken up his
 quarters in the neighbourhood of Lerida, than he formed the de-
 sign of surprising some of the French troops which were left scattered in the
 Ampurdan and northern parts of Catalonia. This bold design he executed
 with a vigour, skill, and secrecy, worthy of the very highest admiration.
 Shrouding his plans in profound darkness, he set out with a chosen body of
 six thousand men, and proceeded by forced marches towards Upper Catalo-
 Sep. 2. nia. Leaving Barcelona and Hostalrich to the right, spreading con-
 tradictory reports wherever he went of his destination, proceeding by horse
 tracks only through the hills, and swelling his column as he advanced by the
 numerous bands of armed peasants on his road, he fell with an overwhelming
 Sep. 14. force on Schwartz's brigade, cantoned at La Bisbal, three quarters
 of a league from Gerona, totally defeated it, and made the whole, twelve
 hundred strong, prisoners. Bravely following up his success, he next sur-
 prised and captured the whole French detachments on the coast towards Pa-
 lamos, and fifteen hundred prisoners were embarked at that harbour for
 Taragona, where they arrived in safety. The success, however, was dearly
 purchased by a severe wound which the brave O'Donnell received at Bisbal,
 which obliged him to return with part of his forces by sea to Taragona, where
 he was received by the population in transports as a deliverer but he left
 sufficient forces under Campoverde to nourish the war in the Ampurdan,
 which soon became so formidable that it induced Napoleon to send strong
 reinforcements from Perpignan to Gerona, in the end of October, while thirty
 thousand fresh troops entered Navarre from France at the same period (2)

Rejoice of
 Macdonald
 at Cardona,
 and his re-
 treat to
 Gerona.

Severely mortified by this disaster, which reflected as much dis-
 credit on the vigilance of his own officers as it did lustre on the
 skill and audacity of the enemy, Macdonald felt the necessity of re-
 tracing his steps to northern Catalonia; and while on his march
 there, sought to take his revenge by an attack on Cardona, where Campoverde
 had stationed himself with a considerable part of his forces, and where the
 local junta of Upper Catalonia had taken refuge when driven from Solsona,
 their usual place of assembly. In the attack on the latter town, the magnifi-
 cent cathedral took fire, and burning all night, fell with a frightful crash that

froze with horror every heart that heard it; while the mountains around were illuminated to their summits by the awful conflagration Cardona itself stands at the foot of a rugged hill, which is the last of an offshoot from the great mountain range that divides eastern from western Catalonia, and a strong castle frowned on a mountain above. On the slope between the town and this stronghold the Spanish army was drawn up in an admirable position, and presented so formidable an aspect that Macdonald at first hesitated to attack it, but while he was deliberating, his advanced guard engaged without orders, and he was obliged to bring up his main body to its support. Neither, however, were able to make any impression, the French columns were driven back down the hill in disorder, and after losing some hundred men Macdonald drew off, and resumed his march to Gerona, which he reached in the beginning of November. There, however, he found the country so utterly exhausted as to be incapable of furnishing subsistence to so great a number of troops, and as Barcelona was again reduced to extremity by want of provisions (1), he left fourteen thousand men under Baraguay d'Hilliers in the Ampurdan to maintain the communication with France, himself set out with sixteen thousand more, and the convoy collected in Perpignan for its relief, and after some fighting succeeded in re-victualling the fortress a fourth time, and again moving to the southward, took a position near Mont Blanch, rather in the condition of a strained and defeated than a victorious and relieving force (2)

While Macdonald was thus painfully maintaining his ground in upper Catalonia, without the forty thousand men under his command making any progress in the subjugation or pacification of the country, Suchet was busily engaged in preparations for the siege of Tortosa. To effect this, however, was a very tedious and difficult undertaking, for the strength of the enemy's forces in the intervening country rendered the transport of the battering train from Gerona and the French frontier impossible, and it required to be collected in Aragon, and conveyed in boats down the Ebro to the destined points, where the banks were in great part in the enemy's hands. Macdonald's approach to the plain of Urgel rather increased than diminished his difficulties, for the unlooked for accumulation of force speedily exhausted the resources of the country, without affording any protection from the Somatenes to counterbalance that disadvantage. The financial difficulties of the French general were much augmented at this period by a peremptory order received from Napoléon to burn the whole English goods found in the province, an order which, however ill-timed and disastrous, he was obliged, after making the most vigorous remonstrances, to carry into complete execution, by publicly burning all the British manufactures found in the province, in the great square of Saragossa. British colonial produce, by great exertions, escaped with a duty only of fifty per cent. This rigorous measure entirely ruined the merchants of the province, and the only resources which the French general had at his command to encounter his enormous expenses, were those which he derived from the plain of Aragon,

(1) Such was the extremity to which Barcelona was reduced at this period by the vigilant blockade kept up by the Catalonians on land, and the English at sea, that Macdonald on 28th October wrote to Suchet—"The Governor of Barcelona has announced to me the immediate departure of a convoy from Perpignan on 4th November, and urges me in the strongest manner to protect its advance. If that convoy is taken or dispersed, Barcelona will be lost and it is not doubtful that the enemy will

try every method to intercept it. My presence alone can save it, and you will easily understand that even if the chances of success are equally balanced, we can never permit, without effort to avert it, such a loss, which would be irremediable"—MACDONALD to SUCHET, 28th October 1810. SUCHET'S *Mem.*, i. 206

(2) Nap. iv. 25, 28. Tor. iii. 321, 322. Vict. et Conq. xx. 139, 141

for great part of its mountain districts were in the hands of the guerillas, and Napoléon, following out his usual system of making war maintain war, had thrown him entirely on his own province for the whole expenses of his corps and military operations (1). Such, was the influence, however, of the vigorous government, and able administration of Suchet, that under the protection of his power industry, by degrees resumed its exertions and though the taxes were extremely severe, comparative contentment prevailed; while such was the dexterity in extracting the resources from a country which long practice had given to the French generals and authorities, that from the ruined capital and wasted province of Aragon, they contrived to extort no less than eight millions of francs (L.320,000) annually, for the pay of the troops alone, besides a much greater sum for their maintenance and operations (2), although it had never paid four millions of francs in all to Government, in the most flourishing and pacific days of the Spanish monarchy (3).

Commence-
ment of the
siege of
Tortosa.
Nov. 11th. Although a sort of nominal blockade had been kept up of Tortosa since the middle of August, yet it was not till the beginning of November that the operations before it were seriously prosecuted the waters of the Ebro being too shallow in the autumnal months, from the drought of summer, to permit the heavy boats laden with the siege equipage to drop down from Saragossa to the lower parts of the river. Meanwhile, the Spanish guerilla parties were indefatigable in their efforts to impede the progress of the navigation; several French parties despatched to clear the banks were surprised and cut to pieces and, on one occasion, a whole Neapolitan battalion was made prisoners. Early in November, however, the waters had risen sufficiently to enable the flotilla having the battering train and other siege apparatus, which had been so long in preparation, to drop down the stream and though some of the boats were stranded, and severe fighting was necessary to clear the banks of the enemy, yet a sufficient number reached the neighbourhood of Tortosa, to enable Suchet to commence the siege. Macdonald, at the same time, approached from the north to lend a hand to the operations and to facilitate their advance, Suchet attacked the Spanish troops at Falset, who obstructed the communication between the two armies, and after a short conflict put them to the rout with considerable loss, while General Bascour, who, with the Valencian troops, lay on the right bank of the Ebro, and who took advantage of the absence of the general-in-chief with the main body of the French forces on the left bank, to make an attack on the covering force near Uldecona, was defeated in two engagements, with the loss of three thousand men, and forced to take shelter within the walls of Peniscola. These important successes in a great measure secured the rear of the besieging force, and materially extended the district from which their resources were to be drawn but such was the perseverance of the Spaniards, and the unconquerable spirit with which hostility sprung up in one place when extinguished in another, that the flotillas on the river were still exposed to attack, and a considerable convoy

(1) "The Governor of Aragon, Marshal Suchet, is charged with the administration of the police of public justice, and of the finances. He will nominate to all public employments, and make all the requisite regulations. All the revenues of Aragon, as well ordinary as extraordinary shall be paid over to the French paymaster, for the payment of the troops, and the charges of their maintenance. As a consequence of this, from the 1st March 1810, the French Treasury shall cease to remit any funds

for the service of the troops stationed in the whole extent of that Government. — *Order* 2d Feb. 1810 — *Moniteur* 9th Feb. — and *Barlet's Moniteur* 1. 243. This decree is a specimen and sample of the whole military government of Napoleon.

(2) "The six months preceding the siege of Tortosa, Suchet had levied in Aragon 120,000 sheep, and 1,500 asses. — *Suchet* 1. 312.

(3) *Suchet*, 1. 298, 224, 246. *Exp. iv* 30, 32. *Smith*, v. 237. 238. *Dalm.* 4. 121.

descending the stream was saved from destruction only by the sacrifice of the covering force, some hundred strong, ashore. Notwithstanding all their vigilance, however, the French generals were drawing their forces, as well as accumulating their means of prosecuting the siege, around the fortress. Suchet had twenty thousand men encamped under its walls, while Macdonald, having re-victualled Barcelona, and raised its garrison to six thousand men, and left Baraguay d'Hilliers with fourteen thousand at Gerona, drew near with fifteen thousand excellent troops to cover the siege (1).

Description of Tortosa TORTOSA, situated at the mouth of the Ebro, and in part resting on a ridge of rocky heights, which in that quarter approach close to the river, seems to form the bond of communication between the mountains of Catalonia and the waters of the river. The town itself is situated on the northern or left bank, and its chief defence consisted in the strong fortifications which crowned the crest of the rugged heights that rise from thence towards the mountains that lie to the northward. The communication with the opposite bank was by a bridge of boats, the southern extremity of which was covered by a regular *tête-de-pont*. The works on the left bank, running up broken ridges and across precipitous ravines, were extremely irregular, and formidable rather from the depth of the precipices and obstacles of the ground, than the strength of the battlements with which they were surmounted. A hornwork, called the Tenasas, perched on a height beyond the northern suburb, and a lunette, bearing the name of Orléans, constructed to cover the point where the Duke of Orléans had carried the place during the war of the Succession, constituted its principal outworks on the left bank of the river. The garrison consisted of eight thousand men, the inhabitants, ten thousand more, were animated with the best spirit, and both from the strength of the works, and the importance of its position, commanding the only bridge over the Ebro from Saragossa to the sea, this fortress was justly regarded as the key of all southern Catalonia (2).

Siege of Tortosa. Six thousand of Macdonald's men were placed under the command of Suchet, while he himself with the remainder, 10,000 strong, stationed himself in the passes of the hills, in such a manner as to interrupt the approach of any Spaniards from Taragona, where the bulk of their forces were placed. But the defence made by Tortosa was noways commensurate either to its ancient reputation, nor the present efforts which had been made for its reduction. The investment having been completed, the whole enemy's posts were driven in on the 19th December, and on the following night ground was broken before the fortress. With such vigour were the operations conducted, and so negligent the defence, that in the short space of seven days the besiegers were safely lodged in the covered way, and on the following day a sally was repulsed with much slaughter. On the night of the 26th the batteries were armed with forty-five pieces of heavy artillery, from which at day-break on the following morning a heavy fire was opened upon the Spanish ramparts. In two days the works were sensibly injured, the bridge to the southern bank of the river broken, and the *tête-de-pont* on that bank abandoned by the besieged. In the night of the 31st, the besiegers' guns were brought up to the edge of the counterscarp, and the miners had effected a lodgement in the rampart, but the mine was not yet fired, no practicable breach had been effected, and the garrison and

iii. 419, 420.

armed citizens, still above 6000 strong, might have prolonged for a considerable time a glorious defence (1)

The governor Alacha, however, was a weak man, wholly destitute of the resolution requisite for such a situation; his imagination was haunted by the terrors of a mine exploded, and the enemy rushing in through a defenceless breach; and at seven o'clock in the evening he hoisted the white flag on the bastion chiefly threatened. Meanwhile, he had recourse to the usual resource of irresolute men, a council of war; but it decided nothing, and left him in greater perplexity than before. The officers, however, of the garrison, indignant at the pusillanimous surrender which was in contemplation, loudly remonstrated against the proposed surrender, and in fact almost shook off the governor's authority. In the night, however, the artillery of the besiegers thundered with powerful effect on the ramparts from the opposite side of the ditch; in the morning two practicable breaches were made on it, and an immediate assault was commanded. Upon this three white flags were displayed in different parts of the city; and Suchet, perceiving that the governor's authority was not generally obeyed, rode up to the principal gate, informed the sentinels that hostilities had ceased, and desired to be instantly conducted to the governor in the citadel. He found him surrounded by his officers, who were vehemently protesting against a surrender, and contending for a renewal of hostilities; but such was the ascendant speedily obtained by the stern manner and undaunted bearing of the French general, that the governor was overawed; none of his officers could undertake the responsibility, at so awful a moment, of revolting openly against his authority, and the place was surrendered at discretion. The garrison, still 7000 strong, laid down their arms. There were found in the place 180 pieces of cannon, 50,000 bombs and cannon-balls, and 150,000 pounds of powder (2)

Suchet took steps, without any delay, to improve the immense advantage thus gained to the uttermost. An expedition was immediately fitted out from the fallen city against the Celdi Balaguer, a fort commanding the pass over the mountains of the same name between Tortosa and Taragona, and this important stronghold was carried by escalade. This easy conquest gave him the means of directing his forces at pleasure, either against the latter of these cities, the seat of government and great bulwark of the Spaniards in the province, or against the valleys still held by their arms in the north of Catalonia; while the possession of the only bridge over the Lower Ebro entirely severed the patriots in Catalonia from those in Valencia, and laid open the rich plains and hitherto untouched fields of the latter province to the French incursions. At the same time, the fort of La Rapita, on the sea-coast near the mouth of the Ebro, and the mouth of that river itself, fell into the hands of the French; and the Valencians and Catalonians, finding themselves entirely severed from each other and separately menaced with an attack, gave up all thoughts of combined operations, and severally prepared to the best of their power to withstand the storm about to fall on their heads. Macdonald, however, in the course of his march from the neighbourhood of Barcelona to Lerida, whither he was directing his course in order to concert measures with Suchet for the investment of Taragona, had to sustain a rude conflict, in the defile of Valls, with the troops of Saratfield, while the garrison of

(1) *Tor. iv. 82, 101. Balan. iii. 431. (2) Suchet, l. 222, 246. Rep. 42, 44.*

(2) *Balan. iii. 441, 442. Suchet, l. 213, 214. Rep. iv. 44, 45. Tor. iii. 96, 102.*

A striking example of this peculiarity in the contest, occurred immediately after the fall of Tortosa. While all Europe imagined that so decisive a blow was to terminate the war in the east of the Peninsula, and that Catalonia and Valencia, now severed from each other, would separately fall an easy prey to the victor, the gallant Spaniards of the former province, nothing daunted, were preparing to wrest its most important fortresses from the enemy and, though baffled in one of their enterprises, they succeeded in making themselves masters of the key to the eastern Pyrenees (1).

Attempt to surprise Barcelona, and capture of Figueras by the Spaniards. March 29. Barcelona was the first object of their attack. Early in March Campoverde assembled 8000 men at Molinos del Rey, and 7000 at Igualada and the neighbouring villages and having secret intelligence with the inhabitants of Monjuich, the citadel of that fortress, who promised to aid him in the attempt, he deemed himself secure of success. Late on the night of the 29th March, he arrived close to the walls, and a column of grenadiers descended into the ditch. General Maurice Mathieu, the French governor, however, had accurate intelligence of all that was going forward the ramparts were lined with armed men, and so terrible a fire was speedily opened on the head of the column, that great numbers fell on the spot, and the remainder who had not crossed the crest of the glacis, finding the design discovered, retired hastily and abandoned the attempt. Far from being discouraged by this failure, a similar enterprise was shortly after undertaken against Figueras, and crowned with complete success. A leader of the Miquelets named Martinez having ascertained that the governor of this important fortress kept a very negligent look-out, and that the garrison, not 2000 strong, trusted entirely to the strength of the ramparts for their defence, formed the design, with the aid of some citizens in the town of sur-

April 20. prising the gates. Late on the evening of the 9th April, he descended from the mountains, and as soon as it was dark sent his advanced guard under Rovira, seven hundred strong, close to the ramparts. The citizens inside, with whom the plan was concerted, immediately opened the postern, the Spaniards rushed in and disarmed the guard and so rapidly did Martinez, with the main body of his forces, follow on their footsteps, that, before the astonished Italians could make any preparations for their defence, the gates were all in possession of the enemy, the arsenals taken, and the whole garrison made prisoners. Thirty men only were killed or wounded in this brilliant exploit, the governor and 1700 men were taken; a few hundred made their escape to Gerona, where they arrived in great dismay early in the morning: while the Sometence of the neighbouring hills, among whom the news spread like wild-fire, made the most incredible exertions, before the French could reinvest the place, to throw in supplies of men and provisions (2).

Unsuccessful attempt of Campoverde to recapture the place. May 11. This important advantage, which seemed to counterbalance the fall of Tortosa, and, if it had been adequately supported, unquestionably would have done so, excited the most enthusiastic transports throughout all Spain. Crowds of Miquelets fully equipped, and burning with ardour, crowded round the standards of Campoverde and Saragossa and from all quarters bands of armed men converged towards Figueras to raise the blockade, revictual the fortress, and preserve the eastern key of the Peninsula for the arms of the monarchy. *The Deusu* was sung in all the churches of the Peninsula not under the immediate control of the enemy. The general transports knew no bounds. But while the people were giving

themselves to excusable congratulations on this auspicious event, the French generals were busily engaged in taking measures to render it of no avail to the enemy. Baraguay d'Hilliers immediately drew out all the forces he could collect from Gerona, and the neighbouring forts, and closely blockaded the fortress, in the hope of compelling it to surrender, from want of provisions, before any succours could be thrown in by the enemy. The Spaniards, on their part, were not idle, and Campoverde speedily approached from the side of Taragona, at the head of 8000 infantry and 1200 horse, bringing with them a great convoy of ammunition and provisions. But all his efforts to re-

May 3 lieve the place proved unsuccessful. Early in May he made his appearance before the besiegers' stations, and so completely had the design been concealed from the French generals, that, at the point where the heads of his columns appeared, there was only a single battalion ready for action, while the Baron d'Erolles threatened the besiegers on the other side by a sally from the citadel, and if the Spanish commander had instantly commenced the attack, the French historians admit he would easily have accomplished his object. The French general, in this extremity, had recourse to an artifice, and announced the conclusion of an armistice with a view to a capitulation to Sarsfield, who fell into the snare, and consented at the critical moment to a suspension of arms. Meanwhile, urgent messengers were dispatched for succour, and when hostilities were resumed the period for complete success had passed. As it was, the head of Sarsfield's column, after overthrowing all opposition, penetrated into the town, and 1500 men with some provisions succeeded in reinforcing the garrison, but Baraguay d'Hilliers, alarmed by the fire of musketry, and now aware of the real point of attack, hastened with a choice body of 4000 men to the spot, and assailing the Spaniards while scattered over several miles of road, and in part involved in the streets of the suburbs in flank, won an easy victory, 1100 men were lost to the Spaniards in this affair, and the remainder driven to a distance from the beleaguered fortress, and though the French loss was nearly as great, yet, they might with reason congratulate themselves on the success of their defence, as the provisions thrown into the place bore no proportion to the additional mouths introduced, and after the defeat of Sarsfield the blockading columns quietly resumed their stations on the hills around its walls (1)

Macdonald was engaged during these operations in northern Catalonia in an enterprise which has left an enduring stain on his memory. After the departure of Suchet for Saragossa, consequent on the fall of Tortosa, the marshal had set out from Lerida for Barcelona, not by the direct road of Igualada, which was occupied in force by Sarsfield, but by the circuitous route of Manresa. Sarsfield, apprized of his intentions, lay in the rocky heights in the neighbourhood of Mont Serrat to assail him in the march. The
 Burning and fight of Manresa
 March 29 Italians, who formed the head of the column, encountered a severe opposition at the bridge of Manresa, which was strongly barricaded, but having forced their way through, they, with wanton barbarity, set fire to the town, though it had made no resistance, and was almost entirely deserted by its inhabitants, and even tore the wounded Spaniards from the hospital. The flames spreading with frightful rapidity, soon reduced 700 houses to ashes, among which were two orphan hospitals, and several other noble establishments both of industry and beneficence. Macdonald, who witnessed the conflagration from the heights of Culla, at a short distance, made no attempt to extinguish the flames, but, resuming his

(1) Vict. et Conq. xx 308, 311. Tor. iv 121, 123 Nap. iv 62, 63,

march on the following morning, left the smoking ruins to attest where a French marshal's army had passed the night. But the wanton act of barbarity was quickly and condignly avenged. The inhabitants of all the neighbouring hills, struck by the prodigious light which, through the whole night, illuminated the heavens, hastened at daybreak to the scene of devastation, and, wrought up to the highest pitch by the sight of the burning dwellings, fell with irresistible fury on the French rearguard as it was desiling out of the town, while Sarrafield himself assailed the long column of march in flank, when scattered over several leagues of woody and rocky defiles, and before Macdonald reached Barcelona he had sustained a loss of 1000 men. The hideous cruelty of this conflagration excited the utmost indignation, not only in Catalonia, but throughout the whole of Spain. The war assumed a character of vengeful atrocity, hitherto unequalled even in that sea of blood, and the Spanish generals, justly indignant at such a wanton violation alike of the usages of war, and the convention hitherto observed in Catalonia, issued a proclamation, directing no quarter to be given to the French troops in the neighbourhood of any town which should be delivered over to the flames (1).

Suchet's reasons for persisting in the siege of Taragona. Macdonald was so disconcerted by this disaster, and the fall of Figueras, which in the highest degree excited the displeasure of the Emperor, that he earnestly entreated Suchet to lay aside for the present all thoughts of the siege of Taragona, and unite all his disposable forces with those of the army of northern Catalonia for the great object of regaining the most important fortress in eastern Spain for the French arms. But Suchet, who was intent on the reduction of the great stronghold of the patriots in that quarter, was not to be diverted from his object; and since Macdonald professed his inability to render him any assistance, he resolved to undertake the enterprise alone, with the aid only of Macdonald's divisions which were placed under his orders. He replied, therefore, to the requisition of his colleague for aid in the blockade of Figueras, "That a simple blockade might be established by the nearest troops; while to accumulate great forces on so sterile a spot would, without accelerating the surrender, transfer the difficulties of subsistence to the besieging force; that it was by no means reasonable to renounce the attack on Taragona, the only remaining bulwark of Catalonia, at the very moment of execution, because of the loss of a fort; that it was in Taragona that the greatest number of the Spanish forces in the province were shut up, and it was there only that they could be made prisoners. Eighteen thousand had already been captured in Lerida, Mequinenza, and Tortosa, and if ten or twelve thousand more were taken in Taragona, the strength of Catalonia would be entirely broken. It was more than ever expedient to press this great operation, as that fortress, stripped of a large portion of its defenders sent to the relief of Figueras, would fall more easily than under any other circumstances could be expected (2)."

Dispositions of Taragona. TARAGONA, which Suchet, in obedience not less of the express injunctions of the Emperor, than the dictates of sound policy on the subject, was now seriously resolved to besiege, is a city of great antiquity, and celebrated from the earliest times in the wars of the Peninsula. The Tar

(1) *Tar. iv* 115, 116. [*Viet. et Comg.* xx. 244, 247. *Rep.* iv. 26, 27. *Month.* v. 266, 267.]

(2) The conduct of Marshal Macdonald has been equally unworthy of his rank as a French duke and marshal, and his station as a general of divided armies. Not content with reducing to ashes a defenceless city which was making no resistance, he has not even respected the sepulchre of wounded

soldiers, and has violated the sacred contract concluded between the hostile armies, and acted upon since the commencement of the war. *CONFERENCE* *Proclamation*, 1st April 1811; *Taragona*, 1 116.

(3) Suchet *Mém.* II. 16, 17. *Rep.* iv. 62, 64. *Tar.* i. 122, 123.

was scattered over their line of march to repel the incursions of the Somatenes from the neighbouring hills. All things having, by great and long continued exertions, been at last got in readiness, the French army moved forward, and, approaching the fortress from the south, crossed the stream of the Francolí, and completed the investment on that side from the foot of the cliffs of Olivo to the sea. In doing so, however, they were exposed to a severe fire from the fort on the one side, and the English squadron on the other, by which, in a short time, two hundred men were struck down; but, notwithstanding this loss, they succeeded in maintaining their ground, and next day repulsed a sortie by the garrison to drive them from it. The French

May 4. had for the undertaking, twenty thousand men, composing the very best troops in the Peninsula, and a hundred pieces of cannon but the Spanish garrison was receiving continual reinforcements by sea. Campoverde

May 10. himself arrived with four thousand men on the 10th, and, after reinforcing the garrison, again set sail to join his lieutenants in the attempt to raise the siege. Colonel Green soon afterwards made his appearance from Cadix with considerable English stores, and fifty thousand dollars in money; while Sarsfield and D'Erolles resumed their former stations near Valls, Mont Blanch, and Igualada, to threaten the communications of the besieging force (1)

May 11. The attack of the besiegers being directed, in the first instance, against the lower town on its southern front, near the Francolí stream, they found themselves severely galled by the fire of Fort

May 12. Olivo and, on that account, soon felt the necessity of directing their operations, in the first place, against that formidable outwork. Several sallies by the besieged in some of which nearly six thousand men were engaged and which, though repulsed, seriously impeded his operations, convinced Suchet, at the same time, of the necessity of contracting his communications, and accumulating all the disposable forces he could command round the fortress, which was now defended by above twelve thousand soldiers. The fortified station on Mont Blanch, accordingly, was abandoned, and its garrison drawn in to reinforce the besiegers, the line of communication by Falset and Felipe de Balaguer being alone preserved open. Ground was broke

May 21. before Fort Olivo on the 21st but the vigorous fire of the Spanish batteries, and the extraordinary difficulties of the ground, rendered the progress of the trenches extremely slow; and it was not till the 27th that thirteen guns were pushed so near as to be able to breach the place, and early on the 28th before the fire was opened. Notwithstanding the weight of metal with which it was attacked the gunners of the fort replied with uncommon

May 28. vigour, and little progress was made during the next day in breaching the ramparts but, towards night, the engineers succeeded in blowing down the palisades which defended the junction of the aqueduct and wall, and left an entrance almost on a level with the ramparts. The breach was not yet practicable; but this ill-defended point afforded a hope of effecting an entrance; and the circumstances of the besiegers, and the increasing numbers and audacity of the Somatenes in their rear, as well as the general enthusiasm excited by the fall of Figueras, rendered it indispensable to hazard an immediate assault. It was therefore ordered for that very night: two chosen columns were selected for the attack: every man in the army as well as the town, felt that on its success the fate of the siege, and probably of the war in Catalonia, would depend (2)

(1) Deim. III. 479, 483. Tac. iv. 127, 128. See Ches. II. 34, 48.

(2) Deim. III. 484, and 487. Tac. iv. 126, 127. Tac. iv. 129, 130. Suchet, II. 52, 53.

It is carried by storm May 29. Four guns were discharged at nightfall as the signal for the assault; a variety of false attacks were immediately directed, with loud cheers and beating of drums, against the ramparts of the fortress, and the columns destined for the real assault of the breach and the aqueduct entrance of the fort, swiftly and silently advanced to their destined points. The Spaniards, distracted by the fire and rolling of drums in every direction, and unable from the darkness to see the assailants, opened a fire from every rampart and bastion in the place. The vast circumference of Taragona presented an undulating sheet of flame: every cliff, every salient angle, stood forth in bright illumination amidst the general gloom, while the English ships in the bay opened a distant cannonade, which increased the grandeur of the spectacle, and threw flaming projectiles that streaked the firmament in every direction with flitting gleams of light. Amidst this awful scene the assaulting columns, shrouded in gloom, advanced bravely to the assault. That destined for the attack of the breach stumbled in the dark against a Spanish column, which was proceeding from the town to relieve the garrison of the fort; the two bodies, from the violence of the shock, soon got intermingled, and, in the confusion which ensued, some of the assailants got in at the gate opened to receive the succour, and, when it was closed, their comrades outside, now close to the walls, began to mount them by escalade. Meanwhile the other column was still more fortunate. The front ranks, who had descended into the fosse, indeed found their scaling-ladders too short, and were soon swept away by the murderous fire from the rampart; but the aqueduct presented a bridge, narrow indeed, but capable of being passed by resolute men, now that the palisades were blown down, and over this narrow ledge the Italian grenadiers made their way into the fort. Though the defences, however, were now penetrated in two different quarters, the brave garrison disdained to surrender. Facing their enemies on the ramparts, wherever they presented themselves, they still fought like lions. The cannoniers fell at their guns; the infantry perished in their ranks as they stood; and it was only by pouring in fresh columns of unwearied troops, who, as day dawned, mowed the heroic defenders down by concentric volleys on all sides, that the resistance was at length overcome. Two hundred of the assailants perished in this desperate assault; but the loss of the besieged was still greater, and nearly a thousand men were made prisoners, the remainder of the garrison having in desperation leaped from the ramparts and escaped into the city (1).

Preparations of the Spaniards for a protracted defence May 21

The loss of Fort Olivo was a severe discouragement to the Spaniards, as it had been generally considered as impregnable, and contained ammunition and provisions for a long siege. Its fall was poorly compensated on the following day by the arrival of reinforcements to the amount of two thousand men, who came by sea from Minorca and Valencia. With their aid a sortie was attempted by three thousand men to endeavour to regain the fort before the French had time to establish themselves in their conquest, but so rapid had been the dispositions of General Rogniat, who commanded the engineers, for its defence, that it was repulsed with loss. A council of war was upon this held in Taragona, and it was decided that Campoverde should leave the place, and endeavour to rouse the mountaineers of Catalonia, who already mustered ten thousand strong in the neighbourhood of Valls, to raise the siege, while the command of the garrison was committed to Don Juan de Contreras, a brave man, who ably and faithfully executed the arduous trust committed to his charge. He im-

(1) Vacani, 124, 126. Belin, iii. 497, 502, Suchet, ii. 56, 60. Tor. iv. 131, 132. Nap. iv. 78, 81.

mediately adopted the most energetic measures for the public defence; levied a heavy tax on the principal merchants, which replenished the military chest; and divided the whole inhabitants, without exception of age or sex, into companies, to whom various duties, according to their capacity, were assigned: the aged and women to attend the wounded and prepare bandages, the children to carry water and ammunition to the troops, the men capable of supporting arms to reinforce the soldiers on the ramparts while Commodore Codrington materially aided the defence by continually landing fresh supplies of provisions and warlike stores, and removing the sick and wounded to the neighbouring and friendly harbour of Valencia (1)

Progress of the siege and preparation made by the Spaniards to resist it. Finding the garrison resolute in maintaining the defence, notwithstanding the disaster they had experienced, Suchet commenced his approaches in form against the lower town, on the side of the Francoli river. Sarafield at the same time entered the fortresses with reinforcements, and took the command in the menaced quarter.

The French engineers, by great exertion, had there established fifty pieces of heavy cannon in the trenches, which were gradually pushed forward to breaching distance, notwithstanding repeated sallies of the besieged. On the 7th June the fire commenced against Fort Francoli, and on the same night a lodgement was effected in that outwork which forms the south-eastern angle of the fortress, close to the sea. By this means the French gained the important advantage of closing the entrance of the harbour to the British fleet; but Codrington still kept up his communication with the town by means of the point of Malagro, which was beyond the reach of the guns from Francoli; and he soon after landed four thousand men from Valencia at Villa Nova, who made their way across the hills to Campoverde, who

June 14. was now seriously preparing in their rear to disquiet the besiegers, while D'Erolles, near Falco, attacked and destroyed a valuable convoy on its route to their camp. Meanwhile, the garrison of Taragona were so confident in their means of defence, that they dispatched a body of horse out by the road to Barcelona, who broke through the French lines of investment, and succeeded in joining their comrades destined to raise the siege. Several gallant sorties also were made by the Spaniards from the lower town, some of which proved entirely successful, and sensibly retarded the approaches of the French, which were now directed against the Orleans bastion, still on the southern front of that part of the fortress (2)

The approaches are brought up to the lower town. These untoward events seriously alarmed Suchet for the event of the siege. The garrison of the fortress had now been augmented to nearly seventeen thousand men: the losses of the defence were constantly supplied by fresh troops: his own besieging force was hardly of greater amount, when the losses it had sustained, already amounting to two thousand five hundred men, were taken into view; and fourteen thousand irregular troops, under Campoverde and Sarafield, were assembled to threaten his communications and cut off his convoys. An ordinary general, in such circumstances, would have abandoned the undertaking. But Suchet was one of those remarkable characters who find resources in themselves to overcome even the most formidable obstacles: he saw that the issue of the campaign was entirely centred in Taragona: that the siege was a combat of life or death to the opposite parties: and he resolved, at all hazards, to persist in the attempt. Abandoning, therefore, all subordinate stations, and summoning to

(1) Such. II. 61 63. Balcan. III. 506, 507. Tor. IV. 133, 134. Kap. IV. 78, 80.

(2) Balcan. III. 512, 513. Tor. IV. 133, 137. Kap. IV. 81 83. Suchet. II. 63, 81.

his aid four thousand additional troops from the rear, he concentrated all his efforts upon pushing forward the approaches, and keeping up the spirits of his men. Such, however, was the vigour of the Spanish fire, and the obstacles which they threw in the way by repeated sorties, that from sixty to a hundred men fell every day in the trenches; and it was evident that both the numbers and spirits of the soldiers would sink before so incessant a consumption, if it was of long endurance. At length, however, on the 21st June, three practicable breaches were declared in the rampart of the lower town, and the troops were directed to make ready for an assault (1)

Assault of
the lower
town
June 21.

At seven o'clock at night, fifteen hundred chosen men were disposed in three columns, and on a signal of four bombs discharged at once, advanced in silence, but with a swift and steady step, towards the breaches. The first column, under General Bouvion, rushed on rapidly to the breach of the Orléans bastion, which they were fortunate enough to surmount almost before they were perceived, and before the enemy had time to fire two mines which had been run under the ruined part of the wall. The Spaniards, surprised, were driven back to the gorge of the redoubt, where they stood firm, and arrested the assaulting column; but fresh troops pouring in, they were at length overcome, and the victors hotly pursuing their advantage, made themselves masters of the whole works in the south-west angle of the lower town, and arrived at the foot of the rampart of Fort Royal. Meanwhile, the second column, whose attack was directed against the breach in the bastion of St Charles, near the sea-coast, met with a severe resistance, and its head was arrested on the breach; but Suchet no sooner perceived this than he ordered up a second body, which, pressing on immediately behind the first, fairly pushed it through the perilous pass, and the rampart was won. The whole bastions and walls now swarmed with the assailants, the Spaniards, without a leader, were thrown into confusion, and fled, some to the upper town, some into the houses in the lower, where they were speedily pursued and massacred. The shouts of the victors, the cries of the vanquished, were heard on all sides, the warehouses near the harbour took fire, and soon filled the heavens with a prodigious flame, in the general confusion the vessels in the port cut their cables and stood out to sea, while the English squadron increased the horrors of the scene by pouring their broadsides indiscriminately into the quays and ramparts, now crowded with the enemy's soldiers. In the midst of this frightful confusion, however, the assailants steadily pursued their advantages amidst a terrific carnage, alike of soldiers and citizens, the besieged were driven entirely from their defences, Fort Royal itself was carried by escalade in the first tumult of victory, and when morning dawned the French were masters of the harbour and whole lower town. The principal warehouses were smoking in ruins, fifteen hundred Spaniards lay dead in the streets and on the breaches, besides five hundred French who had fallen in the assault, eighty heavy guns which stood on the ramparts were in the enemy's power; and the whole remaining hopes of Taragona centred in the infuriated multitude who crowded the walls of the upper town (2).

Fruitless
attempt to
raise the
siege, and
failure of
succour
from
England.

But that multitude still presented an undaunted front to the enemy, and, amidst the ruin of all their hopes, still hoisted with mournful resolution the standard of independence. A flag of truce displayed by Suchet the day after the successful assault was sternly rejected. Loud were the clamours, however, which arose, both in

(1) Suchet, ii 80, 84 Belm. iii. 521, 525, Nap. iv 88 Tor iv 137, 139

the city and the adjoining province, against Campoverde, for his inactivity in not seriously attempting to raise the siege and to such a height did the ferment arrive after the fall of the lower town, that the Junta of Catalonia

June 21. sent him positive orders at all hazards to attempt it.* But though he had twelve thousand infantry and two thousand horse under his command, and the besieged had all their forces ready to co-operate on their side, nothing was done the officer to whom the principal attack was entrusted was too timid to undertake it; and Campoverde himself, after a vain demonstration, drew off, leaving the garrison to its fate. Still, however, the besieged held out undismayed and their spirits were elevated again to the highest

June 26. pitch, when, on the 28th, two thousand English from Cadiz, under Colonel Skerret, arrived in the bay. Loud and enthusiastic were the cheers of the excited multitude when the English commander, with his staff, landed and proceeded to the breach. The fall of Fort Olivo, the assault of the lower town, the terrors of Suchet, were forgotten, when the scarlet uniforms were seen traversing the streets. But these generous and confiding hopes were miserably disappointed. The British officers, though brave and zealous, had not the true military genius; they did not see where the vital point of the war in the east of Spain was to be found. The engineers reported that the wall, already shaking under the French fire, would soon give way. The Spanish garrison appeared adequate to the defence of the now diminished front, which was alone assailed and therefore they merely put their troops at the disposition of the Spanish authorities, without insisting that they should share the dangers of the assault. Contreras, who saw that they despaired of the defence of the place, generously refused to require their aid in the town, and acquiesced in their project to co-operate with Campoverde externally in attempting to raise the siege. Thus, however, failed from the impossibility of getting that general and the governor to agree on any joint plan of operations and the result was, that the precious hours were lost in useless deliberation. Two thousand British troops, capable of rendering Taragona as impregnable as Acre had been to the enemy, and changing the whole fortune of the war in the east of Spain, remained on board their transports, passive spectators of the last struggles for Catalonian independence (1)

Prepared to leave for the recovery of the upper town. This resolution of the English commanders to keep themselves aloof proved fatal to Taragona. The withdrawal of the English, universally deemed in the Peninsula at that period invincible, in-

June 27. 28. evitably produced the general impression that the defence could no longer be maintained, and spread distrust and irresolution at the very moment when vigour and enthusiasm were indispensably necessary to avert the crisis. Suchet, meanwhile, was stimulated by the strongest motives to press on and complete his conquest. The town was half taken the wall which separated him from the molety which still remained in the hands of the Spaniards, had no counterscarp or wet ditch the harbour was in his hands; and his breaching batteries, run up to within musketshot of the walls, had already begun to shake their aged masonry. Contreras, however, though abandoned by the British, was not dismayed. A thick hedge of aloë-trees, no small obstacle to troops, grew at the foot of the rampart defences behind the breach were prepared the adjoining houses loopholed as at Saragossa; barricades were erected across the streets leading into the interior of the town, the breach itself was occupied by three strong battalions; reserves immediately behind were ready to support any point which might be menaced;

(1) *Tow. iv. 148, 141. Rep. iv. 94, 95. Smith. v. 226, 306. Contreras Report, Suchet. II. 421*

and eight thousand veteran troops within the walls still promised a desperate resistance. Such was the vigour with which the fire of the place was kept up, that the parapets in the nearest French trenches erected within the lower town, were shot away, and the gunners stood exposed beside their pieces to a tremendous storm of musketry from the rampart, which swept away numbers every minute. The place of those who fell, however, was instantly supplied by others; the fire of the assailants' batteries continued without intermission; the breach rapidly widened with every discharge, while the impatience on either side for the final struggle became such, that the soldiers on the walls and in the trenches stood up and hurled defiance with frantic gestures at each other, in the midst of the tempest of shot which was flying on all sides. At length Suchet, at five in the afternoon, deeming the breach sufficiently widened to admit of being carried, traversed the ranks, addressing himself to every company, and, seeing the men wrought up to the highest pitch, gave the signal for assault, and fifteen hundred chosen troops, sallying forth from the trenches, rushed forwards towards the rampart, while eight thousand more were in reserve in the trenches to support their attack (1)

Its success The assailants had to cross a space a hundred and twenty yards
June 29 broad before reaching the foot of the wall, and the row of aloes at its foot offered no inconsiderable obstacle to their advance. When they leapt out of the trenches, the whole French batteries instantly ceased firing, while that of the Spaniards from the summit of the rampart redoubled, and a frightful storm of musketry, grape, hand-grenades, and howitzers, swept away the head of the column. On they rushed, however, till the aloes were reached, but their line was found to be impenetrable, the column required to make a circuit to get round, and the delay and confusion incident to this obstacle had wellnigh proved fatal to the assault. When the troops, disordered and out of breath, at length reached the foot of the rampart, and began to ascend the breach, the crumbling ruins gave way under their feet, its summit was crowned by a phalanx of determined men, strongly armed with bayonets, swords, and hand-grenades. A converging fire of musketry fell on all sides, and the leading files were struck down by a shower of grape in flank from the bastion of St -John. The column hesitated and recoiled in confusion: already the cries of victory were heard from the rampart, when Suchet, who was at hand to arrest the disorder, pushed forward a strong reserve to its support, and himself followed with his staff to the scene of danger. Still the assailants hesitated at the foot of the breach, and, spreading out on either side in wild confusion, began to return in vain the fire of the enemy, or take shelter under the projections of the bastion of St -Paul. Upon this, General Habert, Colonel Pepe, and the whole officers of the staff, themselves rushed forward to the breach, followed by the commanders of companies of the assaulting columns. Many fell in the ascent, but the remainder pushed on with heroic courage, and reached the top, the mass behind re-formed and rapidly followed on their footsteps, and the town was won. Eight thousand French, in the highest state of excitement, speedily streamed over the breach, and spread like a torrent along the ramparts on either side, and in the general confusion the three battalions, placed behind as a reserve for the defenders, were overthrown. A panic seized the Spanish troops in the interior, almost all their defences were abandoned, and it was only at the barricades and loop-holed houses near the street of La Rembla, that any serious resistance

(1) Suchet, ii. 88, 99. Nap. iv. 96, 97. Tor. iv. 142, 143. Delm. iii. 531, 543.

was experienced. There, however, a handful of desperate men defended themselves like lions, and it was only by continually bringing up fresh columns of attack, and the failure of ammunition among the besieged, that they were at length overcome, and the town finally taken (1).

The same justice due to Suchet and his indefatigable army for this glorious exploit, which was one of the greatest blows struck during the whole Peninsular war, and gave a decisive preponderance to the French arms in the east of Spain, was deeply tarnished by the savage cruelty which disgraced their triumph after the city was taken. The heroic governor, Contreras, who had received a deep bayonet wound in the breast, near the breach, was borne on a board into the presence of the French commander while the carnage was yet reeking in every quarter. Instead of admiring the valour and commiserating the situation of his fallen enemy, the victorious general reproached him for the tenacity of his defence, and declared he deserved instant death for having continued the resistance after the breach was practicable. "I know of no law," replied Contreras, "which compelled me to capitulate before the assault; besides, I expected succour. My person should be respected like that of the other prisoners, and the French general will respect it; if not, to him the infamy, to me the glory." This dignified answer recalled Suchet to his better feelings: he treated the captive general with respect, and soon after loaded him with kindness, and made advances to induce him to accept rank in the service of Joseph; but the brave Spaniard was proof alike against his seductions as his menaces, and he was in consequence sent as a prisoner to the citadel of Bouillon, in the Low Countries, from whence he afterwards made his escape. But in other quarters the work of slaughter went on without intermission. Gonzalez, the second in command, fell pierced by more than twenty wounds; nine hundred wounded, who had sought refuge in the cathedral, and lay on the pavement weltering in blood, were spared; but upon the defenceless inhabitants the storm of the victor's fury fell with unexampled severity. Armed and unarmed, men and women, grey hairs and infant innocence, attractive youth and wrinkled age, were alike butchered by the infuriated troops, whose passions were, not like the English soldiers, those of plunder or drunkenness, but the infernal unrelenting spirit of vengeance. Above six thousand human beings, almost all defenceless, were massacred on that dreadful night, which will be remembered in Spain as long as the human race endures, the greater part of the garrison, which had precipitated itself over the rocks, or rushed through the northern gates, enclosed within the French lines and the fire of the ramparts, were made prisoners; and when the magistrates of the surrounding country were, on the following morning, by Suchet's orders, brought into the town, and marched through the streets to see what fate awaited those who resisted the French arms, "the blood of the Spaniards," to use the expression of the French journalist of the siege, "inundated the streets and the houses." Humanity, however, amidst such scenes of horror, has to recount with plea-

(1) Suchet, li. 22, 103. Kap. i. 97-98. Tom. iv. 124. Notes, li. 239, 245.

"I such a height had the spirit of Suchet's troops arisen, that a Italian soldier named Blamichal who, at the assault of Fort Uti, had pursued the Spanish garrison to the foot of the walls of the town, and made some prisoners there, being brought before the general-lieutenant, and asked what recompense he desired, answered:—'The honour and the of promoting first to the assault of Tarragona.' On the 28th June this brave man, now promoted to the rank of a sergeant, presented him-

self in full dress before the general, and, saluted the banner which had been presented him. He obtained it was soon at the head of the Italian troops: received a wound, but did not pause, recovering his courage to follow him; was twice again wounded without stopping; and at length fell pierced to the heart by a bullet. He was the servant of the breach! The spirit of Blamichal is not extinct in Italy. It is only obscured by the corruption which has overpowered the higher ranks from long-continued civilisation.—See *Revue* *Almanach* in 100, 101.

sure that many French officers exerted themselves, though too often in vain and at the hazard of their own lives, to stay the carnage, and that numbers of individuals owed their lives to their generous intercession (1).

Immense results of this siege The trophies of the victory were immense, its results decisive. The French loss had been very severe during the siege, amounting to full five thousand men, but this was much exceeded by that of the besieged. Nine thousand of the garrison were made prisoners, three hundred and twenty guns mounted on the ramparts, fifteen thousand muskets, and above a million of cartridges, fell into the hands of the victors. The total loss to the Spaniards, from the commencement of the operations, had been little short of twenty thousand of their best troops. The French artillery had discharged forty-two thousand projectiles, the Spaniards a hundred and twenty thousand, during this siege, in every point of view, one of the most memorable in modern times. But its greatest results were the depriving the patriots of their grand military arsenal, and principal point of communication with the British fleets and the ocean in those parts of Spain. Justly impressed with the magnitude of those advantages, as well as the fortitude and ability displayed in their acquisition, Napoléon sent Suchet his marshal's baton, with an injunction to proceed as he had begun, and earn his dukedom under the walls of Valencia (2).

Suchet's next operations June 29 Anxious to secure, by rapidity of operations, the whole fruits which might be expected from so great a stroke, Marshal Suchet no sooner found himself master of Taragona, than he marched out with the greater part of his forces against Campoverde, whose troops, divided between consternation at its fall, and indignation at his temporizing policy in not relieving it, were alike disheartened and distracted, and incapable of opposing any serious resistance to his arms. The Spanish general, however, fell back so rapidly into the upper valleys and mountain ridges of Catalonia, that Suchet could not reach his footsteps, and various atrocious deeds of cruelty, by which the French marshal endeavoured to strike terror into the Catalans during his march, only revived the exasperation, and sowed again the seeds of an interminable war in the province. Campoverde, however, finding himself in no condition to make head against so formidable an assailant, retired to the mountain ridges on the frontier of Aragon, and openly announced his intention, which a council of war supported, of abandoning the province altogether as a lost country. Upon this all the soldiers in his army who were not Catalans deserted, numbers of the natives of the province returned in despair to their homes. grief and dejection universally prevailed. Meanwhile
July 3 fifteen hundred prisoners, chiefly wounded, were captured at Villa
July 5. Nova when endeavouring to embark the road to Barcelona opened and the Spanish rearguard defeated at Villa Franca. The Valencians, however, so loudly remonstrated against being abandoned to their fate in the Catalonian mountains, the more especially when their own country was evidently
July 9 threatened, that Campoverde agreed to return to Cervera; and the Valencians, three thousand in number, made their way to the sea-coast, where they were embarked at Arun de Mar. The English commodore, however, who took them on board, refused to embark any but Valencians, and thus the bulk of the army was forcibly retained on its own shores. Ultimately Campoverde was deprived of the command, which was conferred on General Lacy, and that indefatigable commander immediately gave a

new organization to his army, suited to the altered circumstances. Dismissing a great proportion of the officers, and almost all the horses, he re-formed great part of the troops into guerrilla bands, under whatever chiefs they chose to select, and numbers of them repaired to the standard of MIRA, in Navarre, who had now risen to celebrity and, after undergoing hardships and privations which exceed all figured in romance, ultimately joined the victorious host which, under Wellington, righted, at the eleventh hour, the wrongs of their country (1)

*Description
of Mont
Serrat.*

While the elements of resistance to French domination were thus, to all appearance, melting away in Catalonia, Suchet, whose activity neither difficulty could check, nor prosperity diminish, executed a *coup-de-main* against MONT SERRAT, a celebrated mountain fastness, and now the last stronghold of independence in that part of Spain. It was composed of the convent of Our Lady of Mont Serrat, formerly possessing great riches, removed at an early period of the war to Minorca by the monks, and stood upon the summit of a fantastic mountain, overlooking from the westward the plain of the Llobregat, in the neighbourhood of Barcelona. The prodigious height of the precipices on which the buildings were situated the wild forms of the peaks which shot up as it were into the sky around them the naked and savage character of the rocks, like the bones of a gigantic skeleton, of which the whole upper part of the mountain is composed the numerous hermitages which nestled like swallows' nests in the clofts, or crowned the projecting points in its long ascent the blue waters of the Mediterranean bounding the distant horizon, from the higher regions; the smiling aspect of the plain of Barcelona, teeming with riches and glittering with buildings at its foot, joined to the massy pile, Gothic towers, and aerial spires, of the convent itself, at the summit—had long impressed the minds of the Spaniards with religious awe, and rendered this monastic retreat one of the most celebrated in the south of Europe. But war in its most terrible form was now to penetrate these abodes of solitude and meditation; and the clang of musketry and the thunders of artillery were to re-echo amidst wilds hitherto responsive only to the notes of gratitude or the song of praise (2)

*Evacuation of
the convent,
July 23.*

The convent of Notre Dame, evacuated by the monks, had, from the beginning of the war, been a favourite station of the patriot bands and though its situation, at the distance of seven leagues only from Barcelona, had long rendered it at once a point of importance to the Spaniards and annoyance to the French, yet, from the apparently impregnable strength of its situation, no attempt had been made to dislodge them from it. Of late considerable pains had been taken to strengthen the position the steep and narrow paths which wound up the long ascent, had in many places been fortified; batteries had been erected on some commanding points; deep ditches drawn across the road in others; and near the monastery itself a strong intrenchment had been thrown up, while its gates were barricaded, and massy walls loop-holed for the fire of musketry. The principal approach was on the north side by Casa Mansana, and it was on it that the greatest care of the garrison had been bestowed; that which ascended the mountain on the south by Colbato, and on the east towards Monestrol, were mere paths, so steep and rugged that they were deemed altogether inaccessible to a body of troops. Suchet, however, having accurately enquired into the nature of the ground, resolved to menace all the three approaches at once; the principal

(1) *Tor.* i. 112. 114. *M. p.* iv. 100. 103. *Edm.* (2) *Tor.* i. 151. 152. *Suchet*, H. 122. 123.
— 520. 521.

quietly waited till famine should compel the besieged to surrender such was their strength, and the vigilance with which they were guarded, that the sallies of the garrison, and the efforts of the Somatenes in the adjacent hills to throw succours into the fortress, were alike baffled; and at length, after ^{Aug. 19.} losing fifteen hundred of their number in these ineffectual sorties, and having exhausted all their means of subsistence, the Spaniards were compelled to surrender at discretion. Thus was accomplished the prophecy of Suchet, that the surprise of Figueras, by inducing the Spaniards to detach a portion of the defenders of Tarragona to its succour, would prove rather prejudicial than auspicious to their arms; and the wisdom of his military counsel not to endanger success by dividing his means, but, relinquishing all minor objects, to concentrate his whole force upon the principal stronghold of the enemy, and vital point of the campaign (1).

^{Evacuation of Tarragona by Suchet, and preparations for the defence by the Spaniards Sept. 1.} Having completed his preparations, Marshal Suchet, in obedience to the positive orders of Napoleon, in the beginning of September commenced his march against Valencia, at the head of somewhat above twenty thousand men; the remainder of his force, which numbered nearly forty thousand combatants, being absorbed in the garrisons of the numerous fortresses which he had captured, and in keeping up his extensive communications. The Spaniards, meanwhile, had not been idle. Aware of the formidable onset which now awaited them, the Junta of Valencia had for a considerable period been busily engaged in the means of defence; the fortifications of Peniscola, Oropesa, and Saguntum, which lay on the great road from Barcelona, had been materially strengthened the latter had a garrison of three thousand men, and was amply provided with the means of defence. Valencia itself was covered by an external line of redoubts and an intrenched camp, which, in addition to its massy though antiquated walls, and ardent population, inflamed by the recollection of two successive defeats of the French, seemed to promise a difficult, perhaps a doubtful contest. Blake, the captain-general of the province, and a member of the Council of Government, was at the head of the army, which mustered five-and-twenty thousand men, comprising almost all the regular soldiers in the Peninsula. He had it in his power, if overmatched, to fall back on the impregnable walls of Carthagena or Alicante, while the sea in his rear every where afforded the inestimable advantage, at once of succour from the English in case of resistance, and the means of evasion in the event of defeat (2).

^{District of Saguntum.} MURVIEDRO, the ancient SAGUNTUM, is a fortress built upon the summit of a steep and rocky hill at the bottom of which the modern town of Murviedro stands. The waters of the Mediterranean, in the days of Hannibal, approached to within a mile of its eastern walls (3) but at present they are five miles distant, a proof how much the sea has retired along that coast in the intervening ages. Many remains of its former grandeur are still to be found by the curious antiquary, although its greatness has so much declined that the modern city contains but six thousand inhabitants, and occupies only a corner of the ample circuit of the ancient walls. The modern fortress, which bears the name of San Fernando de Saguntum, stands on the summit of the mountain round the base of which the ancient city was clustered, and consisted at this time of two redoubts, armed only with seventeen pieces of cannon. The garrison, however, was three thou-

hurled back to the foot of the hill with the loss of half their number, and Saguntum again, after the lapse of two thousand years, repulsed the soldiers of Napoleon, as it had done those of Hannibal (1).

Perilous
situation of
Suchet after
this repulse

Suchet's situation was now again full of peril. The guerilla parties infested the road between Tortosa and Oropesa, so as to render the conveyance of stores and provisions impossible, except by the detachment of a considerable force. Blake, with an army superior to his own, and entirely master of his operations, was in his front: he could not pass Saguntum, already proved by the failure of two assaults to be all but impregnable, and to retreat would be to blow the whole of the east of Spain into a flame, and lose all the fruits of the fall of Taragona. Nor were the accounts from Catalonia and Aragon calculated to allay his fears as to the issue of the campaign. The long inactivity of the French troops around Figueras, had been attended with its usual effects in those warm latitudes. Sickness had spread to a frightful extent during the autumnal months; 10,000 men were in hospital: and the communication between Gerona and Barcelona was again entirely interrupted. Encouraged by the debility of the enemy's forces in the Ampurdan, and the absence of Suchet from the southern parts of the province, the unconquerable Catalans had again risen in arms. Lacy had succeeded in re-organizing 8000 men under D'Erolles and Sarrafield, who were prosecuting a partisan warfare with indefatigable activity,—arms and ammunition having been furnished by the English. Buss, a mountain of great strength about twenty miles above Cardona among the Spanish Pyrenees, fixed on as their arsenal and seat of government, was already fortified and guarded by the militia of the country. Lacy was soon in a condition to resume offensive operations; he surprised Igualada, destroyed the French garrison, two hundred strong, captured an important convoy, compelled the enemy to evacuate Mont Serrat and retire to Taragona, levied contributions up to the gates of Barcelona, and even crossed the frontier, carrying devastation through the valleys on the French side of the Pyrenees. Six hundred men were made prisoners at Cervera, two hundred at Bellpuig. Macdonald was recalled from a command in which he had earned no addition to his laurels, and it was only by collecting a force of 14,000 infantry and 2000 horse that his successor Decaens was enabled to escort a convoy from Gerona to Barcelona (2).

Excerpt
of the
guerrilla in
Aragon

The intelligence from upper Aragon was not less disquieting. The *EXPECTANDO*, a noted guerilla chief, whose stronghold was the mountains near Guadalajara, had united with Duran and other guerilla leaders: and their united force, consisting of six thousand infantry and two thousand five hundred horse, threatened Calatayud. Next another guerilla chief, with five thousand men, was threatening Aragon from the side of Navarre; and lesser partisans were starting up in every direction. Musnier's and Severole's division, indeed, numbering twelve thousand soldiers, succeeded in raising the siege of Calatayud: but Mina gained great successes in the western part of the provinces, pursued the flying enemy up to the gates of Saragossa, and totally destroyed twelve hundred

(1) N. p. l. 273, 274. Tor. l. 214, 218. Suchet, II. 164, 172. Vict. et Camp. 25. 136, 138.

"Pecunia veritas facta est virtutis, et periculum salutis: contenti; saguntinis pro milia moribus patris corpore obsequantibus, non ulla possum referenda, ne i. relictis se locum, hostium multitudine. Itaque quo acris et confertis magis viribus pugnantibus, quo plures vulnerantibus: nullis saltem arma corporumque rursus insistentibus scilicet.

Quam diu asperis saltem virtutibus, et Saguntinis, quia preter spem resistere, creverunt salutis; Pueri quoque non solum pro via sunt; immo veritate oppellat illud, hostiumque i. relictis quasi expellat; ludo impetibus tripudantibus extorquet; postremo summa, in gratiamque in extra colligit. —Liv. l. 23. c. 8. 9

(2) Tor. l. 214, 218. Sup. iv. 276, 277

Italians, who were following him in his retreat towards the mountains. Such was the local knowledge and skill of this incomparable partisan, that, though actively pursued by several bodies of the enemy much superior to his own troops, he succeeded in getting clear off with his prisoners, which were taken from his hands on the coast by the his frigate, and conveyed safe to Corunna. The road between Tortosa and Oropesa also, Suchet's principal line of communication, was entirely closed by lesser hands, and it was easy to see that if he either remained where he was without gaining decisive success, or fell back to the Ebro, he would be beset by a host of enemies who would speedily wrest from him all his conquests (1).

Advance of
Blake to
raise the
siege.

From this hazardous situation, the French general was relieved by the imprudent daring of the Spaniards themselves. Blake, who was no stranger to the formation of a practicable breach in the walls of Saguntum, and knew well that, notwithstanding their recent success, the brave garrison would in the end sink under a repetition of such attacks, was resolved that they should not perish under his eyes, as that of Taragona had done under those of Campoveide. He accordingly made preparations for battle, and for this purpose got together twenty-two thousand infantry, two thousand five hundred horse, and thirty-six guns. With this imposing force, after issuing a simple but touching proclamation to his troops, he set out Oct 21 from Valencia on the evening of the 21st October, and made straight for the French position under the walls of Saguntum. Suchet was overjoyed at the intelligence, which reached him at eleven at night, and immediately gave orders for stopping the enemy on his march, before he had arrived at the ground where he designed to give battle. With this view the French general drew up the whole force that he could spare from the siege, about seventeen thousand men, with thirty guns, in a pass about three miles broad, which extended from the heights of Vall de Jesus and Sancti Spiritus, to the sea, and through which the Spanish army behoved to pass, in approaching Saguntum from Valencia. The gunners were all left in the trenches; and in order to deceive the enemy, and deter them from attempting a sortie, they received orders to redouble their fire upon the breach. But notwithstanding this, the besieged from their elevated battlements descried the approaching succour, and with intense anxiety watched the progress of the advancing host (2).

Battle of
Saguntum
Oct 25

At eight o'clock on the following morning, the Spanish army commenced the attack upon the French at all points, and soon drove in their light troops. Following up this advantage, they pressed on and won a height on the French right which commanded that part of the field, and established some guns there which did great execution. The whole Spanish left, encouraged by this success, advanced rapidly and with the confidence of success; their dense battalions were speedily seen crowning the heights on the French right, and the garrison of Saguntum, who crowded the ramparts, deeming the hour of deliverance at hand, already shouted victory and threw their caps in the air, regardless of the besiegers' fire, which never for an instant ceased to thunder on their walls. In truth, the crisis was full of danger, and a moment's hesitation on the general's part would have lost the day. Suchet instantly ordered up Harispe's division, which, after a severe struggle, regained the heights, and perceiving that Blake was extending his wings with a view to outflank his opponents, he brought up his second line,

(1) Suchet, ii 192, 203, Tor. iv 230, 239 Nap.
iv 278, 280

(2) Tor. iv 247, 248 Nap. iv 281, 282. Su-
chet, ii 179, 181

leaving the cuirassiers only in reserve, and made a vigorous attack on the Spanish centre. The first onset, however, proved utterly unsuccessful; the Spaniards, driven from the height, rallied behind their second line, and again advanced with the utmost intrepidity to retake it. Caro's dragoons overthrew the French cavalry in the plain at its foot; and not only was the hill again wrested from the infantry, but the guns planted on it fell into the enemy's hands. Every thing seemed lost, and would have been so, but for the valour and presence of mind of the French commander-in-chief; but he instantly flew to the reserve of cuirassiers, and addressing to them a few words of encouragement, in doing which he received a wound in the shoulder, himself led them on to the charge. They came upon the Spanish infantry, already somewhat disordered by success, at the very time when they were staggered by a volley in flank from the 110th regiment, which, inclining back to let the torrent pass which they could not arrest, at this critical moment throw in a close and well-directed fire. The onset of the terrible French cuirassiers, fresh and in admirable order, on the Spanish centre, proved irresistible: the Valencian horsemen, already blown and in disorder, were instantly overthrown; the infantry were broken and driven back: not only were the captured guns retaken, but the whole Spanish artillery in that part of the field seized, and the two wings entirely separated from each other. The French right at the same time succeeded in regaining the ground it had lost on the hills, and threw the Spanish left opposed to it in great confusion into the plain: their left also was advancing: and Blake, seeing the day lost, retired towards Valencia, with the loss of a thousand killed and wounded and two thousand five hundred men, and twelve guns, taken. Suchet lost eleven hundred men in the action; but Blake's inability to contend with him in the field was now apparent; and so depressing was this conviction on the garrison of Saguntum, that they capitulated that night, though the breach was not yet practicable, and the garrison still two thousand five hundred strong, deeming it a useless effusion of blood to hold out longer, now that relief had become hopeless (1).

Delay of
Suchet's
Saguntum,
till he re-
ceives re-
inforcements.

Though this important victory and acquisition gave the French general a solid footing in the kingdom of Valencia, he did not consider himself as yet in sufficient strength to undertake the siege of its capital, and the situation of Blake was far from being desperate. His

forces were still above twenty thousand men: he was master of an intrenched camp with a fortified town enclosed within its circuit: and the sea and harbour gave him unlimited means of obtaining reinforcements and supplies from the rear. Impressed with these ideas, as well as the serious character which the desultory warfare had assumed in Aragon and Catalonia in his rear, Suchet halted at Saguntum, and made the most pressing representations to Napoleon as to the necessity of reinforcements, before he could proceed farther in his enterprise. During six weeks that he remained quiet at Saguntum, he was incessantly engaged in making preparations for the siege: while the Spaniards, who had all withdrawn behind the Guadaluver, were daily recruiting their numbers, and completing the arrangements for defence. Although, however, a great degree of enthusiasm

Nov. 2.
Dec. 22.

prevailed among the people, yet nothing indicating a desperate resistance was attempted; and it was very evident that the Valencians, if shut up within their walls, would neither imitate the citizens of Numantium or Saragossa. Meanwhile, Suchet on two occasions had defeated powerful bodies

(1) Suchet, li. 196, 191. Tor. iv. 218, 221. Nap. iv. 275, 276. Vict. et Conq. 313, 319.

of guerillas under Duran and Campillo, who were infesting the rear of the army: and at length, the divisions of Severole and Reille having, by command of the Emperor, been placed under his orders, and reached his headquarters, he prepared, in the beginning of December, with a force now augmented to 55,000 men, to complete the conquest of Valencia; and, for this purpose, pushed his advanced posts to the banks of the Guadalavivier, so that the river alone separated the hostile armies (1).

Suchet
approaches
and sur-
rounds
Valencia.
Dec 25

By drawing considerable reinforcements from the troops in Murcia, Blake had augmented his army to 22,000 men. He had broken down two out of the five stone bridges which crossed the river, the houses which commanded them on the south bank were occupied and loopholed; the city was surrounded by a circular wall thirty feet high and ten thick, but with a ditch and covered way only at the gates. Around this wall, about a mile farther out, was the rampart of the intrenched camp, five miles round, which enclosed the whole city and suburbs, and was defended by an earthen rampart, the front of which was so steep as to require to be ascended by scaling ladders, while a wet ditch ran along its front. But all history demonstrates that such preparations, how material soever to a brave and disciplined, are of little avail to a dejected or unwarlike array, if vigorously assailed by an enterprising enemy. In the night of the 25th December, 200 French hussars crossed the river several miles above the town, opposite the village of Ribaroya, by swimming their horses across, and put to flight the Spanish outposts. The engineers immediately began the construction of two bridges of pontoons for the infantry and artillery; and with such expedition were the operations conducted, and the troops moved across, that, before the Spaniards were well aware of their danger, or the movement which was in contemplation, Suchet himself, with the main body of his forces, and the whole of Reille's division, had not only crossed over, but, by a semicircular march, had got entirely round the Spanish intrenched camp, in such a manner as to cut off the retreat from the city towards Alicante and Murcia. It was precisely a repetition of the circular sweep by which Davoust, in 1805, had interposed between Ulm and Vienna, and cut off all chance of escape from its ill-fated garrison (2). The French hussars fell in with the Spanish cavalry hurrying out of the city to stop their advance at Aldaya, several miles round, and to the south-west of the intrenched camp. They were overpowered in the first encounter, and General Broussand made prisoner, but soon rallying, as fresh troops came up, they regained their lost ground, delivered their general, and pursued their march. At the same time, the better to conceal his real design, Suchet caused Palombini with his division to cross the river a little farther down, and make for Mislata, and the westward of Valencia. The two divisions of Musnier and Habert, which were left on the other bank of the river, commenced a furious assault on the north of the intrenched camp. The roar of artillery was heard on all sides; the rattle of musketry seemed to envelope the city, and it was hard even for the most experienced general to say to which quarter succour required in the first instance to be conveyed (3).

The Spaniards are defeated and thrown back into Valencia.
Dec 26

In the midst of all the tumult, however, the French marshal incessantly pressed on to the main object of his endeavours, which was to sweep round the whole southern side of the town, and interpose near the lake ALBUFERA, on the sea-coast, between Blake's army and

(1) Suchet, ii 201, 213 Tor iv 269, 274 Vict et Conq xx 351, 352 Nap iv. 291

(2) *Ante*, v. 148.

(3) Suchet, ii 210, 216 Tor iv 273, 274. Nap iv. 296, 297 Vict, et Conq, xx 553, 554

the line of retreat to Alicante. So anxious was he to effect this object, that he put himself at the head of Harispe's division, which formed the vanguard of the force which had crossed the river at Ribaroya, and pressing constantly forward, overthrew all opposition, and never halted till he had reached the western margin of the lake, and had become entire master of the southern road. Meanwhile, the action continued with various success in other quarters: the leading brigades of Palombini's division, charged with the attack on Mislata, encountered so tremendous a fire from the Spanish infantry and redoubts that they fell back in utter confusion almost to the banks of the Guadalavivier, but without being diverted by this check, fresh battalions crossed over, and following fast on the traces of Harispe, completed the sweep round the intrenched camp, and established the general in-chief in such strength on its southern front, that he was in no danger of being cut off, and in condition to shift for himself. Deeming himself secure, Suchet at this critical moment ascended the steeple of the village of Chirivilla, to endeavour to ascertain by the line of smoke how the battle was proceeding in other quarters: and when there, he narrowly escaped being made prisoner by a Spanish battalion, which, in the general confusion, entered the village, then occupied only by a few horsemen and his own suite: and it was only by an impetuous charge of his aides-de-camp and personal attendants that the enemy, who were ignorant of the all-important prize within their grasp, were repulsed. General Halbert, at the same time, not only drove the enemy from the northern bank, but throwing a bridge over the river, under cover of fifty pieces of cannon, below Valencia, passed over, amidst a terrible fire of cannon and musketry, and pushed his advanced posts on till they met, near the northern end of the lake of Albufera, those of Harispe, which had crossed above the town and completed its circuit on the southern side. Thus the investment of the place was completed; and so little had the victors suffered in this decisive operation that their loss did not exceed five hundred men. That of the Spaniards was not much greater, though they abandoned eighteen guns to the enemy; but they sustained irreparable damage by having their army entirely dislocated, and the greater part of it shut up, without the chance of escape, in Valencia, whither Blake, with seventeen thousand men, had taken refuge. The remainder broke off from the main body, and, fortunately for the independence of the Peninsula, succeeded in reaching Alicante, though in straggling bands, to the number of above four thousand men. It is a signal proof of the contempt which the French general must have entertained for his opponents, that he thus ventured to spread his troops in a circular sweep of more than fifteen miles in length, with their flank exposed the whole way, to the attacks of a concentrated enemy little inferior in number in possession of an intrenched camp; and of the strong foundation for that contempt, that he succeeded in his design (1).

Blake and the fall of Valencia. Dec. 23. The decisive effects of the investment of the intrenched camp and city of Valencia, were speedily apparent. A few days after, Blake, at the head of fifteen thousand men, endeavoured to force his way out of the town by the left bank of the Guadalavivier; but though the column at first had some success, and drove in the enemy's advanced posts, yet Blake had not determination enough to enforce the only counsel which could extricate the troops from their perilous predicament; Larizabal did not evince his usual energy in the advance: the advice of the heroic Zayas to press on at all hazards, a sword in hand, was overruled; some difficulties at crossing

(1) Suchet, li. 214, 223. *Tor.* iv. 271. 278. *Exp.* iv. 297. 300. *Vict. et Camp.* ix. 353, 354.

the canals threw hesitation into the movements of the whole; and, after losing the precious minutes in vacillation, the Spanish general returned on his footsteps to Valencia, while his advanced guard, to whom the order to return could not be communicated, got safe off to the mountains. A similar attempt was made a few days after on the road to Alicante with no better

Jan 2, 1812 success. Meanwhile, Suchet was commencing regular approaches,
Jan 5

and on the night of the 5th, the Spanish general, despairing of defending the vast circuit of the intrenched camp with a depressed army and irresolute population, withdrew altogether from it, and retired into the city. The French, perceiving the retrograde movement, broke into the works, and pressed on the retiring enemy so hotly, that eighty pieces of heavy artillery, mounted on the redoubts, fell into their hands, and they immediately established themselves within twenty yards of the town wall. Rightly conjecturing that the resistance of the Spaniards would be more speedily subdued by the terrors of a bombardment than by breaching the rampart, Suchet immediately erected mortar batteries, and began to discharge bombs into the city. Blake at first refused to capitulate, when terms were offered by the French general. No preparations, however, had been made to stand a siege, the pavement had now here been lifted, no barricades were erected, there were no cellars or caves, as at Saragossa, for the besieged to retire into to avoid the fire, already some of the finest buildings in the city particularly the noble libraries of the archbishop and university, had been reduced to ashes; and the impossibility of finding subsistence for a population of a hundred and fifty thousand souls besides the troops, as well as the desponding temper of the inhabitants, whose spirit was completely broken by the long

Jan 9 train of disasters which had occurred in the east of Spain, soon convinced the Spanish general of the impossibility of holding out. After the bombardment had continued some days, therefore, and the town had been set on fire in different places, he proposed to capitulate. His terms, however, were sternly rejected, and he at length, finding the majority of the inhabitants adverse to any further resistance, surrendered at discretion (1)

Immense result of this conquest By the capture of Valencia, the French general, in addition to the richest, most populous, and most important city of the Peninsula next to Cadiz, that remained still unsubdued, became master of sixteen thousand regular troops, the best in Spain, who were made prisoners; besides three hundred and ninety pieces of cannon, thirty thousand muskets, two thousand cavalry and artillery horses, twenty-one standards, and immense military stores of all kinds. Seldom has a greater blow been struck in modern war—it was like that delivered by the English, when they stormed

Jan 10 the fortress of Seringapatam. The Spanish army marched out on the 10th of January, and, having laid down their arms, were immediately sent off to France. The elements of resistance still existed in the province: Alicante was still unsubdued, no hostile troops had approached the plains of Murcia, and the mountain range which separated it from New Castile swarmed with active and resolute guerillas. But all unity of purpose, or regular government, was destroyed among the patriot bands by the fall of the capital; the desultory warfare gradually died away, or was confined to the neighbourhood of the mountains, and the rich and beautiful plain of Valencia, the garden of Spain, the scene which poetic rapture sought in vain, with all its immense resources, fell entirely under the French yoke.

(1) *Tor* iv 279, 289. *Suchet*, ii. 225, 230. *Vict. et Conq.* xx. 356, 364, N^o 530, 531.

was immediately turned to the best account by the vigorous administration and oppressive impositions of Marshal Suchet. Order was completely preserved, discipline rigorously maintained; but all the most energetic characters, especially among the clergy, on the side of independence, nearly fifteen hundred in number, were arrested and sent to France, and some hundreds of them shot when unable from fatigue to travel farther; the perpetrators of the disgraceful murders which had stained the commencement of the war justly executed, while an enormous contribution brought into the Imperial coffers all that was rescued from private rapacity. On the war-wasted city and province of Valencia, at the close of four oppressive and burdensome campaigns, the French marshal imposed a contribution of fifty millions of francs, or two millions sterling, equivalent to five or six millions on a small portion of England; and such was the skill which long experience had given the officers of the Imperial army in extracting its utmost resources from the most exhausted country, that this enormous impost was brought, with very little deduction, into the public treasury (1).

Complete
subjugation
of the
province
Jan. 20.

The subjugation of Valencia was soon after completed by the reduction of the little fort of Peniscola which, after a short siege, capitulated, with seventy four pieces of cannon and a thousand men, in the beginning of February. This conquest was of importance as completing the pacification of the whole province, and clearing of all molestation the road from Tortosa. Encouraged by the easy reduction of this stronghold, Monbrun, with his cuirassiers and horse artillery, who had been detached, by Napoleon's orders, from Marmont's army to act against Valencia, presented himself before Alicante, and began to throw bombs from a few pieces into the town. This ludicrous attempt at a bombardment, however, only had the effect of accelerating the preparations for defence, which were now made in good earnest, and with such effect that the French general retired from before its walls towards Madrid, where his presence was loudly called for by the menacing attitude of the English on the Portuguese frontier. Alicante, meanwhile, daily beheld its defenders strengthened by the arrival of the broken bands who had escaped the wreck of Valencia; a powerful English force, some months afterwards, from Sicily landed within its walls, and this city shared, with Cadiz and Carthage, the glory of being the only Spanish cities which had never been sullied by the presence of the enemy (2).

Honours
and rewards
bestowed on
Suchet and
his troops.
Jan. 21.

Justly desirous of giving a public mark of his high sense of the great services rendered to his empire by Marshal Suchet and his brave companions in arms, Napoleon, by a decree dated the moment that he received intelligence of the fall of Valencia, bestowed on the former the title of Duke of Albufera, the scene of his last and most decisive triumph, with the rich domains attached to it in the kingdom of Valencia on the latter an extraordinary donation of two hundred million francs, or £8,000,000 sterling. These immense funds were directed to be realized "from our extraordinary domain in Spain and such parts thereof as are situated in the kingdom of Valencia," and afford a striking example of the system of extortion and spoliation which the Emperor invariably put in force in all the territories which he conquered. But the hour of retribution had arrived; the English armies on the Portuguese frontier were about to commence their immortal career; Russia was preparing for the decisive conflict;

(1) Vict. et Camp. 22, 23, 24, 25. Tor. iv. 224.
231. Suchet, H. 231, 232.

(2) Suchet, H. 234, 236. Tor. iv. 232. Vict. et
Camp. 22, 246.

and there remained only to Suchet and his descendants the barren title which bespoke the scene of his triumph and his glory (1).

Reflections
on these
campaigns
of Suchet

There is no passage in the later history of Napoléon which is more worthy of study than the campaigns of Suchet, which have now been considered Independent of the attention due to the military actions of a general, whom that consummate commander has pronounced the greatest of his captains (2), there is enough in the annals of his exploits to attract the notice and admiration even of the ordinary historian, who pretends to nothing but a general acquaintance with military affairs. In the other campaigns of the French generals, especially in later times, the interest felt in the individual commander is often weakened by the perception of the magnitude of the force at his disposal, or its obvious superiority in discipline and equipment to the enemy with which it had to contend, and the Emperor himself, in particular, hardly ever took the field, from the time when he mounted the Imperial throne till he was reduced to a painful defensive struggle in the plains of Champagne, but at the head of such a force as at once ensured victory and rendered opposition hopeless. But in the case of Suchet, equally with that of Napoleon himself in the Italian campaign of 1796, or the French one of 1814, no such disproportion of force existed; the resources of the contending parties were very nearly balanced, and it was in the superior fortitude and ability of the victorious general that the real secret of his success is to be found. If the Imperial commander was at the head of a body of men, superior in discipline, equipment, military prowess, and numbers, so far as real soldiers are concerned, to the Spanish generals, these advantages, how great soever, were compensated, and perhaps more than compensated, by the rugged and inaccessible fastnesses of which the greater part of Catalonia is composed; the absence of any practicable road through them, the number and strength of their fortified towns, the indomitable spirit and patriotic ardour of the inhabitants, and the vast resources at their command, from the vicinity of the sea and the succour of the English navy. No one who studies these campaigns can doubt that these circumstances counterbalanced the superior discipline and prowess of the French army in the field, that the issue of the contest thus came to be mainly dependent on the comparative talents of the two generals, and that if their relative positions in this respect had been reversed, and Suchet had been at the head of the Spanish, and Camperverde or Blake of the French forces, the result would in all probability have been the entire defeat of the Imperial power in the east of the Peninsula. And in the inexhaustible mental resources of the French general, his fortitude in difficulty, presence of mind in danger, and the admirable decision with which, in critical moments, he abandoned all minor considerations to concentrate his whole force on the main object of the campaign, is to be found the real secret of his glorious successes, as of all the most illustrious deeds recorded in history.

Painful
reflections
on the con-
duct of
England in
this part of
Spain

For the same reason, there is no period of the Peninsular war which an English historian feels so much pain in recounting, as that of this gallant but abortive struggle in the east of Spain. When we reflect on the noble stand which the province of Catalonia, aided only by transient succours from Valencia, made against the armies of two French marshals, who numbered 70,000 admirable troops, in possession of the principal fortresses of the country, under their banners, when we recollect how equally the scales of fortune hung on several occasions, and

(1) Suchet, ii. 236. Vict. et Conq. xx. 366, 367.

(

O'Meara, i.

with what decisive effect even a small reinforcement of regular troops, happily thrown in, would unquestionably have had on the issue of the contest. It is not without the bitterest feelings of regret that we call to mind that, at that very moment, 12,000 English soldiers lay inactive in Sicily, an island effectually defended by our fleets alone from foreign invasion, and within only a few days' sail of the scene of conflict. Had half this force been landed in Catalonia previous to the siege of Tortosa, the French general would never have approached its walls. Had it been added to the defenders of the breaches of Taragona, the French grenadiers would have been hurled headlong from its ramparts. Had it even come up to the rescue under the towers of Saguntum, the Imperial eagles would have retreated with shame from the invasion of Valencia; and the theatre of the first triumphs of Hannibal might have been that of the commencement of Napoleon's overthrow. If we recollect that the capture of Valencia in the east of Spain was contemporaneous with the fall of Ciudad Rodrigo in the west, and that the extinction of regular warfare in one part of the Peninsula, occurred at the very moment when a career of decisive victories was commencing in another, it is difficult to over-estimate the importance to the general issue of the contest which would have arisen from such a happy addition of British succour as would have kept alive the conflagration in a quarter where it was already burning so fiercely, and prevented that concentration of the enemy's force against Wellington, in the close of 1812, which wellnigh wrested from him the whole fruits of the Salamanca campaign.

But it is still more painful to recollect that English succour was at hand when the last stronghold of Catalonian independence was torn by overwhelming force from the arms of freedom; that the warriors of the power which had seen the conquerors of Egypt and the fortunes of Napoleon recoil from the bastions of Acre, beheld secure from their ships the grenadiers of Suchet mount the breach of Taragona and that when the garrison of Saguntum saw their last hopes expire by the descent of the army at their feet, British ships received by signal the intelligence, and the conquerors of Malak, within a few days' sail might have snatched their laurels from the victors. We have a mournful satisfaction in recounting the horrors of the Corunna retreat—we dwell with exultation on the carnage of Albuera; for that suffering was endured and that blood was shed in a noble cause, and England then worthily shared with her allies the dangers of the contest—but to relate that Taragona fell unaided when the English banners were in sight, that deeds of heroism were done, and England though near was not there—this is indeed humiliation, this is truly national dishonour. And under the influence of this feeling, it is not only without regret, but with a sense of justice which amounts to satisfaction, that the subsequent disgrace of the British arms before the walls of Taragona will be recounted (1) for it was fitting that on the one and only spot in the Peninsula where deeds unworthy of her name had been done, the one and only stain on her fame should be incurred (2).

In truth, even a cursory record of the campaign of 1811 must be sufficient to convince every impartial observer that a political paralysis had, to a cer-

(1) Vide infra c. lxi.

(2) These observations are made in national law, and for national objects only. No reflection is intended either on the naval and military officers engaged, who had scarcely land force at their disposal opposite to the rude encounter which awaited them with the French veterans who crowded round the breach of Taragona, and who did offer

though in desperate way to put their force to the test as it was, at the disposal of the Spanish governor. The chief blame rests with the administration, who had not discernment enough in military affairs to see that Taragona was the real point of the war in the east of Spain, and that the whole force we possessed on the Mediterranean should be directed to its support.

Causes of the weakness of the English Government in 1811

tain extent, come to affect the British Government, and that the Cabinet was far from being directed during that year by the firm and unshrinking hands which had hitherto held the reins. Nor is it difficult to discover to what cause this change is to be ascribed.

The year 1811 was, as already noticed (1), one of extraordinary distress in England—the exports and imports taken together had sunk, as compared with the preceding year, no less than thirty-six millions, the revenue had declined by above two millions, while the universal and poignant distress among the manufacturing classes, in consequence of the simultaneous operation of the continental system and the American Non-intercourse Act, rendered the contraction of any considerable loan, or the imposition of fresh taxes of any amount, a matter of extreme difficulty. Add to this, the enormous expenditure consequent in the beginning of the year and the close of the preceding one, on the vast accumulation of soldiers in the lines of Torres Vedras, and the unparalleled drain of specie which had taken place from the necessity of supplying the warlike multitude, which had not only wellnigh exhausted the treasure of the country, but necessarily crippled all active operations on the part of the English generals in the Peninsula.

Insecure tenure Government had of their offices the great cause of the inefficient aid of England in this campaign

But, notwithstanding the weight justly due to these circumstances, a more minute examination of the state of parties at that period will demonstrate that it was not to them alone, nor even chiefly, that the languid operations of the English on the east of Spain, during this momentous year, are to be ascribed. Wellington had clearly pointed out the important advantages which must accrue to the French from the fall of Valencia; both from the concentra-

tion of all their force against himself, which it would enable the Imperial generals to make, the resources which would await Suchet, and could immediately be rendered available in the province, and the disinclination which the grandes at Cadiz, having estates in the east of Spain, would in consequence probably feel towards any further prosecution of the war (2). That the British Ministry were fully alive to these considerations, and prepared to act upon them as soon as they felt themselves secure in their offices, is proved by the considerable expeditions which, when equally hard pressed for money, they sent to Alicante from Sicily, in June 1812 (3), and which, though not conducted with any remarkable ability, effectually stopped the progress of the French in the east of the Peninsula. The supineness with which, in the course of 1811, they permitted a much fairer opportunity of effecting this great object to escape, is to be ascribed chiefly to the insecure tenure by which they then held the reins of power, and the determined and impassioned resistance which the Opposition, their probable successors, had invariably made to its continuance (4). The Prince Regent, as already no-

(1) *Ante*, viii 30

(2) "The loss of Valencia would be of great importance—the greater part of the grandes of Spain have estates in that province upon the revenues of which they have subsisted since they have lost every thing else elsewhere. It may be expected, therefore, that the loss of this kingdom will induce many to wish to submit to the French yoke. The probability that the fall of Valencia would immediately follow the loss of Taragona, was the cause of the ferment at Cadiz in the beginning of last summer. Though Blake has found no resources in that province, the French will find in Valencia the resources of money and provisions of which they stand so much in need. This conquest will enable the enemy to concentrate their forces. Even if Suchet should be unable to press on farther to the

south of Valencia, and Soult should be unable to communicate with him through Murcia, Suchet will be enabled to communicate by a former route that he formerly possessed with the armies of the centre and of Portugal, and his army will be disposable to support the armies of the north and Portugal opposed to us"—WELLINGTON to the EARL of LIVERPOOL, 4th December 1811. GUARDIAN, viii 421, 422.

(3) *Infra*, ch lxiii

(4) "The Government are terribly afraid that I shall get them and myself into a scrape. But what can be expected from men who are beaten three times a-week in the House of Commons? A great deal might be done if there existed in England less party and more public sentiment, and if there was any government."—WELLINGTON to ADMIRAL BELLINGHAM, April 7, 1810, GUARDIAN, vi, 21

hood (1), had assumed the reins of power, upon the incapacity of his father, in February 1811; and, though he had continued the ministers in their several offices, yet he had done so on the distinct explanation that he was actuated solely by a desire, while the reigning monarch had any chance of recovery, not to thwart his principles, or choice of public servants; and it was well understood that, as soon as the restrictions expired in February 1812, he would send for the Whig leaders, which, in point of fact, he immediately did. The knowledge of this precarious tenure of their power, not only disheartened Government from any fresh or extraordinary efforts in a cause which they had every reason to believe was so soon to be abandoned by the succeeding administration, but weakened to a most extraordinary degree their majority in the House of Commons, which, in general, during that interregnum did not exceed twenty or thirty votes (2). The Opposition were so inveterate against the Spanish war, that not only did they declaim against it in the most violent manner on all occasions, both in and out of Parliament; but, if we may believe the contemporary authority of Berthier, actually corresponded during the most critical period of the contest with Napoleon himself, and furnished him with ample details on the situation of the English army, and the circumstances which would, in all likelihood, defeat its exertions (3). It is not surprising that a ministry thus powerfully thwarted, destitute of any members versed in military combination, with a very scanty majority in Parliament, and no support farther than the cold assent of duty from the throne, should, during this critical year, have shrunk from the responsibility of implicating the nation, on a more extended scale, in a contest of doubtful issue even under the most favourable circumstances, which was, to all appearance, to be abandoned as hopeless by their successors.

And yet, so little can even the greatest sagacity or the strongest intellect foresee the ultimate results of human actions, and so strangely does Providence work out its mysterious designs by the intervention of free agents, and the passions often of a diametrically opposite tendency of mankind, that if there are any circumstances more than others to which the immediate catastrophe which occasioned the fall of Napoleon is to be ascribed, it is the unbroken triumph of Suchet in the east, and the strenuous efforts of the English Opposition to magnify the dangers, and underrate the powers of Wellington in the west of the Peninsula. Being accustomed to measure the chances of success in a military contest by the achievements of the regular troops employed, and an entire stranger to the passions and actions of parties in a free community, he

Lord Wellington a toujours été en grande crainte de vos opérations."—BARTHIER, Major-Général, au Maréchal Weym. Prince d'Anglem, Paris, 29 Mars 1811.—*Bull. de la Société des Sciences de la Peninsule* I. 493, 496.

The "extensive correspondence" which is here stated to have gone on between Napoleon and the English Opposition, took place in March 1811; that is, when Massena lay at Salamanca, and Wellington at Corunna, the most critical period of the campaign and the war. Notwithstanding the high authority on which the existence of this correspondence is asserted, it is impossible to believe that it took place with any of the leaders of the Opposition; but it shows with what spirit the party, generally speaking, must have been actuated on this subject, when even the lowest of their number could, at such a moment, resort to communication with the mortal enemy of their country.

not unreasonably concluded, when the last army of Spain capitulated in Valencia, and the whole country, from the Pyrenees to Gibraltar, had, with the exception of a few mountain districts, submitted to his authority, that the contest in the Peninsula was at an end, so far as the Spaniards were concerned, and when he beheld the party in Great Britain, who had all along denounced the war there as utterly hopeless, and irrational on the part of this country, and some of whom, in their zeal against its continuance and to demonstrate its absurdity, had actually corresponded with himself, even at the crisis of the contest, on the eve of getting possession of the reins of power in London, he was naturally led to believe that no cause for disquiet existed, in consequence of the future efforts of England in Spain. He was thus tempted to prosecute, without hesitation, his preparations for the Russian war, and, before finishing the conflict in the Peninsula, plunge into the perils of the Moscow campaign, and the double strain it was, as he has himself told us, which proved fatal to the empire (1) Had he been less successful in the east of Spain—had the English Opposition less strenuously asserted the impolicy and hopelessness of British resistance in the west, he would probably have cleared his rear before engaging with a new enemy in front. Neither could have withstood his whole force if directed against itself alone, and the concentration of all his military power against Wellington in the first instance, would have chilled all hopes of success in Russia, and extinguished, perhaps for ever, the hopes of European freedom. So manifestly does Supreme power make the passions and desires of men the instruments by which it carries into effect its inscrutable purposes, that the very events which vice most strenuously contends for, are made the ultimate causes of its ruin; and those which virtue had most earnestly deprecated when they occurred, are afterwards found to have been the unseen steps which led to its salvation.

(1) " Cette malheureuse guerre d'Espagne," said Napoléon, " a été une véritable plaie, la cause première des malheurs de la France. L'Angleterre s'est fait une armée dans la Péninsule, et de là elle est

devenue l'agent victorieux, le nœud redoutable de toutes les intrigues, qui en peu de temps se sont formées sur le Continent.—*C'est ce qui m'a perdu.*" —LAS CASES, iv 205.

and he had shared their new power, upon the incapacity of his father in the early fall; and, though he had consulted the ministers in their several offices, yet he had none so on the direct explanation that he was actuated solely by a desire, which the reigning monarch had any chance of recovery, not to thwart his principles, or chance of public servants; and it was well understood that it was as the resolutions expired in January 1812 he would send for the Whig leaders, which in point of fact, he immediately did. The knowledge of this precarious tenure of their power, not only disheartened Congress as it furnished any fresh or extraordinary efforts in a cause which they had every reason to believe was so soon to be abandoned by the succeeding administration, but weakened to a most extraordinary degree their majority in the House of Commons, which in general during that interregnum did not exceed twenty or thirty votes (2). The opposition were so inveterate against the Spanish war, that not only did they declaim against it in the most violent manner on all occasions both in and out of Parliament; but, if we may believe the contemporary authority of Bentham, actually corresponded during the most critical period of the contest with Napoleon himself, and furnished him with any he details on the situation of the English army, and the circumstances which would in all likelihood defeat its exertions (3). It is not surprising that a ministry thus powerfully thwarted, destitute of any resources or aid in military combination, with a very scanty majority in Parliament, and no support farther than the cold aid of duty from the throne, should during this critical year, have shrunk from the responsibility of implicating the nation on a more extended scale in a contest of doubtful issue even under the most favourable circumstances, which was, to all appearance, to be abandoned as hopeless by their successors.

And yet so little can even the greatest sagacity or the strongest intellect foresee the ultimate results of human actions, and so strangely does Providence work out its mysterious designs by the intervention of free agents, and the passions often of a diametrically opposite tendency of mankind, that if there are any circumstances more than others to which the immediate catastrophe which occasioned the fall of Napoleon is to be ascribed, it is the unbroken triumph of Surhet in the east, and the strenuous efforts of the English Opposition to magnify the dangers, and underrate the powers of Wellington in the west of the Peninsula. Being accustomed to measure the chances of success in a military contest by the achievements of the regular troops employed, and an entire stranger to the passions and actions of parties in a free community, he

Extraordi-
nary diffi-
culties which
this partisan
warfare
imposed on
the French

In the midst of this terrible warfare, it was with the utmost difficulty that the great line of communication from Madrid to Bayonne could be kept open, fifty thousand men were required to guard it, and, independent of the great fortresses of Pampeluna and St -Sebastian, and the fort of Burgos, nineteen fortified posts or blockhouses, each garrisoned by three or four hundred men, were erected on the line from the Bidassoa to the capital, eleven on the more circuitous route by Valladolid, Segovia, and the Guadarama, fifteen on the road from Valladolid to Saragossa, eight from Valladolid to Santander, and so on through the whole kingdom (1) Thus Spain was overspread by a vast iron net, constructed at an enormous expense, and upheld by an incredible expenditure of men and treasure, but though it was sufficient, except in the mountain districts, to chain the inhabitants and prevent any serious insurrection, yet it absorbed a large proportion of the French troops, and was attended with a great and ceaseless consumption of life to the invaders, so that Wellington did not overestimate its importance when, in December 1811, he wrote to Lord Liverpool: "The people of the country are still disposed to resist whenever they see a prospect of advantage Buonaparte is still far from having effected the conquest even of that part of the Peninsula of which he has military possession; and in truth, the devastation which attends the progress of our enemies' arms, and is the consequence of their continuance in any part of the country, *is our best friend, and will in the end bring the contest to a conclusion* (2) "

Wellington's
difficulties

But if such were the difficulties,—arising partly from the nature of the country which was the seat of war, partly from the absurd distribution of power in the Peninsula by Napoléon, and partly from the oppressive and exterminating mode of conducting war which the revolution had established,—with which the French generals had to contend, Wellington on his part did not recline on a bed of roses—the obstacles which thwarted his operations, though arising from different causes, were nearly as great as those with which his antagonists had to strive, and it is hard to say whether an impartial survey of their relative situations does not leave his superiority as great as if his vast inferiority of force and unbroken career of victories were alone considered

Corruption
and imbecility
of the
Portuguese
administration

The first and most important circumstance which constantly thwarted all the English general's efforts for the deliverance of the Peninsula, was the long-established and incurable corruption of every part of the Portuguese administration This deplorable evil, the sad bequest of ages of despotism, had not at that period been counterbalanced in the dominions of the House of Braganza, by the feverish and sometimes almost supernatural energy which, in a democratic convulsion, springs from the temporary ascendant of poverty, and the unrestrained career of passion. Portugal had lost its monarch and regular government, its rulers owed their election in a great degree to popular choice, and the country was in the most violent state of general excitement, but the convulsion, as Wellington often observed, was anti-Gallican, not democratic—the old influences still pervaded every department of the administration, and that fearful vigour was wanting which invariably appears when uncontrolled power is for the first time vested in the masses, and the people enjoy the dangerous faculty

fought for his native land The mayors, the nobles, the priests, have been all ruined or conducted in captivity into France All our efforts, by showing generosity to our captives, to introduce a more humane style of warfare have proved nugatory there remains only the duty of retaliation."—*Proclamation*

tion by Espoz y Miña, December 11, 1811, BELMAS, 594

(2) Wellington to Lord Liverpool Dec 1, 1811 GUTHRIE, 122

of laying impositions on property, from the operations of which they are from their poverty almost entirely exempted. Hence the government and whole administration were corrupt and imbecile to a degree which appears almost inconceivable to those who have either experienced the permanent rigour of monarchial, or the transient energy of democratic states. So intolerable were abuses in every department, that the people could not conceive any administration without them; and when the soldiers enrolled under British command received the full pay promised them, their astonishment knew no bounds, having before under their native officers known what it was to have less than one-half or two-thirds absorbed by the peculation of those through whose hands the money passed (1)

Had Wellington possessed the same unlimited power in the civil as he did in the military affairs of Portugal, these abuses would speedily have been corrected, but, unfortunately, this was very far indeed from being the case. His direct authority extended only to the command of the armies, and although his influence was, doubtless, considerable with the regency at Lisbon, and he was most ably seconded by the British ambassador there, the Honourable Charles Stuart, yet his efforts to effect an amelioration in the public service, and communicate the requisite vigour to the administration, were perpetually thwarted by the inability of its members to comprehend his views; the extraordinary difficulty of reforming, amidst the din of external war, long established domestic abuses and the constant dread which the regency had of interfering with existing emoluments, or adopting any measures of compulsion against inferior functionaries and magistrates, lest they should endanger their own popularity. Their nervousness on this last head was such as to render Government perfectly powerless, either in enforcing the laws or drawing forth the resources of the country and all the remonstrances of Wellington were unable to make them even adventure upon the very first duty of executive administration, that of making inferior officers do their duty. The consequence was, that though the taxes were very heavy, they were most irregularly collected, and the rich and privileged classes discovered a thousand ways of evading them. Ample levies of men were voted; but no adequate measures were ever taken to bring forth the soldiers, or send them back if they had left their colours. The army in the field was seldom more than half the number for whom pay was drawn, clothing, ammunition, provisions, and stores of all sorts, were constantly wanting for the troops, the means of transport were rarely provided for them, and never in time; and even the English subsidy for the support of 30,000 men, which was regularly advanced, was so much diverted to other objects, that the pay of the men was almost always in arrear, and, in April 1813, the army in the field had received no pay for seven, the garrison for nine, the militia for fifteen months. The consequence was, that Wellington was obliged to feed the Portuguese troops from the British magazines and this, in its turn, impoverished the resources, and paralysed the efforts of the British army (2). Had these evils occurred in the French armies,

(1) Wellington to the Prince Regent of Portugal, April 1813 & p. 422.

(2) "The unfortunate governments in the Peninsula had been reduced to such a state of decrepitude that there was no authority in Spain or Portugal before the French invasion. The French invasions did not improve this state of things and there that stood no crime that I know of has been punished in either excepting that of being a French partisan. These unfortunates in office—these ne-

glects of duty—that disinclination of order—that inattention to regulation which tend to defeat all plans for military operations, and rule a state that is involved in war more than all the plans of French partisans, are passed unnoticed, notwithstanding the numerous complaints which Marshal Bessières and I have made. The cause of all this is the confusion of principle on which the Government have proceeded. They suppose the best foundation for their power is a low vulgar popularity of which the evidence

their generals would speedily have applied a remedy by taking the supplies wanted by force, and sending the owners to the regency for payment, but such a proceeding would have been altogether repugnant to the English mode of carrying on war. It was abhorrent to the nature of Wellington, and the principles on which he was conducting the contest, and if adopted, he was well aware it would have purchased present relief by the sacrifice of all the grounds on which he hoped for ultimate success. Thus the evils continued through the whole campaign. Remonstrance and representation were the sole remedies relied on; the whole of this gigantic civil conflict in his rear fell on Wellington, as always ensues in such cases; and not unfrequently he was engaged in presence of the enemy, and within sight of their videttes, in lengthened yet vain memoirs on the most complicated detail of Portuguese civil administration (1).

Wretched condition of the Spanish troops and jealousy of their generals The next circumstance which paralysed on repeated occasions the operations of the English general, and often at the most critical moments, was the wretched condition and total destitution of the Spanish armies, and the pride and obstinacy which rendered their generals unreasonably jealous of foreign interference, and equally averse to and incapable of any joint measures by which a material or durable benefit to the common cause could be obtained. Such, indeed, were the inefficiency and destitution of the Spanish forces, that it was soon discovered that their presence was a burden rather than an advantage to the Anglo-Portuguese troops, by bringing into the field a host of useless mouths, whose arms were incapable of rendering any effectual service in the field against the enemy, and who yet devoured all the resources by which the war could be maintained. and after the experience of the Talavera campaign, Wellington formed the resolution, from which he never afterwards deviated, of engaging in no joint undertaking whatever with the Castilian armies, but, trusting to them merely for distant diversions, to rely upon his own British and Portuguese forces alone for any operations in the front of the conflict. In fact, after the battles of Ocana and the Tormes, in the close of 1809 (2), no Spanish force worthy of the name of an army existed within the sphere of the English operations, and on the only subsequent occasion on which necessity compelled a junction of the British and Spanish in the field—at Albuera, in 1811—they only escaped a bloody defeat, induced by the obstinacy and intractability of the Spanish generals, and the unwieldy character of their troops, by the surpassing valour of the English soldiers, and the shedding of torrents of English blood (3).

as the shouting of the mob at Lisbon, and the regular attendance at their levees, and to obtain this bubble, they have neglected the essential duty of making inferior functionaries do their duty, which, if done, would, ere this, have saved both countries. On the same principle, they will not regulate their finances, because it interferes with some man's job. They will not lay on new taxes; because none who do so are ever favourites with the mob. They have a general income of 10 and sometimes 20 per cent; but no one has yet paid a hundredth part of what he ought to have done. Thence, from want of money, they can pay nobody. The hire of mules and carts is never paid, the horses die, and the people desert; the commissaries have no money to buy provisions, or provide the means of transport, and thence the troops are constantly suffering, and as I will not allow pillage, every department of the service is paralysed. In consequence, I have been obliged to incorporate the Portuguese troops with the English divisions, and both are paid from one

military chest; but the evil exists in its full extent with the detached corps and garrison."—WELLINGTON TO COLONEL GORDON, 12th June 1811.—GUAWOOD, viii. 6, 7.

(2) *Ante*, vii 376, 378

(3) Wellington to Castanos July 24, 1811 Gurw vii 133, and ix 98, 111

"Your Excellency may depend upon the truth of what I have repeatedly had the honour of stating to you in conversation, that until the Spanish armies shall possess regular resources, by which they can be supplied during any operation which they may undertake, and are equipped in such a manner that casual or trifling difficulties will not impede their operations, and until the troops are disciplined, as all other troops are which are to meet an enemy in the field, it is useless to think of plans of co-operation between this army and those of Spain, which

Treacher-
y of the
Cortes.

At a subsequent period of the war, the lustre of Wellington's victories, and the universal voice of all men of sense, in the Peninsula, which loudly demanded that he should be put at the head of the whole military operations, compelled the Cadiz Government, much against their will, to appoint him generalissimo of all the armies; and the increased vigour and efficiency which, in spite of every difficulty, he speedily communicated to them, clearly demonstrated of what benefit it would have been to the common cause if he had been earlier elevated to the supreme command. But at this period of the contest he was not only thwarted by the frequent jealousy of the Spanish generals, one of whom, Ballasteros, was so mortified at his appointment that he resigned his command in disgust, and wellnigh occasioned the loss of the whole fruits of the battle of Salamanca (1) but he found his influence and usefulness interrupted by treason and disloyalty in the seat of government itself. So fiercely, indeed, had the passions of democracy now begun to burn at Cadiz, that, in their animosity at the orderly spirit of aristocratic rule in England, the Republican leaders forgot the whole evils and wrongs of French invasion, and at a period when the deliverance of the Peninsula was no longer hopeless, but reasonable grounds for expecting it had arisen from the heroic efforts of the English troops, and the approaching hostility of the northern powers, a secret negotiation was going on between Joseph and a considerable proportion of the Cortes, for the delivery of Cadiz to the French troops, and the submission of the whole Peninsula to the Imperial government. They were willing to concede every thing, and acknowledge the Napoleon dynasty, provided the democratic constitution of 1812 was recognised. This conspiracy, suspected at the time, and since fully demonstrated by the documents which have been brought to light, soon made its effects apparent from the undisguised hostility which the Cortes manifested towards Wellington and the English army—the occasional excesses of the soldiers were magnified by the voice of malignity—their services forgotten, their great deeds traduced; the contagion had reached some of the generals of the armies, who were prepared to pass over with their troops to the enemy—and nothing but the unbroken series of Wellington's victories, and the loud voice of fame which heralded his exploits, prevented the government of the Cortes, on the eve of the deliverance of their country from the hands of the spoiler, from blasting all the glories of the contest which it had so heroically maintained by uncalled for submission and shameless treachery at its termination (2).

Extreme
jealousy of
the English
army in
country dur-
ing the
war.

The last circumstance which, throughout his whole career, impeded the operations of Wellington, and had often wellnigh snatched the laurels of victory from his hand when almost within his grasp, was the extraordinary difficulty which the English Government experienced, especially in 1811, in procuring supplies of provisions and money for his army—and the very limited amount of reinforcements in troops which the circumstances of the British empire, or the apprehensions

must be founded on the active offensive operations of all parts of the armies of all the three nations. I should deceive myself and you, and the Governments of both nations, if I were to encourage such a notion; and if I were to undertake the execution of such a plan I should risk the loss of my army for no object whatever.—(BALLASTEROS to CORTES, 21st July 1811, G. News, 12. 123.)

(1) *Ibid.* 12. 123.

(2) *Ibid.* 1. 82 and 66; 47.

Many persons in the Cortes held secret intercourse with Joseph, with the view of acknowledging

his dynasty on condition that he would accede to the general policy of the Cortes in civil government. Early in 1813 the Comte de Montijo, then general in the army of Madrid, had secretly made propositions to pass over with the French under his command, to King Joseph; and soon afterwards the whole army of the Duke del Parque, which had advanced to La Mancha, made offers of the same nature. They were actually in negotiation with Joseph when the Emperor's orders obliged the French army to abandon Madrid and take up the line of the Tago.—*Ibid.* 1. 66; 47.

of Ministers, allowed them to send to his support. The circumstances have been already fully detailed (1) which had at that juncture, to an unprecedented degree, reduced the resources of the empire. It was, in truth, the crisis of the war—both England and France were suffering immensely from their mutual blockade; and the contest seemed reduced to the question who should starve first. At such a time the closing of the American harbours and the vast markets of the United States to the productions of British industry, added to the calamity of an unusually bad harvest, which required nearly five millions sterling to be sent out of the country for the purchase of subsistence, not only rendered it almost an impossibility for the Government to send to Portugal either specie or provisions, but made it a matter of extraordinary difficulty for the English general to obtain from any quarter supplies for his army. His correspondence, accordingly, during the whole of his campaigns, but especially in the years 1810 and 1811, are filled with the difficulties which he experienced in getting provisions and the means of transport, and the backwardness of Government in making the requisite remittances, and not unfrequently, in the bitterness of his heart at finding his best laid schemes rendered abortive by the want of perhaps an inconsiderable sum in ready money, or a few stores in siege equipage, sharp complaints escaped him at the incapacity of the Administration, which, engrossed with its parliamentary contests, left undone the weightier matters of the war (2). But in cooler moments, and on a just retrospect of the extraordinary difficulties with which Government, as well as himself, had to struggle at that crisis, the candour of Wellington's nature modified the censure which the anxiety of the moment had called forth, he admitted that it was "the want of money, that is of specie, which was felt during the war, but that commodity, from the effect of the bank restriction, was then exceedingly scarce in England, and frequently could not be procured at all, and that he had uniformly received the most cordial support and encouragement from the Ministers, without excepting Mr. Perceval, than whom a more honest, zealous, and able minister never served the King (3)."

Counter remarks In truth, however, the complaints of Wellington were not altogether unfounded, and there can be no doubt that his confidential letters to Mr. Stuart, the English ambassador at Lisbon, written at the time, must be regarded by history as documents on which more reliance should be placed than subsequent general recollection, at the distance of five-and-twenty years, when the difficulty was over, and unequalled success had gilded the retrospect of the past with, perhaps, unfaithful colours. Even at the mo-

(1) *Ante*, viii. 60, 63.

(2) The greater part of these complaints will be found quoted in Napier's *Peninsular War*, v. 52 64. Counter Remarks, *infra*; and they are scattered through all Gurwood's *Correspondence*.

As a specimen the following extracts may be given.—*April* 20, 1810—"The Ministry are as much alarmed as the public, or as the Opposition pretend to be: the state of public opinion is very unfavourable to the war, and the general opinion is, that I am inclined to fight a desperate battle, which is to answer no purpose. Their private letters are in some degree at variance with their public instructions, and they throw upon me the whole responsibility of bringing away the army in safety, after staying in the Peninsula till it becomes necessary to evacuate it. But it will not answer, in these times, to receive private hints and opinions from Ministers, which, if attended to, would lead to an act directly contrary to the spirit, and even the letter of the public instructions." [Wellington

to Stuart.] *June* 5, 1810—"This letter will show you the difficulties under which we labour for want of provisions, and of money to buy them. The miserable and pitiful want of money prevents me from doing many things which might and ought to be done for the safety of the country—yet, if any thing fails, I shall not be forgiven." *December* 22, 1810—"It is useless to expect more money from England, as the desire of economy has overcome even the fears of Ministers, and they have gone so far as to send home the transports, in order to save money." *July* 26, 1811—"The soldiers in the hospitals die because the Government have not money to pay for the hospital necessaries, and it is really disgusting to reflect upon the distresses occasioned by the lamentable want of funds to support the machine we have put in motion." There are a great many other letters to the same effect.

(3) Wellington to Spencer Perceval, Esq. *June* 6, 1835. *Nap.*, v. 50.

*Foundation
for War-
like
disposition.*

ment, however, when the contest was going on, Wellington expressed to Mr Stuart his strong sense of the extraordinary effort which the British Government was making to supply the wants of the army, as well as the discreditable manner in which they were threatened by the selfishness of the Portuguese Administration. "The Portuguese Government," says he, "ought to be aware of the difficulties in which Great Britain is involved, in order to procure, not money's worth, but money—specie—to maintain the contest, of which the probable want alone renders the result doubtful. In order to avoid this want, they are making the most gigantic efforts, at an enormous expense, to send to this country every article that an army can require, in hopes to save the demand for, and expenditure of, specie, in the purchase of these articles in the country; and yet the Portuguese Government, instead of seconding their laudable efforts, set themselves against them (1)." Although, therefore, he was often most grievously hampered by the want of specie, and driven to every imaginable resource to procure supplies, by his own exertions, for his army yet his difficulties arose from other and more general causes than any want of zealous co-operation on the part of the English Government and, without entirely exculpating them from blame in allowing their attention to be more engrossed by their Parliamentary struggles than the Peninsular contest, it may safely be affirmed that these causes were the following —

*Unbroken
military
habit of the
British
people.*

Though the contest had now continued nearly eighteen years, the English Government were still, thanks to our insular situation and invincible navy, mere novices in the art of military warfare; and the subordinate functionaries in every department required literally to be taught their several duties in presence of the enemy. There is nothing surprising in this. It is the natural result of the peculiar circumstances, unassailable power, nautical habits, popular government, and commercial character of the English people. Though naturally brave, and always fond of military renown, they are the reverse of warlike in their ordinary habits. Naval supremacy has long since made them trust to their wooden walls for defence; commercial opulence opened more attractive pursuits than the barren heritage of the sword. In peace they invariably relax the sinews of war: no amount of experience can persuade them to take any antecedent measures either to avert disaster or to ensure success. They constantly expect, that without the least previous preparation, and with greatly inferior numbers, their armies, newly raised, uninstructed, and inexperienced, are to vanquish their enemies in every encounter; and the extraordinary valour of the Anglo-Saxon race has so often in pitched battles more than compensated every other disadvantage, that the result seems almost to justify the anticipation. But though in a regular stand up fight native bravery may often make amends for the absence of military instruction or matured preparation, it is otherwise with the varied duties of a protracted campaign. Skill and experience on the part of all engaged in the vast enterprise are there indispensable; and for their want no amount of talent in the general, or courage in the troops, can afford any compensation. An army, if brave and well-disciplined, may often vanquish a more experienced, but less sturdy antagonist, in the field; but it will prove no match for him in marching, retreating, finding provisions, or enduring the long-continued fatigues of a campaign—the same array which has successfully emerged from the perils of the battle-field, may ingloriously melt away amidst the accumulated hor-

(1) Wellington to Stuart, Aug. 27. 1811. *Orig. MSS.* 222.

rors of ill-arranged hospitals, the courage which can mount the deadly breach, may be rendered wholly unavailing by the bluntness of intrenching tools, or the shortness of scaling ladders, and the fruits of a mighty victory, capable of changing the fate of the world, may be lost from the conquerors by the incapacity of commissaries in bringing up supplies, or the remissness of government in furnishing a few pieces of heavy artillery

Universal
inexperience
of inferior
function-
aries Wants of this sort were those which Wellington so often and bitterly experienced in the course of the Peninsular campaign. Every person in the army, with a very few exceptions, from the general to the drummer, was at first ignorant of a great part of his most necessary duties, and the commander-in-chief was obliged himself to attend to the minutest details in every department, under the penalty of seeing his best laid projects miscarry from the ignorance or incapacity of those to whom some subordinate duties had been committed. No one can ever have been entrusted with the responsibility of directing new and inexperienced public servants in any department, who must not in the outset have found this difficulty. It may be conceived, then, with what weight it pressed on a general at the head of an army taking the field for the first time, on any extended scale, for a century, and filled with officers and civil functionaries to whom experience was unknown, and on whose theoretical instruction no pains whatever had been bestowed. In the battle-field, or evolutions in presence of the enemy, their native steadiness and admirable discipline rendered them from the very first adequate to any emergency, but how small a portion of the life of a soldier do such events occupy, and how much does military success in the end depend upon other and less dazzling qualities, and in which long experience had rendered the French perfect proficient! The commissariat was at first ignorant of its duties, and often failed in procuring supplies at the critical moment; the health of the soldiers, especially those newly sent out, frequently suffered dreadfully, and the military hospitals, charged sometimes with twenty thousand sick at a time, fostered contagion rather than cured disease (1) the inebriety of the soldiers amidst the wines of the south too often aggravated the tendency to malaria fever which arose from the death-bestedrodden gales of Estremadura; the engineers were able and instructed, but the troops unskilled in the labour of the trenches, the working tools often insufficient, the mining chisels blunt and useless, and the battering ordnance worn out or inadequate, and these obstacles, perpetually marring the general's operations at the most vital moment, could only be overcome by shedding torrents of heroic blood (2) This universal ignorance is not to be wondered at: it results inevitably in a nation whose power has superseded the necessity of military experience, and whose temper has discouraged the military part

Causes
which led
to these
obstacles to
Wellington's
success The Ministry shared in the general deficiencies, trained for the most part to civil professions, they were generally unfit to judge of military arrangements, they yielded on the management of the war to professional men of capacity inferior to their own, and often immersed, from long inactivity, in a flood of insignificant details, and the pressing concerns of Parliament, with the general conduct of government, left them little leisure to acquire, when in harness, the information requisite for a vigorous and enlightened prosecution of the cabinet duties connected

(1) The total number of sick and wounded who passed through the military hospitals of Portugal, from 1808 to 1814, amounted to the enormous number of three hundred and sixty thousand men

with the military department. Above all, they were, to an extent which now appears almost inconceivable, *unaware of the vital importance of time in war* they almost always attended in the end to the general's requests; but they often did so at a period when the season for gaining the important effects anticipated from them had passed they combined operations so as to favour his designs, but they not unfrequently marred these minor enterprises by the incapacity of the untried officers whom they placed in command. It is in vain to ascribe these unhappy arrangements to the fault of any particular body of men then intrusted with the reins of government they obviously arose from general causes, for they characterise equally the first years of every contest in British history many a Byng has been morally executed for faults really owing to the constitution of his country many a Bourgoyne has capitulated because the means of salvation were not, through popular heedlessness, put into his hands. If foresight and wisdom in previous preparation, commensurate to their vigour and resolution when warmed in the contest, had been given to democratic societies, the English people in modern, as the Roman in ancient times, must long since have obtained the empire of the world. Instead, therefore, of ascribing peculiar blame to any class in the British islands for the manifold difficulties with which Wellington had to struggle in the first years of the contest, let us regard them as the inevitable consequence of previous neglect and long continued security on the part of the whole empire and let this reflection only enhance our admiration for the hero whose resolution and sagacity prepared, and the army whose bravery and perseverance secured, the means of overcoming all these obstacles, and brought the British army in triumph to the walls of Paris.

The British difficulties
presented in the beginning.

But on considering the comparative weight of the difficulties with which the British and French generals had to contend in this memorable contest, one observation applies to them all, eminently characteristic of the conflicting principles on which it was conducted, and the antagonist powers which were there brought into operation on the opposite side. The French, by disregarding every consideration of justice or humanity, forcibly wrenching from the vanquished people their whole resources, and extracting from their own countrymen, by the terrors of the conscription, all the physical force of sixty millions of subjects or allies, had obviously the advantage in the outset; and the chances were very great, that before the English could gain any solid footing in the Peninsula, they would be driven from it by a concentration, from all quarters, of overwhelming forces. This, accordingly, was what had happened in all the previous campaigns of the British during the war; and it had been prevented from again occurring only by the admirable foresight with which the position of Torres Vedras had been chosen and strengthened.

The French difficulties
presented in the end.

But on the other hand, when the first brunt of the Imperial onset had been withstood, and the contest was reduced to a series of protracted campaigns, the balance became more even, and at length, by the natural reaction of mankind against oppression, inclined decisively in favour of the British general. The English method of procuring supplies by paying for them though extremely costly, and far less productive at first than the French mode of taking possession of them by force, proved in the end the only one which could permanently be relied on, for it alone did not destroy in consumption the means of reproduction. The English system of procuring men for the army by voluntary enlistment, though incapable of producing the vast arrays which were clustered by the conscrip-

tion round the Imperial standards, did not exhaust the population in the same degree, and permitted the British armies to be progressively increased to the close of the contest, while the French, in its latter stages, declined in a fearful progression. The English principle of protecting the inhabitants, so far as it was possible, amidst the miseries of war, though in the beginning extremely burdensome, in comparison of the summary methods of spoliation and rapine invariably practised by the French, proved in the long run the most expedient, for it alone conciliated the affections, and husbanded the resources of the people, by whose aid or hostility the contest was to be determined. It is precisely the same in private life. the rapacity of the robber, or the prodigality of the spendthrift, often outshine in the outset the unobtrusive efforts of laborious industry, but mark the end of these things, and it will be found, that in the long run honesty is the best policy, and that the fruits of rapine, or the gains of dishonesty, ultimately avail as little to the grandeur of nations as the elevation of individuals.

Commence
ment of the
first siege of
Badajoz

Having taken his determination to act on the offensive against the French in Spain, and to endeavour, in the outset, to recover the important fortress of Badajoz, Wellington moved his headquarters in the middle of May to Estremadura, taking with him 12,000 men to reinforce General Beresford, who had previously begun the campaign in that province, and had made himself master, after a few days' siege, of Olivenza,

April 17

with its garrison of 580 men. Badajoz was immediately thereafter blockaded, but the great floods of the Guadiana prevented any serious opera-

May 5

tions being commenced against it till the first week of May, when the communications across the river having been effected, the town was invested on both banks. Soult no sooner heard of the enterprise, than he began to collect troops at Seville for its relief, and on this occasion, the deficiencies of the English army, in all the knowledge and preparations requisite for a siege, were painfully conspicuous. All the zeal and ability of the engineer officers, and they were very great, could not compensate the wants of an army which had, at that period, no corps of sappers and miners in its ranks, nor a single private who knew how to carry on approaches under fire. A double attack was projected—one on the castle, and another on the fort of

May 8

St-Christoval, and on the night of the 8th, ground was broken at the distance of four hundred yards from the latter. A bright moon enabled the enemy, however, to keep up a destructive fire on the working parties. A vigorous sally two days afterwards was repulsed with loss, but the Allies pursuing too far were torn in flank by a discharge of grape shot from the ramparts, which, in a few minutes, struck down four hundred men; and though the besiegers continued their operations with great perseverance, the fire of

May 10

May 12.

Christoval was so superior, that four out of five of the guns placed in the trenches were speedily dismounted. On the 12th, ground was broken before the castle, and a battery commenced against the *tête de pont*, but before any progress could be made in the operations, intelligence was received that Soult was approaching, and Beresford instantly and wisely gave orders to discontinue the siege, and assemble all the forces in front to give battle (1).

Forces of
the oppos-
ing armies
at Albuera

Having, by great exertions, collected all his disposable forces in and around Seville, this indefatigable marshal set out on the 10th from that capital, and joining Latour Maubourg on the road, made his appearance at Villa Franca and Almendralejo on the 14th, having in four

days cleared the defiles of the Sierra Morena, and transported his troops from the banks of the Guadalquivir to the streams which nourish the Guadiana. On the 15th, he moved forward his advanced guard, occupying the heights in front of ALBUERA, where Beresford's army was concentrated. The force which was here at the disposal of the English general was considerable in numerical amount; but in composition, with the exception of the British, very inferior to the homogeneous veterans of the French marshal. General Blake arrived from Cadix with 9000 men early on the morning of the 16th; Castanos, with 3000, chiefly horse, was also at hand; and Don Carlos d'Espaņa's men, who had still kept their ground in the northern slopes of the Sierra Morena since the rout of Medellin, swelled the Spanish force to 16,000 men, of whom above 2000 were cavalry. The Anglo-Portuguese force consisting of two divisions and Hamilton's Portuguese brigade, numbered 7000 British and 8000 Portuguese sabres and bayonets: so that the Allies, upon the whole, had in the field 50,000 men, of whom 3000 were horse, with thirty-eight guns; but of these the English alone could be relied on for the decisive shock. Soult's force was inferior in numerical amount, being only 19,000 infantry, and 4000 horse: but they were all veteran troops, whom Napoleon justly termed "the finest in Europe," and he had fifty guns admirably harnessed and served; so that, in real military strength, his force was decidedly superior to that of his antagonist (1).

Disposition of the field of battle, and the French and English positions. Beresford, to whom Castanos, with a delicacy and forbearance very unusual at that period in the Spanish generals, had relinquished the command of the Allied army, had drawn up his motley array on the heights lying to the north of the Albuera streamlet, with the right thrown back in a semicircle, so as to guard against his flank being turned in that quarter, where still higher eminences rose beyond the extremity of the line. The British divisions, commanded by Cole and Stewart, were in the centre, on either side of the great road from the village of Albuera to Badajoz and Valverde, where the principal attack was anticipated: to the right of these stood Hamilton's Portuguese; while Alten, with his brave brigade of Germans, occupied the village and bridge of Albuera, in advance of the centre of the whole line; the right was strongly occupied by the Spaniards under Blake, whose position, on a line of heights, promised to render their unwieldy bulk of some service in making good the position. The French army, according to their usual custom, was arrayed in dense masses, partly in the wood on the south of the Albuera stream, partly on the open ground to their north, and in advance both of the Albuera stream and Fexilla rivulet, which ran along the foot of the heights on the allied right. Soult, seeing that Beresford had neglected to occupy the high ground which commanded the whole field beyond his extreme right, in order to strengthen his centre commanding the great road, resolved to make his principal attack in that quarter: and with this view, during the night, unknown to the English general, and under the screen of the lofty height, concentrated his principal forces, consisting of Gerard's corps, Latour Maubourg's cuirassiers, and Raty's guns, in all fifteen thousand men, with forty pieces of artillery, on the southern slope of the great hill, within half a mile of Beresford's right, but screened entirely from their view; while the remainder of his forces, consisting of Werles division Godinot's brigade, the light cavalry, and twelve guns, were arrayed in the wood to the south of the Albuera stream; the bridge over

(1) Beresford to Wellington, May 18, 1811. xx. 223, 224. Toul. iv. 66, 67. Hamilton's Pos. Gen. xl. 372. Nap. U. 822, 823. Vict. pt. Comq. Camp. iii. 82.

which, with the village of the same, were to be the object of an early attack, to distract the enemy's attention from the powerful onset preparing against them under cover of the lofty eminence on the right (1).

Battle of
Albuera
May 16

The action began early on the morning of the 16th, by a strong body of cavalry who were seen to cross the Albuera stream, opposite the allied right, while Godinot's division, preceded by ten guns, issued from the wood, and bore down upon the bridge. The British guns in the centre immediately opening upon the moving mass, ploughed through its columns with great effect, but the brave assailants pressed on, while their cannon answered the English fire, and crowding towards the bridge in great numbers, were soon warmly engaged with Alten's Germans at that important point. As the Hanoverians were soon pressed by superior numbers, Beresford advanced a Portuguese brigade to their support. A Spanish battery, placed on a height near the church, played warmly on all the approaches to the bridge: the French artillery thundered back without intermission, but with less effect, and the enemy made no material progress in that quarter. Perceiving, however, that Werle's division did not follow in the footsteps of Godinot's, Beresford justly concluded that the real attack was not intended at the village; and dispatched Colonel Hardinge to Blake to warn him that a serious onset might immediately be expected on the right, and entreating him to throw back his line and face outwards, so as to be prepared to receive it. The Spanish general, however, with characteristic obstinacy, refused to credit the information, and declined to endanger his troops by moving them in presence of the enemy. Colonel Shepelor, however, an intelligent German officer, who was serving as a volunteer in the Spanish staff, and has since written a valuable history of the war, was of the opposite opinion, and fixing his eyes steadily on the right, while Blake and Castanos were engrossed only with the attack on the bridge, at length showed them the glancing of deep columns of bayonets in the interstices of the wood in that direction. Yielding reluctantly to the evidence of his senses, Blake upon this ordered the requisite change of front, the second line of Spaniards was moved forward and drawn up at right angles to the first, thus forming a bar across the extremity of the line, perpendicular to its direction, exactly as took place with the Russians in the middle of the battle of Eylau (2).

The French
accumulate
their forces
on the right,
and force
the Spanish
position

Before, however, this critical movement could be completed, the enemy in appalling strength were upon them. Werle, as Beresford had foreseen, no sooner saw Godinot's leading battalions engaged at the bridge, then leaving a few troops to connect the lines together, he rapidly countermarched to the westward, and issuing from the wood, joined the rear-guard of Gerard's corps as it was mounting the hill, on the right of the Allies, while at the same time the light cavalry, quitting Godinot's column, forded the Albuera, and ascending the hill at the gallop, joined the already formidable mass of Latour Maubourg's cuirassiers, who stood opposite to the British heavy dragoons under Lumley. Thus, while the Spanish line was going through the difficult operation of changing its front, it was attacked by fourteen thousand infantry, four thousand noble horse, and forty pieces of cannon. The contest was too unequal to be of long duration. Though such of Blake's troops as had got to their ground before the enemy were upon them, opposed a stout resistance, and for some time kept the assailants at bay, yet their line was irregular and confused when the firing began, huge

gaps were visible into which the French cavalry poured with irresistible force; Rutty's guns, now playing within point blank range, throw the moving regiments into confusion; and after a short and sanguinary struggle, the Spaniards were overthrown at all points, and the whole heights on which they stood fell into the enemy's hands, who immediately placed their batteries there in position, in such a manner as to command the whole field of battle (1)

Dreadful disaster of the British divisions which first got up.

The day seemed more than doubtful; and Soult, thinking that the whole army was yielding, was concentrating his reserves, and arranging his cavalry, so as to be able to convert the retreat into a rout, when Beresford, seeing the real point of attack now clearly pronounced, ordered up the British divisions from the centre to the scene of danger on the right. This order was instantly obeyed: the lines fell back into open column, and with a swift and steady step moved to the right, up the heights, from which the tumultuous array of the Spaniards was now hurled in wild confusion. But before they had reached the summit, a dreadful disaster, wellnigh attended with fatal consequences, befell them. The morning, which had throughout been cloudy and unsettled, at this time broke into heavy storms of wind and rain, accompanied with thick mists, under cover of one of which the French advance against the Spanish position had been effected. Another moment of darkness of the same description proved as fatal to the British as it had been favourable to their antagonists. When General Stewart, with the leading brigade of the second English division, still in column, arrived at the slope of the height which the French had gained, and had got through the Spaniards, he opened a heavy fire upon the enemy from the front rank; but finding they could not be shaken by musketry, immediately ordered a charge of bayonets; and the regiments were in the act of deploying for that purpose, when they were suddenly and unexpectedly attacked in rear, and in great part destroyed, by two regiments of hussars, and one of Polish lancers, which had got round their flank unobserved during the mist. The 51st alone, which still remained in column, resisted the shock but the remainder which had got into line, or were in the act of deploying consisting of the Buffs, the 60th, and the second battalion of the 48th, were instantly pierced in many different quarters by the lancers from behind and almost all slain on the spot, or driven forward into the enemy's line, and made prisoners. Seven hundred men and three standards fell into the hands of the cavalry in the tumult of success they charged the second line coming up; and such was the confusion there from this disaster, that Beresford himself only escaped being made prisoner by his great courage and personal strength, which enabled him to parry the thrust, and dash from his saddle a lancer, who in the affray assailed him when alone and unattended by his suite (2).

Coldest interval to arrive the day by Wellington's brigade.

All seemed lost for not only were the heights, the key of the position, taken, and crowned with the enemy's infantry and artillery, but the British brigade, which had advanced to retake them, had almost all perished in the attempt. With the troops of any other nation it would probably have been so; but the English were determined not to be defeated, and it is surprising how often such a resolution in armies, as well as in individuals, works out its own accomplishment. The Spaniards, incapable of perceiving the change which had taken place in the action, continued to fire with great violence directly forward, although the

(1) Map III. 425, 436. Beresford's despatch. *Gen. v. 374. Top. fr. 68, 69. Vol. of Com. xv. 223, 226.*

(2) Beresford's Despatch. *Gen. v. 374. Map III. 426, 427. Illustr. II. 24. Vol. of Com. xv. 221, 222. Top. I. 66, 70.*

British were before them; and no efforts on the part of Beresford could induce them to advance a step, while the succeeding columns of the English fired, in like manner, on the Spaniards, and endangered Blake himself. But, amidst all this confusion, the unconquerable courage of the British, by a kind of natural instinct, led them to the enemy, and retrieved the disasters of the day. The 51st, under Major L'Estange, isolated on the heights it had won in the midst of enemies, still maintained its ground, and kept up, now in line, a murderous fire on Gerard's dense columns, by which it was assailed. Dickson's artillery speedily came up to the front, and firing with prodigious rapidity, covered the advance of Houghton's brigade, who ere long got footing on the summit, and formed in line on the right of the 51st, the remainder of the second division, under Abercrombie, shortly after pressed gallantly forward and took post on its left, while two Spanish corps also came up to the front, and Lumley's horse artillery, on the extreme right, by a most skilful and well-directed fire, kept at a distance the menacing and far superior squadrons of Monbrun's cuirassiers (1)

Still the combat, though more equal, was far from being re-established. The British troops, in mounting the hill, were exposed to a dreadful fire of grape and musketry from the French guns and masses at the summit, hardly a half of any regiment got to the top unhurt; Houghton himself fell, while nobly heading and cheering on the 29th in the van, Duckworth of the 48th was slain, while the 57th and 48th, which next came up and opened into line in the midst of this terrific fire, soon had two-thirds of their numbers struck down by the fatal discharges of the enemy's artillery. But this combat of giants was too terrible to be of long duration: the French, though suffering enormously in their dense formation, stood their ground gallantly: neither party would recede an inch, though the fire was maintained within pistol-shot, and a deep though narrow gully, which ran along the front, rendered it impossible in that direction to reach the enemy with the bayonet. At this awful crisis ammunition, from the rapidity of the discharges, failed, in some of the British regiments, despite all their valour, the fire slackened, Houghton's brigade, slowly and in firm array, retired. a fresh charge from the now re-assembled Polish lancers captured six English guns, and Beresford, deeming the battle lost, was making preparations for a retreat, and had actually brought up Hamilton's Portuguese brigade from the neighbourhood of the bridge of Albuera into a situation to cover the retrograde movement (2).

In this extremity the firmness of one man changed the fate of the day, and in its ultimate effects, perhaps, determined the issue of the Peninsular war. While Beresford, under circumstances which not only justified, but perhaps called for the measure, was taking steps for a retreat, an officer on his staff, endowed with the eye of a general and the soul of a hero, boldly took upon himself the responsibility of venturing one more throw for victory. Colonel, now SIR HENRY HARDINGE, ordered General Cole to advance with his division on the right, which was still fresh, and, riding up to Abercrombie on the extreme left, ordered him also to bring his reserve brigade into action. Cole quickly put his line, with the fusilier brigade in the van, in motion, crossed the Aroya streamlet, and mounted the hill on the right, while Abercrombie, with the reserve brigade of the second division at the same time clearing their way through the throng, ascended on

the left. These brave men soon changed the face of the day; and the advance which the enemy had made in the centre against Houghton's brigade, proved in its results extremely disastrous, by bringing them into a situation where the flanks, as well as the front, of their deep columns were exposed to the incessant fire of the English infantry. It was exactly the counterpart of what had happened to Lannes's column which broke into the middle of the Austrian line at Aspern (1), and the terrible British column which all but gained the battle of Fontenoy. Houghton's brigade, in the centre, encouraged by the timely succour, and having received a supply of ammunition from the rear, again stood firm, and fired with deadly aim on the front of the mass while the fusilier brigade on one flank, and Abercrombie's on the other, by incessant discharges prevented any of the lines behind from deploying. The carnage in consequence was frightful, especially in the rear of the column; and the very superiority of the French numbers magnified the loss, and augmented the confusion, from causing every shot to tell with effect on the throng. Pressing incessantly on, the fusilier brigade recovered the captured guns, and dispersed the lancers; but a dreadful fire met them when they came near Gerard's infantry. Colonel Myers was killed. Cole himself, and Colonels Ellis, Blakeney, and Hawkshawe fell, badly wounded and the whole brigade, "staggered by the iron tempest, reeled like sinking ships (2)." "

My note
of the
English
infantry
gains the
day

"Suddenly recovering, however," says Colonel Napier, in strains of sublime military eloquence, "they closed on their terrible enemy; and then was seen with what a strength and majesty the British soldier fights. In vain did Soult by voice and gesture animate his Frenchmen; in vain did the hardiest veterans, extricating themselves from the crowded column, sacrifice their lives to gain time and space for the mass to open out on such a fair field; in vain did the mass itself bear up, and, fiercely striving, fire indiscriminately on friends and foes, while the horsemen hovering on the flanks threatened to charge the advancing line. Nothing could stop that astonishing infantry. No sudden burst of undisciplined valour, no nervous enthusiasm, weakened the stability of their order. Their flashing eyes were bent on the dark columns in their front; their measured tread shook the ground, their dreadful volleys swept away the head of every formation; their deafening shouts overpowered the dissonant cries that broke from all parts of the tumultuous crowd, as foot by foot, and with a horrid carnage, it was driven by the incessant vigour of the attack to the farthest edge of the hill. In vain did the French reserves, joining with the struggling multitude, endeavour to sustain the fight: their efforts only increased the irremediable confusion; and the mighty mass, at length giving way like a loosened cliff, went headlong down the ascent. The rain flowed after in streams discoloured with blood; and fifteen hundred unwounded men, the remnant of six thousand unconquerable British soldiers, stood triumphant on the fatal hill (3)." "

Conclusion
of the
battle.

Beresford, seeing the heights thus gloriously won, immediately took steps to secure the victory. Blake's first line, which had not yet been engaged, was removed to the village and bridge of Albuera; Allen's Germans, and the whole Portuguese, were thus rendered disposable, and formed a mass of ten thousand men, who advanced up the hill in the foot steps of Abercrombie and the fusilier brigade; while Ballasteros and Zayas with their Spanish brigades also pressed on in pursuit. Gerard's corps was

soon entirely dissolved: almost all the men threw away their arms, dispersed, and sought for shelter in the wood behind the Albuera stream. Werle's reserves, five thousand strong, were brought up by Soult to cover the retreat, but it was overwhelmed in the flight, and the general himself killed. "All, on the admission of the French themselves, was lost, if in that fatal moment the artillery had shared in the general consternation (1)", but Rutly skilfully drew his guns together, and, emerging through the throng of fugitives, stood forth gallantly in the rear, and by the vigour of his fire arrested the advance of the conquerors. Such was the rapidity with which the guns were worked, and the precision of their aim, that the Spaniards and Portuguese, advancing in the rear of the British, suffered severely, the British infantry were obliged to wait till their own artillery came up, and meanwhile, the confused masses of the enemy got over the stream and regained the cover of the wood. Monbrun's cuirassiers restrained the Allied cavalry, which repeatedly endeavoured to charge, though, from the advanced position which they assumed to do so, they suffered dreadful losses from the British artillery; and at length this sanguinary contest gradually died away on both sides, rather from the exhaustion of the victors than any means of farther resistance, save in their artillery, which remained to the vanquished (2).

Its results. Such was the battle of Albuera, memorable as being the most desperate and bloody of any that occurred, not only in the Peninsular, but the whole Revolutionary war. Though the firing had only lasted four hours, eight thousand men had been struck down on the part of the French, and nearly seven on that of the Allies; an amount of loss, which, in proportion to the number of men actually engaged, is unparalleled in modern war, at least on the side of the victors. The Spaniards lost two thousand men; the Portuguese and Germans, six hundred; but the British alone, four thousand three hundred—a chasm out of seven thousand five hundred English soldiers engaged, which marks clearly upon whom the weight of the contest had fallen. When the Buffs were called together after the battle, only three privates and one drummer answered to the muster-roll, though great numbers who had been made prisoners, and escaped in the confusion, joined during the night and next day. The survivors were less numerous than the wounded. All the efforts of the Portuguese videttes, to whom the care of the maimed was entrusted, could not provide for the multitude who required their aid, the streamlets on the field, swollen with the rain, which fell without intermission all night, ran red with human blood; while Blake, soured by his own defeat and the English success, refused to send any assistance to the succour of his bleeding allies. But, disastrous as was the condition of the British, that of the French was still more calamitous: forced to a retreat, they were encumbered by six thousand five hundred wounded, for whose relief no means whatever existed. Eight hundred of these unhappy men fell into the hands of the British, who left five hundred prisoners and one howitzer in the hands of their opponents. But though the trophies of victory were thus nearly balanced, the result showed decisively on which side success had really been won, for after remaining the next day in the wood from which he had issued in the morning of the battle, Soult on the following night retired towards Seville by the road he had advanced, leaving the British to resume their position undisturbed around the bastions of Badajoz (3).

Wellington
arrives and
takes the
command of
the siege of
Badajoz.

As soon as it was ascertained that the enemy had retreated, the siege of that fortress was resumed on the left bank of the river, and the light cavalry followed the enemy towards the Sierra Morena, whither Soult was retiring. He left the great road to Seville, and fell back towards Llerena, his cavalry being stationed near Usagre. There, a few days afterwards, they were attacked by the 3d and 4th dragoon guards, supported by Lumley's horse artillery in front, while Madden's Portuguese cavalry assailed them in flank. The result was, that they were completely

overthrown, with the loss of a hundred slain and eighty prisoners. This brilliant affair terminated Beresford's independent operations: Wellington had arrived in person, and taken the command of the siege of Badajoz; Hill, who had returned to Portugal, resumed the command of the second division and the covering army; and Beresford set out for Lisbon, where his influence and great talents of administration were indispensably called for, to restore the dilapidated condition of the Portuguese army (1)

Moral
results of
the battle.

Though Beresford's firmness had not proved equal to the dreadful crisis of the battle itself; yet his resolution in maintaining his ground next day, with the diminished and bleeding remnant of his host, was deserving of the highest admiration, and had the most important effect on the fate of the campaign. Soult had still fifteen thousand veterans unburt when he retired to Llerena; and so strongly had Beresford felt the vast superiority of that force to the handful of British who remained after the battle, that on the evening on which it had occurred, he had written to Wellington, avowing that he dreaded a renewal of the action and a bloody defeat on the succeeding day; although the troops, justly proud of their victory, had crowned the hill which they had won by such efforts with several hundred flags taken from the Polish lancers, where they waved defiance to the enemy. That he had the firmness to make good his post, and brave such a danger, is a memorable instance of moral resolution. While the retreat of Soult, under circumstances when, by persevering, he might have perhaps achieved success, cannot but be considered as at once a blot in his escutcheon, and the most convincing proof of the ascendancy gained by that extraordinary display of unconquerable intrepidity which the English army had made in this well debated field, and which encircled their arms with a halo of renown which carried them through all the subsequent dangers of the war. The French military historians are the first to admit this, — "Great and disastrous," say they, "was the influence which this fatal day exercised upon the spirit of the French soldiers. These old warriors, always heretofore conquerors in the north of Europe, and often in Spain, no longer approached the English but with a secret feeling of distrust; while they, on their part, discovered, by the result of the battle of Albuera, the vulnerable side of their antagonists, and learned that, by resisting vigorously the first shock, and taking advantage of superiority of number, they would rarely fail to gain the victory (2)." In truth, however, the British learned on this bloody field a simpler lesson which they never afterwards forgot, and which they applied with fatal efficacy in all the subsequent battles of the war, viz., that the English *in line* could successfully resist and defeat the French *in column*; and to the constant adherence to this maxim the unbroken career of success which followed is in a great measure to be ascribed (3)

Delivered by the retreat of Soult from so formidable an antagonist, and

Renewal of the siege of Badajoz
May 27 deeply impressed with the necessity of straining every nerve to regain the important fortress of Badajoz, Wellington had no sooner arrived on the spot than he recommenced the siege with the utmost vigour. Both parties had improved to the uttermost the short breathing time afforded them by the battle of Albuera, and never was activity more indispensable to either, for it was well known that succour was approaching, and that, unless the place could be carried in a fortnight, the united armies of Marmont and Soult would arrive from the north and south, and compel the raising of the siege. During the absence of the allied forces, Philippon had levelled the trenches and destroyed the approaches of the besiegers, and not only repaired his own works where injured by their fire, but constructed strong interior intrenchments behind where breaches were expected, and considerably augmented his supplies of provisions. Colonel Dickson, who commanded the British engineers, had on his side, by extraordinary activity, got together a train of fifty pieces of heavy artillery, considerable supplies of stores had arrived, and six hundred gunners were at hand to man the pieces.
May 27 All things being at length in readiness, the place was wholly invested on the 27th, and two days afterwards ground broken against Fort Christoval. The operations of the besiegers were pushed with extraordinary vigour, as Wellington was well aware that the success of the enterprise entirely depended on celerity, and on the evening of the 6th June the breach was declared practicable. At midnight the storming party advanced to the attack. They reached the glacis in safety, and descended unobserved into the ditch, but upon arriving at the foot of the breach it was discovered, that after dark the rubbish had been cleared away from the bottom of the slope, so that it could not be ascended, but the troops, boiling with courage, refused to retire, and remained making vain attempts to get in by escalade, till the severity of the fire, and the stout resistance of the enemy, obliged them to retreat (1).

Second assault on Christoval, which is repulsed
June 9 Taught by this check the quality of the enemy with whom they had to deal, the British took more precautions in their next attempt. The fire continued with great vigour, both on Christoval and the body of the place, on the three following days, though, from the age and bad condition of the artillery, which had been drawn from Elvas, and of which a part was a hundred and fifty years old, a considerable proportion of the battering guns had become unserviceable. A heavy fire was also kept up on the castle but although the breaching batteries played on it at the distance only of five hundred yards for seven days, from the 2d to the 9th June, yet so defective was the ordnance, that at the end of that time the breach was hardly practicable, and at any rate it could not be stormed while the enemy held Christoval, as the guns from the latter fort swept along the foot of the castle wall and over the ground in its front. A second attempt, therefore, was made to carry the latter fort, but though the storming party was stronger, and the ladders longer than before, a second defeat was experienced. The garrison, who, on the late occasion, had been only seventy-five, were now increased to two hundred men. Their spirit, much raised by their former success, was now elevated to such a pitch that they stood on their bastions inviting the British with loud cheers to come on and the provident care of the governor of the fortress, Philippon, whose great talents in this species of warfare were now fully manifested, had not only

(1) Wellington to Lord Liverpool June 12, 1811. *GLW* viii 12 B
391 Vict et Conq xx 219

given each soldier four loaded muskets, but arranged a formidable array of bombs, hand grenades, and powder barrels on the top of the rampart, ready to be rolled over among the assailants the moment they reached the foot of the wall. Notwithstanding these obstacles, and the heroic valour of the garrison, who fought like lions in defence of their post, the assaulting columns united at the bottom of the breach the scaling ladders were applied, and some brave men reached the summit but they were immediately bayoneted by the garrison, and at the same time the bombs and powder barrels, being rolled over, exploded with such violence that the order to retire was reluctantly given. The heroic French then listened to the cries of the British wounded who had been left in the ditch, and desiring them to raise their scaling ladders themselves helped them into the fort, where they were kindly treated an admirable instance of generosity at such a moment, but by no means singular on either side in the contest of these truly brave nations throughout the whole Peninsular war (1)

Though the British army had lost four hundred men since they sat down the second time before Badajoz, and a few days more would unquestionably have put them in possession of that fortress; yet it had now become no longer possible to continue the siege. Napoleon, who fully concurred in Wellington's opinion as to the vast importance of this stronghold upon the issue of the campaign, had, early in May, sent positive orders to Marmont to collect his forces, and co-operate with Soult in the most vigorous manner for its deliverance; and for this object reinforcements had been poured into the armies on the Portuguese frontier from all parts of Spain. Soult received four thousand men from the army of the north, and as many from that of the south. Drouet, with eight thousand men from the ninth corps, which had been dissolved, was already in march to join him. Marmont was directed to collect his forces on the Tagus, and second the operations of Soult for the relief of Badajoz. Desaières was to occupy Valladolid with ten thousand men, and push an advanced guard to Salamanca, to observe the Ciudad Rodrigo frontier: while Bonnet was to evacuate the Asturias, and take a position on the Orbigo, towards Leon, to observe the loose Spanish array which was collected on the Galician frontier (2)

Nor was the anxiety of the Emperor confined merely to measures calculated to effect the deliverance of Badajoz. Defensive precautions on the most extensive scale were made, over the whole north of the Peninsula, as far back as Bayonne. Astorga was directed to be evacuated, and in a part dismantled strong works erected around the castle of Burgos, the importance of which he even then clearly discerned; a *lêve-de-port* constructed on the Ebro and Miranda, and another on the Bidassoa at Irun; the defiles between Vittoria and Bayonne secured by block-houses and fortified posts; a citadel of great strength constructed at Santona, so as to render its peninsula impregnable, and serve as a *point d'appui* to a force sent by sea from Bayonne to operate in the rear of an advancing army. A division under Vaendermaison crossed the Pyrenees, and was incorporated with the army of the north; four reserve brigades collected at Bayonne under General Monthlon, who were instantly sent off into Spain as fast as they arrived, and replaced in that fortress by a fresh reserve division of 6000 men and an entire new corps of reserve formed of the divisions Reille, Caffarelli, Souham, and the Italian division of Severolo, in all 40,000 strong to whom

the important duty was committed of occupying Biscay, Navarre, and the north of Old Castile, and keeping open the great line of communication with Bayonne. By these means, a very great addition was made to the strength of the French armies in Spain, which by the end of September, were raised to the enormous amount of 368,000 men, of whom 311,000 were present with the eagles, a force so prodigious as apparently to render hopeless any attempt on the part of the English to dislodge them from the country. Nor were material preparations neglected for the equipment and support of the warlike multitude. Long convoys of ammunition and military stores of all kinds were incessantly traversing the Pyrenees. A million of rations of biscuit were prepared in each of the places of Bayonne, Burgos, and Valladolid; and though last, not least as an indication of the sense of Napoleon of the pressing necessity of arresting the English, the maxim that war should maintain was for a while suspended, and forty millions of francs (£1,600,000) were despatched from Paris for the headquarters of the different armies (1)

Wellington
raises the
siege and
retires into
Portugal
June 10

Although this general displacement and concentration of the French armies, in consequence of the offensive movement of Wellington, had the most important effects ultimately upon the war, and afforded the clearest indication of the importance which Napoleon attached to it, as well as the judgment with which the stroke had been directed, yet, in the first instance, it of necessity compelled the retreat of the English army, and the raising of the siege of Badajoz. On the morning of the 10th, an intercepted letter was brought to Wellington from Soult to Marmont, pointing out the enemy's intention immediately to concentrate their whole force in Estremadura, and converge at the same time to the banks of the Guadiana; while, on the same day, intelligence arrived from the frontiers of Castile, that Marmont's corps were rapidly marching for the same destination, and would be at Merida by the 15th. The united strength of these armies, with the reinforcements they had received, would have amounted to above sixty thousand men, to whom the English general could not, from the sickness of the British army and the extraordinary diminution of the Portuguese troops—from the fatigues of the winter campaign and the inefficiency of the local government, oppose more than forty-eight thousand. In addition to this, the Portuguese authorities had allowed the stores in Elvas to run so low, that enough did not remain in its magazines for a fortnight's defence of the place, far less to answer the demands of the siege of Badajoz. There were none in Lisbon, and no means of transport existed to bring up the English stores from their great depot at Abrantes, as no representations on the part of Wellington could induce the regency at Lisbon to endanger their popularity, by taking any steps to draw forth the resources of the country for these necessary services. In these circumstances the raising of the siege had become indispensable, and it took place, without molestation, on the 10th and 11th, the stores and heavy cannon being removed in safety to Elvas (2)

Entry of
Marmont
and Soult
into Bada-
joz.

It was not long before the wisdom of this retreat became apparent, for Soult and Marmont soon appeared in most formidable strength on the banks of the Guadiana. The former of these marshals having received a part of the reinforcements destined for him, particularly those under Drouet, was strong enough to raise the siege himself,

(1) Belin 1 190, 191 Napoleon to Bessieres June 8, 1811, and Caffarelli, June 11, 1811 Marmont to Napoleon, June 21, 1811. Belin App 1. No 76, 78

(2) Wellington to Lord Liv 1811 Gurw VIII 14, 15 J Conq. xx 253, 254

and for that purpose he broke up on the 11th from Llerena, and advanced towards Albuera, whither also Wellington repaired with the bulk of his forces, still maintaining the blockade of Badajoz, in hopes that the garrison, who were known to be in great want of provisions, would be compelled to capitulate before Marmont arrived. The English general, on this occasion, did not fail to occupy the hill which had been so fiercely contested on the former occasion, and the line in other places was strengthened by field works. Soult, however, who was aware how rapidly Marmont was approaching, was too wary to be drawn into a combat with equal forces; and he therefore ^{June 17} kept off till the 17th, when the near approach of the army of Portugal made it indispensable for the whole allied army to raise the blockade and retire behind the Guadiana. In effect, that marshal, who had neither magazines nor a single horse or mule to convey his supplies, had, by the terrors of military execution, extorted the requisite provisions and means of transport out of the wretched inhabitants, who were reduced to despair (1); and setting out from Alba de Tormes on the 3d June he had advanced, by forced marches, through Ciudad Rodrigo and the Puerto de Banos to Truxillo, ^{June 17} which he reached on the 14th. On the 17th his advanced guard was at Merida, while Soult approached to Albuera; and the British army having retired the same day across the Guadiana, the junction of the French armies was effected on the day following, and they entered Badajoz in triumph on the 28th, at the moment when Phillippon and his brave comrades, having exhausted all their means of subsistence, were preparing the means of breaking through the British lines and escaping (2).

A signal opportunity was now presented to the French generals for striking a great blow at the English army. By collecting their forces from all quarters, stripping the Asturias, Leon, and the two Castiles of troops, and having enough only in Andalusia to maintain the garrisons, they had assembled a prodigious army in front of Badajoz. Marmont brought 31,000 infantry and 5,000 horse, and Soult 23,000 infantry and 3000 admirable horse in all 56,000 infantry and 8000 cavalry, with ninety pieces of cannon. To oppose this powerful array Wellington, who had assembled his whole force from Beira, had only the British and Portuguese; the Spaniards, who took part in the battle of Albuera, having been detached under Blake to cross the Guadalquivir, and menace Seville. There were collected 49,000 infantry, however, and 4000 cavalry, with sixty four pieces of cannon, round the standards of the British chief and these were tried soldiers, who had all faced the enemy, and who had the confidence which experience alone can give in each other. Though the French superiority, therefore, especially in cavalry and artillery, was very considerable and the plains in which the action would be fought, near the Guadiana, were eminently favourable to the action of those arms; yet Wellington justly conceived that, with nearly 50,000 British and Portuguese soldiers, he need not ^{Wellington takes post on the Caja.} fear to give battle. Selecting, therefore, a defensive position behind the Caja, he awaited the approach of the enemy, who crossed the Guadiana in great force, and approached to reconnoitre his position. Every thing announced a great and decisive struggle; and as the French had, with infinite

(1) "L'armée de Marmont se trouvait sans magasins et sans vivres, et comme on attendait pour transporter les canons; tous les objets de ses magasins d'aliments militaires et de ses provisions furent donc le jour même les habitants, tous les habitants, toutes les maisons, toutes les récoltes et emporta tout le bid qu'elle pu ramasser. La pro-

visions de trouva complètement réduites sur un rayon immense et les habitants furent réduits au désespoir. —Baker, I. 192.

labour and difficulty, concentrated their forces from all quarters, from the banks of the Guadalquivir to the mountains of Asturias, and the English had no reserves to fall back upon, it was undoubtedly for their interest to have brought on the fight (1)

Soult and
Marmont
decline
fighting,
and with-
draw

But at this perilous crisis it was seen of what avail the moral weight of an army is, and how completely it can compensate even the most considerable advantage in point of numbers and equipment in the array to which it is opposed. Though the British sabres and bayonets in the field did not exceed twenty-eight thousand, or scarcely half of the French army, the remainder being Portuguese, yet these were the soldiers of Talavera and Busaco—the glory of Albuera shone around the bayonets of the right wing, the remembrance of Fuentes d'Onoro added terrors to the left. Despite all the advantages of their situation, and they were many—for the works of Elvas were in such a dilapidated condition that they could not have stood a week's siege, and the garrison had only ten thousand round shot left—the French marshals recoiled before the danger of hazarding the fate of the Peninsula on a pitched battle with such an army, and after re-occupying Olivenza, which was abandoned on their approach, and reconnoitring the British position, they withdrew without fighting. Nothing occurred except a sharp cavalry action near Elvas, in which 600 British dragoons, at first successful, were at last drawn into an ambuscade by a feigned retreat of the French hussars, and defeated with the loss of 150 men. After remaining a few days together, the French noble array separated, Soult retiring by the way of Albuera towards Seville, and Marmont desfilng towards Truxillo and the valley of the Tagus near Talavera (2)

Operations
of Blake
and Ballas-
teros in
Andalusia

Wellington's principal reliance for the means of breaking up this great combined force, which threatened such dangers to Portugal in his front, was on Blake's troops, who, having separated from the British when they crossed the Guadiana on the 17th, had taken the road for Seville, now entirely denuded of defenders by the concentration of Soult's forces for the relief of Badajoz. Although the Spanish general did occasion a diversion on this favourable occasion in the French rear, yet he effected nothing compared to what, with more judgment and energy, might have been achieved. Having recrossed the Guadiana at Martola on the 22d, he reached Castillegos on the 24th, where he remained inactive till the 30th, as if with the express design of giving the enemy time to prepare for his approach. He then moved forward, but instead of directing the bulk of his forces on Seville, of which he might have easily made himself master, and ruined the famous foundery there, from which the French were making all their ordnance for the siege of Cadiz, he turned to the right, and wasted three days in a fruitless siege of La Niebla, a walled town and castle garrisoned by 500 men, in the mountains. Villemur and Ballasteros, meanwhile, with a small body approached within cannon-shot of Seville, where the utmost alarm prevailed among the French depots, who took refuge, with the Governor-general Dancieu, in the fortified convent of La Cartusa, but Soult was by this time rapidly approaching, and the time for striking the blow had gone by. After blowing up the fortifications of Olivenza, he broke up from Badajoz on the 27th June, relieved with one of his divisions the castle of Niebla early in July, and moved on with the utmost haste to secure Seville from assault, and

July 1. Sierra Morena by Monasterio, re-entered the Andalusian capital on the 7th Blake, upon the approach of the French, retired precipitately from La Niebla into Portugal, and thence descended to Agamonte, at the mouth of the Guadiana, where he fortunately met with an English frigate and three hundred transports, which conveyed his infantry and cannon to Cadiz. Bellasteros, who with the cavalry covered the embarkation, afterwards took refuge in the adjoining island of Canklas, where he threw up intrenchments, and there he remained till August, when he embarked at Villa Real, and sailed with his infantry to the mountains of Ronda, while his cavalry remounted the Guadiana, and joined Castanos, who, with a small force, still kept his ground in the mountains of Estremadura (1)

Total rout
of the Span-
iards at
Baza in
March.

While these momentous operations were going forward on the Guadiana, a feeble attempt at renewed vigour had taken place in Grenada and on the Murcian frontiers. The mountaineers of Ronda, who had never been subdued, were encouraged by the departure of the whole disposable forces in Andalusia for the banks of the Guadiana, to make an attempt against the town of Ronda, the capital of their district, and 4000 armed peasants, under the Marquis Las Cuevas, had already reduced the French garrison there, 800 strong to the last extremity. Soult immediately col-

July 2. lected four columns from Seville, Cadiz, Malaga, and Grenada, with which he speedily raised the siege, and compelled the Spaniards to take refuge in their inaccessible cliffs, with the loss of some hundred men. Indefatigable in his activity, the French marshal next proceeded against the numerous but desultory array of the Murcians, who, to the number of 24 000 men, had advanced against Grenada during his absence on the north of the Sierra

July 2. Morena. The Spaniards made hardly any resistance. No sooner did the advanced guard of Soult make its appearance, than the whole array, which was strongly posted at Venta de Babil in front of Baza, with a strong ravine protecting their front, took to flight and dispersed. And nothing but the unnecessary circumspection of Godinot, who was destined to cut off their retreat, saved them from total ruin. So complete, however, was their rout, that when Blake, who had been dispatched from Cadiz with his troops to take the command of this numerous army arrived, it had entirely vanished, and

Aug. 4. no force whatever remained in the field. The fugitives, however, in great part took refuge in the city of Murcia; its intrenchments were strong, the yellow fever was raging in Carthagea at no great distance; and the French troops were so dreadfully worn out by the long marches and excessive fatigues of the campaign, that Soult refrained from undertaking the siege, and gave his wearied soldiers their long wished for rest amidst the smiling villages of Andalusia (2)

Consequences far more important followed on the other extremity of this vast line of operations. The evacuation of the Asturias by Bonnet, the concentration of the French forces in Old Castle, and the commencement of defensive preparations at Burgos, on the Ebro, and even on the Bidassoa, in pursuance of the provident commands of Napoleon, which have been already mentioned (3), produced an extror-

(1) *Exp. iv. 203, 211. Tot. iv. 77. 81. Vici. et Camp. ix. 159. Chif.*

A curious incident, attended with great disastrous consequences, took place in Estremadura at this period. As some of the Portuguese troops were firing from a few in corn-field in the neighbourhood of Badajoz in dry and sultry weather the corn took fire, and the conflagration spread with such extraordinary rapidity and violence, advancing, as

it always does, towards the north-west wind, which was blowing with gentle gales, that in three days it had reached Madrid, a distance of above thirty miles, which only escaped total destruction by the simple stream of the Guadiana, which stopped the flames.—*See TRAVEL, iv. 71.*

(2) *Vici. et Camp. ix. 264, 267. Exp. iv. 211. 212. Tot. iv. 208, 207.*

(3) *See, viii. 143.*

inary excitement in the northern provinces. The inhabitants of these mountain regions, brave, hardy, and independent, in whom centuries of freedom had created elevation of character, and Alpine air nourished physical resolution, were universally roused by these apparently decisive indications of returning success, and with joyful steps repaired to the headquarters of the indefatigable chief who still, in their rocky fastnesses, maintained the standard of independence. The intelligence of the retreat of the French from Portugal, and the battles of Fuentes d'Onoro and Albuera, coupled with the defensive preparations made on so extensive a scale in all Biscay and Old Castile, produced a general belief on the frontier that the French were about to retire altogether from the Peninsula, and that a vigorous insurrection in the northern provinces would cut off their means of retreat, and effect, by a clap of thunder, the entire deliverance of the Peninsula. Upon a brave people, impressed with these feelings and expectations, Mina from Navarre, Mendizabal, who had disembarked in Biscay from Asturias, and Duran and the Empecinado in the northern parts of Old Castile, found no difficulty in making a very great impression. The insurrection spread like wild-fire through all the hill country; every glen, every valley poured forth its little horde of men, the patriot bands swelled in all the principal towns, and, contrary to what had heretofore been observed, were filled with young men of the first families in the country (1).

Operations of the insurgents in these provinces Mendizabal, who had landed in Biscay early in June, soon found himself at the head of twelve thousand men, and from Potes, his headquarters, extended his incursions to Burgos and Vittoria: Mina was the chief of an equal force in Navarre, and, sweeping the country to the very gates of Saragossa, answered the atrocious proclamations, already noticed, of Bessières (2) by a counter one, breathing the indignant spirit of retaliation and defiance (3); while the Empecinado and Duran in Old Castile had become so formidable that they laid siege to, and captured the important fortified town of Catalayud, though defended by five hundred men

June 5 So urgent did affairs become in the northern provinces, and so uneasy was Napoleon at the insecurity of his communications in that quarter, that the imperial guard, which had entered Spain, were halted at Vittoria, and dispatched to the right and left against the insurgents, succour was drawn both from the army of Portugal and that of the centre, and the large reinforcements pouring through the Pyrenees into the Peninsula were in great part absorbed in this harassing and murderous warfare.

June 9 Mina's bands were defeated on two occasions with considerable loss

June 14 by these formidable antagonists, but their success availed little to the victors. The defeated corps, as in the days of Scitorius, dispersed, having previously fixed on some distant and inaccessible point of rendezvous. The French retired from the country, thinking that the insurrection was subdued, and they were apprised of their mistake by learning that their enemy had reappeared in undiminished strength in some other quarter, or cut off some post of consequence at a great distance from the scene of action (4).

Appendix, No 73

"The army of the north is composed of forty
four thousand men it is true, but if you draw toge-

ther twenty thousand, the communications are instantly lost, and the insurrection makes the greatest progress. The sea coasts will soon be lost as far as Bilbao. We are in want of every thing: in fact, it is with the utmost difficulty that we can get subsistence from day to day. The spirit of the country is frightful. The journey of the King to Paris, the retreat of the army from Portugal, its march to the Tagus, and the evacuation of the whole country,

*Napoleon's
new design—
sent to
Spain.
July 9.*

These threatening appearances in the north soon produced the most vigorous measures on the part of the French emperor to secure this, which, from the commencement of the war, he had always considered as the vital point of the Peninsula. The imperial guard under Dorsenne, at Burgos, who soon after replaced Bessières in the command of the army of the north, was augmented to seventeen thousand men thirteen thousand were collected at Benavente to observe the Galicians under Santocildes, who were beginning to assume a threatening position at the mouths of their glens on that frontier; and nearly forty thousand fresh troops, chiefly old soldiers, crossed the Bidassoa and entered Spain. The great amount of these reinforcements, joined to the narrow escape which Badajoz had just made from falling into the hands of the British, induced Napoleon to make a material change in the distribution of his troops and the duties of his commanders. Marmont, withdrawn from the plains of Leon, which his troops had rendered a perfect desert, and the protection of Ciudad Rodrigo, which was consigned to Dorsenne and the army of the north, was directed to take up his cantonments in the rich and comparatively unexhausted valley of the Tagus, from whence, without neglecting that fortress, he was to consider himself principally entrusted with the defence of Badajoz. For this purpose he was to station two divisions at Truxillo, ready to succour whichever place might be first threatened; to construct a double-fortified *tête-de-pont* at Almaraz, so as to secure that valuable passage of the Tagus and to fortify the Puente de Bano, so as to be master of that important pass through the mountains. For the support of his troops the whole province of Toledo was assigned to Marmont, who immediately began forming magazines from it at Talavera, to the infinite mortification of Joseph who thus saw his principal granary and means of subsistence entirely diverted from his capital and court. Soult was enjoined to hold himself in readiness to advance with thirty thousand men to raise the siege of Badajoz, if it should be again threatened by an English army; while Dorsenne, with the army of the north, now augmented to sixty thousand admirable troops, was entrusted with the onerous and irreconcilable duties of at once guarding the northern passes against the insurgents of Navarre and Biscay, and protecting Ciudad Rodrigo from the enterprises of the British general (1).

*Wellington
has been re-
solved to the
south of
Portugal.*

While Marmont was carrying these fresh instructions, which he immediately did, into execution, and busily engaged in constructing at Almaraz the double forts at each end of the bridge which was to secure the passage of the Tagus, Wellington, who constantly had an eye on the frontier fortresses, and felt that the recovery of one or both of them was essential to any durable impression on the Spanish territory, made a corresponding movement to the frontiers of Beira with the bulk of his forces. Leaving Hill with ten thousand infantry, fifteen hundred horse, and four brigades of artillery on the Estremadura frontier, at Portalegre and Villa Vieiosa he himself moved, with the remainder of his forces, about forty thousand strong to the north of the Tagus, and marching leisurely by Castellebranco, arrived on the Coa, opposite Ciudad Rodrigo, on the 8th August (2).

not even excluding Salamanca, have turned the heads of the people to a degree which I cannot express. The insurgents exert and rally in all quarters with extraordinary activity. If I am obliged to adopt decided line you must not reckon on the communications, Vitoria, Burgos, and Valladolid are the only points which I can hold. —Despatches

Defeat of
the Gali-
cians on the
Esla
July 9

The French general imagined that this movement was intended to co-operate with an advance which had recently taken place on the part of the Galicians under Santocildes, who had descended from their mountains into the plains of Leon, and reoccupied Astorga, when the general concentration of the Imperial forces for the relief of Badajoz left the northern provinces comparatively destitute of French troops. To defeat this supposed combination, Dorsenne resolved, in the first instance, to drive back the Spaniards, who were threatening his right flank; and this proved a task of no difficulty. The Galicians, destitute of every thing, and almost starving, had dwindled away to thirteen thousand ill-disciplined men, who were stationed behind the Esla, and at Foncebudon. Attacked, in the end of August, by Dorsenne with greatly superior forces, the Spaniards, after some sharp skirmishes, in which they were roughly handled by the French dragoons, were cut off from their magazines at Villa Franca and Lugo, and forced back into the mountains round the Valdes Oires, on the Portuguese frontier. The alarm was excessive in Galicia, and nothing saved the whole province from falling into the hands of the invaders but the advance of Wellington to the neighbourhood of Ciudad Rodrigo, which instantly checked the progress of the victorious French on the road to Lugo, and compelled Dorsenne, who had reoccupied Astorga, in which he now left an adequate garrison, to call in his detachments from all quarters to provide for the defence of that important fortress. In his retreat from Villa Franca to Astorga, the French general entirely devastated a line of country above twenty leagues in length, a barbarous measure, and as impolitic as it was cruel, as, by the admission of their own historians, it destroyed a part of the resources of their principal army (1).

Wellington's
march
to the
siege of
Ciudad
Rodrigo

Though the march of the British from the banks of the Guadiana to those of the Coa was attended with this important collateral effect in rescuing Galicia, with its valuable harbours and naval establishments, from the grasp of the enemy, yet it was not the real object which Wellington had in view. Ostensibly undertaken to remove his troops from the sands of the Guadiana, so well known in the autumnal months to be fraught with death, to a more healthy region, he hoped to realize from it not only increased healthiness to his ranks, but additional security to the realm entrusted to his defence. It was on Ciudad Rodrigo that his heart was fixed, and the dispersed situation of the French armies charged with its defence, joined to the defective state of the supplies with which the garrison was furnished, inspired him with a well-grounded hope, that, by a sudden attack, it might be wrested from their hands. With this view he had, with all imaginable secrecy, prepared a powerful battering train of iron guns at Lisbon, which, with a reinforcement of British artillerymen, recently arrived from England, were ostentatiously embarked at that harbour as if for Cadiz, but at sea they were shifted on board small craft, which brought them first to Oporto and then to Lamego, a hundred miles from the sea-coast, near the Douro, which being one of the great depots of the army, the arrival of the carts containing them excited little attention. The operation, however, of bringing sixty-eight heavy guns, with all their stores complete, up sixty miles of water-carriage, and then across nearly forty more of rough mountain roads, was one of no ordinary magnitude, five thousand bullocks and a thousand militia were employed in transporting the train, and repairing the roads for several weeks together, and nothing but the universal and indelible hatred

(1) *Tor* iv. 245, 249. *Nap.* iv. 224, 226. *Belm.* i. 196, 197. *Vict.*

which the cruelty and exactions of the French in that part of Spain had excited, could have prevented the transport of this great armament from coming to their knowledge. As it was, however, they remained entirely ignorant of what was going forward; the guns, by vast exertions, arrived safe at the place of their destination, and Wellington had the satisfaction of thinking that, unknown to the enemy, he had secured a powerful battering train within little more than sixty miles of Ciudad Rodrigo (1)

Grounds of hope for a successful enterprise against that fortress.

The enterprise thus undertaken by Wellington was equally bold in conception, and cautiously provided for in execution. The battering train was brought forward, still unknown to the enemy, to Villa de Ponte, only sixteen leagues in rear of the army, Don Julian Sanchez with his guerillas, had for some time past established a blockade of the fortress; while the Allied army remained in healthy cantonments on the high grounds around Fuento Guinaldo, almost within sight of its walls, ready at a moment's notice either to commence a siege, or move forward to protect the blockade. The fortress, it was known, had only provisions for six weeks; and though the French armies of Dorsenne, Marmont, and Soult could, by concentrating, bring ninety thousand men, or nearly double his own force, to its relief, yet the hopes of Wellington were founded upon the experienced impossibility of such a force being able, from want of provisions, to keep any time together; and though they might relieve it at a particular moment, he trusted that the time would ere long arrive when he might strike a successful blow during the time that they were still at a distance. The army was now greatly improved in health, in the highest spirits, and in admirable order the reinforcements recently arrived from England had raised its numerical amount to forty-eight thousand infantry, five thousand cavalry, and seventy two guns, besides the battering train of this array, about forty-five thousand were under Wellington's own command, while the water-carriage in their rear enabled them constantly to keep together; and their central position went far, in the long run, to counterbalance the great superiority of force, which, by concentrating all their armies, the enemy might bring to bear against him (2)

Project of Napoleon for invading the Alentejo by Soult and Marmont.

This concentration of the Allied force in a position which constantly menaced Ciudad Rodrigo, was attended with this farther and most important advantage, that it entirely disconcerted a deep project which Napoleon had conceived at this period, and which Soult had warmly espoused, and was preparing in the south the means of carrying into execution—viz, of invading Portugal with the combined armies of Marmont and the south, and transferring the seat of war into the Alentejo. This design, which was unquestionably the true mode of attacking Portugal, as it led by the shortest road to Lisbon, and took the famous defences of Torres Vedras in rear, is to be found fully developed in a despatch by the French emperor to Marmont, of date 18th September 1811. That marshal's force, which was estimated as likely then to amount to forty-one thousand men, was to be joined by several divisions of Soult's forces, of whom twenty thousand were still in Extremadura and with the united force, above sixty-five thousand men, he was to besiege Elvas, and inundate the Alentejo. If Wellington, as a set-off against this irruption, moved against Salamanca and the army of the north, Dorsenne was to fall back to Valladolid, or even Burgos, where fifty thousand men would be assembled to stop his progress; if, as was

(1) Wellington to Lord Liverpool, July 18, 1811. *Quar. viii. 111. Nap. iv. 222, 224. Jones, ii. 28, 31.*

(2) Wellington to Lord Liverpool, July 18, 1811. *Quar. viii. 111, 112. Jones, id. 28, 30. Nap. iv. 219, 221.*

deemed more probable, the English drew towards Lisbon, and descended the valley of the Tagus, Dorsenne was to follow them with twenty-five thousand men, and in either case Elvas, it was expected, would fall, and the French armies be placed in cantonments in the Alentejo about the same time that Suchet made himself master of Valencia. This well-conceived design, which perfectly coincided with what Soult had long been contemplating, was entirely based on the supposition that "The English had no heavy artillery for the siege of Ciudad Rodrigo, for if that enterprise is once undertaken, you must march at once to its relief,"—a striking proof of the important effects consequent on the admirable stratagem by which the English general had already secured that vital arm within a few days' march of the menaced fortress (1).

Wellington turns the siege into a blockade, and French approach to raise the siege.

Wellington, in the first instance, intended to have besieged Ciudad Rodrigo, as he conceived himself sufficiently strong to undertake that enterprise in the face of Marmont, and the succour of ten thousand men, which could alone, he conceived, be detached from the army of the north to its relief, and under this impression the preparations for the attack went on with great activity. He had not been many days, however, engaged in this undertaking, when he learned that nearly five-and-twenty thousand admirable troops were disposable around Dorsenne's standards. Upon this he changed his plan for the time to a blockade, and advanced his cavalry so as to straiten the fortress, while Almeida, in the rear, was put into a respectable posture of defence, in order to form a secure place of deposit for the battering train, still at Villa de Ponte, in case of disaster. No sooner did the French generals receive intelligence of the danger with which the fortress was threatened, than they assembled their forces, and collected supplies for its relief. Dorsenne, with infinite difficulty, and by the most rigorous exactions, got together nine hundred waggons laden with provisions for that purpose, and bringing down the divisions Vaendermaison and Souham from Navarre, put himself at the head of above thirty thousand soldiers to cover their entry. Marmont, at the same time, who had been strongly reinforced, and had now fifty thousand effective men around his eagles, in the valley of the Tagus, also collected a large convoy at Bejar, and advanced with a like body to form a junction with the army of the north. Their united forces, above sixty thousand strong, of whom six thousand were cavalry, with a hundred pieces of cannon, united at Tamames, on the 21st September, and immediately advanced towards Ciudad Rodrigo, where Wellington, expecting their approach, had assembled all the forces, forty-five thousand strong, under his immediate command, to watch, and if possible prevent, their entrance (2).

Approach of the two armies to Ciudad Rodrigo, which is re-victualled.

Every man in both armies conceived that the decisive moment had now arrived, and that a pitched battle between these gallant antagonist hosts was now to determine the fate of the Peninsula. But the crisis passed over without any momentous occurrence. the hour of Spain's deliverance had not yet struck. Wellington was too sagacious to trust to doubtful hazard what he felt confident he would ere long accomplish by skill. Though with the noble army at his command he had no reason to dread a battle even against the superior forces of the French marshal, yet there were many reasons which rendered it inexpedient at this time to incur the hazard an engagement on such a scale would necessarily occa-

(1) Napoléon to Marmont, Sept 18, 1811. Belin.

(2) Wellington to
1811 Nap iv 220,

sion even with the best troops. The position which he held in presence of Rodrigo was extensive, and therefore weak: the height of El Bodon in its centre, which was in front of the whole, was indeed strong, and Fuente Guinaldo had been improved by field works but the wings, which occupied a great extent of country, were in the plain, where the enemy's great superiority in cavalry gave him a decided advantage; and the position, with the right wing alone across the Agueda, and the centre and left behind that river, was dangerous from the high banks which lined its sides, and the sudden floods to which in autumn it was subject. The English general, too, was well aware that want of provisions must soon compel the vast array in his front to separate and return to their distant cantonments, and then he meditated a sudden attack with the heavy artillery, which, without their being aware of it, he had at hand. Still Wellington resolved to fight, if he could do so on terms at all approaching to equality; and for this purpose, without attempting to prevent the passage of the convoys, which entered on the 24th, he kept his troops on their ground, though with some hazard to the right wing, advanced beyond the river in order to compel the enemy to concentrate and show all his force, to protect that operation (1).

Combat of
El Bodon
Sept. 24.

When the French army approached the British, it was at first uncertain on which point they would direct their attack but, after some hesitation, Monbrun, with fourteen battalions and thirty-five squadrons of splendid horsemen, crossed the Agueda by the bridge of Rodrigo and adjacent fords, and, pouring rapidly along the road, soon reached the heights of El Bodon. The British, at this point of their position, were not prepared for so sudden an onset; and while Wellington sent to Guinaldo for a brigade of the 4th division, Major-General Colville, the officer in command was directed to draw up his little force, consisting of the 5th and 77th British regiments, and 21st Portuguese, with eight Portuguese guns and five squadrons of Alten's German dragoons, on the summit of the height, which was convex, towards the enemy, and secured on either flank by deep and rugged ravines. Though Picton, with the 4th division, made all imaginable haste to reach the scene of danger, the crisis had passed before he got up. On came Monbrun's cuirassiers like a whirlwind in spite of the severe cannonade, which tore their masses in a fearful manner, and dividing into two bodies when they reached the front of the hill, rode up the rugged sides of the ravines with the utmost fury, and were only checked by the steady fire of the guns and devoted intrepidity of the German horsemen at the summit, who, for three mortal hours, charged the heads of the squadrons as they ascended, and hurled them not less than twenty times, men and horses rolling over each other, back into the hollows. Monbrun, however, was resolute. His cavalry were numerous and daring; and by repeated charges and extreme gallantry, they at length got a footing on the top, and captured two of the guns cutting down the brave Portuguese at their pieces but the 5th regiment instantly rushed forward, though in line, into the midst of the horsemen, and retook their guns, which quickly renewed their fire and at the same time the 77th and 21st Portuguese forced the horsemen down the steep on the other side. But though this phalanx of heroes thus made good their post, the advance of the enemy rendered it no longer tenable. A French division was rapidly approaching the only road by which they could rejoin the remainder of the centre at Fuente Guinaldo and, despite all the peril of the movement, Wel-

(1) Wellington to Lord Liverpool. Sept. 22. 1811. *Quar.* viii. 304, 301. *Rep.* iv. 236, 238.

Wellington ordered them to descend the hill and cross the plain, six miles broad, to Fuente Guinaldo (1).

If the observations of Plutarch be just, that it is not those actions which lead to the greatest results, so much as those in which the greatest heroism or magnanimity is displayed which are the most important subjects of history, never was a combat more deserving of remembrance than this extraordinary action. Descending from his rugged post into the plain, the dauntless Colville formed his infantry into two squares, and the German dragoons, altogether unable to withstand the enormous mass of the French cavalry in the open plain, being obliged to take shelter behind the Portuguese regiment which was first in retreat, the foot soldiers in the rear, consisting of the 5th and 77th, denuded on all sides, were instantly enveloped by a whirlwind of horse. The thundering squadrons, with their scabbards clattering against each other, rending the air with their cries, shaking the ground beneath their feet, charged with apparently resistless force on three sides of the steady square, but vain, even in the bravest hands, is the sabre against the bayonet if equally firmly held. A rolling volley is heard, spreading out like a fan around the mass, the steeds recoil as from the edge of a glowing crater, in an instant the horsemen, scorched, reeling, and dismayed, are scattered on all sides as by the explosion of a volcano; "the glitter of bayonets is seen on the edge of the smoke, and the British regiments, unscathed, came forth like the holy men from the Assyrian furnace (2) "

Before the French could recover from this bloody repulse, Picton, who had used the utmost diligence to reach his comrades, joined the retreating squares, and the whole uniting together, retreated in admirable order for six miles over the arid plain, till they reached the position of Fuente Guinaldo, assigned for the general rendezvous in the rear. During this march was exhibited, in the most striking manner, the extraordinary steadiness which discipline and experience had given to each of the rival bodies. The British moved in close order with their flanks to the enemy, who, in great strength, rode on each side within pistol-shot. With eager glance the officers and men of both armies, during this long and anxious march, eyed each other, watching for any incident or momentary confusion which might afford an opportunity for an attack, but none such occurred, and the British reached their destination without being again charged or molested, save by the firing of six pieces of horse-artillery which hung on the rear of their column, and poured in an incessant fire of round shot, grape, and canister (3). Wellington now gave orders for concentrating his troops around Fuente Guinaldo. The light

(1) Wellington to Lord Liverpool Sept. 29, 1811 *Gurw* viii 301, 302 *Nap* iv 239, 240 *Vict. et Conq* xx 273 *Lond* ii 211 *Beamish Germ Leg* ii 15.

NAPLES, iv 210, has the chief merit of this glowing description.

(3) "Picton, during this retreat, conducted himself with his accustomed coolness. He remained on the left flank of the column, and repeatedly cautioned the different battalions to mind the quarter-distance and the telling off. 'Your safety,' said he, 'my credit, and the honour of the army, are at stake. All rests with you at this moment.' We had receded to within a mile of the intrenched camp, when Montbrun, impatient lest we should escape from his grasp, ordered his troopers to bring up

their left shoulders, and incline towards our columns. The movement was not exactly bringing his squadron into line, but it was the next thing to it, and at this time they were within half pistol shot of us. Picton took off his hat, and holding it over his eyes as a shade from the sun, looked sternly but anxiously at the French. The clatter of the horses, and the clanking of the scabbards was so great when the right half squadron moved up, that many thought it was the forerunner of a general charge, and some of the mounted officers called out, 'If it did not better form square?' 'No,' replied Picton; 'it is but a ruse to frighten us, but it won't do.' And so in effect it proved. Each battalion in its turn formed the rearguard to stop the advance of the enemy, and having given them a volley, they fell back at double quick time behind the battalion formed in their rear."—*Reminiscences of a Subaltern*, p 132, and *Picton's Memoirs*, ii, 37, 39.

division was directed to retire across the Aguada and join the line, and the left, under Graham, to come up from the Izaza but Craufurd, who commanded the former, eager for fighting, only came a few miles nearer, and was still sixteen miles off Graham was twelve, and at nightfall only fifteen thousand men were collected in front of the French army, when a general battle was confidently expected by both parties (1)

Immense
danger of
the British
army at
Fuentes
Gualdo.

Marmont had now gained a great advantage over the English general, but he was ignorant of the inestimable prize which was almost within his grasp. On the morning of the 28th he had collected his whole army, sixty thousand strong, with one hundred and twenty guns, within cannon-shot of the British centre. Wellington's position was now most critical; for, as neither his right nor left wing had come up, he had not more than fifteen thousand men at his disposal to resist the overwhelming force of the enemy and retreat he would not, for that would be to abandon Craufurd and the light division to destruction. He accordingly stood firm, and the troops anxiously gazed on the enemy, expecting a decisive battle. The array which Marmont drew forth was indeed splendid, and calculated to inspire the most elevated ideas of the power of the French empire. The enormous mass of cavalry, seven thousand strong, whose gallantry the Allies had felt on the preceding day, stood in compact array before them, next came different bodies of infantry and artillery, above twenty-five thousand strong, who went through various evolutions with extraordinary precision: at noon twelve battalions of the imperial guard stood forth in close column, and by their martial air, admirable array, and bloody overhanging plumes, attracted universal attention. During the whole day, horse, foot, and cannon never ceased to pour into the French camp, and every thing was made ready for an attack the next day on the British position. But Shakspeare's tide in the affairs of men, was never more strikingly exemplified than on this occasion. While Marmont, in the vain confidence of irresistible strength, was thus making a useless display of his forces when Wellington, with three divisions only, lay before him, the precious hours, never to be recalled, passed away; reinforcements came rapidly in to the English line, at three o'clock the light division came up and the object for which the position of Fuentes Gualdo had been held being now accomplished, a retreat was by the English general ordered in the night to a new position much stronger, because narrower than the former in the rear, where the Allied army was now concentrated between the Coa and the sources of the Aguada and the plumes of the imperial guard were not again seen by the British army till they waved over the fall of the empire on the field of Waterloo (2).

Both Armies
go into re-
treat.

The British right wing retired by two roads on Albergaria and Aldea del Ponte, while the left fell back to Bismula; and with such regularity was the retreat conducted, that not only no sick or stragglers but not even an article of baggage, was left behind. By a strange coincidence, but of which a more memorable instance occurred afterwards in the Moscow retreat, the French army at the same moment was also retiring; and for some hours these two gallant hosts were literally marching with their backs to each other! As soon as the British retreat was discovered, the French wheeled

(1) Kap. iv. 211. 212. Lond. ii. 214. 215. Wellington! Lond. Liverpool, Sept. 29, 1811. Carrv. iii. 382.

(2) Kap. i. 211. 212. Lond. ii. 216. 217. Roemish, ii. 18. Carrv. viii. 383, 384.

"When Marmont next day was informed of the slender amount of force which lay before him at Fuentes Gualdo on the 28th, and that the light division had not come up, he exclaimed—'And, Wellington, thy star too is bright!'—Kap. iv. 216.

about and moved back in pursuit, but, before they could come up with the
 Sept 27 English army, the new ground was taken. A sharp action ensued
 at Aldea del Ponte, where a French column attacked a brigade of the 4th divi-
 sion, but was quickly repulsed, and the British, assuming the offensive,
 drove the enemy out of the village, which was held till the whole army had
 reached its destined ground, when the French again returned, and it was
 Sept. 28 evacuated with some loss. On the 28th, Wellington retired a league
 farther, to a very strong and narrow position in front of the Coa, where he
 meant to give battle, even with all the risk of fighting with a river edged by
 rocky banks in his rear. As it was, however, neither the strength nor the
 danger of the position was put to the test. Marmont, who was already severely
 pinched for provisions, retired towards Ciudad Rodrigo the same day, and
 shortly after passed the Puerto de Banos, and resumed his old quarters on
 the banks of the Tagus, while Dorsenne retreated to Salamanca and the
 Douro, and Wellington put his troops into cantonments on both banks of the
 Coa, the blockade of Ciudad Rodrigo being resumed by Don Julian Sanchez
 and the British light cavalry (1)

Courtesy shown on both sides during these operations. In these brilliant actions the Allies sustained a loss of about three
 hundred men, that of the French was more than double, this num-
 ber, owing to the rapidity and precision of the fire of the infantry
 on their dense squadrons at El Bodon, and on the retreat to Gualdo. The
 most heroic yet generous spirit animated both armies, of which an interesting
 instance occurred in one of the cavalry encounters. A French officer was in
 the act of striking at the brave Captain Felton Harvey of the 14th dragoons,
 when, seeing he had only one arm, he quickly let his sword fall to a salute,
 and passed on. Major Gordon (2), who had been sent by Wellington with a
 flag of truce to Marmont's headquarters, was hospitably received by the
 French marshal, with whom he frequently dined, and often accompanied on
 his rides round the outposts, on which occasions the prospects of the cam-
 paign and the qualities of the troops on both sides were freely discussed, and
 Oct. 15 General Regnaud, governor of Ciudad Rodrigo, having fallen soon
 after into an ambuscade laid by the indefatigable Don Julian Sanchez, and
 been made prisoner, he became a frequent guest at Wellington's table, where
 he occasioned no small entertainment by the numerous anecdotes he related
 of the French generals and armies. Such is war between brave nations, by
 whom all feelings of hostility are invariably laid aside, and glide into those
 of peculiar courtesy, the moment the individual ceases to act in the hostile
 ranks (3)

Re-occupa- tion of Asturias by Bonnet, and concentra- tion of French forces at Valladolid and Burgos. The Allied army, which had been unhealthy during the whole
 campaign, became doubly so when the troops went into canton-
 ments, and they had not been at rest a fortnight before the sick
 had augmented to above seventeen thousand, the usual effect of the
 sudden cessation of active operations on men whose bilious secre-
 tions had been greatly increased by the long continuance of fatigue
 in warm weather, and which, now no longer exhaling in perspiration, in-
 duced fevers. The French, however, were nearly as unhealthy, and the
 penury of subsistence on the Portuguese frontier rendered it absolutely im-
 possible for their generals to undertake any operation of importance. Dor-
 senne, in the north, took advantage of this intermission of active operations
 Nov 1811 on the Portuguese frontier, to push Bonnet, with a strong division,

into the Asturias, who without difficulty surmounted the passes of Cabillas and Ventana, which had been left unguarded by the enemy, and re-occupied Oviedo, Gihon, and all the principal posts in the country. This expedition, joined to the pressing necessity of subduing the insurrection in the northern provinces, and the dark clouds which were arising in the north, led, in December, to a fresh disposition of the Imperial forces. Marmont received orders to establish his headquarters at Valladolid; Dorsenne was to retire to Burgos, and occupy strongly Biscay and Navarre, while the Imperial guard was transferred to Burgos, where it was to hold itself in readiness to march into France a series of arrangements which already revealed the secret views of Napoleon for a Russian campaign (1).

This concluded the campaign of 1811, so far as the operations of the principal armies were concerned. but several important operations occurred with detached corps, which, like the red hue of the evening sky, already gave presage of the glorious dawn.

The first of these events was the surprise of Gérard's division at Aroyos de Molinos on the 28th of October.

Surprise of
Gérard at
Aroyos de
Molinos.
Oct. 28.

When Wellington concentrated his army at Fuente Guinaldo to oppose Marmont and Dorsenne, Hill was left in the northern part of Estremadura to watch Drouot, who remained opposite to him in

that country. After a variety of marches and counter marches, which led to no result, both generals having orders not to fight unless an opportunity should occur of doing so to advantage, Hill received intelligence, on the 27th October, that Gérard, with three thousand infantry and cavalry belonging to Drouot's corps, lay at Aroyos de Molinos, in such a situation as to be liable, by a sudden cross march, to a surprise from the English troops. That able officer instantly made his dispositions; by a forced march he reached Alués-car, four miles from where Gérard lay, before nightfall, and passed the early part of the night in bivouac, without permitting any light to be made, or the slightest sound to escape which might lead the French patrols to suspect their vicinity. At two in the morning he broke up, and advancing swiftly and silently, got close to the road by which he knew the enemy would march out on the following morning, yet concealed from their view by an intervening ridge. In that position they awaited the break of day, and as soon as the grey of the dawn appeared, the column divided into parts; the right, under General Howard, by a wide circuit into the rear of the town by which the French were to retreat, the left under General Stewart, directly on the town from the Alués-car road. The latter column was to attack first and it was hoped that the enemy, dislodged by a sudden attack from the town, would be completely destroyed by falling into the jaws of Howard's men on their line of retreat (2).

Total defeat
of the
French.

On this occasion the British felt the benefit of that unbounded confidence and attachment with which they had inspired the Spanish peasantry for though the whole inhabitants of Alués-car and its vicinity knew perfectly of the arrival and the object which they had in view, not a man betrayed the secret, and Stewart's columns were within gunshot of the enemy before they were aware of their approach. Favoured by a thick mist and deluge of rain, the troops entered Aroyos, with drums suddenly beating and loud cheers, so unexpectedly that the cavalry pickets were rushed upon before they had time to mount and the infantry, who were under arms,

beginning to muster, were so confounded, that, after a desultory struggle, they fled precipitately out of the town (1), leaving a great many of their number prisoners. Once outside, however, they formed two squares, and endeavoured to resist, but while a brisk firing was going on between their rear and Stewart's men pressing on in pursuit, Howard's column suddenly appeared directly in their rear on the great road to Truxillo, and no alternative remained but to surrender or break and seek safety by climbing the steep and rugged sides of the Sierra on their flank. Gérard (2), however, who was a gallant officer as well as skilful, though surprised on this occasion, for some time made a brave resistance, but seeing his guns taken by the 15th dragoons, and his hussars dispersed with great slaughter by the 9th dragoons and German hussars, he became aware that his situation was desperate, and gave the word to disperse. Instantly the squares broke, and all the men, throwing away their arms, ran as fast as their legs could carry them towards the most rugged and inaccessible part of the Sierra. Swiftly as they fled, however, the British pursued as quickly, the Highlanders, at home among the rocks and scaurs, secured prisoners at every step, the 28th and 51st followed rapidly on the footsteps of the flying mass, the 29th turned them by the Truxillo road, and Gerard himself, after displaying the greatest intrepidity, only escaped by throwing himself into rugged cliffs, where the British, encumbered with their arms, could not follow him. He joined Drouet, by devious mountain-paths, at Orellano on the 9th November, with only six hundred followers, without arms and in woful plight, the poor remains of three thousand superb troops who were around his eagles at Aroyos de Molinos, and were esteemed the best brigade in Spain. General Bron and Prince D'Aremberg, with thirteen hundred prisoners, three guns, and the whole baggage of the enemy, fell into the hands of the victors (3).

Improvement in the health of the British army in their campaigns This brilliant success, which was achieved with the loss only of twenty killed and wounded, diffused the highest satisfaction through the whole British army, and shortly after the health of the troops was materially improved, by a considerable portion of them being moved into better supplied and more comfortable quarters on the banks of the Mondego and the Douro. The sick daily diminished, the spirits of the men rose, and soon the hospitals were relieved of half their inmates. Meanwhile, Wellington took none of the rest to himself which he allowed to his troops with unwearied industry he laboured incessantly at the improvement of the transport service, which was soon put on a much more efficient footing, and the forwarding of stores and ammunition to the front, which clearly showed that Ciudad Rodrigo was ere long to be besieged. In spite of
Nov 9 all his vigilance, however, the enemy contrived to throw more than one convoy into that fortress, and in the end the blockade was almost abandoned from finding that the investing force was more straitened for provisions than the invested. Wellington, however, did not care for the introduction of these supplies, as all his efforts had long been directed to besieging the place in form, for which purpose he had already prepared, with infinite pains and secrecy, a portable bridge, which was to be thrown, for the passage of the stores, over the Agueda, and rendered the Douro navigable for boats as

(1) The 71st and 92d regiments, both Highland, led the attack in the town, and they entered with the baggage at their head playing the celebrated Jacobite air, "Hiey, Johnnie Cope are you wakin yet?" in allusion to the well known incident of that commander, in the conflict with the Highlanders under the Pretender, at Prestonpans in 1715.

far up as its junction with that river, forty miles higher than they had ever yet ascended. But ere the season for striking the meditated blow arrived, new and cheering advices had arrived, from the south of Spain (1)

French
expedition
against Tarifa,
which
falls
Oct. 4. and
Oct. 27.

Ballasteros, after his embarkation at Ayamonte, subsequent to the battle of Albuera, had landed in the south of Spain, where he had drawn several thousand recruits to his standard but being unable to withstand the powerful force which Soult directed against him, he had more than once taken refuge under the cannon of Gibraltar. Meanwhile, the English Government, desirous of alighting the war thus energetically revived in the southern extremity, dispatched a body of two thousand men, of whom five hundred were British, who took possession of Tarifa, an ancient town situated on the most southerly extremity of Spain, nearer to the African coast than even the celebrated Pillars of Hercules, and surrounded by an old wall without wet ditch or outworks. Soult, who was well aware how narrowly the besieging force at Cadix had escaped destruction from the combination which the Allies had brought to bear upon them at the time of the battle of Barossa, resolved to dislodge them from this position, and the fortifications were so extremely weak that hardly any resistance was expected. Godinot, accordingly, with eight thousand men, having driven Ballasteros under the cannon of Gibraltar, received orders to turn aside and besiege this stronghold. In the march thither, however, he was so raked in traversing the road, which ran along the sea-shore, by the broadsides of the English ships of war which hung on his flank, that, after sustaining a severe loss, he abandoned the enterprise in despair, and returned to Seville where, unable to bear the warm reproaches of Soult, who was irritated at his repeated failures, he blew out his brains (2)

Second
expedition
against Tarifa,
and
siege of
Tarifa.

Soult, who was not to be diverted from his design, with the importance of which he was now fully impressed by this failure, now prepared an expedition against Tarifa on a larger scale, and entrusted the command to a very distinguished officer, General Laval, who approached its walls at the head of seven thousand men in the middle of December, while two other divisions of three thousand each came up, one from Cadix, the other from Ronda. This formidable accumulation of force compelled Ballasteros again to take shelter in the lines of Gibraltar, and obliged Skerret, who commanded the Allied force, to await the enemy's arrival within the walls, where he had eighteen hundred British, and seven hundred Spaniards and the English engineers, with great skill, constructed interior retrenchments on the side most likely to be assailed, so as to render the assault of the wall the least difficulty which the enemy would have to encounter. The houses within the place expected to be breached were loopholed, the streets barricaded, and an old tower, which commanded the whole town, armed with heavy artillery, at once to send a storm of grape on the assailants, and secure the retreat of the garrison to their ships, which lay in the bay. These precautions, though judicious, were not, however, put to the test. Laval broke ground before the place on the 10th December; and so completely were the anticipations of the British engineers realized, that they did so exactly on the spot where they were expected, and behind which the preparations had been made. The approaches were pushed with great rapidity the battering guns, which opened their fire on the 27th, soon brought the old wall down and by the 30th the breach was sixty feet

wide and of easy ascent. But the British regiments were on the ramparts, each at its proper post, the 47th and a Spanish battalion guarded the breach, the 84th and rifles were dispersed round the walls (1)

Defeat of
the assault
and raising
of the siege
Dec 31

Little aware of the quality of the antagonists with whom they had to deal, a column of 2000 French commenced the assault at daylight on the 31st. Such, however, was the vigour of the fire kept up upon them from every part of the rampart where a musket or gun could be brought to bear on the mass, that it broke before reaching the wall, and the troops arrived at the foot of the breach in great disorder. Part tried to force their way up, part glided down the bed of a stream which flowed through the town, and a few brave men reached the bars of the portcullis which debarred entrance above the waters. But the British soldiers now sent down such a crashing volley on the throng at the iron grate, and at the foot of the breach, that they dispersed to the right and left, seeking refuge under any projecting ground from the intolerable musketry. The combat continued for some time longer, the French, with their usual gallantry, keeping up a quick irregular discharge on the walls, but the ramparts streamed forth fire with such violence, and the old tower sent such a tempest of grape through their ranks, that, after sustaining a dreadful loss, they were forced to retreat, while a shout of victory, mingled with the sound of musical instruments, passed round the walls of the town. This bloody repulse suspended for some days the operations of the besiegers, who confined themselves to a cannonade; and meanwhile the rain fell in such torrents, and sickness made such ravages in their ranks, that, according to their own admission, "the total dissolution of their army was anticipated." Laval persevered some days longer against his own judgment, in obedience to the positive injunctions of Victor, and the breach was so wide from the continued fire that a fresh assault was expected; but on the 4th he raised the siege, and retreated in dreadful weather, having first drowned his powder and buried his heavy artillery. In this expedition, one of the most disastrous to their arms which occurred in the whole Peninsular war, the French lost their whole cavalry and artillery horses, and about five hundred men by the sword, besides an equal number by sickness and starvation, while the total loss of the Allies did not exceed one hundred and fifty (2).

General
results of
this cam-
paign

The campaign of 1811, less momentous in its issue than that which preceded it, when the great struggle of Torres Vedras was brought to a conclusion, and less brilliant in its results than the one which followed, when the decisive overthrow of Salamanca loosened the foundations of French power over the whole of Spain,—was yet of most important consequences in the deliverance of the Peninsula. It is not at once that the transition is made from disaster to success. Victory is of as slow growth, if it is to be durable, to nations, as wealth to individuals. To turn the stream—to change the gales of fortune—to convert the torrent of disaster into the tide of conquest, is the real difficulty—to make the first hundred pounds, often costs more to the poor aspirant after opulence than to make the next thousand. During the campaign of Salamanca, this first hundred was made. For the first time since the British standards appeared in Spain, something approaching an equality had been attained between the contending forces. The advantages of a central position, and of water carriage in his rear, had counterbalanced the still decided superiority of number; and Wellington, with his

(1) Nap iv 330, 334 Belm iv 17, 31 Jones,

60,000 British and Portuguese soldiers, appeared on the offensive in the midst of 150,000 enemies. True, he had hitherto been foiled in his efforts: true, the siege of Badajoz had been raised—that of Ciudad Rodrigo prevented, the blood of Albuera had, to all appearance, streamed in vain; but, to the discerning eye which looked beyond the surface of things, these very disappointments were fraught with future hope. The British army had, throughout, taken the initiative and preserved the offensive. By slight demonstrations they had put in motion the enemy's forces in every part of Spain. The war, throughout, had been maintained in his territories, and all insult to the Portuguese frontier averted. These enterprises had been rendered abortive only by accumulating against the English army the whole of the disposable force in the south-west and north of Spain. The tide of conquest had been arrested, the consolidation of the French power prevented in other quarters by those repeated concentrations; the desolation of the country precluded the possibility of such large masses continuing for any length of time together; and it was easy to see that, if circumstances should enable the British Government to augment, or compel the French Emperor to diminish their respective forces in the Peninsula, the scale would ere long turn to the other side. The balance in military as well as in political affairs, generally quivers for a time before it inclines decisively to a new side.

The British government and every person here were determined to his campaign. But, what was still more important, this campaign was productive, to all concerned in the British army, of one advantage of more ultimate value than any which they had hitherto gained—a sense of their own deficiencies. This invaluable acquisition, of such tardy growth to nations as well as individuals, had been forced alike upon the army, the officers, and the Government, by its events. The soldiers saw that mere valour, though it might win a field, could hardly decide a campaign, that the loud murmur at retreat which forced on the carnage of Albuera, might be drowned in blood; and that the true soldier is he who, ready to fight to the last extremity when the occasion demands, is equally patient and docile in every other duty till that season has arrived. The officers learned that war is at once a difficult science and a practical art; that minute attention to details is indispensable to its perfection; and that the bluntness of intrenching tools, the failure of supplies, or ill-regulated sallies of valour in the field, may often mar the best concerted enterprises. The Government felt the necessity of straining every nerve to aid their zealous general in the contest: reinforcements to a large amount arrived before the close of the campaign, though, unhappily, the uniform unhealthiness of the soldiers on first landing prevented their swelling, as might have been expected, the ranks of the army, and as much specie as could possibly be drawn together, though it was but little, was forwarded for its use. By the incessant efforts of Wellington, every department, both in the British and Portuguese service, was put on a better footing during the campaign: the Government at Lisbon were at length induced to take the requisite steps to recruit the ranks which had been so fearfully thinned by the fatigues and the sickness of the Torres Vedras campaign; the engineer and commissariat service were essentially improved, and all that had been found wanting obtained from England; the transport and ordnance trains put on a much improved footing, and the military hospitals relieved of many of those evils which had hitherto been so fatal to the lives of the soldiers. Before the close of the campaign, eighty-four thousand men stood on the rolls of the Allied army, of whom fifty-six thousand were British, and twenty-eight thousand Portuguese; and though, from the extraordinary sickness of the troops, the number in the field never ex-

ceeded fifty-seven thousand, yet the prevailing epidemics rapidly diminished when the cool weather came on, and every thing announced that, before the next campaign opened, seventy thousand would be present with the standards of Wellington. Finally, the provident care of their chief had materially strengthened the interior defences of the kingdom. The lines of Torres Vedras had been augmented, new ones near Almada, on the southern bank, constructed on a gigantic scale, and such were the preparations made at Lisbon, that the English general contemplated without anxiety an event generally thought probable, and publicly announced in the French newspapers, that the Emperor himself was coming to finish the war, by a clap of thunder, on the Tagus (1)

Napoléon's real intentions at this period in regard to the war in Portugal Though this design was announced, however, it was no part of Napoleon's intention really to put himself at the head of such an armament. His secret despatches to Joseph, now in great part published by authority of the French War Office (2), contain no trace of any such design, the great reinforcements which he poured into the country in autumn were intended only to compensate the immense losses of the Torres Vedras campaign, and re-establish on a secure basis the interrupted communications in the northern provinces. Napoléon neither contemplated nor desired any thing more, at this period, than the re-establishment of the credit of his arms by the capture of Elvas, and the relief of his finances by the quartering of the army of Portugal in the hitherto untouched fields of plunder of the Alentejo (3). It was upon Russia and the north of Europe that the whole attention of the Emperor was now fixed: the war in Portugal he regarded as a useful auxiliary, which might exhaust the English resources, engross their military force, and prevent them from sending any effectual aid, either in men or money, to the decisive points on the banks of the Niemen (4).—In this view, the balanced success of the campaign of 1811, the constant predictions of the Opposition party in England, that Great Britain must finally succumb in the Peninsular struggle, and the brilliant career of Marshal Suchet in Valencia at the same period, were eminently conducive to the ultimate deliverance of Europe, by inspiring the French Emperor with the belief that all danger was now over in that quarter, or would speedily be removed by the accession of the Whigs to office on the termination of the Regency restrictions, and, consequently, that he might safely pursue the phantom of universal empire even to the edge of the Russian snows.

(3) Berthier to Marimont, Sept 18, 1811 Belm i 585, 587

(4) Napoléon's real views at this period were, with more candour than he usually exhibited on such occasions, divulged in his address to the Legislative Body on June 18, 1811—"Since 1809 the greater part of the strong places in Spain have been taken after memorable sieges and the insurgents have been beaten in a great number of pitched battles England has felt that the war is approaching a termination, and that intrigues and gold are no longer sufficient to nourish it she has found herself obliged, therefore, to alter the nature of her assis-

tance, and from an auxiliary she has become a principal. All her troops of the line have been sent to the Peninsula. English blood has at length flowed in torrents in several actions glorious to the French arms. This conflict with Carthage, which seemed as if it would be decided on fields of battle, on the ocean, or beyond the seas, will henceforth be decided on the plains of Spain. When England shall be exhausted—when she shall at last have felt the evils which, for twenty years, she has with so much cruelty poured upon the Continent, when half her families shall be in mourning, then shall a peal of thunder put an end to the affairs of the Peninsula, the destinies of her armies, and avenge Europe and Asia by finishing this second Punic war"—See *Moniteur*, 16th June 1811

CHAPTER LXIII.

FIRST INVASION OF SPAIN BY WELLINGTON JAN.—JULY 1812.

ARGUMENT

First Invasion of Spain by Wellington, January to November 1812—Vast Power and Resources of Napoleon at this period—Remarkable Prediction of Napoleon's approaching Fall at the same time—Commencement at this Period of the Fall of the French Empire—Wellington prepares to besiege Ciudad Rodrigo—Commencement of the Operations—Rapid Progress of the Siege—Aspect of both Sides before the Assault—The Third Division carry the great Breach—Storm of the lesser Breach—Illudicrous disorders consequent on the Storm—Vast Importance of this Capture—Agitation it produced among the French General—Secret Preparations made against Badajoz—Movement of the British Army towards that Fortress—Preparations for the Siege—Its Commencement—Storming of Picurina—Plan of Attack of the Fortress itself—Philippon's Preparations of Defence—Unsuccessful Assault of the great Breaches—Terrific struggle at their Base—The castle is assaulted by Picton—The town is at length carried—Walker's Division also gets in by Escalade—Wellington's Conduct during the Assault—Magnitude and Importance of this Conquest—Soult advances from Andalusia, and retreats to it—Marmont's Irruption into Beira—Wellington moves to the Aguada—His efforts in his Cantonnements to supply the fortresses taken—Napoleon's anger at the Fall of Badajoz—Incorporation of Catalonia with the French Empire—Reduction in the French Force in the Peninsula—Spirit and Character of the Allied Army at this period—Description of the French Forts at the Bridge of Almaraz—III's Preparations for their Attack—Storming of the Forts—Murabete is saved by a False Alarm, and III returns to Badajoz—Defeat of Ballasteros in Andalusia—Defensive Measures taken in Estremadura—Wellington's Preparations for the Invasion of Spain—Soult's Plans at this period—Forces of the French in Spain—Advance of Wellington to Salamanca—Siege of the Forts there—Marmont's ineffectual Attempt to raise the Siege—Capture of the Forts—Marmont retires behind the Dooro—His able Movements, and Wellington's Retreat—Wellington's Difficulties from the Slowness of the Spaniards—And Lord William Bentinck's Failure in the projected Co-operation—Wellington Retreats across the Guarena—Repulse of a Cavalry Attack at Castille—Movements on both Sides during the Retreat to San Christoval—The British retreat to the Neighbourhood of Salamanca—Critical Situation of the English Army—Movements of both Armies immediately before the Battle—False Movement of the French left—Wellington's dispositions of Attack—French Dispositions and Commencement of the Battle—Progress of the Action, and Wound of Marmont—Total Defeat of the French left under Thomieres—Splendid Charge of the British Cavalry on Vay's division—Repulse of the British at the Centre, and of the French at Arapelles—Wellington and Beresford restore the Battle in the Centre—Last Stand and final defeat of the French—Wellington pursues in the wrong Direction—Results of the Battle—Drilliant Charge of the German Dragoons on the French Rearguard—Rapid Retreat of the French to Valladolid—Retreat of Joseph towards Madrid, and Action at Majadahonda—Consternation which prevailed in that Capital—Entry of the English into Madrid and enthusiastic Joy which prevailed—Measures—Attack on and Reduction of the Retiro—Great amount of Warlike Stores found there—And Importance of the Central Position which the English had now acquired in Spain—Able Views of Senii at this period for the Re-establishment of Affairs—Refusal of Sachet to send any Succour to Joseph—Operations of III and Dromet in Estremadura and La Mancha—Wellington moves to the North to press upon Clausel—The French retire to Burgos—Description of the Castle there and the French works around it—Commencement of the Siege and Storming of the Hornwork of Saint-Michael—Repeated unsuccessful Assaults—Storming of the Outer Intrenchments—Increasing Difficulties of the Besiegers from the want of Artillery—Wellington's resolution to retire, and Causes of the Failure of the Attack—Operations of III in the Centre of Spain—He evacuates Madrid, and retreats towards Salamanca—Increasing Difficulties of Wellington's Retreat—Junction of his army and III's—Junction of Soult and Clausel's Force—Wellington offers Battle which is refused—He retreats to Ciudad Rodrigo—Extraordinary Hardships and Losses of that Retreat—The army is put into Winter Quarters—Acclamations Address of Wellington to his Officers—Its effect on the troops—Operations in the South and East of Spain—Landing of the British Force at Alicante—Battle

of Castello, and Defeat of Suchet—Want of Vigour with which this Success was followed up by the British General—Operations in Catalonia during the Campaign, and in Asturias and Biscay—General Result of the Campaign—Its vast Effect in loosening the French Power in the Peninsula—Wellington's great Merits in the Conduct of it—Immense advantages gained by the Allies—Reaction upon themselves of the French mode of making war

The close of the year 1811 and commencement of 1812, witnessed the elevation of the power of Napoleon to its highest point, and such was the magnitude of the forces then at his disposal, and the paralysis which had seized the minds of men from the unbroken career of his success, that his empire appeared established on a foundation which could never be shaken. Every continental state had successively attempted to combat it, and every one had been overthrown in the struggle. The alliance of Russia and Austria in 1805, of Russia and Prussia in 1806, of Spain and Austria in 1809, had been alike unable to restrain the rapid and portentous growth of his power. From pacific repose he rose up, like a giant refreshed by sleep, more formidable in numbers and organization than when the last strife terminated; from warlike struggles he emerged conquering and to conquer. It was hard to say whether his power had risen more rapidly in peace or in war, it was difficult to see what limit could be imposed to the growth of an empire to which the former brought only an increase of hostile preparations, the latter, an enlargement of pacific resources. The systematic exertions of military monarchies, the tumultuous array of popular enthusiasm, had been alike overthrown in the strife. Little could be hoped from the former, when the heroism of Aspern had failed, nothing expected from the latter, when the devotion of Saragossa had been subdued. The hopes awakened by the retreat from Torres Vedras had been chilled by subsequent disasters, the subjugation of the east of Spain seemed to presage the speedy concentration of an overwhelming force against the battalions of Wellington in the west, and if he succumbed, nothing remained, from the shores of the Vistula to the Pillars of Hercules, capable of combating the French power, or resisting the Imperial will. A general despair, in consequence, seized upon the public mind over all Europe. Even the bravest hearts hesitated as to the ultimate issue of a contest in which former continental effort had terminated only in disaster; and many ages of military servitude were regarded by the strongest heads as the inevitable destiny of Europe, to be overthrown, perhaps, at last only by a fresh deluge of northern barbarians (1).

It was at this dark and mournful period, that a member of the Church of England thus addressed a British congregation "There is a limit, my bre-

(1) "These cursed, double cursed news, have sunk my spirits so much, that I am almost at disbelieving a providence. God forgive me! But I think some evil demon has been permitted in the shape of this tyrannical monster, whom God has sent on the nations visited in his anger. The Spaniards may have Roman pride, but they want Roman talent to support it, and in short, unless God in his mercy should raise up amongst them one of those extraordinary geniuses, who seem created for the emergencies of an oppressed people, I confess I see no hope. The spring tide may, for aught I know, break upon us in the next session of Parliament. There is an evil fate upon us in all we do at home or abroad."—SIR WALTER SCOTT to ELLIS 13th December 1808, and September 14, 1809.—LOCKHART'S *Life of Scott*, ii 225, 227, 253

To the same purpose, Sir James Mackintosh said, at this period, writing to Gentz at Vienna—"I believe, like you, in a resurrection, because I believe

in the immortality of civilisation, but when, and by whom, in what form, are questions which I have not the sagacity to answer, and on which it would be boldness to hazard a conjecture. A dark and stormy night, a black series of ages, may be prepared for our posterity before the dawn that opens Dec 24, 1806 the more perfect day. Who can tell how long that fearful night may be before the dawn of a brighter morrow? The race of man may reach the promised land, but there is no assurance that the present generation will not perish in the wilderness. The mischief has become too intricate to be unravelled in our day. An evil greater than despotism, even in its worst and most hideous form, approaches—a monarchy hideously universal seems about to be established."—MACKINTOSH to GENTZ, 24th December 1806, and to WILLIAM OGBURN, Esq., 24th February 1808.—*Memoirs of MACKINTOSH*, i 307 and 383

children, to human suffering; there is an hour in oppression when resolution springs from despair. There are bounds in the moral as well as the material system to the dominion of evil: there are limits to the injustice of nations as well as the guilt of individuals. There is a time, when cunning ceases to delude and hypocrisy to deceive; when power ceases to overawe, and oppression will no longer be borne. To that hour, to that avenging hour, Time and Nature are approaching. The cup of bitterness is full, and there is a drop which will make it overflow. Unmarked as it may be amidst the blaze of military glory, the dread hand is yet writing on the wall the sentence of its doom. The hour is steadily approaching when evil will be overcome with good, and when the life-blood of an injured world will collect at the heart, and by one convulsive effort throw off the load that has oppressed it. It is impossible that the oppressed can longer bemoan the approach of a power which comes only to load them with heavier chains: it is impossible that the nations of Europe, cradled in civilisation and baptised into the liberty of the children of God, can long continue to bend their freeborn heads before the feet of foreign domination—or that they can suffer the stream of knowledge which has so long animated their soil, to terminate at last in the deep stagnation of military despotism. Even the oppressor bleeds in the hour that he triumphs: his people are goaded to exertions which they loathe: his laurels are wet with the tears of those who have been bereaved of their children. For years, our attention has been fixed on that great and guilty country which has been fertile in nothing but revolution; and from which, amidst the clouds that cover it, we have seen that dark and shapeless form arise, which, like the visions that appalled the king of Babylon, 'hath its legs of iron and its arms of brass.' Yet, while our eye strains to measure its dimensions, and our ear shrinks at the threatening of its voice, let us survey it with the searching eye of the prophet, and we shall see that its feet are of 'base and perishable clay.' Amidst all the terrors of its brightness, it has no foundation in the moral stability of justice. It is irradiated by no beam from Heaven; it is blessed by no prayer of man; it is worshipped with no gratitude by the patriot heart. It may remain for the time that is appointed it, but the awful hour is on the wing when the universe will resound with its fall: and the same sun which now measures out with reluctance the length of its impious reign, will one day pour his undecaying beams amid its ruins, and bring forth from the earth which it has overshadowed the promises of a greater spring (1).—That ultimate triumph of virtue over oppression, which the foresight of the statesman could not venture to anticipate, and the courage of the soldier hardly dared to expect, was clearly foreseen, and confidently announced, at the darkest period of the struggle, by the undoubting voice of religious faith. The philosopher may admire the moral grandeur of the sentiments conveyed in these eloquent words; the historian may mark the exact accomplishment which the prediction they contained was so soon to receive, and its singular felicity at the moment it was uttered: but the author trusts he will be forgiven if he feels a yet deeper interest in the voice of a revered parent—now issuing from the tomb—and gives vent to an expression of thankfulness, that he has been permitted to follow out, in the narrative of this mighty convulsion, those principles on the moral government of the world which were invariably maintained and publicly expressed by his father, during the whole of its continuance.

(1) First Sermon, February 28, 1811, and Feb. 1846, by the Rev. Archibald Alison, Prebendary of Sarum, etc. Sermons, Vol. I. 272 and 468; 6th edition.

Commence-
ment at
this period
of the fall
of the
French
empire

The subsequent chapters of this history contain nothing but the accomplishment of this prediction. The universe did indeed resound with the fall of the awful form which had overshadowed it, and the English historian may well feel a pride at the part which his country took in this immortal deliverance. The British army was the vanguard which broke the spell which had so long entranced mankind. It was from the rocks of Torres Vedras that the French arms first permanently receded. It was on the plains of Castile that the first mortal strokes to their empire were delivered. Before the Niemen had been crossed, the rivulet of the Albuera had run red with Gallic blood, before Smolensko had fallen, Badajoz had yielded to the resistless assault of the English soldiery. It was in the triumphs of Salamanca that the Russians sought the long-wished-for omen of ultimate victory, in the recovery of Madrid that they beheld, amidst the flames of Moscow, the presage of their own deliverance (1). The first to open the career of freedom to the world, England was also the last to recede from the conflict. The same standards which had waved over its earliest triumphs, were seen above the reserve on whom the final throes of the struggle depended. Vain would have been the snows of Russia and the conquest of Leipsic, vain the passage of the Rhine and the capture of Paris, if British valour had not for ever stopped the renewed career of victory on the field of Waterloo (2). And mark the extraordinary coincidence between the termination of revolutionary triumph and the commencement of righteous retribution. Both occurred at the same moment, it would seem as if a distinct line had been drawn by Omnipotence, beyond which victory should not fan the banners of guilt on the one side, nor disaster sink the spirit of virtue on the other,

"Fond impious man, think'st thou you sanguine cloud,
Raised by thy breath, hath quenched the orb of day?
To-morrow he repairs the golden flood,
And warms the nations with redoubled ray."

On the 8th January 1812, the long series of revolutionary triumphs terminated with the fall of Valencia, and the NEXT DAY Wellington led his army across the Agüeda, and commenced the career of victory which never paused till the oppressor was hurled from his throne, and the British standards waved in triumph on the walls of Paris (3).

Rodrigo
Jan 1812

Wellington no sooner perceived, from the dispersion of the armies of Portugal and the north, in wide cantonments on the upper Tagus and the Douro, in December 1811, that Ciudad Rodrigo was abandoned to its own resources, than he judged that the favourable opportunity, so long watched for, of attacking that fortress with some chance of success, had arrived. His army, indeed, was still unhealthy, nearly twenty thousand were yet in hospital, for though large reinforcements had arrived from England, yet the new regiments, in great part affected by the Walcheren fever, were far more liable to sickness than the old soldiers, the pay was three months in arrear, supplies were still got up with difficulty, and the new clothing for the troops had not yet arrived. But in all these respects he was well aware the enemy's armies were in a still worse condition, while the

(2) "If the English army," said Napoleon, "had been defeated at Waterloo, what would have awaited all the Russians, Austrians, or Prussians who were crowding to the Rhine, and the Pyrenees?"—*Наполеон, Мемуары*, 203

(3) This is strictly true, in advance in Russia was

new positions assigned to, and now taken by them, in conformity with the orders of the French Emperor, issued in November, had removed them to such a distance as rendered it doubtful whether, especially at that inclement season, any adequate force could be assembled for its relief. Bonnet was in the Asturias; Montbrun at Alicante and the bulk of the army of the north, now charged with the defence of Ciudad Rodrigo, in cantonments on the Douro. The better, however, to conceal his real designs, Wellington, in the close of 1811, caused Hill to assume the offensive in Estremadura and this was done with success by that enterprising officer, whose slightest movements were watched with the utmost anxiety since the blow of Aroyos Molinos, that Dec. 26. 1811 (they abandoned Merida and Almendralizo, and concentrated their forces towards Merida, while the English advanced posts occupied the latter town on the 2d of January, and spread themselves out in the neighbourhood of Badajoz. Such was the impression produced by this irruption into the French quarters, that Soult, conceiving Badajoz to be threatened, gave orders for assembling his forces through the whole of Andalusia, at the very moment that Wellington, having concealed his designs till the instant of their execution, was making his troops prepare fascines and gabions in their respective villages, and laying down the portable bridge over the Agueda for the siege of Ciudad Rodrigo (1).

Commence-
ment of the
siege.
Jan. 9.

All things being in readiness, the bridge was fixed on the 6th, but a heavy fall of snow prevented the troops from moving till the 8th as if to mark the termination of Napoleon's long career of conquest, by the surrender of Valencia, coincide exactly with the commencement of his fall, by the English attack on Ciudad Rodrigo. The light division only crossed on that day, and immediately formed the investment of the fortress, in the evening an advanced redoubt, situated on the great Teson, was carried by Jan. 12. assault the first parallel was established on the day following; Jan. 14. and a few days after, the convent of Santa Cruz was stormed. The garrison, alarmed at the progress of the besiegers, now made a vigorous sortie, and did considerable mischief to the head of the sap before they were repulsed; but the progress of the works was not seriously interrupted by this effort. On the same afternoon the batteries opened; and at night the fortified convent of San Francisco, which flanked the right of the trenches, was carried by a gallant escalade of the 40th regiment. At half past four in the evening, just as darkness set in, the breaching batteries opened, and thirty heavy guns sent forth their crashing fire against the walls. "Then was beheld a spectacle at once fearful and sublime. The enemy replied to the assailants fire with more than fifty pieces the bellowing of eighty large guns shook the ground far and wide; the smoke rested in heavy volumes upon the battlements of the place, or curled in light wreaths about the numerous spires; the shells, blazing through the air, seemed fiery serpents leaping from the darkness; the walls crashed to the stroke of the bullet, and the distant mountains returning the sound, appeared to moan over the falling city (2)." On the three following days the fire continued with great vigour on both sides the wall came down in huge masses, and though the besiegers were exposed to a most destructive cannonade, and the head of the trenches wellnigh stifled by the storm of grape and shells, eleven thousand of

—*Conquest* of 25.

which were discharged by the enemy, yet the progress of the ruin was very evident, and by reserving all their fire for the ramparts, and not discharging a shot at the defences, the *faussebraye* was beaten down, and two large breaches were declared practicable in the rampart on the morning of the 19th. The nearest batteries were still above two hundred yards distant, and not one of the parapets was injured, circumstances which augmented greatly the difficulties of carrying the place by storm; but Wellington was, for many reasons, eager for the assault, for the prize to be gained by its capture was immense, and every day added to the danger of the fortress being relieved from without. The whole siege equipage and stores of the army of Portugal were deposited in the place, and the French had no other nearer than Madrid, its capture would render any attack on Almeida or the lines of Torres Vedras impossible for a very long period, the enemy's credit would suffer by the capture of so important a stronghold under the eye of two armies, each as strong as that of the besiegers, and the British would acquire by its reduction both a frontier fortress of approved strength, and a basis for future offensive operations of inestimable importance. Marmont, too, was collecting his troops and approaching; it was known that by the 28th or 29th he would be at Salamanca, only four marches distant, with forty thousand men, and the recent failure at Badajoz told but too clearly what might be the result of prosecuting the siege according to the established rules, and waiting till the counterscarp was blown in, and the parapets commanding the breach all levelled by the besiegers' fire. The place was accordingly summoned on the 18th, and the governor having returned a gallant answer, that he would not surrender, preparations were made for the assault (1).

Plan of the assault The perilous honour of this attack fell on the light and 5d divisions, whose turn it was to be that day on duty in the trenches. The latter, commanded by General McKinnon, preceded by the light companies, under Major Manners, was to attack the main breach, the Portuguese of the division were in reserve in the trenches, ready to advance if occasion required. The latter, under General Vandeleur and Colonel Bernard, received orders to assault the lesser breach, and, as soon as they got footing on the summit, turn sharp to the right in order to take in flank the defenders of the main breach, and assail in rear the interior retrenchments by which the enemy hoped to stop the progress of the assailants, even if they did win the rampart. This done, and a communication between the two columns being effected, an effort was to be made to burst open the Salamanca gate, and let in the rest of the division. Pack, with his brigade of Portuguese, as soon as the firing became general, was to make a false attack by escalade on the outwork of St.-Jago, on the opposite side of the town, which might be converted into a real attack if a favourable opportunity of penetrating should occur. The storming parties received orders not to fire a shot, but push on with the bayonet, the bearers of the bags, ladders, and other engines of assault, were not even armed, lest any irregular skirmish should interfere with their smoothing the way for the other troops. The preparations of the besieged, however, were very formidable—bombs and hand-grenades lined the top of the breaches to roll down on the assailants, bags of powder were disposed among the ruins, to explode when they began to ascend the slopes; two heavy guns, charged with grape, flanked the summit of the larger breach, and a mine was prepared under it, to explode if all other defences failed. These obstacles, however, noways daunted the British troops, and the last words of Wellington

action.

(1) Gurw viii 526, 527 Nap iv 379, 383 Jones, ii 61, 62. Helm, iv.

breathed the spirit of the whole army as well as himself—"Ciudad Rodrigo must be carried by assault this evening at seven o'clock (1) "

Aspect of
both sides
before the
assault.

The evening was calm and tranquil the moon, in her first quarter, diffused a doubtful light over the scene, which, without disclosing particular objects, rendered their rude outline distinctly visible. The projecting bastions stood forth like giants in the gloom, darkly yet clearly defined on the adjoining shadows, while in their sides, yawning gulfs, half filled up with ruins, showed where the breaches had been made and the deadly strife was to ensue. In the British lines the trenches were crowded with armed men, among whom not a whisper was to be heard, nor a movement perceived; so completely had discipline, and the absorbing anxiety of the moment, subdued every unruly feeling and stilled every dauntless heart. As the great clock, however, of the Cathedral tolled seven, the word was quietly passed along that all was ready and, leaping at once out of the trenches, the men rushed forward to the breaches, led by their respective forlorn hopes—that of the third division headed by Ensign Mackie, with the forlorn hope, and General M'Kinnon leading the storming party—that of the light by Mr Gurwood (2), followed by Major Napier at the head of the storming party—and with the exploits of these brave men began THE FALL OF THE FRENCH EMPIRE (3)

The third
division
carry the
great breach.

M'Kinnon's division crossed the open space between the trenches and the rampart, under a tempest of grape and musketry from the walls, and in a few minutes reached the counterscarp, which was found to be eleven feet deep. The sappers, however, instantly threw down their bags of hay, which soon diminished the depth by one-half, and the men, hastily leaping down, arrived at the foot of the great breach; but there a most serious opposition awaited them. The shells, rolled down from the top, burst amidst the throng with frightful explosions. Every shot of the close ranks of the French infantry told with effect on the dense mass below and when, forcing their way up the slope, the British soldiers at length reached the summit, they were torn in pieces by a terrific discharge of grape from the heavy guns within a few yards distance on either side, which at once, like a scythe, swept the whole warlike multitude down. Before these could be reloaded, however, those immediately behind pushed up, and won the ascent of the faussebraye, and at its top met two battalions which had mounted the perpendicular of the faussebraye by escalade, and together they crowded up the breach of the rampart, which was speedily carried. But just as, in the tumult of victory, they were striving to penetrate the interior retrenchments which the besieged had constructed to bar their further entrance, the mine which had been worked under their feet was suddenly exploded, and the bravest and most forward, among whom was the gallant M'Kinnon, were blown into the air. Still the column which had won the great breach held the ground they had gained, and finding it impossible to penetrate farther into the town, from the obstacle of the inner retrenchment, they established themselves among the ruins to await the result of the other attacks, and the scarlet uniforms came pouring in on every side (4)

Charge of
the French
in mass.

In the meanwhile the light division under Crauford, and the Portuguese under Pack, were still more successful. The former had

three hundred yards of glacis to cross before they reached its crest, but this distance was swiftly passed, though the gallant Craufurd received a fatal wound during the rush, the counterscarp, eleven feet deep, was leaped down in the face of a dreadful fire of grape and musketry, and the lesser breach reached. It proved, however, to be extremely steep and narrow; and when two-thirds of the ascent had been won, the struggle was so violent that the men paused, and every musket in the crowd was snapped under the instinct of self-defence, though not one was loaded. Major Napier, however, who was at this moment struck down by a grape-shot, called to the troops to trust to their bayonets. The officers all at once sprung to the front, and the summit was won. Then arose a loud shout from every quarter, for Pack's Portuguese at the same moment had escaladed the walls on the opposite side. The light division now pushed on in great numbers, and, not forgetting their orders, turned sharp to the right, and with loud cheers assaulted in flank the intrenchment at the great breach, where the third division had been arrested, and by a mighty effort of both united, the barriers were burst through, and the troops rushed in. Some irregular fighting occurred in the streets, but no further systematic resistance was attempted, and Mr Gurwood, who, though wounded, had maintained his post at the head of the third division when they carried the breach, received the governor's sword, the deserved reward of his heroism, at the gate of the castle (1).

HIDEOUS
disorders
consequent
on the
storm

A frightful scene of plunder, intoxication, and violence, immediately ensued. The firing, which ceased for a moment when the tumult at the breaches subsided, was now renewed in the irregular

way which denoted the commencement of riot and disorder; and shouts and screams on all sides fearfully intermingled with the groans of the wounded. The churches were ransacked, the wine and spirit cellars pillaged, and brutal intoxication spread in every direction. Soon the flames were seen bursting forth in several quarters; some houses were burned to the ground, others already ignited, and it was only by the intrepidity of a few officers and soldiers, whose coolness deserves the highest praise, that a fire, wantonly lighted in the midst of the great powder magazine, was extinguished. By degrees, however, the drunken men dropped from excess of liquor, or fell asleep; the efforts of the officers and fresh divisions which Wellington instantly ordered into the town, were incessant to restore order. The houses on fire, and not consumed, were happily saved, and before morning a degree of order was restored which could hardly have been hoped for by those who witnessed the first license consequent upon victory. Yet even in these moments of unbridled passion, when the national vice of drunkenness appeared in its most frightful colours, some redeeming qualities were displayed though all who combated were put to death without mercy, yet the unresisting every where received quarter, no slaughter, either of the citizens or enemy took place; and of a garrison consisting only of eighteen hundred men at the commencement of the siege, full fifteen hundred, still unwounded, were made prisoners (2).

Vast im-
portance of
this capture

The storming of Ciudad Rodrigo was one of the most brilliant exploits of the British army, and from none have greater or more splendid results immediately flowed. A hundred and fifty guns, including the whole battering train of Marmont's army, and immense stores of every kind, fell into the hands of the Allies, who had to lament the loss of thirteen

(1) Baird's Report, Aug 8, 1812 Belm iv 291 (2) Nap iv 386 Lond ii 256, 267 Belm iv,

hundred men, including two heroes cut off early in their career, Generals Craufurd and McKinnon. But it was not the material results, great and important as they were, which constituted its principal value. The moral influence with which it was attended was far more important. Wellington had now carried the frontier fortress of Spain, in the face of sixty thousand men hastening from the army of Portugal and the north to raise the siege. In the depth of winter he had thrown a portable bridge over the Aguada, and collected his troops and battering train with such secrecy and celerity, that the breaching batteries had opened their fire before the enemy had advices of the commencement of the enterprise, and the place was carried before they had begun to march for its relief. It was now evident that he had, for the first time since the Peninsular war commenced, obtained the ascendancy over his enemies; and that, with the initiative in operation, the war was to be carried into the territory occupied by the enemy. Nor was the proof afforded of the increased proficiency of the English in the art of war, and their improved skill in the multifarious duties connected with its successful prosecution, less gratifying or less prophetic of a revolution in the contest. Ciudad Rodrigo had been taken by storm, after a siege of twelve days, in the depth of winter, by an army of forty thousand men, whereas Masséna, with one of eighty thousand, had been detained before its walls six weeks in the height of summer. The intelligence of this unlooked-for success, therefore, excited the most enthusiastic joy in all the allied capitals. The democrats of Cadix were, for the time, overpowered; and the English general was created Duke of Ciudad Rodrigo amidst the unanimous acclamations of the Cortes and people. The Portuguese Government forgot its jealousy of English interference, and conferred upon him the title of Marquis of Torres Vedras, while the thanks of the British Parliament were voted to the army and a pension of £2000 a-year settled on the earldom of Wellington (1).

agitation is produced among the French generals. Great was the consternation produced in the French generals by the fall of Ciudad Rodrigo. Marmont had arrived with the divisions under his immediate orders at Valladolid, to take the command of the newly organized army of Portugal on the 13th of January, without any suspicions of what was going forward; and it was not till late in the evening of that day that he learned that the British had crossed the Aguada. Instantly orders were dispatched to the troops in all directions to assemble. Bonnet was to hasten from the Asturian mountains; Brennier from the valley of the Tagus; Dorsenne to call in all the detached parties which were on the banks of the Douro; and these troops were all to rendezvous at Salamanca on the 1st February. Meanwhile, however, not only was Ciudad Rodrigo taken, but the breaches in the walls repaired, provisions for six weeks thrown in; and the British general, leaving a division to secure the place, had resumed his ancient positions at Fuente Guinaldo. It is impossible now to doubt that this rapid and brilliant success was mainly owing to the ill-judged dispositions of the French Emperor, who had detached Montholon to Valencia, dislocated his armies, and given almost all their divisions a new direction, at the very time when the decisive operation was undertaken, joined to the oppressive way in which he had always carried on war, which had so desolated the country as to render the dispersion of the troops to a prodigious distance indispensable to their subsistence; but it was never his custom to take blame to himself, where he could, by possibility, throw it upon others; and his ill-humour, at

(1) Map. iv. 246, 249. Jones, ii. 64. 67. Gerv. iii. 522.

this disaster, exhorted in violent invectives against both Marmont and Dorsenne, though it was his own directions which had left to neither the means of averting it (1).

Secret pre-
parations
made
against
Badajoz.

No sooner had Wellington put Ciudad Rodrigo in a situation of defence against any sudden attack, than he turned his eyes towards Badajoz, the remaining frontier fortress, which it was necessary that he should reduce before attempting his meditated invasion of the interior of Spain. As this enterprise required the united strength of the whole army, Ciudad Rodrigo, after having been repaired and provisioned for six weeks, was delivered over to Don Julian Sanchez, with his division of guerillas, and the Spanish Government was warned, in the strongest manner, of the necessity of taking immediate steps to have the breaches thoroughly repaired, and provisions for at least six months thrown in. Meanwhile preparations were made for the siege with all imaginable activity; but as the French marshals were now thoroughly alarmed by the blow struck at Ciudad Rodrigo, and Soult, in particular, was sensitively alive to any demonstrations against Badajoz, they required to be conducted with all imaginable secrecy. The battering train and engineers were accordingly embarked for Lisbon as if for Oporto, and at sea re-shipped on board small craft, privately sent out from different parts of the coast, to elude attention, and sent up the river Caldao, in the Alentejo, to Alacer da Sal, where the country carriages could, without suspicion, convey them to the banks of the Guadiana, while fascines and gabions were secretly prepared at Elvas, amidst other repairs of its ramparts, ostensibly directed to the defence of that fortress. Arrangements were at the same time made for transferring the grand supply of the army from the artery of the Douro to that of the Tagus. A temporary depot was formed at Celorico, as if for the nourishing of preparations on the Beira frontier; and a grand magazine established beyond the Douro. So completely did these preparations impose upon the French Emperor, that he entirely mistook the real point of attack, and in spite of the most urgent remonstrances of Marmont, who insisted that Badajoz was threatened, Napoléon wrote to him, "that the English general was not mad, and that an invasion on the side of Salamanca was alone to be guarded against (2)." "

(1) Belin iv 216, 217 Berthier to Marmont Feb 11, 1812. Berthier to Marmont Feb 18, 1812. Belin, i App No 88, 91.

"The Emperor is highly displeased at the negligence which you have evinced in the affair of Ciudad Rodrigo. Why had you not advices from it twice a week? What were you doing with the five divisions of Souham? This is a strange mode of carrying on war, and the Emperor makes no secret of his opinion, that the disgrace of this disaster attaches to you. It would have fallen on General Thiebault, if that general had not been able to show that he had not sufficient force to do any thing: whereas the whole division Souham was at your disposal. This humiliating check cannot be ascribed but to the defect of your dispositions and the want of consideration in the measures you have adopted."—*Berthier to Dorsenne, 11th Feb 1812* BELMAS, i, App No 88.

"The fall of Ciudad Rodrigo is an affront to you and the English are sufficiently acquainted with French honour to know, that that affront may become the source of a burden to them, by forcing them to preserve the prize they have won. The Emperor is far from being satisfied with your dispositions. You have the superiority over the enemy, and instead of taking the initiative, you are always on the defensive. You fatigue and harass your troops without doing any thing that is not the

way to carry on war. Never mind Hill and the army of the south: that army is strong enough to combat five divisions of the English army. You should have marched on Ciudad Rodrigo, and retaken it before the breaches were filled up or the place provisioned."—*Berthier to Marmont, 18th Feb 1812 Ibid. App No 91*

(2) Jones, ii 67, 68 Nap iv 392, 393 Belin iv 217, 218.

"You must suppose the English mad to imagine that they will march upon Badajoz, leaving you at Salamanca: that is, leaving you in a situation to get to Lisbon before them. Even if, yielding to imprudent counsels, they should move towards the south, you may at once arrest their movements by detaching one or two divisions towards the Tagus: by that you will cause yourself to be respected, and regain the initiative over the enemy. I repeat it, then: the instructions of the Emperor are precise: you are not to quit Salamanca: you are even to re-occupy the Asturias: let your headquarters be at Salamanca, and never cease to menace the English from thence."—*Berthier to Marmont, 11th February 1812*—These instructions were repeated in still stronger terms, in spite of Marmont's representations to the contrary, in another despatch of Berthier to him of 18th February 1811.—*See BELMAS, i, No. 90, 91, Appendix.*

Movement
of the army
to the
Portugal.

Having thus completely outwitted the vigilance of the French Emperor, and at length completed his well-concealed preparations for the important enterprise in view, Wellington, on the 9th of March, suddenly commenced his march to the south; and the troops, from all quarters, converged towards Badajoz. One division of infantry alone remained on the Agueda, to succour Ciudad Rodrigo if necessary, and retard any incursion which the enemy might attempt on the Beira frontier, which was put in as good a position of defence as circumstances would admit. The English general arrived at Elvas on the 11th, and immediately prepared to invest the place; but incredible difficulties, which wellnigh proved fatal to the whole enterprise, retarded, for a very considerable period, the commencement of the siege. No representations which either Wellington, or his able coadjutor Mr. Stuart, the English ambassador at Lisbon, could make, could induce the Portuguese Regency to put in hazard their popularity, by making the magistrates draw forth the resources of the country for the conveyance of the ordnance and siege equipage, either from Almeida, where some of it came, or from the river Caldas, where the remainder had been brought by water-carriage. Hence, though the troops crossed the Tagus on a bridge of boats at Vallaballo on the 9th and 10th, it was not till the 15th that the pontoons could be thrown over the Guadiana, nor till the 17th that the investment of the fortress could be completed. The delay of these days afterwards required to be redeemed by torrents of British blood (1).

Commence-
ment of the
siege.

To cover the siege, Hill was posted near Almendralejos with thirty thousand men, of whom five thousand were horse; while Wellington himself, with twenty two thousand, commanded the besieging force. It was at first expected that Marmont would immediately co-operate with Soult in endeavouring to disturb the operations of the English army; but it was soon ascertained that his divisions had all marched through the Puerto de Pico, from the valley of the Tagus, into Castile, in obedience, as it is now known, to the absurd and positive orders of Napoleon, and consequently the British covering army was relieved of all anxiety except that arising from Soult, who was approaching from Andalusia. Meanwhile, the operations of the siege were vigorously conducted; but it was soon apparent that a most desperate as well as skilful defence might be anticipated. Philippon, whose great talents in this species of warfare had been experienced in the former siege, had been indefatigable during the six months that had since elapsed, in improving the fortifications, and adding to the strength and resources of the place. He had five thousand men under his command, drawn by equal numbers from the armies of Marmont, Soult, and Jourdan at Madrid in order to interest all these commanders in its defence. The old breaches were all repaired, and strong additional works constructed to retard the operations of the besiegers in the quarters from whence the former attacks had been made. The ditches had been cleared out, and in some places materially deepened, as well as filled with water; the glacis was every where elevated, so as to cover the scarp of the rampart. The *écluse-de-pont* on the other side of the river, ruined in the former siege, had been thoroughly repaired, and ample provisions laid up for the numerous garrison. The castle, in particular, which

(1) H. p. iv. 397. 398. Jones, II. 68. G. V. i. c. 21. 22.

The rich city of Evora, which had suffered so dreadfully from Lisbon's misfortune, in August 1808, (see I. 32.) and from the effects of British and French arms, had seen the fire of a heavy cannon

since that time refused to furnish a single cart.—Harris iv. 397 and Wilson on the 26th April 1812.—See Wilson, II. 23. Warrington at Lisbon, 27th March 1812.—G. V. i. c. 21.

is situated on a rock more than a hundred feet above the level of the Guadiana, and surrounded by walls twenty-eight feet in height, was deemed perfectly secure, and what between dread of the approaching siege, and the orders of the French governor, all the inhabitants, except four or five thousand of the most indigent class, had left the place, so that no failure of provisions was to be apprehended (1)

Commence-
ment of the
siege These defensive preparations had rendered a renewal of the at-
March 17 tack on Fort Christoval impossible, and therefore Wellington re-
solved to commence his operations against an outwork called Fort Picurina, with a view to the final attack on the rampart at the bastion of Tri-
nidad, which could be breached from the hill on which it stood. Ground was broken against this outwork, unperceived by the enemy, in the night, and parallels established within two hundred yards of its walls. Alarmed at the progress of this approach, Philippon, two days after, ordered a sortie with fifteen hundred men, including some squadrons of cavalry, by the gates of La

March 19 Trinidad. These gallant men, whose approach was covered by a thick fog, at first did great mischief in the British trenches, driving the whole working parties from their posts, sweeping away several hundred intrenching tools, and spreading confusion as far even as the bivouacs and depots in the rear; but Picton's whole division immediately ran to arms, and the enemy were ultimately driven back with the loss of above three hundred men; though the British purchased their final advantage by the loss of a hundred and fifty men, including Colonel Fletcher, the able chief of the engineers. To guard against similar checks in future, Wellington removed his reserve parks nearly half-a-mile farther back, and established a reserve guard of six field-pieces near the trenches, with a signal post on a neighbouring height to give timely warning of the enemy's approach. No further attempt was made by the besieged to disturb the approaches of the British, but they had for some days a powerful ally in the rain, which descended in such floods that the trenches were filled with water, and the earth was so saturated that it was

March 24 impossible to cut it into any regular form. At length on the 24th, after a deluge of four days, the atmosphere cleared up, and the investment was completed on the right bank of the Guadiana, while a heavy fire was

March 25 opened from eight-and-twenty guns on the Picurina, which soon beat down the outer palisades, the British marksmen keeping up such a fire from the trenches that no man ventured to look over the parapet. The defences were injured, though not breached, but as they did not exhibit the appearance of great external strength, and time was of essential value, from the known energy of Soult, who was collecting his forces to raise the siege, it was determined, without further delay, to endeavour to carry it by assault (2)

Storming
of Fort
Picurina The attack was made by General Kempt with five hundred of the third division. The night was fine, and the arrangements skilfully and correctly made. But when the troops, by a sudden rush, reached the palisades, they found them so far repaired as to render entrance impossible, while a streaming fire from the top of the walls cut down all who paused at that post of danger. The crisis soon became imminent, and the carnage terrible, for the enemy's marksmen shot fast from the rampart, the alarm bells in the town rang violently, and the guns of the castle opened in rear on the struggling mass of the assailants. Amidst this fearful tumult the cool courage

(1) Belin iv. 311, 319 Jones, ii. 68, 6 Nap^r iv. 397, 101

(2) Belin iv. 319, 329
ii. 70, 71 Guizot i. 6,

106, 108 Jones

of Kempt skillfully directed the attack; the troops were drawn round to the part of the fort sheltered from the fire the reserves were quickly brought up, and sent headlong in to support the front. The shock was irresistible. In an instant the scaling ladders were applied, and the assailants with loud cheers mounted the rampart; while at the same time the axe-men of the light division discovered the gate, and hewing down the barriers, also burst in on the side next the place. So sudden was the onset, so vehement the fight, that the garrison, in the confusion, forgot, or had not time to roll over the shells and combustibles arranged on the ramparts. The British lost above three hundred and fifty men in this heroic assault, which lasted an hour but it contributed essentially to the progress of the siege for Philippon had calculated upon retarding the besiegers four or five days longer by this outwork, and if the assault had not taken place on that day, this would actually have happened, as the loopholed gallery in the counterscarp and the mines would by that time have been completed (1)

March 24. No sooner did Philippon learn the capture of the fort, than he opened a tremendous fire upon it from every gun on the bastions which could be brought to bear, and with such effect that the lodgement effected in it was destroyed, as the troops could not remain in the work and a sally to retake it with three battalions was attempted, but was quickly repulsed. On the following night, however, the men were got under cover, and the second parallel being completed in advance of the fort, enfilading and breaching batteries were erected in it: and after five days' continued firing, the sap being pushed up close to the walls, the Trinidad bastion crumbled under the repeated strokes of the bullet, and soon three large yawning chasms appeared in its walls. By the morning of the 6th they were all declared practicable and though the counterscarp was still enfire, and the most formidable preparations were evidently making to retrench the summits of the ruined parts of the rampart, yet, as Soult was now approaching from Andalusia, and Mar mont had concentrated his whole force at Salamanca, from whence he was expected to menace Ciudad Rodrigo, into which the Spaniards had never yet, notwithstanding the urgent representations of Wellington, thrown any provisions, he determined to hazard an assault on the following day (2)

Plan of attack of the fortress of Almeida. The plan of attack was suited to the magnitude of the enterprise, the extent of the preparations for repelling it which had been made by the garrison, and the known courage and ability both of the governor and his followers. On the right, Picton's division was to file out of the trenches, to cross the Rivillas rivulet, and endeavour to scale the castle walls, notwithstanding their rocky elevation and imposing height, when the tumult at the breaches had drawn the principal attention of the enemy to the other side of the fortress. On the left, Leith's division was to make a feint on the near Pardaleras outwork, and a real attack, by escalade, on the more distant San Vincente bastion, though the glacis was there mined, the ditch deep, the scarp twenty-eight feet high, and the ramparts lined with bold and determined men. In the centre, the fourth and light divisions, under General Colville and Colonel Barnard, were to assault the breaches. Like the other columns of assault, they were furnished with ladders and axes, and preceded by storming parties of five hundred men, led by their respective forlorn hopes. The light division was to assault the bastion of Santa Maria, the fourth

division that of Trinidad, and the two together were nearly ten thousand strong. But they had need of all their strength for the enemy was at once numerous and skilful, elated by former success, and confident of future victory, the ramparts were lofty, the breaches steep and narrow, and Philippon's skill had prepared the most direful means of destruction for the dark and massy columns that stood in the British lines, with hearts beating for the assault (1)

Philippon's preparations for defence Sixteen chosen companies were charged with the defence of the three breaches, and were arrayed behind the parapets which had been constructed on the *terre-plein* of the ramparts, immediately behind them was placed a strong battalion, in a retrenchment which had been formed in the rear of the menaced bastion, a company of sharpshooters occupied a raft which was floated in the inundation which immediately adjoined the foot of the breaches and flanked the assaulting columns, and another battalion was in reserve at the gate of Trinidad, ready to carry succour to any point which might require it. Every soldier had four loaded muskets beside him, to avoid the delay of charging them at the critical moment, shells were arranged in abundance along the parapet, to roll down on the assailants the moment they filled the ditch, heavy logs were provided, to crush whole files by their descending weight, and at the summit of each breach an immense beam of wood, sunk three feet deep into the earth at either extremity, was placed, thickly studded with sword-blades, with the sharp end turned outwards, so as to defy entrance alike to strength and courage. Similar preparations, with the exception of the sword-blades, were made at the castle and the bastion of San Vincente, which were menaced by escalade; and pits dug, in considerable numbers, at the foot of the great breach, to entangle or suffocate the brave men who might have descended into the fosse. Relying on these preparations, and their own conscious resolution, the French soldiers confidently looked down from their lofty ramparts on the dark columns of the distant enemy, who were arrayed for the assault; and many a gallant breast there throbbed, not less ardently than in the British host, for the decisive moment which was to determine this long-continued duel between the two nations (2)

Unsuccessful assault of the great breaches It was intended that the whole points should be assailed at once, and ten o'clock was the hour assigned for this attack. But a bomb having burst close to the third division, destined for the assault of the castle, and discovered their position, Picton was obliged to hurry on the assault, and as the ramparts now streamed out fire in all directions, the fourth and light divisions could no longer be restrained, but silently and swiftly advanced towards the breaches, while the guard in the trenches, leaping out with a loud shout, enveloped and carried the little outwork of San Roque, by which the column attacking the castle might have been enfiladed in flank. They were discovered, however, as they reached the crest of the glacis, by the accidental explosion of a bomb, and its light showed the ramparts crowded with dark figures and glittering arms, which the next instant were shrouded in gloom. Still not a shot was fired on either side. Silently the hay packs were let down, the ladders placed to the counterescarp, and the forlorn hopes and storming parties descended into the fosse. Five hundred of the bravest were already down and approaching the breaches, when a stream of fire shot upward into the heavens, as if the earth had been

rent asunder; instantly a crash, louder than the bursting of a volcano, was heard in the ditch, and the explosion of hundreds of shells and powder barrels blow the men beneath to atoms. For a moment only the light division paused on the edge of the crater; then, with a shout which drowned even the roar of the artillery, they leaped down into the fiery gulf, while at the same moment the fourth division came running up, and poured over with the like fury (1).

Terrific
struggle at
their feet.

And now a scene ensued unparalleled even in the long and bloody annals of the revolutionary war. Boiling with intrepidity, the British columns came rushing on, and, the roar constantly urging on the front, pushed down, no one knew how, into the ditch. Numbers, from keeping too far to the right, fell into the part inundated, and were drowned; but the dead bodies filled up the ditch and formed a ghastly bridge, over which their comrades passed (2). Others inclining to the left, came to the dry part, and shunned a watery grave, but they did so only to fall into the still more appalling terrors of fire. The space into which both divisions had now descended, was a ditch of very confined dimensions, with the enemy's rampart in front and both flanks; so that the troops, crowded together in a narrow space at the bottom, were exposed to a cross plunging fire on every side except their rear, where stood a ravine filled with British soldiers, whose loud cheers and incessant though ineffectual fire against the parapets, rather augmented than diminished the general confusion. The enemy's shouts, also from the breaches and walls, were loud and terrible, and the bursting of the shells, the explosion of the powder barrels, the heavy crash of the descending logs, the continued streams of fire from the ramparts, the roaring of the guns from either flank, and distant thunder of the parallel batteries, which still threw howitzers on the breaches, formed a scene of matchless sublimity and horror. Still, even in this awful situation, the gallantry of the officers and the devotion of the men, prompted them to the most heroic efforts: the loud shouts of defiance by the enemy were answered by vehement cheers even from dying lips, and roused the English to maddened efforts: again and again bands of daring leaders, followed by the bravest of their followers, rushed up the breaches, and, despite every obstacle, reached the summits. Vain attempt! the ponderous beams, thick studded with sword-blades, barred any further progress: the numerous spikes set among the ruins transixed their feet: discharges of grape and musketry, within pistol shot on either flank, tore down their ranks, and even the desperation of the rear, who strove to force the front forward, in order to make a bridge of their writhing bodies, failed in shaking the steady girdle of steel. Some even strove to make their way under it, and, having forced their heads through, had their brains beat out by the butt-ends of the enemy's muskets. Never since the invention of fire-arms had such a slaughter taken place in so narrow a space: for two hours the men continued in that living grave, disdaining to retreat, unable to advance: and it was not till two thousand had fallen in this scene of horror, that by Wellington's orders they retired to reform for a second assault (3).

The castle is
commanded by
Picton.

While this tremendous conflict was going on at the breaches, a struggle of a different, but hardly less violent kind took place at the castle. There Picton's division were no sooner discovered by the explo-

sion of the bomb among their ranks, than the whole moved forward at a steady pace, about half an hour before the fight began at the breaches. They crossed the stream of the Rivillas by single file, under a terrible fire from the ramparts, for the enemy brought every gun and musket to bear on the advancing mass, and the light which spread on all sides showed each man as clear as day. Rapidly forming on the other side, they rushed quickly up the rugged steep to the foot of the castle wall. There Kempt, who had hitherto headed the assault, was struck down, and Picton was left alone to conduct the column. To the soul of a hero, however, he united the skill of a general, and well were both tried on that eventful night. Soon the palisades were burst through, and in ran Picton followed by his men; but when they got through and reached the foot of the wall, the fire, almost perpendicularly down, was so violent that the troops wavered. In an instant the loud voice of their chief was heard above the din, calling on them to advance, and they rushed in, bearing on their shoulders the ponderous scaling ladders, which were immediately raised up against the wall. Down in an instant, with a frightful crash, came huge logs of wood, heavy stones, shells, and hand-grenades; while the musketry, with deadly effect, was phed from above, and the bursting projectiles, illuminating the whole battlements, enabled the enemy to take aim with unerring accuracy. Several of the ladders were broken by the weight of the throng who pressed up them; and the men, falling from a great height were transfixed on the bayonets of their comrades below, and died miserably. Still fresh assailants swarmed round the foot of the ladders. Hundreds had died, but hundreds remained eager for the fray. Macpherson of the 43th, and Pakenham (1), reached the top of the rampart, but were instantly and severely wounded, and thrown down. Picton, though wounded, called to his men that they had never been defeated, and that now was the time to conquer or die. "If we cannot win the castle," said he, "let us die upon the walls." Animated by his voice, they again rushed forward, but again all the bravest were struck down. Picton himself was badly wounded, and his men, despite all their valour, were obliged to recoil, and take shelter under a projection of the hill (2).

It is at
length
carried

The attack seemed hopeless, when the reviving voice of Picton again summoned the soldiers to the attack, and he directed it a little to the right of the former assault, where the wall was somewhat lower, and an embrasure promised some facility for entrance. There a young hero, Colonel Ridge, of the 43th, who had already distinguished himself at Ciudad Rodrigo, sprung forward, and calling on the men to follow, himself mounted the first ladder. As quick as lightning he ascends the steps; his broadsword is in guard above his head, his trusty grenadier bayonets project from behind on either side—and he is on the summit! Canch, of the grenadiers, quickly mounts another ladder, and both stand side by side on the ramparts. The shouting troops press up after them, and the castle is won. Speedily the enemy were driven through the inner gate into the town, but a reinforcement arrived from the French reserve, a sharp firing took place at the gate, and Ridge fell in the glorious sepulchre which his sword had won. The enemy made but a slight resistance in the castle after the ramparts were gained, but the fighting was still severe in other quarters; and Philippon, deeming the escalade of the castle impossible, disbelieved the officer who brought the account of it, and delayed to send succours till the English had established themselves in their important conquest (3).

Walker's
division also
gets in by
escalade.

While these furious combats were going on at the breaches and in the castle, Walker, with his brigade, was escalading the distant bastion of San Vincente, so that the town was literally girdled with fire. They got near to the counterscarp undiscovered, and immediately, by means of their ladders, began to descend into the ditch; but at that moment the moon shone out, they were discovered, and a heavy fire began from the walls. The Portuguese in the division immediately throw down their ladders and fled; but the British pushed on, and soon reached the foot of the rampart. It proved, however, to be thirty feet high; the ladders were too short; a mine was sprung beneath their feet: the fire from the walls was quick and deadly; and logs of wood and shells thrown over, crushed or tore in pieces whole companies at once. Fortunately, during the alarm occasioned by the carrying of the castle, the assailants discovered a part of the scarp only twenty feet high; and there three ladders were placed against an empty embrasure. The ladders, however, were still too short, and the first man who got up, had to stoop down and draw up his comrades, after being pushed up by them. Instantly the crowds came rushing on, and Walker himself, among the foremost, was struck down on the ramparts, severely but not mortally wounded. The troops immediately advanced, with a rapid step and loud cheers, towards the breaches, where the incessant roar and awful conflagration told that the struggle was still going on. Strenuously fighting, they took several bastions, when the false alarm of a mine being sprung created a panic, and they were drawn back almost to the original one they had won: but a battalion left there, by a crashing volley arrested the pursuers, and the troops rallying again, fought on towards the breaches, while another body marched towards the great square of the town. There their bugles sounded an English air in the heart of Badajoz: they were answered by a similar note from the castle. Soon the breaches were abandoned, and the victors poured in from all quarters: while Philippon crossed the bridge and took refuge in Fort Christoval, where he surrendered at discretion next morning, but not till he had sent off messengers to Soult, to warn him of the disaster, and in time to avert a greater one from himself (1).

Wellington's
conduct
during the
assault.

During the whole of this eventful night, Wellington remained in one position, near the quarries, anxiously listening to the awful roar, and receiving the accounts which the different aides-de-camp brought of the desperate resistance which the troops were encountering at the breaches. Albeit well aware of the dreadful loss which must be going forward, he calmly received the intelligence, knowing how much the fate of the war depended on perseverance at that decisive moment. At length an officer arrived from Picton's division, with intelligence that the castle was taken. "Who brings that intelligence?" said Wellington in his usual quick, decided way. "Lieutenant Tyler," said the officer. "Ah, Tyler! well—are you certain, sir?" "I entered the castle with the troops, have just left it, and General Picton is in possession." "With how many men?" "His division (2)." "Return, sir, and desire General Picton to maintain his position at all hazards." Enthusiastic joy immediately took possession of all present; but when

For the description of this memorable assault, I have collected the inimitable narrative of Colonel Napier with the official despatch of Wellington in Gerwood's *Despatches*, and the animated accounts

of Colonel Jones, of Thomas Picton, Almeida, and the United Services Journals; and added many important facts from Philippon's official despatches, with one or other valuable documents regarding the siege. In *Bat. II.* 12, *Journals des Sieges sous le Peninsule* v. 383, 342.

(2) Picton. *Memoirs*, II. 112, 118. *United Services Journal*. *Rep.* IV. 122.

Wellington, at a subsequent period of the night, learned the full extent of the havoc made in his brave men, his wonted firmness gave way, and he yielded to a passionate burst of grief.

Magnitude and importance of the conquest Five thousand men and officers had fallen in all during the siege, including seven hundred Portuguese. Of these, eight hundred were killed, and no less than three thousand five hundred had been struck down during the assault—an unparalleled loss, proving alike the skill and intrepidity of the defence, and the desperate valour of the attack. But the prize was immense, and the consequences of the triumph decisive, in the end, of the fate of the Peninsula. A place of the first order, with the preservation of which the honour of three French armies had been wound up, in the best condition, garrisoned by five thousand choice troops, and commanded by an officer of equal courage and ability, had been captured after a siege of nineteen days, only eleven of which had been open trenches—less than half the time which Suchet, with superior means for the actual siege, had consumed in the reduction of Taragona (1). One hundred and seventy heavy guns, five thousand muskets, and eighty thousand shot were found in the place, three thousand eight hundred men, including the Governor Philippon, were made prisoners, thirteen hundred had been killed or wounded since the commencement of the siege. But what was of far more importance than even the reduction of such a fortress in such a time and with such means, Wellington had now clearly obtained the superiority over the French generals, their two border strongholds, alike a barrier for defence and a base for offensive operations on their side, had been reduced, the path was smoothed for the English army into the heart of Spain, and the disunion already obvious between the Imperial marshals, might be reasonably expected to be increased rather than diminished by a disaster which would expose them both to the vials of the Emperor's wrath (2).

Disgraceful conduct of the town It would be well for the English historian if he could stop here, and could recount that his countrymen, after having displayed such heroic bravery in the assault, had not stained their victory by the usual excesses which, by the barbarous usages still observed in war, are so often, in the case of a town carried by assault, wreaked on the heads of the unoffending citizens. But this, unfortunately, is not the case. Disorders and excesses of every sort prevailed, and the British soldiery showed by their conduct after the storm, that they inherited their full share of the sins, as well as the virtues, of the children of Adam. The disgraceful national vice of intemperance, in particular, broke forth in its most frightful colours, all the wine-shops and vaults were broken open and plundered, pillage was universal, every house was ransacked for valuables, spirits, or wine, and crowds of drunken soldiers, for two days and nights, thronged the streets, while the breaking open of doors and windows, the report of casual muskets, and the screams of the despoiled citizens, resounded on all sides. At length, on the third day, Wellington being highly incensed at the continuance of the disorders, marched two fresh divisions into the town, a gallows was erected in the great square, a few of the worst plunderers were executed, and thus order was restored. Yet even in this humiliating scene many redeeming traits, were to be found, the worst characters indeed here,

(1) Suchet broke ground before Taragona on the 21st May, and the place was finally carried by assault on the 28th June, a period of thirty seven days. Suchet's force, which was all engaged in the siege, (the enemy's disturbing force in the rear being very trifling,) was 21,000, Wellington's at

Badajoz, 19,000.—*Vide Suchet's Memoirs*, ii 52, 109, and *Ante*, viii p 103, 114.

as on all occasions where popular passion obtains full vent, were the leaders; but hundreds risked, and many lost their lives, in endeavouring to put a stop to the violence. No blood was shed of the unresisting, and comparatively few of the more atrocious crimes usual on such occasions committed while the French conquest of Taragona was disgraced by the slaughter, on their own admission, of four thousand chiefly unarmed citizens (1), the British storm of Badajoz exhibited the glorious trophy of as many direful and bloodstained enemies rescued from death in the moment of hard-earned victory—the very horror which the British officers at the time felt and have since expressed at the brutal excesses of the men, only shows how abhorrent such usages were to the mild and humane spirit which prevailed in the English (2).

The Duke of Wellington said in Parliament, on occasion of the Chartist insurrection at Birmingham in July 1839, that he had seen many towns in his life taken by storm, but he had never seen a town treated as Birmingham was in that quarter where the rioters had gained the superiority. This observation is clearly well founded in the sense in which it was obviously meant; viz. that no part of Badajoz, or any other town he had seen taken by assault, was treated so horribly as that part of Birmingham was where the rioters got the mastery—for if the Chartists had had possession of that town for three days, as the troops had of Badajoz, they would have burned and destroyed the whole edifices it contained. In two hours three hundred Chartists in the Bull-ring burned three houses, gutted thirty, and consumed by fire the whole furniture which they had dragged out, before the eyes of the owners—while nothing but plunder and intoxication, with a few casual conflagrations, took place at Badajoz, even during the three days the disorders lasted;—a memorable example of the increasing moderation which the humanity of recent times had infused even into the most awful of all moments, that of a town taken by assault, and of the furious passions which democratic delusion had at the same time spread among the corrupted members of an opulent and pacific community.

Soult, never dreaming of this powerful fortress being carried in so short a period that there hardly seemed to be time for the breaching batteries to have approached the body of the place, had set out from Seville, on the 51st March, with the whole force which he could collect, and debouched by Guadalcanal into the south of Estremadura on the 4th April. On the 7th he was advancing from Fuente del Maestro to Santa Martha, at no great distance from Badajoz, with twenty-five thousand men, prepared to give battle to Hill's covering force, which was just before him, when the horsemen detached by Philippon brought the intelligence of the fall of that fortress. He immediately retraced his steps with great celerity, and regained Seville by the 14th; for he was in no condition to fight the whole English army, and the Andalusian capital, which was menaced by Villermur and Morillo, who had issued out of Portugal with four thousand men, and already approached to within ten miles of it, loudly called for his protection. In the course of the retreat, however, the British horse, two thousand strong, came up with them near Usagre, and a brilliant cavalry action took place, under Sir Stapleton Cotton, with an equal force of the enemy, who were broken and pursued four miles in great disorder, with the loss of a hundred and thirty prisoners, besides nearly as many killed and wounded (3).

ing batteries to have approached the body of the place had set out from Seville on the 31st March with the whole force which he could collect and debouched by Guadalquivir into the south of Extremadura on the 11th April On the 7th he was advancing from Fuente del Maestro to Santa Marta at no great distance from Badajoz with twenty five thousand men prepared to give battle to Hill's covering force which was just before him when the horsemen detached by Philippon brought the intelligence of the fall of that fortress He immediately retraced his steps with great celerity and regained Seville by the 11th for he was in no condition to fight the whole English army and the Andalusian capital which was menaced by Villenour and Morillo who had issued out of Tortuza with four thousand men and already approached to within ten miles of it loudly called for his protection

In the course of the retreat however the British horse two thousand strong came up with them near Escorial and a brilliant cavalry action took place under Sir Stapleton Cotton with an equal force of the enemy who were broken and pursued four miles in great disorder with the loss of a hundred and fifty prisoners besides many a many killed and wounded

Marmont's
irruption
into Beira A great game now lay before the English general, and he was strongly tempted to play it. Soult, with a disposable army of twenty-five thousand only, was in Andalusia, and even by raising the siege of Cadiz, and exposing his troops to be assailed in rear by the powerful garrison of that city, he could only bring forty thousand into the field, and though they were among the very best troops in the French army, and commanded by one of their ablest generals, yet with forty-five thousand British and Portuguese, who were now gathered round his standards, Wellington might hope to strike a decisive blow against that important branch of the enemy's force. That he entertained this design is now proved by his despatches (1); but he soon received intelligence from the north which compelled him to forego these prospects, how brilliant soever, and attend to the vital point of preserving his communications with his base of operations. Marmont having with infinite difficulty collected fifteen days' provisions for his troops, an indispensable preliminary to entering upon the wasted districts around Ciudad

April 1 Rodrigo, had advanced from Salamanca in the beginning of April, and immediately advanced to that fortress, which he invested. Thence pushing on past Almeida, he entered Beira with above thirty-five thousand men, which he ravaged with the utmost cruelty, and Trant and Wilson, who had assembled the militia of the province, even with the aid of the troops which Wellington had left to guard the frontier, were unable to offer any effectual resistance, as Silveira had not yet come up with that of Entre Douro e Minho. Trant, however, was not discouraged, and that enterprising officer even formed the daring design of surprising the French marshal in his headquarters at Sabugal, and this was prevented by the singular coincidence of Marmont having on the same night formed a project of carrying off the English commander, which only failed from a single drummer having accidentally discovered the approach of his horsemen, and beat the alarm. The enemy having approached Celorico, Wilson, after having remained at his post there to the last moment, retreated after having destroyed the magazines. In the retreat

April 11 from that place, the French came up with the rearguard of the retreating militia near the Mondego, who immediately, despite all the efforts of April 15 their officers, dispersed and fled, and Marmont, taking advantage of the consternation, pushed on to Castel Branco, where there were large magazines, which, however, were fortunately transported in safety to the south of the Tagus, while Victor Alten, with his German dragoons, crossed that river at Villa Velho, leaving the northern provinces wholly uncovered (2).

Wellington
moves to
the Agueda Urgent as affairs had now become to the north of the Tagus, Wellington would not have been diverted by these predatory alarms from his great object of attacking Soult in Andalusia, but the state of Ciudad Rodrigo and Almeida were such as to call for immediate attention. Notwithstanding the most urgent representations of the English general, the Spanish Government had taken no steps for provisioning the former of these fortresses, and the Portuguese Regency had been so remiss in their exertions for putting the latter into a good state of defence, that it was hardly secure against a *coup-de-main*. These circumstances rendered it indispensable for Wellington to return immediately to the Agueda, and accordingly, after lingering in the neighbourhood of Badajoz a few days, in the hope that Soult, stung by the loss of that fortress, would fight a battle to retrieve his credit, he broke up April 21 for the north upon finding that he had finally retired into Andalusia.

proved by intercepted returns immediately before it, that Marmont's strength had been forty four thousand actually with the eagles, independent of six thousand two hundred in the Asturias, and the garrison lost in the forts (1). The French, therefore, during the action and retreat, must have been weakened to the extent of twenty two thousand, or half their army; a result which, how great soever, is easily accounted for, if the magnitude of the defeat, and subsequent losses, and the absolute necessity to which the French soldiers were reduced of straggling in quest of subsistence, from no magazine being provided by their generals, is taken into consideration. On the French side, Generals Feroy, Thomière, and Des Graviers were killed, and Marshal Marmont, and Generals Bonnet, Clausel, and Monnet wounded. The Allies had to lament the loss of General Le Marchant killed, and Generals Beresford, Stapleton, Cotton, Leith, Colo, and Allen wounded. Wellington himself was struck by a spent ball on the thigh; but, like Napoléon and Julius Cæsar, he bore a charmed life, and did him no injury (2).

Brilliant charge of the German dragoons on the French rearguard. July 22.

With admirable diligence Clausel got his whole army across the river at Alba de Tormes, during the night; and with such expedition was the retreat conducted, that, although Wellington was in motion next morning by daylight, and moved straight in that direction, it was not till noon that they came up with the rearguard,

who were posted near La Serna. Such was the depression which prevailed among the French cavalry, that they gave way on the first appearance of the Allied horse, and left the infantry to their fate. The foot-soldiers, however, stood firm, and formed with great readiness three squares on the slope of the hill which they were ascending, to resist the squadrons which soon came thundering upon them. The charge was made by Bock's German, and Anson's brigade of English dragoons—and is remarkable as being one of the few instances in the whole revolutionary war, in which, on a fair field and without being previously shaken by cannon, infantry in square were broken by cavalry. The German horse first charged, on two faces; the nearest square, which was lowest down the hill. The French soldiers stood firm and the front rank, kneeling, received the gallant horsemen with the rolling fire of the Pyramids; but a cloud of dust, which preceded the horses, obscured their aim—a single horse, which dashed forward and fell upon the bayonets, formed an opening—at the entrance thus accidentally made, the furious dragoons rushed, and in a few seconds the whole square were sabred or made prisoners. Encouraged by this success, Bock's men next charged the second square, which also received them with a rolling fire—but their courage was shaken by the fearful catastrophe they had just witnessed—a few of them broke from their ranks and fled—and the whole now wavering, the horsemen dashed in, and the greater part of the battalion was cut down or taken. Not content with these triumphs, the unwearied Germans prepared to charge the third square, to which the fugitives from the two others had now fled, and which was at the top of the hill, supported by some horse who had come up to their assistance. The French cavalry were speedily dispersed, and the square, in like manner, broken by an impetuous charge of this irresistible cavalry. In this glorious combat, the Germans had above one hundred men

(1) "From the enclosed intercepted returns, the army of Portugal consisted on the 1st April, of 63,347 men, of whom 31,483 are effective fit for duty; of these 48,328 are infantry 3,794 cavalry and 3,363 artillery. There are besides 1,500 infantry and 1000 horse at Salamanca; which, deducting 6,200 under Donnet in the Asturias, will leave

42,900 infantry and 4,900 cavalry in the field, with 28 guns."—Wellington to Sir J. Graham, 16th June 1812, G. WOOD, II. 239.

(2) Wellington to Lord Bathurst, July 22, 1812. *Genl. ix.* 364, 306. *James, II.* 100. *London* 963. *Exp.* 180. *Vict. et Comp.* xxi. 42.

killed and wounded, but nearly the whole of the enemy's infantry, consisting of three battalions, were cut down or made captives. The prisoners taken were above twelve hundred. This action deserves to be noticed in a particular manner, as having been, on the enemy's own admission, the most brilliant cavalry affair which occurred during the war (1).

After this defeat of their rearguard, the French army fell into great confusion, and there being no supplies whatever for the troops, great numbers dispersed in every direction in quest of subsistence. But with such extraordinary celerity was this retreat conducted, that Clausel's headquarters were at Flores de Avila, no less than *forty miles* from the field of battle, on the first night,—a prodigious stretch, in little more than twelve hours, for any army, but especially one which, on the preceding day, had undergone the fatigues of a desperate battle. By this forced march, however, the French general both got beyond the reach of further molestation from his pursuers, and got up to Cassarelli's artillery, and horsemen, fifteen hundred strong, who joined from the army of the north, and took the place of the discomfited and wearied rearguard. Still continuing their retreat with rapid strides, they crossed the Douro, and never stopped till they got to Valladolid. Wellington continued the pursuit beyond that river to the same place, where he took seventeen cannon, and eight hundred sick; but seeing no prospect of making up with the enemy, who were retiring towards Burgos, and aware that they were disabled, for a considerable time, from undertaking any active operation, having been reduced to half their numbers, he desisted from the pursuit, recrossed the Douro, and moved against the army of the centre and Madrid, leaving Clinton (2), with his division and Anson's horse, and the Galicians, under Santocildes, to make head against the army of the north in his absence (3).

Joseph was at Blasco Sancho, on the 25th, when he received the stunning intelligence of the defeat, and was made aware by Clausel that he was unable to keep the field to the south of the Douro, and must immediately cross that river, in order to preserve his depots at Valladolid and Burgos. By a rapid movement upon Arevalo, he could still have effected a junction with the army of Portugal, but he wisely declined to link his fortunes with those of a beaten and dejected host, and retraced his steps towards Madrid, in order to preserve his communication with the unbroken forces under Soult in Andalusia, and Suchet in Valencia. Unwilling, however, as long as he could avoid it, to repossess the Guadarama, he moved first to Segovia, from whence he sent positive orders to Soult to

(1) Beamish, ii 83, 85 Gurw ix 305 Jones, ii 110 Belin i 231 Vict et Conq xxi 52, 53 Nap v 182, 183

"The boldest charge during the war was made the day after the battle of Salamanca, by the Hanoverian general Bock, at the head of the heavy brigade of the King's German Legion"—Fox's, *Guerre de la Péninsule*, i 290 Colonel Napier, who is not favourable to cavalry as an arm in war, hardly seems to do justice to his brave comrades, the Germans, in this action, though he admits their uncommon gallantry—Compare Napier, v 184, and Beamish's *King's German Legion*, ii 83, 85—Napier says, merely, that the dragoons "surmounted the difficulties of the ground, and went clean through the square then the squares above retreated, and several hundred prisoners were made by these able and daring horsemen"—V 183 This is hardly the due account of a charge which Wellington says "was one of the most gallant he ever witnessed, and the whole body of the enemy's in-

fantry, consisting of three battalions, were made prisoners," (Guarwood, ix 305)—which Jones says took 900 prisoners, (ii 110)—which Belmas admits destroyed 900 men, (i 231)—and which Beamish, in the *Annals of the King's German Legion*, asserts took nearly 1,400 prisoners, (ii 85)

(3) At Olmedo, where the British entered on the 27th, the brave French general Ferey died of his wounds. The Spaniards had forced the body from the grave before the English soldiers came up, but when the light division arrived, the men rescued the remains of their gallant antagonist in arms from their infuriated enemies, re-made the grave, and heaped rocks upon it for additional security. Recalled to their better feelings by this generous action, the Spaniards "the deed—See Nap v. 185-6

evacuate Andalusia, and join him on the frontiers of La Mancha, and at the same time transmitted to the minister of war at Paris the most bitter complaints against all his marshals, whose jealousies and separate interests rendered them, he affirmed, insensible to the public good, and doomed him to be the impotent spectator of the Emperor's and his kingdom's ruin (1). He was soon obliged, however, by the approach of the British, to abandon Segovia, and retreat across the Guadarama, where he was speedily followed by Aug. 11. the Allies, who on the 11th crossed the ridge, and occupied the Escorial. Joseph, with two thousand horse, was at Naval Carnero, to watch and retard the movements of the British; and a reconnoissance, made by him in the evening, brought on a shock at Majalahonda, with the Portuguese cavalry, under General D'Urban, which formed the advanced guard of the Allies. These squadrons, though they had behaved with great gallantry at the battle of Salamanca, were on this occasion seized with an unaccountable panic, and turned about before they reached the enemy, overthrowing in their flight three guns of horse-artillery, which, in consequence, fell into the hands of the French cavalry. The German horse, however, who were immediately brought up to repair the disorder, behaved with their accustomed gallantry, and checked the pursuers, though not without a considerable loss to themselves, which in all amounted to three hundred men. The French again retired, after burning the gun-carriages they had taken (2) and on the same evening the Allied advanced posts were pushed to the neighbourhood of Madrid.

Great was the consternation which prevailed in that capital at the near approach of the English army. Rumour with its hundred tongues, had even exaggerated the disasters of the French troops: faction was abashed at the awful presence of patriotic triumph; selfish ambition sunk into the earth at the prospect of the immediate overthrow of its golden dreams. Straited as the court of Joseph had been for a long period, there were yet a multitude of persons who were implicated in its fortunes, and beheld with alarm the prospect of its overthrow. The monarch had collected round the seat of government a great number of idle retainers, and all that multitude of dependants, numerous in every country, but especially so in one so full of proud hidalgos as Spain, who are destitute of all public principle, and ready to accept the wages of servitude from any master who possesses the reins of power. The long continuance also of the war, and continued occupation of the capital by the French armies, had inspired a great number of persons of good feelings, but no extraordinary firmness, with the belief that the French power was irresistible, and they had, in consequence, become involved, more or less, with the Napoleón dynasty. All these individuals felt themselves at once exposed to the overthrow of their fortunes, and possibly the last extremities of popular vengeance, and there-

(1) "The few troops at my command, in the army of the centre are assembled; the environs of Madrid. The whole provinces of the centre are evacuated, and even the important positions of Sierra Sierra and Bayona. I should not have been reduced to these painful extremities, if the general-in-chief of the army of the north had obeyed the instructions I have so often given him to succour at all hazards, the army of Portugal, and abandon for the moment all lower points as I have just done. I repeat it M. Duka, if the Emperor cannot discover means to make the generals of the north of Aragon, and of the south obey me, Spain is lost, and with it the French army I have always told you, and I

now repeat it, because affairs are daily becoming more urgent, that the generals who attend only to their own provinces, and not to the general result of the operations, ought to be discarded as an example to their successors, who should be instructed, in the first instance, to obey me; and that I should no longer be condemned, as heretofore to be the impotent spectator of the dissolution of our arms, and the loss of the country."—*Journal de D. de France, Monsieur en l'air* July 12, 1812. *Bull.* 5, 1. 663, 663. App.

(2) Joseph to Soult July 23, 1812. *Bull.* 1. 673. Wellington to Lord Wellington, Aug. 12, 1812. *Genl. Inq.* 319. *Journal*, 11. 113. *Vict.* at Comp. xii. 83, 84.

fore they began in excessive alarm to prepare for their departure as soon as the English advanced posts were seen on the southern side of the Guadarama range. On the other hand, the working-classes, who had suffered extremely from the long occupation of the capital by the enemy, the continued suspension of commerce, the absence of the landed proprietors, and the exorbitant taxes by which Joseph, in the little circle around the metropolis, which alone was really subject to his authority, had endeavoured to realize a scanty revenue for the support of his court (1), were extravagant in their joy at their approaching deliverance, and even the presence of the French troops could hardly prevent them from giving vent to it in every imaginable demonstration. Then, as is usually the case on the eve of a great civil convulsion, the people were variously affected by hope or terror, according as their interests were likely to be affected by the approaching change; but none viewed it with indifference, every heart was agitated, and few eyelids were closed in Madrid the night before the British entered the city (2).

Entrance of the British into Madrid, and enthusiastic joy of the inhabitants Aug 12 The population of the capital had been reduced, by the French occupation and devastation of the country, to a third of its former amount, but the people in the surrounding districts were highly excited when they heard that Joseph and his court were retiring, and when the long and mournful trains set out, on the evening of the 11th, for Toledo, crowds from all quarters hastened to Madrid to witness the entrance of their deliverers on the following morning. Long before the British soldiers were seen on the Guadarama road, every balcony, every window, every door was crowded with eager multitudes, joy beamed on every countenance; and the general exultation had led the people to array themselves in the best remaining attire in their possession, so that it could hardly have been imagined to what an extent misery had previously existed. No words can express the enthusiasm which prevailed when the English standards were seen in the distance, and the scarlet uniforms began to be discerned through the crowd. Amidst a countless multitude, wrought up to the very highest pitch of rapturous feeling, amidst tears of gratitude and shouts of triumph, through throngs resounding with exultation and balconies graced by beauty, to the sound of military music and the pomp of military power—the British army made their entrance into the Spanish capital, not as conquerors but as friends, not as oppressors but deliverers. On that day their chief drank deep of “the purest, holiest, draught of power.” The crowd came forth to meet him, not with courtly adulation or bought applause, but heartfelt gratitude and deep enthusiasm, for famine had been among them, and the wan cheek and trickling eye of the multitude who thronged round him to kiss his hand, or touch his horse, bespoke the magnitude of the evils from which he had delivered them. Incredible were the efforts made to manifest the universal transports. Garlands of flowers were displayed from every door, festoons of drapery descended from every balcony, men, women, and children came pouring out of every house to welcome their deliverers, eagerly pressing on them fruits and refreshments, and seeking to grasp the hands which had freed their country. In the evening a general illumination gave vent to the universal rapture (3) all distinctions of rank, sex, and pro-

(1) The taxes had become most oppressive. All the old imposts, though nominally repealed, were in fact collected as rigidly as before, and, in addition to them, a multitude of new duties on corn, oil, meat, and vegetables. Forced loans had repeatedly been exacted from the wealthier classes, and a tax, first of eight, then ten, then fifteen per cent had been imposed on all houses. Employment there was

none. The hospitals were crowded with sick and starving poor, and of the persons who had died in the first six months of 1812, two thirds had perished of actual want.—SOUTHEY, vi. 48, 49.

session were forgotten in the festive blaze; and the severity of four years seemed to be lost in the intoxicating joy of the first moments of emancipation. But while his troops were indulging in the glorious scene, and ^{large and} officers and men alike were sharing in the festivities provided for them by the gratitude of the citizens, and feeling "the electric shock of a nation's gratitude (1)," the anxious mind of their chief was revolving the means of securing the fruits of this important conquest, and maintaining the brilliant but hazardous position which he had won in the centre of Spain. The Retiro was still in the enemy's hands, and garrisoned by seventeen hundred men; but its possession was of the very highest importance, as it contained the greatest arsenal of military stores and artillery which the French possessed in the country and its loss would entirely disable them, now that the Ciudad Rodrigo train had fallen into the hands of the British, from undertaking the siege of any considerable fortress for a long period of time. Its ^{and its} defences were immediately reconnoitred, and were found to consist of a double set of intrenchments—one so large that an army would have been required for its defence, the other so contracted that the troops, if driven into it, could hardly be expected to withstand a vigorous cannonade. Wellington took his measures accordingly. Preparations were made for assaulting the outer intrenchments, and guns placed in battery to annihilate the enemy when he was shut up in the interior fort. These preparations, rapidly completed, had the desired effect—the commander knowing the weakness of his post, no sooner saw the assaulting columns formed, than he hastened to make his submission; and the fort was surrendered at discretion, with its whole garrison, one hundred and eighty pieces of artillery, twenty thousand stand of arms, and immenso magazines of carriages, clothing, and military stores of all kinds. On the same day, Don Carlos D'España was appointed governor of Madrid, and the constitution proclaimed with great solemnity in the principal public places, amidst shouting crowds, who fondly persuaded themselves that the Spaniards had now established their freedom, as well as achieved their independence, and that, having gained the privileges, they were at once to evince the intelligence and earn the fame of the citizens of Athens and Lacedæmon (2).

Meanwhile Joseph, who had retreated on the road to Aranjuez, was reduced to the most grievous state of perplexity. At the head of only twelve thousand soldiers, he was followed by a motley crowd of above twenty thousand persons of both sexes, and all ages and conditions, who were linked to the fortunes of his court, and whose loud lamentations, clamorous importunity, and real destitution, added inexpressibly to the difficulties of his situation. The mournful procession which extended almost the whole way from Madrid to Aranjuez, resembled rather those lugubrious troops of captives leaving their homes under the stern severity of ancient war, of which classic eloquence has left us such moving portraits, than any of the ordinary events of modern warfare. The line of the soldiers' march was broken in upon by crowds of weeping women and wailing children; courtiers, even of the highest rank, were seen desperately contending with common soldiers for the animals which transported their families; multitudes of persons, bred in affluence and unused to hardship, eagerly sought from casual passengers the necessaries of life. The unhappy monarch had earnestly besought help from Suchet, and been unsuccessful; he had commanded Soult to send ten

(1) *Sir R. Peel.*(2) *South. L. 22, 23. Jones, G. 112, 114. Tier v 78 79. Garw. G. 246, 248. Rep. v 184, 185.*

thousand men to his aid at Toledo, and met with a positive refusal. Thus destitute alike of friends, consideration, or authority, he was surrounded by a starving crowd of needy dependents. He had literally all the burdens of a crown without either its power, its respect, or its means of beneficence. Such was the miserable condition of this immense array, that the cavalry alone of the Allies would have sufficed to have driven the whole into the Tagus, and the bridge of Aranjuez might have renewed the horrors of the passage of the Loire (1), or anticipated those of the Berezina, but Wellington restrained his soldiers, and suffered the crowd to pass over in safety, humanely feeling that the deliverance of the Spanish capital should not be sullied by the massacre of a considerable part of its citizens, and wisely judging that it was not politic to disembarass a fugitive monarch of a crowd of useless and destitute retainers (2).

*General
breaking
up of the
French
power in
Spain
Aug. 13* The French affairs in every part of the Peninsula now exhibited that general crash and ruin which so usually follow a great military disaster, and presage the breaking up of political power. At the same time that the Retiro, with its immense warlike stores, yielded to the arms of Wellington, Guadalajara, with its garrison of seven hundred men, surrendered to those of the Empecinado, who had so long maintained a guerilla warfare in the mountains in its vicinity. Three hundred men had recently before been captured by the partidas near Valladolid, six thousand were shut up and blockaded in Toro, Tordesillas, and Zamora on the Douro, Astorga, long closely besieged, at last surrendered with twelve hundred men, soon after, Tordesillas, with three hundred, capitulated; the castle of Mirabete, near Almaraz, had already been blown up, Talavera *Aug. 19* and the Puerto de Banos were evacuated, and the French troops in the valley of the Tagus withdrawn to the neighbourhood of Aranjuez. Symptoms also of the evacuation of Andalusia at no distant period were already apparent. In the middle of August the castle of Niebla was destroyed, and the whole district of the same name abandoned. All the archives and valuable effects at Seville were packed up, and the defences of the Cartusa convent in its neighbourhood materially strengthened; while an unusual degree of bustle in the lines in front of Cadiz, led to the suspicion that the French were about to retire from their position before that city. No decided *Aug. 21* movement, however, to that effect took place till the news arrived of the capture of Madrid; but no sooner was it received, than the sudden bursting forth of fierce conflagrations in various parts of their lines and violent explosions in all directions, announced that the long-beleaguered city *Aug. 15* was to be delivered. At nine on the following morning the British and Spanish troops made a general sortie, and found the intrenchments deserted, and the work of destruction already far advanced. In a moment the labour of three years had been set at naught. The gigantic intrenchments, constructed at so incredible a cost of time and money, were abandoned, the principal forts were consigned to the flames, while the rapid approach of the besieged, rescued from destruction enormous stores of shot and other warlike implements, which, with five hundred pieces of cannon mounted on the works (3), besides an equal number which had been destroyed before the garrison came up, constituted the proud warlike trophies of the battle of Salamanca.

Vict. et

*Advantages
and dangers
of Writing
his journal.*

The situation of Wellington was now in the highest degree brilliant, and the consequences which had already attended his exertions, both demonstrated the magnitude of the blow which had been struck, and the skill with which the quarter in which it was delivered had been selected. Never was a more just observation than that made by Napoleon at the very outset of the war (1), "that the fate of the Peninsula was to be determined in the neighbourhood of Valladolid for a stroke delivered there would paralyse all Spain." Already from its effects his power had been loosened in every quarter: the valley of the Tagus had been abandoned, that of the Douro conquered, Madrid had fallen into the hands of the Allies; Andalusia was in the course of being abandoned by the French. What was of more importance in a military point of view, the army of the north was now irrevocably separated from that of the centre: the former, not above twenty thousand strong, was thrown back, routed and discouraged, into the neighbourhood of Burgos, the latter, encumbered with a host of fugitives, was flying in dismay over the plains of La Mancha. But these, certainly great advantages, were counterbalanced by corresponding dangers: and to the eye which, undazzled by present events, looked forward to the future issue of things, there were many causes for anxiety in the prospects of the English general, and not the least those which gave the greatest lustre to his present situation. The power of the French in Spain had been loosened, not destroyed: one victory, and the capture of two fortresses, could not overthrow the fabric reared by four years of conquest; the abandonment of the remoter provinces by the Imperial generals, would only augment the force which they could concentrate in the heart of the monarchy: and woful experience had sufficiently demonstrated that no reliance was to be placed on Spanish co-operation, and that the liberation even of the richest provinces brought no corresponding accession of strength to the standards of Wellington. Thus, disaster might possibly in reality improve the situation of the French generals, and, by compelling them to concentrate their forces, and loosen their hold of the remoter parts of Spain, be the means of bringing an overwhelming force against Wellington in its centre.

*Able view
of Soult at
this period
for the re-
establishment
of his army.*

Soult, even before matters had arrived at their present critical situation, had long entertained lofty, and yet reasonable views, for the maintenance of the French power in the Peninsula. Though they were founded, as those of all the marshals at that period were, upon the immediate interests of his own province, and proposed an arrangement which was to bring him into the supreme direction of its military affairs, yet it is doubtful whether, by any other combination, an equally formidable force could have been brought against the English general. His plan, founded on the necessity of retaining their hold both of Andalusia and Valencia as the great reservoirs of their resources, and the impossibility of doing so with effect while the centre of Spain was also occupied with insufficient forces, was, that Joseph himself should come to Andalusia with all the troops he could collect, and so reinforce the army of Estremadura to such an extent as might enable them to resume the offensive in the Alentejo, and fix the seat of war in the Portuguese provinces on the left bank of the Tagus (2).

(1) *Ann. vi. 333.*

(2) I see clearly the dangers of your Majesty's position; but any troops which I could send you would be insufficient to re-establish your affairs, unless the whole army of the south should march, which would occasion the loss of Andalusia, and, by necessary consequence, of Valencia. From one

post to another we should be driven to the Elbro. Now, all that might be routed. It can by single word from your Majesty save six thousand sick and wounded, whom I shall be compelled to abandon, preserve two thousand pieces of cannon, the only reserve part that now remains in Spain, and abridge the war by at least six campaigns. I propose that

Impressed with these ideas, it was with the most poignant regret that this able commander received the formal order from the king, already mentioned, to evacuate Andalusia, and thus lose at once the fruit of three years' labours. "The southern provinces," he observed, "hitherto such a burden, now offer the means of remedying the present disasters. To sacrifice them, for the sake of regaining the capital of Spain, is folly, it is purchasing a town at the price of a kingdom. Philip V thus lost it, and yet preserved his throne. The battle of Arapiles was merely a grand duel, which might be fought over again with a different result, but to abandon Andalusia, with all its stores and establishments, to raise the siege of Cadiz, sacrifice the guns, the equipments, the hospitals, and the magazines, and thus render null the labour of three years, would be to make the battle of Arapiles a prodigious historical event, which would be felt all over Europe, and even in the new world. Collect, then, the army of the centre, the army of Aragon, and, if possible, the army of Portugal, and march upon Andalusia, even if in so doing you should be obliged to evacuate Valencia. By doing this, a hundred and twenty thousand men will be assembled on the southern frontier of Portugal. If the army of Portugal remain on the north, let it do so. It can defend the line of the Ebro; and the moment eighty thousand men are assembled to the south of the Sierra, Morena, the theatre of war is changed, and the English general must fall back to save Lisbon (1) "

Refusal of
Suchet to
send any
succour to
Joseph

Important and daring as these views for the maintenance of French ascendancy in Spain undoubtedly were, they involved a sacrifice of the capital, the central provinces of the monarchy, and the communication with France, to which Joseph could by no means reconcile his mind. Nor, if he had adopted Soult's views, would it have been an easy matter to carry them into execution, for the army of Portugal was totally unable to undertake any such march as that from the Ebro to the Guadalquivir, the army of the centre, with its fearful train of dispossessed and starving courtiers, would be rather a burden than an assistance; and Suchet, with the army of Aragon, so far from being prepared to sacrifice his hard-won conquests in the east of Spain, by following the King's standard into Andalusia, had positively refused to send him any succour, even to prevent his capital from falling into the enemy's hands (2). The plan proposed by Suchet, that the retreat of the army of the centre should be upon Valencia, and that Soult, with that of the south, should be directed to fall back in the same direction, if less brilliant and daring, was more feasible and prudent than that of Soult—that the whole centre of the Peninsula should be evacuated, and the French forces assembled, in two masses, on the Ebro and the Guadalquivir, and it had the great, and in Joseph's estimation, decisive advantage, that it kept open the great lines of retreat and communication with

your Majesty should yourself come, with all the troops you can collect to Andalusia, that will enable us to increase the army in Estremadura to such an extent as will fix the seat of war in the Portuguese provinces to the south of the Tagus"—*Soult to Joseph, 16th July 1812, BELLAS, i. 658*

(1) *Soult to Joseph, Aug 12, 1812, Nap v 589, Appendix*

(2) "I am well aware that the most formidable enemies which the Emperor now has in the Peninsula are the English, and see clearly the importance it would be of, if I could send your Majesty a corps of fifteen thousand or twenty thousand men, but when the impossibility of doing so is as clearly demonstrated as it is at this moment, I conceive it is my first duty to make you aware of the advantage

of preserving our conquests in Valencia. They offer a point of retreat at once to the army of the centre and that of the south, and preserve the great line of communication with France by the eastern coast. Valencia is the true point of retreat; Wellington will never fight so far from his ships. His only object by his invasion is to reap the harvests of Leon, and induce your Majesty to evacuate Andalusia. My first duty is to act according to the Emperor's instructions of 24th April: any detachment towards Madrid would compromise the fate of the provinces of Catalonia and Valencia. I see, with extreme regret, I have lost your Majesty's confidence, and pray you to give me a successor"—*Soult to Joseph, June 30, 1812, BELLAS, i. 657, 661.*

Aug. 12. Franco, both by the routes of Barcelona and Bayonne. Positive orders accordingly were transmitted to Soult to continue and complete the evacuation of Andalusia, and fall back with all his forces towards Valencia. The marshal, much against his will, obeyed these instructions, and the French troops, in every quarter, took the road for Murcia, but such were the feelings of exasperation excited on both sides by these calamities, and this immense abandonment of territory, that mutual and most acrimonious complaints were made on both sides to Napoléon—Joseph accusing Soult of disobedience of orders, and a design to make himself king of Andalusia (1); and Soult accusing Joseph, to the French war minister, of disloyalty to his brother, and forgetfulness of the Emperor's interests in the separate concerns of his own dominions.

When Wellington first moved into the plains of Leon, Hill received orders to remain on the defensive in Estremadura, and not fight with his opponent unless an opportunity should occur of doing so obviously to advantage. At this period it was Drouet's interest to have urged on a battle, as a serious loss in the south, even if consequent on a victory, might have compelled Wellington to detach, or even arrest his career of success in the north. He advanced accordingly with twenty four thousand men to Santa Martha, with the intention of attacking Hill's corps; but the position at Albuera, now considerably strengthened by field-works, which the English general had assumed, was so formidable that he was deterred from the attempt, and retreated towards the Sierra Morena on the very day of the battle of Salamanca. A variety of affairs of outpost afterwards ensued between the two armies, in one of which

July 24. Slade's brigade of horse gained a brilliant advantage over the French cavalry. Nothing of importance, however, ensued between the two armies till the battle of Salamanca had imposed on Soult the necessity of withdrawing his troops altogether from Estremadura, preparatory to the general evacuation of the southern provinces. and then Hill followed Drouet, on his retreat to the Sierra Morena, till he received orders from Wellington to advance up the Jarama towards Madrid, to cover the city on the southern side, while he himself, with the bulk of his forces, proceeded northward to the siege of Burgos (2).

Wellington was not long, after he arrived at Madrid, of perceiving that the north was the quarter in which matters had become most urgent, and that it was there that the struggle for the maintenance of his position in the Peninsula was to be undergone. The expected co-operation on the east coast of Spain had, as already mentioned, entirely failed. Clausel had been considerably reinforced in the north; and Madrid had been very far indeed from realizing the sanguine expectations which had been formed as to the extent to which it might provide means for the campaign. A loan of L.480,000 had indeed been asked from the city, and nominally agreed

(1) Soult to the Duke de Feltre, Aug. 12, 1812. Nap. v. 591 and 224, 225.

"I have yesterday received the letter in which which your Majesty wrote to me, from Rescena on the 18th October. At the distance the Emperor is from his capital, there are some things on which we must shed our eyes, at least for the moment. If the conduct of the Duke of Dalmeida is prudent and doubtful—if his proceedings even be the same aspect as those he formerly adopted when in Portugal, after the taking of Oporto—the time will come when the Emperor may punish him, if he deems it expedient; and, perhaps, he is less dangerous where he is than here, where a few factions

perpetrate, from the depth of the prisons even where they were confined, meditated, and all but executed, revolution against the Emperor's authority on the 24 and 26 October (Blacket's conspiracy). I think, then, sir, it is most prudent not to drive the Duke of Dalmeida to extremities; taking care nevertheless, underneath, to thwart all his such than projects; and using every imaginable precaution to secure the stability of the army of the north towards the Emperor, and also that of the Spaniards in his service.

—Confidential Letter the Duke de Feltre, Ambassador at Paris to King Joseph; Paris, 10th Nov. 1812. Nap. v. 822, 4 pp.

to, but such had been the exhaustion of its resources by the long previous impoverishment and exaction of the French troops, that it produced very little. The regency at Cadiz could not be prevailed on to contribute any thing even for the subsistence of the troops, the military chest, so far as specie was concerned, was absolutely penniless, the war with America had, at the most critical period of the contest, closed the principal source from whence grain had hitherto been obtained for the army, and supplies could be procured only by purchasing corn for hard cash, and at a heavy expense, in Lisbon. The citizens had liberally fed the troops in garrison, and the stewards of the sequestered and royal lands had zealously given the produce of their harvest on the promise of future payment, but no steps whatever had been taken to augment the military strength of the country, or turn the enthusiasm of the people to any useful account. The guerillas were quietly settling down in the large towns, and striving to console themselves for their privations by the plunder they could collect, while the people of the capital, deeming the war at an end, were giving themselves up to feasts and bull-fights, without any thought of the serious concerns of their situation. Thus the whole weight of the contest, as usual, was likely to fall on Wellington and his English troops; and as the north was the vital point of the campaign, and the considerable reinforcements which were coming from England had been directed to Corunna to join him on the Douro, he resolved without delay to direct a considerable part of his forces there, and proceed in person to endeavour to gain a base for the future operations of the war in the northern provinces (1). Leaving, therefore, the two divisions of the Allied army which stood most in need of repose at Madrid, he himself set out on the 1st September for Valladolid with four divisions. Hill was ordered to Aranjuez to assist in covering

Sept 1 the capital, the British and Portuguese from Cadiz were ordered round by sea to Lisbon, with instructions to move up as rapidly as possible to the scene of action, the guards and reinforcements from England were directed to land at Corunna, and thence cross Galicia with all possible expedition, and every effort made to bring together as great a disposable force as could be collected in the anticipated seat of war to the north of the Douro (2).

French
retire to
Burgos
Sept 8

The march from Madrid was conducted with great expedition. Leaving that capital on the 1st September, the English general passed the Douro on the 6th, at the fords of El Herrera, and on the 7th drove the enemy from Valladolid; and following them closely, effected a junction with the army of Galicia under Santocildes at Palencia. It was there seen how miserably fallacious had been the representations which had been held forth as to the support which might be anticipated from this portion of the Spanish troops. Instead of thirty thousand men who received rations as soldiers in Galicia, there only joined the army twelve thousand men, ill-disciplined, and almost in rags, of whom no more than three hundred and fifty were horse. It was quite evident, the moment they made their appearance, that no reliance could be placed on them to withstand the shock of a single division of French troops. If, however, the appearance of the Spanish

(1) Such was the misery to which the poorer classes of Madrid had been reduced by the long continued exactions of the French troops and authorities, that when the British arrived, so far from being in a condition to give them any support, they needed relief from them. Groans of famishing persons were, in the poorer quarters of the city, heard every night, while, in the morning, the numerous dead bodies

thrown into the streets showed how intense the suffering had been, and the British officers of the third division and 45th regiment formed by contributions a soup-kitchen, which rescued hundreds from an untimely death.—See *Napier*, v. 257, 258.

(2) Wellington to Sir H. Wellesley, Aug. 23, 1812. *Gurw.* ix. 369, 371. *Jones*, ii. 123. *Nap.* v. 258, 261. V. XXI.

force was in the highest degree discouraging, that of the French troops was in a proportional degree satisfactory, and evinced, in the clearest manner, the vast chasm which the battle of Salamanca had made in their ranks. As Clausel retired, he broke down all the bridges over the numerous streams which, in that mountainous region, flow towards the Douro or the Ebro, the repairing of which sensibly retarded the advance of the British, but when he drew near to Burgos, and took up a position covering that town, which compelled the Allies to wait till the bulk of their army came up, it at once appeared how immensely his numbers had diminished from the effects of that memorable engagement. His battalions could be distinctly numbered; and the whole amount of his troops, including cavalry and artillery, did not exceed twenty two thousand (1), a sad contrast to the noble army of forty-five thousand who had so lately crowded the banks of the Guarena. With this force he did not conceive himself sufficiently strong to fight; and therefore abandoning Burgos to its fate, he retired to Briviesca, on its northern side, where he was next day joined by General Souham with nine thousand infantry of the army of the north, which increased his force, even after deducting two thousand left in garrison in the castle of Burgos, to fully thirty thousand men (2).

Description of the castle of Burgos, and the French works there. The Castle of Burgos, which has acquired, from the consequences of the siege that followed, an historic character that would not otherwise have belonged to it, occupies the upper parts of an oblong conical hill, the lower half of which is surrounded by an uncovered wall of difficult access, while on its summit stands an old square keep, converted by the French into a modern casemated fort. Between these defences, which they found there when they commenced their operations, the French engineers had constructed two lines of field works, well built and strongly palisaded, which enclosed the two summits of the hill, on the highest of which the old keep, surrounded by a strong battery, stood, while the lower was crowned by an ancient building called the white church, which also had been converted into a sort of modern fortress. The battery called the Napoleon battery, round the old keep, was so elevated that it commanded the whole country within cannon-shot around, with the exception of a hill called St. Michael, which was a lower eminence, on which the French had constructed a hornwork, with a scarp twenty-five, and a counterscarp ten feet high, encircled by strong palisades, and well furnished with heavy cannon, while its position under the fire of the Napoleon battery rendered it peculiarly difficult to hold even if won by assault. Twenty heavy guns and six mortars were already mounted in this fortress; and, independent of its importance as commanding the great road from Bayonne to Madrid, its acquisition was an object of the very highest importance to the Allies, as the whole stores and reserve artillery of the army of Portugal were deposited within its walls, and its reduction, by depriving that force of its resources, would probably enable the English general to take up his winter quarters, and fix the seat of war, on the banks of the Ebro (3).

Storming of the hornwork of St. Michael. The first effort of the English general was directed against the hornwork of St. Michael, the possession of which was indispensably necessary to approaches against the body of the place. Such, how-

ever, was the vigour with which the French batteries, which commanded all the fords and bridges over the Arlanza stream, which required to be passed before it could be reached, were served, that it was not till the 19th that the passage was effected, and the outposts on the hill of St Michael driven in. An assault was immediately ordered for the same night, and conducted by Major Somers Cocks, with the light infantry of the first division, Pack's Portuguese, and the 42d British regiment. As soon as it was dark, the troops moved to the assault, and as the works, though formidable, were not yet entirely finished, they succeeded in forcing their way, headed by the 79th, in by the gorge, at daylight the next morning, although the attempt to carry the work itself failed, from the great height of the scarp. The garrison, which consisted of a strong battalion, made a stout resistance, and, when they found the entrance in the enemy's possession, collecting themselves into a solid mass, they overpowered all opposition, burst through the assailants, and regained the castle, with the loss only of a hundred and fifty men, while that of the assailants was above four hundred (1).

Repeated
unsuccessful
assaults

Batteries were now erected against the exterior line of defences, and Wellington had an opportunity of observing in person the strength of the place. Although the lines were far from being complete, and such as would easily have yielded to a very small battering train; yet such was the almost total destitution of the British army in heavy artillery, that Wellington, from the very first, expressed the most serious apprehensions that he would not be able to breach its ramparts, and that his only chances of success consisted in the failure of the garrison's water, or in their magazines being set on fire (2). The attempt, however, was made twelve thousand men, comprehending the first and sixth divisions, with two Portuguese brigades, were intrusted with the siege, while twenty thousand, supported by ten thousand Spaniards, formed the covering force. Approaches in form were accordingly commenced, although the miserable battering train, which consisted only of three eighteen pounders and the five iron

Sept. 28

twenty-four pound howitzers which had been used at the siege of the forts of Salamanca, gave but little hopes of a successful issue to the enterprise. An attempt was made, after the breaching guns had played a few days, to carry the outer wall by assault, but although the troops got into the ditch, and the ladders were fixed against the scarp of the rampart, yet the few who reached its summit were immediately bayoneted, and, after a bloody conflict of half an hour, the assailants fell back, after having lost three hundred and fifty men (3).

Storming
of the outer
lines

All the attempts to breach the wall of this outer intrenchment by means of the heavy guns having failed, and two out of the three having been silenced by the superior weight of the enemy's fire, an attempt was made to run a mine in such a manner as to blow it down, while the single gun which remained in a serviceable condition continued its ineffectual fire upon the rampart. The gun could do nothing but the mine, which was exploded on the night of the 29th, made a chasm in the wall, though not sufficiently wide as to be deemed practicable by the assaulting columns, though a sergeant and four men, who formed the forlorn hope, had

gained its summit; and before the next morning the garrison had, with surprising activity, run up such interior defences as rendered all entrance impossible. Recourse was now had to a second mine—a new gallery was run

Oct. 1 under the wall, and, at four in the afternoon of the 4th October, it was sprung with a terrific explosion, which at once sent many of the French up into the air, and brought down above one hundred feet of the wall. An assault was instantly ordered, both there and at the old breach, and both proved successful. Holmes, with the 2d battalion of the 24th, quickly forced his way through the smoke and crumbling ruins, almost before the rattle of the explosion had ceased; while Lieutenant Fraser of the same regiment, at the same moment carried the old breach—and both uniting, drove the enemy into their interior line. This important achievement greatly elevated the spirits of the army, which had sunk considerably from the long duration and serious loss of life during the siege—and the speedy reduction of the castle was anticipated, the more especially as some supplies of ammunition had already been received from Santander, and more was known to be on the road, both from Ciudad Rodrigo and Corunna (1).

But these promising appearances were of short continuance, and soon gave way to such a succession of disasters, as not only almost shut out all hope of a successful issue to the siege, but so seriously depressed the spirit of the army, as went far to counterbalance all the advantages of the campaign. Dubreton and his brave garrison, who throughout the whole siege discharged with incomparable vigour and talent the important duty intrusted to them, made the most strenuous efforts to dispossess the besiegers of the vantage-ground they had gained, and, in the first instance at least, with unlooked for success. A sally, suddenly directed, on the afternoon of the next day, against the advanced posts of the British within the outer wall, swept

Oct. 2 them all back and regained both breaches—and though the garrison was driven in again the same evening, yet they had in the mean time destroyed this lodgment, and carried off the tools. The two following days Oct. 3 and 4 were employed by both parties in indefatigable efforts—the Allies increasing the front of their lodgment, and pushing their sap up to the second line—the French, by frequent sorties and an incessant fire, as well as by rolling of shells down the hill, striving to retard them. On the evening of the 8th, however, the head of the sap had, by strenuous exertions, been run to within ten yards of the wall; and Dubreton, seeing an assault of that line imminent, ordered a sally in the night, which succeeded so far, that by a desperate rush the trench was gained, and before the enemy could be driven in again, which was effected with the utmost gallantry by Major Cocks, who fell dead in the moment of success, the whole works, constructed with so much labour between the outer and inner line, were destroyed (2).

It was now evident that to push the sap on so narrow a front, without the aid of artillery, was hopeless; and every effort was therefore made to increase the fire on the inner line. The arrival of ammunition from Santander enabled the engineers to do this. The one remaining gun was worked incessantly—and the five iron howitzers did such good service, that it was evident that if an adequate supply of ammunition could be obtained, the place would speedily fall. But the failure of that indispensable article again suspended the operations, and it was not till the

Oct. 25 15th that the fire in the breaching batteries could be renewed. It

was then directed against the inner circle of the Napoléon battery, while
 Oct. 17 a mine, charged with nine hundred pounds of powder, was run
 under the white church. This done, and the howitzers having cleared away
 the temporary obstructions run up in the breach of the second line, a final
 assault was ordered for the night of the 18th. At half-past four in the morn-

Oct. 18 ing, the signal was given by the springing of the mine beneath the
 white church, which threw down a part of the wall; and Colonel Browne,
 at the head of a Portuguese battalion and some Spanish companies, after a
 violent struggle, established themselves in its ruins. At the same time, a de-
 tachment of the King's German Legion carried the breach of the second line;
 the Guards at another place, got in by escalade, and the intrenchment was
 won. Some brave men, in the tumult of victory, even rushed on and got to
 the summit of the breach of the third line, where the bodies of Major
 Wurnib and a Hanoverian colonel were found. Unfortunately, however, the
 efforts of these heroes were, in the darkness of the night, not adequately
 supported; the troops got dispersed in the space between the second and
 third line, and Dubreton, who had a powerful reserve in readiness to take
 advantage of such an incident, instantly rushed down with an overpowering
 force, and drove the assailants out of the lines they had so gallantly won,
 with the loss of two hundred men (1)

Wellington raises the siege: causes of its failure. This was the last effort of the besiegers. The siège, which had now
 continued without intermission for thirty days, had not only occa-
 sioned a vast consumption of ammunition to the Allies, which they
 could ill spare in the exhausted state of their supplies, but it had cost them
 two thousand brave men killed and wounded, and given the French generals
 time to assemble forces from all quarters for its relief. Souham's corps at Bri-
 viesca had been joined by the whole army of the north, and strong reinforce-
 ments from Alava, in consequence of which Clausel, whose force was now
 raised to forty-four thousand men, had assumed an offensive attitude, which
 had obliged Wellington to unite nearly the whole besieging to the covering
 army, on the day of the last assault. He had even driven in the British pic-
 kets, and obtained possession of Quintana Palla on their left, though from
 this they were immediately expelled by Sir Edward Paget with two divisions.
 Accounts, however, were at the same time received from Madrid, which ren-
 dered it indispensable for the Allies forthwith to provide for the security of
 the centre of Spain. Soult, who had without molestation assembled his whole
 forces in Andalusia, including Drouet's from Estremadura, had marched

Sept. 15 from Grâna da in the middle of September, by the way of Caravaca,
 and effected his junction with the army of the centre, under Joseph, on the

Sept. 21 29th of the same month, at Albante. Their united force was sixty
 thousand strong, without reckoning on any of Suchet's troops. Ballasteros,
 whose indefatigable activity and energy had hitherto so justly procured for
 him a high reputation, was so mortified at being directed by the Cortes to act
 in obedience to the directions of Wellington, that at this critical period he
 not only hung back, and kept his important force in a state of inactivity, but

Sept. 12 actually published a proclamation to his troops, appealing to the
 Spanish pride against the indignity of serving under a foreigner; a proceed-
 ing for which the government at Cadiz most justly deprived him of his com-
 mand, and confined him in the fortress of Ceuta. But, meanwhile, the evil
 was done, and was irreparable. the whole army of the south had united with

(1) Wellington to Lord Bathurst, Oct. 26, 1812. 277, 279. Belm. iv. 291, 295. Vict. et Con-

that of the centre, and was advancing rapidly against Madrid with sixty thousand men while the reinforced army of the north, mustering forty five thousand soldiers, pressed on Wellington on the northern side. Thus, as usual, the whole weight of the contest had fallen upon the British general, whose united force, after the losses and sickness of the campaign, being little more than half the number of the enemy's armies directed against them, a retreat to a central position became a matter of necessity; and the siege of the castle of Burgos was raised on the night of the 21st, not without severe regret on the part of the English general (1).

Southern first operations were directed against the castle of Chig-chilla, a fort of great strength, situated on a high rock at the point of junction of the roads of Allicano and Valencio, and commanding

...the capital. It was estimated by two hundred and forty men, and, from its inaccessible situation, was well-nigh impregnable. Wellington had calculated upon the loss of this fort.

By this fortunate catastrophe, coupled with the no less suspicious

injunction with that of Joseph, in all sixty thousand men, to bear against the centre of Spain, where Hill, now reinforced by the troops from Cadiz, with

In these circumstances, it became a matter of necessity to abandon

British force in the Peninsula, in a central situation on the plains of

John. Wellington then experienced the truth of what he had long before expressed in his correspondence, viz., that the invasion of Andalusia and the siege of Cadiz, by retaining a large portion of the French force in a state of

and been a sensible benefit to the Allied cause; and that the battle of Salamis, by interrupting this order and bringing their masses concentrated to-
 comparative inactivity, so far as retaining the British Army was concerned,

other, from the mountains of Asturias to the bay of Cadix, upon the same host, would, in the first instance at least, prove a disadvantage. He assumed orders to him according to abandon the line of the Tagus, which

the neighborhood of Salamanca. These orders were immediately obeyed
and hitherto held, evacuate Madrid, and fall back by the Guadarrama pass
preparations for the defence of the line of the Tagus were discontinued (3);

[illegible][illegible]

Madrid was evacuated, amidst the frequent tears and mournful silence of the inhabitants; a dense mass of men, women, and children, followed the troops for miles bewailing their departure on the same day Joseph made his entry, and the British army, at first in good order, took the road for the Guadarama pass.

Great difficulties of Wellington's retreat
 Meanwhile, Wellington himself had extraordinary difficulties to encounter in his retreat from Burgos. No small difficulty was experienced at the very outset in getting the troops across the bridge of the Arlanza, for it was commanded by the castle, and the enemy, aware of the intentions of the besiegers, had brought every gun they possibly could to bear on the narrow archway. Such, however, were the precautions taken by the British engineers to prevent the carriages passing from making any noise, as the French had done twelve years before at the siege of the Fort of Bard in the valley of Aosta (1), that the whole would have got over in the night in safety, had not some irregular Spanish horse heedlessly galloped past, and, by their ill-timed clatter, attracted the attention of the garrison, who instantly commenced a heavy fire on the bridge, then crowded with carriages, which

Oct. 21 at first was very destructive, but the aim was soon lost as the guns recoiled, and the remaining discharges, which continued through the whole night, did little or no mischief. This night march, which, from its extraordinary difficulty and boldness, had never been anticipated by the French generals, gave Wellington a full day's journey in advance of them, and the French cavalry did not overtake the Allies in any force till the forenoon of the 23d. Several sharp affairs between the cavalry on either side then took place. In particular, at the passage of the Hormaza, General Anson's brigade twice charged the head of the pursuers' as they forded, and for three hours checked the pursuit.

Oct. 23 A more serious action took place near Venta del Pozo, when the French cavalry, who had at length forced the passage, and were hotly pursuing Anson's horsemen who were retiring in disorder, were received by two battalions of the King's German Legion drawn up in square. The Imperial cavalry came on with then wonted gallantry and loud shouts but they were unable to retaliate upon the Germans the disaster of the 23d June (2), the steady squares received them with a rolling volley, and after several ineffectual charges, in the course of which they sustained a severe loss, the French squadrons were obliged to retire, and the retreat on that day was continued without any further molestation. The army retiring in two co-

Oct. 24 lumns crossed the Pisuerga, and headquarters were fixed for the night at Cordovilla. Much disorder prevailed there during the night, in consequence of the soldiers, who already, from the commencement of the retreat, had become relaxed in their discipline, breaking into the subterranean caves in that vicinity, where the wine of the vintage was stored, and the effects of intemperance generally appeared when the troops began to move next morning but luckily the enemy was not aware of the circumstance, and the retreat of twenty miles was conducted that day without molestation as far as Duenas, across the Carrion, where the Guards who had disembarked at Corunna, joined the army nearly on the spot where Sir John Moore had commenced his forward movement against Soult four years before (3).

It had now become evident that the French cavalry, nearly double that of the Allies, and fresh from cantonments, while the British and Portuguese were extenuated by the fatigues of a long campaign, could hardly be opposed

power, and stretching out his light troops to the northward, in order to feel for the corps of Souham, which was descending from the Douro On the 6th,
 Nov 7 his headquarters were at Areolo, and on the day following the advanced posts of the two armies entered into communication by Medina del Campo. The main bodies were not long in effecting a junction; and on the
 Nov 10 10th the united force advanced towards the British post at Alba de Tormes. General Hamilton, with a brigade of Portuguese, held the castle at that place, round which some field-works had been hastily constructed, and though Soult battered it with eighteen pieces of artillery, to which the Allies had only four guns to reply, yet their fire of musketry was kept up with such vigour that the enemy did not venture upon an assault, but sought for and found a ford higher up the Tormes, at Galisancho On the following day the whole French army passed over, and took post in a strong position near Mozarbes, from whence detachments of their numerous cavalry threatened the communication of the British with Ciudad Rodrigo The force now at the disposal of the French marshals was very formidable, amounting to no less than ninety-five thousand men, of whom twelve thousand were superb cavalry, with a hundred and twenty pieces of cannon (1).

To oppose this immense force, Wellington had fifty-two thousand British and Portuguese, including four thousand horse, and four-
 Wellington offers battle, which is refused
 teen thousand Spaniards, but on the last little reliance could be placed in a regular engagement With so great an inferiority, it was impossible for the English general to attack the French on the strong ground which they themselves had selected, but he offered battle in his own position, and for this purpose withdrew to the famous position of Arapelles The sight of that memorable field strongly excited the soldiers of both armies, the French, conscious of their superiority in number, demanded with loud cries to be led to the combat, hoping to wash out the recollection of their former defeat on the very spot on which it had been sustained The sight of the ground, still blanched by the skeletons of their countrymen, and strewed with fragments of casques and cuirasses, excited in the highest degree their warlike enthusiasm The British, nothing doubtful of the result of a second battle of Salamanca, clustered in great strength on the two Arapelles, and the ridge of Arriba, yet moist with the blood of their heroic comrades, and gazing with stern resolve on the interminable masses of the enemy, panted for the thrilling moment which was to bring to a decisive issue their long protracted contest The opinions of the French generals, however, were divided as to the course which should be pursued Jourdan, whose martial fire age had not extinguished, was eager to fight immediately, and for this purpose to bear down at once on the Allies, and hazard all on the issue of a single battle. Soult, on the other hand, better instructed in the character of the troops with whom he had to deal, hesitated to attack them where they stood, and instead, moved a considerable part of his force to the left, so as to menace the communication with Ciudad Rodrigo, much as Marmont had done, but on a wider circle, so as to be beyond the reach of the falcon swoop which had proved so fatal to his predecessor (2)

Wellington, knowing that the immense superiority of the enemy, especially in cavalry, rendered it an easy matter for them to out-

fusion, as they would not fight, to retreat already the baggage had debilitated through Salamanca, and at three o'clock in the afternoon several loud explosions in the British rear announced to both armies that the movement had commenced. The operation, however, was a very hazardous one for, in performing it, the Allied army, dealing almost without cannon-shot of the enemy, presented their flank, several miles in length, to the attack, and a daring general had the same opportunity for a brilliant stroke which had been presented to Wellington by Marmon, on the same ground, four months before. Possibly the extreme ardour of the French soldiers might, notwithstanding the presence of their leader, have brought on a general action, but in that desperate moment the star of England provoked a violent storm of rain, accompanied by a thick mist, came on, which for two hours rendered it impossible to see any object more than a few yards ahead; and during this interval of darkness, the whole British army, in three columns, having the advantage of moving on the high-roads, while the enemy could only attack by cross lanes, now almost impassable from wet, moved safely past the dangerous ground. A few cavalry alone followed the Allies, and made only two hundred prisoners (1) and the single trophy which the enemy could show from a crisis which might have changed the fate of Spain and the world, was the English second in command, Sir Edward Paget, who accidentally fell on the day following into the hands of a small party of horse, while riding unattended from one column to the other, during the darkness of a severe storm.

The retreat from the Arapiles to Ciudad Rodrigo lasted but three days, and it was only disturbed by the cavalry of the French, almost all their infantry and guns having halted at Salamanca. Nevertheless, the distress of the troops for the most part was very great, the disorders frightful, and the loss sustained very considerable. During the whole march the weather was to the last degree inclement; storms of wind and rain succeeded each other with hardly any intermission; and the spirit of the soldiers, already weakened by the long continuance and severe fatigues of the retreat, sunk in an extraordinary degree, and precipitated them into general confusion and insubordination. The roads were so deep that it was with the utmost difficulty that the guns and baggage-waggons could be dragged through; the supplies, especially of Sir R. Bull's corps, almost totally failed, from troops having been turned off their former communications without gaining any new ones; and the soldiers, compelled to stagger in quest of subsistence, fell into the usual disorders of a disorganized army, and in great part yielded to the unbounded passion for intoxication which breaks out in all men during severe distress, but has, in every age, been in a peculiar manner the disgrace of the English people. On the 10th, the march of the army was through a continued forest, where vast quantities of wine were feeding under the trees; the soldiers immediately dispersed to about the game thus presented to their hand, and such a rolling of musketry was heard through the woods, that Wellington at first thought the enemy were upon them. A sharp skirmish took place, as the rear-guard of the army was descending the steep slopes which lead from the high table-land covered with the forest to the llanura stream, which now was passed with very little loss a disposition from orders on the part of the officers in direction of columns, had wellnigh occasioned a serious loss, by taking the much to a place where the road, though more direct, was crossed by the river

(1) *Vid. et Comp. vol. 64. pp. 306. 312. 313. 314. 315. 316. 317. 318. 319. 320. 321. 322. 323. 324. 325.*

in an impassable state of flood, from which they were only extricated by being led back by Wellington in person, happily without the enemy's knowledge, to Nov 17 the ford which he had originally assigned, and on the 17th the weather was so dreadful, and the privations of the troops so excessive, that most serious disasters might be anticipated if the retreat were conducted further in such calamitous circumstances. Happily, as this was the worst day of their sufferings, so it was the last. Soult, whose troops were suffering nearly as much as those of the Allies, was compelled by utter starvation to discontinue the pursuit at the Huebra; a few squadrons only followed to the Tamames; on the 18th the weather cleared up, provisions in plenty were obtained from the magazines at Ciudad Rodrigo, and liberally served out to the famishing troops, and the wearied men, finding fuel and dry bivouacs on the sandy hills near that fortress, forgot their fatigues around the blazing watchfires, and after six months' incessant toils and dangers, sunk into the enjoyment of undisturbed repose (1)

Both armies are put into winter-quarters. Both parties were now thoroughly exhausted with their fatigues, and not only rest, but a separation on either side in quest of subsistence, had become indispensable. If Soult had remained, with all his forces together, for a week longer, one-half of his soldiers, and probably all his horses, would have perished of actual famine, and if Wellington's retreat in similar storms had continued a few days more, his army would have been wellnigh dissolved. Both the French and the English commanders accordingly put their troops into winter-quarters, and the vast arrays which had so recently crowded the banks of the Tormes were dispersed over a wide extent of surface. The British went into cantonments on the Coa and the Agueda, the left being thrown back to Lamego, and the right advanced so far forward as to hold the pass of Bejar. Headquarters were again established at Grenada. Soult's noble army was entirely dislocated. His own headquarters were established at Toledo in La Mancha, Joseph returned with his guards to Madrid, and the bulk of the army was cantoned in Old and New Castile, between the Douro and the Tagus, Salamanca being occupied in strength by two divisions. But the ground lost in the campaign was never again recovered. Asturias and Estremadura remained in the undisturbed possession of the Spaniards, the Imperial standards never again crossed the Sierra Morena, and Andalusia, Murcia, and Grenada were for ever delivered from the oppression of the invader (2)

Losses of the retreat, and severe address of Wellington to his troops. The losses sustained by the British and Portuguese during this retreat, by casualties or prisoners in the field, did not exceed fifteen hundred men, but the stragglers who fell into the enemy's hands were much more numerous, and the prisoners taken in this way exceeded three thousand. Altogether, from the time that the siege of Burgos was abandoned, the army had been weakened by the loss of nearly seven thousand men. The insubordination of the troops, and the frightful habits of intemperance to which in many cases they surrendered themselves, were the main causes of this serious diminution. For the retreat had been conducted with extraordinary skill, the men of both armies had retired above two hundred miles, in presence of greatly superior forces, without a single battalion being broken, or a gun or standard taken, no stores, treasure, or provisions had been destroyed, none of the sick and wounded abandoned, no night marches, with the exception of that under the cannon of the castle of Burgos,

troops before the next campaign, and all admitted that it was in a great degree to their beneficial effect that the triumphs of Vittoria and the Pyrenees were to be ascribed (1)

While this surprising campaign was going on in the centre and north of Spain, the operations in the south and on the east coast, though not equally brilliant, sustained the character of the British arms, and, in their ultimate effects, were attended with important results in the deliverance of the Peninsula. It has been already noticed (2) how much Wellington found his operations impeded, immediately before the battle of Salamanca, by the project of Lord William Bentinck to commence his grand diversion on the Italian shores, thereby reducing the British expedition destined to act on the east of Spain to six thousand men. Such as it was, however, this armament produced a very considerable impression, and clearly proved of what importance, on the general issue of the campaign, the operations in that quarter, if more vigorously conducted and with a larger force, might have been. General Maitland, who commanded this force, arrived at Port Mahon in Minorca, in the middle of July, and at first stood across for the coast of Catalonia, with a view, if possible, to a *coup de main* against Taragona, but finding that, though preparations for a considerable rising in that quarter had been made, there was no Spanish force in existence capable of keeping the field as a regular army, and that they could only bring eight thousand *somatenes* into the field, while the French had thirteen thousand disposable men in the province, besides Suchet's force, of a still greater amount, in Valencia, he wisely judged that it would be hopeless to attempt an effort in that province, and therefore made for Alicante, where a strong fortress, still in the hands of the Murcians, offered a secure base for his operations. There, accordingly, he landed, in the beginning of August, and his arrival was most opportune and beneficial to the common cause, as it saved that fortress, which was menaced with a siege, in consequence of the defeat of General O'Donnell, who, with the last reserves of the Murcians, six thousand strong, had been totally routed by a division of Suchet's army under Harispe, only ten days before, at the mouth of the pass of Castalla, and was now wholly unable to keep the field (5)

Maitland's forces were all disembarked at Alicante by the 11th August, but, although he found himself in communication with a body of Spaniards considerable in point of numerical amount, yet no reliance could be placed upon them for operations in the field; and he was soon overwhelmed by the innumerable crosses, jealousies, and vexations, to which every British commander throughout the war, without exception, was subjected, who attempted to combine operations with the Peninsular troops, and which the iron frame and invincible perseverance of Wellington alone had been able to overcome. The governor of Alicante, in the first instance, refused to give him possession of that fortress, and only a limited number of men were permitted to remain within its walls, of the British soldiers only three thousand were English or German, who could be relied on for the real shock, the remainder being Mediterranean mercenaries, whose steadiness in action was untried and doubtful, and the moment operations in the field were proposed, such extraordinary difficulties as to providing subsistence and the means of transport were thrown in the way by the

(2) *Ante*, VIII p. 215

Spanish authorities and commanders, that Maliland abandoned the attempt in despair, and not long after, under the combined influence of bad health and disgust, resigned his command. At the same time, twelve hundred men, under General, now Sir Rufane Donkin, disembarked at Denia, on the east of Alicante, but were speedily assailed by superior forces and forced to re-embark. He was succeeded by General Maclean, who held the command only for a few weeks, when he was superseded by General Clinton but he too was paralyzed by the difficulties with which he was surrounded; and though on the 22d November the clade of Alicante was surrendered to the keeping of the British, still no offensive movement worth noticing was attempted. General Campbell came next with four thousand fresh troops from Sicily; but the season for active operations had now passed, and the winter was spent in strenuous efforts to put the army on a more efficient footing. It was fortunate, that at this period Suchet was so far removed by the habitual exaggerations of the Spaniards, that he attempted nothing, believing that the Allies had fifty thousand men in his front and thus this expedition, though it did nothing else, yet produced the important effect of detaching his whole force in that part of Spain, and preventing any part of it from joining the mass which was concentrating from all other quarters against Wellington in the plains of Old Castile (1).

Though the war in Catalonia and the Asturias was not distinguished by any brilliant events during this campaign, yet the Spaniards were in both slowly regaining the ascendancy. The weight of the English army, though distant, operated with sensible effect in both these provinces, and by compelling the French to concentrate their forces in such court unassailable points, or small contingent even, allowed the inhabitants to retreat from them several important points. In spring Montserrat was abandoned by the invaders, and immediately occupied by Colonel Grey, who, with some Spanish bands, again fortified that important stronghold. Decree and Maurice Mathieu collected their forces, and in the end of July drove the Spaniards a second time from it; but, instead of retaining their conquest, they set fire to the buildings, and the names of the monastery told all the inhabitants of the adjoining plains that the holy mountain was no longer polluted by the presence of the spoiler. The bands of Lacy, D'Arrolles, Flores, and Alenas, however, kept undisturbed possession of the whole mountain range with which the country abounded. The power of the French extended only over the fortresses which they held, and the plains, and their immediate vicinity, and so precarious was their authority in more remote quarters, that eight thousand men were required to keep open the communication between Girona, Barcelona, and Tarragona. In August, an English squadron, commanded by Sir Home Popham, appeared in the end of June on the coast, and did excellent service by keeping the French posts in a state of constant alarm, so as to prevent Castaill from declaring any considerable force to the aid of Marmon previous to the battle of Salamanca. Castro Trujillo, a strong fort on the sea-coast, was taken in the beginning of July, which enabled the squadron to communicate freely with the insurgents in the interior; and although several attempts on Sanlúcar, Cádiz, and Bilbao failed, from the strong fortifications with which the French had established themselves in those towns, yet they were evacuated and fell into the hands of the Spaniards on occasion of the general concentration of the French forces in the northern provinces.

pitfalls to the south of the Ebro had been loosened. The great armies of Madrid, Seville, Ciudad Rodrigo, and the lines before Cadiz, had fallen into the enemy's hands or been destroyed; no reserve parks remained to enable them to attempt the siege of the frontier places of Portugal, no fortresses were yet in their possession to delay the enemy, should he make a second invasion into the interior of Spain; a bloody disaster in the Douro would instantly compel the evacuation of Madrid and Valencia, and send the whole French armies in confusion behind the Ebro. A sense of this insecurity paralysed the French as much as it animated the British army; the perception of it, joined to an ardent thirst for vengeance for the wrongs they had received, had again revived in a fearful degree the insurrection in the whole provinces of the kingdom not actually in the possession of the imperial troops. The recent appointment of Wellington as generalissimo of the Spanish armies, promised to impart to them a degree of efficiency which they had never previously attained, and to direct them in one uniform plan of operations against the enemy; while the evacuation of more than half, and by far the richest half of the Spanish territory, proved a still more sensible wound to Napoleon, by depriving him of the means of longer carrying on his favourite system of making war maintain war, and throwing his armies in the Peninsula for their main supplies on the treasury of Paris, already severely drained by the unparalleled expenses of the Russian war (1).

Memorable as the merits of Wellington had been since the commencement of the Peninsular contest, they were outdone by the shining exploits of this campaign. The secrecy of his preparations, the rapidity and force of his strokes, the judicious direction of his attacks, the vast effects which followed from them, all revealed the consummate commander, now for the first time relieved from the load which had oppressed him, and, by the celerity of his movements, and the skillful

use of a central position, counterbalancing what would otherwise have been a disadvantageous superiority of numbers. When it is recollected that Wellington, with an army which never could bring sixty thousand men into the field, gained these wonderful successes over an enemy who had two hundred and forty thousand effective veterans (troops at his disposal, and captured the two great frontier fortresses under the very eyes of two marshals, who, as the event proved, could assemble a hundred thousand men for their relief, it is evident that more than fortune or national courage had been at work, and that consummate generalship had come to the discussion of that valour and experienced discipline. The secrecy of the preparation for, and the rapidity of the attack on Ciudad Rodrigo, the stern resolution of the assault of Badajoz, the eagle eye which caught the moment of decisive victory at Salamanca, the strategic skill which separated the armies of the north and centre, and recovered the advantages gained by Marmont on the banks of the Guarena, form so many models of military skill which will ever engage the attention and command the admiration of succeeding generations.

In truth, however, here, as elsewhere in the great revolutions of the world, moral causes were at the bottom of the changes, and the talents of individual actors intruded with the direction of affairs were chiefly conspicuous in the sagacity with which they discerned, and the skill with which they availed themselves of, those general impulses to mankind, whose operation, how important soever, was shrouded from the eye of ordinary observers. The more that the memorable history of the Pen-

insular campaigns is studied, the more clearly will it appear that it was the oppressive mode in which the French carried on the contest which wrought out their ruin, and that it was to Napoléon's favourite maxim, that war should maintain war, that we are to ascribe his fall. Not only did this iniquitous system everywhere inspire the most unbounded and lasting hatred at their domination, but it imposed upon his lieutenants and viceroys the necessity of such a separation of their forces, with a view to the permanent levying and collecting of contributions, as necessarily exposed them to the danger of being cut up in detail, and precluded the possibility of any combined or united operations. The eccentric irruption into Andalusia, when Wellington in Portugal was still unsubdued, is the chief cause to which all the subsequent disasters in Spain are to be ascribed, and it arose clearly from the necessity of seizing upon hitherto untouched fields of plunder. The marshals were never weary of expressing their astonishment at the unwise policy which kept their armies detached from each other, and melting away in inglorious warfare in their separate provinces, when the English army retained a central position, menacing alike to them all. But the secret motive of Napoléon in so distributing his force was very apparent. If he brought them into large bodies to wage a united war with the English general, the occupation of many of the provinces would require to be discontinued, the levying of the contributions would cease, and the cost of his armies, hitherto wholly defrayed by Spanish resources, would fall with overwhelming weight on the Imperial treasury. Hence arose the dispersion of the armies, the military governments, the jealousies of the marshals, the weakness of the king, the exasperation of the inhabitants, the triumphs of the British, and the loss of the Peninsula. The mighty fabric, based on injustice, reared in rapine, cemented by blood, involved in itself the principles of its own destruction. The very greatness of its power, the wide spread of its extension, only accelerated the period of its fall. All that was wanting was an enduring enemy, that had discernment enough to see, and talent adequate to improve, the chances thus arising in his favour, and a position where a sure refuge might be found till the period of reaction should arrive. The constancy of England presented such a foe, the eye of Wellington constituted such a commander, and the rocks of Torres Vedras furnished such a stronghold.

the EASTERN WORLD. It is there that is to be found the birth-place of the human race, there the scenes alike of the earliest and the greatest efforts of civilisation, there the spot from which the fortunes of the whole human family have taken their rise. The greatness of the states of modern Europe may have produced a more durable impression upon the fortunes of the species; the achievements of their intellect may have exalted higher the character of humanity, but they will never awaken so profound an interest as those which carry us back to the original separation of nations, and the first cradle of mankind.

Interesting extremes of refinement and civilisation which there appear Independent of the interest which naturally attaches to the East, from the sublime events and heart-stirring episodes of which in every age it has been the theatre—independent of the obligations which we owe to it as the birth-place of letters and of figures, of knowledge and of religion—there is something in the simplicity of Eastern story, and the pathos of Asiatic incident, which must ever touch the inmost recesses of our hearts. Although the human race have existed longer there than in any other part of the globe, although wealth exhibited its earliest prodigies on the plain of Shinar, and commerce first began with the march of the camels through the Syrian deserts, yet society has always existed in a more romantic and interesting form in the Eastern than in the Western world. The extremes of civilisation and simplicity, of wealth and poverty, of grandeur and humility, have always been there brought into close proximity with each other. The splendour of the capital is to be found close beside the rudeness of the desert, and the traveller, equally in the days of Herodotus and of the present time, on emerging from the greatest cities, finds himself surrounded by the camels of the children of Ishmael. The whole empires of central Asia are penetrated in all directions by these nomade tribes. They have, in every age, formed a distinguishing feature of Asiatic society, and at times have exercised the most important influence on the fortunes of mankind. Through every subsequent stage of society, nations will recur with interest to these primeval occupations of their race. The scenes, the manners, the imagery of the East, will always form the profoundest chords that can be touched in the human heart, and to the last ages of the world, man, by an indelible instinct, will revert to those regions of his pristine existence with the same interest with which the individual looks back to the scenes of his own infancy.

Present interest and prospects of the East Nor are the present situation and future destinies of the Oriental states, less calculated to awaken the interest alike of the heedless observer of passing events and the contemplative student of the fortunes of mankind. By a mysterious agency it would appear that the fate of man, even in the most advanced stages of his progress, is indissolubly united with the Eastern world, and the present course of events, not less clearly than the whole scope of prophecy, concur in demonstrating that it is there that the great changes calculated to affect the destiny of the species are to be brought about. The course of civilisation, which hitherto constantly has been from east to west, has now, to all appearance, begun to alter its direction. The vast wave of civilisation is rolling steadily towards the Rocky Mountains, and its standard will, ere long, be arrested only by the waters of the Pacific. But the progress of human improvement is not destined to be thus finally barred. For the first time since the creation of man, the stream of improvement has set in in the opposite direction—the British Australian colonies are rapidly sowing the seeds of the European race in the regions of the sun, and even the sober eye of historic anticipation can now dimly descry the time when the eastern Archipelago and the isles of the Pacific are to be cleared by

the efforts of civilized men, and blessed by the light of the Christian religion. Not are political events less clearly bringing back the interests and the struggles of civilized man to the picture scene of his birth. The two great powers which have now, in an indelible manner, impressed their image upon the human species, England and Russia, are there slowly but inevitably coming into collision. Consequently the incalculable prize which, as it will soon appear, brought the empires of France and Russia into hostility, and led to the overthrow of the greatest efforts of European power by the energy of barbaric patriotism and the force of local rivalry. The same glittering object has retained the rival powers of Great Britain and Russia in thinly disguised hostility since the fall of Napoleon's power, while "the necessity of conquest to existence," felt equally by the British empire in India as by the French in Europe, has already impelled the British battalions over the Himalayan snows; brought the stream of victory, for the first time in the annals of mankind, from the shores of the Ganges to the steppes of Tartary; arrayed the sable natives of Bengal as warriors, in the cradle of the Mogul power and on the edge of the steppes of Samarcand and brought the British battalions, though in an inverse order, into the footsteps of the phalanx of Alexander.

The structure of society, the condition of mankind, and the course of human happiness or misery, have always been so different in the East from the Western world, that it would appear as if a separate character had, from the very outset of their career, been imparted by the finger of Providence on the various races of mankind. The descendants of Shem, the dwellers in the tents of the East, are still as widely separated from the descendants of Japhet, as when the superior vigour of the European race impressed upon the Roman people the belief, that to their race alone it was given to struggle with the difficulties of humanity, and unfold the secrets of nature (1). Their joys, equally with their sorrows, their virtues and their vices, their triumphs and their reverses, the sources of their prosperity and the causes of their ruin, are essentially distinct in those two quarters of the globe, while the peculiarities of the third great family of mankind are still so strongly marked, that there is no reason to believe that it will ever be able to emerge from a state of submission and servitude and that the prophecy will hold good equally in the last as in the first ages of the world,—"God shall multiply Japhet, and he shall dwell in the tents of Shem, and Canaan shall be his servant (2)."

Although civilization has subsided from the very earliest times in the Eastern nations, and the labours of man have there achieved no prodigies of industry far surpassing any which have been reaped by the efforts of the Western world, yet no disposition to resist authority, or assert independent privileges, has ever appeared, even in those situations where, from the assemblage of mankind together in great towns, the chief facilities might be supposed to have existed for the extension of the democratic spirit. Revolutions and civil wars innumerable have occurred, indeed, in every age of Asiatic story, but they have all been brought about either by the casual oppression, or particular governors, or the hostility of rival candidates for the throne against each other. With the formation of this unbearable oppression, or the ascent of the throne by the successful competitor

(1) And Japhet grew
 larger than all other people,
 and he dwelt in the tents of Shem,
 and Canaan was his servant.

(2) Gen. ix. 27.

And Japhet grew
 larger than all other people,
 and he dwelt in the tents of Shem,
 and Canaan was his servant.

tion, all thoughts even of resistance have passed away from the minds of the people. The commercial cities of Asia Minor, which acquired republican ideas and resisted the authority of Darius, were all of European origin. No attempt to organize a system of popular resistance to encroachment, such as in every age of European history, alike in ancient and modern times, has formed the great and deserving object of public effort, ever was thought of in the East. From the earliest times to the present moment the whole Oriental world have been strangers alike to the elastic vigour, the social progress and the democratic contentions of the European race. It is not sufficient to say that they submit now without a thought of resistance to the grossest oppression of their governors, or whomsoever is placed in authority over them. The idea of opposition has never crossed their minds: they have done so without a murmur from the days of Abraham.

Rapid progress of early civilisation in the East Owing to the prodigious fertility of their great alluvial plains, and the unbounded riches of nature which there spring up almost unbidden to the hand of the husbandman, the progress of opulence has always been much more rapid in the Eastern than in the Western world. In the great plain of Mesopotamia, one-half of which is composed of a natural terrace, sloping down with a gradual declivity from the Euphrates to the Tigris, and the other of a similar slope, inclining the other way, from the Tigris to the Euphrates (1), the means of irrigation are provided, as it were, ready made by nature to the hand of man, and nothing is required on his part but to convey away into little channels the beneficent stream which, thus descending in perennial flow from the Armenian snows, affords the means of spreading continual verdure and fertility over a soil where vegetation ripens under the rays of a tropical sun. In the Delta of Egypt a level surface of great extent is annually submerged by the fertilizing floods of the Nile, and the principal difficulty of man is to clear out the prodigious luxuriance of vegetation which springs up from the solar warmth, when the waters of the river have first regained their natural channel. In the European fields, again, the productive powers of nature require to be drawn forth and assisted by years of human labour. The operations of draining, planting, and enclosing, which are essential to the improvement of agriculture, are the work of centuries; and the vast profits which in the East reward the first and infant efforts of human cultivation, are gained in the West only by the result of the accumulated labour of many successive generations. Agricultural riches, and consequent commercial opulence, spring up at once in the East with the rapidity and luxuriance of tropical vegetation: they are of slow and difficult growth in the West, like the oak and the pine, which arrive at maturity only after the lapse of ages.

Proportionate rapid growth of corruption But in proportion to the rapidity with which vegetation thus springs up under the genial warmth of an Eastern sun, is the fragile nature of the materials of which it is composed, and the seeds of rapid decay which are involved in the splendid structure. The law of nature seems to be of universal application—all that rapidly comes to maturity is subject to as speedy decay—whatever is destined for long duration is of the slowest growth, and of the most tardy development. The early prodigies of Oriental civilisation were of no longer duration, in the great year of human existence, than the first fruits of spring amidst the quickly succeeding harvests with which the labours of the natural year are crowned. The seeds of decay were sown with no unsparing hand, from the native corruption of the

the East have, in every age, fallen before the daring rovers of the Scythian wilds, with the same certainty that the timid herds of inferior animals perpetually become the prey of the savage lords of the wilderness. The barbarian conquerors, when they settle in the opulent regions of civilisation, in the course of a few generations become as corrupted as the nations they have conquered, but, nevertheless, a certain impulse has been communicated to human vigour, and the extraordinary degeneracy of the seats of opulence purified, for a season at least, by the infusion of barbarian energy.

System of Oriental government, and descent of the throne The system of government in the East, from the earliest times, has been the same. we have no need to turn to modern travellers for a picture of the social system, it is to be found sketched out in the books of the Old Testament, and faithfully portrayed in the pages of Xenophon and Herodotus. Rank and authority are every where personal only power is annexed to office, not to families; and depends for its establishment and continuance solely on the will of the sovereign. The throne itself is seldom found to follow the hereditary line of descent, the natural attachment of mankind to the families of their benefactors has commonly, for several generations, secured its continuance in the members of the family of a first founder of a dynasty; but no regular principle of succession has been followed, and the most energetic and audacious, whether of legitimate or illegitimate birth, has usually, without opposition, seized the diadem. The people, with that disposition to passive submission which in every age has characterised the inhabitants of Asia, submit without a murmur to a change of dynasty. The victor, generally in a single battle, is instantly saluted as sultan by all the satraps and cities of the empire, the stroke of fate is implicitly acquiesced in by all, and the descendants of a family which have enjoyed the throne for centuries, are consigned without regret to the obscurity from which they sprung, and speedily lost among the multitudes of humble life.

Precarious tenure of inferior authority The same instability and precarious tenure of power are to be found in a still greater degree among the inferior depositaries of authority. If the chances of victory, or the mutability of fortune, seat or unseat a dynasty on the throne, the favour of a sultan, the caprice of a minister, or the accidents of success, still more rapidly place or displace the rulers in the cities and the governors in the provinces. The changes of fortune, which from the earliest ages have existed in the East, appear incredible to those who have been accustomed to the more stable order of things in the Western world. The extraordinary adventures, the sudden elevations and as sudden depressions of human life portrayed in the Arabian Nights, are not the brilliant creations of Oriental fancy. they are the faithful picture of the continually occurring changes of fortune in the Eastern world. A barber may there any day become a vizier a vizier, if he escapes the bowstring, may often esteem himself happy if he can become a barber. The education of all classes is the same, for this simple reason, that none can foresee with tolerable certainty any material difference in their destiny in life. Nothing is more common than to see, as chief ministers of the sultan, men who had formerly been trained to the humble duties of street porters a shoemaker often becomes the high admiral of the Turkish fleet. The descents from greatness are still more rapid than the ascent, wealth often attracts envy, and cupidity on the throne seldom fails to find pretexts for confiscating the riches which the oppression of subordinate functionaries had extorted from the cultivators of the soil. When the inevitable hour arrives, the victim of imperial cruelty or vengeance submits to the stroke of fate, the ruler of millions of subjects, the master of thousands of soldiers, quietly stretches out his neck to the

bowling his exorbitant possessions, the object of so much envy, are con-
fiscated to the treasury, or handed over to a more fortunate successor; and
his children are found labouring with their hands in the fields, car-
rying water in the street, or bearing lances as private soldiers in the ranks
of their father's successor.

Improvement, and the spread of opulence in Europe, are the slow
growth of successive generations, each of which have added some-
thing to the national wealth, or raised something for the public
right. The virtues of the vices, the weakness or the energy, of the
sovereign on the throne, though by no means unimportant elements in the
national fortune, seldom produce a decisive influence on the destinies of the
state. The public tranquillity depends on the bravery and virtue of the higher
ranks; the public opulence upon the industry and frugality of the lower.
But in the East almost every thing turns upon the energy, the talents, and
activity of the sovereign on the throne. If he is possessed of mental qualities
and ruling abilities, the fortunes of the state are speedily raised to the very
highest point of elevation. If he is sunk in indolence, or lost in the pleasures
of the harem, external disaster and internal dissipation are speedily ensue.
The vigour of a great monarch, wielding the despotic powers of government,
speedily makes itself felt in every department: order is maintained by the
swords and governors of provinces, each trembling for the preservation of
his own authority; industry and property are protected among the poor
multitudes flock from the adjoining states, to share in the protection of vi-
gour and justice; warriors crowd from all quarters to follow the standards of
victory and plunder. Internal triumph, external success, thus rapidly accu-
mulate round the empire of energy and courage; and the immense movable
or floating population of Asia, speedily causes an extraordinary influx of im-
habitants into the principal cities of the empire. The whole history of the
East, from the earliest ages, is composed of the successive elevations of dynas-
ties or individuals by the efforts of the possessors of the throne, and their as-
tutism decline, and ultimate extinction, from the degeneracy and effemina-
cy of their unworthy successors.

In Europe, also, in ancient and modern times, a great degree of
stability has been communicated to the acquisitions of civiliza-
tion, the conquests of power, and the accumulation of wealth; and
although the progress of nations has been interrupted by casual
vicissitudes of fortune, yet a long period of prosperity and greatness has
been imparted to national existence, and its decline has been owing to a suc-
cession of causes which have gradually undermined, and at last dried up the
sources of prosperity. But in the East a very different progress presents it-
self. The rise of power, the growth of civilization, the markets of opulence,
have been far more rapid than in the Western world; but, on the other hand,
the catastrophes to which they have been subject have been much more
rapid, the degeneracy by which they have been undermined, infinitely more
swift in its progress. Though the voice of reason, matured by the lessons of
experience, cannot as yet affirm that the European communities, with all
their advantages of religion and knowledge, have eradicated from their bosoms
the seeds of mortality, it may with confidence be affirmed, that as they have
been slower of growth, so they will be more durable in existence than the
Oriental dynasties, and that the causes of decline, common to humanity,
have been combated in the Western by far stronger principles of vigour and
remotion than have ever appeared in the Eastern world.
But, for the same reason, corruption, when it does spread through the vitals

And those of corrup-
tion also

of the state, will be more deeply rooted in Europe than in Asia; and if degeneracy does overtake society in its last stages, it will be far more universal in the West than in the East. Nothing is so remarkable in the Asiatic states as the simplicity of manners and habits which prevails beyond the pale of those who actually enjoy the transitory wealth or power which are the consequence of the sultan's favour. That *they* speedily are corrupted by the possession of wealth, and that the descendants even of the bravest men become so utterly degenerate as to be incapable of contributing any thing to the defence of the state in a few generations, may be considered as decisively proved by every period of Asiatic history. But the great bulk of the people, as they share in none of the advantages of wealth and power, so they have at no period been generally affected by its corruptions. If a traveller enters an Asiatic town, he finds the manners of the people and simplicity of domestic life nearly as they appear in the sacred records and the early narrative of Herodotus. In Europe, on the other hand, as political power and opulence have descended far more generally through all classes of society, and communicated in consequence, during the periods of public virtue, a far greater degree of durability and vigour to political prosperity, so the seeds of corruption, when they do spread, will be in proportion more generally diffused, and degeneracy, when it reaches the middle ranks, more universal and hopeless.

Ruinous
effects of
polygamy
which yet
are confined
almost en-
tirely to the
great.

Polygamy is and ever has been a dreadful evil in the East, and the extraordinary rapidity with which all races of conquerors have degenerated, in a few generations after their establishment in the conquered districts, has been doubtless mainly owing to this ruinous institution, which, among the great and affluent, poisons the sources of manhood and energy in the cradle. The Scythian conqueror himself was bred up amidst his herds and his flocks. wandering on horseback from morning till night, he acquired vigour from habit, and hardihood from necessity. His degenerate offspring, after his conquests were completed, bred up in the seclusion of the harem, surrounded by women, wealth, and flattery, sensual, capricious, and tyrannical, could hardly be recognised as the offspring of such a parent. But polygamy, with all its attendant train of ills—flawing eunuchs, fiery passions, luxurious seraglios, female jealousy, and sensual corruption—never has, and never can be a vice of the great body of the people. Necessity, the strongest of all laws, will, in every age and part of the world, confine men to a single wife. the cost of several, or a train of concubines, is so great, that, like a stud of hunters or race-horses in England, it is altogether beyond the reach of the vast majority of mankind. By leading to the speedy corruption of the higher ranks, this ruinous institution may indeed, and always does, exercise a fatal influence on the *national* fortunes, but its effect on general manners, domestic purity, or the progress of population, is very inconsiderable. In none of these respects, perhaps, is it so powerful an instrument of corruption as the female profligacy and promiscuous concubinage, which, pervading all ranks, is felt as so consuming an evil in all the great cities of western Europe.

Causes of
decay com-
pensated
by other cir-
cumstances

As no protection, in any age or in any country of Asiatic history, has existed in the spirit of freedom which pervaded the middle or lower classes, or the bulwarks which they have constructed against the tyranny of the sovereign, human industry might have been almost destroyed, and the human race become wellnigh extinct in many of its most favoured regions, in consequence of the constant oppression of arbitrary power, or the periodical inroads of the Scythian cavalry, if it were not for three cir-

circumstances, eminently characteristic of eastern civilisation, which in every age have turned the principal sources of protection to Oriental industry.

1 The first of these is the institution of the village community (1), which has been already dwelt on in treating of the condition of the people in India, and which prevails generally throughout almost every part of the East. Society there appears in its simplest form. A certain district around a village belongs in common to all its inhabitants. Some are devoted to the cultivation of the soil, and with their surplus produce maintain the other classes of the little society, among whom the different trades of blacksmiths, carpenters, potters, masons, barbers, bakers, tailors, shoemakers, and others, are divided. Each member of which is bound to his own profession to contribute, sometimes by money, at others by a return in kind to the wants of the other members of the community. The general tax, or rather tribute which is imposed upon the whole, is levied by certain persons chosen by all the members, who allocate with great equity the share of the burden upon each individual, charge themselves with its collection, and account for it to the pasha or other collector of the revenue. The attachment of the people to these little communities is so strong as to be almost inseparable. If the members of it are dispersed by foreign violence, it is perpetuated from generation to generation the ancient landmarks are preserved even the sites of the different villages are marked on their memories, and handed down to their children and if happier times return and the dispersed community or tribe becomes as near as possible on the heights of its ancestors. But if this village system operates as a protection to the community during prosperous times it comes to press often with dreadful severity in adverse times. The government will rarely intertreat any thing of the fixed tribute from the community. The weight of the exaction thus often comes to fall upon declining numbers, and so grievous does the burden become when the members in the community are seriously impaired by sickness or the sword, that the remaining members fly to the desert or the mountains, and the entire depopulation of the country ensues. It is to this cause that both Gibbon and Sismondi (2) ascribe the rapid decline of population in the rural districts of the Roman empire and the same circumstance is considered by recent observers as the cause of the rapid decrease of the population in the contemporary states of Turkey and Persia.

2. The next circumstance which has contributed to soften the weight of despotism in the East, is the institution of *azams*, and the corporate privileges which belong to the members of the different trades in the towns. The former of these are officers appointed by the people to watch over the interests of the cultivators, and shield them from the oppression of the pashas. The latter are the rights which members of the different trades in towns enjoy, and which interest, between the individual and the oppression of the tax-collector, the important shield of a community having a common interest with himself. Where the *azams* do their duty they are frequently of essential service, and they have, in every age, delayed the ruin of many provinces. But they are often in league with the pashas, and are bribed by the wealth which this extortion has produced, to connive at still further exactions. The most effectual security, in consequence, is found to be the incorporation of trades in towns, and hence the observation so common to the historians. The most effectual security, in consequence, is found to be the incorporation of trades in towns, and hence the observation so common to the historians. The most effectual security, in consequence, is found to be the incorporation of trades in towns, and hence the observation so common to the historians.

mon in the East, that industry in the towns is much better protected than in the country, and that the numbers of their inhabitants are often stationary, or even increasing, amidst the desolation and ruin of the fields of the country (1)

Security of mountain fastnesses 3 The principal protection of the rural population, in unsettled and disastrous times, is to be found in the security which mountain fastnesses have afforded to the industry of the people. Mountain ridges of prodigious height and vast extent run through the East in almost every direction. Independent of the great stony girdles of the globe, the Caucasus and Himalaya, great numbers of considerable mountain ranges branch out from these huge chains in many different directions, and in their valleys the industry of the cultivators is comparatively undisturbed by the exactions of the pashas, or the plunder of the janissaries. Water, also, that indispensable requisite to cultivation over almost all the East, is generally to be had in comparative abundance from the mountain torrents of these alpine regions, and wherever it can be carried, the green field, the flowery orchard, and the smiling cottage, bespeak the residence of happy and industrious man. The rural population, accordingly, in many of the great mountain chains of the East—that of the Bulgarians among the wooded and thickly-peopled heights of the Balkan, of the Druses and Maronites on the terraced slopes, or beneath the alpine cliffs of Lebanon, and of the inhabitants of Mount Taurus, among the clear streams and beside the wooded valleys of Asia Minor—often exhibit a degree of general felicity to which hardly a parallel is to be found in any other part of the globe. The cavalry of the pashas is unable to penetrate these rocky dells or wooded recesses, the stern valour of the mountaineers guards the entrance to these asylums of industry and innocence, the demands of government are commuted into a fixed tribute from the state, land is almost always subdivided among the cultivators; and every man, on his little freehold, enjoys undisturbed the fruits of his toil (2)

Immense number and skill of the horse men in the East The great strength of the East, in every age, has been found to consist in the multitude and admirable dexterity of its horsemen; and this arises from the number of nomade tribes who, in almost all Asiatic states, pervade every part of its territory, and who, constantly on horseback, have attained a proficiency in the care and management of that noble animal, unknown in any other part of the world. The number of these nomade tribes who pervade the Persian monarchy, is nearly a million, those in Asiatic Turkey are still more numerous (3). Nor is the high estimation of horses confined to those who still adhere to the roving habits of their forefathers, it pervades the whole community, and descends to the very humblest and most indigent classes of the people. A beggar in Arabia, with his family, asks charity mounted on several horses, the luxury of the great consists in the number and high breeding of their stallions. The Tartar chiefs to the north of Persia have often three or four thousand horses for their private property, and the poorest man in their tribe is master of three or four. Uniting the blood of the Arab to the strength of the Tartar horse, these incomparable animals will convey their riders on a predatory excursion of a thousand miles in ten days, carrying with them their scanty provender for crossing the desert which separates them from civilized regions as they go forth, and bearing the ample spoil which their daring masters have amassed on their return (4). The Asiatic lives with his horse, his children

(4) I had this extraordinary fact from my accom

authority of the throne, the deplorable contests between the princes of the same family, and the general oppression which the pashas have exercised in the independent sovereignties which they have erected in many of the provinces of these vast empires (1).

*Immutable
manners and
customs of
the Turks*

Encamped for four centuries in Europe, the Turks have deviated in no respect from the manners and customs of their Asiatic forefathers. Although from the day that the cannon of Mahomet the Second opened the breach in the walls of Constantinople, which still exists to attest the fall of the Emperor of the East, they have been the undisputed masters of the fairest and richest dominion upon earth, yet the great body of them still retain the primitive customs and habits which they brought with them from the mountains of Koordistan. They have in no degree either shared in the improvement, or adopted the manners, or acquired the knowledge, of their European neighbours. Their government is still the absolute rule of the sultans and the pashas, the agas and the Janissaries, notwithstanding their close proximity to, and constant intercourse with, the democratic commercial communities of modern Europe, they are yet the devout followers of Mahomet, notwithstanding that they every where admit that the star of the Crescent is waning before that of the Cross, they still adhere in all their institutions to the precepts of the Koran, they rely with implicit faith on the aid of the Prophet, although they are well aware that the followers of Christ are ultimately to expel them from Europe, and themselves point to the gate by which the Muscovite battalions are to enter when they place the Cross upon the dome of St -Sophia.

The Mahometan religion is the cause of this tenacity

A very sufficient reason may be assigned for this invariable adherence of the Turks to their Asiatic customs, notwithstanding their close proximity to European civilisation, and the innumerable evils which they have suffered from the superiority of the European discipline. Their RELIGION renders them incapable either of alteration or improvement. The Koran contains several admirable precepts of morality, drawn from the sages of antiquity, and many sublime truths borrowed from the Gospel, but in all the parts where it is original, it is either a wild rhapsody, inapplicable to the rest of the world, or a rude code suited to none but a horde of Oriental conquerors. Nevertheless, it forms not only the religious standard of faith, but the civil code of law. The whole decisions of the cadis in Mussulman states are founded on texts of the Koran, all the maxims of the muftis and supreme religious council are drawn, without comment or amplification, from its injunctions (2). The celebrated saying of the Arabian conqueror who destroyed the Alexandrian library, "If these books contain the truth, it is already in the Koran, and therefore they are superfluous, if what they contain is not there, it is false, and therefore they should be destroyed," contains the whole system of their civil and ecclesiastical government.

Minutely specifying almost all the particulars of government, containing every possible direction for the regulation of the interests of society as it

(1) For the preceding account of the civilisation and manners of the East, the author has relied on the older travels of Olivier, Sonnini, Volney, Chardin, Eton, and De Tott, with the more modern narratives of Chateaubriand, Lamartine, Porter, Fraser, Morier, Walsh, Urquhart, and Slade. The particular references are in general not given on the margin, because they would cover it with too dense an array, and the authorities in the text are founded rather upon a comparison of their different accounts, and the conclusions which the author, after much reflection on the subject, has drawn from them, than

from any particular passages which specially and to the letter support the statements which he has given. And he hopes that such a summary will not be deemed misplaced, even in a work of European history, the more especially, when the important questions now wound up with the policy of the East are considered, and the intimate connexion which the English nation, both from its national policy and the extent of its oriental dominions, has with the future destinies of that important portion of the globe.

(2) Malte Bran, iv. 266, 267.

play will it find their mutual infancy; the attachment of both sides grows with their growth, and strengthens with their strength; and when he has arrived at the full maturity of his powers, the noble Arab sided, and almost with human sagacity, and fought with more than human devotion, will die in the strenuous effort to save the playfellow of his infancy from captivity or death (1).

If the purity of domestic manners be, as it undoubtedly is, the great source both of public grandeur and private happiness, a powerful antidote to the numerous evils by which they are oppressed has in every age been found in this cause in the East. Notwithstanding the immense superiority which Europe has long enjoyed from the energy of its character, the freedom of its institutions, and the superiority of its knowledge, it may be doubted whether the sacred fountain of domestic life has been preserved so pure among the poor and needy, as in the action of the East. The unrestrained social intercourse of the sexes; the incessant activity which prevails, the close proximity in which the poor men and women in great cities are accumulated together; and the general licentiousness of manners which has flowed from the illiberality that prevails, and the passion for ardour which is so common among the working-classes, have produced a far greater degree of general vice and misery in Europe than has ever obtained, at least among the middle and lower classes, in the East. The enormous mass of female profligacy which overpreads almost all our great towns, is the most almost unknown from the action of the barren harem, in the middle classes (2), flowed pure manners and a more elevated character than has resulted from the constant intermixture of the sexes, and the violent passions to which it gives rise. It is this simplicity and honesty of disposition, joined to the unaffected devotion and martial qualities by which they are distinguished, which has blinded so many European travellers of the highest talents and discernment to the devastating effects of false government, and the ruinous consequences which have flowed, particularly during the decline of the Persian and Turkish empires, from the weakened

much longer if he was not relieved (1); and for this purpose he assembled a body of thirty thousand men on the river Janina, at the distance of about forty miles from the fortress. Sensible, however, that his troops, which were for the most part mere undisciplined militia, would be wholly unable to withstand the Russian army in the open field, he took post on the river near BATTIN, and, after the Turkish fashion, immediately proceeded to fortify his camp. His situation was well selected, being a half-deserted plain at the confluence of the Janina and the Danube, with a few small trees scattered over its surface, and watered on two sides by those ample streams. When seen from a distance, this surface appeared level, but on a nearer approach it was discovered to be intersected by several rocky ravines. Two of the ravines, which were impassable even for foot soldiers, fortified the sides of the camp, which rested on the Danube near the confluence of the two rivers in rear, while the neck of land which lay between them, and by which alone access could be obtained to its interior, strengthened by two redoubts, was covered, in the interval between them, with thick bushes and underwood, where the janissary light infantry would have a decided superiority over the Russian dragoons and through which it would be difficult for the latter to bring up their numerous artillery to counterbalance this disadvantage. Nevertheless, Kaminski, desirous to wipe off the disgrace of the repulse at Houdschouck, and fearful of the approach of Ali Pacha, the far famed ruler of Albania, who, with his hardly mountaineers, was slowly approaching at the summons of the Grand Seignior to co-operate in the operations, resolved to hazard an attack (2).

For this purpose, having previously strengthened the besieging forces before Houdschouck, with half of the forces which had been withdrawn from Schumla, and detached General Kuliess with a division of six thousand men to reconnoitre the Turkish camp,

and prevent them from forging beyond the limits, the general-in-chief set out from the environs of Houdschouck with twelve thousand men, and, following the right bank of the river, appeared in front of the Turkish intrenchments. They appeared to be so strong, that notwithstanding the Russian superiority, especially in artillery, of which they had a hundred pieces, it was deemed impracticable to hazard an attack in front, at least unless strongly supported by simultaneous operations on either flank. The enemy, it was soon discovered, had two intrenched camps, the works of which mutually supported each other, and their guns were so disposed as completely to command in rear the navigation of the Danube, on which they also had a powerful flotilla destined for the relief of Houdschouck. The only practicable way of reaching them that remained was by an attack in flank, near the village of Batin, where the ravine, though steep and rugged, was practicable for foot soldiers, while as heavy a fire as possible was opened on the intrenched camp in front nearest the isthmus, from an eminence which had been with great judgment seized and strengthened by the Cossacks. Meanwhile strong reinforcements were ordered up under Wolnost from Silistria, and as a strong reconnaissance under Kuliess on the front of the enemy's position, with the troops in square, had led to no advantage, and was attended with considerable loss, Kaminski made every effort to collect troops from all quarters; and Wolnost having at length come up with five thousand men, the grand attack was fixed for the 7th September (3).

(1) "We have almost lost out of sight the number of the columns marching to deliver us. One has already retreated to the mountain tops, and we have only preserved the day."—General

much longer if he was not relieved (1); and for this purpose he assembled a body of thirty thousand men on the river Jantra, at the distance of about forty miles from the fortress. Sensible, however, that his troops, which were for the most part mere undisciplined militia, would be wholly unable to withstand the Russian army in the open field, he took post on the river near BATTIN, and, after the Turkish fashion, immediately proceeded to fortify his camp. His situation was well selected, being a half-deserted plain at the confluence of the Jantra and the Danube, with a few fruit-trees scattered over its surface, and watered on two sides by those ample streams. When seen from a distance, this surface appeared level, but on a nearer approach it was discovered to be intersected by several rocky ravines. Two of the fissures, which were impassable even for foot soldiers, fortified the sides of the camp, which rested on the Danube near the confluence of the two rivers in rear, while the neck of land which lay between them, and by which alone access could be obtained to its interior, strengthened by two redoubts, was covered, in the interval between them, with thick bushes and underwood, where the janissary light infantry would have a decided superiority over the Russian tirailleurs and through which it would be difficult for the latter to bring up their numerous artillery to counterbalance this disadvantage. Nevertheless, Kaminski, desirous to wipe off the disgrace of the repulse at Roudschouck, and fearful of the approach of Ali Pacha, the far famed ruler of Albania, who, with his hardly mountaineers, was slowly approaching at the summons of the Grand Seignior to co-operate in the operations, resolved to hazard an attack (2).

For this purpose, having previously strengthened the besieging force before Roudschouck, with half of the forces which had been withdrawn from Schumla, and detached General Kulneff with a division of six thousand men to reconnoitre the Turkish camp, and prevent them from foraging beyond its limits, the general-in-chief set out from the environs of Roudschouck with twelve thousand men, and, following the right bank of the river, appeared in front of the Turkish intrenchments. They appeared to be so strong that notwithstanding the Russian superiority, especially in artillery, of which they had a hundred pieces, it was deemed impracticable to hazard an attack in front, at least unless strongly supported by simultaneous operations on either flank. The enemy, it was soon discovered, had two intrenched camps, the works of which mutually supported each other, and their guns were so disposed as completely to command in rear the navigation of the Danube, on which they also had a powerful flotilla destined for the relief of Roudschouck. The only practicable way of reaching them that remained was by an attack in flank, near the village of Battin, where the ravine, though steep and rugged, was practicable for foot soldiers; while as heavy a fire as possible was opened on the intrenched camp in front nearest the isthmus, from an eminence which had been with great judgment seized and strengthened by the Cossacks. Meanwhile, strong reinforcements were ordered up under Woinoff from Silistria; and as a strong reconnoissance under Kulneff on the front of the enemy's position, with the troops in square, had led to no advantage, and was attended with considerable loss, Kaminski made every effort to collect troops from all quarters; and Woinoff having at length come up with five thousand men, the grand attack was fixed for the 7th September (3).

(1) "We have almost lost our sight in straining to see the columns approaching to deliver us. Our loss already amounts to six thousand men; and we have only provisions for ten days."—*General*

(3) Vol. 111, 112.

Battle of
Battin
Sept 7

The battle commenced at daybreak; Kaminski himself, at the head of the whole cavalry, advanced to within cannon-shot of the principal camp, while another column of infantry moved up in squares to the front of the lesser one, and Kulneff with the left was dispatched to the other side of the ravine, which formed the western defence of the Turkish position; but the latter general did not arrive at the point of attack assigned to him till considerably after the time calculated on, which led to the discomfiture of the Russians on the first day. Kaminski himself with the centre stormed the principal heights which commanded one of the intrenched camps though with great loss, and put all the Turks who defended them to the sword; but Kulneff failed in his attack on the left from the side of the ravine, and though one of his columns succeeded in penetrating into the camp, yet it was immediately cut to pieces by the Turkish scymitars. While on the right the brave Illowolski, who conducted the assault on the other intrenched camp, was mortally wounded on the edge of the ditch, and the bravest of his followers who crossed it left their heads in the hands of the Turks, who fought like desperadoes. Thus the attack having failed on both flanks, though a most important advantage had been gained in the centre, Kaminski desisted from farther attempts for the night, merely retaining the important heights which he himself had won, and concentrated his troops as much as possible in that quarter, while Kulneff got under shelter in the bottom of the rocky ravine which he had crossed (1).

Plan for the
renewal of
the battle

The Turkish camps were now completely surrounded by the Muscovite troops, and many of the Imperial generals, seeing the desperate manner in which they had been defended on the preceding day, strongly recommended the general-in-chief to make a bridge of gold for a retreating enemy, and withdraw Kulneff's divisions from the ravine during the night, so as to leave them a retreat up the course of the Danube. The Turks also, elated by their success, gave way to every demonstration of joy, and in sight of both armies, went through the barbarous operation, on the top of their intrenchments, of decapitating the Russians who had been left on the field (2). But Kaminski was resolute. Orders were given to renew the attack at daybreak, the principal effort being directed against the gorge of the camps, where the works, owing to the natural strength of the ravines in their rear, were least formidable. Kulneff, who had had a violent altercation with the general-in-chief, was put under arrest, and the command of his troops devolved to Sabanejef, and the whole artillery brought to bear on the enemy's camp, that on Kaminski's heights firing down from above, that of Kulneff being pointed up from the ravine below, so as to throw his howitzers upwards into the intrenchments (3).

The attack of Sabanejef proved entirely successful after encountering a vigorous opposition, his troops, gallantly led by their general, made their way into the camp to which he was opposed, but the Turks seeing their position no longer tenable, adopted and bravely executed a most extraordinary resolution. Suddenly assembling the whole of his cavalry and the bravest of his infantry, Muktar Pasha, abandoning his camp and all its contents, poured out by one of the gates like a torrent, and making straight across the plateau, sought the shelter of the ravine on the right, which was not oc-

(1) Val. 124, 127

(2) The Prince de Ligne observed, on this practice of the Turks, to cut off the heads of the wounded or prisoners, that it was "more formidable in appearance than reality; for it could do no harm to

the dead, it was often a relief to the wounded, and that it was rather an advantage to the unhurt, as it left them no chance of escape but in victory."—VAL
LENTINI, 69

(3) Val. 120

cupied by the Russians in any force. This unlooked-for deluge had wellnigh swept away Kaminski himself, who was moving at the time from the left to the centre, in order to direct an attack on the front of the camp. For a considerable time this singular evacuation remained unknown to the Russian centre, who seeing the standards of Mahomet still floating on the intrenchments, and a multitude of foot soldiers on the rampart firing vehemently, and shouting Allah! deemed the tumult owing only to a partial sally from the works. But, at length, they too left the rampart; its fire gradually died away, the standards alone remained on the summit, and the fact becoming known, the Russians on all sides poured with loud shouts into the enclosure, and with savage revenge, excited by the Turkish cruelty to the prisoners, put all they still found within to the sword. The guns on the intrenchments were instantly turned against the flying swarms of Ottomans, and the Russian cavalry quickly pursuing came up even with their horse, and did considerable mischief. But the decisive trophies of the victory were the principal camp of the Ottomans, with fourteen guns and two hundred standards; the whole flotilla which lay in the Danube, laden with provisions and ammunition for the relief of Roudschouck; and five thousand men, whom the lesser camp were obliged to surrender as prisoners of war, with Achmet Pasha, the second in command. The brave Seraskier had died the same day of his wounds (1).

Capitulation
of Bender-
schouck.
Sept. 12.

The immediate consequence of this great victory was the capture of Sistowa, a fortified place on the Danube, in the neighbourhood, which surrendered a few days afterwards, with the whole Turkish flotilla which had taken refuge under its walls. Meanwhile, Count Langeron, with the troops now considerably reinforced at Roudschouck, was pressing the siege of that fortress with the utmost possible activity, and had made himself master of the island in the Danube, which forms the point of communication between it and the fortress of Giurgero, situated on the opposite bank. Seeing the commander of the latter place, which was the weaker of the two, thus separated from his colleague, Langeron summoned him to surrender, but the reply was in the true laconic style "Giurgero is not yet swimming in its blood." Bosniak Aga, however, seeing the flotilla on which his whole hopes of relief were fixed captured, became sensible of the necessity of coming to terms of accommodation, but the conqueror of Batten, elated with his recent success, and the effects of a similar severity to Achmet Pasha, refused any terms but those of absolute surrender, upon which the proud Turk declared he would die in the breach first. The intelligence, however, which the Russian general received shortly after, of the elevation of Bernadotte to the rank of crown prince and heir-apparent of Sweden, coupled with accounts of the sacred standard having been unfurled at Constantinople, induced him to relax from this ill-timed rigour; and by the intervention of Count Langeron, a capitulation was at length agreed on, in the end of September, in virtue of which the pasha was permitted to retire with his whole troops and inhabitants, leaving only the walls, cannon, standards, and military stores to the Russians. These conditions, the fair reward of his heroic defence, were so favourable, that Bosniak Aga would probably have willingly acceded to them in the beginning of the siege; and the pasha of Giurgero immediately after capitulated on the same favourable terms (2).

Though the Russians had thus made themselves masters of these important

Evacuation of Roudschouck, and ruin of Sistowa strongholds on the Danube, yet the obstinate resistance of Bosniak Aga had entirely ruined their designs for the campaign. The rainy season had now set in; the evacuation of Roudschouck, which the Turks prolonged as much as possible, took nearly a month; Kaminski did not consider it safe to undertake any other enterprise till he was finally delivered of his formidable antagonist; and even when the Russians were put entirely in possession of the fortress in the end of October, they got nothing but half-ruined walls and a deserted town, tenanted only by five hundred of the lowest of the people, while the long trains conveying the garrison and inhabitants, the real strength of Roudschouck, to the southward, formed an army in the field little less formidable than it had been behind its blood-stained ramparts. A deplorable catastrophe, characteristic of the envenomed character of these semi-religious wars, took place at the same period. Kaminski, disquieted at the prolonged resistance of Roudschouck, and the intelligence of great armaments at Constantinople, dispatched orders to General St.-Priest, in command at Sistowa, to destroy that town, and bring all his forces to the main army. These orders, dictated in a moment of groundless alarm, were too faithfully executed. Sistowa was reduced to a heap of ruins, its inhabitants, twenty thousand in number, transported to the opposite side of the Danube, where they were sheltered from the drenching rains in huts newly-constructed, great flocks of wild pigeons settled in the ruins of this once flourishing town, and its smiling environs, composed of vine-clad hills, intermingled with roses, were soon choked by weeds, and tenanted only by the wild foxes from the neighbouring solitudes (1).

Conclusion of the campaign, Oct 29 It was necessary, however, to do something to give eclat to the conclusion of the campaign, and for this reason, the siege of Nicopolis was undertaken, a considerable town on the southern bank of the Danube, though not so flourishing as Sistowa had been. Kaminski, accordingly, sat down before it with thirty thousand men, while the indefatigable Bosniak Aga approached Tirnova with seventeen thousand who had followed his standard from Roudschouck, and soon formed the basis of a respectable army. The commander of that place, however, shut his gates against such formidable guests, and Bosniak at length found refuge in Plewne, while the Pacha of Giurgevo was received in Tirnova. Meanwhile, Nicopolis capitulated, and the Russians re-crossed the Danube, and took up their winter-quarters for the most part in Wallachia and Moldavia, leaving three divisions only on the right bank at Nicopolis, Roudschouck, and Silistria. Soon after, the Cabinet of St.-Petersburg, worn out with this endless war of sieges, in which they frequently combated at a disadvantage, and foreseeing a formidable struggle nearer home, where they would need all their strength, sent orders to Kaminski to destroy all the fortified places on the right bank of the Danube, with the exception of Roudschouck, which was to be retained only as a *tele-de-pont*. In pursuance of these directions, the walls of Silistria and Nicopolis were blown up, and Roudschouck put in a respectable posture of defence, but before any offensive operations could be commenced, Kaminski was seized with the malady of which he soon after died, and he was

(1) Val 139, 112. Jom 467

A singular proof of the extraordinary fertility of the soil, and its adaptation for the cultivation of the vine, occurred at Roudschouck at this period. The whole slopes in its vicinity are covered with vines, which grow in that district with such luxuriance, that though the besieging army had feasted on them for some weeks before the armistice began, yet the

inhabitants there, during its continuance, reaped a very fair crop from their gardens. The combined efforts of two armies were unable to consume the profuse fruit of a few miles square. The vine, which is there indigenous, grows with such tenacity on the slopes, that it is hardly possible, by any efforts of cultivation, to extirpate it.—VALLETTIER, 47.

succeeded by an officer destined to immortal celebrity in a more glorious war—GENERAL KUTUSOFF (1)

*Great draft
of troops
from the
Danube to
Poland.
Jan. 9.
Feb. 1812*

The campaign of 1812, however, of necessity was laid out upon a defensive plan merely, for although the Russian army had been reinforced in the early part of the winter by a strong division under General Suwarow, son of the great marshal of the same name, in consequence of which, Kaminaki, before his illness rendered him unfit for service, had made a vigorous winter march against Loweza, which was surprised and taken with four thousand men, in the depth of winter yet immediately afterwards, the relations between the cabinet of St. Petersburg and that of the Tuilleries became so menacing, that the Emperor Alexander gave orders for five divisions of the army to break up from their winter-quarters on the Danube, and direct their march, not towards the Balkan and Constantinople, but to Poland and the Vistula. This great deduction at once reduced the Russians to one-half of their former amount; and with fifty thousand men merely, it was not only impossible for Kutusoff to prosecute offensive operations to the south of the Danube, but difficult for him even to maintain his footing on the south of that river in the few strongholds of which they still retained possession. Encouraged by this great diminution in the strength of their enemies, and thoroughly roused by the dangers they had incurred in the preceding campaign, the Turkish Government made the most vigorous efforts for the prosecution of the war, and not only put themselves at all points into a good posture of defence, but prepared to take advantage of the weakness of their enemies, and regain all the strongholds which they had lost on the right bank of the Danube. Achmet Pasha, who had gained such renown at the assault of Brailow, commanded the main army which numbered sixty thousand combatants, with seventy-eight pieces of artillery admirably equipped. He advanced in the middle of June towards Roudschouk at the head of this imposing force, while at the same time a corps of twenty thousand men was detached to the left, towards Widdin, to keep in check Czerny George and the Servians, and nearly the same number to the right, to observe Silistria, Nicopolis, and Tourloukal, and occupy any of these places which might be evacuated by the enemy (2)

*Battle of
Roudschouk.*

It affords a strong proof of the native vigour, which, despite the innumerable errors of their political institutions, animated the Turkish empire, that they were capable, in the third year of the war, and without any external aid of putting forth such formidable forces. Their approach immediately made Kutusoff concentrate his troops, and he himself crossed the Danube, and took post with eighteen thousand men in front of Roudschouk. As the superiority of the enemy especially in cavalry, was so great, the Russian general remained on the defensive and awaited their approach in the regular squares, which had so often dissipated the innumerable hordes of the Osmanli horse. The attack of the Ottomans was made in their usual manner—charging with loud shouts these squares on three sides at once but in the tumult of the onset, and when the infantry were in a manner encircled by their enemies, the discernment of the Grand Vizier had prepared a separate corps which was to penetrate into the town. This able plan all but succeeded. The Turkish guns, admirably directed, ploughed through the Russian squares, while the spahis, in every quarter, threw themselves upon them with impetuosity over the whole position. The squares on the right, where they had the advantage of having one flank se-

(1) *Jour. III. 407 Vol. 111. 134*

(2) *Jour. III. 812. Vol. 130. 132.*

cured by the precipitous banks of the river Lomin, withstood the shock; but the centre suffered severely from the cannonade of the Turkish batteries, and the left was wellnigh swept away by the torrent of their incomparable horse. Kutusoff brought up his cavalry to keep at a distance the increasing squadrons of the spahis, but then was seen how inadequate the European is to the encounter of the Asiatic horse. In a moment the advancing mass of the Muscovites and Cossacks was charged in flank, pierced through, and overthrown. Four regiments were almost destroyed; and the Ottoman horsemen, deeming the victory won, dashed through the intervals of the squares with deafening cries, disregarding the fire which assailed them on either flank, and penetrated in the rear even as far as the gardens of the town. All seemed lost, and if the Grand Vizier had had infantry at hand to support his cavalry, it would have been so. But the gallant horsemen, having no aid from foot-soldiers, were unable to establish themselves in the fortress; the grape-shot from the ramparts shook their ranks, and they were compelled to retreat through the steady squares, who stood immovable as if rooted to the ground, and again poured in a deadly volley on either side of their now diminished squadrons. This completed the discomfiture of the Turks, who took refuge in their intrenched camp, but although Kutusoff, seeing the field deserted, advanced to the front of its rampart, he did not venture to storm the works, and soon after withdrew within the walls of Roudschouck, with the loss of three thousand men, the Turks being weakened by at least an equal number (1)

Evacuation
of Roud-
schouck by
the Rus-
sians

Though this memorable battle was highly honourable to the discipline and intrepidity of the Russians, considering the great numerical superiority of their enemies, and the admirable quality of their cavalry, yet it convinced Kutusoff of the impossibility of maintaining his footing on the right bank of the Danube. The extensive works of Roudschouck required a garrison of at least ten thousand men—nearly half the disposable force of which he had the command. He wisely resolved, therefore, to prefer a campaign in the field, where the discipline of his troops might give them the advantage, to the murderous contest behind walls, where the Turks were so formidable, and abandoning to his antagonist the object of so much bloodshed, withdrew from Roudschouck after barbarously burning the town, and crossed over entirely to the left bank of the river. Bosniak Aga, amidst the pomp of Oriental power and the clang of military instruments, again took possession of the ramparts which he had so nobly defended, the fugitive inhabitants of the fortress returned in joyful crowds to their much-loved and long-deserted homes, the standards of Mahomet were again displayed from the battlements, the beautiful vineyards in the environs were cleared out and dressed by the hands of their owners, and, contrary to the order of things for above a century, the Crescent appeared triumphant over the Cross (2)

The Turks
cross the
Danube
Sept 8

Overjoyed at this great success, the Grand Vizier determined to cross the Danube, and expel the Russians from all the Turkish territory which they held in Wallachia and Moldavia. After six weeks spent in repairing the fortifications of Roudschouck, and collecting forces on all sides, the passage was effected in the night of the 8th September; the Grand Vizier having with great skill drawn the attention of their antagonists to a feigned point of passage, whereby the real one was overlooked. No sooner, however, was the passage discovered, than the Russians under Boulatoff,

(1) Journ. iii. 543. Vol. 152, 155.

(2) Vol. 156, 158.

who were nearest at hand, commenced an assault on the Ottomans; but the latter, with great skill, had already thrown up some rude works the thick brushwood with which they were surrounded, prevented the advance of the Muscovites in masses the Ottomans maintained their wonted superiority in bushfighting; battlements, erected on some heights on the right bank, spread death through the Russian ranks, and under cover of their fire the passage was continued with such vigour, that by noon six thousand men, almost all janissaries, and six pieces of cannon, were established on the left bank. Boulatoff, however, was not to be discouraged having received reinforcements, which raised his force to eight thousand men, he hazarded a third assault, but with no better success, and, after losing two thousand of his best troops in this murderous contest, besides a gun and a standard, the Russians retired, and the Turks, with deafening shouts and sabre in hand, sallied out of their intrenchments, and cut off the heads of the slain and unfortunate wounded (1)

The Turks
strengthened
their position.
Sept. 10.

General Sabinejev, during these events, had succeeded in forcing his way through the brushwood, and established a battery within half cannon-shot of the Turkish intrenchment on the left bank,

which effectually cut off all communication between it and the remainder of the army on the right; but Kutusoff ordered this advanced position to be abandoned in the night and issuing orders, in all directions, to concentrate round the outside of the intrenchment, brought up his flotilla to cannonade the enemy on the northern shore But it was too late for success in this way;

Sept. 12. the enemy were now solidly established on the left bank; the flotilla was so roughly handled by the Turkish artillery, that one of its number sunk in the river the passage of troops continued incessantly, and by the 18th

Sept. 12. thirty thousand men, with fifty pieces of cannon, were established on the left bank, in a large intrenched camp, with redoubts at its angles while an equal force on the right, under the Grand Vizier in person, had established a sort of city, in which his tent was conspicuous, decked out with unusual splendour At this period the Russians around the intrenchments were so weak, that if Ahmet Pasha had fallen vigorously on his opponents, he would probably have gained such decisive success as would have restored Wallachia and Moldavia to the Ottoman arms. But the precious time, big with such portentous events, was consumed in erecting intrenchments round the troops which had passed over and, in the mean time, two strong divisions of infantry and a large body of Cossacks came up, which raised the Russian

Sept. 16. force to thirty five thousand men Kutusoff now resolved to take advantage of the exposed situation of the enemy, and, if possible, by cutting off the communication of those passed over to the right compel them to

Sept. surrender He allowed the Turks, accordingly, after severe fighting to extend their camp, and even erect a redoubt a mile in advance of its former limits; but while his troops were lost in astonishment at the supineness of their general, he was preparing with the secrecy and finesse peculiar to his character, the means of involving the enemy in a signal calamity (2)

Kutusoff
surprised the
Ottomans by
the enemy

The intention of the Grand Vizier was to have gradually pushed his troops forward, covering themselves with intrenchments and redoubts as they advanced, till he got possession of the village of

Malta, about two miles further on, where there were considerable magazines, which he meant also to fortify, and thereby acquire a solid footing on the northern bank To defeat this project, the Russian general, on the night

Sept. 29 of the 29th, erected four large redoubts in an exterior circle around the Ottoman camp, and these were soon succeeded by eight more. Alarmed at the progress of this line of circumvallation, which, in the form of a semi-circle, enclosed their camp with both ends resting on the Danube, the Turks, after several bloody combats, erected a new redoubt near the river, to cover their communication with the southern shore, but the Russians stormed it before the works were finished, and put the garrison, consisting of four hundred Albanians, to the sword. A sally of the Ottomans immediately made to regain this important post, was repulsed with the loss of above fifteen hundred men. After this severe check the Turks remained quietly within their intrenchments, while the Russian general erected a ninth redoubt on his extreme right near the Danube, which completed the investiture of the Turkish camp, and considerably straitened their communications with the opposite bank of the river (1).

Surprise and total defeat of the Turks on the right bank. As long, however, as the Ottomans had a communication of any sort open with the other side, it was impossible that they could be reduced to any serious difficulties for want of provisions, and Kutusoff was therefore tempted to hazard an expedition to the other bank, in order, if possible, to dislodge the enemy from the ground on the opposite side, from whence the Grand Vizier's camp was supplied with food and reinforcements. This important operation was intrusted to General Markoff, who, with ten thousand men, set out from the Russian camp, after dark, on the night of the 10th October, and succeeded, early the next morning, in throwing his light troops and Cossacks across. The flotilla, which had been ordered to the point in order to transport across the main body, could not get down, from the violence of the current, in consequence of which their passage was delayed for twenty-eight hours, and was not effected till the morning of the 13th. During this time the greatest anxiety prevailed at headquarters, where very scanty information of their proceedings had been received; but, strange to say, though the point where the Russians had been disembarked on the right bank was not above six miles from the Ottoman camp there, it remained entirely unknown to its generals. Kutusoff's disquietude, however, was at length dissipated. Markoff having got over ten battalions and five hundred horse, proceeded instantly to the attack of the Turkish camp on the right bank, leaving the remainder to continue their passage. The surprise was complete—the Turks, never dreaming of being assailed on their own side, made scarcely any resistance, the civil functionaries of the Grand Vizier, the merchants and traders who thronged the encampment, took to flight in the utmost consternation, and, not deeming themselves in safety at Roudschouck, which had been stripped of nearly all its heavy artillery for the use of the camp, took the road for Rasgrad and Schumla. The magnificent tents of the Grand Vizier, the whole baggage and stores of the army, an immense number of horses, camels, and carriages, and prodigious booty, fell into the hands of the victors, who did not lose eight men in this felicitous attack. Markoff, however, without casting a thought on the booty, seized the Turkish batteries, which he turned against the enemy on the other side, where the remainder of the Russian army were drawn up in battle array, witnesses of his triumph, and, while eighty pieces of cannon thundered against the Ottoman camp, demanded with loud cries to be led to the assault (2).

(1) Val 165, 167 Jom iii 543

*Entrée
of the Turk
ish army on
the right
bank.*

Had Kutusoff possessed the daring of Alexander or Cæsar, he would have taken advantage of the enthusiasm of the moment and the consternation of the enemy, and instantly led his troops to the attack of the intrenched camp on the left bank and there can be little doubt that, if this had been done, it would have been carried, and the whole Turkish army destroyed. But his genius was essentially cautious; and he never would owe to hazard what he hoped to gain by combination. Repressing, therefore, the ardour of his troops, he contented himself with a furious cannonade; and meanwhile, the Grand Vizier himself, who was on the right bank, escaped in a boat to Roudschouck, after in vain proposing an armistice with a view to negotiations for peace. The Pasha Tschappau-Oglou, son of one of the richest princes of Asia Minor, then took the command, and, by his firmness and resources in the most trying circumstances, extorted the admiration even of his enemies. The circumstances of the Turks were wholly desperate. The Russian artillery, now augmented to two hundred pieces of cannon, on the opposite sides of the Danube, kept up an incessant fire upon them, night and day; a strong flotilla, both above and below, precluded all access or escape, by water; a formidable semicircle of redoubts, with batteries in their interstices, enclosed them on the land side; their provisions were soon exhausted; forage there was none for their horses; their tents were burned for fuel; and the troops, during the damp nights of autumn, lay on the open ground, exposed to the ceaseless tempest of shot. Yet all these accumulated horrors could not shake the firm mind of the Turkish general. He repeatedly refused the most advantageous offers of capitulation; and after having consumed his last horses, he was forming the audacious project of cutting his way by a sudden irruption through the Russian left, and intrenching himself opposite to Roudschouck, and under the shelter of its guns. When a convention concluded at Giurgevo, in the end of October, with a view to a peace between the two powers, put an end to the miseries, and saved the honour, of these brave men (1).

Oct. 28. It was stipulated that they should be fed from the Russian magazines till their fate was finally determined by the plenipotentiaries of the two powers, then assembled at Giurgevo—a condition which was faithfully performed; and on the 4th December they finally quitted their camp, in virtue of a convention by which they were to evacuate it, without their arms or cannon, and be quartered in the villages in the neighbourhood of Bucharest, on con-

Dec. 2. dition of having them restored only if peace was concluded. The Russians immediately entered their blood-stained intrenchments, the object of such desperate strife; and their interior told how dreadful had been the sufferings of their heroic defenders. The ground was strewn with the dead bodies of men and horses, which the survivors had not possessed sufficient strength to inter; limbs struck off by the cannon-shot, broken arms, overturned gun-carriages, and putrid corpses, lay on all sides; the earth even was ploughed up in many places by the shot; but the survivors, though pale and emaciated, still preserved their calm and resolute air. Five thousand amidst the respect of their enemies, delivered up their arms, with fifty-one guns, above twelve thousand had perished, by disease or the sword, since the cannonade commenced (2).

*Conclusion
of the cam-
paign in
Little
Wallachia.*

This concluded the operations of the campaign, and put an end to this bloody war, in which both parties had made prodigious efforts, and neither had gained decisive success. In Little Wallachia, Ismael

Bey had invaded the Russian side of the river with thirty thousand men; and General Sass, who commanded in that quarter with very inferior forces, was ^{Sept 16} at one period so hard pressed, that Kutusoff in the middle of September sent him orders to evacuate the province entirely, and join him in his camp before the Grand Vizier, but that general, with admirable skill, maintained his ground, defeated the enemy in several partial encounters, and at length compelled him to retire back to the right bank about the same time that the great disaster befell the army of the Grand Vizier in the neighbourhood of Roudschouek (1).

Peace of
Bucharest
May 28,
1812

Negotiations in good earnest were carried on for peace; for both parties were sincerely desirous of an accommodation. The Russians, well aware of the formidable contest which was impending over them with Napoléon, were anxious at any price to terminate the hostilities on the Danube, and bring Kutusoff's force to the assistance of the grand armies on the Niemen. At first sight, it might have been supposed, that what it was so much the interest of the Russians to obtain, it could not be for the advantage of the Turks to concede: but in this instance it was otherwise, and the good sense of the Turks triumphed over all the efforts which the French ambassador, Latour Maubourg, made to retain them in hostilities with Russia. By a singular but just retribution, all the powers whose ambassadors or envoys assisted at these conferences, were either threatened by, or had been offered a share of, Napoléon's spoiliations, and their concurring testimony removed all doubt from the minds of the Turkish ministers as to the imminent danger to which they would be exposed if Napoléon should obtain the same supremacy in Western, which he had long enjoyed in Eastern Europe. The English made them acquainted with the secret articles of the treaty of Tilsit, already mentioned (2), whereby, in consideration of the fidelity with which they had adhered to his fortunes during the war in Poland; and through the disasters of Eylau, the French Emperor had not only agreed to the entire partition of their European dominions, Constantinople and Roumelia alone excepted, but had actually stipulated the largest shares, viz Greece, the islands of the Archipelago, Albania, and Macedonia, to himself. Russia, a party to that scheme of plunder, and intimately acquainted with all its details, revealed them fully to the Turkish ambassadors; the secret conferences of Erfurth were made known, and documents bearing the official signatures of the French plenipotentiaries, were exhibited to them by Kutusoff, which left no doubt of the truth of their representations, Austria disclosed the offer made to her of Servia and Bosnia, if she would concur in the partition, while Czerny George, alarmed at the clear proofs which had been adduced of the intention to dethrone him in the scramble, gave ample details of the inquiries and surveys made by Marshal Marmont immediately after the treaty of Tilsit, to ascertain the most expedient mode of effecting the conquest of the French share in the partition (3). Struck by the concurring representations of all these powers, and the clear evidence which was adduced to support them, the Divan no longer hesitated, the Turks saw clearly, that if Napoléon gained the mastery of Russia he would instantly turn the force of both empires against them—that Moscow would be but a step to Constantinople (4). They strove hard for a considerable time to obtain restitution of all the provinces cc

Russians in the beginning of the war to the north of the Danube; but finding the Russians resolute to retain, at least, the provinces to the east of the Pruth, and rather to run the hazard of a continuance of the war than consent to their restoration, they at length agreed to allow that river to form the boundary of the two nations, and peace was concluded on these terms in the end *May 24, 1812.* of May. The treaty with Turkey was speedily followed by one with Great Britain, which was signed on the 18th July. By the first treaty, although the Cabinet of St. Petersburg lost Wallachia and Moldavia, which they had declared part of their empire, they gained Bessarabia, which gave them the inappreciable advantage, in a contest both with Turkey and Austria, of commanding the mouths of the Danube. And Admiral Tchichagoff, who had been sent from St.-Petersburg to conclude the treaty, as Kutusoff's proceedings were esteemed too dilatory, set off from Bucharest for the Vistula on the 31st July at the head of forty thousand men, who appeared with fatal effect on the great theatre of Europe at the passage of the Berezina (1).

Reasons which induced the Turks to conclude this peace. Napoléon has repeatedly said that the folly of the Turks in making peace at Bucharest with the Russians, their hereditary enemies, was such, that it altogether exceeded the bounds of reasonable calculation and therefore that he was not to be blamed for the disastrous consequences which flowed from the appearance of Tchichagoff's army in his rear when he lay at Moscow. In truth, however, the Turks were not, in this instance, so limited in their political vision as the French writers are desirous to represent and their conduct in concluding that treaty was rather the result of that clear judgment and strong common sense, which, whenever the facts of a case are distinctly brought before them, has always distinguished the Ottoman councils. They knew well the hostility of Russia, and they had often experienced the weight of its arms; but they had felt the ingratitude of France; and the desertion of a friend sinks deeper into the breast than the enmity of a foe. They were aware of their danger from Muscovite ambition; but they were also no strangers to the power and designs of Napoléon and they apprehended with reason immediate destruction from his power, if, by subjugating Russia, he was put in a situation to direct the whole resources of Europe against their devoted capital. They never forgot their desertion at Tilsit by the French Emperor nor the unprovoked project of spoliation on his part which succeeded it and justly feared that, though the mutual jealousy of the two Imperial Allies had hitherto preserved them from destruction, they could not look for a continuance of their respite if the forces of both were concentrated in one hand.

The vigorous and unlooked for resistance which Turkey at this period opposed to all the efforts of the Russians, sufficiently illustrates the elements of strength which at that period lay dormant, till roused by present danger in the Ottoman empire and may perhaps suggest the necessity of modifying some of those opinions as to the declining condition of the power of the Grand Seignior, which have so long been received as political maxims in Europe. When it is recollected that Russia for three years directed her whole force against the Turks; that in the year 1810, she had a hundred thousand men upon the Danube and that this array was composed of the conquerors of Eylau, it certainly appears not a little surprising that the Ottoman empire was not overthrown altogether in the shock. Nevertheless, the contest was extremely equal; and though the forces with which the Ottomans had to contend on the Danube fully equalled those which fronted Napoléon on the

(1) *Journ. III. 516 Vol. 172, 180. See the treaty in Marten, III. 397 230.*

Vistula, yet they opposed nearly as effectual a resistance to the Muscovite arms as the conqueror of Western Europe. The contest began on the Danube, and it terminated, after three years' bloodshed, on the same river, with the loss of only one or two frontier towns to the Ottomans. This broad and decisive fact proves, that, although the political power of Turkey has unquestionably declined for the last century and a half, and the enormous abuses of its civil government have occasioned, during that period, a constant diminution in its inhabitants and strength, yet it still possesses great resources when they are fairly drawn forth by impending danger, and that in the native bravery of its inhabitants is often to be found, as in the English soldiers, more than a compensation for all the errors of their direction or government.

of Sultaun
Mahmoud

Sultaun Mahmound, who attempted to arrest this decay, and draw forth, under more enlightened guidance, the still powerful resources of the Ottoman empire, was one of those remarkable men whose character has stamped a mighty impress on the age in which he lived. Albert bred in the seclusion and effeminacy of the harem, he possessed the native courage and hardihood of his race, albeit little informed by education or social intercourse, he had sagacity enough to perceive the increasing inferiority of the Mahometan to the Christian empires, and courage to undertake what was thought to be the remedy. Instead of ascribing the decline of his dominions, like most of his countrymen, to the irresistible decrees of fate, and submitting to it with the apathy of a predestinarian, he set himself vigorously to avert the evil, and sought, by the destruction of the privileged classes, and the introduction of European discipline and usages, both in civil and military affairs, to communicate to his aged empire a portion of the energy of western civilisation. The contest with ancient habits, inveterate from custom, engrafted upon law, and sanctified by religion, was long and obstinate; and the catastrophe by which it was concluded, in the destruction of the janissaries in 1826, was one of the most awful recorded in history. Whatever the ultimate effect of that tremendous event may be, it stamped Mahmoud's character for all future ages and bespoke the fearless energy, the undaunted courage, the unflinching rigour, which, braving the perils which had proved fatal to so many of his race, could thus subdue them all, and fix, by his single hand, a different impress upon the institutions of a vast empire.

Nevertheless Sultaun Mahmound will not bear a comparison with Peter the Great; and the destruction of the janissaries will, to all appearance, be attended with very different effects from the overthrow of the Muscovite strelitzes. Mahmoud would never have been found in the workshop of Saardam: he was not at the head of his troops under the walls of Varna nor on the field of Koniakh. Political regeneration, difficult in all, is impossible in Mahometan states: the religion and institutions of the harem preclude the possibility of expansion or alteration; they are inconsistent with the adoption of improvement by foreign usages. The power of Turkey has been irrecoverably broken by the destruction of part and the alienation of the whole of the janissary body: the national resources have been ruined, without the vigour of a different civilisation being acquired; the strength of Asia has been lost, without that of Europe being gained. Like the kingdom of Mysore, in Hindostan, the Ottoman empire has sunk to the earth in the attempt to substitute the military system of the West for that of the East. This, accordingly, appeared decided, in the next contest with Russia, where the Danube was no longer maintained: the Balkan barrier; in two campaigns, &c.

direction of the fearful tempest which had elevated him to the throne. Disunion soon broke out among the chiefs who had headed the revolt, whose common rapacity rendered them alike an object of horror to the people. The perfidious Carmican, who had been the main cause of Selim's overthrow, was seized, deposed, and his property confiscated, the ferocious Cabakchy became all-powerful, and substituted in his stead Tayar Pasha, formerly pasha of Trebizonde, who had been displaced by the former sultaun Tayan, however, soon showed himself not less tyrannical and rapacious than his predecessor. Prince Suzzo, the first dragoman of the Porte, was, by his orders, massacred at the gates of the seraglio, upon suspicion of having revealed to the ambassador of France the secret intention of the Divan to treat with England. Tayar's extortions roused the populace against him, who crowded round the gates of the seraglio demanding his head. His old ally Cabakchy yielded to the torrent, and proclaimed himself his enemy, and the tyrannical Carmican, abandoned by all, was glad to escape to Roudschouck, where Mustapha Barayctar, the commander of that place, was secretly collecting the disaffected, and fomenting a counter-revolution. The arrival of Tayar, and his imminent danger, determined their measures. Selecting a choice body of four thousand horse, followed by twelve thousand infantry, chiefly the new troops, who could be relied on, he crossed the Balkan to Adrianople, and, together, they marched to Constantinople bearing with them the *sandjak-cheriff*, or standard of Mahomet. Barayctar combated the rebels with their own weapons. Hadgy-Ali, fortified by a firman of the Grand Vizier, surrounded the house of Cabakchy in the night with troops, surprised him in the middle of May 21, 1808 his harem, and cut off his head, which he sent to Barayctar. The cries of the women of the harem having alarmed the neighbourhood, the yamacks assembled to arms, disregarding the firman of the Grand Seigneur, they attacked and overthrew the handful of troops with which Hadgy-Ali had destroyed Cabakchy, and shut them up in some houses, to which they set fire. The intrepid Ali, however, sallied forth sword in hand, cut his way through the besiegers, and threw himself into one of the castles of the Bosphorus, from whence, after being vainly besieged by the yamacks for three days, he made his way to the victorious army of the Grand Vizier, now at the gates of Constantinople (1).

Fresh revolution
Deposition of Mustapha.
Death of Selim and accession of Mahmoud
May 21, 1808

At the entrance of the capital Barayctar made known his conditions to sultaun Mustapha, viz that he should exile the Grand Mufti, and disband the yamacks. Too happy to extricate himself from such a crisis by these concessions, the sultaun at once agreed. Barayctar feigned entire satisfaction, and the deluded sovereign resumed with undiminished zest his favourite amusements. But the undaunted pasha of Roudschouck had deeper designs in view. A few days after, learning that the Grand Seigneur had gone to pass the day with the ladies of his harem at one of his kiosks, or country residences, he put himself at the head of a chosen body of troops, and as the Grand Vizier hesitated to accompany him, violently tore from his hands the seals of office, made himself master of the *Sanjak-cheriff*, and, preceded by that revered standard, marched to the seraglio to dethrone the reigning sultaun, and restore the captive Selim. The outer gates of the palace flew open at the sight of the sacred ensign, but the bostangis at the inner gates opposed so firm a resistance, that time was afforded for the sultaun to return by a back way, and regain his private apartments. Meanwhile, Barayctar's troops thundered at the gates,

and loudly demanded that Selim should instantly be restored to them, and seated on the throne. To gain time, Mustapha's adherents seized companions; but, meanwhile, he himself gave orders that Selim should be strangled in prison. The order was immediately executed, and the dead body of the unhappy sultan thrown into the court to Barakchar's troops. Placed to the heart, the faithful Barakchar threw himself on his master's remains, which he bedewed with his tears. In a transport of rage he ordered the officers of the scraglio to be brought before him and instantly executed (1). Sulaim Mustapha was deposed, and shut up in the same prison from which Selim had just been brought to execution; and his younger brother Mahmoud, the last of the royal and sacred race, put on the throne.

It might have been supposed that this bloody catastrophe would have terminated these frightful revolutions, but fortune was not so kind. Mustapha had been determined to reform the national institutions (Ismail Selim had been, that to this disposition he joined an inflexibility of character, which rendered him incomparably more formidable and that the great capacity of the Grand Vizier rendered it highly probable that their projects would soon be carried into complete execution. The jealousy of the janissaries was again awakened. A large portion of the army which had overthrown Sulaim Mustapha, had been withdrawn to make head against the Russians on the Danube, and the opportunity seemed favourable for again assembling the now order of things. The ulucas, the mirla, and the leaders of the disaffected, again organised an insurrection, and it broke out in the middle of November.

Notwithstanding all the precautions which Mahmoud and the Grand Vizier Barakchar could take, the party of the janissaries on this occasion proved victorious. A furious multitude of these haughty pretensions surrounded the noble barracks of the new troops, set fire to them, and consumed several hundreds in the conflagration, while another body directed their steps to the palace of the Grand Vizier, and a third to the scraglio itself. Four thousand chosen guards defended the sultan, and defeated all the efforts of the janissaries at that point but the few faithful defenders of the Grand Vizier were driven into his palace, to which the savage multitude immediately set fire, and the heroic Barakchar, to shorten his sufferings, blinched set fire to a powder magazine, which he had provided as a last resource against his enemies, and with his whole household, was blown into the air. Instantly at these scenes of horror, Sulaim Mahmoud gave orders for his troops to rally forth from the scraglio, and others from the adjoining forts of the Bosphorus to enter the town; and Constantinople immediately became the theatre of general bloodshed, massacre, and conflagration. The janissaries set fire to every quarter of which they obtained possession to augment the confusion, and men, women, and children perished alike by the sword or in the flames. At length, after forty-eight hours of continued combat and unceasing horror, the party of the janissaries prevailed. A great part of the new troops perished by their hands; the remainder surrendered; and the sultan, who had previously arranged his rival Mustapha in prison, was compelled to purchase peace by the sacrifice of all his ministers who were bent on the new order of

things Yet even in these moments of victorious insurrection, the force of old attachment and long-established loyalty to the sacred race was apparent. Mahmoud, the last of the race of Othman, with which the existence of the empire was thought to be wound up, became the object of veneration even to the rebels who had subverted his government (1); and he reigned in safety, with despotic power, by the support of the very faction who would have consigned him to the dungeon, and probably the bowstring, had his imprisoned relative survived to be elevated to the throne.

Passive indifference of the people during these disorders In these sanguinary tumults, the great bulk of the people remained in a state of passive indifference, ready to submit implicitly to either of the factions which might prove victorious in the strife. The contest lay between the ulemas, the mufti, the janissaries on the one side, and the court and officers of state, with such of the new troops as they had organized, on the other. The multitude took no part in the combat till the insurgents roused their passions by the hope of plunder or the sight of conflagration. Like the Parisian populace, on occasion of the contests for power between the club of Clichy and the bayonets of Augereau in 1797, or the grenadiers of Napoleon and the council of the Five Hundred (2), they submitted in silence to power which they could not resist, and avoided a contest in which they had no interest. Years of revolution had produced the same result in the metropolis of France which centuries of despotism had done in that of Turkey, and in the social conflicts which convulsed the state, fanaticism and tyranny in the east, produced almost as great atrocities as infidelity and democracy had done in the west of Europe (3).

Napoleon's desertion of the Turks in the treaty of Tilsit These repeated convulsions at Constantinople proved highly injurious to the Ottoman cause in the field of diplomacy, because they gave Napoleon, as already noticed, a pretext at the treaty of Tilsit for holding out, as he did, that his engagements were with Sultaan Selim, that he was under no obligation to keep faith with the ferocious rabble who had overthrown his government, and consigned himself to a dungeon, and that the Turks had now proved themselves a mere horde of barbarians, who could no longer be tolerated in Europe. It was one of the conditions, accordingly, of the treaty of Tilsit, that France was to offer its mediation to effect an adjustment of the differences between Russia and the Sublime Porte, and that, in the event of the latter declining the terms arranged between Alexander and Napoléon, she was to be jointly attacked by them both. Russia was to be at entire liberty to annex Wallachia, Moldavia, and Bulgaria to her empire, while Macedonia, Thrace, Greece, and the islands of the Archipelago, were to be allotted to the French Emperor, who immediately commenced enquiries and surveys as to his share in the partition (4). By such shameful desertion of his ally did Napoléon requite the Turks for the fidelity with which they had stood by his side, when the British squadron under Sir J. Duckworth threatened Constantinople with destruction, and, if more energetically led, might have effected it.

Causes which deferred serious operations till spring 1809 Russia, however, had other and more pressing objects of ambition nearer home, which were also amply provided for by the treaty of Tilsit; The situation of her principal armies in the north of Poland, pointed them out as immediately deserving of attention; and the conquerors of Eylau defiled in great and irresistible strength through St.-Petersburg, on their route for Finland. The prosecution of the war in

that province, long the object of desire to the cabinet of St. Petersburg, which will immediately be considered, rendered the Russian Government unwilling to engage in hostilities at the same time on the Danube, and the Turks, distracted by the cruel dissensions at Constantinople, were too happy to prolong a negotiation which might relieve them, during their agonies, from the Russian battalions. But the war in Finland having terminated, as might have been expected, by the annexation of that province to the Russian dominions, and peace having been concluded, as will immediately be detailed, with the court of Stockholm, the Czar turned his eyes to the Turkish dominions. Napoleon formally abandoned the principalities of Wallachia and Moldavia to the conquest of his powerful northern ally; the army on the Danube was reinforced by sixty battalions, and orders were sent to its commander, Prince Proskorowsky, to cross that river and carry the war with vigour into the heart of the Turkish territories (1).

The Russians, however, were far from reaping that benefit from the distractions of the Ottoman empire, and their own surpassing strength, which might have been anticipated Proskorowsky, though an able general, was ill-qualified with the very peculiar mode of war required in Turkish warfare, where the enemy's infantry throw themselves into fortresses, which they defend with desperate courage to the last extremity; and their horse scouring in vast multitudes a desert and unpeopled country, disappear upon a reverse, and again assemble in undiminished strength, if a farther advance by the enemy is attempted. His force was very great—one hundred and twenty-five battalions, ninety-five squadrons, and ten thousand Cossacks, presented a total of eighty thousand infantry and twenty-five thousand horse, to which the Turks, sorely weakened by their internal dissensions and the defection of Cerny George, who had declared for the Russians, had no force to oppose which was capable of keeping the field. They wisely, therefore, confined themselves to throwing strong garrisons into the fortresses on the Danube, and directed their principal forces against Servia, where their undisciplined militia were more likely to meet with antagonists in the field, over whom they had a chance of prevailing. This plan proved entirely successful. Sultan Mahmud succeeded in routing the military spirit of the Ottoman population in European Turkey, and eighty thousand Turks, to whom Cerny George could only oppose thirty thousand mountaineers, soon compelled him to recede from Nizza, to which he had advanced, to retire with loss behind the Morava, and finally take refuge under the cannon of Belgrade. A corps of Russians now advanced from the north to the support of their Serbian allies, and in some degree changed the face of affairs. The Ottomans, on the side of Bosnia, which held out for the Grand Seigneur, were driven back into their own territories, but still their grand army kept possession of the greater part of Servia, and threatened Belgrade, and it was evident, that unless a powerful diversion was effected on the Lower Danube, the campaign would terminate entirely to the advantage of the Turks (2).

Proskorowsky's first enterprise was against Clujewo, near the mouth of the Danube; and, ignorant of the quality of the enemy whom he had to deal, as well as misled by the successful issue of the assault of Iametz and Ockow in former days, he ventured to attempt to carry it by escalade. A bloody repulse, in which he lost two

thousand men, taught him his mistake. Abandoning this presumptuous attempt, the Russian general next invested Biahlow, on the right bank of the river, and began to batter its walls with heavy cannon, though without going through the form of regular approaches. Deeming it practicable to carry the place by escalade before the walls were breached, an assault was attempted in that manner, but the steady valour and deadly aim of the Mussulmans who manned the ramparts, again baffled all the efforts of the Muscovite infantry, and they were repulsed with the loss of above seven thousand men. To conceal these disasters, the Russian general now merely converted the siege into a blockade, crossed the Danube at Galacz, and openly proclaimed his resolution to carry the war to the foot of the Balkan. But this operation was not prosecuted with any activity, and the Turks, emboldened by their success at Gurgevo and Biahlow, ventured, under the Grand Vizier, to cross the Danube at the former of these towns, and began to ravage the plains of Moldavia. Meanwhile, Prosorowsky died, and he was succeeded in the command by Bagrathion, who, in order to draw back the Turks from their incursion on the northern bank of the river, immediately advanced against Silistria, the most important fortress on the whole northern frontier. But the Turks having thrown fifteen thousand men into that stronghold, the Russian general did not deem himself in sufficient force to undertake the siege of a place of such strength so defended, and therefore confined himself to a simple blockade, in maintaining which his troops suffered most severely from the unhealthiness of its environs in the autumnal months. The Grand Vizier, however, alarmed for a fortress of such importance, at length recrossed the Danube, and detached fifteen thousand men to beat up the enemy's quarters in its vicinity, in the end of October. Bagrathion advanced against this body, and an action, with no decisive result, ensued at Tartaritzza, in which, however, it soon appeared that the Russians had been worsted, for Bagrathion immediately recrossed the Danube, and raised the blockade. Ismael, however, which had been long blockaded, surrendered on the 21st September, and Bagrathion, after so many reverses, succeeded in throwing a radiance over the conclusion of the campaign by the reduction of Biahlow, which had been long invested on both banks of the river, and surrendered by capitulation, from want of provisions, in the end of November, thereby giving the Russians the great advantage of a solid fortress, which secured their passage of the Danube (1).

Annexation of Wallachia and Moldavia to Russia and opening of the campaign of 1810 The Swedish war in 1808, and the Austrian one of 1809, had operated as important diversions in favour of the Ottoman forces, but in the beginning of 1810, the cabinet of St -Petersburg resolved to carry on their operations with much greater vigour against the Turks, fearful lest the present favourable opportunity afforded by the conclusion of the peace with Napoléon should glide away, without its being turned to due advantage by the agreed-on conquests from the Ottomans. In the beginning of the year, accordingly, an imperial ukase appeared, formally annexing Moldavia and Wallachia, which for three years had been occupied by their troops, to the Russian empire, and declaring the Danube, from the Austrian frontier to the sea, the southern European boundary of their mighty dominion. This decisive step was immediately followed up by the most extensive military preparations. The Muscovite army on the Danube was augmented to a hundred and ten thousand men, of whom thirty

thousand were horse. Bagration, whose checked success had been far placed by Khamuly (1), a general, learned, brave, and in the flower of his age but by no means possessing experience in Turkish warfare adequate to the difficult task with which he was entrusted. Seeing himself at the head of so great a force, and desirous to equalize the commencement of his campaign by decisive success, he resolved to divide his troops into two parts; and while with the left he himself advanced by Ilkova to Schumla, the right was to lay siege to Silistra and Houdschouck, and the lesser fortresses on the Danube, so as to become master of the whole line of that important stream. The project was well conceived, as it offered the important advantage of crossing the plains and barren hills between the Danube and the Balkan, before the unhappily hecat commenced, and when the yet green herbage offered ample subsistence for the horses of the army but it failed from not sufficiently estimating the desperate valour of the Turks in the defence of fortified places, which has so often rendered abortive the best laid plans for the subversion of the Ottoman empire (2).

During the winter, a sort of tacit armistice, attended by very singular effects, prevailed between the two armies. Though the Russians were masters of many batteries on the left bank of the Danube, and by their possession of Brailow, had the command of its principal mouth, yet, during the whole winter of 1809-10, they made no attempt to obstruct the navigation of that river; the Turks and Austrian vessels continued to ply upon it as during a period of profound peace, and English goods to an enormous amount mounted the stream, paid duties to the pass of Widdin, and were carried through the Roshenbourg, by means of beads and horses' backs, into Hungary, and thence through the whole of Germany. The secret of this extraordinary traffic was to be found in the continental system of Napoleon, then in full activity in northern Europe, which had so intimately connected the price of all kinds of British merchandise, that the vast profits of the merchants, who were fortunate enough to get any introduced, enabled them to bribe the authorities in all the different countries through which they passed, to wink at the transit of the goods, even in direct violation of the engagements of their respective sovereigns. Thus, at the very time that the French Emperor flattered himself, that by the treaty of Tilsit, and the accession of the Russian Emperor to the continental coalition, he had closed the last doors against the introduction of English manufactures to the continent, the generals of the very power he had subdued, were conspiring at the same against which he had made such strenuous efforts, and found in their conspiracy the means of excelling it: a striking proof of the extreme utility, even with the greatest power, of excluding nothing that mutual intercourse which arises out of the wants, and grows with the happiness of mankind (3).

The first of the Russians crossed the Danube, in the middle of March, at Casimir, between Houdschouck and Widdin; but it was not till the middle of May that the left wing of their army entered upon the campaign; and advanced to Bazarzil. Meanwhile, the Grand Vizier, Kora-Jussuf Pasha, already known by his defence of Varna against Napoleon (1), had been indistinguishable in his endeavours to accumulate and direct

(1) Some of the journals of the same name who accompanied the Russians in the summer of 1812 and were made during the time they were in the field. — *Ann. L. 17*

plined a formidable force in the great intrenched camp of SCHUMLA, and strengthened the numerous redoubts by which it is defended, but when the Russians approached, he cautiously kept his still ill-disciplined host within their ramparts. Kaminski immediately laid siege to Bazarjik, which, after a short siege and the capture of eight hundred of its garrison in an unfortunate sortie, was carried by assault, in the beginning of June; with two thousand prisoners. The Russians, who were sixty thousand strong on the lower Danube, finding no enemy to oppose them in the field, divided their forces, and while the main body, under Kaminski in person, advanced towards the Balkan, Langeron, with his corps, was dispatched to besiege Silistria, and lesser bodies sent against Tourtougai and Rasgrad. Langeron proved entirely successful in seven days after he appeared before its walls, Silistria, one of the strongest places on the Danube, surrendered by capitulation, though the sap was still one hundred and eighty yards from the ditch, on condition only of the garrison and inhabitants retiring where they chose; while Tourtougai and Rasgrad yielded soon after to the terrors of a bombardment. These successes, which proved that a golden key, or favourable conditions to the inhabitants, could sometimes be as effectual as an iron one, or force, in opening the Turkish gates, encouraged the commander-in-chief, without awaiting the issue of the operations of his right wing against Roudschouck, to advance towards Schumla, and he appeared, accordingly, with forty thousand men in front of that celebrated stronghold, hitherto the *ne plus ultra* of Muscovite advance towards Constantinople, on the 22d June (1).

Description of Schumla Schumla, which in all the wars between Russia and Turkey, has been a place of the highest importance, is a considerable town, situated on the northern slope of the Balkan, where the great road from Belgrade and Bucharest to Constantinople first ascends the slopes of the mountains. To the traveller who approaches it from the open and desert hills extending southward from the Danube, it exhibits the appearance of a triangular sheet of vast extent spread over the hollow of the mountains, and extending up the heights on either side; not unlike the distant view of Algiers over the waves of the Mediterranean. Thirty thousand industrious inhabitants fill its streets with animation, and a clear torrent descending through its centre, secures both to them and the inmates of the intrenched camp, which extends far beyond their dwellings, an ample supply of the indispensable element of water. The town cannot be said to be regularly fortified, even though its position, at the point of intersection of the principal roads which cross the Balkan from north to south, renders it a strategical point of the very highest importance, and it is overhung, in rear, by a succession of eminences, which rise one above another, till they are lost in the woody thickets of Mount Hemus. But these heights, of difficult access and covered with thick brushwood, are entirely inaccessible to European cavalry and artillery, the vast circuit of the intrenched camp renders it almost impossible to invest or blockade its circumference; supplies are thus introduced with ease from the rear, and though the redoubts consist only of a ditch and rampart of clay, and they are placed merely on the commanding points, leaving often a space, several hundred yards broad, open without any defence, yet in the hands of the Turks and janissaries they constituted a most efficient barrier. In 1744, these field-works had repulsed the utmost efforts of the Russians, under Marshal Romanzoff; and at this time, when they were garrisoned by Jussuf

Pasha, the defender of Acre, with thirty thousand chosen troops, who had employed months in clearing out and strengthening them, it seemed as though they were beyond the strength even of Hamurabi's army to effect their conquest (1).

The Russian general commenced his operations on his own right, in order to turn the Turkish camp, and, establishing himself on the heights in the rear, intercourse between the Grand Vizier and Constantinople. He succeeded in establishing a division on these rugged and wood-clad eminences; but the difficulty of dragging artillery up such broken ravines, and the danger of taking a large part of the army in a position, where, if defeated, it would be deprived of a retreat to the Danube, deterred him from establishing himself in that important position. Several inconsiderable actions took place, particularly at the heights of the Grotto, in the rear of Scutaria, and the Russians were entirely masters of the road from that town to Constantinople. But the investment was never complete; a large convey of provisions was introduced into the Turkish camp soon after, notwithstanding the utmost vigilance of the besiegers; the desperate valour of the janissaries rendered the contest for every thicket or rocky eminence a scene of blood, in which the assailants generally lost more men than the enemy. The strength of the works in front to the north of the town, precluded the hope of a successful assault, and, after several weeks spent in fruitless efforts, Hamurabi was obliged to renounce his enterprise (2).

To cover the disgrace of an open retreat, he left thirty thousand men, under his brother to continue a distant blockade, and himself hastened with twelve thousand choice troops, to co-operate in the siege of Roussouk. This fortress, which became justly celebrated by the murders and assaults which followed, is a Turkish town containing thirty thousand inhabitants, with a strong rampart and well stocked, but without other bastions, counterescarp, glacis, or outworks. Like the other Turkish fortresses which have already been described, it did not possess more powerful means of defence than Brailow, nor so much so as Silistria; but every defect was supplied by the resources of the government. Bozjak, a man of cool judgment and invincible resolution, at the head of a garrison of seven thousand men, and whose example had roused the whole male population of the place capable of bearing arms, nearly as numerous, to the determination of making a practical breach had been formed, an assault was hardly to be made to animate the soldiers; Hamurabi himself ordered every effort to be made to animate the soldiers; Hamurabi himself in full uniform, rode through the ranks, speaking to the men on the exploits of their regiments in former times, and animating their courage for the decisive assault which was approaching. The clergy joined in the efforts to animate the men, and the attack was ordered on the 3d August, a day laid in peculiar veneration in Russia, from being the day of the Emperor's coronation (3).

Bozjak, Aja, from the time that the cannon of the besiegers had begun to rattle against his walls, had not returned a shot; and from this circumstance, the younger Russian soldiers flattered themselves that very little resistance was to be anticipated; while the veterans

feared, from long experience, that he was only reserving his whole strength for the decisive moment of assault. During the whole preceding night, a vehement fire was kept up from all the batteries, and at daybreak the troops advanced to the attack in five massy columns, one of which was charged with mounting the breach, while the others were to endeavour to effect a descent by escalading the rampart in those situations where it was still uninjured. The troops advanced with their wonted steadiness to the assault, and soon reached the foot of the scarp, but it was soon found that the postholders and sentinels had neither arisen from terror nor inattention. From every roof, every window, and every loophole that could bear upon the assailants, a dreadful fire issued the moment that they came within range; the parapets and the *terre-pleins* were lined with undaunted *Musketeers*, who opened a well-sustained discharge upon the enemy; and the troops, deterred by the severity of their fire, recoiled from the foot of the rampart, and began from the top sides of the ditch to exchange musket shot with their *enemies* and

much longer if he was not relieved (1), and for this purpose he assembled a body of thirty thousand men on the river Jantra, at the distance of about forty miles from the fortress Semle, however, that his troops, which were for the most part mere undisciplined militia, would be wholly unable to withstand the Russian army in the open field, he took post on the river near Batin, and, after the Turkish fashion, immediately proceeded to fortify his camp. His situation was well selected, being a half-deserted plain at the confluence of the Jantra and the Danube, with a few fruit trees scattered over the surface, and watered on two sides by those ample streams. When seen from a distance, this surface appeared level, but on a nearer approach it was discovered to be intersected by several rocky ridges. Two of the ridges, which were impassable even for foot soldiers, fortified the sides of the camp, which rested on the Danube near the confluence of the two rivers in rear, while the neck of land which lay between them, and by which alone access could be obtained to its interior, strengthened by two redoubts, was covered, in the interval between them, with thick bushes and underwood, where the janissary light infantry would have a decided superiority over the Russian tirailleurs and through which it would be difficult for the latter to bring up their numerous artillery to counterbalance this disadvantage. Nevertheless, Kaminski, desirous to wipe off the disgrace of the repulse at Roudschouck, and fearful of the approach of Ali Pacha, the far famed ruler of Albania, who, with his hardly mountaineers, was slowly approaching at the summons of the Grand Seigneur to co-operate in the operations, resolved to hazard an attack (2).

For this purpose, having previously strengthened the besiegged force before Roudschouck, with half of the forces which had been withdrawn from Schumla, and detached General Kulind with a

division of six thousand men to reconnoitre the Turkish camp, and prevent them from foraging beyond its limits, the general-in-chief set out from the environs of Roudschouck with twelve thousand men, and, following the right bank of the river, appeared in front of the Turkish intrenchments. They appeared to be so strong, that notwithstanding the Russian superiority, especially in artillery, of which they had a hundred pieces, it was deemed impracticable to hazard an attack in front, at least unless strongly supported by simultaneous operations on either flank. The enemy, it was soon discovered, had two intrenched camps, the works of which mutually supported each other, and their guns were so disposed as completely to command in rear the navigation of the Danube, on which they also had a powerful battery destined for the relief of Roudschouck. The only practicable way of reaching them that remained was by an attack in flank, near the village of Batin, where the ravine, though steep and rugged, was practicable for foot soldiers, while as heavy a fire as possible was opened on the intrenched camp in front nearest the intrenchment, from an eminence which had been with great judgment seized and strengthened by the Cossacks. Meanwhile strong reinforcements were ordered up under Wolnost from Silistria and a strong reconnaissance under Kulind on the front of the enemy's position, with the troops in square, had led to no advantage, and was attended with considerable loss, Kaminski made every effort to collect troops from all quarters and Wolnost having at length come up with five thousand men, the grand attack was fixed for the 7th September (3).

(1) "I have almost lost out myself in waiting for the common expectation to deliver me. I have only provisions for two days.—Bosnia." — Vol. 118, p. 115. — Vol. 118, p. 115.

(3) "I have almost lost out myself in waiting for the common expectation to deliver me. I have only provisions for two days.—Bosnia." — Vol. 118, p. 115. — Vol. 118, p. 115.

Sound by the French troops, would not permit him to engage in any of these enterprises; and after repairing to Stockholm, with a view to concert operations with the King, which proved impossible, he was recalled, with his troops, by the British Government, who perceived a more feasible object of continental operations in the Spanish peninsula where they arrived, as already noticed, immediately after the battle of Vimiera (1). The departure of the English expedition completed the discouragement of the Swedish nation, by plainly evincing that, in the estimation of that power, their cause was considered as hopeless, or their King impracticable. The glorious successes in the Gulf of Bothnia had shot only like a brilliant meteor through the gloom of their arctic night; the Russian Government, roused by their unexpected reverses, had poured immense reinforcements into Finland; Buxhowden, at the head of forty thousand men, compelled the Swedish troops again to retire, and by the end of October had nearly overrun the whole province; and the brave Klingspor, unable any longer to avert the stroke of fate, was compelled, in November, to sign a convention, in virtue of which the whole of Finland to the east of the Gulf of Bothnia, was ceded to the Russian forces (2).

General wish for change of Government. The calamitous events, which affected the Swedes the more sensibly from the warmth of their patriotic feelings, and their long exemption from political catastrophes, produced a very general opinion among the most influential classes, that a change on the throne had become indispensable. It soon became generally known that, undeterred by the loss of Pomerania and Finland, the brightest jewels in his crown, Gustavus was determined to disregard the convention concluded in Finland by his generals, and renew the war in the following year, as early as the season would admit. And the Swedes, seeing that the British expedition had left their shores, and that the whole forces of that power were engaged in the Peninsular contest, justly anticipated the entire subjugation of their country, and ruin of their independence, if the strife were any longer delayed. Influenced by these considerations, which the urgency of the case soon rendered general, and swayed also not a little by a suspicion as to the sanity of the monarch, which many symptoms had rendered more than doubtful, a general understanding as in England in 1688, took place among all parties, and for a time suspended their political differences, viz., that the dethronement of the reigning monarch, and the elevation of his uncle, the Duke of Sudermania, to the throne had become indispensable and this virtual though not yet expressly formed conspiracy, soon acquired consistency and became ripe for execution by the leading officers in the army engaged in it (3).

The real object of the conspirators was to obtain for Sweden the support of some foreign power able to support its independence against the united forces of France and Russia, and for this purpose they offered the crown to the Duke of Gloucester (4). But the British Government wholly declined at so critical a moment, an acquisition, which, how flattering soever to the national character, was likely, in the end, to embroil them with the Northern Courts, and would have been contrary to all the principles on which they had hitherto maintained the contest with France. They therefore declined the perilous offer. The same party then applied to Napoleon; but he replied in an evasive manner, that his honour was pledged to the Emperor of Russia and the Prince-Royal of Denmark. The Swedish malecontents, therefore were

compelled to trust to their own resources for the maintenance of their independence, and there can be no doubt that, in the course which they adopted, they acted the part of good patriots, when the great dangers with which they were surrounded, and the imminent hazard of the independence of their country being irrevocably destroyed, are taken into account. The army on the Norwegian frontier was the first to prepare itself. Early in March Colonel Adlesparre set out himself from that force at the head of three thousand men, and marched upon Stockholm, while the remainder of the troops took possession of Gottenburg, and the principal harbours in the southern provinces of the kingdom. No sooner was Gustavus informed of these events, which were accompanied by a violent popular fermentation at Stockholm, than he quitted his country palace at Haga, where he happened to be at the time, and hastened to the capital, where he shut himself up in his palace, all the avenues of which were strongly occupied by his guards.

The king however, soon found, that even these faithful defenders could not be relied on—the night was passed in great agitation, and in giving the most contradictory orders, but the great object of the unhappy monarch, upon finding himself deserted by all his subjects, was to get the command of relays of horses, and to raise some money for his immediate necessities upon the credit of the English subsidies. But he soon found it impossible to attain either of these objects. At the same time, the committee of insurrection in Stockholm, which embraced all the principal men in the capital, particularly the Baron d'Adlercrantz, who justly enjoyed a large share of public confidence, and General Klingspor, recently so distinguished by his defence of the province of Bothnia, deemed it of essential importance not to permit the monarch to quit the capital. And the keepers of the public treasury prevented the king from getting any money, by refusing to discharge any orders which had not the authority of the States of the kingdom (1)

In this extremity, as Gustavus still persevered in his resolution to quit the capital, and as the Duke of Sudermania could not prevail upon him to abandon his design, the Baron Adlercrantz and General Klingspor, whose connexion with the insurgents was not known, were called in to assist in the deliberations. The former began an energetic remonstrance against the king's proposed departure, in the middle of which he was interrupted by Gustavus, who exclaimed, "Treason! Treason! Ye shall all be punished as you deserve"—"We are not traitors," replied the Baron calmly, "but good Swedes, intent only on the happiness of your majesty and of the country." At these words, the king drew his sword and thrust himself on the baron, but the latter avoided the plunge and seized the monarch by the middle, while Colonel Silfesparré got possession of his sword. "Rescue, rescue!" cried the king. "I am assassinated." Upon hearing these cries, the guards outside attempted to enter, and finding the door of the apartment locked, they were proceeding to break it open; upon which the undaunted Adlercrantz himself unlocked it, and seizing the sabre of a soldier who stood near, and the baton, the ensign of command of the adjutant-general of the guards, threw himself before the troops, who had their bayonets drawn, and exclaimed in a loud voice, "I am now your adjutant-general, and in that quality I command you guards to retire." The king, from a feeling of humanity, to prevent the useless effusion of blood, motioned with his hand for them to retire. Overawed by his presence, they retired, but in the

(1) St Donat, Mém. de Charles VIII.

king had made his escape by a back-door, which communicated with a postern stair, and seized in his flight the sword of Count Stromfeld. Thus armed anew, he was running across the inner court of the palace towards a guard-house, where he would immediately have found troops ready to support him, when he was met by a forester of the name of Grieff, who threw himself in his way, and though wounded in the arm, continued to hold the king until some of the conspirators arrived, by whom he was immediately disarmed a second time, and reconducted into the state apartments. The Duke of Sudermania was immediately proclaimed regent: next day, the king was conducted as a prisoner to the Castle of Drottningholm, from whence he was transferred to the palace of Gripsholm, from which a fortnight after there appeared his formal renunciation of the crown, grounded on the alleged impossibility of continuing the government in a manner consistent with the interests of the kingdom. So completely were the public in Stockholm prepared for this event, that no disturbances whatever took place there on the change of dynasty (1); and even the theatres of Stockholm were open on the night on which it took place, as if nothing unusual had happened (2).

This violent but bloodless revolution was immediately followed by the elevation of Adlercrantz, Klingenspor, and Aldesparre to the highest offices in the Swedish ministry, and on the 5th of June the Duke of Sudermania was proclaimed King. The States of the kingdom had previously solemnly deposed not only the dethroned monarch, but his whole race (3), and nothing remained but to declare his successor, who ascended the throne by the title of Charles the Thirteenth. The first care of the new monarch was to conclude a peace with Russia; and in order the better to attain that object he wrote to Napoléon, stating "that he placed the integrity of the Swedish throne under the safeguard of the generosity of Napoléon (4)." The French Emperor, however, who was at that instant engaged in a doubtful war with Austria on the shores of the Danube, had no inclination to embroil himself with the court of St. Petersburg on account of the integrity of Sweden: and in addition to that, he was expressly bound, by the conferences at Tilsit, to surrender Finland to Russia in consideration of himself being permitted to seize upon the kingdom of the Spanish peninsula. Napoléon, therefore, turned a deaf ear to the petition of the Swedish monarch, and the cabinet of St. Petersburg determined to seize upon their prey, notified to the court of Stockholm that they were immediately to resume hostilities. The Swedes were in no condition to make any resistance: for, independently of the paralysis of their national strength which had arisen from the change of dynasty, and the universal desire for immediate peace to which it had been owing, the Russians had gained an

(1) *St. Denis*, l. 109, 113. *Elze* viii. 161, 163.

(2) Suspicion had always been entertained of the legitimacy of Gustavus the Fourth; and a story is told by some authors, that in an interview between the queen mother and the deposed monarch, she revealed to him the secret of his birth, and that, in conceal her shame, the king was prevailed upon voluntarily to abdicate the throne. No evidence, however, is adduced to give credence to this rumour which rests upon very suspicious authority: considering the interests which his successors on the throne have to throw doubts on the legitimacy of the deposed monarch.—*St. Denis*, l. 1, 2, and *Breux* lib. 163. Note.

(3) It is just by this present act, all the fidelity and obedience which we owe to our King Gustavus the Fourth, his heirs, King of Sweden, and we declare both him and his heirs, heirs, or to be heirs,

now and for ever, dethroned from the throne and government of Sweden. This is the most open and undignified dethronement of a monarch by the states of a kingdom which is perhaps recorded in history; and it is not little remarkable that it was only accomplished without the death of the reigning monarch, but without the shedding of a single drop of blood on the part of his subjects. The Swedish historians may well take pride in this dignified manliness and humanity of this great moral movement, which offers no murder and poisoning contrast to the dreadful revolutions both in England and France, followed the dethronement of the reigning monarch, and the heinous royal murders by which they were both accompanied.—*St. Denis* lib. 164, and *Morrell* v. ch. 277, 278.

(4) *Letter of J. 7th Dec. 1809.*

extraordinary advantage in the spring of that year, by the bold march of a general destined to the highest celebrity in future times, Count Barclay de Tolly, who, taking advantage of the severe frost of spring 1809, had the hardihood to cross the Gulf of Bothnia on the ice, and had arrived in the middle of March on the Swedish side as far as Golby, on the road to Stockholm. This extraordinary event, which alone was wanting to complete the marvels of the French revolutionary war, put a decisive period, as well it might, to the contest in the Scandinavian peninsula. The cabinet of St. Petersburg were inexorable, the entire cession of Finland was resolved on, and on these terms peace was at length concluded on the 17th of September. By this treaty Russia acquired Finland, the Isles of Åland, Savollax, Quirille, and some lesser ones in the Baltic, and the whole province of West Bothnia, as far as Tornea, at the head of the Gulf of Bothnia, and from thence, by the course of the river Jocka, almost to the mouth of the frozen ocean. Sweden also declared its accession to the continental system, and in return for so many concessions, the duchy of Pomerania was restored to the Swedish crown, and Prince Holstein Augustenburg, son of the Duke of Holstein Augustenburg, was declared the Crown Prince, or, in other words, the successor to the throne. This treaty was shortly afterwards followed by the conclusion of a treaty between Sweden and France, the only remarkable feature of which was the extraordinary rigour with which the continental system was imposed upon the Swedish monarchy (1).

Death of the Crown Prince of Sweden The flames of war appeared now to be finally stilled on the shores of the Baltic, and Sweden, adhering to the policy of endeavouring to procure a counterpoise in France against the exorbitant power of Russia, had made secret propositions to Napoleon for an alliance between the Prince Augustenburg, the heir-apparent to the throne, and a princess of the Imperial family of France. This proposition, however, was coldly received by Napoléon, who had no inclination to precipitate the contest which he saw would sooner or later arise with the Russian empire. But all these projects were rendered abortive by the sudden death of the young prince, who was seized with a stroke of apoplexy on horseback when reviewing a regiment of guards at Quidinge in Holstein, and died immediately after. This unexpected event, as it deprived Sweden of a successor to the throne, immediately opened up a vast field of intrigue in the north of Europe, and various efforts were made to procure the election of different persons to the dignity, which should secure the ultimate ascent to the Swedish throne. The right of election was vested in the states of Sweden, but it was easy to see that they would be swayed by external influence in their choice, and the two powers between whom the contest necessarily lay, were France and Russia (2).

Intrigues for the election of his successor: Part which France and Russia took in them It was obviously the interest of Russia to place on the throne of Sweden a prince who might incline to its protection in any political crisis that might arise, and the secret wishes of that power lay towards the young prince, son of the late king, but there was an obvious difficulty in obtaining the consent of the Swedish Parliament to a measure, the effect of which might be to involve almost all the leading men in the kingdom, at some future period, in the penalties of high treason. The principal object of Napoléon was to in the *St. Petersburg* to the Swedish throne, some counterpoise to the p *ssion* *of* *the* *throne*

all the professions of mutual regard by the two emperors, their interests had already begun to clash, and symptoms of estrangement already appeared in their diplomatic intercourse with each other. Candidates, however, were not wanting for the situation. The King of Denmark openly aspired to the honour, and endeavoured to impress upon Napoleon the great political advantage which would arise to France from the union of the three crowns of Denmark, Sweden, and Norway on one head, as a counterpoise to the power of Russia; but the King of Sweden, well aware that such a project would be viewed with extreme repugnance by the nobles and people of Sweden, who were actuated by a jealousy of very old standing towards their Danish and Norwegian neighbours, inclined towards the young prince of Holstein Augustenburg, younger brother of the prince who had just perished, and in a secret correspondence with Napoleon, he disclosed his wishes to the Emperor, who professed himself favourable to the design, and gave the most flattering assurances of his support. And, in particular, the advantages it would bring to both countries to have the royal families of Sweden and Denmark united by closer ties. But the King of Denmark, who was brother-in-law to the Prince of Augustenburg prohibited him from acceding to the wishes of the King of Sweden, and openly set forth his own pretensions to the dignity, in a letter to the latter monarch (1).

Matters were still in a state of uncertainty at Stockholm, when an article in the *Journal des Débats* which at that period was entirely under the direction of the Cabinet of the Tuilleries, openly avowed that the election of the King of Denmark to the Swedish throne would be agreeable to the French Emperor. No sooner was this paper received in Sweden, than it produced the greatest consternation. The leading men in that kingdom at once saw that they were about to be sacrificed to the balance of power in Northern Europe, and that, under the pretence of the necessity of providing a counterpart in that quarter to the exorbitant power of Russia, by uniting the three Baltic crowns on one head they were in effect to be subjected to the rule of their old and inveterate enemies. Colonel Surenau, a Frenchman by birth, but long aide-de-camp to the present King of Sweden, let fall the expression in the midst of the general disquietude, 'The lowest French general would be better received here than the King of Denmark.' Many examples had recently occurred of the elevation of French generals to European thrones, and the Swedes were too clear-sighted not to perceive that possibly, by the election of such an officer, they might, without hazard to their own independence, secure the powerful support of France against the encroachments of Russia. A powerful party in Sweden, accordingly, turned their eyes to Bernadotte, who commanded the large French army on the shores of the Baltic, and who, as already mentioned, had gained the affections of a great number of the best families in Sweden, from his kindness to a body of Swedish prisoners, taken in the Polish war of 1807 (2). A committee of twelve was, according to the form of the Swedish law, appointed to recommend a successor to the Diet and at first, eleven votes declared for the young Prince of Augustenburg and only one for Bernadotte. Before the final day of election a French agent arrived at Oerebro, where the Diet sat, and announced, though as it afterwards appeared without any authority, that the wishes of Napoleon were in favour of the election of his victorious general. This intelligence immediately altered the determination

(2) *Ann.* 1812.

of the committee. At the public election, a few days afterwards, ten of the twelve voted for Bernadotte, and their choice was immediately afterwards confirmed by the Swedish Diet. He was shortly afterwards adopted as son by Charles XIII., and, as soon as Napoléon received the intelligence, although he expressed his surprise at it, and wrote to his ambassador at St.-Petersburg that he would have preferred to see the king of Denmark on the throne, yet he nevertheless advised Bernadotte to accept the dignity of the Crown Prince, and advanced him a million of francs for the expenses immediately consequent upon it (1).

His history Charles John, Prince of Pontecorvo, Marshal Bernadotte, and now King of Sweden, was born at Pau, in Bearn, in the south of France, on the 6th of January 1767. He was the son of a lawyer, and first embraced the profession of arms by entering as a private in the regiment of royal marines (2). In that capacity he served in India during the American war, and was present at the taking of Pondicherry. Upon returning to Europe, when peace was concluded between France and England in 1785, he at first thought of quitting the service, and embracing the profession of the law in his native town, but he was prevented by the favour of his colonel, who fixed the destinies of the young soldier, by promoting the future marshal of France and King of Sweden to the rank of sergeant. At the breaking out of the Revolution in 1792, he enjoyed the satisfaction, at Marseilles, of rescuing from a ferocious mob the colonel who had promoted him, and saving his life at the hazard of his own. When the war broke out in 1792, he distinguished himself in several combats in Flanders, and had attained to the rank of a general of brigade, at the battle of Fleurus, in 1794. He continued to distinguish himself in the war on the frontier of the Rhine, particularly at the passage of the Rhine at Niderworth, in the year 1796. In 1797 he repeatedly signaled himself in the war with Austria, especially at the passage of the Piave, and in the siege of the fortress of Gradiska. In June 1798, he was appointed ambassador at Vienna, and soon after married the daughter of a merchant at Marseilles, of the name of Clary. In 1799 he refused the command of the army in Italy, and took the command of that on the upper Rhine, where he soon reduced Mannheim, and, in the end of June in that year, he was appointed minister of war at Paris. To the zeal and ability which he displayed in restoring the shattered ranks of the republican armies, Napoleon was mainly indebted, as already observed, for his astonishing success at Marengo (3). But he was dismissed from the office of minister of war by Napoléon, to whom his sturdy republican opinions had proved highly obnoxious, on the occasion of the 18th of Brumaire. Napoléon, however, who was aware of his abilities, afterwards appointed him to the head of the army which invaded Hanover

(1) Napoleon to the King of Sweden, Sept. 6, 1810. *Bign.* ix. 222, 228. *Monte.* viii. 28, 31.

Although Napoleon immediately disavowed the agent at Oerebro who had used his name in this transaction, and although the Minister of Foreign Affairs wrote to the French Ambassador at Stockholm, that "he could not bring himself to believe that that individual would have had the impudence to declare himself invested with any diplomatic mission, or authorized to make the least insinuation relative to the election;" yet it is more than probable that that agent was in fact authorized by the French Emperor, who adopted that method of securing the elevation of one of his generals to the throne of a monarchy bordering on Russia, without openly committing himself in his cause. It is extremely improbable that any unauthorized individual would

have ventured to interfere in such a transaction, and still more unlikely that the French Minister at Oerebro would have been the dupe of an impostor. The extreme anxiety which Napoléon evinced for some time afterwards to convince the cabinet of St.-Petersburg that he had taken no concern in this election, only renders it the more probable that he was in reality at the bottom of the transaction.—*See* *Hayes* xi. 127, 128. *Bign.* ix. 226, 228.

(2) When he put on his uniform in this regiment at Pau, he exchanged in a frolic his dress with that of a companion, who at the same moment had entered the regiment. The latter, in giving him his uniform said, "Go, I make you a Marshal of France"—*St. Doyat* i. 122.

(3) *Ante*, iv. 144.

in 1803; in 1804 he was made a marshal of the empire; in 1805 the corps which he commanded had a great share in the successes of Ulm, whither Bernadotte had led it from Hanover. In 1806 he was distinguished in the campaign of Jena, and effected the destruction of Blücher's corps at Lubeck, and, after the peace of Tilsit, received from Napoleon the military command of the Hans Towns. He was immediately afterwards entrusted by Napoleon with the formation of a Saxon corps at Dresden, which afterwards took part in the battle of Wagram, and the address to whom, from their commander, as already shown, excited in a peculiar manner the indignation of the French Emperor (1). After this he fell into a sort of disgrace, and it was without the knowledge of Napoleon that he was sent by the minister of war from Paris to arrest the progress of the English on the banks of the Scheldt, after the taking of Flushing. Napoleon, after he learned the election of his old lieutenant to the rank of Crown Prince of Sweden, had an interview with him at which, though warmly solicited, he refused to absolve him from his oath of allegiance to France. Bernadotte, however, was firm; and, after some altercation, Napoleon yielded, and dismissed him with these words: "Well—be it so set off. Let our destinies be accomplished (2)."

His character It need hardly be said that he must have been a most remarkable man who thus raised himself from the rank of a private soldier to that of Marshal of France and King of Sweden and still more, who, after the fall of Napoleon and the general overthrow of the Revolutionary authorities in Europe, could succeed in maintaining his place upon the throne, amidst the fall of all the other potentates who had owed their elevation to his triumphs. In truth, Bernadotte was unquestionably one of the ablest men of the age, fruitful as it was in the greatest ability and the most heroic characters. He was gifted by nature, not merely with the most intrepid courage, but with an uncommon degree of calmness in danger, which early attracted the notice of his comrades, and was the principal cause of his rapid elevation in the revolutionary armies. Difficulties never found him unprepared: dangers always undaunted. He belonged in early life to the extreme Republican party, and was so closely allied with many of the worst characters in the Revolution that he narrowly escaped destruction on occasion of the Revolution in 1799, which elevated Napoleon to the throne. But, fortunately for Bernadotte, his duties in the army kept him, in general, far removed from the atrocities of the Revolution and his democratic principles, how strong soever, were not so deeply rooted but what they readily gave place to the suggestions of individual elevation. He was ambitious, and, like most of the other marshals, little scrupulous in the means which he adopted to increase his fortune but though rapacious when accident or success gave him the means of plunder, he had nothing cruel or vindictive in his disposition and he was mainly indebted from the kindness which he showed to the Polish prisoners in the war of 1807, for his elevation to the throne of Charles XII. After his destiny was fixed, he attached himself, in good earnest, to the interest of Sweden the unbearable arrogance of Napoleon combined with the influence of the monarchy to which he had been elected, to make him espouse the cause of Russia in the great struggle which ensued in 1812 between France and that power; and although afterwards, when the fortunes of Napoleon appeared on the wane, he evinced a natural repugnance to push his old general to extremities, and was only held to his engagements by the

members of Napoleon's own family, and of the relations of those independent powers which it was most his interest to have conciliated. Five hundred thousand souls were by it swept off from the dominions of the King of Westphalia, Napoleon's own brother, and two hundred thousand from the territory of the grand-duchy of Berg, which he had bestowed upon one of his lieutenants. but what was much more serious, it swallowed up the whole possessions of the Grand Duke of Oldenburg, the brother-in-law of the Emperor Alexander, and, besides entirely cutting off Prussia from the coast of the German ocean, brought the French empire up to Lubeck, almost within sight of the Russian frontier (1)

Jealousy of Russia at these encroachments This monstrous encroachment of Napoleon, serious as it was from the immense extent of the territory thereby incorporated with the French empire, and which extended its dominion from 84 to 130 departments, and its population to forty two millions of souls, excited the most violent feelings at St. Petersburg, and blew into a flame those feelings of irritation which had existed in the Emperor's breast ever since the slight thrown upon his sister by the marriage of Napoleon. The encroachment, great as it was, was rendered still more alarming from the manner in which it was carried into effect. for here an immense tract in the north of Germany was at once annexed to the French empire, without either the formality of diplomatic sanction, or the right acquired by the power of conquest. The French Emperor took upon himself the right to dispose of free cities and independent potentates in the north of Germany, as an eastern sultan would of the fortunes of his dependent pashas. But, however great and unprecedented the stretch might be, it was obvious that Napoleon was prepared to make it good by the sword, and that it would be wrenched from him only by force of arms. Sept. 27 ¹⁸¹⁰ for shortly before, he had, without any apparent reverse to justify the measure, issued a decree, ordering the levy of forty-five thousand men for the service of the navy, and one hundred and twenty five thousand men for the army, taken from the youth who had arrived at the age of nineteen in the years 1810 and 1811 (2)

Apprehensions of Russia of the restoration of the Kingdom of Poland But, in addition to this great and well-founded cause of complaint, Russia had other sources of disquietude, which were not so strongly established in sound reason but arose rather from the apprehensions of injustice that her ill gotten gains would be wrested from her. The grand-duchy of Warsaw was a continual object of jealousy to the cabinet of St. Petersburg; and, although Napoleon, as already mentioned, had done his utmost to remove their uneasiness on this head, and expressed his desire "that the name of Poland should disappear not only from the political transactions of Europe, but even from the page of history (3);" yet he had by no means succeeded in allaying their apprehensions. The Russian ministers saw very little of this disposition in the large augmentation which he had given to this duchy out of the spoils of the Austrian monarchy after the treaty of Vienna in 1809 and, so anxious did the Emperor Alexander become on this subject shortly after the conclusion of the Austrian treaty, that he opened a negotiation with Napoleon, with a view to the conclusion of a convention which should for ever allay all the apprehensions which he felt on the subject. A convention, accordingly, was drawn up, which Jan. 4. 1810. Champagne expressly authorized Caulaincourt, the French ambassador at

to ALEXANDER IV.

of Germany; observed that he took no umbrage at similar defensive works at Modlin, Thorn, Warsaw, and Torgau; that the demands now made by Napoléon for a rigorous execution of the Continental System were unauthorised by any agreement and that the only favour which he had yet asked of him not contained in the treaties, viz a convention concerning Poland, had been refused (1)

Russian commercial treaty with the end of Feb. Dec. 31. 1810. Alexander was no sooner informed of the spoliation of the Grand-Duke of Oldenburg by Napoléon, and the extension of the French empire to the shores of the Baltic, than he replied in a manner which affected Napoléon in the most sensitive point. On the 31st December, 1810, he published an imperial ukase, which, under the colour of regulating the affairs of commerce, in effect contained a material relaxation of the rigour of the decrees hitherto in force in the Russian empire against English commerce. Colonial produce was admitted if under a neutral flag; a thin disguise, which the commercial enterprize of England was soon able to throw over the most extensive mercantile speculations. Many articles of French manufacture were virtually prohibited, by not being included in the list of goods which might be admitted on payment of a duty, particularly laces, bronzes, jewellery, silks, ribbons, and gauzes. These regulations were attended by an order for the establishment of a coast-guard of eighty thousand men to enforce obedience to them; a step which it might be easily seen was but a cloak for the augmentation of the regular army. In addition to this the Cabinet of St. Petersburg presented a diplomatic note to all the Courts in Europe, formally complaining of the annexation of the duchy of Oldenburg to the French empire (2)

Napoléon reasons the objections of Hanover from Jerome. July 1. 1810. The imperious disposition of Napoléon strongly appeared in the course of the year 1810 in the transactions with his brother, the new king of Westphalia. He had by a solemn deed, made over to that monarch all the rights which he possessed by conquest over the Electorate of Hanover; under the burden according to his usual practice, of a large portion of the revenues of the electorate, which he reserved to himself, as a fund from which to reward his favourite generals or officers, and those of the King of Westphalia, being at the sole expense of supporting the French troops who might ever be stationed in his territory. The payment of these French troops, however, did not proceed with great regularity; and Napoléon made this a pretext for declaring to his brother Jérôme, "that he found himself, with regret, under the necessity of resuming the administration of Hanover that he regarded the treaty as annulled by the king of Westphalia himself and that he felt himself at entire liberty to dispose of the Hanoverian territory as his interests might dictate." In effect, it was shortly after incorporated with France under the name of the 52d military division, on occasion of the union of the Hanse Towns to the "Grande Nation" (3)

North of the king of Rome. March 30. The clouds, however, which, from so many concurrent causes, were seen to be threatening the French empire in the north of Europe, were in the estimation of the Emperor more than compensated, by the fortunate event which occurred at Paris in March. The Empress Maria Louisa who had long promised an heir to the throne, on the 20th was seized with the pains of childbirth but though she had the aid of the most skilful medical assistance which France could afford, she suffered

(3) Bign. ix. 333, 334.

ed a more complete submission to his will from his former lieutenant than from an independent power "Choose," said he, "between cannon-shot against the English vessels which approach your coasts and the confiscation of their merchandise, or an immediate war with France. Sweden is now doing me more mischief than the whole *Aro* coalitions put together. You tell me Sweden is suffering? Bah! Is not France suffering? Are not Bordeaux, Holland, Germany, suffering? We must all suffer to conquer a maritime peace. Sweden is the sole cause of the crisis I now experience; it must be ended: at all hazards we must conquer a maritime peace (1)"

Universal military prodigy by the Continental System Napoleon had good reason for saying that France and her dependencies were suffering at this terrible crisis. Such was the exhaustion and stoppage of industry in the principal towns of the empire, that the paupers amounted in many places to a third, in some to two-thirds of the whole population (2). In Russia, the system of paper credit was entirely ruined by the effects of the Continental System; and government paper had fallen so low, that the ruble in government paper in the loan negotiated with Mebler, on 27th March 1810, was estimated at just one-half of the silver ruble and, taking this depreciation into view, the interest stipulated by the lenders in reality amounted to twenty-eight per cent (3). But bad as this was, the financial and individual ruin in Prussia was incomparably greater. Industry was every where at a stand from the want of external commerce, and the absorption of all domestic funds in the French requisitions; the exchequer was penniless, and the national credit extinct; a strong feeling of necessity and patriotic duty alone induced the few remaining capitalists to come forward to enable the king to meet the rigorous demands of Napoleon's tax-gatherers. The augmentation of the troops in her territory in the course of 1810 and 1811, all of whom were fed, clothed, paid, and, lodged, at the expense of the bleeding state, was such as to exceed belief, if it were not attested by contemporary and authentic documents (4). It may readily be conceived that it was not without extreme difficulty that such prodigious sums could, by the united efforts of the French and Prussian authorities, be extracted from the people. But here too, the enormous power and irresistible forces of France had provided the means of extortion. The great fortress of Magdeburg had been converted into a prison for the defaulters in the state contributions from all the surrounding provinces, and into that huge *baillie Daroust*, at the head of an army of seventy thousand men, incessantly poured new shoals of victims. Yet in spite of all their efforts, the demands of France could not be satisfied. and the books of Daru, the inspector general of accounts, exhibited a continual and hopeless array of arrears undischarged, and debt accumulating (5).

Treaties between France and Prussia. It may readily be conceived that in these circumstances, Prussia would willingly have thrown off her fetters, if she could have done so with the slightest prospect of success. But such was the prostra-

(4) In secret report by *Chapellier Hardenberg* to Baron *Kreuzmark*, by order of the King on 26th August 1811 it appeared that "the *Saxon* army was contained within two days march of the *king's* palace. *Daroust* bore command an army, in front of the 10,000 men stipulated by the treaties; France

has augmented the troops in the *Oder* to 22,000 men and their support alone cost the state 250,000 francs monthly. The garrison of *Stettin* has been augmented 17,500 men. —*Report Hardenberg* 11. 17. 1811. 20th August 1811. *His Majesty*, xl. 251.

(5) *Herd.* xl. 228, 249. 251. *Schmitt*, x. 99, 100.

for Austria in the event of a prosperous issue of the war Turkey was to be invited to accede to the confederacy; and Prince Schwartzberg, still ambassador at Paris, was appointed to the command of the army (1).

Nothing can paint Napoléon's astute policy better than these treaties. While in the secret treaty with Prussia he expressly provides for the case of a French war with Turkey which he clearly contemplated, and which was declared not to be within the *casus fœderis*,—by the secret treaty with Austria, at the very same time, he disarmed the fears of the latter power on the Ottoman question, by expressly guaranteeing the integrity of the Ottoman dominions, and inviting that power to accede to the general league against Russia. And while in his negotiations with Russia relative to the much-desired convention regarding Poland, he again and again expressed his readiness to sign an engagement “not to favour any design tending to the re-establishment of the kingdom of Poland,” he at the same time, in the secret treaty with Austria, provided for that very restoration, and stipulated the indemnity which she was to receive in Illyrian provinces for any Polish cessions she might be required to make for its completion.

While Napoléon was thus fortifying himself by the accession of Austria and Prussia, for the great and decisive struggle which was approaching, England and Russia, on their part, were not idle and an ally was gained for the cause of European independence in a quarter where it could least have been anticipated, but whose co-operation proved, in the end, of the most decisive importance in the subsequent contest. Sweden further removed from the scene of danger, and more deeply interested than either Prussia and Austria in the preservation of foreign commerce from the sterility of its territory, was not so immediately under the control of Napoléon; and both Charles XIII and Bernadotte justly apprehended the overthrow of their infant dynasty, if they acceded, in all its rigour, to the imperious demands of the French Emperor for war with England and the exclusion of British manufactures from the Swedish harbours. M. Alquier, the French ambassador at Stockholm, never ceased to urge, in the most menacing manner, in the latter months of 1810, the necessity of an immediate choice of either a war with France, which would be followed by the conquest of Pomerania, or the immediate commencement of hostilities with England. To these demands, Bernadotte answered, that a war with England would almost entirely destroy the Swedish revenue, that the estates of the kingdom would not submit to any direct imposition; that the arsenals, in consequence of the disastrous issue of the late war with Russia, were empty; the salt, an article of primary necessity to Sweden, could only be obtained from England; that the fleet at Carlscrona could not possibly be got to sea without a great expenditure and that, so far from having the funds requisite for that purpose, the Government had not even wherewithal to put the fortifications of that harbour in a state of defence against the English fleet. Napoléon remained perfectly deaf to all these representations; and as he left them no alternative, war was declared by Sweden against England in the middle of November 1810 (2).

(1) See treaty in Marten, sup. l. 427 and in Schœll, 122, 124.

(2) *Nöteborgs fördrag*, Nov. 19 and Dec. 8, 1810. Schœll, 91, 96. Mart. xl. 122, 124.

Napoléon's reply to these representations was in his usual haughty and imperious style. “You tell me that you wish to remain at peace with France, but I

may let you have proofs of this disposition. Foreign commerce is the present chief of business of all nations. I can instantly cause you to be attacked by the Danes and Russians, and I will instantly do so if I fifteen day you are not at war with England. I have been long enough the duke of Sweden as well as of Prussia; but the better pen or the stilet I should

Alienation

quence of
the over-
bearing
demands of
Napoleon

The Swedish Government, however, soon found that their condition was by no means ameliorated by their declaring war against England, so far as France was concerned, and they had ample opportunity of contrasting the manner in which they were treated by the English, against whom they had declared, and France, for whose alliance they had made such ruinous sacrifices. Feigning to be ignorant of the Swedish declaration of war, the British cruisers committed no hostilities on the Swedish merchantmen, but, on the other hand, the French captured without mercy the Swedish vessels, under pretence that they were trading with England and were not furnished with French licenses, confiscated the cargoes, and threw the seamen into prison. Meanwhile, Napoleon demanded two thousand sailors from Sweden, and, as they were not immediately furnished, he insisted upon them sending twelve thousand. Bernadotte answered, that Sweden had iron in its harbours to the value of a million

sterling, and that, if Napoleon would take that instead of the seamen, it would be some relief to Swedish industry, but the Emperor declined this, alleging that he had plenty of iron without going to Sweden for it. He

next insisted that French custom-house officers should be established at Gottenburg, and that Sweden should accede to a northern confederacy like that of the Rhine, of which he himself was to be the head, and which was to consist of Sweden, Denmark, and the grand duchy of Warsaw, but the Swedish monarch, aware of the change which had taken place in the close of 1810 in the policy of the Russian cabinet, and feeling his dependence upon Russia and England, both for his resources and his existence, declined the

proposal. The consequence was, that, early in January 1812, Napoleon entered Pomerania, overran the whole country, seized the fortress of Stralsund, confiscated all the Swedish ships in the harbour, imposed enormous contributions on the inhabitants, and armed all the merchant vessels in the harbours as privateers against the English commerce (1), while the French civil authorities, who every where, like vultures, followed in the rear of their armies, established themselves in the whole country, and began to levy contributions for the use of the Imperial treasury.

The Swedish govern-
ment allies
itself with
Russia and
Great
Britain

This last act of hostility, following on so long a train of injuries, determined the policy of the Swedish cabinet. Bernadotte lent a willing ear to the suggestions of Russia, and, on the 5th and 8th of April 1812, treaties were concluded between the courts of St Petersburg and Stockholm, by which the two contracting parties mutually guaranteed each others' possessions, and it was stipulated on the one hand, that, in the event of a war with France, Sweden was to assist Russia with a corps of thirty thousand men, who were to operate, in conjunction with twenty thousand Russians, in the north of Germany, and that, in return, the Emperor of Russia was to guarantee Norway to Sweden, upon the latter power receiving an adequate indemnity in Pomerania, and, in the event of Denmark refusing to agree to this exchange, Russia was to aid Sweden with thirty-five thousand men to conquer Norway. These treaties were shortly afterwards secretly communicated to the British Government, from whom they met with the most favourable reception. Lord Wellesley, and subse-

by the catastrophe of Holland, that it was necessary to take a decided line. I cannot reckon always on the alliance of Russia. I loved the King of Holland, but nevertheless I confiscated his dominions, because he would not obey my will. I did the same with the Swiss. They hesitated on confiscating the English goods. I marched my troops into their dominions,

and they soon obeyed. On the fifth day from this, war must be declared, or my ambassador is as ordered to demand his passports. Open war, or a sincere alliance. These are my last words. — NAPOLEON to BERNADOTTE, 14th Nov. 1810. HARDENBERG, xi. 130.

(1) Schoell, ix. 96, 101. Hard. xi. 131, 135.

quently Lord Castlereagh, who succeeded him in the direction of foreign affairs exerted themselves to the utmost to promote these amicable dispositions, and in consequence, a treaty of peace was concluded between Great Britain and July 2, 1812. Sweden, at Oerebro, on the 12th of July 1812 (1); the British harbours were immediately opened to the Swedish vessels, and amicable relations immediately re-established between the two countries (2)

Repetition of military preparations. Previous to engaging in hostilities, Napoleon's preparations were of so extensive a kind, as indicated his sense of the magnitude of the contest in which he was about to engage. By a decree of the 15th of March 1812, the whole male population of France capable of bearing arms was divided into three bands: a hundred cohorts of the first of which, estimated at 900,000 men, was to be immediately organized and put into active service, to guard the coast and frontier fortresses, and the two other, disciplined and equipped, without leaving their respective departments, but ready to take the field when called on for the service of their country. By these means, it was calculated, that a reserve of 1,200,000 men could be raised to assist the French army (3)

Exposition of proposals of peace to the English Government. According to his usual custom, when about to commence the most serious hostilities, Napoleon made proposals of peace to England. The terms now offered were, that the integrity of Spain should be guaranteed—that France should renounce all extension of her empire on the side of the Pyrenees—that the reigning dynasty in Spain should be declared independent, and the country governed by the national constitution of the Cortes; that the independence and security of Portugal should be guaranteed, and the house of Braganza reign in that kingdom—that the kingdom of Naples should remain in the hands of its present ruler, and that of Sicily with its existing king; and that Spain, Portugal, and Italy, should be evacuated by the French and British troops, both by land and sea. To these April 22. proposals, Lord Castlereagh replied, that if by the term "reigning dynasty," the French Government meant the royal authority of Spain and its government, as now vested in Joseph Buonaparte and the Cortes assembled under his authority, and not the government of Ferdinand VII, the true monarch of Spain, and the Cortes assembled by his authority, no negotiation could be admitted on such a basis. No reply was made by Napoleon to this answer—and it is evident that the proposal was made with no real prospect of an accommodation—but merely to sow suspicion between the courts of London and St. Petersburg, or to give him the advantage which he always desired, of being able to hold out to Europe at the commencement of a new war, that he had in vain made proposals of accommodation to his enemies (4)

Final negotiation between France and Russia. When hostilities had been thus long and openly anticipated between France and Russia, it is of little moment to inquire what were the immediate and ostensible grounds which led to the rupture between the two cabinets. Down to the very commencement of hostilities, notes continued to be interchanged between Champagny and Romanzoff,

(1) Schoell, x. 161, 167.

(2) When Napoleon discovered that Sweden was inclining to the Russian alliance, he used the most generous efforts to endeavour to regain the former power to his own interest. For this purpose he offered to evacuate Pomerania, on condition that Sweden should let him with thirty-five thousand men in his track upon Russia; and if they did so he offered to restore to them Finland and admit them into participation of the benefits of the Confederation of the Rhine. But it was too late. Swe-

den had taken her part and formed sound judgment as to the real interests of her subjects; and the proposals, therefore, were rejected, even though supported by all the influence of the Austrian Minister at the court of Stockholm.—Schoell, x. 166, 167.

(3) Montheyre March. 12, 1812. *Mem.* x. 172. Thib. viii. 372, 374.

which did little more than recapitulate the mutual grounds of complaint of the two cabinets against each other (1) Napoléon continually reproached Russia with the imperfect execution of the continental system, the Imperial ukase of the 51st December 1810, the armaments in the interior of Russia, and the fortifications on the Dwina, the transference of powerful forces from the Danube to the Niemen; and the protest of Alexander against the incorporation of the Duchy of Oldenburg with the French empire. On the other hand, the ministers of Russia represented that these measures, though apparently hostile, were defensive merely, rendered necessary by the immense accumulation of French troops in Poland and the north of Germany, the invasion of Swedish Pomerania, the extension of the French empire over the whole Hanse Towns and to the Baltic Sea, and the incorporation of the Duchy of Oldenburg with Napoléon's April 21, 1812 empire. Nevertheless, Alexander offered to come to an accommodation, and dismiss his armaments, on condition that France would evacuate Prussia and Swedish Pomerania, reduce the garrison of Dantzic, and come to an arrangement with the king of Sweden. This ultimatum remained without any answer on the part of the French government, and it was soon sufficiently evident that the decision of both sovereigns had been finally come to, for on the 29th April Alexander arrived at Wilna, and in the middle of May Napoleon set out for Dresden (2).

Views with which the contest was regarded in Europe All Europe was held in anxious suspense by the evident approach of the dreadful conflict which had so long been preparing between these two colossal empires, which were thus about to bring the whole forces of Christendom into the contest. Influenced, however, by the calamitous issue of all former wars against Napoléon, but slender hopes were entertained of any successful result of this last resistance now attempted in the north. The power of Napoleon appeared too great to be withstood by any human efforts, and even the strongest heads could anticipate no other issue from the war than the final prostration of Russia, the conquest of Turkey, and the establishment of French supremacy from the English Channel to the Black Sea. The English still followed with intense interest the energetic career of Wellington in the Peninsula, but his fate too, it was evident, was wrapped up in the issue of the approaching contest, and even the most sanguine could hardly hope for any thing but disaster to the British arms if Napoleon, victorious over Russia and Turkey, were to bring back his conquering legions from the Vistula and the Danube to the banks of the Ebro. A general despair in consequence seized the minds of men, it seemed doubtful if even the British navy in the end could secure the independence of this favoured isle—and the general subjugation of the whole civilized world was anticipated—probably to be rescued from slavery only by a fresh deluge of northern barbarians.

CHAPTER LXVI

ADVANCE OF NAPOLEON TO MOSCOW

ARGUMENT

Napoleon's Secret Reasons for the War with Russia—Vast Force which he had collected for that Enterprise—Universal Enthusiasm with which the Expedition was regarded in the French Empire—Different Feelings of the Troops of different Nations—Disinclination of the Marshals and older Officers for the Campaign—Views of the Russian Government in the approaching Contest—Religion and Patriotism the Principles to which they appealed—Plan of the Russian Government to resist the Invasion—Desponding Feelings of the English—Military Preparations of the French Emperor for the contest—Force of the French Army—Force of the Russians—Forces which they had collected on the Frontier to oppose the Invasion—Divisions of Napoleon's Forces at the outset of the Campaign—General Aspect of the Polish Provinces adjoining Russia—Napoleon leaves Paris—Splendour of his Residence at Dresden—His confident Anticipations of Success in the campaign—Distress in Poland on the first Entrance of the French Army—Prodigious Efforts of the Emperor for the Supply of his Troops—And to elevate their Spirit—Approach of the French Army to the Niemen—Napoleon's Proclamation to his Soldiers on crossing the River—Spiffidid Scene on the Crossing of the River—Proclamation of the Emperor Alexander to the Russians on the Invasion—Noble Resolution of the Russian Army and People—Their Forces retreat on all sides—Napoleon enters Wilna, and remains there seventeen days—Enthusiasm of the Poles on that Event—Address of the Polish Diet to the Emperor—His Views on the Subject, and Reply—Movements of Jérôme Bonaparte against Bagration—Their ill Success, and consequent Displeasure of Napoleon—Combat of Mohilew—Bagration effects his Retreat to Smolensko—Retreat of the Russian main Army to the entrenched Camp at Orsha, and thence to Polotsk—Napoleon advances to the Dnieper—Rendezvous of the principal Part of his Forces in Front of Wittepek—Position of the Russians, and Force which Barclay had collected there—Intelligence from Bagration induces him to retreat to Smolensko—Admirable order in which the Retreat was conducted—Advance of the French to Wittepek, and Reasons for their halt there—Immense Difficulty experienced in providing Subsistence for the invading Army—Causes to which it was owing—The Emperor Alexander repairs to Moscow to hasten the Armaments in the Interior—Proclamation to the Nation—Generous and Patriotic Devotion of the Inhabitants of Moscow—Departure of the Emperor for St. Petersburg—Opinion of Napoleon on these Proclamations—First Operations of Count Wittgenstein on the Dwina—Oudinot, reproached by Napoleon again moves against him—Operations of Tormasoff against Schwartzberg—Information received at Wittepek of the Conclusion of peace between the Russians and Turks, and an Alliance between Sweden and England—Argument against any further Advance at the French headquarters, and Answer of Napoleon—Reflections on this Determination—Barclay advances against the Right of the French Army—Napoleon advances against Smolensko—Heroic Action of Newerofskoi, near Krasnoi—Both Armies approach Smolensko—Description of that City—First Attack of Ney on the Citadel which is repulsed—Napoleon's Dispositions for a general Attack on the town—Noble Appearance of the Attacking Army—The Russian Army retires in the night, leaving a strong Rearguard only in the City—Bloody Attack on the town, which proves unsuccessful—Repulse of Napoleon, and Results of the Battle—Splendid Appearances of the burning City at night—Retreat of the Russians from Smolensko—Circular March of Barclay to regain the Moscow Road and Bagration's Corps—Battle of Valutina—Measures of Napoleon to restore the Combat—Desperate Valor displayed on both Sides—Results of this Bloody Action—Singular Good Fortune of the Russians on this Occasion—Napoleon's Visit to the Field of Battle—General Uncertainty and Depression of the French Army—Enormous Losses already sustained from Sickness and Fatigue—Napoleon's reasons for a farther Advance—Reasons which induced the Russian Generals to prepare for a Battle—Operations of Schwartzberg against Tormasoff—And of St. Cyr against Wittgenstein, and of Macdonald against Riga—Advance of Victor to Smolensko—And of Angereau from the Oder and the National Guard of France to the Elbe—Advance of Napoleon towards Moscow—Appointment of Kutusoff to the Supreme Command—His Character and previous Achievements—Arrival of Kutusoff at the Headquarters of the Army—Extraordinary Skill and Order of the Russian Retreat—Order of the French Pursuit—Description of the Country through which the French Army passed in advancing to Moscow—The Russians take post at Borodino; Description of their Position there—Napoleon's

Arrival on the Field of Battle—Attack on the Redoubt in front—Napoléon receives the Account of the Battle of Salamanca—Night previous to the Battle—Napoléon's Proclamation to his Soldiers—Efforts of the Russians to animate the Spirits of their Troops—Forces engaged on both Sides—Davoust's Plan of Attack, which is rejected by the Emperor, who resolves to attack, by *échelon*, from the Right—Russian Dispositions for the Battle—French Preparations for the Attack—Proclamation of Kutusoff to his Troops—Feelings of the Soldiers on both Sides—BATTLE OF BORODINO—Commencement of the Action—Success of Ney and Eugène in the Centre—Ney and Davoust, after an obstinate Conflict, carry the Heights of Semonovskole—The great Redoubt is taken and retaken—Alarm on the left by an Irruption of Russian Cavalry—Grand successful Attack on the Great Redoubt—Its Capture leads to no decisive Result—Fresh Advance of the Russian Centre—Final Operations of the day—Magnitude and Importance of this Battle—Loss on both sides—Want of Vigour evinced by Napoléon in this Battle—Sound Reason, nevertheless, which prevented him from engaging his Reserves—Reflections on the Battle—Distressed Condition of the French Army at its termination—Orderly Retreat of the Russians towards Moscow—Debate in the Russian Council of War whether they should Evacuate Moscow—Reasons given in the Council of War, by Kutusoff, for abandoning Moscow—Total Deficiency of Supplies, if known to the Russians, would have forced the French to Halt and Retreat—Universal Desertion of the City by the Inhabitants—Arrival of the French at Moscow—Description of that City—Transports of the French Troops at the sight—The French enter, and find the City deserted—Preparations made by the Russians for burning it—First night of the French in Moscow—Commencement of the Conflagration—Awful Appearance of the Fire during the following night—Disorder and Consternation in the City—Napoléon at length leaves the Kremlin—Horrors of Moscow after the Fire had ceased—Semicircular March of the Russian Army round the City—Feelings of the Soldiers in the Russian Army on this occasion.

Napoléon's
secret rea-
sons for the
war with
Russia.

THEY are little acquainted, says Marshal St.-Cyr, with the progress of ambition, who are surprised that Napoleon undertook the war in Russia. It is the nature of that desire, as of all other vehement passions, to be insatiable. Every gratification it receives only renders it the more vehement, until at length it outsteps the bounds of physical nature, and quenches itself in the flame it has raised. Napoléon knew well that his empire was founded on the *prestige* of popular opinion, that to maintain that opinion it was necessary that he should continually advance, that the moment his victories ceased his throne began to totter. The public, habituated to victory by his successes, were no longer to be dazzled by ordinary achievements. He felt that his later triumphs must eclipse those of his earlier years, that if he only equalled them, he would be thought to have retrograded, that victories might have sufficed for the General of the Republic, but conquest must attend the steps of the Emperor of the West. To overthrow Austria, or conquer Italy, might suffice for his earlier years, but nothing could revive the enthusiasm of the people in later times, but the destruction of the Colossus of the North. From the moment that he launched into the career of conquest, he had perilled his fortune on a single throw—universal dominion or a private station (1). Such is the universal law of nature, the principle which leads to the punishment of national equally as individual sins, the curb at once on the pride of aristocracy, the madness of democracy, and the rage of conquest, the fetter which checks the excesses of men, and the limit which restrains the rulers of nations.

Vast force which he had collected for that enterprise. Since the fall of the Roman empire, no monarch had ever attained the commanding station which Napoléon occupied at the commencement of the Russian war. The influence of Charlemagne extended over a smaller surface, and embraced only barbarous states. The hordes of Timour were hardly as numerous, and incomparably inferior in discipline and equipment. Even the myriads of Attila or Genghis Khan exhibited no such combination of the muniments of war, and foreboded no such

sons for the
war with
Russia

THEY are little acquainted, says Marshal St.-Cyr, with the progress of ambition, who are surprised that Napoléon undertook the war in Russia. It is the nature of that desire, as of all other vehement passions, to be insatiable. Every gratification it receives only renders it the more vehement, until at length it outsteps the bounds of physical nature, and quenches itself in the flame it has raised. Napoléon knew well that his empire was founded on the *prestige* of popular opinion, that to maintain that opinion it was necessary that he should continually advance, that the moment his victories ceased his throne began to totter. The public, habituated to victory by his successes, were no longer to be dazzled by ordinary achievements. He felt that his later triumphs must eclipse those of his earlier years, that if he only equalled them, he would be thought to have retrograded, that victories might have sufficed for the General of the Republic, but conquest must attend the steps of the Emperor of the West. To overthrow Austria, or conquer Italy, might suffice for his earlier years, but nothing could revive the enthusiasm of the people in later times, but the destruction of the Colossus of the North. From the moment that he launched into the career of conquest, he had perilled his fortune on a single throw—universal dominion or a private station (1). Such is the universal law of nature, the principle which leads to the punishment of national equally as individual sins, the curb at once on the pride of aristocracy, the madness of democracy, and the rage of conquest, the fetter which checks the excesses of men, and the limit which restrains the rulers of nations.

Vast force which he had collected for that enterprise. Since the fall of the Roman empire, no monarch had ever attained the commanding station which Napoleon occupied at the commencement of the Russian war. The influence of Charlemagne extended over a smaller surface, and embraced only barbarous states. The hordes of Timour were hardly as numerous, and incomparably inferior in discipline and equipment. Even the myriads of Attila or Genghis Khan exhibited no such combination of the muniments of war, and foreboded no such

(1) St. Cyr, Hist. Militaire, iii. 2, 3

permanent subjection of the liberties of mankind. From the shores of the Baltic to the mountains of Calabria, from the sands of Bordeaux to the forests of the Vistula, the whole forces of Europe were marshalled at his will: the accumulated wealth of ages was turned to the support of one gigantic power; and the military prowess, which centuries of glory had fostered in rival states, combined under the banners of one victorious leader.

The acknowledged supremacy of his genius had extinguished the jealousies even of the armies who had suffered most in his career. The Austrians and Italians, the Prussians and Bavarians, marched in the same ranks with the French and the Poles. The partition of Poland, the humiliation of Prussia, the conquest of Austria, were for a time forgotten: the conquerors of Marengo, Austerlitz, and Jena, were to be seen side by side with the vanquished in these disastrous combats. However much the sense of present humiliation might oppress the governments, or the recollection of recent wrongs rankle in the minds of the people he had vanquished, the necessity of present submission was felt by all: one only passion, the desire of conquest, animated the varied bands who followed his standard: one only career, that of military glory, remained to the youth in the realms he had subdued (1).

Universal
enthusiasm
with which
the expedi-
tion was
regarded in
the French
empire.

During the spring of 1812 the whole roads of France and Germany were thronged by cavalry, infantry, and artillery, hastening to the scene of the approaching conflict. This varied aspect and splendid equipment of these troops, excited the strongest feelings of enthusiasm in the military people through whom they passed. It ap-

peared impossible that any human efforts could resist the immense force which was converging towards the Vistula: the presence of Napoleon ensured victory. Immediate advancement and lasting glory awaited those who distinguished themselves in the combats. Such was the general enthusiasm which was excited in every part of the Emperor's vast dominions, that young men of the richest and the noblest families eagerly solicited employment in an expedition where success appeared certain, and danger unlikely. All heads were turned by the torrent: ambition, in every age and rank, was dazzled by the apparent brilliancy of the prospect. The expedition, said they, which is preparing, will throw that of Egypt into the shade. Never had the instinct of war, the passion for military glory, more strongly seconded the ambition of the chief of an empire. "We are setting out for Moscow, but we will soon return," were the words with which the joyous youth every where took leave of their parents, their relations, their friends. The march to Petersburg or Moscow seemed only a military promenade—a hunting party of six months' duration, in which little danger was to be met, but ample excitement experienced—a last effort, which would place the empire of Napoleon, and the glory of France, beyond the reach of danger. The magnificence of the spectacle, and the brilliancy of the prospects, spread these feelings even amongst the people of the vanquished states: the expected restoration of Poland, and humiliation of Russia, gave an air of romance to the approaching expedition: and thousands breathed wishes for its success, who were destined soon to be aroused by nobler emotions, or to perish in a holier cause (2).

Different
feelings of
the troops
of different
nations.

Notwithstanding, however, the general enthusiasm which animated the warlike multitude, the different nations of whom it was composed were inspired by very different feelings; and, though the resplendent chains of the empire held them all for the time in willing

obedience, yet the elements of discord existed, and it might have been foreseen would break out if any serious disaster befell the head of the confederacy. The Prussians beheld with ill-suppressed grief their banners associated with those of the conqueror and oppressor of their country. The Austrians, after having contended for twenty years with France, blushed at being themselves ranged as auxiliaries under the power with whom they had so long struggled for mastery. even the Germans of the Rhenish confederacy, notwithstanding their longer union with the troops of Napoléon, were filled with discontented feelings, and could not disguise the conviction, that every victory they gained for the imperial despot was riveting more firmly the fetters about their own necks. The Poles alone, cheered by the anticipated restoration of their country, and indignant at the repeated wrongs they had experienced from Russia, advanced with joyful steps to the conflict, and prepared to strike for the cause of national independence, not the interests or ambition of any external power. Yet, such is the marvellous effect of military subordination, and of the point of military honour, that the enormous assemblage of armed men were animated by one common feeling of warlike enthusiasm, and the commands of Napoléon were as readily obeyed by the Italians, Germans, or Prussians, as the guards of the French Empire (1)

Distinction of the marshals and older officers for the campaign In one important particular, however, the composition of the army was very different from what it had been in the earlier periods of the Republic. Though the young officers and fresh conscripts were animated with the utmost ardour, yet the older generals and marshals, whose fortunes were made, and in whom age was beginning to extinguish the fires of youth, were by no means equally eager for the contest. Having nothing further to look to in military advancement, and not feeling "the necessity of conquest to existence," which, in every period of his career, was so strongly experienced by their chief, they beheld with ill-disguised aversion the mortal conflict in which they were now about to be engaged, and sighed for their palaces, their châteaux, and their pleasures, instead of the hardships and privations of a Russian campaign. Napoléon perceived and lamented this change in his old companions in arms; he felt no such refrigeration in himself, and was astonished that they did not follow him in the close of his career with the same ardour as in its commencement. Unable, however, to overcome their repugnance for bold counsels, he gradually estranged himself from their society, concentrated his burning thoughts in his breast, and not unfrequently withdrew from a council of marshals into an embrasure of a window (2), where he opened his mind in unreserved communication with some young general of division, whose ideas were more in harmony with the undiminished energy which he felt in his own bosom.

Views of the Russian Government on the approaching contest The Russian Government was fully aware of the approaching danger, and had for a considerable period been silently preparing to meet it. Upwards of a year before, a large portion of the Turkish army, as already noticed, had been withdrawn from the Danube, and the main strength of the empire collected on the Niemen (3). The Emperor Alexander had, by the address of his aide-de-camp Chernicheff, obtained an apparently accurate, though, as was afterwards experienced, deceptive detail of the strength of the "grand army," its destination, and the several corps of which it was composed. He resolved to oppose to the vast

(1) Chénier, *Guerre de Russie*, i. 165, 166
(2) Fain, i. 46, 47

(3) .

preparations of the French Emperor the indomitable perseverance of north ern valour; and, without provoking the contest to undergo every thing rather than yield in the strife. The nobles, at this crisis, rallied round the throne with a spirit worthy of the Roman senators; and the poor peasants, ignorant of the magnitude of the danger by which they were to be assailed, prepared to die in defence of their country and their religion (1)

Religion and patriotism were the principles by which they were appealed to. Military spirit prevailed to a considerable degree in the Russian army, but by no means to the extent which subsequently existed after the unparalleled successes of the war. The disastrous issue of all preceding contests with France, and the doubtful event of the war with the Turks, had spread a desponding feeling both through the government and the country. Alexander and his council were prepared indeed to resist; but it was rather with the mournful and magnanimous resolution of perishing in defence of their country, than from any confident hope of being able to achieve its deliverance. They had to contend with a monarch of consummate military talents, whose career of victory had been unbroken, with an army insured to conquest by twenty years of success, and who now led on more than half the forces of continental Europe to overwhelm the resistance of its only remaining independent power. In such a conflict they were well aware the chances of victory, the hope of success, lay all on the other side. Worldly motives, usually so powerful in the human breast, could in vain be appealed to; but Alexander found the means of meeting it in those higher and more generous principles, which, unknown in ordinary times, unfelt by ordinary men, yet exist in every heart, if not overwhelmed by the intensity of selfish desires, and not unfrequently defeat all the calculations of the most experienced observers, by the brilliancy with which they shine forth on extraordinary occasions. RELIGION AND PATRIOTISM were the principles to which the Russian Government appealed in the awful crisis, and they met with a responsive echo in every heart within their dominions. Every proclamation to the people, every address to the nobles, breathed the language of religious or patriotic devotion. The Emperor, neither confident nor depressed, appeared prepared to combat to the last man in defence of his country, and, if necessary, be the last martyr in its cause. The French, like mankind in general, ridiculed sentiments of which they were ignorant, and stigmatized as fanatical the efforts of the Russian authorities to imprint a religious character upon the contest; little aware that the forces of revolution, in other words the passions of the world, cannot be successfully combated but by an appeal to religious emotion, that is, the motives of heaven, and that, when the Emperor Alexander elevated the standard of the cross, he invoked the only power that ever has, or ever will, arrest the march of temporal revolution (2)

Plan of the Russian Government to resist the invasion. It was not without due consideration, and a full appreciation of the sacrifices with which it would be attended, that the Cabinet of St.-Petersburg had adopted the resolution of engaging in a war of life or death with the French empire. They had carefully studied the warfare of Wellington in Portugal; and a military memoir of extraordinary ability, still preserved in the archives of St. Petersburg had pointed to that sagacious and scientific campaign as the model on which the defensive system of Russia should be founded (3). To support the plan of operations, an intrenched camp, capable of containing the whole Russian army, had been

(1) *Revol.* l. 103, 106. *See* *ibid.* l. 100.
(2) *Ibid.* l. 78, 217. *Chamb.* l. 178.

(3) *Mem.* ix. 274

constructed at Drissa to cover the approach to St -Petersburg. A strong *tête-de-pont* at Borissow covered the passage of the Berezhina by the route of Moscow; and the ramparts of Smolensko, the bulwark of Old Russia, were armed with cannon, and put in a respectable state of defence. But none of these strongholds were capable of resisting the vast forces which Napoléon had at his disposal. They were intended as obstacles only to retard the advance of his army, leaving it to other and more powerful agents to accomplish his destruction. For this purpose, the Russian armies, like those of Wellington down the valley of the Tagus, were to retire slowly into the interior of the empire; the country, as they fell back, was to be denuded of its inhabitants, and laid waste; clouds of light horse were to harass the flanks and cut off the foraging parties of the advancing enemy, and every effort made to rouse the rural population, and inspire them with a religious zeal in the great contest in which they were about to be engaged. By these means it was hoped the forces of the French Emperor, great as they undoubtedly were, would be gradually wasted away. Every step they advanced in a desolate realm would bring them nearer their ruin, and the very magnitude of his army would ultimately prove an insupportable incumbrance, from the impossibility of providing subsistence for such a multitude. But it was impossible to rouse a national spirit in Lithuania, because its inhabitants, ancient Poles, being seized with the desire of recovering their independence, were animated with the strongest spirit in favour of the invaders; and therefore this system could really be carried into effect only when the army reached Smolensko, the ancient frontier of Russia; and the erroneous information which Chernicheff had obtained at Paris as to the strength of the French army, led the Emperor to miscalculate the force which would be requisite to repel it, and rendered necessary a much farther retreat, and more extensive sacrifices than had at first been relied on (1)

Desponding feelings of the English The repeated defeats of the Russians, in the preceding wars with Napoléon, spread a desponding feeling throughout the English people in regard to the approaching contest. Taught by the disastrous consequences of former coalitions, the British Government made no attempt to stake the last chance of Europe on the hazardous issue of continental war, and, contrary to all former precedent, they neither offered, nor would Russia accept, any pecuniary assistance. Mr. Perceval stated in the House of Commons, that Russia engaged in the contest on her own responsibility (2), and without any instigation on the part of England, and the Czar sought to animate the patriotism of the people by the assurance that they stood alone in the contest, and would share with none the glory of success.

Military preparations of the French emperor for the contest The forces which Napoleon at that period commanded, amounted to the enormous number of nearly twelve hundred thousand men, almost all in the highest state of discipline and equipment. Of these eight hundred and fifty thousand were native French, and of that body only three hundred thousand were engaged in the Spanish war. A population of forty-three millions in the French empire, and eight more in the kingdom of Italy and the Illyrian provinces, afforded apparently ample means of recruiting his losses, but as the conscription had ceased to be productive from the arrival of the period when those destroyed in the early revolutionary wars occasioned a chasm in the births of 1794 and 1793, and consequently in the population between eighteen and twenty years of age,

(1) Chamb. 176, 177. Fain, 176. Bout. 1. (2) Parl. Deb. July 13, 1812

he resorted to an extraordinary method of providing for the security of his dominions. All the inhabitants of the French empire, and of the kingdom of Italy capable of bearing arms, were formed into three bans, as they were called—the first comprehending all those from twenty to twenty-six years of age, the second from twenty-six to forty, the third, from forty to sixty years of age. One hundred and twenty thousand of the first ban, was immediately placed at the disposal of the minister-of-war. This extraordinary measure, unknown in any former contest, demonstrates both how fatally the conscription had operated upon the male population of France, and may be regarded as one of the first prognostics that the empire had reached the limits of physical nature, and approached its fall. The weakness of age fell at once upon it, when the chasm occasioned by the dreadful wars of 1793 and 1794, appeared in the male population which should be available for the purposes of the conscription. The total failure of the conscription, after 1814, demonstrated that the early wars of the Revolution had mowed down the race from which the defenders of the empire should have sprung (1).

^{Force of the}
^{French}
^{Army} The grand army itself, which was now concentrated in Poland, or ready to support the movements of those in advance, was divided into thirteen corps of infantry and four of cavalry, and amounted to the immense aggregate of above five hundred thousand men (2). Of these, above:

eighty thousand were cavalry, and they were supported by thirteen hundred pieces of cannon. Nearly twenty thousand chariots or carts, of all descriptions, followed the army, and the horses employed in the artillery, the cavalry, and the conveyance of the baggage, amounted to the unprecedented number of one hundred and eighty-seven thousand. No such stupendous accumulation of armed men had yet been formed in modern times, or probably since the beginning of the world (1). Of this prodigious armament, however, only two hundred thousand were native French, the remainder were Germans, Italians, Poles, Swiss, and Austrians, whom the terror of the French arms had compelled, how unvoluntarily soever, to follow their banners. "Exercitus mixtus ex colluvione omnium gentium quibus non lex, non mos non lingua communis; alius habitus, alii vestes, alia arma alii ritus, alia sacra (2)".

The forces which the Russian empire had to oppose to this crusade were much less considerable at the commencement of the campaign, but they were constantly increased as the war rolled into the interior of the empire; and, before its close, the armies on the two sides were nearly equal. Its regular forces amounted, in the close of 1811, to five hundred and seventeen thousand men, but of these nearly seventy thousand were in garrison, and the remainder dispersed over an immense surface, from the Danube to the Gulf of Finland, and from the Niemen to the Caucasus. Two successive levies had, however, been effected since that period, which furnished most seasonable supplies of disciplined men to the armies, as they were successively thinned by the casualties of war (3).

To oppose the invasion of the French, the Russians had collected two hundred and seventeen thousand in the first line, and thirty-five thousand in the second; and the army of Moldavia, amounting to fifty thousand, ultimately appeared on the scene, and took an active share in the close of the campaign. Their united strength was nearly three hundred thousand, of which above fifty thousand were cavalry, and they brought into the field upwards of eight hundred pieces of cannon (4).

The forces of the French, therefore, exceeded those of the Russians by nearly three hundred thousand men; but the former were at an immense distance from their resources, and had no means of recruiting their losses, whereas the latter were in their own country, and supported by the devotion of a patriotic and devoted people. By the foresight of the Government, thirty-six depôts, in the provinces bordering on the supposed theatre of war, had been formed, to supply the losses occasioned by the campaign, and proved of the most essential service in the progress of the war (1).

Napoléon's forces, at the commencement of the campaign, were divided into three great masses. The first, two hundred and twenty thousand strong, under the immediate orders of the Emperor, was destined to overwhelm the first Russian army, under the command of Barclay de Tolly, who had only one hundred and twenty-seven thousand; the second, consisting of seventy five thousand, under Jérôme, was to crush Prince Bagrathion, whose forces were only forty-eight thousand; the Viceroy, at the head of seventy five thousand, was charged with the important task of throwing himself between these two Russian armies, and preventing their reunion. Besides these great armies, the right wing of the French, thirty thousand strong, under Schwartzberg, was opposed to Tormassoff who had forty thousand under his orders; and the left, of the same strength, under Macdonald, was destined to act against Riga, where Essen, with an inconsiderable force, awaited his approach (2).

The face of the country on the western frontier of Russia is in general flat, and in many places marshy. Vast woods of pine cover the plains, and the rivers flow in some places through steep banks, in others stagnate over extensive swamps, which often present the most serious obstacles to military operations. Cultivation in Lithuania is so inconsiderable, that the fields of corn seem cut out of gloomy forests; the villages are few and miserable. The little industry which exists is owing to the Jews, who reside in the towns in great numbers. Inhabiting a rich country, the Poles are destitute of the common necessities of life. employed in raising magnificent crops of wheat, they seldom taste any thing but rye-

bread, oats, or the coarsest fare. The miserable aspect of the country attracted the notice even of the careless followers of Napoléon's army, but the warlike spirit of the people was undecayed, and the peasants equally with the nobles retained that aptitude for war, and facility at assuming its discipline and duties, which in every age has formed their honourable characteristic (1).

Napoléon left Paris on the 9th May the Empress Maria Louisa accompanied him to Dresden. The whole sovereigns of Germany were there assembled, including the Emperor Francis and the King of Prussia. The Empress had left Germany as a sacrifice to the interests of her country she returned beside the conqueror of the world, surrounded by the pomp of more than imperial splendour. The theatres of Paris had been transferred to Dresden; the assembled courts of Europe there awaited her approach; the oldest potentates yielded to the ascendant of her youthful diadem. During the magnificent series of pageants which followed her arrival, flattery exhausted its talent and luxury its magnificence; and the pride of the Cæsars was forgotten in the glory of one who had risen upon the ruins of their antiquated splendour. No adequate conception can be formed of the astonishing power and grandeur of Napoléon, but by those who witnessed his residence on this occasion at Dresden. The Emperor occupied the principal apartments of the palace; his numerous suite were accommodated around, the august guests of the King of Saxony all looked to him as the centre of attraction. Four kings were frequently to be seen waiting in his antechamber; queens were the maids of honour to Maria Louisa. With more than eastern magnificence he distributed diamonds, snuff-boxes, and crosses among the innumerable crowd of princes, ministers, dukes, and courtiers, who thronged, with oriental servility, around his steps; whenever he appeared in public, nothing was to be heard but praises of his grandeur and magnificence. The vast crowd of strangers, the superb equipages which thronged the streets, the brilliant guards which were stationed in all the principal parts of the city, the constant arrival and departure of couriers from or towards every part of Europe, all announced the king of kings, who was now elevated to the highest pinnacle of earthly grandeur (2).

His confident anticipations of success in the campaign
No fears for the issue of the gigantic expedition which he had undertaken, ever crossed the mind of the Emperor, or the cortége of kings and princes by whom he was surrounded. "Never," said he, "was the success of an expedition more certain, I see on all sides nothing but probabilities in my favour. Not only do I advance at the head of the immense forces of France, Italy, Germany, the Confederation of the Rhine, and Poland, but the two monarchies which have hitherto been the most powerful auxiliaries of Russia against me, have now ranged themselves on my side: they espouse my quarrel with the zeal of my oldest friends. Why should I not number in a similar class Turkey and Sweden? The former at this moment is, in all probability, resuming its arms against the Russians. Bernadotte hesitates, it is true, but he is a Frenchman; he will regain his old associations at the first cannon-shot, he will not refuse to Sweden so favourable an opportunity of avenging the disasters of Charles XII. Never again can such a favourable combination of circumstances be anticipated. I feel that it draws me on, and, if Alexander persists in refusing my propositions, I will pass the Niemen (3)." Marvellous as is the contrast between these anticipations and the actual issue of the campaign, the penetration of few men in

(1) Bout i 122, 123. Labaume, 20. Burnett's Poland, i 90

Europe could at that time promise a different result from the French Emperor and Madame de Staël expressed the almost universal opinion, that "when Napoleon was at Dresden in 1812, surrounded by all the sovereigns of Germany, and commanding an army of five hundred thousand men, it appeared impossible, according to all human calculation, that his expedition should not succeed (1) "

Distance to Poland on the first entrance of the French army. No sooner had he arrived in Poland than the Emperor was assailed by the cries of the peasantry, who were ruined by his soldiers. Notwithstanding the utmost exertions on his part to prevent pillage, and to provide for their necessities, the enormous multi-

June 17 tude of men and horses who were assembled, speedily exhausted the country. It was in vain that his prudent foresight had provided numerous battalions of light and heavy chariots for the provisioning of the army. Innumerable carriages laden with tools of every description, twenty-six squadrons of waggons laden with military equipages, several thousand light caissons, carrying luxuries as well as objects of necessity of every description, and six complete sets of pontoons; the wants of such a prodigious accumulation of troops, speedily exhausted all the means of subsistence which the country afforded, and all the stores they could convey with them. Forced requisitions of horses, chariots, and oxen from the peasantry, soon became necessary; and the Poles, who expected deliverance from their bondage, were stripped of every thing they possessed by their liberators. To such a pitch did the misery subsequently arrive, that the richest families in Warsaw were literally in danger of starving, and the interest of money rose to eighty per cent (2). Yet such was the rapidity of the marches at the opening of the campaign, that the greater part of these exactions were abandoned or destroyed before the army had advanced many leagues into the Russian territory.

Prodigious stores of the Emperor for the supply of his troops. Feb. 11, 1812. Enormous magazines had been formed to provide for the wants of the troops in the campaign. By the treaty, already mentioned, concluded with Prussia a short time before, that unhappy country was compelled to furnish 220,000 quintals of oats, 24,000 of rice, 2,000,000 bottles of beer, 400,000 quintals of wheat, 600,000 of straw, 530,000 of hay, 6,000,000 boisseaux of oats, 44,000 oxen, 15,000 horses, 4,600 carriages, harnessed and furnished with drivers and horses, and hospitals provided with every requisite for 20,000 patients. At Dantzig, the grand depot of the army, innumerable military stores were collected, and magazines capable of being transported by water through the Frischaff to Königsberg, and by land across the country to Interberg, where they were received on the Niemen. The active and impassioned mind of the Emperor had long been incessantly occupied with this object: the whole day was passed in dictating letters to his generals on the subject: in the night he frequently rose from bed to reiterate his commands. "For masses such as are now to be put in movement," said he, "the resources of no country can suffice. All the caissons must be ready to be laden with bread, flour, rice, vegetables, and brandy, besides what is requisite for the moveable columns. My manoeuvres may assemble in a moment four hundred thousand men at one point: the country will be totally unable to provide for them; every thing must be brought by themselves (3) "

And to estimate their extent. Before approaching the Niemen, the Emperor reviewed the principal corps of his army. On these occasions, according to his usual

practice, he passed through the ranks of the soldiers, and enquired minutely into their wants and equipments. The veterans he reminded of the battles of the Pyramids, of the glories of Marengo, Austerlitz, and Jena, the conscripts seemed equally the object of attention. Was then pay regularly received, were their rations faithfully served out, had they any complaints to make against their officers? Frequently he halted in the centre of a regiment, and, calling the troops around him, enquired what commissions were vacant, and who were most worthy to hold them, and having ascertained the age, services, and wounds of those specified, immediately appointed them to the vacant situations in the presence of their comrades. By attentions such as these Napoleon gained the hearts of his soldiers, and produced that enthusiastic attachment to his person, which, as much as the splendour of his military talent, distinguished every period of his career (1)

At length he approached the Niemen, and the numerous battalions of the Grand Army converged towards Kowno, which being the extreme point of a salient angle, where the Prussian projected into the Russian territory, seemed a favourable point for commencing operations. The infantry arrived in good order, and left but few stragglers behind; but the cavalry and artillery had already begun to suffer severely: the grass, the hay, the meadows, were soon entirely consumed by the enormous multitude of horses which passed along, and the succeeding columns suffered severely from the devastation of those which had preceded them. Two hundred and twenty thousand men, and a hundred thousand horses, now concentrated at the point of junction of four different roads at Interberg on the Pregel, presented a mass of combatants unparalleled in modern times for their efficiency and splendour. Before setting out for the Niemen, the troops were all served with provisions to convey them beyond that river to Wilna, the capital of Russian Poland. But all the care of the Emperor and his lieutenants was unable to provide subsistence for such stupendous masses: the carriages and cattle which had been seized in Old Prussia, under a provision that they should be sent back as soon as they reached the Niemen, were still kept for service beyond that river, and the unhappy owners resumed the road to their homes, destitute either of money or provisions, and uttering the loudest complaints against the injustice with which they had been treated. Pillage and disorder were already universal on the flanks of the army, and it was easy to foresee that want of provisions would prove the great difficulty of the campaign. The masses, however, pressed on without intermission, and at length on the 25d June, before daybreak, the Imperial columns approached the river, which as yet was concealed by the great forest of Pilwisky, and the Emperor immediately mounted on horseback to reconnoitre the banks. His horse suddenly fell as he approached the shore, and he was precipitated on the sand. Some one exclaimed, "It is a bad omen—a Roman would have retired," but, without regarding the augury, he gave orders for the construction of three bridges, and retired to his quarters, humming the tune, "Marlborough s'en va à la guerre," and repeating with martial emphasis the line, "Ne sait quand il reviendra (2) "

On the approach of night the following proclamation of the Emperor was read to the troops—"Soldiers, the second war of Poland is commenced. the first was terminated at Friedland and Tilsit, when Russia swore an eternal alliance with France, and war

(1) Ségur, i. 123

(2) Ségur, i. 143 Fain, i. 92, 93 Jour, i. 52. Chambray, i.

with England now she violates her oaths. She refuses to give any explanation of her strange conduct till the French eagles have repassed the Rhine, leaving our allies at her discretion. *Fate drags her on—let her destinies be fulfilled*. Does she imagine we are degenerated? Are we not still the soldiers of Austerlitz? We are placed between dishonour and war; our choice cannot be doubtful. Let us then advance, cross the Niemen, and carry the war into her own territory. The second Polish war will be as glorious as the first; but the peace we conclude shall be its own guarantee, and put an end to the fatal influence which for fifty years Russia has exercised in the affairs of Europe." The soldiers, grouped in circles, heard these animating words with enthusiasm, and immediately the signal to advance was given. vast columns desiled out of the forest and hollows with which the banks of the river abounded, and pressed in silence to the margin of the stream; not a sound was heard but the measured tread of marching bands, not a light was suffered to shine on the vast and disciplined array of France. The troops halted and lay down on the edge of the river, too impatient to sleep, and eagerly gazing through the gloom at the Russian shore (1).

Splendid
array of
the
cavalry
of the
river At one in the morning the corps of Davoust broke up and crossed the river, and shortly after its advanced guard took possession of Kowno. The tent of the Emperor was placed on an eminence three hundred paces from the bank, and as the sun rose he beheld the resplendent June 24. masses slowly descending to the bridges. The world had never seen so magnificent an array as lay before him; horse, foot, and cannon in the finest order, and in the highest state of equipment, incessantly issued from the forest, and wound down the paths which led to the river: the glittering of the arms, the splendour of the dress, the loud shouts of the men as they passed the Imperial station inspired universal enthusiasm, and seemed to afford a certain presage of success. The burning impatience of the young conscripts the calm assurance of the veteran soldiers the confident ardour of the younger officers the dubious presentiments of the older generals, filled every heart with thrilling emotion. No sinister presentiments now were visible on the countenance of the Emperor; the joy which he felt at the recommencement of war communicated an universal degree of animation. Two hundred thousand men, including forty thousand horse, of whom twelve thousand were cuirassiers, clad in glittering steel, passed the river that day in presence of the Emperor. Could the eye of prophecy have foreseen the thin and shattered remains of this countless host, which a few months afterwards were alone destined to regain the shore of the Niemen, the change would have appeared too dreadful for any human powers of destruction to have accomplished (2).

The passage of troops continued incessantly during the 24th and 25th; and the cavalry under Murat, passing Davoust's corps, took the lead in the advance. The Viceroy and Jérôme, at the head of their respective armies, crossed some days afterwards at Pilyony and Grodno, the former at the head of seventy, the latter of sixty five thousand men and immediately began to advance against the corps of Bagration, which lay in the opposite country; whilst Macdonald passed the Niemen at Tilzit, and on the 2d July Schwartzzenberg crossed the frontier by passing the Bug at Moguilev (3).

The Emperor Alexander was at a ball at a country house of General Bennigsen, in the neighbourhood of Wilna, when the intelligence of the passage

of the river reached him. He concealed the despatches, and remained with the company till its close, without exhibiting any change of manner, or revealing in any way the momentous news he had received. On the same night, however, after the festivities were over, he prepared and published the following proclamation to the nation and army:—"For long we have observed

Proclamation of the Emperor Alexander to the Russians on the invasion June 25, 1812

the hostile proceedings of the French Emperor towards Russia, but we always entertained the hope of avoiding hostilities by measures of conciliation; but, seeing all our efforts without success, we have been constrained to assemble our armies. Still we hoped to maintain peace, by resting on our frontiers in a defensive attitude, without committing any act of aggression. All these conciliatory measures have failed the Emperor Napoléon, by a sudden attack on our troops at Kowno, has declared war. Seeing, therefore, that nothing can induce him to remain at peace, nothing remains for us but to invoke the succour of the Most High, and oppose our forces to the enemy. I need not remind the officers and soldiers of their duty, to excite their valour, the blood of the brave Sclavonians flows in their veins. Soldiers, you defend your religion, your country, and your liberty. I am with you. God is against the aggressor." To the nation the commencement of the war was announced in a letter addressed to the Governor of St-Petersburg, which concluded with these remarkable words:—"I have the fullest confidence in the zeal of my people, and the bravery of my soldiers. Menaced in their homes, they will defend them with their wonted firmness and intrepidity. Providence will bless our just cause. The defence of our country, of our independence and national honour, have forced me to unsheath the sword. *I will not return it to the scabbard as long as a single enemy remains on the Russian territory (1)*"

Noble resolution of the Russian army and people

The intelligence of the invasion of the French, and these moving addresses, excited the utmost enthusiasm in the people and the army. It was not mere military ardour, or the passion for conquest, like that which animated the French army, but a deep-rooted resolution of resistance, founded on the feelings of patriotism and the spirit of devotion. Less buoyant at first, it was more powerful at last, founded on the contempt of life, it remained unshaken by disaster, unsubdued by defeat. As the French army advanced, and the dangers of Russia increased, it augmented in strength, and while the ardour of the invaders was quenched by the difficulties of their enterprise, the spirit of the Russians rose with the sacrifices which their situation required (2).

Their forces retreat on all sides

It was with feelings of regret, therefore, that the Russian army received orders to retire before the enemy. This resolution had been previously taken, and all the commanders furnished with directions as to the route they were to follow. The enormous superiority of Napoléon rendered it hopeless to attempt any resistance, till time and the casualties incident to so long a march, had thinned his formidable ranks, nor was it long before the wisdom of this resolution became apparent. The sultry heat of the weather at the crossing of the Niemen, was succeeded by a tempest the fury of which resembled the devastating hurricanes of tropical climates. Upon the countless multitudes of Napoleon, who traversed an exhausted country, covered with sterile sands or inhospitable forests, its violence fell with unmitigated severity. The horses perished by thousands from the combined effects of incessant rain and unwholesome provender, one hundred and

twenty pieces of cannon, and five hundred caissons, were left at Wilna without the means of transport; above ten thousand dead horses were found on the highway leading to that city alone; thirty thousand disbanded soldiers spread desolation round the army; and before it had been six days in the Russian territory, or a single shot fired, twenty-five thousand sick and dying men filled the hospitals of Wilna and the villages of Lithuania (1)

It seldom enters Wilna, and remains there even three days. June 28. Barclay left Wilna on the 28th June, and on the same day Napoleon entered it. He remained there for seventeen days—a delay which military historians have pronounced the greatest fault in his whole life. It is certain that it gave time to the Russian commanders to retire in admirable order, and exhibits a striking contrast to the rapidity with which he pursued his broken enemy after the battle of Jena, or the combats of Ratibon and Lchmuhl. Already the extraordinary consumption of human life in the campaign had become apparent; for as the Emperor reviewed the troops at Wilna, they were almost struck down by the pestilential smell which the westerly wind blew from the long line of carcases of horses and bodies of men which lay unburied on the road from Kowno (2). But on the other hand, it is to be recollected that Lithuania afforded none of the resources for a victorious army which the opulent and cultivated plains of Saxony or Bavaria presented. Vast forests of pine, or deserts, heaths, and sands, offered no resources for the troops. Contrary to what obtains in the old civilized states of western Europe, the vicinity of the highways was hardly more peopled or better cultivated than the unfrequented districts; and if the army outstripped the convoys which accompanied it, the soldiers would have perished of want, or the military array been dissolved by the necessity of separating for the purpose of marauding and pillage. The unparalleled magnitude of his present forces necessarily impeded the Emperor's movements, and he felt that if he advanced, without due precaution, into so sterile a region, he ran the risk of perishing, like Darius, from the multitude of mouths which he had to feed (3).

Enthusiasm of the Poles on that event. The ancient and unforgotten patriotism of the Poles burst forth without control for some days after the occupation of Wilna. As Napoleon entered that city at the head of the Polish regiment commanded by Prince Radzivil, amidst the acclamations of the inhabitants, who regarded him as their liberator. The national banners were raised amidst the acclamations of multitudes: the young embraced and wept in the public streets: the aged brought forth the ancient Polish dress, which had almost been forgotten during the days of their humiliation. The Diet of Warsaw declared the Kingdom of Poland re-established, convoked the national diets, invited all the Poles to unite together, and called upon those in the Russian service to abandon its standards.

Napoleon took some steps at first, calculated to favour the hope that a national restoration was in contemplation. The few days devoted at Wilna to the repose of the army, were given by the Emperor to the organisation of a provincial government, extending over all Lithuania. The country was divided into four governments; and prefects, mayors, and assistants, elected as in the French Empire. Six regiments of infantry, and one of cavalry, were directed to be raised, one of which formed part of Napoleon's guard; and the constant presence of Maret, his minister for foreign affairs, whose anxiety for the restoration of Poland was well known, in all his diplomatic labours, in

spired the general hope that some decisive measure for the reversal of the great act of injustice under which it had suffered was in contemplation. Altogether, the Poles furnished to Napoleon, in the course of the campaign, no less than eighty-five thousand men (1)

The first address of the Polish Diet to the Emperor was signally characteristic of the profound feelings of undeserved injury by which that gallant nation were animated—"Why have we been effaced from the map of Europe? By what right have we been attacked, invaded, dismembered? What have been our crimes, who our judges? Russia is the author of all our woes. Need we refer to that execrable day, when, in the midst of the shouts of a ferocious conqueror, Warsaw heard the last groans of the population of Praga, which perished entire by fire or sword? These are the titles of Russia to Poland: force has forged them, force can alone burst their fetters. Frontiers traced by a spoliating hand can never extinguish our common origin, or destroy our common rights. Yes! we are still Poles! The day of our restoration has arrived: the land of the Jagellons and the Sobieskis is to resume all its glory." The clergy were next admonished to solicit the Divine protection; and an address published to the Lithuanians in the Russian army, calling upon them to range themselves under the banners of their country (2).

But though Napoleon was not insensible to the advantages which the co-operation of the Lithuanians offered him, yet political considerations of insurmountable weight prevented him from taking that decisive step in favour of the restoration of Poland, by which alone its independence, in the midst of so many powerful neighbours, could be effected, viz the reunion of all its partitioned provinces under one head. He was well aware of the ardent, but unsteady and factious character of the Poles, and deemed the aid of their tumultuous democracy dearly purchased, if the friendship of Austria or Prussia, his present firm allies, were endangered in its acquisition. He replied, therefore, to the address of the Polish Diet,—“I approve of your efforts, and authorize you to continue them. I will do all in my power to second your resolutions. If you are unanimous, you may indulge the hope of compelling the enemy to recognise your rights, but in these remote and widely extended countries, it is solely in the unanimity of the efforts of the population that you can find hopes of establishing it. Let Lithuania, Samogitia, Volhynia, Podolia, and the Ukraine, be animated by the same spirit which I have witnessed in the Grand Duchy of Warsaw, and Providence will crown your efforts with success. I must at the same time inform you, that I have guaranteed the integrity of the Austrian dominions, and *can sanction no movement which may endanger the peaceable possession of her Polish provinces*.” These words froze every heart with horror. It was evident that he was willing enough to disturb Russia by a revolt in her Lithuanian dominions, but had no inclination to embroil himself with Austria or Prussia, by a general reunion of the Polish provinces, and without that, it was universally felt the restoration of the kingdom would prove an illusory dream. The provincial government which he had established did not possess the confidence of the nation; no guarantee for the restoration of the monarchy was given, distrust and dissatisfaction succeeded to the transports of inconsiderate joy; and Napoleon, by yielding to the dictates of a cautious policy, lost the support of a gallant people (3).

Movements
of Jérôme
against
Bagrathion

While Napoleon, with the main body of his army, moved upon Wilna, Jérôme and Davoust advanced against Bagrathion, who was forced to fall back by an eccentric line of retreat towards Bobrinsk.

The rapidity of the advance of the French centre cut off the communication between the two Russian armies; and by pushing back Barclay five days before the position of Bagrathion was disturbed, he hoped to repeat the oblique attack on a great scale which had proved so fatal to the Austrians at Lissa. Bagrathion, in consequence, fell back but finding that his advanced posts, in consequence of the oblique advance of the French centre, encountered the corps of Davoust, whom Napoleon had detached from the *Grand Army* to prevent his rejoining the Russian centre, he was obliged to make several de-

July 2. tours; and in the course of one of these, his cavalry, consisting chiefly of Cossacks, encountered at Mir the advanced guard of Jérôme's army, composed of three regiments of Polish cavalry. A sharp action ensued, which terminated favourably to the Russians, and the day following a still more so-

July 10. rious combat took place, between six Polish regiments and the Cossack cavalry, which also terminated in the repulse of the invaders. These brilliant affairs, which were the first engagements of the campaign, produced the utmost enthusiasm in the Russian army; but Bagrathion, wisely judging that even a total defeat of Jérôme's army, by drawing him farther from the interior would only enable Davoust to interpose between his army and the retiring columns of Barclay, continued his retreat, and reached in safety the ramparts of Bobrinsk on the Berezina, on the 18th July (1)

Their in-
surrection, and
consequent
displeasure
of Napoleon. The object of Napoleon in these movements was to separate entirely Bagrathion from Barclay de Tolly, and enclose the former between Jérôme's army, which pressed his rear, and Davoust's corps, which was destined to fall perpendicularly on its flank, or occupy the termination of the roads by which it was retiring, or might seek to regain by cross-roads the intrenched camp of Drissa, where the whole army was ordered to rendezvous. But the rapidity and skill of the Russian movements, joined to the inexplicable tardiness of Jérôme's pursuit, having rendered this well-conceived design abortive, the Emperor deprived his brother, with bitter reproaches, of its command, and placed the corps of Junot and Poniatowski under the orders

July 2. of Davoust (2). This change did not improve the success of the movements for the capture of Bagrathion. That general reached Minsk on the

Commit of
Mistake 8th, and on the 12th resumed his march for Witepsk. Both armies advanced with expedition to occupy Mohilow, which commanded the entrance of the defiles by which the cross movement towards Barclay was to be effected but in spite of the utmost diligence of the Russians, they found it already in the hands of Davoust, who defended its approaches with thirty thousand men, and had adopted every imaginable precaution to secure it

July 21. from attack. On the 23d July, Bagrathion pushed forward General Raefskoi with twenty thousand men to attack the French position, which was extremely strong, in the defiles of a forest which was filled with artillery and tirailleurs. An obstinate conflict ensued, in which the Russians displayed their characteristic intrepidity in sustaining unmoved for hours, at the en-

(1) *Essai*. l. 190. 228. *Journals* iv 66. *Chron.* l. 199 300. *Fala*, l. 294. 313. 316

(2) — I am extremely displeased that the King of Westphalia (Jérôme) (or not having sent his light troops in pursuit of the enemy under Bagrathion. It is impossible to remember worse than he has done. Had Poniatowski only displayed vision he should have been sent forward on that duty; where-

as, in fact, he had his whole corps. By thus forgetting all rules, as well as his express instructions, Bagrathion has gained time to make his retreat with perfect leisure. The whole fruit of my manoeuvres, and the finest opportunity of the war has been lost by his singular forgetfulness of the first principles of the military art. — *Fala* l. 299.

eminences Napoléon, at the head of a hundred and eighty thousand men, made every preparation for an attack on the following day. Several severe skirmishes between the advanced guards, in presence of their respective armies, with alternate success, elevated the hope of the contending parties, and the soldiers on both sides sharpened their weapons, and prepared for a mortal struggle on the following day. Napoléon's last words to Murat at night-fall were, "To-morrow at five, the sun of Austerlitz (1)!"

Intelligence from Bagrathion induces him to retreat to Smolensko In truth, the Russian general, notwithstanding the vast disproportion of numbers, had taken the bold resolution to give battle on the following day, in order to avoid the danger of being attacked by the French while defiling by a flank movement in the direction of Orcha, where he had appointed Bagrathion to meet him. But during the night intelligence was received, which fortunately induced him to change his determination. It appeared, from letters brought by one of his aides-de-camp, that Bagrathion having been arrested by Davoust at Mohilow, and unable, in consequence, to continue his march to Orcha, had crossed the Dnieper, and was moving towards Smolensko. Barclay immediately resolved to discontinue his intended flank movement towards Orcha, and, abandoning Witepsk, to effect his junction in the neighbourhood of that renowned bulwark of the Russian empire (2).

Admirable order in which the retreat was conducted Brilliant watch-fires were kept up in the Russian lines during the night, to induce the belief that they were resolved to give battle; but, meanwhile, the whole army broke up from its encampment, and the important and perilous duty of protecting the rear was intrusted to Count Pahlen. **July 28** Early on the morning of the 28th, Murat, who had bivouacked with the advanced posts, approached the enemy's station, but found their camp entirely deserted. With such skill had the retreat been conducted, that not a weapon, not a baggage-waggon, not a straggler, had been left behind—

"'Twould seem as if their mother earth,
Had swallow'd up her warlike birth "

Following on the traces of the enemy, the advanced guard was unable, at the separation of the two roads of St -Petersburg and Moscow, to ascertain which their opponents had followed! The French officers beheld with astonishment the science and discipline of their enemies, and were obliged to acknowledge with shame, that there was more order in the Russian retreating than in their own advancing columns (3).

Advance of the French to Witepsk and reasons for their halt there The Viceroy at length discovered the Russian rearguard slowly retiring in admirable order over the plain towards Smolensko. Some charges executed against it by the French chasseurs were not only repulsed, but the assailants destroyed. The exhausted state of the horses rendered it impossible for the cavalry to act with effect, and the retreating riders could only save their extenuated horses by leading them by the bridles, the rays of a powerful sun overwhelmed the soldiers, and every thing conspired to indicate the necessity of repose. In truth, the losses of the army during their long march had been such, that it was absolutely necessary to make a halt. Napoléon had accomplished the advance from Kowno and Grodno to Witepsk, without magazines or convoys, in little more than thirty days, whereas Charles XII had taken eight months to tra-

hundred thousand men and horses, while traversing such a country. It was from the very outset of the campaign, in consequence, found necessary to reduce the rations served out to the soldiers to one-half, and the pittance thus obtained, was inadequate to the support of men undergoing the fatigue which their long marches imposed upon the troops. Such as it was, however, it was in general denied to the detachments or convalescents coming up in the rear, who, finding the magazines emptied by the enormous multitude who had passed before them, were in general sent on without any thing, to find subsistence as they best could, in a country often desert, always wasted by the passage of the corps which were then on the march. Pillage, and the dispersion of the troops for several leagues on either side of the high-roads in quest of subsistence, became thus a matter of necessity; no order or discipline could prevent it. A large proportion of the stragglers who thus inundated the country never rejoined their colours, or were only collected in confused multitudes by the light columns organized by the Emperor to arrest the disorders, and before a great part of the army had even seen the enemy, it had already undergone a loss greater than might have been expected in the most bloody campaign (1)

The Emperor Alexander repairs to Moscow to hasten the armaments there

While these movements were taking place in the armies, the Emperor Alexander hastened to Moscow, to accelerate by his presence the armaments in the interior of the empire. By an edict dated from the camp at Drissa, the 12th July, he had already ordered a new levy of one in one hundred males in the provinces nearest to the seat of war, but this supply not being deemed sufficient, a proclamation, July 12, 1812 couched in the most energetic language, was addressed a few days afterwards from Polotsk to the inhabitants of Moscow — “Never,” said he, “was danger more urgent. The national religion, the throne, the state, can be preserved only by the greatest sacrifices. May the hearts of our illustrious nobles and people be filled with the spirit of true valour; and may God bless the righteous cause! May this holy spirit, emanating from Moscow, spread to the extremities of the empire! May the destruction with which we are menaced recoil upon the head of the invader, and may *Europe, freed from the yoke of servitude, have cause to bless the name of Russia* (2)!”

Proclamation to the nation

A similar address was on the 18th published to the whole Russian people — “The enemy has crossed our frontiers and penetrated into the interior of Russia. Unable by treachery to overturn an empire which has grown with the growth of ages, he now endeavours to overturn it with the accumulated forces of Europe. Treachery in his heart, honour on his lips, he seeks to seduce the credulous ears, and enchain the manly arms, and if the captive hardly perceives at first his chains under the flowers in which they are hid, tyranny ere long discloses itself in all its odious colours. But Russia has penetrated his views! The path of duty lies before her, she has invoked the protection of the Most High. She opposes to the machinations of the enemy an army undaunted in courage, which burns with the desire to chase the enemy from its country; to destroy those locusts who appear to overload the earth, but whom the earth will reject from its bosom, and deny even the rights of sepulture. We demand forces proportioned to such an object, and that object is, the destruction of a tyrant who oppresses the universe. Great as is the valour of our troops, they have need of reinforcements in the interior to sustain their efforts. We have invited our ancient metropolis of Moscow to give the first example of this heroic devotion

We address the same appeal to all our subjects in Europe or Asia, and to all communities and religions. We invite all classes to a general armament, in order to co-operate with ourselves against the designs of the enemy. Let them find at every step the faithful sons of Russia ready to combat with all their forces, and deal to all his seducers; despising his fraud, trampling under foot his gold, paying by the heroism of true valour all the efforts of his legions of slaves. In every noble may he find a Potanin, in every co-citizen a Palatin, in every citizen a Meno. Illustrious nobles! in every age you have been the saviours of your country, holy clergy, by your prayers you have always invoked the Divine blessing on the arms of Russia; people, worthy descendants of the brave Sclavonians, often have you broken the jaws of the lions which were opened to devour you! Unite then, with the cross in your hearts and the sword in your hands, and no human power shall prevail against you (1). "

While the winds of all ranks were in the highest state of excitation from these proclamations, and a sense of the crisis which awaited their country, the Emperor arrived in Moscow from the army. On the 27th July the nobles and the merchants were invited to a solemn assembly at the imperial palace. Count Rasoupsky, the governor of Moscow, then read the Emperor's address, and invited all the nobles to contribute to the defence of their country. A levy of ten in one hundred of the male population was immediately proposed and unanimously adopted, and they further agreed to clothe and arm them at their own expense. It was calculated that if the other parts of the empire followed this example, which they immediately did, it would produce five hundred thousand warriors. Nor did the assembly of merchants evince less zeal in the public service: a contribution proportioned to the capital of each was instantly agreed to; a voluntary additional subscription was further opened, and in less than an hour the sum subscribed exceeded £1,180,000. While all hearts were touched by these splendid efforts, the Emperor appeared in the assembly, and after openly explaining the dangers of the state, declared a transport of generous enthusiasm, that he would exhaust his last resources before giving up the contest (2). "The disaster," said he, "which you are menaced, should be considered as the means necessary to complete the ruin of the enemy." History affords few examples of so generous a confidence on the part of the sovereign, and such devoted patriotism on the part of his subjects.

By these means a powerful auxiliary force was created in the interior destined to fill up the chain in the regular army. The example of Moscow was speedily followed by the other cities and provinces in the centre of the empire; and the patriotic letters thus formed, powerfully contributed to the final success of the campaign. Having taken these energetic measures, the Emperor set out for St.-Petersburg, where he arrived on the 13th August and, by an edict published on the 10th, an additional levy was ordered in all the provinces not actually the theatre of war (3). These proclamations, and some rumours of the extensive preparations going forward in the interior, speedily reached the French headquarters, where they excited no small astonishment. The religious strains of the addresses especially, and the repeated appeals to the

Exhortations
of the Em-
peror for
the support
of Russia
were
appreciated
by the
French
generals.

protection of Heaven, were the subject of unbounded ridicule among the gay, and thoughtless officers of the Grand Army. Not so, however, Napoléon. He received with equal surprise, but very different feelings from those of contempt, the report of these energetic efforts to give a devotional character to the contest. Again and again he caused the proclamations, and the still more impassioned addresses of the metropolitan Archbishop of Moscow to the clergy of the empire, to be read to him, and long did he muse on their contents. "What," said he, "can have wrought such a change in the Emperor Alexander? Whence has sprung all this venom which he has infused into the quarrel? Now there is nothing but the force of arms which can terminate the contest. War alone can put a period to war. It was to avoid such a necessity that I was so careful, at the outset of the contest, not to implicate myself by any declarations in favour of the re-establishment of Poland; now I see my moderation was a fault (1)." .

First operations of Count Wittgenstein on the Dwina

While the centre of the French army thus advanced to Witepsk, and Barclay retired to Smolensko, Count Wittgenstein, with twenty-five thousand men, was detached from the army of the latter, in order to retain a position upon the Dwina and cover the road to

St-Petersburg. Oudinot was opposed to him by Napoléon, and he occupied Polotsk with twenty-seven thousand excellent soldiers. On the 30th July he advanced against the Russian general, and a severe action ensued on the following day. The Russian vanguard, under Kutusoff, in the first instance imprudently crossed the Drissa, and was driven back with the loss of a thousand men. But the French under Verdier, hurried on by the eagerness of the pursuit, committed the same fault, and brought on a general action, in which the Russians, after a long and bloody struggle, were victorious. Oudinot, weakened by the loss of four thousand men, retired across the Drissa, and took shelter under the walls of Polotsk, where he was shortly after joined by St-Cyr, at the head of twelve thousand Bavarians, which raised his army, notwithstanding its losses, to thirty-five thousand men (2).

Oudinot, reproached by Napoléon against Wittgenstein

Napoléon was no sooner informed of this check on the Dwina, than he gave vent to severe invectives against Oudinot, who, he insisted, was superior in force to the enemy, and, instead of awaiting an attack, should have taken the initiative, and assumed a victorious attitude towards the enemy. Stung to the quick by these reproaches,

which he was conscious were by no means deserved, the brave marshal obeyed his orders and advanced against his antagonist, while the Emperor, who felt the full importance, during his advance into the interior, of preserving his left flank on the Dwina secure, ordered up St-Cyr with his corps of Bavarians, who were estimated at twenty-two thousand men, but who had already wasted away to half that number, by forced marches to Polotsk, and he arrived there on the 6th August. Alexander, on his side, who was not less interested in the operations of a corps which at once covered the road to St-Petersburg and menaced the communications of the French army, ordered up powerful reinforcements, sixteen thousand strong, under Count Sternheil, who had been stationed in Finland, but were now rendered disposable by the conclusion of the treaty with Sweden, to the same destination, and the militia of St-Petersburg also received orders to advance to his support. Thus every thing announced that the war on the Dwina would become of great, if not decisive importance, before the close of the campaign (3).

Napoléon to Berthier,

protection of Heaven, were the subject of unbounded ridicule among the gay and thoughtless officers of the Grand Army. Not so, however, Napoléon—he received with equal surprise, but very different feelings from those of contempt, the report of these energetic efforts to give a devotional character to the contest. Again and again he caused the proclamations, and the still more impassioned addresses of the metropolitan Archbishop of Moscow to the clergy of the empire, to be read to him; and long did he muse on their contents. “What,” said he, “can have wrought such a change in the Emperor Alexander? Whence has sprung all this venom which he has infused into the quarrel?” Now there is nothing but the force of arms which can terminate the contest. war alone can put a period to war. It was to avoid such a necessity that I was so careful, at the outset of the contest, not to implicate myself by any declarations in favour of the re-establishment of Poland, now I see my moderation was a fault (1).”

While the centre of the French army thus advanced to Witepsk, and Barclay retired to Smolensko, Count Wittgenstein, with twenty-five thousand men, was detached from the army of the latter, in order to retain a position upon the Dwina and cover the road to St.-Petersburg. Oudinot was opposed to him by Napoleon; and he occupied Polotsk with twenty-seven thousand excellent soldiers. On the 30th July he advanced against the Russian general, and a severe action ensued on the following day. the Russian vanguard, under Kutusoff, in the first instance imprudently crossed the Drissa, and was driven back with the loss of a thousand men—but the French under Verdier, hurried on by the eagerness of the pursuit, committed the same fault, and brought on a general action, in which the Russians, after a long and bloody struggle, were victorious. Oudinot, weakened by the loss of four thousand men, retired across the Drissa, and took shelter under the walls of Polotsk, where he was shortly after joined by St.-Cyr, at the head of twelve thousand Bavarians, which raised his army, notwithstanding its losses, to thirty-five thousand men (2).

Napoleon was no sooner informed of this check on the Dwina, than he gave vent to severe invectives against Oudinot, who, he insisted, was superior in force to the enemy, and, instead of awaiting an attack, should have taken the initiative, and assumed a victorious attitude towards the enemy. Stung to the quick by these reproaches, which he was conscious were by no means deserved, the brave marshal obeyed his orders and advanced against his antagonist, while the Emperor, who felt the full importance, during his advance into the interior, of preserving his left flank on the Dwina secure, ordered up St.-Cyr with his corps of Bavarians, who were estimated at twenty-two thousand men, but who had already wasted away to half that number, by forced marches to Polotsk, and he arrived there on the 6th August. Alexander, on his side, who was not less interested in the operations of a corps which at once covered the road to St.-Petersburg and menaced the communications of the French army, ordered up powerful reinforcements, sixteen thousand strong, under Count Steinheil, who had been stationed in Finland, but were now rendered disposable by the conclusion of the treaty with Sweden, to the same destination, and the militia of St.-Petersburg also received orders to advance to his support. Thus every thing announced that the war on the Dwina would become of great, if not decisive importance, before the close of the campaign (3).

On the other hand, Tormassoff, finding that the Austrians under Schwarzenberg were not advancing against him, fell suddenly on the corps of Saxons under Neyner, at Koblen, and on the 25th July made prisoners an entire brigade of their best troops. It became indispensable, therefore, to support the Saxon corps by the Austrians under Schwarzenberg, and thus Napoleon lost the support of that auxiliary force, on which he had reckoned to supply the prodigious waste of human life in the campaign (1).

While Napoleon lay inactive at Wittich, he received two pieces of intelligence which had a material influence upon his ulterior views in the campaign. The first was the peace of Bucharest, concluded on July 14th between the Russians and the Turks, whereby a large part of their army on the Danube was rendered a disposable force and the second, the discovery of the treaty of the 24th March preceding, between the Swedes and the Emperor Alexander, which not only promised to set free the Russian army in Finland, but threatened his rear with a descent from the Swedish forces. Information at this same time was received of powerful reinforcements to the army of Tor-massoff, which were approaching from the Danube, and of great additions to the corps of Wittichstein, which might soon be expected from the army of observation in Finland. At the same period a treaty of alliance, offensive and defensive, was signed between Russia and England, by which a subsidy of £800,000 was provided to the former power; and it was supposed, that in the event of the French invasion endangering the Russian fleet, it should be removed, as a measure of security, to the British shores (2).

These important events, and the intelligence of the prodigious armaments preparing in the interior by the activity of the Emperor Alexander, and the painful efforts of his subjects, led to the most serious reflections at Napoleon's headquarters. The expedience of an advance into the heart of the empire was discussed in his military council for some days. Several of his generals openly dissuaded him from the enterprise, as fraught with the greatest hazard. But after they had all delivered their opinions, the Emperor expressed his own as follows: "Why should we remain at Wittich? the vicinity of the rivers, indeed, make it a desirable position in summer. But in winter what would wall their frozen streams? We must, therefore, construct every thing for ourselves. Whence at Moscow all is ready made to our hands. A return to the Vistula, be still more dangerous. It would necessarily lead to a retreat to the Vistula, and the loss of the whole of Lithuania. At Stoolensko, again, we shall find a fortified town, and a position on the Prusper. The example of Charles XII is out of place. He did not fall because his enterprise was impracticable, but because he had not force sufficient to accomplish it. In war, fortune has an equal share with ability in success. If we wait for an entirely favourable train of circumstances, we shall never attempt any thing to gain an object we must commence it. No blood has yet been shed: Russia is too powerful to yield without fighting. Alexander will not wait till a great battle has been fought. It is a mistake to suppose he is retreating from any premeditated design. His armies retreated from the Dwina to effect a junction with Bagration from Wittich, to unite with him at Smolensko. The hour of battle is arrived. You will not have Smolensko without a battle; you

will not have Moscow without a battle I cannot think of taking up my winter-quarters in the middle of July. Our troops are always in spirits when they advance a prolonged and defensive position is not suited to the French genius. Are we accustomed to halt behind rivers? to remain cantoned in huts? to manœuvre in the same spot during eight months of privations? The line of defence of the Dwina or Borysthènes are illusory let winter come with its snows, and where are your barriers? Why should we leave the fanatical people of the East time to empty their immense plains and fall upon us? Why should we remain here eight months, when twenty days are sufficient to accomplish our purpose? Let us anticipate winter and its reflections. We must strike soon and strongly, or we shall be in danger. We must be in Moscow in a month, or we shall never be there. Peace awaits us under its walls. Should Alexander still persist, I will treat with his nobles. Moscow hates St. Petersburg, the effects of that jealousy are incalculable."—With such arguments did Napoléon justify his resolution to advance into the interior of the empire, but, in truth, the campaigns of Echmuhl and Jena had spoiled him for the delays of ordinary war, or the precautions requisite between equal combatants. his career seemed blasted, unless he stepped from victory to victory, and even the dangers of a Russian winter were preferable, in his estimation, to the insupportable tedium of a lengthened residence at Witepsk (1)

Reflections
on this de-
termination

In truth, the result is not always a proof of the wisdom either of military or political measures, because many things enter into its composition which cannot be foreseen by the greatest sagacity a due appreciation of all the considerations which present themselves at the moment, is the utmost that can be effected by human ability. Before we condemn Napoléon's advance to Moscow as imprudent, we should recollect that similar temerity had, in all his former wars, been crowned with success, that the experience he had had of Russian firmness at Austerlitz and Friedland, afforded no ground for supposing that the Emperor would resist the force of circumstances which had more than once constrained the pride of Austria and Prussia to submit, that a throne raised by the sword would be endangered by the least pause even in the career of success which had established it, that the peace with Turkey and Sweden would shortly expose his flanks to attack from forces which could not as yet be brought into the field, and that the fact of his actually entering Moscow with a victorious army, demonstrates that he possessed the means of reducing the Russians to that extremity, in which, according to all former experience, he might expect a glorious peace. These considerations, while they tend to exculpate Napoleon from blame in the important step which he now took, enhance to the highest degree the glory of the Emperor and people of Russia, by showing that the success which ultimately crowned their efforts, was owing to a degree of firmness in adversity which was deemed beyond the bounds of human fortitude.

Barclay
advances
against the
right of
the French
army

The first step in the renewal of hostilities was taken by the Russian general, whose forces, since his junction with Bagration, were raised to one hundred and twenty thousand men. The dispersed cantonments of the French army presented an opportunity for striking a blow with something approaching to equality of numbers,—an object of the utmost importance, as their vast amount, when all collected, was still too great to justify the risking of a general battle, and it was indispensable, by all means, to protract the war, in order to give time for the com-

picion of the armaments in the interior. With this view, the Russians broke up early on the morning of August 7, and advanced in three great columns against the French quarters. The mass of their forces, one hundred and fourteen thousand strong, was directed towards Roudnik, whilst Platoff, with a chain of Cossacks, covered their movements. At Inkowo, the enterprising commander fell upon the advanced guard of Murat, under Sebastian, consisting of six thousand horse and a regiment of light infantry, and defeated it with the loss of five hundred prisoners. This check roused the genius of Napoleon. He instantly dispatched couriers in all directions to collect his corps, and assembled them in a body round his headquarters, and moved from Wliscop on the 14th August, in the direction of Smolensko (1). To repair the error which he had committed in leaving his forces so much dispersed, and giving the enemy the advantage of the initiative, he resolved to turn the left of the Russian army, and, by crossing the Dnieper, gain possession of Smolensko, and thus cut them off from the interior of the empire. With this view, on the 13th three bridges were thrown over the Dnieper, and two hundred thousand men suddenly assembled on the shores of that river. Amongst them the corps of Davoust was particularly distinguished by the strength of his divisions, and the admirable state of his discipline and equipment. Napoleon passed in a day the woody and rugged ridges which separates the Dnieper from the Dnieper, and belid, with a transport of youthful enthusiasm, that celebrated stream, which the Romans knew only by their dedications, and whose course to the Black Sea awakened those dreams of Oriental ambition, which from his childhood years had been floating in his mind (2).

The French army crossed the Dnieper at several fords in order of battle, with the Emperor in the centre on horseback, and at Ladya entered the territories of Old Russia. Advancing forward, Muratals Ney and Murat, who headed the leading column of the army, ordered, near Krasnoi, General Averkoff, who with the rearward, six thousand strong and twelve hundred horse, was slowly retreating in the direction of Smolensko. This little corps, which had been detached by Barclay to the other side of the Dnieper, after he had retired with the remainder of his troops to the left, found itself assailed on all sides by eighteen thousand horse, with out the possibility of obtaining assistance from its comrades, who were on the opposite side of the river. The head of the retreating column being overtaken and stopped by the light cavalry of the French, the horsemen who formed the advance were speedily driven into the ranks of the infantry; and the situation of the Russians was the more critical from the unexpected nature of their troops, who were now fewer than had been seen here. Many generals in such circumstances would have deemed resistance impossible, and proposed a surrender. But Averkoff, though only of his duty in steadily dividing his little army into two hollow squares, which were soon after united into one, he retired slowly and in admirable order over the immense open plains which adjoin the Dnieper, covered on all sides by innumerable squadrons, who charged through the rampart of bayonets, and cut day, and in some instances broke through the ranks of the Russian officers in the very centre of their squares. Averkoff, however, always formed again; and this little band of heroes, still forming a hollow square when the latter was broken or weakened by loss, steadily retired

(1) *Chap. L. 202. Supp. L. 214. 215. Book. L. (2) *Russ. L. 215. Supp. L. 212. Book. L. 212.**

during the whole day, repulsing, by an incessant rolling fire, the repeated charges of the French cavalry, and at length, on the approach of night, reached Korytna with unbroken ranks, though with the loss of eleven hundred men and five pieces of cannon (1)

Bout. 1 255. Fain. 1 359. Sigur. 1 260. Napoleon continued to press upon the retreating Russian columns, but on the following day Newerofskoi effected a junction with Raefskoi, and their united force being nineteen thousand men, they resolved to throw themselves into Smolensko, and there defend themselves to the last extremity, in order to afford time for the main body of the Russian army to advance to its succour. Barclay and Bagration, meanwhile, being apprised of the approach of the French towards that town, and the imminent danger of their columns on the other side of the river, retreated with the utmost expedition in that direction. At daybreak on the morning of the 16th, the main Russian army marched on Smolensko, where Raefskoi and Newerofskoi, with nineteen thousand men, were shut up in presence of the whole French army (2)

Descript. in
of that city The ancient and venerable city of Smolensko is situated on two hills, which there restrain within a narrow channel the stream of the Dnieper. Two bridges secure the communication between the two divisions of the city and opposite sides of the river. An old wall, thirty-five feet high and eighteen feet thick, surmounted by thirty lofty towers, formed its principal protection. In front of this rampart was placed a dry ditch, a covered way, and a glacis; but the ditch was shallow, and exposed to no flanking fire, and the covered way had no communication with the body of the place. Fifty guns of old construction were mounted upon the ramparts, but they were without carriages and in bad order, and the ditch was wholly wanting where the walls adjoined the Dnieper. Three gates only formed an entrance into the town, one of which led to Krasnoi, one to a suburb, and the third across the Dnieper to Moscow. Near the gate of Krasnoi was a half-moon beyond the ditch, intended to cover a breach in the walls, still called the 'Royal Breach,' made by Sigismund, king of Poland, in the days when Sarmatian grandeur had not yet been torn in pieces by democratic frenzy and external cupidity. A citadel of more modern construction was still less capable of defence, from the decayed state of its ramparts, which in many places might be ascended without difficulty. The cathedral, a venerable old edifice with vast gilded domes, was an object of the highest religious veneration to the peasantry of Russia, and being the frontier and one of the chief cities of the old empire, the preservation of the place was an object of the utmost solicitude to the soldiers (3)

First attack
of Ney on
the citadel,
which is
repulsed.
Aug 16 At four in the morning, Murat and Ney appeared before Smolensko, and the Emperor, having arrived an hour after, ordered an immediate attack on the citadel by Ney's corps, which Raefskoi repulsed with great loss before any succour from the main army arrived. Still the utmost anxiety filled the breast of the Russian generals, and every eye was anxiously turned towards the side of Krasnoi, from which the main army might be expected, for the French columns, in enormous masses, were fast crowding round the town, and already the standards of a hundred and fifty thousand men might be counted from the spires of the cathedral. At length vast clouds of dust were seen afar off, in the plain on the opposite side of the river, and through their openings long

(2) Bout. 1 257. Sigur. 1 265, 266.

black columns, resplendent with steel, appeared advancing with the utmost rapidity towards the walls of the city. It was Barclay and Bagrathion hastening to the relief of their comrades, at the head of a hundred and twenty thousand men. Bagrathion was the first to enter, and, having secured the important communication of the bridges, instantly reinforced the heroic band who had so nobly maintained their post against the enemy (1).

A Napoleon's disposition for general attack on the town. Napoleon, conceiving that the enemy was resolved to defend Smolensko with all his forces, immediately made his dispositions for a general attack on the following day. His army, exclusive of the corps of Junot and the Viceroy, which were not come up, amounted to a hundred and eighty thousand men, with five hundred pieces of cannon. The Imperial guard was in the centre. Murat, Ney, and Davoust, at the head of their respective forces, were prepared to commence the attack. The Emperor planted his tent in the midst of the first line, almost within cannon-shot of the city (2).

Noble appearance of the attacking army. Never was a nobler spectacle presented in military annals than the French army exhibited on the day preceding the grand attack on Smolensko. The simultaneously converging of so vast a multitude from all directions to the westward, presented to those who watched their movements from the domes of the cathedral, at first a confused multitude of men, horses, artillery, and chariots, who covered the earth as far as the eye could reach, but by degrees order began to appear in the chaos. The different corps and squadrons took up their allotted ground; the artillery ranged itself on the prominent eminences, and the admirable arrangements of modern discipline appeared in their highest lustre. Silently the troops defiled out of the crowd and took up their appointed stations; no sound of drums or trumpets was heard, as on a day of parade. The solemnity of the occasion, the awful nature of the contest which awaited them, had impressed every heart. even the voice of the chiefs when giving the word of command was grave, some times faltering, though with other emotions than those of fear (3).

The Russian army retired on the night, leaving strong rearguard only in the night Aug. 17. But the Russian general had no intention of hazarding a general battle in a situation where he was exposed to the risk of being cut off from his communications with Moscow and the interior. Contrary to the opinion of Bagrathion and the principal officers of both armies, he resolved to retreat, and hold Smolensko merely by such a rearguard as might enable the troops to withdraw on the road to Moscow in safety. Bagrathion accordingly defiled out of the city at four in the morning of the 17th, in the direction of Elnia, to secure the road to the capital, and took post with the main body of the army behind the little stream of the Kolodnia, about four miles distant. While Barclay, with the corps of Doctoroff and Bagawouth, still held the ramparts of Smolensko. Napoleon, exasperated at the sight of the retiring columns, and unable, after several efforts, to find a ford in the river in order to reach them, ordered a general assault, and at two o'clock in the afternoon all the columns approached the ramparts (4).

Bleeding attack on the town, which proved unsuccessful, Aug. 18. Ney advanced to the attack of the citadel. Davoust and Lobau towards the suburbs which lay before the ramparts; while Poniatowski, with sixty pieces of cannon, was destined to descend and enfilade the banks of the Dnieper, and destroy the bridges which

connected the old and new city. But the Russians were not unprepared for their reception. The suburbs were filled with musketeers prepared to contest every inch of ground, and the ramparts, defended by two hundred pieces of heavy cannon and thirty thousand admirable troops, vomited an incessant fire on the assailants, while the French masses, preceded by a numerous artillery, advanced with stern regularity to the attack. After an obstinate conflict, the besiegers established themselves in the suburbs, and a hundred and fifty pieces of cannon, within point-blank range, battered the walls of the city. The French army, stationed on the amphitheatre of surrounding heights, beheld with breathless anxiety the impending conflict, and announced with loud shouts the advance of their comrades. The Viceroy's corps and that of Junot successively arrived before five o'clock, and formed the reserve of the assailants; so that nearly two hundred thousand combatants were engaged in the assault, or grouped round the town, prepared to support the more advanced columns. But it was in vain that their batteries thundered against the ancient walls; that column after column advanced through a storm of shot to the assault of the citadel, and that the ardent intrepidity of the Poles sought to wrest from Russia the key of their independence, so often in former days mastered by their arms. The thickness of the ramparts defied the efforts of the artillery, and the valour of the assailants sought in vain to wrest the gates from their defenders. Towards evening, the French howitzers succeeded in setting fire to some houses near the ramparts, and the flames, seizing on the wooden streets, spread with frightful rapidity, but the firmness of the Russians remained unshaken, and, placed between the fire of the enemy in front and the burning city behind, they continued to present an undaunted resistance to the assaults of their enemies (1).

Repulse of Napoleon, and results of the battle Discouraged by the failure of such repeated and bloody attacks, and having experienced the total inability of his artillery, without regular approaches, to breach the massy walls of the town, Napoleon, at seven in the evening, commanded his troops to draw off, and at nine the cannonade ceased at all points. The Russians, after an arduous conflict, remained masters of the city, and their advanced posts re-occupied the covered way. Thus the French Emperor, who had brought seventy thousand men to the attack, had the mortification to find all his efforts foiled by a Russian corps whose force never exceeded thirty thousand men, supported by the formidable ramparts which he had the boldness to expect to carry by a *coup de main*. Fully fifteen thousand men were lost to the invaders in these fruitless assaults; while the Russians, on the 17th alone, lost nearly six thousand, and during the whole conflict not less than ten thousand men (2).

Splendid appearance of the burning city The weather was calm and serene, and the unclouded sky reminded the Italian soldiers of the sunsets in their beautiful country. To the roar of artillery and the tumult of mortal conflict, succeeded a night of tranquillity unusual in the midst of such numerous assemblages of men, the result of the fatigue and exhaustion of the preceding days. In the midst of this momentary repose the fires spread with unresisted violence, and a vast column of flame ascended from the interior of the city. Around this blazing centre, the corps of the French army were grouped in dense masses for several miles in circumference; the light of their watch-fires illuminated the heavens; but every eye was arrested by the spectacle of the burning city within. A dark band in front marked the yet unbroken line of the battle-

ments; every loophole and embrasure was clearly defined by the resplendent light behind, whence volumes of flame and burning smoke arose, as from a vast volcano, over half the heavens: a lurid light, like that of Vesuvius, was cast over the extended bivouacs of the French army, while the lofty domes of the cathedral (1), still untouched by the conflagration, stood in dark magnificence above the ocean of flame. The troops beheld with dismay the splendid spectacle, and, uncertain of the event, rested in suspense all night on their arms.

Retreat of
Barclay from
Smolensko.
Aug. 16.

At three in the morning, a patrol of Davoust scaled the walls, and penetrated without resistance into the interior of the town. Finding neither inhabitants nor opponents, he returned to his corps, and the French advanced guard speedily entered the walls. They found the streets deserted. The work of destruction, begun by the French howitzers, had been completed by the voluntary sacrifice of the inhabitants, who had fled with the retiring corps of their countrymen; and the invading columns, in all the pomp of military splendour, traversed in silence a ruined city, filled only with smoking walls and dying men. Never did the horrors of war appear in more striking colours than to the French troops as they entered that devoted city. Almost all the houses were consumed, or in ruins: dying soldiers or citizens encumbered the streets, a few miserable wretches were alone to be seen ransacking the yet smoking remains, for any relics of their property which might have survived the conflagration. In the midst of this scene of woe, the cathedral and churches which had withstood the flames, alone offered an asylum to the unfortunate inhabitants; while the martial columns of the French army, marching in the finest order to the sound of military music through the wreck occasioned by their arms, afforded a grand and imposing spectacle. So skilfully, however, had the Russian retreat been managed, that the magazines in the town had all been destroyed; the wounded, and great part of the inhabitants withdrawn; and the bridges over the Dnieper broken down, amidst the horrors of the nocturnal conflagration following that dreadful day (2), leaving naked walls, and the cannon which mounted them, as the only trophy to the conqueror.

The abandonment of Smolensko, long regarded as the bulwark of Old Russia, was a matter of profound regret to the Russian soldiers, and furnished Napoleon with abundant matter for congratulation in his bulletins. But he soon found that the retreating enemy had lost none of their courage from this catastrophe. A column of French having passed the Dnieper at a ford, and entered the eastern suburb of Smolensko, were instantly attacked, and driven back across the river, by Baron Korf and the Russian rearguard, while the main body leisurely continued their retreat towards their brethren under Bagration (3).

General
movement of
Barclay to
regain the
Moukhou
road and
Bagrathion's
corps.

In conducting this retreat, however, the Russian commander had considerable difficulties to encounter. Bagration had retired by the route to Moscow, in order to prevent the enemy from interposing between the army and that metropolis: while Barclay, finding that route exposed to the fire of the French artillery when his columns began to withdraw, had taken the road to St. Petersburg, and every mile that he advanced led him farther from his comrades. On this occasion, the bad effects of the independent and co-ordinate command which

Barclay and Bagrathion had of their respective armies, and the jealousy and misunderstanding to which it necessarily gave rise, had wellnigh proved fatal to the empire; for if the two armies had marched a day longer on these diverging lines, their subsequent junction would have become impossible, and Napoleon, with his immense host interposed between them, would have proved irresistible. In these circumstances, a circular flank movement became necessary, a hazardous operation at any time, but more especially so to a retreating army, encumbered with an immense train of cannon, and in presence of an enterprising enemy. Nevertheless, Barclay, seeing no alternative, adopted this perilous course, and for a day the fate of Russia was suspended by a thread, for a vigorous attack by Napoleon on the moving columns would have renewed the disaster of Austerlitz. Fortunately, Napoléon was ignorant of the advantage which lay within his grasp, or was not in a condition to avail himself of it, and a severe action with the rearguard alone took place, in circumstances when a general action might have been expected. Barclay, fully sensible of the impending danger, detached a strong body from his army to reinforce the rearguard of Bagrathion on the Moscow road, with instructions to proceed by forced marches to the point of junction, and defend to the last extremity the first tenable position, in order to give the main army time to regain, by cross roads, the Moscow route (1).

Battle of
Valentina
Aug 29

Napoléon, having re-established the bridges over the Dnieper advanced his columns both on the roads of Smolensko and St -Petersburg. Ney passed the river before daybreak on the 19th, by the light of the burning suburbs, and advanced on the Moscow road as far Valentina, where the Russian rearguard, stationed by Barclay to cover his cross movement from the Petersburg to the Moscow roads, was strongly posted on the opposite side of a ravine, through which the little stream of the Kolodnia flowed. The troops engaged were at first inconsiderable, but they were gradually strengthened on both sides, and the combat which ensued was of the most obstinate description. Notwithstanding his utmost efforts, the Russian general Touczoff was driven from his first position, and compelled to retire behind the rivulet, but being there reinforced by fresh troops, and eight pieces of heavy artillery, which Barclay brought up in person to the scene of danger, he renewed the conflict, and drove the enemy back again across the stream (2).

Measures
of Napoléon
to restore
the combat

Napoleon was no sooner informed of the serious and unexpected resistance which Ney experienced from the Russian rearguard, than he dispatched orders to the division Gudin of Davoust's corps, already signalized at the battle of Auestadt (3), to advance to his support, and at the same time, fearing that the whole enemy's army had assembled for battle, gave directions to Morand, who with another division of Davoust's corps was a little in the rear on a cross road, which would have brought him direct upon the Russian flank, to halt and retire. This retrograde movement was performed with great difficulty, as at the time the order was received Morand's troops were involved in an old pine wood, where the intermixture of the advancing and retreating columns created extreme confusion; and it was hard to say whether the Russians engaged owed most to this unusual want of decision on the part of the Emperor, or to the hesitation of Junot, who, having received orders merely to take a position on the right bank of the Dnieper immediately after crossing it, had not moral courage enough to undertake the responsibility of attacking the Russian rearguard posted

(1) Bout i 272 Jour iv 96, 99 Chamb i. 222,
223

(2) Bout i 276 Chamb, i. 323, Jour iv 100
(3) *Ante*, v. 355

beyond that river, when engaged with Ney (1), though his position would have enabled him to assail it with every advantage in rear, at the moment when it was already hard pressed by the enemy in front, and he was strenuously urged to do so by Murat.

Desperately
valour dis-
played on
both sides.

Thus left to his own resources, with the assistance only of Gudin's division twelve thousand strong, Ney, however, resolutely maintained the contest. He repeatedly attacked the enemy, both with musketry and the bayonet. Gudin's men outdid even their former glorious exploits: four times did they cross the stream with the utmost intrepidity, and ascend the opposite bank with fixed bayonets; but they were constantly driven back by the devoted heroism of the Russians, who, aware of the vital importance of maintaining the position, were resolved to perish to the last man rather than abandon it. The generals on both sides came up to the spot. General Gudin was struck down by a cannon-shot when bravely leading his men to the charge; and General Touczoff (2) made prisoner in the midst of his staff by a furious irruption of the French cavalry. But the loss of their leaders made no diminution in the fury of the combat: both sides fought with invincible obstinacy. The contest continued with various success till night-fall; but at the close of the day the Russians retained their position, and under cover of their heroic rearguard, the main army of Barclay had regained in safety the Moscow road (3).

Results of
this bloody
action.

This action, in which the French lost eight thousand, and the Russians six thousand men, had an important effect on the spirit of both armies. Ney commenced the combat with twenty-five thousand men and, by the accession of Gudin, his force was raised to thirty-five thousand: while General Touczoff had hardly five thousand under his orders in the first instance: and the whole reinforcements which were afterwards brought up to his assistance did not raise his force to above twenty-five thousand men. The brave General Gudin was killed by the cannon shot which felled him while leading his troops across the stream, already red with human blood and his loss, in the opinion of Napoléon, would more than have balanced a victory (4).

Stupor
and
panic
of the
Russians
on this
occa-
sion.

Notwithstanding their devoted valour, however, the Russians owed much to fortune on this occasion. Had Napoléon pressed forward with the main body of his forces, all the firmness of their rearguard could not have saved their army from total defeat while accomplishing their perilous movement. They themselves were astonished at not being attacked in flank by the cavalry under Murat; and the conduct of Junot, in not hastening to the scene of action, appeared so inexcusable, that it was with the utmost difficulty the Emperor was dissuaded from at once depriving him of his command. Morand, with his numerous division of Davoust's corps, was abreast of Valentina, at so short a distance from the Russian right that every cannon-shot was distinctly heard: and, if not restrained by the Emperor's orders, he might, by suddenly appearing, have decided the victory: and, finally, Napoléon himself did not arrive on the field till three on the following morning, when he found only the dead and the dying, instead of the desperate conflict which his eagle eye might have converted into an important victory (5).

Napoléon's visit to the field of battle. The Russians in the night continued their retreat, and retired by the Moscow road without further molestation from their enemies. and Napoléon visited, at break of day, the field of battle. The regiments of Gudin's division were reduced to skeletons: the soldiers black with powder, and their bayonets bent with the violence of the encounter, the earth ploughed with cannon-shot, the trees torn and mutilated, the field covered with broken carriages, wounded horses, and mangled bodies. The horrors of the scene had filled the minds of the survivors with melancholy; but the presence of Napoleon restored their military ardour. He was prodigal of his praise, and of those acts of kindness by which he won the hearts of his soldiers. "With such men," he exclaimed, "you might conquer the world - this is the most glorious of our fields - the dead have won immortal glory." With his own hands he delivered an eagle to the 127th regiment, which had not hitherto acquired that honour, and loaded the troops of the other corps with decorations: the regiments were formed successively in hollow circles, in the midst of which the Emperor enquired of the officers who were the most deserving, and, if the men confirmed their nomination, the appointment of the persons named to superior rank was instantly completed. These honours, bestowed at such a moment and from such hands, filled the troops with enthusiasm - and the shattered remains of the regiments, proud of their diminished numbers, exulted in the thought that Europe was resounding with their praise (1)

General uneasiness and depression of the French army. In truth, a great effort was necessary to support the spirit of the army, which was considerably damped by the fatigues and dangers of the campaign. The objects that met the eye in Germany, and as far as the Oder, reminded the soldiers of France - but in Poland and Lithuania every thing wore a novel and gloomy aspect. The troops were seized with disquietude at finding themselves incessantly advancing through gloomy forests, intersected only by swampy streams or rocky dells. their spirits sank at the interminable solitudes which surrounded them in every direction, and the consciousness of their numbers added only to their apprehensions, from the obvious inadequacy of the country to provide for their necessities. The young conscripts, who advanced upon the traces of the Grand Army, were depressed by the melancholy remains which every where presented themselves, dead horses, broken carriages, and dying men, obstructed the roads, and infected the atmosphere. while the veterans who had combated in the front, contrasted the miserable quarters which they had gained amidst the ruins of Smolensko with the smiling villages they had abandoned in their native land. Even the generals were shaken by the general contagion - and those who had risen to the highest rank sighed to think that, after a life spent in arms, and wealth honourably acquired, they were reduced like common soldiers to the never-ending hardships of wretched food, incessant fatigue, and squalid habitations (2)

Enormous losses already sustained from sickness and fatigue. Nor were the reports of the hospitals or the commissariat calculated to allay these gloomy anticipations. Already the march through Lithuania had cost the allied troops a half, the native French a fourth of their army, miserable victims of intemperance, disease, and fatigue - out of thirty thousand Bavarians who set out from Munich, only twelve thousand entered upon the first actions on the Dwina (3).

(1) Ségur, i. 307, 309. Fain, i. 390. Chamb. i. 330

(2) Ségur, i. 286, 287, 291.

(3) "At its departure from the Bavarian states

this corps was estimated at thirty thousand men, on leaving Wilna it was still twenty five thousand, but the march to Wittepsk, without any other subsistence than two rations bread and

Typhus fever and dysentery, the well known attendants on military suffering, had every where broken out in the most alarming manner, and swept off thousands in all the great hospitals of the army. Wilna and Witepsk were converted into vast charnel-houses, where contagion completed the unfinished work of human destruction; and even the spacious convents of Smolensko, which had not suffered from the flames, were incapable of containing the multitudes of wounded who had been disabled under its walls. Such was the accumulation of corpses around the ramparts of that city, that they exceeded all that the strength of the survivors could bury; and the smell which they diffused in every direction gave rise to a frightful epidemic, which in the end proved more fatal to the troops than the sword of the enemy. All the cottages in its environs were filled with wounded soldiers, both French and Russian, who, crowded together often without either straw or provisions, made known their existence and sufferings by the groans and lamentations which they uttered. Hundreds were forgotten, and perished miserably in the general confusion: the streets were blocked up by the endless files of chariots, bearing the sick and maimed, which incessantly traversed them, and such was the multitude of amputated limbs which there was no time to destroy, that they accumulated in bloody heaps and infected the air with their smell (1).

Napoleon
remains for
further
advances.

To any other mind than that of Napoléon, these disastrous circumstances would have furnished reasons for delay; but to him they afforded only additional and cogent arguments for an advance.

He was aware how much his empire depended on opinion, and how rapidly these sinister auguries would be known to Europe if not eclipsed by the lustre of a victory. "The condition of the army," said he, "is frightful: I know it. At Wilna, one-half were stragglers; now they amount to two-thirds: there is not a moment to lose. We must grasp at peace, and it can only be found at Moscow. Besides, the state of the army is such as to render a halt impossible: constant advance alone keeps it together; you may lead it forward, but you cannot arrest its movement. We have advanced too far to retreat. If I had nothing in view but military glory, I would have nothing to do but return to Smolensko, and extend my wings on either side so as to crush Wittgenstein and Tormasoff. These operations would be brilliant, they would form a glorious termination to the campaign, but they would not conclude the war. Peace is before us: we have only to march eight days to obtain it: so near our object, it is impossible to deliberate: let us advance to Moscow (2)."

Reasons
which de-
duced the
Russian
generals to
prepare for
battle.

On the other side, the feelings of the Russian generals, as to the propriety of a further retreat, underwent a change. The object in retiring from the frontier had been to draw the enemy into a situation where his original superiority of force might be diminished by the fatigues and the diseases incident to a protracted advance. These causes, joined to the bloody battles recently fought, had already operated so powerfully, that the effective French army was little more than half its original

mass, reduced it half so that on its entry into Poland, without having ever seen the enemy it could only muster twelve thousand combatants. Thirteen thousand five hundred men had been lost by fatigue or want of provisions; of whom eight thousand were already no more, and the greater part of the sick gave no hope of recovery. It may easily be imagined from this in what miserable state the troops under arms were: all generals and soldiers, had been seized with violent dysentery which, in many cases, was combined with other

complaints. It could not be otherwise; for the soldier had nothing to nourish him but meat without either bread or vegetables, in a country where the water was bad. There were no fermented liquors, and the mills were destroyed. It was the same with all the other corps in the French army.—*Memoirs, St.-Cyr, Histoire Moderne, liv. 68, 69.*

amount, while the losses of the Russians were more than supplied by the great armaments prepared in the interior. But a further retreat would sacrifice all these advantages, because it would surrender to the enemy the capital and the richest provinces of the empire, from whence the principal resources for maintaining the war were to be drawn, while the invader would reap all the fruits of a victory without its dangers. The troops had long murmured at continually retiring before their enemies; and the prospect of abandoning Moscow without a struggle, was likely to excite the utmost dissatisfaction not only in the army but the nation. These reasons induced Barclay to resolve to give battle on the first convenient situation, and he dispatched orders to General Milaiadowitch to hasten the levies in the interior, and direct the corps when formed to Wiazma (1).

Operations of Schwartz-
enberg
against Tor-
masoff
Aug 12 Napoléon was still further encouraged to advance from Smolensko by the intelligence which he received at that juncture from the armies on his two flanks. On the 12th August, Schwartzenberg, who had arrived with his corps of Austrians to the support of Re-gnier, attacked Tormasoff with nearly forty thousand men, who could only collect to oppose him twenty-five thousand. In an early part of the engage-ment, the left wing of the Russians was turned, notwithstanding the strength of their position, which was covered both in front and flank by morasses; but the Austrians did not follow up their advantages with sufficient vigour; and, by throwing back his left wing, Tormasoff contrived to prolong the contest without serious loss till nightfall, when he retired from the field, and got behind the Styr, with the loss of four thousand men and a few pieces of canon. This victory, though by no means decisive, preserved the Grand Duchy of Warsaw from invasion, and relieved Napoléon, for the time at least, from the disquietudes which he was beginning to feel for the communications in his rear (2).

And of St-
Cyr against
Wittgen-
stein
Aug 12 On the other side, Wittgenstein, on the day on which Tormasoff was engaged with the Austrians, attacked the advanced guard of Oudinot on the Swoiana, and drove it back with the loss of fifteen hundred men. Oudinot, in consequence, fell back to Polotsk, where he was joined by the Bavarians, and his army raised to above thirty-five thousand men. Wittgenstein, with only twenty-four thousand, had the courage to hazard a general attack on the French lines posted in front of Polotsk, and a bloody action ensued on the 17th August, without any decisive advantage on either side, but in which Oudinot was severely wounded. On Aug 17, the 18th, the battle was renewed, and both sides fought with the utmost obstinacy; but in the end, although their cavalry had driven the French to the walls of the city, the Russians retired with the loss of seven cannon and two thousand men. The French, however, who had suffered nearly as much, were in no condition to follow up their advantage. St-Cyr, who commanded after the loss of Oudinot, was, in consequence, made a marshal of the empire; but, notwithstanding his success, he did not move forward till the 22d, when his advanced guard, consisting of the Bavarians under General Wrede, made an attack on the Russian rearguard, but experienced a severe defeat. Wittgenstein removed his headquarters to the fortified position of Sewókhino, where he awaited the reinforcements which were expected from Finland and St-Petersburg (3).

Still further to the right, Marshal Macdonald having advanced to the neigh-

Typhus fever and dysentery, the well-known attendants on military suffering, had every where broken out in the most alarming manner, and swept off thousands in all the great hospitals of the army. Wilna and Witepsk were converted into vast charnel-houses, where contagion completed the unfinished work of human destruction; and even the spacious convents of Smolensko, which had not suffered from the flames, were incapable of containing the multitudes of wounded who had been disabled under its walls. Such was the accumulation of corpses around the ramparts of that city, that they exceeded all that the strength of the survivors could bury; and the smell which they diffused in every direction gave rise to a frightful epidemic, which in the end proved more fatal to the troops than the sword of the enemy. All the cottages in its environs were filled with wounded soldiers, both French and Russian, who, crowded together often without either straw or provisions, made known their existence and sufferings by the groans and lamentations which they uttered. Hundreds were forgotten, and perished miserably in the general confusion. The streets were blocked up by the endless files of chariots, bearing the sick and maimed, which incessantly traversed them; and such was the multitude of amputated limbs which there was no time to destroy, that they accumulated in bloody heaps and infected the air with their smell (1).

*Recesses
reasons for
a further
advance.*

To any other mind than that of Napoléon, these disastrous circumstances would have furnished reasons for delay; but to him they afforded only additional and cogent arguments for an advance. He was aware how much his empire depended on opinion, and how rapidly these sinister auguries would be known to Europe if not eclipsed by the lustre of a victory. "The condition of the army," said he, "is frightful. I know it. At Wilna, one-half were stragglers; now they amount to two-thirds; there is not a moment to lose. We must grasp at peace, and it can only be found at Moscow. Besides, the state of the army is such as to render a halt impossible: constant advance alone keeps it together; you may lead it forward, but you cannot arrest its movement. We have advanced too far to retreat. If I had nothing in view but military glory, I would have nothing to do but return to Smolensko, and extend my wings on either side so as to crush Wittgenstein and Tormasoff. These operations would be brilliant; they would form a glorious termination to the campaign; but they would not conclude the war. Peace is before us; we have only to march eight days to obtain it; so near our object, it is impossible to deliberate: let us advance to Moscow (2)."

*Reasons
which op-
posed the
Russian
generals to
pursue the
battle.*

On the other side, the feelings of the Russian generals, as to the propriety of a further retreat, underwent a change. The object in retiring from the frontier had been to draw the enemy into a situation where his original superiority of force might be diminished by the fatigues and the diseases incident to a protracted advance. These causes, joined to the bloody battles recently fought, had already operated so powerfully, that the effective French army was little more than half its original

man, reduced it a half; so that on its entry into Poland, without having ever seen the enemy it could only muster twelve thousand combatants. Thirteen thousand five hundred men had been lost by fatigue or want of provisions; of whom eight thousand were already no more, and the greater part of the sick gave no hope of recovery. It may easily be imagined from this to what miserable state the troops under arms were; all generals and soldiers, had been seized with violent dysentery which, in many cases, was combined with other

complaints. It could not be otherwise; for the soldier had nothing to nourish him but meat without either bread or vegetables, in a country where the water was bad. bourhood of Riga with the corps under his command, consisting chiefly of Prussians, General Essen made a vigorous sortie, and attacked General Grawert at Eckau, whom he defeated with the loss of twelve hundred men. The operations, in consequence, languished on the side of Livonia; and nothing of importance occurred till a later period of the campaign (1)

Advances of
Victor to
Smolensko.

The corps of Marshal Victor, which had now come up to the Dwina, became a body of great importance, as it occupied a central position on the great road to Smolensko, in such a manner as to constitute the reserve at once of the Grand Army, Oudinot, and Schwartzemberg. Napoleon gave orders to him to advance to Smolensko, and intrusted the whole of Lithuania to his orders. Thirty thousand men stationed in that strong position, directly in the rear of the Grand Army, and on its line of communications, appeared to give great security to the enterprise of the Emperor. His instructions were,—“To direct all his attention and forces to the general object, which is to secure the communication from Wilna, by Minsk and Smolensko, with the Imperial headquarters. The army which you command is the reserve of the Grand Army. If the route by Smolensko to the Grand Army is interrupted, you must re-open it at all hazards. Possibly I may not find peace where I am about to seek it; but, even in that case, supported by so strong a reserve, well posted, my retreat would be secure, and need not be precipitate (2).”

And of
Angereau
from the
Oder and
the National
Guard of
France to
the Elbe.

The advance of Victor to Smolensko left a void between the Niemen and the Vistula which it was essential to fill up, and here, too, the provident care of the Emperor had arranged what seemed the means of absolute security. Angereau's great army, above fifty thousand strong, received orders to move on from the line of the Elbe and the Oder, where it lay, to the Niemen, and occupy all the principal points of communication from Berlin to the Lithuanian provinces; while the hundred cohorts of the National Guard of France, which had been put on a respectable footing before the Emperor's departure from Paris, were moved forward from the fortresses of the Rhine, where they had been completing their discipline and organization, to the strongholds on the Elbe. Instructions were at the same time sent to Schwartzemberg, who was reinforced by some Polish regiments, to advance against Tormasoff, and secure the rear of the Grand Army from insult or injury from that quarter. Finally, to provide a reserve in France itself, and complete the great chain of communication from the Seine to the Moskwa, the Emperor ordered the levy by conscription of one hundred and twenty thousand men, from the youth who attained the age of eighteen to nineteen, in 1813. Thus, the whole of western Europe was to be precipitated on the devoted realm of Russia; and the vast army of five hundred thousand, which the Emperor commanded in person, was but the advanced part of the mighty host which was to drive back to Asia the Tartar race (3).

Advances of
Napoleon
towards
Moscow
Aug. 22.

Encouraged by these successes, and having completed those dispositions which appeared to secure his rear, Napoleon left Smolensko with his guards, and followed the Russian army, which was slowly retiring on the Moscow road. Barclay fell back by Dorogobouge to Wlaxma, and from thence to Gjatak, where Miloradowitch, with a reserve of sixteen thousand men, joined the army. He was surveying the ground with

a view to the choice of a field of battle, when he was superseded in the command by General Kutusoff, whom the Emperor had named commander-in-chief of all the armies. The wisdom of nominating to the supreme command a Russian by birth, endeared to the soldiers by his recent victories over the Turks, and who might direct the movements of the scattered forces from the Danube to the Baltic, cannot be doubted; but though Barclay was thus deprived of the fruit of his measures at the very moment when he might have expected to reap them, yet he gained immortal honour by the campaign which he had previously conducted. He had retreated above four hundred miles, in presence of an army twice as numerous as his own, headed by a general unrivalled for his talent in pursuing an enemy, without a single battalion having been broken, a single standard taken, or sustaining a greater loss in prisoners or artillery than he had inflicted on his pursuers. Scotland has good reason to be proud of having given birth to a leader capable of such achievements. History can furnish no parallel to a retreat of such peril performed with such success (1)

Appointment of Kutusoff to the supreme command Kutusoff, who was thus in her last agony called by the unanimous voice of Russia to the command of her armies, was at St.-Petersburg when the eventful change befell him. He had been engaged, as we have already seen, in a campaign in which signal reverses had been succeeded by glorious triumphs on the Danube, and, beyond any other general in the Russian army, he enjoyed the confidence of the soldiers. Accustomed, in the great majority of instances, to be commanded by foreign officers, they beheld with unbounded enthusiasm a native Russian at the head of their battalions, and were confirmed in this attachment by the brilliant success with which he had redeemed the campaign on the Danube, and restored to the Muscovite standards the triumphs of Ismael and Oczakoff (2). Though victories so brilliant, however, had lately attended his arms, and a solemn Te Deum had been chanted at St.-Petersburg, in presence of the Emperor and court, on account of the peace with the Turks, Kutusoff himself laboured under a sort of disgrace at court, in consequence of its having been supposed that he had not conducted the negotiations at Bucharest with the expedition which the critical state of the empire required. The courtiers, observant of the least cloud which overshadows the fortunes of a leading character, were already shunning his society, and so low had the prospects of the future saviour of Russia fallen, that he received with tears of gratitude the visit of Count Oginski, a Polish nobleman, who had formerly enjoyed his intimacy in Lithuania, and had moral courage enough not to desert him in his adversity. Alexander was most unwilling, and justly so, to deprive Barclay of the command, as he with reason regarded his retreat from the Niemen to the Moskwa as a model of military skill, and destined, perhaps, in the end to prove the salvation of the empire. But the public mind was now agitated to the greatest degree by the fall of Smolensko, and the continued retreat of the Russian armies towards Moscow, the ferment at St.-Petersburg was extreme, and all classes concurred in demanding, with loud cries, the appointment of Kutusoff, as the only guarantee for the integrity of the empire. Alexander yielded to the torrent, and the veteran general was appointed to the supreme command. The universal transports of

Barclay de Tolly was of an old and respectable Scotch family, the Barclays of Towy in Aberdeenshire. The old family tower of the chief who baffled the great invasion of Napoleon, is to be seen close

to the highway, on the left hand side, between Lyrio and Turriff, on the great road from Aberdeen to Inverness.

(2) *Ante*, viii. 284, 293.

all classes, nobles, army, and people, upon this appointment, proved how much he had endeared himself to the nation: the people threw themselves at his feet when he went to the cathedral in state, to offer up his applications for the success of the armies, and besought him to save Russia. Loaded with their benedictions, accompanied by their prayers, he set out for the army, charged with the salvation of his country and the deliverance of Europe (1).

His character and previous achievements.

The whole life of the veteran who was now called to the momentous duty of directing the armies under the walls of Moscow, and whose brief career was attended with such extraordinary results upon the fortunes of Europe, had been devoted to the service of his country. He was upwards of seventy when he was summoned to measure swords with Napoleon, but the snows of age had given him the caution of experience without extinguishing the fires of youth. He was descended from a noble Russian ancestry, and connected by marriage with the principal families of Moscow. His military renown had suffered less than might have been expected from the reverse of Austerlitz, as it was well known that the fatal cross march which brought on the disasters of that unhappy day (2), had been undertaken contrary to his advice; and his recent successes in the war against the Turks had completely re-established his reputation. He had been repeatedly wounded in his different campaigns, and one of his injuries had deprived him of an eye. His height was moderate, his figure corpulent, and his manners distinguished by good humour and *bonhomie*; but under this apparently simple exterior he concealed a remarkable degree of *finesse* and diplomatic address peculiar to his country, and which in the end proved more than a match for all the ministers of Napoleon. He had studied war profoundly, not only in the field but in the closet, and had brought an extensive theoretical acquaintance with military principles to bear on the experience which a long and active life in harness had given of its actual details. The soldiers were warmly attached to him, from the conviction acquired by experience, that without relaxing in the necessary rigour of discipline and subordination, he was at all times careful not to overload them with needless exactions, and ever solicitous about their material comforts. While the recent and glorious victories which he had gained over the Turks, inspired them with a confidence which no general had enjoyed since the days of Suwarrow. The companion in arms of that illustrious warrior, he was like him attached to old customs, and ingrafted the affection of the soldiers on national manners, a custom somewhat antiquated, and a scrupulous regard for the observances of religion, the great lever by which the public mind in Russia is to be affected. These qualities, from a knowledge of their influence on the soldiers, recommended him also to the higher and more enlightened classes, and compensated in general estimation the disadvantage of the advanced age of seventy-four years, and the recollection of the fatal reverse, which, under his command, the Russian arms had experienced at Austerlitz (3); and it may safely be affirmed, that never did commander undertake a hazardous and difficult duty more warmly supported by all classes of his countrymen.

Arrival of Kutusoff at the headquarters of the army.

The arrival of Kutusoff diffused general joy amongst the Russian troops. The successful termination of the Turkish war was considered as a presage of victory by the nation. His engaging manners and paternal solicitude for their welfare, had long endeared him to the sol-

(1) Ogiński's *Mémoires*, III. 184, 187. Bond. I. 232, 263. De Ségur, *Dix années d'Italie*, 348.

(3) Clench, II. 27, 28. Bond. I. 262. Valentin, *Général des Turcs*, p. 174.

diers, confidence speedily succeeded to depression, and the troops began to burnish their arms and sharpen their flints in expectation of an immediate engagement. But it was no easy matter to justify these expectations. The army was now hardly fifty leagues from Moscow, and that capital could only be saved by a general battle; yet how engage in one with any prospect of success, with an army still (notwithstanding the arrival of sixteen thousand new levies and ten thousand of the militia of Moscow) greatly inferior in number to their opponents, and grievously depressed by the length of their retreat? Nevertheless, it had become indispensable to run such a hazard, in order to check the consternation which, since the fall of Smolensko, was beginning to spread in the interior of Russia, and Kutusoff readily embraced the views of Barclay as to the necessity of no longer delaying the perilous alternative (1).

Excessive loss of life. During their march from Smolensko, the French army experienced great difficulties, which could only have been overcome by the experience and resources of their chiefs. The Russians retiring burned the principal towns, and the inhabitants of the country voluntarily left their houses to avoid the tempest which was lowering in their rear. With such skill was the retreat conducted, that neither cannon, equipage, nor prisoners fell into the hands of the invaders, and on one occasion, when the rearguard was attacked by Murat, the French, after an obstinate conflict, were repulsed from the field. Davoust, in a report to the Emperor upon the retreat of the Russians, observed, "It must be confessed that their retreat is conducted in admirable order. The nature of the ground determines the position of their rearguard, and not the manoeuvres of Murat. Their positions are so well chosen, and defended with such vigour, that it seems as if their movements are the result of a plan previously determined on, and executed with scrupulous exactness (2)."

Order of the French army. Murat, at the head of a long column of twenty thousand cavalry, headed the pursuit, but it was in vain that the squadrons toiled through clouds of dust, from morning till night, under a burning sun, the horses sunk under their fatigues without being able to reach the enemy. After this enormous body of horse came the infantry, marching in three great columns, all abreast, that in the centre kept to the high-road, and was composed of the corps of Davoust, still the first both in numbers and discipline, on the right, within the fields, marched the corps of Pomiatowski, on the left that of Eugène; the Imperial guard on the highway behind Davoust, and Ney in the rear. The artillery of these corps found their way as they best could, along the country roads or open plains parallel to the great road. The enormous body advanced with astonishing rapidity, without any regard to difficulties or the means of subsistence: the weak, the sickly, broken carriages, dismounted guns, lame horses, were left behind, but the head of the column still pressed on with ceaseless march, devastating the plain in its progress (3), and trampling under foot the whole fruits of the earth, as if a gigantic rolling stone had been drawn along its surface.

Description of the country through which the French army passed in advancing to Moscow. The physical character of the country through which the army marched during its advance from Smolensko, had singularly facilitated this remarkable mode of sweeping, like a devastating flood, over a comparatively narrow space; but at the same time, it had impressed the most sombre and gloomy presentiments on the minds of the soldiers. Its great rivers are the only striking features of that

(1) Bout. i 303, 305 Chamb. ii 28, 29.

boundless plain, every thing else is lost in the immensity of space. Hardly any brooks are to be met with, so frequently does the sand obstruct their course or drain away their waters. No variety of trees is to be seen: the eternal birch alone, planted in rows along the road-sides, relieves the monotony of nature. Even the absence of stones is felt as a subject of regret; so much is the mind fatigued by never perceiving new objects, or being permitted to repose on hills, rocks, or valleys. You see nothing on either hand but vast plains of corn, which appear to have been cultivated by invisible hands, so rare does the population appear in the boundless expanse around.⁽¹⁾ A few woods of birch, villages separated by vast distances from each other, all formed of wooden houses constructed in the same manner, constitute the only objects which relieve the general uniformity of the scene. Even the approach to towns is indicated by no symptoms of greater animation; fruits and flowers are to be seen only in a few enclosures: orchards or vine-yards are nowhere to be met with. Such is the vast expanse of Russia that every thing is lost in it, even the chateaux of the nobility and the cottages of the people disappear. You would suppose that you were traversing a country, of which the inhabitants had migrated to some other quarter of the globe. Even birds are wanting; animals are rarely to be met with: the unbroken extent has banished every other object except the extent itself, which incessantly haunts the imagination (1).

The Russian
often take
post at
Borodino.
Description
of their
position
there.

Napoleon, perceiving from the approach to Moscow that a general battle was at hand, gave three days' rest to his army, ordered a general muster roll to be called of his troops along the whole line, and warned his detachments that if they did not join their respective corps, they would lose the honour of the approaching conflict.

Orders were at the same time despatched to the parks of reserve ammunition to advance, to the artillery to have their pieces in the best order, to the cavalry to refresh their horses, and to the soldiers to sharpen their sabres and examine the locks of their muskets. Meanwhile, the Russians took post at Borodino, which appeared to Kutusoff to present an eligible position for defence. The little stream of the Kolotza, flowing in a rocky dell, covered the right of the line as far as the village of Borodino, which stood in the centre of the position, on an elevated ridge. On the left the army extended to the village of Semenovskoe, and the approach to it, though of easier access, was intersected by broken ravines, which promised to embarrass the movements of the enemy. To aid the advantages of nature, intrenchments were hastily thrown up by the Russian army on some parts of their line; a wood on the right was strengthened by some field-works; and in the centre, on the sloping banks of the Kolotza, two heavy batteries were placed; while between the centre and the left, where the position was most accessible, a great redoubt was erected on a height which commanded the whole plain in front of the army. On the extreme left three other batteries were placed to aid by their cross fire the great redoubt; while, at the distance of nine hundred toises in front of the line, another redoubt was erected on an eminence, to retard the advance of the attacking host (2).

Napoleon
arrived on
the field of
battle.

On the 8th September the French army, in three great columns, passed the vast and gloomy convent of Kolotakol without meeting an enemy; but as it approached the destined field, clouds of Cossacks were seen traversing the plain, and behind them the Russian army, in

(1) De Sacy, Dix Années d'Asie, 242, 246.

(2) Chanch. II. 36, 37. Bent. I. 307, 308. & per
I. 306, 307. Fain. I. 117. li. 6, 8.

a dense and imposing mass, was descried drawn up in battle array. At this sight the advanced guard halted, and Napoléon instantly coming forward to an eminence in the front, surveyed the position with the eye of a conqueror, and fixed, with the rapidity of lightning, on the points of attack (1).

Attack on the redoubt in front Sept 5 The first object was to seize the redoubt in front of the position, where Prince Górczakoff commanded ten thousand men, supported by twelve pieces of heavy artillery. The attack was conducted by Murat, with an immense body of cavalry, the division of Cambray, and the corps of Prince Poniatowski. With an intrepid step the French infantry arrived to within twenty yards of the redoubt. the cannon on either side vomited forth grape-shot on their opponents, and the dauntless antagonists stood at that short distance discharging musketry at each other. At length, after a frightful struggle, the redoubt was carried by an assault of the 57th French infantry; but the Russians, returning to the charge, destroyed the troops who had entered it, and it was three times taken and retaken in the course of the evening (2). Finally, it remained before night in the hands of the French. On the following morning, when the Emperor passed the 61st regiment, he asked the colonel where the third battalion was. "Sire," he replied, "it is in the redoubt." and in truth the whole of that brave corps had perished in the intrenchments which it had conquered.

Napoléon receives the account of the battle of Salamanca During the course of the evening, intelligence was received at headquarters of the disastrous battle of Salamanca. Napoléon, though on the verge of fate himself, showed on this occasion no indulgence for the faults of his lieutenants, and bitterly inveighed against the rashness of Marmont, which had endangered all his successes in Spain. About the same time a portrait of the King of Rome was received from the Empress at Paris. At the sight of the much-loved image, the Emperor, who was tenderly attached to his son, melted into tears. the anxiety and danger of the moment were forgotten in the recollection of those he had left behind him. With his own hands he placed the picture on the outside of his tent, and called the officers and privates of his faithful guard to share in the emotion which it had awakened in his mind (3).

Night previous to the battle When the musketry ceased, both armies took up their positions, and the fires of the bivouacs were lighted. Those of the Russians flamed in an immense semicircle, which illuminated the half of the heavens: those of the French were more scattered and unequal, as the troops successively arrived and took up their ground. Napoléon's tent was pitched on the left of the great road, amidst the squares of the Old Guard but he slept little, being continually occupied in dispatching orders and asking questions. He could not be induced to lie down till he was assured by those on the outside, that, from the number of shadows of moving figures which surrounded their watchfires, it was evident that the enemy remained firm on the ground they had chosen. He passed almost all the night in dictating orders, and it was not till midnight was far past that he could be prevailed on to take a few hours of repose. A young officer of his guard never closed his eyes during that anxious night. Augustus Caulaincourt lay on the floor, wrapped in his cloak, with his eyes fixed on the miniature of his young bride, whom he had quitted a few days after their marriage, and whom he was never destined to see again in this world. His remains lie in the "red monument which his good sword hath dug" in the great redoubt on the field of Boro-

dino (1) The army passed, for the most part, a sleepless night the common men being engaged in repairing their arms, the officers in protecting themselves from the cold, which already was severely felt at night, and in watching the Russian position to see whether a retreat was commencing. But no sound was heard along the whole line; their fires burned, with a steady flame and morning alone extinguished the light of their bivouacs (2)

Repetition of
proclamation
to his
soldiers.

When the dawn discovered the Russian army still in their position, and it was evident that a general battle was to take place, an universal feeling of joy pervaded the French troops, and the anxiety of the men evinced itself in a general murmur throughout their lines. The fatigues of the campaign, the distance from home, the approaching dangers, were forgotten in the intense solicitude of the moment. The Emperor, at break of day, withdrew the curtains of his tent, and advancing into the middle of the circle of officers who awaited his approach, mounted on horseback, and riding to the heights in front, surveyed the whole of the Russian position the weakness of the left made him resolve to make the principal effort at that point, and against the redoubt in the centre. At five, the sun breaking through a fog, appeared in cloudless splendour "It is the sun of Austerlitz!" said Napoleon, and immediately, the trumpets sounded, the drums beat, and the following proclamation was read to the troops—"Soldiers! the battle is at hand which you have so long desired henceforth the victory depends on yourselves. It has become necessary, and will give you abundance, good winter quarters, and a speedy return to your country! Conduct yourselves as you did at Austerlitz, Friedland, Witepsk, and Smolensko and let the remotest posterity recount your actions on this day let your countrymen say of you all—he was in that great battle under the walls of Moscow." The troops heard with enthusiasm these heart-stirring words, and their shouts were re-echoed from the Russian lines (3)

Effect of
the Russian
aiming to
animate the
spirit of
their troops.

Nor did the Russians neglect the most powerful means to animate the courage of their troops. On the evening of the 6th an unusual movement was observed in their position, and shortly a procession of dignified clergy, carrying an image to which miraculous powers were supposed to belong, passed through the whole lines of the army. The soldiers every where knelt before it, and mingled with the religious strains which rose from their ranks fervent prayers for their country, their families, and their religion. The priests bestowed their blessings on the prostrate army, and all, down to the meanest soldier, felt penetrated by the resolution to defend their country or perish in the attempt (4) Shortly afterwards,

Proclamation
of
Kutusoff to
his troops.

preceded by a venerated image and followed by all his staff, Kutusoff himself rode along the front of the line immediately after which the following proclamation was read to the troops—"Brother companions in arms! You see before you in that image, the object of your pious regard, an appeal addressed to Heaven to join its aid to that of men against the tyrant who disturbs the universe. Not content with destroying millions of human beings, the images of God, that arch rebel against all laws, human and divine has penetrated with an armed force into our sanctuaries, defiled them with blood, overturned our altars, and exposed the arch of the Lord, consecrated in that holy image of our church, to the desolation of the elements, and the profanation of impious hands. Fear not,

therefore, that 'the Almighty, who has called that reptile from the dust by his power, should not be with you. Fear not that he will refuse to extend his buckler over your ranks, and to combat his enemy with the sword of St.-Michael. It is in that belief that I set out to combat, to conquer, if needs be, to die—assured that my eyes shall behold victory Soldiers! Perform your duties: think of your cities in flames; of your children who implore your protection. think of your Emperor, who considers you as the strength of his arm; and to-morrow, before the sun has set, you will have traced your fidelity and faith on the soil of your country with the blood of the aggressors (1) ”

The sound of the prayers of the soldiers was heard in the French lines, and great was the ridicule bestowed in that unbelieving host on what they deemed the mummerly of the exhibition. But the event proved that they are not the worst soldiers who are the best Christians and the experienced observer, who reflects on the vast variety and force of the temporal stimulants to exertion which were arrayed under the standards of Napoléon, will gratefully acknowledge the wisdom which led the Russian chiefs to invoke the aid of higher influences; and will discern in the principles of religion, how much soever disguised under the forms of uncivilized worship, the only power that can in the last resort withstand the shock of that concentration of worldly ambition which occasions, or is occasioned by, a revolution.

Forces engaged on both sides The forces on the two sides were nearly equal but the French had a vast superiority in cavalry, and in the quality of part of their troops The Russian force was a hundred and thirty-two thousand, with six hundred and forty pieces of artillery; but of these ten thousand were militia from Smolensko and Moscow, who had never seen service, and seven thousand Cossacks: so that for the shock of battle they could only count on a hundred and fifteen thousand (2) The French force consisted of a hundred and thirty-three thousand, of whom thirty thousand were cavalry, and they brought into the field no less than five hundred and ninety pieces of cannon (3).

Davoust's plan of attack which is rejected by Napoléon, who resolves to attack, by échelon, from the right. Davoust proposed to the Emperor to move to the Russian extreme left, during the night, with forty thousand men, and when the battle was engaged along the whole front, to attack the redoubts suddenly in flank, and advancing rapidly from left to right of the whole Russian position, terminate the war on the field of battle But Napoléon, deeming the detachment of so large a portion of his force hazardous at such a distance from his resources, rejected the advice. He resolved to attack by *echelon* from the right, and disposed his masses to act accordingly. Marshals Ney and Davoust led the attack, at the head of their respective corps (4)

Russian dispositions for the battle While these vast preparations were going on in the French lines, the Russians on their part were making every thing ready to oppose to them the most vigorous resistance. The village of Borodino was occupied by a strong detachment of the Imperial guards, and may be considered as an advanced post in front of the line. The great road from

Great disputes have taken place as to the forces engaged in this memorable battle, but they are now ascertained in an authentic manner on both sides—on that of the Russians by the official

returns of Kutusoff published by Boutourlin, that of the French from the Imperial muster roll called on the 2d September by orders of Napoleon, and published by Chambray from the Archives of the War Office at Paris—See BOUTOURLIN, 1. 320, and CHAMBRAY, 1 32, 33

(4) Ségur, 1. 316, 377, 390 Jom iv

Smolensko to Moscow ran perpendicularly through the centre of their position: on its right, Bagawouth and Ostermann occupied the plateau, which bordered the Kolotza; the second next the road, the first on the extreme right. On the left of Ostermann, and on the left also of the road, the massy columns of Doctoroff extended as far as the great redoubt, with the defence of which his left was charged. Beyond the redoubt, Rajewski lay with his right resting on that bulwark, and his left on the village of Semenowakoi, while the corps of Borosdin and division of Noweroskole, on an eminence, stretched beyond it to woods occupied by *trailleurs* beyond which, on the extreme left, Touczkoff had taken a position at the village of Ullitza, on the old road to Smolensko, with his own corps and the militia of Moscow, which were placed under his orders. The Imperial guard was in reserve behind the centre. All these corps were drawn up in two lines, with the exception of that of Touczkoff, on which, as he stood on the old road, a furious attack was anticipated, and which was in four. The whole cavalry was drawn up in a third line in rear of the infantry, with the exception of one corps which was on the extreme right near the Moskwa; while the formidable artillery lined the whole front of the position (1).

French prepared for the attack. On the side of the French, the preparations for attack were on a corresponding scale of magnitude. On the extreme right, Poniatowski was placed on the old road to Smolensko, opposite to Touczkoff; next to him three divisions of Davoust, still, notwithstanding all their losses, thirty thousand strong, stood near the redoubt carried on the evening of the 5th. On his left, Ney's corps was stationed, with Junot's directly in his rear, between the redoubt and the stream of the Kolotza. The heavy cavalry of the reserve was behind the wood on one side of the captured redoubt, while the whole Imperial guard, also in reserve, was on the other. Morand and Gerard's divisions of Davoust's corps were placed on the left of Ney and Junot, under the orders of Eugène, whose corps, with the heavy cavalry of Grouchy, formed the extreme left of the line. Thus the great bulk of the French army was concentrated round the captured redoubt; within cannon-shot of whose batteries eighty thousand veterans and three hundred guns were accumulated. and it was easy to foresee that there the principal efforts of Napoleon were to be made (2).

Feelings of the soldiers on both sides. Both armies passed a restless agitated night. so strongly had the intense anxiety of the moment come to operate on the excited frame of the soldiers. Never, in truth, in modern times, had interest so great, feelings so vehement, been brought into collision. never were such results dependent on the arm of the soldier. On the one hand was the flower of the warriors of Europe, led by the consummate talents of Napoleon, which, after having subjugated all the states of the continent, had now penetrated beyond the old frontiers of Europe into the wilds of Asiatic rule. on the other, a nation originally sprung from the Tartar race, and but recently emerged into civilized society, singly maintained the strife against the mighty conqueror, and brought to bear against the accumulated forces of civilisation, the unsubdued energy of the desert. The destinies of Europe, every one felt, hung on the contest. the battle about to be fought was the most momentous which had occurred in modern times, on its result depended whether the liberty of nations was to be maintained, or one overwhelming power was to crush all lesser states within its grasp. Still more, the moral destiny of mankind was at stake. on one side was arrayed talent, energy, perseverance,

(1) *Revue*. I. 321, 327. *Chamb.* II. 42, 43.(2) *Chamb.* II. 47. *Id.* *Falm.* II. 17, 18.

the acquisitions of science, the glories of civilisation, the wonders of discipline, but the lustre of these brilliant qualities was tarnished by the purposes to which they were applied in the hands of the conqueror; they were employed only to gild the chains of despotism, and deck out the banners of infidelity. on the other were to be seen courage, resolution, devotion, the vigour of rising civilisation, the pride of unbroken conquest, the ambition of boundless dominion; but the harsher features of these aspiring feelings were concealed by the patriotic grandeur of the cause in which they were engaged, and the sanctity of religion threw a veil over the intermixture of worldly qualities by which its cause was to be maintained (1)

Battle of Borodino Sept. 7 At six o'clock on the morning of the 7th, a cannon fired from one of the batteries of General Sorbier, announced the commencement of the battle. The French columns advanced in *echelon*, with the right under Davoust in front: their masses moved on steadily, without firing, under cover of their artillery, notwithstanding an incessant discharge of all arms from the Russian position. Davoust soon had a horse shot under him, and several generals were killed as they hurried over the plain, or toiled at the foot of the intrenchments: the ground was covered by moving masses, which incessantly rolled forward to the line of flame which marked the position of the hostile batteries. General Compans was severely wounded at the head of his division; Rapp, who succeeded him in the command, soon shared the same fate, Dessaix also was struck down, who succeeded Rapp, and Davoust himself, injured by a contusion received in the fall of his horse, was for a short time disabled. The successive loss of all their chiefs for some time threw indecision into the French attack, but at length the redoubts on the left were carried: they were immediately retaken, however, by the second line of the Russians, which Bagrathion brought up to the attack. the combat continued with the utmost fury, and Kutusoff, foreseeing that the left wing could not long withstand the repeated attacks which Napoleon directed against it, moved the corps of Bagawouth, from the right of the army, to its support (2).

Partial success of Ney and Eugene in the centre. While this fierce conflict was raging on the right centre under Davoust, Ney, impatient for the fight, was still inactive in the centre. He was so near the station of Napoleon, that the Emperor's aide-de-camp called the marshal to receive his last orders. At length the moment being arrived for him to support the left of Davoust, the orders to attack the redoubts were given: the drums beat, and Ney's three divisions precipitated themselves to the charge, preceded by seventy pieces of cannon, and Murat prepared to aid them with ten thousand of his redoubtable cavalry. Soon the heads of the columns arrived in the awful tempest of grape-shot, but nothing could restrain their impetuosity. Gallantly facing the storm, they pushed on till they reached the foot of the intrenchments, and then, breaking off to the right and left, passed between them, and entered the redoubts by the gorge. Shortly after, however, Bagawouth's corps came up from the extreme Russian right, where it lay unengaged, and Bagrathion, putting himself at its head, not only expelled the enemy from their intrenchments, but pursued them for some distance into the plain. On the extreme right Poniatowski, in the first instance, carried Ulitza by a rapid charge, but he was soon after arrested by Touczkoff in the woody marshes which lay around that village, where the nature of the ground would only permit tirailleurs to be employed. Eugène, however, on the left, carried the village

(1) Chamb. ii 52, 53

(2) Journ iv 122 Sugar, i 37
370 Fain ii. 23, 20, Chamb. i

of Borodino, on the right bank of the Kolotza, and immediately crossing his divisions over the bridges of that stream, prepared to assail the great redoubt in the centre of the Russian line, where Barclay lay with the flower of the Russian infantry (1)

Key and Davoust, after an obstinate resistance, carry the heights of Semenowskolo.

These contests, however, at this period were subordinate: it was in the right centre, where Davoust and Ney were striving for the heights of Semenowskolo, that the decisive blows were to be struck.

These important heights soon became the principal objects of contention both parties strove, by accumulating forces upon that important ridge, to gain possession of an eminence which promised to render them masters of the field. After four hours hard fighting, Ney, finding himself overmatched by superior forces, anxiously demanded succour and Napoleon, perceiving that these heights were still in the hands of the Russians, made preparations for a grand attack. The young guard, and great part of the cavalry in reserve, were sent to the support of Davoust four hundred pieces of cannon were brought to bear upon the redoubts; while, under cover of this tremendous fire, immense columns of infantry and cavalry advanced to the assault. In vain the fire from the Russian batteries swept off whole battalions as they approached the survivors closed their ranks, and advanced with a firm step and unbroken front against the rampart of death. Bagration, perceiving that the French were gradually gaining ground, ordered the whole left wing to issue from their intrenchments, leaving only the reserves to guard the works. The shock in the plain was terrible. Eighty thousand men, and seven hundred pieces of cannon, accumulated in a small space, strove with unparalleled fury for above an hour, without any perceptible advantage, till Bagration and the chief of his staff, St.-Priest, being both severely wounded, and Friant's division of Davoust's corps having assailed their flank, the Russians began to give way. General Kouounitsyn, with admirable presence of mind, however, immediately assumed the command and, drawing back his troops with their whole artillery from the disputed ridge, established them in a strong position in the rear, behind the ravine of Semenowskolo. The conquerors endeavoured to pursue their advantage, and the cavalry under Nansouty fell with the utmost fury upon the extreme left of the new Russian position but all their efforts were defeated by the devotion of the regiments of the Russian guard (2), who formed squares under a tremendous fire from their abandoned works, now lined by French cannon, and for the remainder of the day maintained their ground alike against the impetuous charges of the horse and the fatal ravages of the artillery.

The great redoubt is taken and retaken.

Meanwhile an obstinate conflict was going on in the centre, where Barclay, after having lost the village of Borodino, still resolutely defended the great redoubt. The Viceroy, after having crossed the Kolotza, advanced with the utmost intrepidity through the broken ground which lay in his front, overthrew the division of General Paskowitch, and, aided by General Bonami with his brave brigade, in the midst of the fire of eighty pieces of cannon, carried that formidable intrenchment Kutusoff, sensible of the necessity of repairing the disaster, instantly brought forward his best troops, and, after an arduous conflict, not only retook the redoubt, and made Bonami and part of his troops prisoners, but, pursuing the broken battalions of the assailants, carried confusion and dismay into the French

(1) Falm. II. 27. 28. Chamb. II. 92. 93.

(2) Boisl. I. 238. 240. Sayer I. 302. 306. Chamb. II. 65. 66. Falm. II. 31. 32.

centre. Napoléon was anxiously solicited to support that point by the Imperial guard; but he deemed it imprudent to risk that last reserve at so great a distance from support. After much hesitation he refused the succour, and Eugène was left for two hours to support unaided the terrible fire of the great redoubt, and the repeated charges of the Russian cavalry (1)

Alarm on
the left by
an irruption
of Russian
cavalry

The attention of the Emperor, however, was soon arrested by a violent outcry and confusion on the left. While Bagawouth and

Ostermann were traversing the field of battle from the Russian right to their left, to aid in the defence of the heights of Semenowskoie, Kutusoff ordered Oubaroff, with eight regiments of Cossacks, to cross the Kolotza, and cover the movement by an attack on the left flank of Eugène's corps. This irruption was attended with the most signal success. A brigade of cavalry under Ornano was speedily overthrown, soon the Cossacks passed Borodino, Delzon's Italian division avoided destruction only by throwing themselves into squares, the Viceroy himself escaped being made prisoner only by throwing himself into one of the squares of infantry, the baggage and artillery drivers fled in confusion, and Napoléon himself deemed the attack so serious that he hastily galloped to the spot, accompanied by the cavalry and artillery of the guard. It turned out, however, to be a false alarm, as Oubaroff, unsupported by infantry, retired across the Kolotza when he found himself threatened by large bodies of the enemy, but this diversion had an important effect, and, by withdrawing a portion of the reserve destined for the attack of the great redoubt, sensibly retarded the success of the day (2)

Grand suc-
cessful at-
tack on the
great
redoubt

When the Russian intrenchments, however, on the left were carried, Napoléon resolved to make a desperate effort to regain his advantages in the centre. For this purpose more than two hundred pieces of cannon were directed against the great redoubt, and, while the Viceroy re-formed his divisions for the assault, Caulaincourt, in command of Monbrun's division of cuirassiers, which he had assumed as that General had just been struck down by a cannon-shot, was directed to penetrate through the Russian line, and, wheeling round, enter the intrenchment by its gorge "You will see me, immediately, dead or alive," was the answer of the brave general; and he set off at the gallop at the head of his followers, and the glittering mass was soon lost in the volumes of smoke, as he approached the intrenchment. The Russians hastened, by all possible means, to support the point of attack. The corps of Ostermann was placed in front, and the regiments of the guards, Preobazinski and Semenowskoie, were stationed as a reserve in their rear. Caulaincourt, advancing with the utmost rapidity, overthrew the regiments of Russian horse whom Kutusoff had opposed to him, while the great redoubt continued to vomit forth an incessant fire upon its assailants. Eugene with his infantry was advancing to the attack. The bayonets of his troops were already gleaming on its slopes, when the columns of the cuirassiers were seen ascending through the clouds of smoke which enveloped the intrenchment. Its sides seemed clothed in glittering steel, and the fire from its summit, after redoubling in fury for a few seconds, suddenly ceased. The flames of the volcano were extinguished in blood and the resplendent casques of the French cuirassiers appeared, when the smoke cleared away, above the highest embrasures of the intrenchment (5).

The capture
of the redoubt
did not prevent
the French from
establishing them-
selves in their
important conquest.
The Russian soldiers
charged with its
defence, refusing
quarter, had almost
all perished in the
assault; and the
interior presented
a frightful assem-
blage of dis-
mounted cannons,
dying men, broken
arms, and wounded
horses. Grouchy,
hoping to profit by
the consternation
which its capture
had occasioned,
advanced at the
head of his cavalry
against the corps
of Ostermann, drawn
up on the heights
in the rear, but they
were met by the
chasseurs of the
Russian guard, over-
thrown, and driven
back with severe
loss. Encouraged
by this success,
and perceiving that
the French on the
left of the great
redoubt kept them-
selves at a distance
to avoid the terri-
ble fire of the Rus-
sian batteries on
the heights in the
rear, Kutusoff re-
solved to make a
forward movement,
in order to re-oc-
cupy the ground on
which his army origi-
nally stood in the
centre at the com-
mencement of the
action. Ostermann's
corps, with great
part of the guard
and a large body
of cavalry, ad-
vanced on this
perilous mission.
Slowly and in
admirable order
the Russian masses
moved forward
under the fire of
the redoubtable
batteries which
the French had
established on the
heights won from
the Russians, and
even reached the
foot of the intrench-
ments, where eighty
pieces of cannon
thundered on their
close ranks, with
a severity of fire
unexampled in
war; while their
cavalry, by several
gallant charges,
even carried some
of the redoubts,
and erected the
Russian standards
on their old strong-
holds. It was all
in vain: they were
speedily retaken,
and the Muscovite
battalions, unable
to advance, un-
willing to retire,
told and died at
the foot of the
field works which
they had lost. Wea-
ried at length
with the fruitless
butchery, Kutusoff
drew off, covered
by his immense
artillery, and the
Russians were
again re-established
along the whole
line on the heights,
immediately in
rear of their origi-
nal position (1).
Meanwhile, Mil-
laradowitch planted
the Russian bat-
teries on the heights
behind the re-
doubts, and from
this second line
the fire of artiller-
y was so severe
and incessant,
that the French,
far from advancing
to the conquest,
were obliged to
shelter themselves
on their knees,
behind the intrench-
ments they had
won. Poniatowski
alone, desirous
of emulating the
successes of the
centre, advanced
in the evening
against the corps
of Bagration, which
then occupied
the great road
to Smolensko, on
the left of the
Russian line, and
after an obstinate
struggle carried
the position, from
which his oppo-
nents retired to
the heights oc-
cupied by Bagra-
tion's corps, at a
short distance
in the rear. Thus
the Russians at
all points, at the
close of the day,
had lost their
original line of
defence. But, though
driven from their
first line, their
columns, with an
immense artillery,
were ranged in
unbroken ranks
on a second
position still
stronger than
the first, while
the enemy, ex-
hausted by an
engagement of
unparalleled
severity, were
in no condition
to commence
a second battle
to complete
their successes.
The cannon
continued to
fire with the
utmost violence
on both sides
till night, but
no further
operations of
importance
were attempted.
The French,
exhausted with
fatigue and
carnage, at length
fell back to the
ground they
had occupied
before the battle;
and the Russians
strengthened
themselves in
their new
position behind
the ravine of
Semenowakölle (2).

The death of Caulaincourt, who met a glorious end at the entrance of the redoubt, did not prevent the French from establishing themselves in their important conquest. The Russian soldiers charged with its defence, refusing quarter, had almost all perished in the assault; and the interior presented a frightful assemblage of dismounted cannons, dying men, broken arms, and wounded horses. Grouchy, hoping to profit by the consternation which its capture had occasioned, advanced at the head of his cavalry against the corps of Ostermann, drawn up on the heights in the rear, but they were met by the chasseurs of the Russian guard, overthrown, and driven back with severe loss. Encouraged by this success, and perceiving that the French on the left of the great redoubt kept themselves at a distance to avoid the terrible fire of the Russian batteries on the heights in the rear, Kutusoff resolved to make a forward movement, in order to re-occupy the ground on which his army originally stood in the centre at the commencement of the action. Ostermann's corps, with great part of the guard and a large body of cavalry, advanced on this perilous mission. Slowly and in admirable order the Russian masses moved forward under the fire of the redoubtable batteries which the French had established on the heights won from the Russians, and even reached the foot of the intrenchments, where eighty pieces of cannon thundered on their close ranks, with a severity of fire unexampled in war; while their cavalry, by several gallant charges, even carried some of the redoubts, and erected the Russian standards on their old strongholds. It was all in vain: they were speedily retaken, and the Muscovite battalions, unable to advance, unwilling to retire, told and died at the foot of the field works which they had lost. Wearied at length with the fruitless butchery, Kutusoff drew off, covered by his immense artillery, and the Russians were again re-established along the whole line on the heights, immediately in rear of their original position (1). Meanwhile, Millaradowitch planted the Russian batteries on the heights behind the redoubts, and from this second line the fire of artillery was so severe and incessant, that the French, far from advancing to the conquest, were obliged to shelter themselves on their knees, behind the intrenchments they had won. Poniatowski alone, desirous of emulating the successes of the centre, advanced in the evening against the corps of Bagration, which then occupied the great road to Smolensko, on the left of the Russian line, and after an obstinate struggle carried the position, from which his opponents retired to the heights occupied by Bagration's corps, at a short distance in the rear. Thus the Russians at all points, at the close of the day, had lost their original line of defence. But, though driven from their first line, their columns, with an immense artillery, were ranged in unbroken ranks on a second position still stronger than the first, while the enemy, exhausted by an engagement of unparalleled severity, were in no condition to commence a second battle to complete their successes. The cannon continued to fire with the utmost violence on both sides till night, but no further operations of importance were attempted. The French, exhausted with fatigue and carnage, at length fell back to the ground they had occupied before the battle; and the Russians strengthened themselves in their new position behind the ravine of Semenowakölle (2).

Such was the terrible battle of Borodino, the most murderous and obstinately disputed of which history has preserved a record. The wars of Timour or Attila may have witnessed a greater display of

(2) Russ. I. 244, 317. Suppl. I. 418, 411. Lab. 182. Fala. II. 38, 87. Cheneb. II. 77, 78.

physical force, and been attended by a more prodigal waste of human life, but in no previous contest were such formidable masses of disciplined forces assembled, or so gigantic an array of the implements of destruction exhibited. The armies of the whole continent were here pitched against each other not, as at Chalons or Tours, the fierce squadrons of invading barbarians against the tumultuary levies of feudal power, but the disciplined forces of civilized ambition against the steady firmness of regulated patriotism. The wealth of Europe was exhausted for the equipment of the expedition, its talent concentrated in the direction of its force the whole resources of Russia were required to oppose it, its whole energy strained in resisting its fury.

Loss on
both sides

The dreadful loss on both sides demonstrated the unparalleled obstinacy of the contest. The Russians had to lament the loss of one of their bravest and ablest generals, Prince Bagrathion, who fell nobly as he defended the redoubts on the left, and subsequently died of his wounds; and of Generals Kantaisoff and Touczkoff killed, and thirty generals of inferior rank wounded. Fifteen thousand killed, thirty thousand wounded, and two thousand prisoners, presented a total loss of nearly fifty thousand men. On the French side, besides Generals Monbrun, Caulaincourt, and many others killed, thirty generals were wounded, and the total loss was twelve thousand killed, and thirty-eight thousand wounded. The trophies of victory were equally divided, the Russians took ten pieces of cannon from their enemies, who could boast of thirteen captured from them (1).

Want of
vigour
evinced by
Napoleon
in this
battle

Napoleon has been severely censured by some writers for not bringing forward the Imperial guard towards the close of the action, in order to confirm the success of the Viceroy and Ney. Certain it is that, in this battle, he was far from having exhibited the vigour or capacity which he had so frequently displayed on former occasions, and which had nowhere shone forth with brighter lustre than on the field of Wagram. His mental powers appear to have been, in a great degree, overwhelmed by the corporal fatigue, which he had recently undergone, and a painful malady which had, for the time, debilitated even his constitution of iron. A severe attack of rheumatism had deprived him of much of his former activity, and such was the state to which he was, in consequence, reduced, that at ten o'clock in the morning his strength required to be recruited by stimulating liquors. "He remained," says an unexceptionable eyewitness, General Mathieu Dumas, "during the engagement, on a position from whence he beheld the whole field of battle, immovable, seated on the edge of a ditch, or walking to and fro over a small space. It was not till half-past six that he mounted on horseback, and rode forward to the field, which was then strewed with dead (2)." The position thus chosen was so far from the theatre of action as to render correct observation with the eye impossible, and the communication of orders frequently tardy. At the most critical moments the Emperor evinced great irresolution. He appeared struck with apathy, and it may truly be said that he proved himself inferior, on this vital occasion, both to his previous reputation and his present fortunes (3).

Sound reasons, never
theless
which pre-
vented him
from engag-
ing his
reserves,

Notwithstanding all this, however, it may reasonably be doubted whether, had Napoleon enjoyed in this great battle all his former vigour, sound policy would have dictated any other course than that which he actually pursued. The reasons which he himself assigned to General Dumas and Count Daru, the very night of the

(1) Bout 1. 349, 350. Sagur, 1. 414, 422. Larrey,

iv 46. Fain 11 41

(2) Souvenirs de M. Dumas, iii. 438

(3) Chamb. ii. 76, 77. Souv. de Dumas

battle, for not aiming at more decisive results, appear perfectly satisfactory — "People will perhaps be astonished that I have not brought forward my reserves to obtain greater success, but I felt the necessity of preserving them, to strike a decisive blow in the great battle which the enemy will probably give to us in the plains in front of Moscow. The success of the action in which we have been engaged was secured, but it was my duty to think of the general result of the campaign, and it was for that that I spared my reserves." Eight years afterwards he repeated the same opinion at St.-Helena. In truth, had the Guard been seriously injured at Borodino, it is doubtful if any part of the army, of which it was the heart, and of which, through every difficulty, it sustained the courage, would have repassed the Niemen. It is one thing to hazard a reserve in a situation where the loss it may sustain can easily be repaired; it is another, and a very different thing, to risk its existence in the centre of an enemy's country, at a distance from reinforcements, when its ruin may endanger the whole army. The fatal result to the French of the battle of Waterloo demonstrates the extreme peril of engaging the reserves before the strength of the enemy's force has been finally broken; and the risk of a rout at Borodino was incomparably greater than on the French frontier. Though driven from their first line, the Russians still presented an undaunted front to the field of battle. They were masters of a strong position, defended by above six hundred pieces of cannon; and, notwithstanding their losses, nearly seventy thousand men were still under arms. The recent advantages had been too dearly purchased to admit the hope of decisive success and, if the action was renewed on the following day, no other force remained either to ensure victory or avert disaster (1).

Reflections on the battle. In truth, the battle of Borodino affords one example of a fact which was abundantly demonstrated during the remainder of the war, that when troops are naturally brave, and their courage has been improved by discipline, the superiority of generalship loses much of its importance. If large bodies of armed men lay down their arms the moment they are turned or cut off from their comrades, a skilful and vigorous attack is almost certain of success; but if they resist to the uttermost, and turn fiercely on their assailants, the peril is nearly as great to the assailant as the defending force. The attacks in column of Napoleon, were frequently crowned with the most signal success against the Austrians and Prussians, but they seldom prevailed against the steady valour of the Russians, and never against the murderous fire of the English Infantry (2).

Described immediately after the battle. The French army, sensible of the magnitude of their loss, passed a melancholy night after the battle. The marshals were divided as to the prudence of a further advance. The heroic Ney himself strenuously recommended a retreat. Such was the enormous accumulation of the wounded, that they far exceeded all the resources of the French surgeons, and they lay for days together neglected on the field. The little bread which remained was soon exhausted, and the wounded were compelled to live on horseflesh. Even straw was wanting in the abbey of Kolotskoi and the neighbouring villages, which were converted into temporary hospitals, and the miserable wretches lay on the floor without either bedding or covering. During the night the Cossacks made an irruption into their lines, and the Imperial guard were obliged to stand to their arms: a humiliating circumstance after what was held out as a decisive victory (3). On the following

(3) "Un événement, says Ségur — a scene d'horreur la veille d'une victoire." — *See* I. 421

day, the Emperor visited the field, but the soldiers were too much depressed to receive him with their wonted enthusiasm. grouped in small bodies round their eagles, stained with blood, and scorched with powder, their shouts of triumph were feebly heard amidst the cries of the wounded. The field of battle, over its whole extent, was strewed with dead bodies, broken guns, casques, cuirasses, and helmets, among which the wounded raised their heads to implore relief. Bleeding horses, maddened by pain, were alone seen moving in this scene of woe. The wounded had crept in great numbers into the ravines, to seek shelter from the storm of shot, or the severity of the tempest which succeeded it, their last breath uttered the names of their country, their mother, or their offspring (1).

Orderly
retreat of
the Rus-
sians to-
wards
Moscow

The Russians retired the day after the battle, on the great road to Moscow. The magnitude of their loss rendered it too hazardous to risk the remainder of the army in a general action with the French, who had been considerably reinforced since the battle. But no

signs of confusion appeared on their track, neither chariots, cannon, nor prisoners, attested the retreat of a broken army. A severe engagement in front of Mojaïsk with the rearguard, terminated, without any decisive advantage, in the loss of two thousand men to each side, and sufficiently taught the French that neither the courage nor discipline of their opponents had suffered any abatement. The good countenance preserved by this gallant rearguard on this occasion, was of essential service to the Russian army; it enabled Kutusoff to retain Mojaïsk till not only his whole artillery and chariots, but almost all the wounded were removed, before the town was evacuated on the following morning at ten o'clock. With such skill was the subsequent retreat conducted, that when the French arrived at the separation of the roads of Moscow and Kaluga, they were for some time uncertain, as at Witepsk, which of the two the retreating army had followed (2).

Debate in
the Russian
council of
war, whe-
ther they
should
evacuate
Moscow

No further engagement of consequence took place. Napoléon, on the same day on which it was abandoned by the Russians, entered Mojaïsk, and established his headquarters in that town, while his guard bivouacked round it, and the other corps of the army slowly followed the enemy towards the capital. The retreat was conducted in so leisurely a manner, and the pursuit was so slack that the army was considerably re-established in its equipments and organization after the desperate shock it had received before it approached Moscow; and on the 15th a position was taken up half a league in advance of that city, where field-works had been commenced. Though Kutusoff at this period numbered only fifty thousand regular soldiers, with twenty thousand militia and Cossacks round his banners, yet they were animated with the best spirit, and unanimous in the desire to fight another battle for the defence of the capital. A council of war was held to deliberate on the question, whether they should adopt this bold resolution. Some were of opinion that the position they occupied was not tenable, and that they should retire to a central position between the northern and southern provinces; Beningsen and Doctoroff were clear for fighting where they stood, as they maintained the army still mustered ninety thousand men, and the loss of Moscow would spread consternation through the empire. Kutusoff and Barclay supported the proposal of a retreat, assigning as a reason that it was indispensable to preserve the

(1) Segur i. 421. Larrey, iv. 57, 58. Chamb. ii. 82, 91.

army entire, and draw near to the expected reinforcements and that the abandonment of the metropolis "would lead the enemy into a snare, when his destruction would be inevitable." These prophetic words determined the assembly, and orders were immediately given for the troops to retire in the direction of Kolomna. On the morning of the 14th, the army continued its retreat, and in silent grief defiled through the streets of the sacred city (1).

Total destruction of supplies. It is known to the Russians, would have forced the French to halt and retreat.

Notwithstanding these plausible, and indeed invincible reasons for a retreat, according to the information which the Russian general possessed, nothing is more certain than that, if they had been aware of the real state of the French army, they would have stood firm, and that Napoleon, if he had hazarded a battle, would have been defeated or driven, if he had declined it, to a disastrous retreat. Unknown to them, the French Emperor had advanced so inconsiderately, and with so little previous preparation, from Smolensko, that he was literally destitute of the means of fighting another battle. The bold front assumed by Murat and the advanced guard, alone concealed the real weakness of the Grand Army, and above all its scanty supply of ammunition. All his care for the supply of the army had been confined to providing for his base at Smolensko: from that point he had plunged into the heart of Russia, with no magazines and little provisions, except what the soldiers could collect on their line of march, already wasted by the systematic devastation of the retreating enemy. At Vienna, little more than a third of the way, the want of every thing had begun to be experienced: and from that time, as they advanced onwards towards Moscow, the necessities of the troops had gone on continually increasing. The houses to the distance of several miles on both sides of the great road, were invariably burned, either by accident or design, when the leading columns passed through: and those which followed found the country a perfect desert. In the ruins of the dwellings, men, horses, and baggage-waggons were indiscriminately huddled together, after the manner of barbarians. The ammunition of the army was adequate only for a single battle: and that of Borodino: where ninety-one thousand cannon-shot had been discharged, had reduced the reserved stores so low, that there did not remain enough for a second general engagement (2).

A large convoy, it is true, had on the 7th September passed Smolensko but it could not reach the army for a fortnight to come, and it was utterly impracticable for the troops to maintain themselves in front of Mojaïsk till that supply arrived. The little bread and flour which the soldiers brought with them from Smolensko, had been long ago exhausted: the mills were all destroyed, and the grain removed: the soldiers subsisted on nothing but horse-flesh, and the few potatoes or vegetables which they could discover in

(1) Bunt. i. 367, 368. Chénik. ii. 99. 100.

Rumov. "Notwithstanding," said Kutsoff, given to the "the valour which my army displayed at Borodino, I was obliged, as was by Koutsoff for you know to yield to numbers, and abandoning commerce my retreat. Since that Moscow then the enemy has recruited near our reinforcements, and at present I have fewer chances of success than I had then; our dangers are increased by the proximity of Moscow where I should lose half my army if it was necessary after reverse to traverse the capital. On the other hand, if we retire without combat, we must abandon it: a cruel sacrifice it is true, but which does not draw after it the destruction of the empire. On the contrary the enemy far removed from his resources, possessing as his only communication the road from Smolensko to Moscow: on the eve of experience-

ing reverses on the Dnieper, by the arrival of 11 armies of Moldavia and Finland will find himself in the most critical situation. The army is in bad position, and is I prefer in numbers to the enemy: such were the losses which it experienced at Borodino, that entire brigades are now commanded by field-officers, and regiments by captains; the same produces in its movements, therefore, is not I present: I be expected as heretofore. Every thing, therefore, conspires to prove that we should be best if we fought a battle. The safety of the country depends on the preservation of the river.

History would not risk us of the enemy: like disaster to near Moscow would occasion its entire destruction. — *See Mémoires du Baruch de Tolly sur le Conseil des Officiers Supérieurs à Moscou, 8 no in Cas. n. 257 et seq.*

(2) Fain. ii. 47.

the earth, medicines for the sick, bandages and beds for the wounded, were nowhere to be found. So universal was the distress, that General Matthieu Dumas, who held the high situation of adjutant-general to the army, has declared that he regarded the burning of Moscow as an advantage, from the belief that it must force the Emperor to an immediate retreat. Had the Russians been aware of these disastrous circumstances, they would doubtless have held firm at Moscow, and Napoléon would have been driven to a retreat, even in sight of the prize which he so eagerly coveted. But they could not conceive that so experienced a commander would have precipitated himself three hundred miles into an enemy's country, without magazines or provisions, and ammunition only for a single battle. therefore they abandoned the capital; and to this ignorance of the real state of the French army, and consequent resolution to abandon their metropolis, the total overthrow of Napoleon which ensued, is, beyond all question, to be ascribed (1).

Universal
desertion
of the city
by the inha-
bitants

Nothing could exceed the consternation of the inhabitants of Moscow at finding themselves thus abandoned by their defenders. They had previously been led to believe, from the reports published by the Russian Government, that the French had been defeated at Borodino, or at all events that their entry into Moscow was out of the question, and no preparations for leaving the city had been made by the inhabitants, though arrangements to that effect had been made by the governor, Count Rostopchin, whose name has acquired an immortal celebrity from the awful catastrophe which soon followed. Speedily, however, the inhabitants left the city in that extremity they reverted at once to the nomadic life of their ancestors. In a few days, nearly three hundred thousand had departed. The troops entered the gates with dejected looks, shedding tears of despair, the streets, almost deserted by their inhabitants, mournfully re-echoed the sound of their tread (2). it seemed as if Russia was attending the obsequies of her metropolis. Notwithstanding the confusion of the people, however, the march of the soldiers was conducted in admirable order; and the army, abandoning the cradle of the empire, prepared in silence to revenge its fall.

Arrival of
the French
at Moscow

At eleven o'clock on the 14th, the advanced guard of the French army, from an eminence on the road, descried the long wished-for minarets of Moscow. The domes of above two hundred churches, and the massy summits of a thousand palaces, glittered in the rays of the sun. the form of the cupolas gave an Oriental character to the scene; but, above all, the cross indicated the ascendancy of the European religion.

Description
of that city

The scene which presented itself to the eye, resembled rather a province adorned with palaces, domes, woods, and buildings, than a single city. A boundless accumulation of houses, churches, public edifices, rivers, parks, and gardens, stretched out over swelling eminences and gentle vales as far as the eye could reach. The mixture of architectural decoration and pillared scenery, with the bright green of foliage, was peculiarly fascinating to European eyes. Every thing announced its Oriental character. Asia and Europe meet in that extraordinary city. It resembles Rome, not in the character of its edifices or architecture, but in the strange variety of styles which are to be met with, and which at once bespeak the Queen of half the globe. Many of its palaces are of wood, coloured green, yellow, or rose, and with the exterior ornamented with sculpture in Moorish or Arabesque taste. Nowhere does luxury and magnificence appear in a more imposing form, or

(1) Chamb ii 36, 38, 78. Fain ii 47. Larrey,

are placed close beside poverty in a more humiliating aspect. The Kremlin, the ancient palace of the Czars of Muscovy, where they alternately defended themselves against the Poles and Tartars, is surrounded by a high loop-holed wall, flanked by towers, which resemble rather the minarets of a Turkish mosque than the summits of a European fortress. But, how Oriental soever the character of the scene may be, the number and magnificence of the domes and churches, with their gilded cupolas and splendid crosses, tell the beholder at every step that he is in the midst of the rule of the Christian faith (1)

Transports of the troops at the sight. Struck by the magnificence of the spectacle, the leading squadrons halted, and exclaimed, "Moscow! Moscow!" and the cry, repeated from rank to rank, at length reached the Emperor's guard. The soldiers breaking their array, rushed tumultuously forward and Napoleon, hastening in the midst of them, gazed impatiently on the splendid scene. His first words were, "Behold at last that famous city!" the next, "It was full time!" In intoxicated with joy, the army descended from the heights. The fatigues and dangers of the campaign were forgotten in the triumph of the moment and eternal glory was anticipated in the conquest which they were about to complete (2)

The French enter it, and find it deserted. Murat, at the head of the cavalry, speedily advanced to the gates, and concluded a truce with Miloradowitch for the evacuation of the capital. But the entry of the French troops speedily dispelled the illusions in which the army had indulged. Moscow was found to be deserted. Its long streets and splendid palaces resounded only with the clang of the invaders' march. Not a sound was to be heard in its vast circumference: the dwellings of three hundred thousand persons seemed as silent as the wilderness. Napoleon in vain waited till evening for a deputation from the magistrates or the chief nobility. Not a human being came forward to deprecate his hostility and the mournful truth could at length be no longer concealed, that Moscow, as if struck by enchantment, was bereft of its inhabitants. Wearied of fruitless delay, the Emperor at length advanced to the city, and entered the ancient palace of the Czars amidst no other concourse than that of his own soldiers (3)

Preparations made by the Russians for burning the city. The Russians, however, in abandoning their capital, had resolved upon a sacrifice greater than the patriotism of the world had yet exhibited. The governor, Count Rostopchin, had already set the example of devotion by preparing the means of destruction for his country palace, which he had set fire to by applying the torch with his own hands to his nuptial bed, and to the gates of the palace he had affixed a writing with the following inscription:—"During eight years I have embellished this country house, and lived happily in it, in the bosom of my family. The inhabitants of this estate, to the number of seven thousand, quit at your approach, in order that it may not be sullied by your presence. Frenchmen, at Moscow I have abandoned to you my two houses, with their furniture, worth half a million of roubles; here you will find nothing but ashes (4)." The nobles, in a public assembly, determined to imitate the example of the

(1) De Sade, *Dix Années d'Exil*, 231. Chateaub. II. 111. Lab. 183. Reguc. II. 34. Laitrey IV. 63.

The most graphic description of the interior of Moscow in the English language, is from the pen of the Marchioness of Londonderry, the brilliancy of which induces feeling of regret that the noble authoress should not have recorded her observations

in a more desirable form than the pages of an ephemeral periodical.

(4) The author received this anecdote in 1814 from the lips of Count Rostopchin himself, at Paris.—See also CHATEAUB. II. 271. *Précis* Hist.

Numantians, and destroy the city they could no longer defend. The authorities, when they retired, carried with them the fire-engines, and every thing capable of arresting a conflagration (1); and combustibles were disposed in the principal edifices to favour the progress of the flames. The persons intrusted with the duty of setting fire to the city, only awaited the retreat of their countrymen to commence the work of destruction.

1st night of the French in Moscow The sight of the grotesque towers and venerable walls of the Kremlin first revived the Emperor's imagination, and rekindled those dreams of Oriental conquest, which from his earliest years had floated in his mind. His followers, dispersed over the vast extent of the city, gazed with astonishment on the sumptuous palaces of the nobles and the gilded domes of the churches. The mixture of architectural decoration and shady foliage, of Gothic magnificence and Eastern luxury, excited the admiration of the French soldiers, more susceptible than any other people of impressions of that description. Evening came on, with increasing wonder the French troops traversed the central parts of the city, recently so crowded with passengers; but not a living creature was to be seen to explain the universal desolation. It seemed like a city of the dead. Night approached; an unclouded moon illuminated those beautiful palaces—those vast hotels—those deserted streets. all was still—the silence of the tomb. The officers broke open the doors of some of the principal mansions in search of sleeping-quarters. They found every thing in perfect order, the bedrooms were fully furnished as if guests were expected, the drawing-rooms bore the marks of having been recently inhabited, even the work of the ladies was on the tables, the keys in the wardrobes, but still not an inmate was to be seen. By degrees a few of the lowest class of slaves emerged, pale and trembling, from the cellars, showed the way to the sleeping apartments (2), and laid open every thing which these sumptuous mansions contained, but the only account they could give was that the whole inhabitants had fled, and that they alone were left in the deserted city.

Commencement of the conflagration Sept 13 But the terrible catastrophe soon commenced. On the night of the 15th a fire broke out in the Bourse, behind the Bazar, which soon consumed that noble edifice, and spread to a considerable part of the crowded streets in the vicinity. This, however, was but the prelude to more extended calamities. At midnight on the 15th, a bright light was seen to illuminate the northern and western parts of the city; and the sentinels on watch at the Kremlin soon discerned the splendid edifices in that quarter to be in flames. The wind changed repeatedly during the night, but to whatever quarter it veered the conflagration extended itself, fresh fires were every instant seen breaking out in all directions, and Moscow soon exhibited the spectacle of a sea of flame agitated by the wind. The soldiers, drowned in sleep or overcome by intoxication, were incapable of arresting its progress; and the burning fragments floating through the hot air began to fall on the roofs and courts of the Kremlin. The fury of an autumnal tempest added to the horrors of the scene, and it seemed as if the wrath of heaven had combined with the vengeance of man to consume the invaders in the city they had conquered (3).

Awful appearance during the following night But it was chiefly during the night of the 18th and 19th that the conflagration attained its greatest violence. At that time the whole city was wrapped in flames, and volumes of fire of various colours

(1) Bout. i 370. Lab 218 Chamb ii 119, 120. (3) Lab 209 Ségur, ii 447, 448. Chamb ii, Lab 184.

ascended to the heavens in many places, diffusing a prodigious light on all sides, and attended by an intolerable heat. These balloons of flame were accompanied in their ascent by a frightful hissing noise and loud explosions, the result of the vast stores of oil, tar, resin, spirits, and other combustible materials, with which the greater part of the shops were filled. Large pieces of painted canvass, unrolled from the outside of the buildings by the violence of the heat, floated on fire in the atmosphere, and sent down on all sides a flaming shower, which spread the conflagration in quarters even the most removed from those where it originally commenced. The wind, naturally high, was raised, by the sudden rarefaction of the air, to a perfect hurricane. The howling of the tempest drowned even the roar of the conflagration: the whole heavens were filled with the whirl of the burning volumes of smoke, which rose on all sides, and made midnight as bright as day (1); while even the bravest hearts, subdued by the sublimity of the scene, and the feeling of human impotence in the midst of such elemental strife, sunk and trembled in silence (2).

Con-ter-
tion and
clan-der in
the city

The return of day did not diminish the terrors of the conflagration. An immense crowd of hitherto unseen people, who had taken refuge in the cellars or vaults of the buildings, issued forth as the flames reached their dwellings: the streets were speedily filled with multitudes flying in every direction with the most precious articles of their furniture while the French army, whose discipline this fatal event had entirely dissolved, assembled in drunken crowds, and loaded themselves with the spoils of the city. Never in modern times had such a scene been witnessed. The men were loaded with packages, charged with their most precious effects, which often took fire as they were carried along, and which they were obliged to throw down to save themselves. The women had generally two or three children on their backs, and as many led by the hand which, with, trembling steps and piteous cries, sought their devious way through the labyrinth of flame. Many old men, unable to walk, were drawn on hurdles or wheelbarrows by their children and grandchildren, while their burnt beards and smoking garments showed with what difficulty they had been rescued from the flames. Often the French soldiers, tormented by hunger and thirst, and loosened from all discipline by the horrors which surrounded them, not contented with the booty in the streets, rushed headlong into the burning edifices to ransack their cellars for the stores of wine and spirits which they contained, and beneath the ruins great numbers perished miserably, the victims of intemperance and the surrounding fire. Meanwhile, the flames, fanned by a tempestuous gale, advanced with frightful rapidity, devouring alike in their course the palaces of the great, the temples of religion, and the cottages of the poor (3).

Explosion
at length
brave the
Kremlin.

The Emperor long clung to the Kremlin, in the hope that the cessation of the fire would enable him to retain his long wished-for conquest. But at length, on the 16th, the conflagration had spread in every direction the horizon seemed a vast ocean of flame, and the cry arose that the Kremlin itself was on fire. He gave vent to his rage by commanding the massacre of the unfortunate men who had been intrusted with the duty of commencing the fire, and, yielding to the solicitations of his followers, abandoned the Kremlin. The wind and the rush of the flames was so

(1) "At the distance of three quarters of a league from Moscow I could, at midnight, read the despatches which the major-general of the army addressed to me."—Dumas, *Souvenirs*, etc. 454.

(2) *Larrey* iv 73, 74. *Dumas*, *Œuvres* iii. 419, 454.

violent, that Berthier was almost swept away by their fury; but the Emperor and his followers arrived in safety before night at the country palace of Petrowsky. General Mathieu Dumas and Count Daru, who were among the last that left the Kremlin, could scarcely bear the intense heat as they rode along the quay to follow the Emperor; and on leaving it, their horses were with difficulty brought to pass between two burning houses at the entrance of the street, which formed the sole issue that remained to them. Arrived at length at Petrowsky, they had leisure to contemplate the awful spectacle which was presented by the conflagration. Early on the following morning, Napoleon cast a melancholy look to the burning city, which now filled half the heavens with its flames, and exclaimed, after a long silence—"This sad event is the presage of a long train of disasters (1)."

For thirty-six hours the conflagration continued, and during that time above nine-tenths of the city was destroyed. The remainder, abandoned to pillage and deserted by its inhabitants, offered no resources for the army. Moscow had been conquered, but the victors had gained only a heap of ruins (2).

Imagination cannot conceive the horrors into which the remnant of the people who could not abandon their homes, were plunged by this unparalleled sacrifice. Bereft of every thing, they wandered amidst the ruins, eagerly searching for a parent or an infant amidst the smoking heaps. pillage became universal, and from the scene of devastation, the wrecks of former magnificence were ransacked alike by the licentious soldiery and the suffering multitude. The city, abandoned to pillage, was speedily filled with marauders, and, in addition to the whole French army, numbers flocked in from the country to share in the general license. Furniture of the most precious description, splendid jewellery, Indian and Turkish stuffs, stores of wine and brandy, gold and silver plate, rich furs, gorgeous trappings of silk and satin, were spread about in promiscuous confusion, and became the prey of the least intoxicated among the multitude. A frightful tumult succeeded to the stillness which had reigned in the city when the troops first entered it. The cries of the pillaged inhabitants, the coarse imprecations of the soldiers, were mingled with the lamentations of those who had lost their parents, their children, their all, in the conflagration. Plunder became universal in those days of unrestrained license. the same place often beheld the general's uniform and the soldier's humble garments in search of pillage. The ground, in the parts which had been consumed, was covered with a motley group of soldiers, peasants, and marauders of all countries and aspects, who sought in the smoking ruins the remains of the precious articles which they formerly contained. The church of St-Michael, containing the tombs of the Emperors of Russia, did not escape their sacrilegious violence, but no treasures were found to reward the cupidity of the depredators. The shouts of the marauders were interrupted by the shrieks of the victims of military license, and occasionally drowned in the roar of the conflagration, while not the least extraordinary part of the clamour arose from the howling of the dogs, who, being chained to the gates of the palaces, were consumed in the flames with which they were surrounded (3).

While these terrible scenes were passing in the metropolis, the Russian army retired on the road to Kolomna, and after falling back two mar

Semidircular march of the Russian army toward Moscow In that direction, wheeled to the left, and by a semidircular march regained the route to Kaluga, in the neighbourhood of the Smolensko road. By this masterly movement, Kutusoff at once drew near to his reinforcements, covered the richest provinces of the empire, secured the supplies of the army, and threatened the communications of the enemy. The city of Kaluga, stored with ample magazines, served as the base of the future operations of the army. The camp at Tarutino, where he took post, was speedily filled with provisions, and the multitude of recruits who daily arrived from the southern provinces, restored the spirits of the soldiers. Placed on the central route between Moscow and Kaluga, this position enabled the Russians to defend all the avenues to that important city, and the event soon showed of what consequence the admirable selection of this station was to the future success of the campaign (1)

Feelings of the soldiers in the Russian army on this occasion. In making this circular march, the troops were filled with the most melancholy feelings. The fugitives from the metropolis had already spread the intelligence of the fire, and the lurid light which filled one-half of the heavens, attested too plainly the truth of their tale. The roar of the flames, and the fury of the tempest, occasioned by the extraordinary heat of so large a portion of the atmosphere, was heard even at so great a distance and as the troops marched at night, their steps were guided by the glare of the conflagration. One only feeling pervaded every breast, that of profound and ineffaceable indignation; one only passion animated every bosom, that of stern and collected vengeance. The burning of the holy city had effaced all lighter feelings, and impressed a religious solemnity on that memorable march. Words there were none spoken in that vast array: the hearts of all were too big for utterance; the tread of the men alone was heard from the ranks; but the silent tears which trickled down the cheek, and the glance of fire which was turned towards the heavens, bespoke the deep determination that was felt. Silent and mournful they continued their way, interrupted only by the burning fragments which occasionally fell among their ranks, and for a moment illuminated the stern visages of the soldiers. They left behind them their palaces and their temples, monuments of art and miracles of luxury: the remains of ages which had passed away, and of those which were yet unfinished; the tombs of their ancestors and the cradles of their descendants: nothing remained of Moscow but the remembrance of the city and the resolution to avenge it (2)

General
inclination
of conquest
from the
north to the
south.

THE stream of conquest in every age has flowed from the north to the south. The superiority of arms, or the power of knowledge, have sometimes given the civilisation of refined, a temporary advantage over the courage of barbarous states; but all the great settlements of mankind have come from the northern regions. The fanaticism of Arabia, the discipline of Rome, for a time subdued the fairest regions of the globe, but the dynasties they established were of no permanent duration. The empire of the Caliphs hardly survived the immediate descendants of Omar; the crescent of Mahomet wavered till it was steadied by the conquest of Turkestan; the discipline of Rome more easily conquered the whole of Asia than a few semi barbarous tribes in the north of Germany; and all the courage of the legions could not subdue the nations beyond the frontier of the Danube, or prevent the provinces of their dominion from at length becoming the prey of an artless but courageous northern enemy.

Final cause
of this law
of nature.

It is by the continued operation of this military superiority of the north over the south, that the purity of the moral atmosphere is preserved, and the progress of wealth rendered consistent with the preservation of virtue and energy among mankind. Civilisation, it is true, induces opulence, and opulence gives birth to corruption; but courage as certainly accompanies poverty and courage in the end ensures conquest. The accumulated wealth and decaying hardihood of civilisation, at once provoke hostility and disarm resistance; while the augmented numbers of turbulent barbarism both require expansion and compel obedience. The stream of conquest overwhelms for a time the monuments of civilisation, and buries the labours of useful industry; but the victors insensibly acquire knowledge from the people they have vanquished, and yield to the superiority of more advanced civilisation; while the conquered provinces are regenerated by the infusion of barbarian valour, and regain, amidst the hardships of life, the virtue they had lost by its refinements. Ages elapse during the mighty change, and generations seem doomed to misfortune during the winter of existence; but the laws of nature are incessantly operating, and preparing in silence the renovation of the world.

Arrival of
the era
in the
French wars,
when the
north rolled
back con-
quest to the
south.

The era of Napoleon was not destined to form an exception to this general tendency. The enthusiasm which the French Revolution had occasioned, the talent it had developed, the military abilities of its chief, had rolled the tide of conquest backward to its source, and pushed far beyond the utmost limits of the Roman empire the dominion of southern civilisation. But the concurrence of these extraordinary events could not permanently alter the destinies of mankind. The flames of Moscow were the funeral pile of the French empire: from its ashes arose a spirit which could never be subdued. From that period commenced a succession of disasters which brought back the tide of conquest to the shores of the Rhine, and re-established the wonted ascendancy of the northern over the southern regions. But the second invasion of the northern nations was not stained by the barbarities which marked the first: the irruption of Attila was very different from that of Alexander. Other conquerors have preceded him in the path of military glory; other nations have bowed beneath the yoke of foreign dominion; and other ages have seen the energies of mankind wither before the march of victorious power. It has been reserved to our age alone to witness, it has been the high prerogative of Russia only to exhibit, a more animating spectacle: to show us power applied only to the purposes of beneficence, victory made the means of moral renovation, conquest become the instrument of political resurrection. After resisting the mightiest armament which the power of man had ever assembled against the liberties of mankind, we have seen her triumphant arms issue victorious from their desolated country, give liberty to those who had been compelled to attempt their subjugation, and seek to avenge the ashes of their own capital by sparing the cities of their prostrate enemy. Before the march of her victorious power, we have seen the energies of the world revive, we have seen her triumphant voice awaken every fallen people to nobler duties, and recall the remembrance of their pristine glory; we have seen her banners waving over the infant armies of every renovated people, and the track of her chariot wheels followed, not by the sighs of a captive, but the blessings of a liberated world.

Moral re-
novation of
Europe
which
sprang
from these
events

In this moral renovation of nature all ranks have been compelled to participate. The high and the low, the rich and the poor, have been alike found at the post of honour. The higher orders, by whose weakness and vice an inlet was opened for these misfortunes, have been purified in the misfortunes themselves, and in the school of adversity trained to nobler employments, and called to the exercise of more animating duties. The lower orders, by whose cupidity and ambition they were subsequently occasioned, have learned wisdom and gained experience in the course of the same arduous struggle, and the misfortunes of states have given them a weight and an importance unknown in the former ages of the world. Even the sovereigns of Europe have felt the influence of the same causes: they have been compelled to leave the abodes of ease and of affluence, to join in the soldier's duties and partake of the soldier's glory; they have been compelled to justify the eminence of their rank by the display of all the qualities by which it is ennobled. All that is great and all that is noble in Europe, have been assembled in one memorable field: the prayers of emperors have ascended to Heaven for the success of the soldier's arm, and the meeting of the sovereigns of Europe within the walls of Leipsic has realized all the magnificence of eastern imagination, and all the visions of chivalrous glory.

*Colossal
adoption of
this period,
and brave
courage of
the Em-
peror and
his staff.
Sept. 16.*

But the dawn of the day which was fraught with these mighty events, and destined to set amidst this blaze of glory, was dark and gloomy to Russia. The necessity of abandoning the metropolis, the ruin of the ancient capital, spread dismay through the empire. On the 16th September, Kutusoff announced the melancholy event, adding, as the only matter for consolation, "that the city was bereft of the population, who constituted its strength" that the people are the soul of the empire, and that, where they are, there is Moscow and the empire of Russia." The Emperor displayed in these trying circumstances a heroism worthy of ancient Rome. His address to the nation, announcing the fall of Moscow, concluded with these remarkable and prophetic words—"Let there be no pusillanimous depression, let us swear to redouble our courage and perseverance. The enemy has entered Moscow deserted, as into a tomb, without the means either of ruling or subsistence. He invaded Russia at the head of three hundred thousand men; half have perished from the sword, famine, or desertion, the other half are shut up in the capital, bereft of every thing. He is in the centre of Russia, and not a Russian has yielded to his power. Meanwhile, our forces increase and surround him. He is in the midst of a warlike people, whose armies envelope him on every side. soon, to escape from famine, he will be compelled to cut his way through our brave battalions. Shall we then yield when Europe is in admiration at our exertions? Let us show ourselves worthy of giving her an example, and bless the Hand which has chosen us to be the first of nations in the cause of freedom." In the present miserable state of the human race, what glory awaits the nation, which, after having patiently endured all the evils of war, shall succeed by the force of courage and virtue, not only in reconquering its own rights, but in extending the blessings of freedom to other states, and even to those who have been made the unwilling instruments of attempting its subjugation! May the blessing of the Almighty enable us to return good for evil, by the aid of his succour may we be enabled to triumph over our enemies, and in saving ourselves may we become the instruments of his mercy for the salvation of mankind (1)!"

*Private
sentiments of
the Em-
peror in
private.*

Nor did the private sentiments and conduct of the Emperor fall short of these magnanimous declarations. On the morning on which the intelligence of the battle of Borodino reached St. Petersburg, he sent for the English ambassador, Lord Cathcart. Without attempting to disguise that they had been overpowered in that bloody fight, and that the sacrifice of Moscow would be the consequence, he desired him to inform his Government, that not for one nor twenty such calamities would he abandon the contest in which he was engaged; and that, rather than submit, he would abandon Europe, and retire altogether to the original seats of his ancestors in the Asiatic wilds (2).

*Plan of
the Rus-
sian general
for not
resisting
the French.*

The preparations of the Russian Government corresponded to the magnitude of these anticipations, and their firmness was worthy of the cause in which they were engaged. The peace with Turkey had rendered disposable the greater part of the Moldavian army; while the treaty with Sweden, concluded by the Emperor in August at Åbo, enabled the regular forces of Finland to be withdrawn for the reinforcement of the corps of Count Wittgenstein. While the main Russian force, therefore, retired before Napoleon, and drew the war into the interior of Russia, two

(1) *Rept. li. 133, 134. Stager, li. 73, 74.*

(2) I received this striking anecdote from the lips of my venerable friend Lord Cathcart himself.

powerful armies were preparing to intercept his communications and cut off his retreat. The corps of Wittgenstein, augmented by the greater part of the troops of Finland, under Count Steinheil, and the militia of St -Petersburg to the numerical force of fifty thousand men, received orders to act vigorously against St -Cyr, and drive him from Polotsk, in order to approach the bank of the Oula and the line of retreat of the main French army. At the same time the army of Moldavia, under Tchichagoff, of an equal force, was directed to advance from the southern provinces, to pass the corps of Schwarzenberg, and establish itself on the line of the Beresina, and at the important bridge of Borissow. Thus, while Napoléon was resting in fancied security among the ruins of Moscow, and impatiently expecting the submission of Russia, a formidable force of a hundred thousand men was moving towards Poland, to cut off his retreat to western Europe. The empire was pierced to its heart, but instead of yielding up the contest it was extending its mighty arms to stifle the aggressor (1)

Extraordi-
nary mag-
nitude of
these com-
binations

History can furnish no parallel to the magnitude of their military combinations, or the sagacity with which they were conceived.

Had subsequent events not rendered their complete execution impracticable, they unquestionably would have led to the surrender of the whole French army. From the forests of Finland to the steppes of the Ukraine, from the confines of the Frozen to those of the Torrid Zone, multitudes of armed men were directed to one centre, the days of their march were accurately calculated, and the point of their union previously fixed. The neighbourhood of Borissow and the 22d of October, were assigned as the place and time of their junction,—a place about to acquire a fatal celebrity in French history. It is not to be forgotten that the orders which assembled these distant masses were issued from St -Petersburg, during the consternation which immediately followed the fall of Moscow, and when Napoleon

(1) Bout ii 128, 130 Chamb ii 191, 192, 289. The orders to this effect, from Alexander in person, which subsequently received Kutusoff's approbation, and were dispatched to Tormasoff, Tchichagoff, Wittgenstein, and Steinheil, are dated September 18, 1812, and are given in Boutourlin, ii. 211 and Chambray, ii. 289. The precision with which the directions were given, and the marches calculated, so as to secure the grand object of combining a hundred thousand men at Minsk, Borissow, and the line of the Beresina, from the 15th to the 20th of October, directly in the rear of the main line of communication and retreat of the French army, is worthy of unqualified admiration.—"Tchichagoff was ordered to be at Pinsk by the 2d October, and thence to march by Nieswig to Minsk, so as to reach the latter town by the 16th, and thence advance to the line of the Beresina, and fortify Borissow and all the points susceptible of defence on the line of the enemy's retreat, so that the army of Napoleon, closely followed on its retreat by Prince Kutusoff, should experience at every step a formidable resistance. He was in this position to cut off all communication, even by couriers, between the French army in the interior and the remainder of Europe, and await the progress of events. Tormasoff received instructions to commence offensive operations on the 8th of October against Schwarzenberg, with a view to drive his force from the environs of Nieswig and Pinsk, and leave the line of the Beresina clear for the occupation of Tchichagoff and Wittgenstein, who were to descend from the north at the same time in the same direction. Wittgenstein himself was to be reinforced by the 8th October by eleven thousand of the militia

of St Petersburg, nine thousand old soldiers from Finland, and eight thousand of the militia of Novogorod, and, after having collected all his reinforcements, he was directed to commence offensive operations on both sides of the Dwina, and strive to expel the enemy from Polotsk, and overwhelm the corps of Oudinot, who was to be driven off in the direction of Wilna, so as to separate him from the French Grand Army. Having accomplished this success, Wittgenstein was to leave the care of looking after Oudinot's remains to Count Steinheil, who was placed further to the west, in the direction of Riga, and move himself with the utmost rapidity to Doksitz, where he was to be by the 22d October, and open up a communication with Tchichagoff at Minsk. In that situation he was to wait the course of ulterior events, and meanwhile do his utmost to secure every pass by which the enemy might retire from Smolensko by Witopsk towards Wilna. Lastly, the corps of Count Steinheil, which had been drawn from Finland, was to approach Riga, upon which the governor of that fortress was to march out with about twenty thousand men, and co operate with him in such a manner as to draw the whole attention of Macdonald and prevent his sending succours to St -Cyr or Oudinot, and in the event of those marshals being beaten by Wittgenstein, ordered to fall upon their remains." These movements, taken in conjunction with those of the Grand Army in the neighbourhood of Moscow, and directing the concentration of forces from the Danube to the Gulf of Finland, directly in the rear of the French army, are the greatest, and perhaps the most skillful military operations recorded in the annals of the world.

confidently calculated on the immediate submission of the Russian Government (1)

Memorandum of Napoleon to secure his communications.

In advancing to Moscow, the French Emperor, on his part, was not unblissful of his line of communication. The corps of Victor, thirty thousand strong, had been, agreeably to the directions already given, stationed at Smolensko, with the double view of protecting the rear of the Grand Army, and aiding, in case of need, the forces of St.-Cyr on the Dwina; while the corps of Augereau, amounting to fifty two thousand men, was stationed in *échelon*, through the Grand Duchy of Warsaw and the Kingdom of Prussia Schwartzemberg, at the head of the Austrians, was more than a match for Tormasoff; and St.-Cyr, with the corps of Oudinot and the Bavarians, was destined to keep in check the army of Wittgenstein. It is remarkable that the penetrating eye of the French Emperor, so early as the 20th of August, and of course prior to the battle of Borodino, discerned the probable importance of the country between Minsk, Smolensko, and Witopsk, in the ulterior operations which might be expected before the close of the campaign, and that he made, in consequence, every imaginable effort to strengthen his forces in that vital point of his communications. Victor received the command in-chief of the forces in Lithuania—he was to establish his headquarters at Smolensko, and powerful reinforcements, especially of Polish and Lithuanian troops, were directed from all quarters to various points from that city by Borissof to Minsk. The great objects of this marshal were, to be, keeping up on the one side a communication with Wilna, where a strong garrison and vast magazines were stationed, and on the other with the Grand Army in the interior of Russia (2)

His unsuccessful attempt at negotiation.

Napoleon returned to the Kremlin, which had escaped the flames, on the 20th September, and anxiously awaited the impression which the intelligence of his success should produce on the Russian Government. To aid the supposed effect, Count Lauriston was dispatched to the headquarters of Kutnaoff, with authority to propose an armistice, and Murat had an interview with General Beningsen. Prince Wolkonsky was forwarded with the letter of Napoleon to Petersburg while the French deputation were amused by hopes of accommodation held out by the Russian generals (3)

Napoleon in vain expects submission from the Russians.

Meanwhile, Napoleon lay inactive at Moscow, expecting the submission of the Russian Government. But day after day, and week after week, rolled on without any answer to his proposals: the winter was visibly approaching, and the anxiety of the troops in regard to their future destination could not be concealed. His first proposal was to burn the remains of Moscow, march by Twer to St.-Petersburg, and then form a junction with Macdonald, who was still in the neighbourhood of Riga. But the difficulty of advancing with an army encumbered with baggage and artillery on a single chaussee, traversing morasses and forests at the commencement of the winter season, was too obvious to his generals, and speedily led to the abandonment of the design. He risked the existence of his army, therefore, by a continued residence at the Kremlin, and allowed the precious hours, which could never be recalled, to pass away, without taking any steps towards securing permanent quarters for the winter (4)

His reasons
for a pro-
tracted stay
at Moscow

It is not to be supposed from this circumstance, however, that he was insensible to the dangers of his position, or the increasing perils of a retreat during a Russian winter. These dangers were fully appreciated by his discerning genius. but, great as they were, they were overbalanced in his estimation by the necessary consequences of so fatal a measure as a general retreat. The illusion of his invincibility would instantly be dispelled, and Europe would resound with the intelligence of his overthrow. "I am blamed," said he, "for not retreating, but those who censure me do not consider that it requires a month to re-organize the army and evacuate the hospitals that, if we abandon the wounded, the Cossacks will daily triumph over the sick and the isolated men. A retreat will appear a flight and Europe will re-echo with the news. What a frightful course of perilous wars will date from my first retrograde step! I know well that Moscow, as a military position, is worth nothing but as a political point its preservation is of inestimable value. The world regards me only as a general, forgetting that I am an emperor In politics, you must never retace your steps if you have committed a fault, you must never show that you are conscious of it error, steadily adhered to, becomes a virtue in the eyes of posterity (1) " By such specious arguments did this great man seek to justify the excessive self-love which formed the principal blot in his character, and strive to vindicate the postponement, the painful acknowledgment, of defeat, or rather the career of ambition, like that of guilt, is interminable, and, when once it pauses in its course, immediate ruin ensues.

Continued
finess of
the weather
there

Contrary to the usual course of nature in that latitude, the climate, during the first weeks of October, continued fine, and the sun of autumn shed a mild radiance over the scene of approaching desolation The Emperor, in his bulletins, compared it to the weather at Fontainebleau in the close of autumn The Russians, accustomed to see the snow begin to fall at that period (2), regarded the fineness of the weather as a sign of the Divine favour to their enemies little imagining that it was lulling them into a fancied security on the eve of their destruction

Rule of the
discipline of
the French
army

Meanwhile, the discipline and efficiency of the French army was daily declining amidst the license which followed the pillage of Moscow. All the efforts of their commanders were unable to arrest the growing insubordination of the troops Pillage had enriched numbers, but amidst the general misery with which they were surrounded, the most precious articles were of no real value, and were gladly exchanged for a temporary supply of the necessaries of life Miserable horse-flesh was eaten by the officers, arrayed in the richest furs and silks of the East, out of golden dishes the common men were often on the point of starving. The Emperor sought to conceal his anxiety, and restore the military spirit of his soldiers, by daily reviews at the Kremlin, and, notwithstanding the fatigues and consumption of the campaign, the troops exhibited a brilliant appearance when they defiled through the palace of the Czars (3)

Increasing
strength
and admira-
ble situation
of the Rus-
sian army

Very different was the spectacle exhibited in the patriot camp of the Russian army. Discipline, order, and regularity were there conspicuous: the chasms in the battalions were filled up by the numerous levies who arrived from the southern provinces all the necessaries of life were to be had in abundance, and even many luxuries were brought thither by the wandering merchants from the neighbouring ci-

(1) Segur, ii 93, 94

(2) Lab 241, 23 and 25. Bulletin, Moniteur, 121

(3) Segur, ii 66, 67 Lab 237 C

ties. The camp at Taroutino, now become the last hope of European freedom, presented the animating spectacle of universal enthusiasm—the veterans burned with desire to revenge the wrongs they had witnessed inflicted on their country; the young soldiers, to prove themselves worthy of their heroic brethren in arms. None of the provinces refused to answer the call for patriotic exertion; the roads were covered by recruits, joyously marching to the common rendezvous—the accustomed restraints to prevent desertion were abandoned, when all were pressing forward to the scene of danger. In the enthusiasm of the moment, the natural ties of affection seemed subdued by a holier feeling—the lamentations usually heard in the villages at the departure of the conscripts, were exchanged for shouts of exultation; and mothers wept for joy when they learned that fortune had selected their sons to be the defenders of their country. The Cossacks of the Don took arms in a body at the call of Platoff, and twenty-two regiments soon joined the army, composed chiefly of veterans whose period of service had expired, or youths who had never borne arms, but who joyfully resumed or took up their lances when their country was in danger. These rude allies entered the camp, uttering loud shouts, which resounded within the French lines; and the ancient war-cry of the crusaders, *Dieu le veult! Dieu le veult!* was heard from the descendants of the enemies of the champions of Jerusalem (1).

Perhaps
and indeed
of the
victims who
were
to the
Russian
armies.

The savage aspect of the horses which these warriors brought with them from the wilderness, their uncombed manes which still swept the ground, their wild and unbroken carriage, attested how far the spirit of resistance had penetrated, and the strength of the feeling which had brought the children of the desert into the

dwelling of civilized life. Constant discharges of musketry from the Russian lines, indicated the multitude of recruits who were receiving the elements of military instruction. The troops at the advanced posts did not dissemble from the French the danger they ran by remaining longer in their present position—they expressed their astonishment at the security of their invaders on the approach of winter, “in fifteen days,” said they, “you will see your nails drop from your fingers, and your muskets fall from your hands. Had you not enough of food in your own country, room for the living, tomb for the dead, that you have come so far to leave your bones in a hostile land (2)?”

Kutusoff
has found
of the ad-
vantages of
his posi-
tion.
Sept. 28.

Kutusoff clearly felt, and nobly expressed in his letters to the Emperor, both the sacrifice which it cost him to abandon Moscow, and the immense advantages which his present position gave him

with a view to the future operations of the army. “Foreseeing” said he, “the necessity of the abandonment, I had already taken measures for removing from the city the chief part of the public and private riches it contained. Almost all the people have quitted the capital—that venerable city is left like a desert of ramparts and private houses—what the body is when the soul has quitted it, such is Moscow abandoned by its inhabitants. The soul of the empire is the people; and where they are, there is Moscow and the empire. Doubtless, the desperate resolution to abandon the venerated city of our ancestors, will wound every heart, and leave in the minds of the Russians ineffaceable regrets, but after all it is but a town for the empire—the sacrifice of a part for the salvation of the whole. That sacrifice will procure me the means of preserving my whole army. I am master of the road to Tula and Kaluga; and I cover, by the extended line of my troops, the magazines of our resources, the most abundant provinces of the empire,

(1) Séguet, II. 90. Bout, II. 117. 118.

(2) Séguet, II. 90. Bout, II. 121. Clanch, II. 278.

which furnish to our armies their flocks and their harvests. If I had taken up any other position, or had obstinately insisted upon preserving Moscow, I should have been obliged to abandon these provinces to the enemy, and the consequence would have been the destruction of my army and of the empire. At present I preserve entire my communication with Tormasoff and Teliuchazoff, and am in a situation to form, with my whole forces, a continuous line, which will completely intercept the communications of the enemy, and even straiten his intercourse with Smolensko itself. Thus, I trust, I shall be able to intercept all the succour which may be forwarded to him from his rear, and in the end constrain him to abandon the capital, and confound all his haughty projects (1) "

Meanwhile, though a species of armistice reigned between the the main armies, a destructive warfare began on the flanks and rear of the French position, which proved of the utmost moment in the sequel of the campaign. After the example of the Spaniards, the Russians established a chain of partisans round the French army, which cut off all their foraging parties, and, growing bolder from success, soon held them almost imprisoned in their cantonments. The militia of the contiguous provinces, aided by the Cossacks of the Don, formed a vast circle round Moscow, occupying every road, and cutting off all supplies of provisions to the invading army. The want of forage was soon so severely felt, that the cavalry were obliged to penetrate to a considerable distance in quest of subsistence, and these detachments, in most cases, fell into the hands of the numerous corps of the hostile circle. So early as the 10th October General Dorokoff captured a whole battalion of Westphalians, and numerous magazines in the town of Vereia, while Colonel Davidoff, on the great road to Smolensko, destroyed numerous detachments even of the Imperial guard. This latter officer had the merit of recommending, and himself setting the example of the organization of this formidable species of force in the Russian war, and the event soon proved that it was calculated to effect far greater changes there than in the mountains of Spain, as the long line of communication in the French rear was open to their attacks, and the irregular hordes from the Don furnished an ample supply of troops admirably calculated for this kind of warfare. During the first three weeks of October, the partisans round Moscow made prisoners of no less than four thousand one hundred and eighty French soldiers; and the reports from Murat announced the alarming intelligence, that *one-half* of the whole surviving cavalry of the army had perished in these inglorious encounters (2).

Although the principal object of the Russians in the conflagration of Moscow had been to render it impossible for the French to remain there; yet the effect which did take place, was not in the end less disastrous to the army of the invaders than the design which was originally in view could have been. After the troops returned to the capital, immense stores of all sorts were discovered, which had been deposited in the innumerable cellars with which the city abounded, and escaped the conflagration. The magnitude of the booty which thus came to be at their disposal, proved fatal to the discipline of the soldiers, while it in no degree relieved the real wants of the army. Wine, brandy, and rice, gold and silver vessels, sumptuous apparel, rich silks, embroidered stuffs, pelisses, and gorgeous draperies, were to be had in abundance, "

(1) Kutusoff to Alexander, Sept. 16, 1812. " 23, 50. *Revue* " 11
Chaulib " 278, 279. *Fain* " 95

(2) Davidoff's *Guerre des Partisans*, 127. *Segur*,

there was none for the horses, though there was immense ammunition for the guns (1). These were the real wants of the army, and they were in no degree relieved by the vast and rich stores which, when the conflagration ceased, were extracted from the cellars of the city. Thus the French suffered more from the continued occupation of Moscow, than they could possibly have done from being obliged to abandon it; for they found amidst its ruins luxuries which proved fatal to their discipline, while they did not obtain the stores necessary to their existence (2).

Increasing
danger
threatening
to the
French
position.

The eyes of the French army were now opened to the imminent danger which they had incurred in advancing to Moscow after the battle of Borodino, and how well founded had been the advice so strenuously given by Marshal Ney, to retire at once from that fatal field. To gain the victory on that occasion required the sacrifice of so large a portion of the army, and especially of the cavalry, that they were no longer able to keep the field, except in large masses. In proportion as the light troops of the enemy were augmented by the concourse of the nomadic tribes from the eastern provinces of the empire, the shattered squadrons of France, which had escaped the carnage of Borodino, melted away before the fatigues and the dangers of incessant warfare. It was in vain, therefore, that above a hundred thousand veteran troops still occupied the capital, and that a thousand pieces of cannon still guarded the approaches to the Kremlin: this vast assemblage of armed men was in danger of perishing, from its very numbers, for want of subsistence, in the midst of an exhausted country; this formidable train of artillery might soon become an unserviceable burden, from the rapid destruction of the horses which conveyed it. The French infantry, like the Roman legions, would be powerless in the midst of the Scythian cavalry and the disasters of Antony and Julian appeared about to be renewed in the midst of the solitudes of Russia (3).

Napoleon's
early per-
suasions
for re-
treat.

Impressed with these ideas, a general feeling of disquietude filled the French army, and the more intelligent of the officers were seized with the most gloomy forebodings as to the fate of the army, if the stay at Moscow was prolonged for any considerable time. So strongly impressed was one of the ablest of its officers with these dangers, that he has told us himself that he regarded the burning of Moscow as a fortunate event, as it was likely to render a stay in the heart of Russia impossible, and compel the Emperor, how unwilling soever, to a retreat (4). Napoleon himself, though he had opened a negotiation with Kutusoff, from which he still hoped the happiest results, yet in private was well aware that if these attempts at a negotiation proved fruitless, he would be driven to that extremity. In the

first days of October, only three weeks after he had entered the capital, he gave orders for evacuating the hospitals on Smolensk; and, on the 6th of the same month, he wrote to Berthier, strongly urging the adoption of the measures necessary for a retreat by Mojaisk and Wiazma to that city (5).

(1) "We have found in Moscow 2,000,000 of cartridges, 300,000 pounds of powder, 300,000 of saltpetre and sulphur, and an immense quantity of musons and balls. It is triple what we consumed in the last battle. We can now fight four such battles as Borodino."—Barclay de Tolly to Alexander, 18th September 1812, *P. H.* II, 137.

(2) *Camb.* II, 357-183. *P. H.* II, 191, 137.

(3) *Quil. de Toul.* 374.

(4) *Dumas, Rec.* III, 450.

(5) *P. H.* II, 147, 148.

"Give instant orders to the generals commanding on the road to Smolensk, to make themselves masters of a circuit of ten leagues round their respective stations, and collect all the horses and carriages which they need in to carry our wounded. Charge the Duke of Albeville, on his highest responsibility, to evacuate the wounded here and at Kolobak on Wiazma; and the commander there to do the same on Smolensk."—Barclay de Tolly to Berthier, Oct. 16, 1812, *P. H.* II, 418.

Extreme difficulty of keeping open the communication to his rear. Sept. 20.

In truth, however, the commands of Napoléon to keep his rear clear, and secure the communication with Smolensko, were more easily issued than obeyed; for the commander along the line to Wilna, notwithstanding all the pains he had taken to station troops in *echelon* along the whole road, was quite unable to keep off the enemy, the number and audacity of the parties who infested that vital artery soon became so excessive, that Baraguay d'Hilliers, who was in command at Wiazma, wrote to Berthier so early as the 26th September, that the number of the partisans by whom he was surrounded was daily augmenting that he was entirely destitute of provisions or ammunition, and could not exist unless a magazine were formed at his station, and that he was under the necessity of stopping the convoys for Moscow, to get food and ammunition for his own troops and ten days afterwards he wrote that he was as completely blockaded at Smolensko as at Wiazma, that he had not troops sufficient to guard a single convoy, that the regiments which came up to join him from the Vistula were little better than skeletons, with almost all their officers dead, that without reinforcements the passage could no longer be kept open; that eight times the forces at his disposal were indispensable, and that notwithstanding his urgent entreaties, he had not received a man to aid him in his efforts (1).

Meaning a formal resolution not to treat for peace.

During this critical period, big with the fate of Russia and of the world, Napoleon was amused by the show of a negotiation, which, as already seen, he had opened with the Russian commander-in-chief. But astute as he was alike in the cabinet as the field, he here proved no match for the diplomatic talent of the Russian generals, and suffered himself to be duped by that profound dissimulation, in all ages the mark of the Russian character, and which in an especial manner distinguished their greyhaired chief. Kutusoff's real object was to gain time, till winter set in, and retreat became impossible, or obviously ruinous to the French army. But even this shadow of a negotiation, at so critical a period, was in the highest degree displeasing to the Emperor Alexander, who was no sooner informed of the reception of Lauriston at the Russian headquarters, and the commencement of an opening for conferences, than he wrote to Kutusoff, expressing his high displeasure at the proceeding, and his absolute command, to "admit of no negotiation whatever, or relation tending towards peace with the enemy (2) "

First appearance of snow and increasing disquiet of the French. Oct. 13.

At length, on the 15th October, a shower of snow fell, and announced the approach of another danger of a still more formidable kind. At the same time, Kutusoff made the French lines re-echo with discharges of artillery, in commemoration of the entry of Madrid by the English troops. In a proclamation addressed to his soldiers,

(1) Baraguay d'Hilliers to Berthier, Sept. 20 and 30, 1812. *Chamb. iii* 280, 280.

(2) Bout in 131. *Chamb. ii* 208, 303.

"The report of Prince Michel Larionowitz has informed me of the conference you have had with the French aide-de-camp Lauriston. The conversations I had with you at the moment of your departure for the army intrusted to your care, have sufficiently made you aware of my firm resolution to avoid with the enemy every sort of negotiation or conference tending to peace. I now repeat, in the most solemn manner, the same injunction, and it is my command that this resolution should be acted upon in the most rigorous and immovable manner. I have in like manner learned, with the most extreme displeasure, that General Bennigsen

has had a conference with the King of Naples, and that too without any assignable motive. I now order you to make him acquainted with my high displeasure, and I require of you the most rigorous solicitude and watchfulness to prevent any such unauthorized step being taken by any of your generals or officers in future. All the instructions you have received from me, all the determinations contained in my orders, in a word, every thing should conspire to convince you that my resolution is not to be shaken, and that at this consideration on earth can induce me to the war, or weaken the sacred duty of our injured country."—ALEXANDER.

24th Oct. 1812, *Chamb. ii* 304.

he declared, "The campaign, finished on the part of the enemy, is only commencing on ours. Madrid has fallen. The hand of Omnipotence presses on Napoleon. Moscow will be his prison of his tomb: the Grand Army will perish with him. France will fall in Russia (1) "

*Kutuzoff's
purpose to
retreat.*

Alarmed by the visible approach of winter, Napoleon at length issued for the purchase of twenty thousand horses: the trophies of the Kremlin, the great cross of St. Ivan and the wounded, were directed to move upon Mofalsk: the muskets of the wounded at Kolotoskoi and the caissons of the reserve, were ordered to be destroyed. The troops were commanded to be provided with forage and subsistence for a long march: a vain attempt in a country totally exhausted of resources, and in which he was hemmed in by a circle of enterprising enemies (2)

*Kutuzoff's
purpose of
the state of
his army.
Oct. 12.*

Kutuzoff, at this period, wrote in the most encouraging terms to the Emperor, on the immense advantages which he had derived from the position in front of the southern provinces, which he had so skilfully obtained—"The army," said he, "is at rest, and daily receives reinforcements. The different regiments fill up their chains, and complete their numbers, by means of recruits who daily arrive from the southern provinces, and who burn to measure their strength with the enemy. Abundant forage and good water have entirely re-established our cavalry. The troops experience no want of provisions. All the roads in our rear are covered with convoys of provisions coming from the most abundant provinces. Convalescent officers and soldiers daily rejoin their standards; while the sick and wounded, nursed in the bosom of their country, enjoy the inestimable advantages of receiving the tender cares of their families. On the other hand, such is the state of disorganization of the French army, that they are not in a condition to undertake any thing against us. They can only obtain provisions with extreme difficulty; and all the prisoners concur in declaring that they have nothing but horse-flesh, and that bread is even more rare than butcher meat. Their artillery horses, and those of the cavalry, suffer immensely: the greater part of their dragoons perished in the battle of Borodino, and those which remain are fast melting away under the destructive attacks of our light horse. Hardly a day passes in which we do not make three hundred prisoners. The peasants, from the tops of their steeple, give signal of the enemy's approach, and join in attacking them. Such is their spirit, that numbers every where come forward demanding arms, and they inflict summary chastisement on the backward and deserters. The arm of the Most High is evidently upraised against our enemies. I have just received the account of the capture of Madrid by the Spaniards and English (3) "

*Kutuzoff's
purpose
to resume
offensive
operations.
Oct. 7.*

At length, having completed the re-organization of his army, the Russian general resolved to resume offensive operations. The French advanced guard, under Murat and Poniatowski, thirty thousand strong, was posted in the neighbourhood of Winkowo, and kept so negligent a guard as to offer a tempting opportunity for a surprise. Nevertheless, the Russian commander hesitated at striking so important a blow, lest he should awaken Napoleon from his fancied security before the commencement of winter had rendered a regular retreat impracticable: but, when it became evident that the French army was about to retire, he no longer hesi-

(1) Bulletin, by 112. See H. 102. Chamb. H.

(2) Kutuzoff to Alexander, Oct. 12, 1812, Chamb. H. 304, 307

(3) Segur t. 100, 102. Chamb. H. 317. Fals. H.

tated, and intrusted the execution of the attack to General Beningsen. The attacking force was divided into five columns. the first, under the command of Count Orloff Demissoff, was destined to turn the enemy's left, and cut off his retreat, the second, under the orders of General Bagawouth, supported by sixty pieces of cannon, was directed to attack the left, and support Count Orloff, Count Ostermann, with the third column, was ordered to maintain the communication with the two last columns, under the orders of Generals Doctoroff and Raefskoi, which, with seventy-two pieces of cannon, were intended to attack the enemy in front, and prevent him from sending succours to the left, where the serious impression was expected to be made. To cover the whole movement, General Milatadowitch, with the advanced guard, was to remain in his old position till the firing had commenced, when he was to support the column which led on the attack in front, and push on with Raefskoi towards Winkowo (1).

At seven in the evening of the 17th October, the attacking columns broke up from the camp at Taroutino, and marched during the night to the different stations assigned to them. The attack was intended to have been made at daybreak on the 18th, but the delays consequent on the march of so many detached bodies delayed the commencement of the battle till seven. The French, though taken by surprise, defended themselves bravely till the appearance of Count Orloff, in the rear of their left, threw the cavalry of Sebastiani into disorder, which soon communicated itself to their whole line. If the third column, destined to support Orloff, had been on their ground at the appointed time, the Russians might have seized the great road to Moscow, and entirely cut off the enemy's retreat, but the non-arrival of this corps having deprived him of the expected succour, Beningsen thought himself compelled to forego this immense advantage, and allow the enemy to retain possession of the road in their rear. Nevertheless, their retreat was conducted in such confusion, that fifteen hundred prisoners, thirty-eight pieces of cannon, forty caissons, and the whole baggage of the army, fell into the hands of the victors, who had only to lament the loss of General Bagawouth, who was struck by a cannon-shot while bravely leading on his column, and five hundred men killed and wounded. Had the third column arrived on its ground at the appointed time, or had Beningsen acted with more vigour even with the troops which had come up, the French corps would have been totally destroyed. The capture of the baggage proved the extreme want which prevailed in the French encampment. In the kitchen of Murat were found roasted cats and boiled horse-flesh (2).

This disastrous intelligence reached Napoleon as he was reviewing the corps of Marshal Ney in the Kremlin, previous to its departure from Moscow (3). He instantly dispatched couriers in every direction a thousand orders were given in the course of the evening, the fire of his youthful years reappeared in his visage (4). Before daybreak on the morning of the 19th, he left the Kremlin, exclaiming, "Let us march on Kaluga, and woe to those who interrupt our passage!"

Napoléon left Moscow at the head of one hundred and five thousand combatants, six hundred pieces of cannon, and two thousand military chariots, an imposing force, and seemingly still capable of conquering the world. His infantry had increased by ten thousand men during his

(1) Rout ii 110, 143

residence at the Kremlin; partly from the recovery of the wounded, partly the arrival of reinforcements from the west of Europe. But the most alarming diminution was perceptible in the cavalry: numerous corps of dismounted horsemen had been formed; and those who were still mounted had evidently the greatest difficulty to urge on their exhausted steeds. The long train of artillery was slowly dragged forward, and it was obvious that, after a few days' march, the horses that moved it would sink under their fatigue (1).

In the rear of the still formidable mass of warriors marched a long and seemingly interminable train of chariots, waggons, and captives, bearing the pillage and riches of the devoted city. The trophies of imperial ambition, the cross of St. Ivan, and the Persian and Turkish standards found in the capital, were mingled with the spoils of individual cupidity. The common soldiers strove to support the weight of Asiatic finery which they had ransacked from the ruins; the carriages groaned under the load of Eastern luxuries, which the troops vainly hoped to carry with them to their own country. The followers of the camp, in number nearly forty thousand, of all nations and sexes, and clothed for the most part in the sumptuous dresses which they had obtained during the pillage, formed a motley train, whose clamours augmented the general confusion: and in the chariots were many young Russian females, the willing slaves of their seducers, abandoning the country of which they were unworthy. In the midst of this fantastic train, which covered the country as far as the eye could reach, were to be seen columns of that redoubtable infantry which had borne the French standards in triumph through every capital of continental Europe, and which still preserved, amidst the motley group, its martial array: but the artillery horses were already sinking under their fatigues, and the diminished regiments of the cavalry told too clearly how fatally the war had affected that important branch of the service. Confusion was already apparent in the line of march: no human efforts could force along that stupendous array of artillery, caissons, baggage-waggons, and carts; the rearguard, in despair, passed on before the whole had defiled: before them, and quantities of rich booty was, at every step, abandoned to the enemy. The whole resembled rather a wandering caravan, or a roving nation, than an army of disciplined troops; and forcibly recalled to the imagination the predatory warfare of antiquity, when the northern barbarians returned to their deserts loaded with the spoils of captive provinces (2).

Kutusoff broke up from the camp at Taroutino at the head of eighty thousand regular troops, and nearly thirty thousand militia or Cossacks. These irregular bands of horsemen, in the pursuit of a retreating army, were more serviceable than the élite of the Imperial guard. The army was immediately marched towards Malo-Jaroslavit, the strongest position on the new road from Moscow to Kaluga, in the hope of anticipating the French Emperor in the occupation of that important position: while General Winzingerode, who lay in the neighbourhood of Klin, on the route to Twer, with ten thousand men, advanced towards Moscow. He marched without opposition through the ruined streets of the capital: but having imprudently approached the Kremlin to summon the garrison to surrender, he was made prisoner by Marshal Mortier, who commanded the French rearguard that still occupied its walls. Shortly afterwards, however, the in-

(1) Sérurier, II. 112. Jour. fr. 181. Chénob, II. 316. Fein, II. 161. Sérurier, II. 316. Fein, II. 161.

vadeis retired, leaving to the Russians the ancient palace of the Czars, armed by forty-two pieces of cannon, but, before his departure, the French general blew up a part of its venerable edifices by the express command of Napoléon—a despicable piece of revenge on the part of so great a commander, and singularly expressive of the envenomed state of his mind (1).

Advance of Napoléon to Malo Jaroslawitz, and desperate battle there Napoléon, after advancing on the 19th on the old road to Kaluga, which led straight to the Russian position of Taroutino, for some hours, turned suddenly to the right, and gained, by cross roads, the new route, which led to the same place by Malo-Jarosláwicz. This skilful manœuvre was concealed from the Russians by the corps of Marshal Ney, which continued slowly advancing towards the old position of Taroutino. In consequence, Platoff, with fifteen regiments of Cossacks, was at first only detached to Malo-Jaroslawitz, and the main body of the army did not move in that direction till the evening of the 22d. The corps of Doctoroff, by a rapid night march, reached that important position at five in the morning of the 24th, but found it already occupied by General Delzons, with two battalions of French infantry. These troops were immediately attacked and expelled from the town by the Russian chasseurs: the Viceroy, however, having come up shortly after with his whole corps, drove out the light troops of Doctoroff, but was in his turn compelled to yield to the vigorous attacks of the Russian infantry. The combat continued with the utmost fury on both sides till evening. The town, which speedily took fire, was taken and retaken seven different times. The rival nations fought with the bayonet in the midst of the burning houses, but at length the Viceroy succeeded in finally dislodging the enemy. During the action, however, the army of Kutusoff gained the precious hours requisite to reach the other road. His columns, during the whole day, were seen, in two long black lines, rapidly advancing towards the heights behind the scene of action, and before night they were firmly established on the wooded eminences in the rear of Malo-Jaroslawitz. The Viceroy, after a glorious combat, found himself master of a mass of bloody and smoking ruins, dearly purchased by the loss of five thousand of his best troops, while one hundred thousand men, and seven hundred pieces of cannon, posted on a semicircle in his front, precluded the possibility of a farther advance towards Kaluga without a general battle (2).

Results of the battle The loss of the Russians was as great as that of the French, and they had to lament the death of the brave General Dorokhoff, who fell in an early period of the engagement. The French remained masters of the field of battle, but the advantage gained by Kutusoff was of incalculable importance. By interposing his whole army between the enemy and Kaluga, and occupying the strong position behind the town, he compelled Napoléon either to fight at a great disadvantage, or renounce his projected march upon Kaluga, and fall back on the wasted line of the Smolensko road. Either of these alternatives was equivalent to a defeat, and the event proved that the consequences of this bloody engagement were more disastrous to the French than any event which had befallen them since the commencement of the Revolution (3).

Napoléon's grievous embarrassment at this result Napoléon remained in the neighbourhood of the field of battle the whole of the night of the 24th, and sent out numerous parties to reconnoitre the Russian position. The strength of the ground, in the opinion of his most experienced officers, precluded the possibility of a

(1) Fain ii 169 Bout ii 155 Join iv 168,

(2) Bout ii 157, 161, 162. Ségur, ii 119, 141

successful attack. No alternative remained but to fall back on the Smolensko road. The agitation of his mind, in consequence, became so excessive, that his attendants dared not approach him. Upon returning to his miserable cottage, he sent for Berthier, Murat, and Bessières. They sat round a table where was spread out a map of the country, and the Emperor spoke to them at first of the change which the arrival of Kutusoff in the high grounds beyond Malo-Jaroslawitz had made in his situation. After a little discussion, however, he became meditative, and resting his cheeks on his hands, and his elbows on the table, his eyes fixed on the map, he remained for above an hour in moody silence, without motion or uttering a word. The three generals, respecting his mental agony, preserved silence, merely looking at each other during that long period; then suddenly starting up, he dismissed them without making them acquainted with his resolution. Immediately after, however, he sent to Davoust, ordering him to put himself at the head of the advanced guard, as he was to be at the outposts with his guards at daybreak on the following morning. Ney, who was at a short distance, was directed to take a position between Barowsk and Malo-Jaroslawitz, after leaving two divisions to protect the reserve parks and baggage at the former of these towns (1).

His position is nearly made prisoner At daybreak on the 23th, he set out in person to examine the ground, and was advancing through a confused mass of baggage-waggons and artillery, when suddenly a tumult arose the cry was heard, "It is Platoff—they are ten thousand!" and a large body of Cossacks was seen directly bearing down upon the Imperial escort. It turned out to be Platoff at the head of ten regiments of Cossacks, who made a dash to seize a park of forty pieces of artillery stationed near the village of Gorodnia, where the headquarters of Napoleon were placed. The Emperor himself narrowly escaped being made prisoner. General Rapp was thrown down while bravely combating, and his immediate attendants were compelled to use their sabres against the lances of the enemy. The squadrons on service who were immediately in attendance on the Emperor, were overthrown and pierced through by numbers, and it was not till the grenadiers *à cheval* and the dragoons of the guard appeared, that the irruption was stopped. The Cossacks, ignorant of the incalculable prize which was within their grasp, dashed through his attendants, and seized the artillery, but they were only able to carry off eleven pieces, from the want of horses to convey them, and the rapid appearance of the cavalry of the Imperial guard. Napoleon, after this distressing incident, returned to Gorodnia, but again left it at ten o'clock, and advanced to Malo-Jaroslawitz. According to his usual custom, he rode over the whole field which had been the theatre of such desperate strife on the preceding day, and moved on so as to see with his own eyes the elevated plateau which the Russian army, three quarters of a league in advance, still occupied. This done, he returned at five in the afternoon to Gorodnia, and nothing farther was attempted on either side that day (2).

Decision of fate at the French headquarters was the course to be pursued. This incident, however, was more than irritating. It proved the ruinous inferiority of the French to their enemies in light troops. Napoleon, in consequence, deemed it too hazardous to attempt to force the enemy's position, and returned pensively to his miserable habitation. An emperor, two kings, and three marshals were there assembled upon their deliberations, hung the destinies of the world. Murat, with his usual fire, recommended the boldest course. "Why should we fear the for-

unused to disaster, became relaxed from the moment that they began to retreat before their enemies (1)

They of Napoleon in consequence of the retreat.

Napoléon calculated chiefly upon the support of Victor, who, with above thirty thousand fresh troops, had been stationed since the beginning of September in the neighbourhood of Smolensko. This corps, joined to the reinforcements which were daily arriving from the westward, and the detached soldiers of the Grand Army who might be reformed into battalions, would amount to fifty thousand men, and with such support he hoped to maintain the line of the Dwina till the return of spring. But the operations of Wittgenstein and Tchichagoff rendered this project impracticable; and, even without their assistance, the superiority of the Russians in cavalry would have rendered any position within their territory untenable for any length of time. The French retired by Borowsk to Vereia, where the Emperor's head-quarters were established on the 27th. The weather was serene. It was still compared by Napoléon to the autumn at Fontenelleau (2)

In the course of their retreat, they destroyed all the towns through which the army passed: Borowsk and Vereia shared the fate of Moscow. At the latter town the Emperor was joined by Marshal Mortier, who after blowing up, as already mentioned, part of the Kremlin, had fallen back on the main army with his detachment. Winzingerode, made prisoner at the Kremlin, was then presented to the Emperor. His appearance excited one of those transports of rage which were not unusual in his irritable moods: but which, on this occasion, happily passed away, without actual violence to the Russian general (3)

Kutusoff moves in pursuit on parallel line.

As soon as Kutusoff was apprised of the enemy's retreat, he resolved, instead of pursuing them on the wasted line which they had adopted, to move the main body of his army by a parallel road towards Majalsk and Wiazma, and to harass their retreating columns by a large body of Cossacks and light troops. General Milaradowitch, in consequence, at the head of twenty-five thousand light troops, was directed to move along a road parallel and near to the great Smolensko route; while Platoff, with the Cossacks, pressed the French rearguard, and Kutusoff himself, at the head of the whole army, moved in two columns towards Wiazma (4)

The French repeat the field of Borodino.

The whole French army had regained the Smolensko road on the 20th. The corps marched at intervals of half a day's journey from each other, and for some days were not seriously harassed by the enemy. In passing through a heap of ruins, the soldiers recognised some features of a scene formerly known to them: it was Mojausk, formerly the scene of so much glory. The steeple alone remained in the midst of the desert, and its clock, still "unheard, repeated its hours." They approached an open plain; and soon the multitude of unburied dead, whose bones had begun to whiten in the sun—the broken and ruined redoubts which appeared at intervals—the rugged surface of the ground, which was still torn by the cannon-shot, announced the bloody field of Borodino. Thirty thousand skeletons, innumerable fragments of helmets, cuirasses, and arms, broken guns, carriages, standards, and bloody uniforms, formed the sad remains of that scene of glory. The soldiers, in passing, gazed in silence at the great redoubt, so lately the theatre of mortal strife, now marked by the silence and

devastation of an extinguished volcano: regret for the loss of their companions in arms was mingled with the painful sense of the fruitlessness of the sacrifice; and they hurried from the scene of desolation with melancholy recollections of the past, and gloomy anticipations of the future (1).

Woful spectacle exhibited on passing the abbey of Kolotskoi In passing the great abbey of Kolotskoi, the army received a lamentable addition to its numbers in a multitude of wounded men, who had escaped from that scene of horror to join their retreating companions. Thousands had perished in the hospital from the total inadequacy of the means of relief to the prodigious accumulation of wounded who had been left: but a greater number than could have been expected had been saved, in consequence of the heroic and skilful efforts of the French surgeons. These miserable men crawled to the side of the road, and, with uplifted hands and lamentable cries, besought their comrades not to leave them to the horrors of famine or the fury of the enemy. At the distance of two leagues from Mojaish, five hundred of these unhappy wretches had collected round a deserted barn: for several days they had received no food—an officer and twenty-five men were on the spot to guard them, and two surgeons were in attendance to dress their wounds, but the former had no food to give them, and the latter no linen or salves to apply to their mangled limbs. Napoléon made the greatest efforts to get them the means of conveyance—but the troops, whom misery had already begun to render selfish, murmured at displacing the spoils of Moscow by their bleeding companions, and could with difficulty be constrained to give them a place in their chariots (2).

Disorders which already appeared on the line of retreat Although only a few Cossacks as yet harassed the rear of the retreating army, the discouragement of the troops had become very great, and the dreadful features of the retreat already began to appear. Baggage-waggons were abandoned at every step, from the failure of the horses which drew them, the infantry and cavalry marched pell-mell in the utmost confusion, and the incessant explosions along the whole line, demonstrated how many of the ammunition-waggons required to be sacrificed to prevent their falling into the hands of the enemy. The retreat was rapidly becoming a flight (3), the troops were beginning to separate from the marching columns in quest of plunder or subsistence, and numbers of horses were slain to furnish food for the hungry multitudes who surrounded them.

Severe action at Wiazma, Nov 2 On the 2d November, the headquarters reached Wiazma. The Emperor flattered himself that he had got the start of Kutusoff by several marches, and that his troops would not be disquieted by the enemy during the remainder of the retreat; but this delusive quiet was not of long continuance. On approaching that town, the corps of Davoust, which formed the rearguard of the army, found, on the 5d, the advanced guard of Milaradowitch posted on the southern side of the great road, while Platoff, with a large body of Cossacks, pressed the rear of the army. The Emperor, with the guard and the first corps of the army, was already advanced on the road to Smolensko, and the corps of the Viceroy and Ney alone remained to resist the attack. By a vigorous charge, the Russian cavalry, under Wasilchikoff, in the first instance broke in upon the line of the French retreat, and established themselves astride on the great road, in the interval between the corps of the Viceroy and that of Davoust, while Platoff, the moment that

(2) Scgur, ii. 164. Lab. 280. Chamb iii. 252.

the cannonade commenced, attacked the rear of the latter at Federowskole. If the infantry of Milaradowitch had been at hand to support his cavalry while the Cossacks pressed his rear, the corps of Davoust would have been totally destroyed. But the infantry, unable to keep pace with the rapid advance of the cavalry, was still far behind; and General Wassilchukoff was left, for more than half an hour, to resist alone all the efforts of the enemy to dislodge him from his position. Meanwhile, the Viceroy, hearing of the danger of Davoust's corps, retraced his steps, and drew back his advanced guard, which had already reached Wiazma, to the scene of danger. Milaradowitch, in his turn, was now severely pressed between the advancing troops of Davoust and the returning corps of Eugène. But he bravely maintained his post near the great road till the infantry of Prince Eugène of Wirtemberg came up to his support. But the moment of decisive success was now over. Davoust, with admirable presence of mind, had contrived to get his artillery and baggage across the fields in the neighbourhood of Wassilchukoff during the continuance of the action; and the united French corps were now intent only on securing their retreat to Wiazma. In doing so, however, they were keenly pursued by Milaradowitch, who was now supported both by his own infantry and the Cossacks of Platoff; a numerous artillery thundered on their retreating columns, and though the soldiers of the Viceroy still kept their ranks, those of Davoust, exhausted by the fatigues of the retreat, fell into confusion. At this critical moment, the vanguard of Kutusoff beyond Wiazma was heard to commence a cannonade on the corps of Ney, which was in advance of the Viceroy. and the troops, conceiving themselves beset on all sides, fell back in disorder into Wiazma. General Paskowitch, at the head of his brave division, rushed into the town, and drove the enemy through the streets at the point of the bayonet. In the midst of the general confusion the houses took fire, which stopped the pursuit. and the shattered corps of Davoust, in their bivouacs beyond the walls, counted their diminished ranks and re-formed their battalions by the light of the conflagration (1).

Report of the battle, and the loss of Kutusoff in pushing the advantage of the day.

In this engagement the French lost above six thousand men, of whom two thousand were made prisoners, while the loss of the Russians did not exceed two thousand. The corps of Davoust had, before the battle, lost ten thousand men by fatigue or desertion since the retreat commenced at Malo-Jaroslawitz; and twenty-seven pieces of their artillery had fallen into the hands of the enemy. When the troops resumed their march on the following day, they were astonished at the smallness of their numbers. There seems to be no room for doubt, that had Kutusoff supported by a sufficient force the bold advance of Milaradowitch, or hastened his own march so as to anticipate the French vanguard at Wiazma, he would have had every chance of destroying a great part of their army, and his own troops were grievously disappointed at the opportunity being allowed to escape. But the Russian commander, knowing the severity of the season which was about to commence, and the multiplied obstacles which were preparing to arrest the retreat of Napoleon, deemed, and perhaps wisely, that the surer course was to let the enemy waste away before the cold of winter, before he attempted to envelope the main body; and confine his attacks at present to the rearguard, whose fatigues had already reduced them to that state of debility which might soon be expected to become general in the whole army (2).

(2) Doest. II. 192, 193. Berger II. 171.

Ney assumes the command of the rearguard The corps of Davoust, which had suffered so severely, was now replaced by that of Marshal Ney as the rearguard, and this heroic general began to cover that retreat, mortal to so many others, immortal to him. On the 4th and 5th the retreat continued, and in passing the Lake of Semlewo, the grand cross of Ivan and the armour of the Kremlin, the trophies of Moscow, were buried in the waves (1).

Commencement of the great frosts, and appearance of the atmosphere The weather, though cold and frosty at night, had hitherto been clear and bright during the day; and the continued, though now level and powerless sun, had cheered the hearts of the soldiers. But on the 6th November the Russian winter set in with unwonted severity. Cold fogs first rose from the surface of the ground, and obscured the heretofore unclouded face of the sun, a few flakes of snow next began to float in the atmosphere, and filled the army with dread gradually the light of day declined, and a thick murky darkness overspread the firmament. The wind rose, and soon blew with frightful violence, howling through the forests, or sweeping over the plains with resistless fury the snow fell in thick and continued showers, which soon covered the earth with an impenetrable clothing, confounding all objects together, and leaving the army to wander in the dark through an icy desert. Great numbers of the soldiers, in struggling to get forward, fell into hollows or ditches which were concealed by the treacherous surface, and perished miserably before the eyes of their comrades: others were swallowed up in the moving hills, which, like the sands of the desert, preceded the blast of death. To fall was certain destruction the severity of the tempest speedily checked respiration, and the snow, accumulating round the sufferer, soon formed a little sepulchre for his remains. The road, and the fields in its vicinity, were rapidly strewed with these melancholy eminences: and the succeeding columns found the surface rough and almost impassable from the multitude of these icy mounds that lay upon their route (2).

Breadful depression produced thereby on the minds of the soldiers Accustomed as the soldiers had been to death in its ordinary forms, there was something singularly appalling in the uniformity of the snowy wilderness which, like a vast winding-sheet, seemed ready to envelope the remains of the whole army. Exhausted by fatigue, or pierced by cold, they sank by thousands on the road, casting a last look upon their comrades, and pronouncing with their dying breath the names of those most dear to them. Clouds of ravens, like the birds which are only seen at sea when a shipwreck is at hand, issued from the forests, and hovered over the dying remains of the soldiers while troops of dogs, which had followed the army from Moscow, driven to fury by suffering, howled in the rear, and often fell upon their victims before life was extinct. The only objects that rose above the snow were the tall pines, whose gigantic stems and funereal foliage cast a darker horror over the scene (3), and seemed destined to mark the grave of the army amidst the deathlike uniformity of the wilderness.

Increasing distresses of the troops. The weight of their arms soon became intolerable to the least robust of the soldiers their fingers frequently dropped off while holding their muskets, and the useless load was thrown aside in the struggle for the maintenance of life. Amidst the general ruin, multitudes left their ranks, and wandered on the flanks or rear of the army, where they were speedily massacred by the peasants, or made prisoners by the Cossacks.

one's energies on his own safety, and the catastrophes of others were unheeded, when all anticipated similar disasters for themselves. Some, however, of a firmer character, resisted the contagion, and preserved, even in the wreck of nature, the gaiety and serenity of indomitable minds (1)

Continuance of the retreat to Dorogobouge In the midst of these sufferings the army arrived at Dorogobouge. The Imperial column and the corps of Davoust, after a short rest, proceeded on the road to Smolensko, while the corps of Eugène was directed to move towards the north, in order to assist Oudinot, who was severely pressed by Count Wittgenstein. Ney, with his corps, now severely weakened by the fatigues of the retreat, was still intrusted with the perilous duty of protecting the rear, but he never failed in its performance,—discharging at one time the duty of an able commander, displaying at another the courage of a simple grenadier. In his reports to Napoleon, he portrayed in true colours the frightful condition of the army, but in the field he was always to be found with the rearguard, combating with as much alacrity, though a marshal and prince of the empire, as when he was a private soldier in the revolutionary army (2)

Disasters of the Viceroy in his retreat to the same place The Viceroy, in advancing towards the Dwina from Dorogobouge, met with a succession of disasters. Before arriving at the banks of the Wop, he had been compelled to abandon sixty-four pieces of cannon and three thousand detached soldiers to his pursuers, but on the margin of that stream a new difficulty awaited him—the bridge which he had ordered to be constructed could not be raised, and his troops were obliged to cross the stream amidst floating masses of ice, with the water up to their middles. All the efforts of the artillerymen could not obtain a passage for the cannon, and in consequence, the whole remaining artillery and all the baggage of the corps were abandoned to the Cossacks. The bivouac of the following night was eminently disastrous. The troops, soaking with the water of the Wop, sought in vain for shelter, and multitudes perished from the freezing of wet garments round their exhausted limbs. On the snow around them was to be seen the plunder which could no longer be dragged along—the riches of Paris and Moscow lay scattered on an unknown strand, amidst the dead and the dying. This terrible night effected the total disorganization of the corps; and, to complete his misfortunes, the Viceroy, on arriving the following day at Doukhowtchina, found that town already occupied by two regiments of Cossacks. But in these critical circumstances he did not lose his presence of mind. Forming the Italian Guard and a few squadrons of cavalry, which still preserved their horses, into a square, he attacked and carried the town, and finding that a retreat in the direction of Witepsk would expose his detached corps to certain destruction, he made in all haste for Smolensko, where he arrived with the shattered remains of his troops on the 15th November, and found the other corps of the French army already assembled (3)

Meanwhile, the main Russian army, still advancing in two columns, was moving in the chord of the arc of which Napoleon was describing the curve. They advanced by Jelnia to Tchelkanowo, where the headquarters were es-

(1) Segur, ii. 181, 185, 191. Lab. 303. Fain ii. 287. Chamb. ii. 382, 383.

The death produced upon almost all the soldiers who perished from the cold was the same. The persons affected fell into a state of paralytic torpor, which led them to approach the fires of the bivouacs, where they speedily fell into an apoplectic slumber, from which they never awakened. Those of the officers and men who were able to perform

the whole journey, and had preserved a little sugar and coffee, resisted the cold most effectually. Mortification in particular limbs ensued in innumerable cases, against which the best preservative was found to be walking on foot.—Lannaer, *Mém. de Chirurgie Militaire*, iv. 91.

Departure
of Kutusoff
by his
passing
near the
time.

established on the 12th, on the road leading from Smolensko to Roslaw; and thus threatened the communications of the French army, and precluded the possibility of their remaining in the former town. By following this route, Kutusoff not only got the start of his enemies, and compelled them to continue a disastrous retreat, after they hoped to have arrived at its termination; but had the immense advantage of quartering his troops under cover in the villages, in a country as yet unwasted by war, during the severity of the winter nights. The march of the army was so rapid, that several detached bodies of the French, who had not yet received orders to retreat, fell into their hands. In particular, the advanced guard of General Baraguay d'Hilliers, under Augereau, with two thousand men, were made prisoners by Count Orloff Denisoff and Colonel Davidoff (1), who preceded the main body of the army with their light troops; and a depot of one thousand three hundred men was captured at Klementsiewo by another corps of partisans under Colonel Bistrom.

Napoleon
receives in-
telligence
of Mallet's
conspiracy
at Paris.

Between Dorogobouge and Smolensko Napoleon received intelligence of the conspiracy of Mallet at Paris, of which a full account will shortly be given, and by which a few daring men for a few hours gained possession of the seat of government, made prisoner the chief of the police, and had nearly overturned the Imperial government. He now perceived on what a sandy foundation his fortunes were rested, even in France itself, and exclaimed to Daru, "What if we had remained at Moscow!" From that moment his whole thoughts were concentrated on Paris and all the disasters of his present situation could hardly withdraw his impassioned imagination from the convulsions which he anticipated in the centre of his power (2).

Arrival of
the corps
at Smo-
lenko.
Nov. 9, 13.

The successive arrival of the different corps at Smolensko, where they continued to drop in from the 9th to the 13th, presented the most dismal spectacle. At the sight of the long wished for towers, the soldiers could no longer restrain their impatience: the little remaining discipline instantly gave way, and officers and privates, infantry and cavalry, precipitated themselves in an undistinguished mass upon the gates. The famishing troops rushed into the streets, and the gates of the magazines were instantly surrounded by crowds, demanding, with earnest cries, the food which they had so long been promised. Bread, in sufficient quantities, could not be furnished: large sacks of grain were thrown out to the applicants, and the miserable soldiers fought with each other for a few pounds of dried roots or grain (3). The old and new guard alone preserved their ranks in the midst of the general confusion; and their steadiness seemed in some degree to justify that indulgence to their sufferings which excited such violent dissatisfaction among the other troops.

Efforts of
Napoleon
to provide
magnificent
on his line
of retreat.

The Emperor had made the greatest exertions to provide magazines along the line of his retreat. Immense quantities of provisions had been collected at Smolensko, Minsk, and Wilna: gigantic efforts had been made to transport them to the places of their destination: the roads of Germany and Italy were covered by herds of cattle and trains of waggons hastening to the theatre of war. But all these efforts were insufficient: the arrival of the convoys was retarded by the state of the roads, which the passage of so many thousand carriages had almost rendered im-

(1) Thoul. II. 301, 302. Segur, II. 330. Chomh. II. 301, 302.

passable the oxen sank under the fatigues of their lengthened marches, and the impatience of those who drove them the stores of grain, however immense, could not suffice for the number of sick and isolated men who were left in the rear of the army, and the famished multitude who arrived from Moscow The genius and foresight of Napoleon were not wanting the most minute orders had been forwarded to the authorities in the rear, to provide for the wants of the army, but every thing failed, because the magnitude of his demands outstripped the bounds of human exertion. (1)

Disastrous intelligence from the armies on both flanks The intelligence which the Emperor received at Smolensko from his two flanks, would alone have been sufficient to compel his retreat to the Niemen, even if ample means of subsistence had been found for the army (2) The secondary armies of Russia had, every where resumed the offensive the gigantic plan of Alexander for the capture of the Grand Army was rapidly advancing to maturity the flames of Moscow had set the whole empire on fire.

Important operations of Wittgenstein on the Dwina Wittgenstein's army, having been raised, by the junction of Count Steinhill with ten thousand regular troops from Finland, the militia of St. Petersburg, and some additional reinforcements from the capital, to fifty thousand men, that general resumed the offensive Having divided his army into two columns, at the head of thirty-six thousand men, he advanced on the right bank of the Dwina against Marshal St -Cyr, while Steinhill, with thirteen thousand, operated against his rear on the left bank of the river Shut up in Polotsk, the French general had only thirty thousand men to oppose to these formidable masses The Russian militia, incorporated with the regular army, soon acquired the discipline and hardihood of Oct 18 veteran soldiers On the 18th October, being the very day on which Kutusoff attacked Murat at Winkowo, Wittgenstein advanced against Polotsk, where St -Cyr occupied an intrenched camp, and an obstinate battle began along the whole line of the intrenchments General Diebitch, who commanded the advanced guard, supported by the Russian tirailleurs, composed for the most part of militia, carried the French redoubts in the centre, while Prince Jachwill drove them under cover of the cannon of the city on the right, but on the left, the French, after a furious engagement, maintained their ground Night put an end to the battle, and the Russians withdrew from the intrenchments which had been the scene of so much carnage On the following morning at ten o'clock, the cannon of Count Steinhill on the left of the river gave the joyful intelligence to the Russians that they were supported; to the French, that their retreat was in danger St -Cyr immediately made dispositions for a retreat, and the artillery were silently drawn across the bridges, but towards night the Russians, who, during the whole day, had been establishing their batteries, perceiving the movement, opened a concentric fire on all sides upon the city The wooden houses having been set on fire by the shells, the flames threw so bright a light around the intrenchments, that the troops fought at midnight as in full day At two in the morning the Russians carried the ramparts, and drove the enemy with the bayonet through the burning streets The French, nevertheless, disputed the ground so bravely, that they saved almost their whole artillery, and reached the opposite bank with the loss only of four thousand killed and wounded, and two thousand prisoners, having previously broken down the bridge over the Dwina (3).

(Check of
Steinhill,
and re-
turned
of
Wittgen-
stein.)

The Russians in these engagements had about three thousand killed and wounded and on the following day Count Steinhill, having been attacked by a superior force detached by St.-Cyr, was defeated and compelled to recross the Dwina, leaving eighteen hundred prisoners in the hands of the enemy. There appears to have been a want of concert in the movements of the Russian generals on the opposite sides of the stream. Had they attacked vigorously at the same moment, there seems no doubt; not only that the check of Count Steinhill would have been avoided, but the greater part of the French army made prisoners. It had been intended by Wittgenstein to turn the right of St.-Cyr, and thus cut him off from his communications with Smolensko and the Grand Army. But the difficulty of throwing bridges over the river at Goriany having rendered that design abortive, the French general retired towards Smoliantzy, where he formed a junction on the 31st October with Victor, who came to his support from Smolensko with twenty-five thousand men. The pursuit of the Russians was retarded for several days by the difficulty of re-establishing the bridges; but they overtook them near Smoliantzy, and took eight hundred prisoners from the rearguard. Wittgenstein immediately established himself, in conformity with the plan of the campaign, on the banks of the Oula, and detached a division to take possession of Witepsk, which was captured, with a slender garrison and large magazines, on the 7th November (1).

(Napoleon
orders Vi-
ctor and
Oudinot
to attack
Wittgen-
stein, which
he does
without
success.)

Napoleon, alarmed by the near approach of Wittgenstein's corps, ordered Victor and Oudinot, who now had resumed the command of St.-Cyr's corps, to drive it back, without advancing too far from the line of the Grand Army. The Russians, perceiving the enemy's intention, took a strong position at Smoliantzy, and called in their detached columns to give battle. On the 14th the French columns began the attack, which continued with various success during the whole day, but at length, after the village of Smoliantzy had been six times taken and retaken, the French marshals, disconcerted by the heavy fire of the Russian batteries, and desirous not to risk the retreat of the Emperor by a more serious contest, withdrew from the field. The loss of each party was about three thousand men, but the success of the Russians was evinced by the retreat of their adversaries, and the re-establishment of their remaining position on the banks of the Oula (2).

(Operations
of Tchichagoff
on the
Oula Bank.)

Meanwhile Tchichagoff, having rapidly advanced from Bucharest, which he left on the 31st July, by Jassy, Chotsin, and Zaslav, to Ostrog, effected his junction, behind the Styr, with Tormasoff, on the 14th September. Schwartzberg, whose whole force, including Saxons and Poles, did not exceed forty three thousand, immediately commenced his retreat; while the Russian generals, at the head of above sixty thousand men, resumed offensive operations. The Austrians fell back from the banks of the Turia to those of the Bug, with the loss, during their retreat, of two thousand killed and wounded, and five thousand prisoners. Tchichagoff having thus cleared the country of these enemies, and compelled them to fall back in the direction of Warsaw, changed the direction of his movements, and leaving to General Sacken with a part of his army, the task of observing Schwartzberg and preventing him from returning to the theatre of war, moved himself, with the main body of his forces, in the direction of the Bercsina. Sacken was reinforced by the corps of Count Essen, which raised his

(1) Doul. II. 278, 284. 8^e gear II. 252, 227. Fain.

(2) Doul. II. 287, 294. Jan. 11. 181

force to twenty-seven thousand men, while Tchichagoff, with thirty-eight thousand men and one hundred and fifty-six pieces of cannon, moved in the direction of Minsk. He there expected to force a junction with the little army of General Litell, who, with the twelve thousand men, had maintained his ground in the neighbourhood of Bobrinsk since the beginning of the campaign, and thus bring a force of fifty thousand men to operate on the communication of the Grand Army (1).

Operations of Schwartz-zenberg against Sacken The Austrians having begun to recross the Bug with a force which reinforcements had raised to forty-five thousand men, in order to act against Sacken, the Russian general advanced to attack them in detail before their whole force was across the river. By a rapid advance, he succeeded in drawing the whole attention of Schwartzzenberg upon himself, and when pressed by superior forces, took post in the vast forest of Bialswège, but the Austrian commander having manœuvred with great skill and vigour, succeeded in interposing a column between him and Tchichagoff, and thereby compelled him to fall back to Bozest. The Russian general, by a happy mixture of boldness and prudence, succeeded, however, first by an offensive movement, in drawing upon himself the whole force of his adversary, nearly double his own, and then, by a skilful retreat, in withdrawing his troops, without any serious loss, in such a direction as to preclude his opponents from throwing any obstacles in the way of the decisive measures which were commencing on the Beresina (2).

Capture of Minsk and the bridge of Borystow by Tchichagoff During these operations, Tchichagoff advanced with great expedition in the direction of Minsk. That town, containing the immense magazines and depots which Napoléon, during the whole summer, had been collecting for his army, was garrisoned by six thousand men, chiefly new levies, under the Polish General Bronykowski. The Russians, after destroying several smaller detachments which they met on the road, came up with and totally defeated the garrison at Kiudanow, with the loss of three thousand prisoners. The immediate consequence of this success was the capture of Minsk, on November 16, with its immense magazines, and above two thousand wounded men. By the loss of this important point, the French not only were deprived of their principal depot, but of their best line of retreat. Bronykowski fell back to the bridge of Borissow, which commanded the only remaining communication of the Grand Army. Dombrowsky, who commanded a Polish corps of eight thousand men in that quarter, instantly hastened to the defence of this important post, but notwithstanding all their efforts, the bridge, with its *tête-de-pont*, was forced on the 21st by the corps of Count Lambert, who captured eight cannon and two thousand five hundred prisoners, besides destroying two thousand of the enemy's best troops. This decisive blow gave the Russians the command of the only remaining bridge over the Beresina, and seemed to render the escape of Napoléon a matter of absolute impossibility. At the same time Count Chernitcheff, who had been detached by Tchichagoff, to open a communication with Wittgenstein, succeeded, after extraordinary exertions and by a long detour, in reaching the headquarters of that enterprising commander. In crossing the great road from Smolensko to Warsaw, he had the good fortune to fall in with and liberate General Winzingerode, moving as a prisoner towards the French dominions (3).

Check of
his skill,
and oper-
ations im-
posed on
him by
the state.

The Russians in these engagements had about three thousand killed and wounded and on the following day Count Steinheil, having been attacked by a superior force detached by St.-Cyr, was defeated and compelled to recross the Dwina, leaving eighteen hundred prisoners in the hands of the enemy. There appears to have been a want of concert in the movements of the Russian generals on the opposite sides of the stream. Had they attacked vigorously at the same moment, there seems no doubt, not only that the check of Count Steinheil would have been avoided, but the greater part of the French army made prisoner. It had been intended by Wittgenstein to turn the right of St.-Cyr, and thus cut him off from his communications with Smolensko and the Grand Army. But the difficulty of throwing bridges over the river at Goriany having rendered that design abortive, the French general retired towards Smoliantzy, where he formed a junction on the 31st October with Victor, who came to his support from Smolensko with twenty-five thousand men. The pursuit of the Russians was retarded for several days by the difficulty of re-establishing the bridges; but they overtook them near Smoliantzy, and took eight hundred prisoners from the rearguard. Wittgenstein immediately established himself, in conformity with the plan of the campaign, on the banks of the Oula, and detached a division to take possession of Witepak, which was captured, with a slender garrison and large magazines, on the 7th November (1).

Rapid
order of
Victor and
Oudinot
to attack
Wittgen-
stein, which
he does
without
success.

Napoleon, alarmed by the near approach of Wittgenstein's corps, ordered Victor and Oudinot, who now had resumed the command of St.-Cyr's corps, to drive it back, without advancing too far from the line of the Grand Army. The Russians, perceiving the enemy's intention, took a strong position at Smoliantzy, and called in their detached columns to give battle. On the 14th the French columns began the attack, which continued with various success during the whole day but at length, after the village of Smoliantzy had been six times taken and retaken, the French marshals, disconcerted by the heavy fire of the Russian batteries, and desirous not to risk the retreat of the Emperor by a more serious contest, withdrew from the field. The loss of each party was about three thousand men but the success of the Russians was owing to the retreat of their adversaries, and the re-establishment of their remaining position on the banks of the Oula (2).

Operations
of Tchichagoff
on the
left bank.

Meanwhile Tchichagoff, having rapidly advanced from Bucharest, which he left on the 31st July, by Jassy, Chotsin, and Zaslav, to Ostrog effected his junction, behind the Styr, with Tormasoff, on the 14th September. Schwartzberg, whose whole force, including Saxons and Poles, did not exceed forty-three thousand, immediately commenced his retreat; while the Russian generals, at the head of above sixty thousand men, resumed offensive operations. The Austrians fell back from the banks of the Turia to those of the Bug, with the loss, during their retreat, of two thousand killed and wounded, and five thousand prisoners. Tchichagoff having thus cleared the country of these enemies, and compelled them to fall back in the direction of Warsaw, changed the direction of his movements, and leaving to General Sacken, with a part of his army, the task of observing Schwartzberg and preventing him from returning to the theatre of war, moved himself, with the main body of his forces, in the direction of the Berezina. Sacken was reinforced by the corps of Count Essen, which raised his

force to twenty-seven thousand men; while Tchichagoff, with thirty-eight thousand men and one hundred and fifty-six pieces of cannon, moved in the direction of Minsk. He there expected to force a junction with the little army of General Ertell, who, with the twelve thousand men, had maintained his ground in the neighbourhood of Bobrinsk since the beginning of the campaign, and thus bring a force of fifty thousand men to operate on the communication of the Grand Army (1).

Operations
of Schwartz-
enberg
against
Sacken

The Austrians having begun to recross the Bug with a force which reinforcements had raised to forty-five thousand men, in order to act against Sacken, the Russian general advanced to attack them in detail before their whole force was across the river. By a rapid advance, he succeeded in drawing the whole attention of Schwarzenberg upon himself, and when pressed by superior forces, took post in the vast forest of Bialswège; but the Austrian commander having manœuvred with great skill and vigour, succeeded in interposing a column between him and Tchichagoff, and thereby compelled him to fall back to Bozest. The Russian general, by a happy mixture of boldness and prudence, succeeded, however, first by an offensive movement, in drawing upon himself the whole force of his adversary, nearly double his own, and then, by a skilful retreat, in withdrawing his troops, without any serious loss, in such a direction as to preclude his opponents from throwing any obstacles in the way of the decisive measures which were commencing on the Beresina (2).

Capture of
Minsk and
the bridge
of Borissow
by Tchichagoff,

During these operations, Tchichagoff advanced with great expedition in the direction of Minsk. That town, containing the immense magazines and depots which Napoléon, during the whole summer, had been collecting for his army, was garrisoned by six thousand men, chiefly new levies, under the Polish General Bronykowski. The Russians, after destroying several smaller detachments which they met on the road, came up with and totally defeated the garrison at Kiodanow, with the loss of three thousand prisoners. The immediate consequence of this success was the capture of Minsk, on November 16, with its immense magazines, and above two thousand wounded men. By the loss of this important point, the French not only were deprived of their principal depot, but of their best line of retreat. Bronykowski fell back to the bridge of Borissow, which commanded the only remaining communication of the Grand Army. Dombrowsky, who commanded a Polish corps of eight thousand men in that quarter, instantly hastened to the defence of this important post; but notwithstanding all their efforts, the bridge, with its *tête-de-pont*, was forced on the 21st by the corps of Count Lambert, who captured eight cannon and two thousand five hundred prisoners, besides destroying two thousand of the enemy's best troops. This decisive blow gave the Russians the command of the only remaining bridge over the Beresina, and seemed to render the escape of Napoléon a matter of absolute impossibility. At the same time Count Chernitcheff, who had been detached by Tchichagoff, to open a communication with Wittgenstein, succeeded, after extraordinary exertions and by a long detour, in reaching the headquarters of that enterprising commander. In crossing the great road from Smolensko to Warsaw, he had the singular good fortune to fall in with and liberate General Winzingerode, who was moving as a prisoner towards the French dominions (3).

Partial
completion
of the plan
for sur-
rounding
Napoleon.
Nov. 1.

In this way the gigantic plan formed by the Russians for the destruction of Napoleon's army approached its accomplishment. The forces of Wittgenstein and Tchichagoff, drawn from the opposite extremities of Europe, had successfully reached their destined points, the lines of the Oula and of the Beresina were guarded by seventy thousand men. Minsk with its vast magazines, Borissov with its fortified bridge, were in the hands of the Russians while Napoleon, with the shattered remains of his army, was still engaged with the whole forces of Kutusoff in the neighbourhood of Smolensko. The plan so ably traced by the cabinet of St.-Petersburg had, nevertheless, not been fully carried into execution. Instead of seventy, they had calculated on one hundred and twenty thousand being assembled in the rear of the Grand Army and the armies of the Russian commanders, though approaching, were not in such close proximity as to be able to support each other in case of danger. The principal causes of this disappointment were the non-arrival of General Ertell, who had failed to join Tchichagoff with his troops, and the disasters which had reduced to one-half the corps of Count Steinbüll. Nevertheless, the force in his rear, such as it was, would have rendered the escape of any part of the French army altogether desperate to any other commander than Napoleon (1).

Alarm by
these disas-
ters, Napo-
leon resolves
to retire
from Smo-
lensko to
the Niemen.

The French Emperor, perceiving from the exhausted state of the magazines, the loss of Polotsk, and the advance of Tchichagoff, that a protracted stay at Smolensko was impossible, prepared for a continuance of his retreat. The remains of the cavalry, reduced from forty thousand who crossed the Niemen to eight hundred, were formed into one body, and placed under the orders of Latour Maubourg the shattered battalions blended into separate corps and the Emperor, putting himself at the head of the old guard, set out from Smolensko on the 14th. His troops amounted to nearly seventy thousand men; but of this body not more than forty thousand were in such a state of organization as to be capable of offensive operations. They had already lost three hundred and fifty pieces of cannon but nearly two hundred and fifty were still dragged along, destined along to augment the long catalogue of the victor's trophies (2).

Arrival of
Kutusoff at
Krasnoi.

Kutusoff, continuing his parallel march, had already arrived in the neighbourhood of Krasnoi with his whole army, excepting the Cossacks under Platoff but it did not now exceed fifty thousand men. Thirty thousand soldiers had been left behind during the rapid march from Malo-Jaroslawitz from fatigue and the severity of the weather, which affected the Russian troops even more than those from the south of Europe. The Russian soldiers had the advantage of the French in the enthusiasm of success, in having marched over an unwasted country, in having preserved a greater number of their artillery horses, and in not ultimately losing the men who fell behind but the cold of winter was as severe upon them as upon the invaders and the diminution of their ranks for present operations was fully as great as that of their adversaries (3).

Order of
the French
retreat from
Smolensko.
Nov. 4.

The French troops marched, as on the previous part of the retreat, in successive columns; the Emperor, with the old and new guard, came first, next that of the Viceroy, then Davoust, while Ney still continued to bring up the rear. On the 14th the old guard occupied Krasnoi Kutusoff having brought up the greater part of his army to the neighbourhood of the great road early on the morning of the 15th, opened a heavy fire of ar-

(1) *Revue*, II. 319, 320. *Chamb.* III. 12, 28. *Fain*. II. 228, 229.

(2) *Magaz.* II. 226, 227. *Revue*, II. 304, 327, 328.

tillery on the French guards, while Milaradowitch crossed the great road, and drove back the heads of the advancing columns. In the night, however, Napoléon attacked the Russians with the best divisions of the young guard, and succeeded in clearing the route to Krasnoi, and on the following morning the Emperor himself passed the dangerous part of the road in the midst of the old guard. Kutusoff, fearful to encounter that formidable body, withdrew his troops from the road, and harassed their march only by a distant cannonade. The veterans closed their ranks round their monarch as they passed the Russian batteries, and played in the hottest of the fire the celebrated air,—“ *Où peut-on être mieux qu’au sein de sa famille ?* ” “ Say, rather,” exclaimed the Emperor, “ let us watch over the safety of the Empire (1) ”

Impression the name of Napoléon still produced on the minds of men In truth, on this occasion, as during the whole remainder of the retreat, the French army owed their safety chiefly to the circumstance that the Russian generals were far from being aware of the miserable condition to which their antagonists were reduced, and took their measures to resist the Grand Army, when, it was only the skeleton of that awful array which was before them; and by a more vigorous onset they might, in all probability, have effected its entire destruction. This illusion, so natural from the heroic deeds of the French army, was increased by the circumstance that, in several intercepted despatches from Berthier to the marshals of the army, which fell into the hands of the Russians, he spoke of different corps of the armies as if they still existed in considerable strength, when, in fact, they were little better than shadows. The imagination could not conceive the extent of disaster which had befallen the French army; the remembrance of its deeds still affected the minds of men, and Napoléon was still the mighty conqueror at the head of the Grand Army, when in truth, he could not collect thirty thousand men around his standards in a condition to face the enemy (2).

Successful attack on Eugene's corps No sooner had the guard passed, than Kutusoff made his dispositions to block up the road, and cut off the corps of the Viceroy. Prince Dolgorucki, with his corps, was placed astride upon the great road fronting Smolensko, while General Raefskoi was established parallel to its line to take the advancing columns in flank. Eugène, after passing a miserable night round the fires of his bivouac, was advancing slowly on foot along the road in the middle of his staff, when he was met by an officer of Milaradowitch, who summoned him to surrender. The French general Guyon, the sole survivor of his brigade, instantly repelled the insulting proposal, but immediately the heads of the column were arrested by a shower of cannon-shot, the hills on the left of the road were seen bristling with armed men, and a fence of levelled bayonets closed the front. Far from being dismayed by so fearful a spectacle, the brave Eugene, worthy of the crown which he wore, formed his troops into three divisions, and advanced with firmness to attack the Russian batteries, but the French squares in vain strove to cut their way through the hostile ranks: their battalions melted away under the fire of the grape-shot, while numerous squadrons poured down from the eminences on the left to destroy the scattered columns. Finding it impracticable to force his way along the great road, the Viceroy placed himself and the royal guard at the head of his best troops, and while the enemy were actively engaged on the left, defiled across the fields during the obscurity of evening, and joined the Emperor at Krasnoi. In this affair he

(1) Segur, ii 242, 244, 245 Bout. ii 208, 210
Fain, ii 202. Gourg ii. 202

(2) Chamb iii

lost twenty two hundred prisoners, a still greater number killed, one eagle, and eighteen pieces of cannon; but he saved the honour of his corps by his intrepidity and skill (1)

Arrangements for cutting off Davoust's retreat. Encouraged by this success, Kutusoff resolved, on the 17th, to bring his whole force to bear upon the remaining corps of Davoust and the guards. For this purpose, he divided his army into three columns: the first, under the orders of General Tormasoff, who had been called to the main army since the death of Bagrathion, was destined to advance towards the great road beyond Krasnoi in the direction of Orsha, so as to threaten the communications of Napoleon, and prevent him from sending succour to his distressed lieutenants, the second, commanded by Prince Gallitzin, received orders to move upon Krasnoi, and attack the enemy in front; while the third, under the orders of Milaradowitch, was commanded to allow the corps of Davoust to defile along the road towards Krasnoi, till the whole body was past, and then fall upon his rear. In this manner, he hoped that the corps of Davoust and the guards, pressed together, and attacked in front and on both flanks at the same time, would be thrown into disorder and destroyed (2)

Napoleon's heroic resolution to support Dornau. Napoleon, feeling the necessity of making an effort to disengage that marshal from his perilous situation, prolonged his stay on the 17th at Krasnoi, and accepted the combat. Before daylight the divisions of Roguet of the guard surprised and defeated a Russian detachment in the village of Ojarowski a success of great importance, by the circumstance which it produced in the Russian commander. He drew up his troops in two lines fronting the Russian centre, with their right resting on the town of Krasnoi, and their left on the ravine of the Loosmina. At day-break the Emperor set out from Krasnoi on foot, in the direction of Smolensko, to lend his aid to Davoust, who was coming up. On seizing his sword, he exclaimed, "I have long enough acted emperor now is the moment to resume the general (3)"

Battle of Krasnoi. The action commenced by Prince Gallitzin, with the Russian centre, attacking General Roguet and the young guard. After an obstinate conflict, in the course of which a square of the Imperial guard was broken and destroyed by the Russian cuirassiers, the Russians established themselves on the banks of the Loosmina, near the centre of the French position. At the same time, the corps of Davoust, which had been suffered to pass by Milaradowitch, appeared in sight, slowly moving on in the midst of a cloud of Cossacks, which enveloped its ranks. The position of Napoleon was now in the highest degree critical. In front, on the right and left, the horizon was flaming with the enemy's fire; Krasnoi was speedily filled by a crowd of fugitives from the centre and Davoust's corps, which could no longer maintain their ground against Prince Gallitzin and the increasing force of Milaradowitch, which pressed on from the south and east. At this dreadful moment, if the corps of Tormasoff had appeared on the road to the right, between Krasnoi and Liady, there seems no doubt that the whole French army would either have been compelled to surrender, or driven back upon the Dnieper, and lost in the marshes and forests which border that deserted stream. But Kutusoff, having discovered that the Emperor with his guards was in Krasnoi, delayed the march of his left wing till eleven o'clock, so as to give the guards and Mortier time to defile towards Liady, before Tor-

(1) *Sagor* II. 240, 256. *Lah.* 247. 253. *Bent.* II. 212, 214. *Folz.* II. 204. 205. *Chamb.* II. 461, 464. (2) *Sagor* II. 236, 252. *Bent.* II. 217. *Geary* II. 471. (3) *Bent.* II. 218, 217.

masoff crossed the road—overawed, it would appear, by the thoughts of driving to desperation so great a conqueror, or desirous of securing, without loss to himself, the destruction of the corps of Davoust. The consequence was, that Napoléon, with the half of his guards who had survived the battle, retired in safety to Liady, while Prince Gallitzin carried by assault the village of Krasnoi, and the corps of Davoust, severely pressed in rear by the troops of Milaradowitch, and cut in two by the advanced guard of Tormasoff, which at length arrived at its ground, was almost totally destroyed (1). In this battle, the Russians took above six thousand prisoners, forty-five pieces of cannon, two standards, and an immense quantity of baggage, among which were the baton of Marshal Davoust and part of the archives of Napoléon.

Immense danger and heroic conduct of Ney Meanwhile, the corps of Marshal Ney, which brought up the rear, left Smolensko on the morning of the 17th, after blowing up part of the ramparts. On their route they speedily saw traces of the ruin of the Grand Army, cannon, caissons, dead horses, wounded men, arrested their progress at every step, amidst a tremendous cold and an unusual accumulation of snow. Kutusoff, informed of the situation of this corps by the papers of the Emperor found at Krasnoi, prepared for his reception. The army was established in two columns on the great road, facing both ways, in order to prevent any attempt at a rescue by the French troops who had got on towards Liady, while a body of cavalry was detached to prevent him desiling by the right of the great road. The French columns, ignorant of their danger, approached on the 18th, under cover of a thick fog, the banks of the Lossmina, strewn with the bodies of their comrades, when they were suddenly assailed by repeated discharges of grape-shot from forty pieces of cannon, while the whole heights on their front and flank appeared crested by dense black columns of infantry and artillery, ranged in order of battle. To a proposition for a capitulation, the intrepid Ney replied, “A marshal of France never surrenders!” and instantly forming his columns of attack, advanced with the utmost heroism against the Russian batteries. His soldiers, worthy of their immortal commander, closed their ranks, and marched with hopeless devotion against the iron bands of their adversaries; but after a fruitless action, and the loss of half their numbers, they were thrown into disorder, and driven back to a considerable distance from the field of battle, with the loss of three thousand five hundred prisoners, and above two thousand killed. The marshal, perceiving that the enemy’s position could not be forced in front, and that they were extending to the north of the great road, to prevent him from escaping, as Prince Eugène had done, formed a body of four thousand out of the most efficient of his troops, and with these retired for an hour on the road to Smolensko, when he suddenly turned to the north, and moved towards the Dnieper. The severity of the cold had frozen part of the course of that river. At the village of Syrokenie, his advanced posts fell in with a peasant who conducted them to a point where the passage was practicable, and he succeeded, during the night, in transporting three thousand, without horses or artillery, over the fragile ice, to the opposite shore. He even waited three hours on the bank before venturing across the river, to give time for his stragglers to join his little detachment, and during this anxious period, the heroic marshal, wrapped in his cloak, slept quietly on the margin of the stream. The remainder of his corps, amounting to eight thousand five hundred, with twenty-seven pieces of cannon, and the whole baggage of the corps, fell into the hands of the Russians. In the morning of

(1) Bout. ii. 218, 223, 224. Ségur, ii. 264, 275. Fain, ii. 306, 307. Chamb. ii. 445, 44

the 19th, a column of two thousand five hundred men was surrounded by the Russian cavalry in the neighbourhood of Wlasya-Louki and made prisoners; and the remnant of Marshal Ney's corps was assailed by the Cossacks, who had come from Smolensko along the north bank of the river, and compelled to abandon three hundred prisoners and ten pieces of cannon (1).

General result of the battles of Borodino The result of the actions on the 16th, 17th, and 18th, besides one hundred and twelve pieces of cannon abandoned near Smolensko, was the capture of twenty-six thousand prisoners, three hundred officers, and one hundred and sixteen pieces of cannon, and ten thousand killed or drowned; with the loss to the Russians of only two thousand men. The history of the revolutionary wars can afford no parallel to such a success achieved at so small a sacrifice to the victorious party. Napoleon himself bore testimony to the ability with which the manoeuvres on his flank had been conducted (2). The skill of the Russian movements is the more to be admired, because, with a force inferior upon the whole to their antagonists, they were always superior at the point of attack. Napoleon left Smolensko with seventy thousand men, of whom one-half were still efficient: Kutusoff arrived at Krasnoi with only fifty thousand, nearly as much debilitated by suffering as their opponents (3). It must, however, be admitted, that the caution of the Russian commander, however praiseworthy on former occasions, was misplaced on the 18th at Krasnoi: the Russians there, though not superior in number to their antagonists, were supported by all the excitement of victory, while successive disasters had sunk the spirit of the French: and the chance of capturing Napoleon, or even his principal generals, was worth purchasing at the hazard even of a defeat to a corps of the army (4).

Horrible confusion which reigned in the French army. Although the Emperor and part of the army had escaped this imminent danger at Krasnoi yet it was a painful sight for his officers to behold the straits to which he was reduced, and the utter disorganization which pervaded every part of the army. The horses having all perished, or been reserved by the Emperor's orders for the wounded, Napoleon himself marched on foot, with a birch stick in his hand, to avoid falling on the icy roads, surrounded by a body of officers who still preserved some sort of regularity of appearance: but it was with extreme difficulty that they could force their way through the crowd of straggling soldiers, baggage-waggons, chariots, cannon, and camp followers, who, pell-mell and in utter confusion, crowded the roads in the most frightful disorder. Nothing but the devotion of the officers who surrounded him, preserved any sort of order in this disorganized multitude; but their efforts were incessant to watch over the safety of the Emperor, and thus succeeded in bringing him safely through the frightful confusion with which he was surrounded (5).

Horrible conduct of Ney during his retreat. Ney was severely harassed by Platoff in his retreat, after crossing the Dnieper. For above twenty leagues he marched in the midst of six thousand of these Scythians, who hovered incessantly round his wearied columns. On one occasion, the Cossacks got the start of his advanced troops: and the sudden apparition of flashes of artillery in the midst of the darkness of the forest, announced that they were surrounded by their enemies. The bravest fell back in dismay, and gave themselves up for lost; but the marshal, with admirable presence of mind, ordered the charge to be

(1) Boul. II. 225, 229. Segur II. 228, 229, 240. Fain, II. 310, 312. Chambr. II. 462, 472.

beat, and exclaimed, "Comrades, now is the moment; forward, they are ours!" At these words, the surprised soldiers, imagining that the enemy were cut off, resumed their courage, and the Cossacks, dreading an overthrow, fled in confusion. At length, after undergoing innumerable hardships, the heroic commander brought the remnant of his corps, hardly amounting to fifteen hundred armed men, to the neighbourhood of Orcha; and the Emperor, who heard with the utmost joy of their approach, sent the Viceroy's corps to their assistance, which enabled them to rejoin in safety the other corps of the army. Napoléon exclaimed, "I have three hundred millions in my coffers in the Tuileries: I would willingly have given them to save Marshal Ney (1)!"

Prodigious
losses of the
French
army

The whole French army was now assembled near Orcha, but they exhibited a miserable skeleton of the Grand Army. Out of thirty-five thousand of the guard there remained only six thousand, but they were in tolerable condition, and had preserved their artillery. Davoust had only saved four thousand out of seventy thousand; Eugène, eighteen hundred out of forty-two thousand, Ney, fifteen hundred out of forty thousand. The marshals vainly attempted to re-establish order, and established gendarmes to arrest the stragglers, and bring them back to their standards. the punishment of death had lost its terrors to men who expected only a few hours of life (2).

Cessation of
the frost,
and dis-
continuance
of the pur-
suit by
Kutusoff

The severity of the weather abated at Orcha; to the intense frost of the preceding fortnight succeeded a thaw, which rendered the bivouacs at night less intolerable, magazines in abundance were formed in the town, and a park of artillery supplied the losses of the corps in that essential particular. The garrison of the town and the Polish cavalry in the neighbourhood were joined to the army. Kutusoff, finding that, during the delay occasioned by the action with Marshal Ney's corps, the remains of the French army had gained the start of him by several marches, resolved to relinquish the pursuit to his advanced guard, and give the main body some repose (3). For this purpose he moved his headquarters, by easy marches, to Kopyn on the Dnieper, leaving to Wittgenstein and Tchichagoff the task of completing the destruction of the French army.

Napoléon's
hazardous
situation
and plans

Napoleon's first intention was to join his forces to those of Victor and Oudinot, and, with their united force, fall upon Wittgenstein, and force his way across the Oula, on the direct road to Wilna. But the excessive difficulty of the roads in that direction, leading through forests and morasses, which offered no resources for the army, and the experienced strength of the Russian position at Smolensko, having compelled him to abandon that design, he moved direct upon the Beresina. On the road he received the disastrous intelligence, first, of the capture of Minsk, and then of the bridge of Borissow, by Tchichagoff's army. the only passage over the river was now in the enemy's hands, while the sudden thaw had broken up its wintry covering, and filled the stream with fragments of floating ice, which rendered it apparently impossible to re-establish a communication with the opposite shore. In front was Tchichagoff, guarding the stream with thirty thousand men, on the right, Wittgenstein in an impregnable position, on the left, Kutusoff with the main Russian army, (4).

His admir-
able arrange-
ments for
marching
through.

In these critical circumstances the Emperor displayed his usual genius and firmness of mind. Far from despairing of his fortunes, he resolved to accumulate his force, and overwhelm the army of Moldavia, which obstructed the direct line of his return to Europe. For this purpose he strengthened his army with the corps of Victor, Oudinot, and Dombrowski, and all the detachments which he could collect in the neighbourhood, and, placing the corps of Oudinot in front, and that of Victor in the rear, set out on his perilous march. By concentrating his whole force in this manner, he presented an imposing mass of seventy thousand combatants; for, though the remains of the Grand Army, reinforced by the wreck of Dombrowski's corps, did not exceed twenty thousand men, the united army of Victor and Oudinot brought an accession of fifty thousand troops, with all their artillery and appointments in good order, and the united artillery of the army amounted to two hundred and fifty pieces. After making every allowance for the disorganization of a part of this force, there can be no doubt that Napoleon had at his disposal a body of forty thousand combatants, perfectly armed, and in a condition to fight; that they were supported by a powerful train of artillery, and that all were penetrated by the conviction that their only chance of safety lay in their own courage and resolution (1).

Force which
Tschichagoff
had to
oppose him.

To oppose this still formidable force, Tschichagoff had only at his disposal thirty three thousand men, of which one-third was cavalry, nearly unservicable in the marshy shores and wooded banks of the Beresina; and his artillery did not exceed one hundred and fifty pieces. He had no chance, therefore, of opposing the passage of the river by main force; but the real danger of Napoleon consisted in this, that he might fall with superior numbers upon the French advanced guard before the main body could come across to their assistance, or, by destroying the bridge over the marshes on the road to Timbuc, render their further progress impracticable even after passing the stream, or delay it till the approach of Wittgenstein endangered the whole army (2).

Breaking
down of
the bridge
of Borisow
and junction
of Napoleon
and Victor.

The advanced guard of Tschichagoff, advancing beyond the bridge of Borisow, in order to approach Wittgenstein's corps, was met on the 25d by the vanguard of Oudinot, and totally defeated, with the loss of above one thousand men. His troops, in consequence, re-

passed the river in the utmost confusion, but they had the presence of mind to destroy the bridge of Borisow in their flight. This circumstance still exposed Napoleon to the difficulty of throwing a bridge and crossing the river in

Nov. 25. the face of the enemy's army a difficulty which was not diminished by the intelligence, that on the same day Wittgenstein had fallen on his rear guard under Victor, and made fifteen hundred prisoners. The corps of Victor, in consequence, was thrown back upon the centre of the army, under Napoleon in person. They met suddenly in the middle of a pine forest, and Victor's men then beheld, for the first time, the ghastly remains of that once splendid army traversing the wood more like a troop of captives than a body of armed men. The squalid looks of the soldiers, the silent tread and sunk visages of the men, their long boards and smoke-beamcarved countenances; the vast numbers of officers and generals marching without troops promiscuously with the common men; the extraordinary dresses of the army, composed of women's pelisses, old carpets, or torn cloaks, threw the troops of Victor, who had been kept ignorant of the disasters of the Grand Army,

into consternation; and disorder, the most contagious of all maladies, began rapidly to spread through the ranks (1).⁷

Napoléon's measure to deceive the enemy as to his real point of passage To conceal his real intention, Napoléon made demonstrations towards the Lower Beresina, as if his design was to cross there, and unite his forces to those of Schwartzenberg. He even went so far as to make considerable preparations for a bridge, nearly opposite Brill in that quarter. Meanwhile, the main body of his forces were collected on the heights of Borissow; and finding that his demonstrations had attracted the whole attention of the enemy to the lower part of the river, he began, under cover of a battery of forty pieces, to throw two bridges, on the

Nov 24 night of the 23th, over the stream, nearly opposite to Studienka. A severe frost, which set in on the 24th, facilitated the approach of the artillery and caissons to the river, over the marshy meadows which lined its sides: but this fortunate circumstance redoubled the difficulty of forming the bridges, by reason of the floating ice which was brought down by its waves.

Nov 25 But nothing could arrest the French engineers. With heroic devotion, the corps of sappers threw themselves into the river, with the water up to their shoulders; while the cavalry of General Corbineau swam across the stream to drive back the Russian detachments which were beginning to collect on the opposite shore. The enemy were defeated; and the bridge for infantry being at length completed by the incredible exertions of General Eblé, and the French engineers, a brigade of infantry was soon transported in safety to the opposite shore (2).

The first part of the army surprise the passage By a singular piece of fortune, General Tchaplitz, who commanded the Russian troops on the western side of the river, had been recalled by Tchichagoff, on that very night, to the Lower Beresina, to resist the attack which was anticipated in that quarter. In the morning of

Nov 26 the 26th, the French, who had passed a sleepless night, watching the Russian forces, beheld with astonishment their bivouacs deserted, and their batteries in retreat, at the very time that the bridge was beginning to acquire consistency. Tchaplitz, who was soon informed of the passage, made all haste to return, but he found the advanced guard so firmly established, that it was impossible to dislodge them from their position. Another bridge was speedily completed for the passage of the carriages and artillery. Fifty pieces of cannon, besides the artillery of the whole corps, defiled in a short time to the western bank, the whole of Oudinot's corps was transported across: and the Russians being driven back to the thickets, at a distance from the river, Napoléon found himself master of the important defiles that lead to Zembín, and the passage for his army secured (3).

Tchichagoff's measure on hearing of the passage During these critical operations, Tchichagoff, with the main body of his forces, lay inactive at Chabachwicz, obstinately adhering to his opinion that the serious attempt was to be made on the lower part of the river. He even adhered to this opinion *after he heard* of the passage having commenced at Studienka, conceiving that that operation was only

Nov 27 a feint to withdraw his attention from the real intentions of the Emperor. But being at length convinced, by repeated advices from Tchaplitz, that the passage was seriously going forward at that point, he made all haste to march his troops in that direction, while Wittgenstein having received intelligence that the French were escaping over the river, attempted

to march straight to Studienka, in order to destroy the rearguard on the left bank, but the state of the roads rendering that project impracticable, he was compelled to move to Starol Borissow. In this way he hoped either to cut off Victor, if he had not yet passed that place, or to follow him up in the direction of Studienka, if he had anticipated his movement (1)

Copy of Partonneaux's division by Wittgenstein. Nov. 27. The corps of Victor was extended along the left bank of the Berezina, as far as Borissow, which was occupied by General Partonneaux with a strong division. During the whole of the 27th the passage of the army continued, while Victor's corps gradually drew nearer to the bridge; but the division of Partonneaux, which formed his rearguard, was commanded by Napoleon not to leave Borissow and move upon Starol-Borissow till six in the evening. The consequence was, that before he could reach the latter town, Wittgenstein's army was firmly established across the great road, with his front facing the line by which alone the French could approach Partonneaux, finding his progress interrupted by so formidable a force, attempted to cut his way through; but his troops being defeated with great loss in their attempt, and finding their retreat to Borissow cut off by Platoff, who had come up with his Cossacks, was compelled to capitulate with seven thousand men, including eight hundred cavalry in the best condition. He himself endeavoured, with four hundred men, to elude his pursuers during the obscurity of the night; but after wandering some hours in the dark through the snowy desert, and finding every outlet blockaded by the enemy's fires, he was obliged to lay down his arms (2)

Preparation for general attack on the French on both sides of the river. On the same day General Yermoloff, with the advanced guard of Kutusoff's army, arrived at Borissow, and a bridge of pontoons having been established by Tchichagoff, his corps was instantly passed over to reinforce the army of Moldavia on the right bank; and the Russian generals having met from Moscow, Finland, and Bucharest, at Borissow on the night of the 27th, concerted measures for a general attack on the French army on both sides of the river for the following day. Tchichagoff, supported by Yermoloff, was to assail Oudinot and the French main body on the right bank, while Wittgenstein pressed upon Victor, and threw back his corps upon the bridge of Studienka (3)

The French force threw way through Tchichagoff's corps. Tchaplitz began the action on the morning of the 27th, by a spirited attack on the corps of Marshal Oudinot; but the French vanguard having been successively reinforced by the remains of Ney's corps, the legion of the Vistula, and the Imperial guard, the Russians, after an obstinate conflict, were compelled to give way, with the loss of twelve hundred prisoners. The French cuirassiers charged with so much impetuosity, that the day would have been irretrievably lost, if Tchaplitz had not bravely thrown himself upon the victorious squadron at the head of the Russian hussars; and Tchichagoff having at length brought up the main body of his forces, the battle was restored; but it was too late for decisive success: the road to Zembin was secured, traversing for some hundred yards desfilés through the marshes where the narrow road was laid on wood, which might have been burned, and the retreat of the French entirely stopped; and during the action the guard and the corps of Davoust desfiléd in that direction. The battle continued in the wood between Brill and Stackhow with inconceivable fury till midnight; the French fighting with the courage of despair,

the Russians with the ardent desire to complete the destruction of their enemies. The loss was nearly equal on both sides, that of the French amounted to nearly five thousand in killed and wounded (1)

Lurid attack of Wittgenstein on the French on the left bank While this was going forward on the right bank, Wittgenstein commenced a vigorous attack on the corps of Victor, now severely weakened by the loss of Partoureaux's division. After a severe struggle, General Diebitch established a battery of twelve pieces so far in advance as to command the bridge, and the confused crowd of soldiers, chariots, and baggage-waggon which was assembled in its vicinity, and soon the balls from his guns began to fall among them. A dreadful tumult instantly commenced, and the whole crowd rushed towards the bridges, crushing each other in their flight, and blockading the passage by their efforts to get over. As the Russian corps successively gained ground, their batteries formed a vast semicircle, which played incessantly on the bridges till night, and augmented to desperation the terror of the multitudes who were struggling at their entrance. In the midst of the confusion, the artillery-bridge broke, and the crowd who were upon it, pushed forward by those behind, were precipitated into the water, and perished miserably. Infantry, cavalry, and artillery, now rushed promiscuously to the other bridge, which was speedily choked up, through the frantic crowd, the caissons and cannon were urged forward with unpitiable fury, ploughing their way, like the car of Juggernaut, through the dead and the dying, while the weaker were every where pushed into the stream; and thousands perished amidst the mass of ice which were floating on its waves (2).

Generous devotion shown by many at this awful passage In these moments of hopeless agony, all the varieties of character were exposed naked to view. Selfishness there exhibited all its baseness, and cowardice its meanness; while heroism seemed clothed with supernatural power, and generosity cast a lustre over the character of humanity. Soldiers seized infants from their expiring mothers, and vowed to adopt them as their own. Officers harnessed themselves in the sledges, to extricate their wounded comrades, privates threw themselves on the snow beside their dying officers, and exposed themselves to captivity or death to solace their last moments (3). Mothers were seen lifting their children above their heads in the water, raising them as they sunk, and even holding them aloft for some moments after they themselves were buried in the waves. An infant abandoned by its mother near the gate of Smolensko, and adopted by the soldiers, was saved, by their care, from the horrors of the Beresina, it was again saved at Wilna, on the bridge of Kowno, and it finally escaped all the horrors of the retreat.

Frightful scenes when the bridges were broken It was in the midst of this terrific scene that the rearguard of Marshal Victor, which had nobly sustained, during the whole day, the arduous duty of protecting the passage, arrived at the entrance of the bridge. His troops, with stern severity, opened a passage for themselves through the helpless multitude, and in vain endeavoured to persuade them to pass over to the opposite shore. Despair and misery had rendered them incapable of the exertion. At length, as morning dawned, and the Russian troops approached, the rearguard were drawn across the bridge, which was set on fire. A frightful cry now rose from the multitude on the opposite bank, who awakened too late to the horrors of their situation, numbers rushed

over the burning bridge, and to avoid the flames plunged into the waves while thousands wandered in hopeless misery along the shore, and beheld their last hopes expire with the receding columns of their countrymen. When the ice dissolved in spring, the magnitude of the disaster became manifest twelve thousand dead bodies were found on the shores of the river (1)

Remains of
this dreadful
passage

Such was the dreadful passage of the Berezina—glorious to the French arms, yet how fatal! The talent of the Emperor, the firmness of the soldiers, was never more strongly exemplified, but it completed the ruin of the Grand Army. Twenty-five pieces of cannon, sixteen thousand prisoners, and above twelve thousand slain, were the price at which the passage was purchased. The corps of Victor and Oudinot were reduced to the deplorable state of the troops who had come from Moscow; the army no longer preserved the appearance of military order, but a confused mass of fifty thousand men marched in detached groups along the road to Wilna.

Dreadful
disasters
which now
ensued in
the retreat.

To complete the disaster, the frost, which for some days had been comparatively mild, set in on the 30th with increased severity. The general disorder now reached its height, the horses of Victor and Oudinot's corps, and all those which had been collected on the retreat, shared the fate of those which had accompanied the Grand Army—the artillery was gradually abandoned; the cavalry melted away and Marshal Ney with difficulty could collect three thousand men on foot to form the rearguard, and protect the helpless multitude from the attacks of Platoff and his indefatigable Cossacks. For some days Victor shared with him the post of danger; and by their incessant exertions successive rearguards were formed, which rapidly disappeared under the severity of the weather or the attacks of the enemy. Tchaplitz and Platoff continued to press the rearguard, and, on the

Dec. 4.

4th December, captured twenty-four cannons and two thousand five hundred prisoners. In the midst of the general ruin, a guard, called the "Sacred Squadron," was formed of officers, to surround and protect the Emperor. The gentlemen who composed it discharged with heroic fidelity the duty assigned to them, and executed, without murmuring, all the duties of common soldiers—but the severity of the cold soon destroyed their horses, and the Emperor, in the midst of his faithful followers, was obliged to march on foot through the snow. At night, the bivouac was formed in the middle of the still unbroken squares of the Old Guard. These brave men sat round the watch-fires on their haversacks, with their elbows on their knees, their heads resting on their hands, and seated close together—striving by this posture to repress the pangs of hunger, and gather additional warmth by resting on each other (2).

Napoleon
leaves the
army for
Paris.

On the 5th, Napoleon arrived at Smorgoni. He there collected his marshals around him, dictated the famous 29th bulletin, which fully developed the horrors of the retreat, explained his reasons for immediately returning to Paris, and, after bidding them all an affectionate farewell, set out in a sledge at ten at night for the French capital, accompanied by Caulaincourt and Lobau, leaving the command of the army to Murat (3).

A Sufferings
of Poland
during the
campaign.

During the time that this long course of disasters was befalling the Grand Army, Warsaw and the Grand Duchy of Lithuania had been the victims of the most uninterrupted suffering. Great as was the

(1) *Sigier* ii. 372. *Desm.* ii. 343, 344. *Jom.* i. 202. *Falm.* ii. 404, 409. *Climak.* iii. 71. *Lab.* 335.

, and ardent their desire to regain their national independence off the hated yoke of Russia, they had yet sunk under the imposed upon them by the continual passage of the troops, requisitions of the French emperor. The Grand Duchy of possessing only a population of little more than four millions ly, during the campaign, furnished eighty-five thousand y, and their swords had drunk as deep of the Russian y troops in the vast array, both at Smolensko and Borodino. , great as it was, however, was far from keeping pace with ptions of Napoléon, and the Polish battalions were so come immense multitude of armed men by whom they were Napoléon frequently complained that he had never seen in his army. Nevertheless, situated as the Grand Duchy surprising how its inhabitants had been capable of making which they actually did. The pay of the troops had long Government, deeply in debt, was unable to borrow money he capitalists in Europe, and the greatest proprietors were ghty per cent for the money they were compelled to bor-requisitions. Prince Czartorinski was obliged to leave Warsaw inability to maintain his family there, and the Princess of the richest noble in Poland, was so reduced, that she d money to send home two lady's-maids whom she had e and England the whole public authorities were six of their salaries; and those to whom the great propriet-ed, were unable to extract from them a single farthing in e midst of this universal misery, the requisitions for the re incessant; no representations could convince Napoléon poverishment to which Poland had been reduced taxes, , were laid on, but they produced nothing, and moveable ps traversed the country in every direction, seizing with-gicultural produce of the peasants, who were universally y by the exactions (1)!

ie midst of this scene of unparalleled suffering, it was an- to the Abbé de Pradt one morning early, on the 10th of travelling carriage in great haste had driven into the Hotel Warsaw, and that his immediate presence was required. He going there, and found in the court-yard a small travelling , without wheels, on a coarse sledge made of four pieces of , which had been almost dashed to pieces in entering the gate-br travelling-carriages, still ruder in their construction, stood incourt speedily appeared, and taking the Abbé by the hand, nall dark apartment, with the windows half-shut, and in a cor-rvant girl was striving in vain to light a fire with green damp.

A figure wrapped up in a rich pelisse, was placed with its as the Abbé entered, it turned round on hearing the sound of Napoleon stood before him (2).

"Is it you, Ambassador?" said the Emperor. "You have gi- much unpleasantness," replied the Abbé, with deep emotion, "I see you well, and I am content." After some further conver-sé, upon the Emperor enquiring what contributions could be

firm held by the Grand Duchy explained to him the state of destitution to which Poland had been reduced and the great exertions it had made for furnishing for his army. "What!" rejoined the Emperor "I have not seen a Pole in my ranks." "There were eighty-two thousand nevertheless but they were drowned in the immensity of your Majesty's armament." "What would the Poles be at?" rejoined the Emperor "To be Russians if they cannot be Poles? And then, why not Russians?" with a sarcastic air. "Come Abbé we must raise ten thousand Polish Cossacks a lance and a horse are enough for each man. With them we will soon stop the Russians. From the sublime to the ridiculous is but a step. Dangers! I have seen none of them. I am never so well as in agitation the greater the tumult the better I feel. None but the *rois fainéants* grow fat in their palaces. Horseback and camps for me. *From the sublime to the ridiculous is but a step.* I see you are all in alarm here. Bah! The army is superb. I have a hundred and twenty thousand men. I have always beaten the Russians they never venture to stand against me. They are no longer the soldiers of Eylau and Friedland. We will maintain our position at Wilna. I am going to raise three hundred thousand men. Success will embolden the Russians. I will give them two or three battles on the Oder, and in six months I will be again on the Niemen. I have more weight on the throne than at the head of the army. I left the troop indeed with regret but it was necessary to watch over Austria and Prussia. All that has happened is nothing it is the effect of the climate, and nothing more. The enemy are nothing I have beat them wherever I met them. They thought they would cut me off at the Beresina but I soon got quit of that fool of an admiral (I never could pronounce his name). Their position was superb fifteen hundred toises of a marsh a river. But what then? I got through them all. It is then you see who have the strong minds. I have often been harder pushed before. At Marengo I was beaten till six o'clock at night next day I was master of all Italy. At Essling they thought they would stop me that archduke has published I know not what on the subject. I could not prevent the Danube from rising sixteen feet in one night but for that it was all over with Austria. But it was written in heaven that I should marry an archduchess.

E. understood "So also in Russia. Could I prevent it from freezing?" They came
and told me and told me every morning that I had lost ten thousand horses
at the Beresina during the night. Well a good journey to them. Our Norman
 horses are less hardy than the Russian they cannot resist more than nine
 degrees of cold. It is the same with the Germans. Go and look for the Saxons
 or the Bavarians. You won't find one of them alive. Perhaps they may say
 I lingered too long at Moscow possibly I did so but the weather was fine,
 and I expected peace the winter set in before its usual time. I sent Lauriston
 on the 11th of October to negotiate for peace. I thought of going to
 St. Petersburg I had time enough to winter there or in the south of Russia.
 The King of Naples will hold good at Wilna. Politics are a great drama he
 who ventures nothing will win nothing. *From the sublime to the ridiculous*
is but a step. The Russians have shown themselves they have clouds of Cossacks
 that nation after all is something. The crown peasants love the Government
 the nobles are mounted on horseback they proposed to me to
 declare the slaves free. I would not do so a general massacre would have
 followed. I made a regular war on Alexander but who could have thought
 they would have struck such a stroke as the burning of Moscow? They attribute
 it to us but it was truly themselves who did it. It would have done
 honour to ancient Rome. I will have nothing to do with the *corps diplomatique*.

lique They are nothing but titled spies sent to send bulletins of what we are about to their court. I won't go through Silesia—ah, ah! Prussia *From the sublime to the ridiculous is but a step*” The Emperor ran on in this way for above three hours, during which time the fire, which had at length kindled, gradually went out, and all in the apartment were perishing of cold; but the Emperor experienced no inconvenience, so completely was his mind absorbed in the subjects of the conversation. At length, it being announced that the carriage was ready, he and Caulaincourt mounted the sledge, and upon the persons present enquiring anxiously for his health, he exclaimed, “I never was better if I had the devil himself on board, I think I would not be a bit the worse!” With these words he waved adieu to his attendants, set out in his humble conveyance, and was soon lost in the gloom of a Polish winter. In setting off, the sledge was all but overturned by running against the post of the gate of the courtyard of the inn (1).

Increased severity of the cold, and dread of suffering from the troops The departure of the Emperor, though a matter of congratulation to the troops, completed the disorganization of the army. The cold increased in intensity as they approached Wilna, and at length reached twenty-six and thirty degrees of Reaumur, corresponding to twenty-eight and thirty-six below zero of Fahrenheit. The officers ceased to obey their generals; the generals disregarded the marshals, and the marshals contested the authority of Murat. The private soldiers, relieved of the duty of preserving the Emperor, forgot every thing but the instinct of self-preservation. The colonels hid the eagles in their haversacks, or buried them in the ground, the officers, who had hitherto marched round that sacred standard, dispersed to attend to their own safety. nothing was thought of in the army but the urgent pangs of hunger, or the terrible severity of the cold. If a soldier dropped, his comrades instantly fell upon him, and, before life was extinct, tore from him his cloak, his money, and the bread which he carried in his bosom. when he died, one of them frequently sat upon his body, for the sake of the temporary warmth which it afforded, and when it became cold, fell beside his companion, to rise no more. The watch-fires at night were surrounded by circles of exhausted men, who crowded like spectres round the blazing piles. as the wood was consumed, they continued to gaze with indifference on the decaying embers, incapable either of rising to renew the fuel, or of seeking another bivouac, and when at length the flames were extinguished, fell dead beside the ashes. The position of these melancholy bivouacs was marked in the morning by the circles of dead bodies which surrounded them, and attested the successive groups who, during the night, had been attracted by their light (2).

Prodigious losses of the detachments which joined the French army In vain numerous detachments joined the army between Smorgoni and Wilna, the terrible severity of the cold, and the sight of the sufferings of the Grand Army, speedily effected their dissolution. The division of Loison, six thousand strong, which marched from Königsberg to reinforce the army, was almost totally destroyed in a few days, and three skeleton battalions only reached their unhappy comrades. Twenty thousand recruits had joined between the Beresina and Wilna, and yet scarcely forty thousand of the whole troops reached that city, all in the last stage of misery and despair. During this disastrous retreat, the Russians incessantly pressed upon the retiring army. On leaving Smorgoni, their rear-guard was attacked by General Tchaplitz, and tota^{ly} destroyed with the loss

of twenty five cannon and three thousand prisoners; between Smorgout and Ochliany he again came up with the enemy, and dispersed the new rear-guard, with the loss of sixty-one pieces of cannon and four thousand prisoners and at Medniki he captured sixteen cannon and thirteen hundred prisoners. On the road to Wilna he captured thirty-one pieces, and penetrated into the town, where the French were hardly established; while Platoff proceeded on the road to Kowno, and cut off a whole column of one thousand men, with twenty-eight pieces of artillery (1)

It is a very remarkable circumstance, but attested by the most unexceptionable medical evidence, that during the whole of this dreadful retreat the French, to whom the cold was unusual, bore it better than the Russians and that of the survivors almost all were Italians or Frenchmen from the provinces to the south of the Loire. "The inhabitants," says Larrey, who was chief physician to Napoléon in the campaign, "of the southern countries of Europe, bore the cold better than the natives of the northern and moister climates—such as the Hanoverians, the Dutch, the Prussians, and the other German people the Russians themselves, from what I learned at Wilna, suffered more from the cold than the French. Three thousand men, being the best soldiers of the guard, partly cavalry and partly infantry, almost all natives of the southern provinces of France, were the only persons who really withstood the cruel vicissitudes of the retreat. They were the miserable remains of an army of four hundred thousand men, whom the inhabitants of the country had seen defiling over the bridge at Kowno, six months before, in all the pride of apparently irresistible strength (2) "

The troops had hardly begun to taste the sweets of repose, and to refresh themselves from the immense magazines which Wilna contained when they were roused by the cannon of the Russians, and compelled to hasten their retreat. A helpless crowd rushed out of the gates on the evening of the 10th December, and speedily arrived at the foot of an ascent covered with ice, where the whole remaining carriages of the army required to be abandoned. The equipage of Napoléon the treasure of the army, the baggage left at Wilna, the trophies of Moscow, the whole remaining artillery, were all left at the foot of that fatal ascent. In the confusion of leaving the city the Old Guard itself was for a short time dispersed, and the feeble appearance of order hitherto preserved disappeared; but in this extremity, the wonted courage of Marshal Ney was not wanting. He voluntarily hastened to the rear, and out of the confused mass formed a small corps, chiefly composed of the troops recently come up with Loison, with which he arrested the efforts of the enemy. The Russians found in Wilna, besides immense magazines of every description, above fourteen thousand soldiers, and two hundred and fifty officers, who were incapable of marching further, and preferred becoming prisoners of war to a longer continuance of their sufferings (3)

At length, on the 12th December the French arrived at Kowno on the Niemen, when three thousand prisoners were taken by Platoff and on the 15th they passed the bridge, in number about twenty thousand, of whom two-thirds had never seen the Kremlin. Thus, not more

(1) Rout. II. 197, 448. Lab. 403, 409. Fain, II. Chant. II.

(2) Larrey IV. 111, 114.

A similar fact has been observed regarding the British troops in India, who in general bear the fatigue of forced marches under the burning sun of that climate better than the rest. Russians, who have been habituated to it all their lives. The reason seems to be the same in both cases; viz. that the in-

habitants of the temperate regions of the globe, having their constitutions ripened by a more gradual climate are able to bear the extremes both of heat and cold better than those whose constitutions have been weakened either by the aridity of the arctic, or the relaxations of the tropical regions.

(3) Lab. 416, 421. Argur II. 418, 423. Rout. II. 411, 412. Larrey IV. 167

than seven thousand of the vast host with which Napoléon passed Smolensko in the beginning of summer, left the Russian territory, and out of five hundred thousand combatants who had crossed the Niemen since June, twenty thousand alone escaped the disasters of the campaign. As the Imperial Guard defiled over the bridge, an old grenadier extended on the ground attracted the attention of his comrades. The crowd respected his undaunted air, his decoration, and his three insignia. With a placid eye he viewed the approach of death, which he felt to be fast approaching, and, disregarding the other passengers and uttering no supplications, he waited till one of his comrades was near, and then, collecting all his strength, he raised himself on his elbow, and exclaimed to the soldier about to succour him, "Your assistance is in vain, my friend: the only favour which I have to request is, that you will prevent the enemy from profaning the marks of distinction which I have gained in combating them. Carry to my captain this decoration, which was given me on the field of Austerlitz, and this sabre, which I used in the battle of Friedland." With these words he expired, and the sabre and cross were carried to the Old Guard, now reduced to three hundred men, but still marching in serried groups, and preserving even unto death their martial and undaunted air (1).

Heroic conduct of
Ney on this
occasion

The heroic Ney still covered the rear when the troops were defiling over the bridge. Four times the rearguard had melted away under his command, and as often his example and activity had reformed a band for the protection of the army. He arrived at Kowno destitute of troops; a few hundred of the Old Guard alone retained the use of their arms, and they were already defiling over the river. Instantly collecting seven hundred fresh troops, whom he found in the town, and planting twenty-four pieces of cannon remaining there on the redoubts, he made good the post during the whole day against the efforts of the enemy. On the following day he still continued the defence, but finding that his troops deserted him, he seized a musket, and with difficulty rallied thirty men to defend the gate of Wilna. At length, when the passage of the troops who could be persuaded to move was completed, he slowly retired through the streets and across the river, still facing the enemy, and was the LAST OF THE GRAND ARMY who left the Russian territory (2).

Appearance
of Ney at
Gumbinnen
after passing
the Niemen

The first place on the German side of the Niemen where any of the persons who had gone across could rest, was Gumbinnen, and General Matthieu Dumas, who had with great difficulty reached that place, in consequence of a malady under which he had laboured ever since leaving Moscow, had just entered the house of a French physician where he had lodged when passing there before on his entrance into Russia, when a man entered, wrapped up in a large cloak, with a long beard, his visage blackened with gunpowder, his whiskers half-burned by fire, but his eyes still sparkling with undecayed lustre. "At last here I am! What! General Dumas, do you not know me?" "No. Who are you?" "I am the rearguard of the Grand Army—Marshal Ney. I have fired the last musket-shot on the Bridge of Kowno; I have thrown into the Niemen the last of our arms, and I have walked hither, as you see me, across the forests (3)." With respectful solicitude, General Dumas received the hero of the retreat; the benevolent host relieved his immediate necessities, and he soon after set out with Dumas, in the calash of the latter, on the road for Königsberg.

the passage
of the mass
point five
miles
before.

When the troops, in leaving Kowno, arrived at the point where the passage had been effected five months before; when they beheld those heights, then crowded with splendid battalions, now covered by a miserable band of fugitives, and passed the remains of the bridges, now deserted, which then groaned under the march of glittering squadrons, the magnitude of the contrast, notwithstanding their present sufferings, brought tears into the eyes even of the common soldiers. Casting a last look on the shores of her savage regions—then, so ardently desired, since, the scene of such grievous suffering—they plunged into the forest, and, abandoning every appearance of military order, dispersed like private travellers over the boundless plains of Poland (1)

Operations
against
Mackintosh
near Riga.

The only corps of the enemy which still remained in Russia, was that of Marshal Macdonald, twenty-nine thousand strong, which was still in the environs of Riga, and that of Schwartzenberg and Regnier, which was in the southern provinces. The design of Kutusoff was to cut him off from the Niemen, and throw his corps back upon the peninsula of Courland, from whence escape, except by sea, was impossible. For this purpose, the corps of Wittgenstein was directed to descend the right bank of the Niemen to Kowno, and move upon Gumbinnen to cut him off from the Vistula; while the garrison of Riga, now considerably reinforced, pressed upon his rear. On the 18th December, Macdonald, who appears to have been totally forgot during the confusion of the retreat, began to retire from Riga; while the Marquis Paulucci, governor of Riga, detached ten thousand men to harass his retreat. General Diebitch, who commanded the advanced guard of Wittgenstein, advanced so rapidly, that on the 23th he came up with the retreating army, and boldly threw himself, with only two thousand men, between the French troops of Macdonald and the Prussian auxiliaries. In his corps, commanded by General D'York, who amounted to eighteen thousand men. The garrison of Riga, pressing him in rear, and the troops of Wittgenstein coming up to separate him from Macdonald, D'York conceived it no longer necessary to risk his army by an adherence to their forced alliance, and on the 30th December signed a convention with General Diebitch in virtue of which the Prussian troops, to the number of ten thousand, became neutral, and only awaited the commands of the King of Prussia to unite themselves to the victorious Russians. Deprived by this defection of one-half of his troops, Macdonald lost no time in falling back to Konigsberg, which he reached on the 3d January, with the loss, in various skirmishes during his retreat, of fifteen hundred killed and wounded, and above one thousand prisoners. The slowness of Wittgenstein's advance alone, preserved the remains of his corps from total destruction (2)

Noble pro-
clamation of
Alexander
to his sol-
diers.

Jan. 7, 1812.

On the other side, Prince Schwartzenberg, learning of the disasters of the Grand Army, and finding that the corps of Sacken opposed to him was strongly reinforced, fell back to the Grand Duchy of Warsaw, and finally evacuated the Russian territory on the 7th January (5)

On the last day of the year, Alexander addressed from Wilna a noble proclamation to the soldiers, in which, without underrating their glorious exploits, he ascribed the success which had been attained mainly to the protection of Heaven. "Soldiers! The year is past—that glorious and ever memorable year in which you have buried to

(1) Lab. 427. Sagar II. 429, 430.

(3) Bont. II. 415. Sagar II. 404.

the dust the pride of the insolent aggressor. It is past, but your heroic deeds will never pass, time will never efface their recollection : they are present in the hearts of your contemporaries, they will live in the gratitude of posterity. You have purchased with your blood the independence of your country against so many powers leagued together for its subjugation. You have acquired a title to the gratitude of Russia, and the admiration of the world. You have proved by your fidelity, your valour, and your perseverance, that against the hearts filled with love to God and devotion to their country, the most formidable efforts of the enemy are like the furious waves of the ocean, which break in vain on the solid rocks, and leave nothing but scattered foam around them. Desirous to distinguish all those who have shared in the immortal exploits, I have caused medals to be struck from silver which has been blessed by our holy church. They bear the date of the memorable year 1812. Suspended by a blue ribbon, they will serve to decorate the warlike breasts which have served as a buckler to their country. You have all shared the same fatigues and dangers, you have but one heart and one will, you are all worthy to wear this honourable recompense, and you will all feel proud of the decoration. May your enemies tremble when they see it on your bosoms. May they know that under these medals beat hearts animated by an imperishable tie, because it is not founded on ambition or impiety, but on the immutable basis of patriotism and religion (1) "

Retreat of the remains of the Grand Army to Königsberg and Dantzic The scattered troops of the Grand Army continued to retreat through the Polish territory, still pursued by the Russians, who continued to take numbers of prisoners. The town of Königsberg was speedily filled with sick and wounded men above ten thousand were soon collected at Königsberg, almost all of whom fell into the hands of the Russians. The French generals made a vain attempt to rally the troops on the Vistula; but their diminished numbers precluded all hope of maintaining that position. Numbers who had escaped the horrors of the retreat, fell a victim to the sudden change of temperature, and the return to the usages of civilized life which followed their return to Prussia. The shattered remains of the army were collected in Dantzic, to secure that important military position. Thirty-five thousand men, of seventeen different nations, were there assembled, and the remainder fell back to Posen on the Oder. The Russians stopped the march of their troops, already almost exhausted, at Kalisch, in the end of January, and thus terminated this memorable campaign (2)

Arrival of Alexander at Wilna and horrible state of the hospitals On the 22d December, the Emperor Alexander arrived at Wilna, and hastened to award to the troops the rewards which their glorious services merited. He found the city overwhelmed with prisoners and wounded men, contagious diseases speedily appeared, and the mortality soon became excessive both among the victors and vanquished. History has not preserved a more noble instance of fortitude and humanity than was exhibited by the Emperor Alexander on this occasion. The condition of the prisoners, till his arrival, was horrible beyond conception. Huddled together in hospitals, without either fire, water, medicines, beds, or straw, they lay on the hard floor, often in the last stage of exhaustion or disease. Hundreds, in consequence, died every day, whose bodies were thrown out of the windows into the streets by the soldiers in attendance, but their place was immediately supplied by multitudes of others, who

crawled continually into these abodes of wretchedness, often only to draw their last breath within its walls. Hard biscuit was all they had for food; and their only drink the snow which the least injured among them brought in from the streets and courtyards of the buildings. The frightful accumulation of gangrene wounds and expiring sickness; the multitudes who crowded, not only the apartments but even the stairs of the hospitals and the putrid smell of above six thousand bodies which lay unburied in their vicinity, had engendered a dreadful contagious fever, of which hundreds died every day, and which, for several succeeding years, spread its ravages through every country in Europe (1).

Into these hidden dens of misery the Emperor Alexander and his brother Constantine immediately entered, on their arrival at Wiemar, on the 22d of December. Profoundly moved by the dreadful spectacle of human suffering which was there exhibited, the Czar immediately took the most efficacious measures to assuage the universal suffering. Without casting a thought upon the consideration that most of these unfortunate wretches had been his enemies, he, along with Constantine, distributed money largely among them. His own physicians, including the able and intrepid Dr. Wylie, who never left his person, were sent to make the necessary arrangements for putting a stop to these horrors. Out of his own purse, the Emperor discharged a large part of the arrears of pay due to the troops of his enemies, and established vast hospitals in the palaces of the city, where the French sick and wounded were placed beside and equally well treated with the Russian. The dead bodies in the streets were collected and burned; they amounted to the astonishing number of seventeen thousand. The total number consumed there, and brought in from the vicinity, exceeded thirty thousand. The Grand Duke Constantine rivalled his brother in these acts of mercy. Several of the wounded were brought to his apartments and tended there and he, in consequence, caught the prevailing epidemic, though the strength of his constitution carried him safely through its dangers. Shortly after, all the sovereigns of Europe whose subjects were lying in the hospitals at Wilna, sent money to the Emperor to relieve their distresses. Napoleon alone, engrossed with the cares of his situation, sent none. Alexander and Constantine, however, were indefatigable in their attentions to the prisoners during several weeks that they remained at Wilna and the Emperor, on the very day of his arrival, published a general amnesty to the Polish nation for any part they might have taken in the insurrection against his government; terminating thus a campaign of unexampled dangers and glory, by deeds of unprecedented mercy (2).

From the most moderate calculations, it appears that the losses of the French during the campaign were as follows —

(1) *Chamb.* III. 145, 147. *Séjour* II. 467. *Oginski*, IV. 89, 100.

(2) *Chamb.* III. 145, 148. *Oginski*, III. 98, 100. *Bess.* II. 418. *Séjour* II. 467.

The writer is happy to be able to confirm the preceding account of the conduct of the Emperor Alexander and the Grand Duke Constantine on this occasion, which is given by all the historians, both

French and Russian who have treated on the subject, by the account which he himself received in Paris, in May 1814 from his esteemed friends, Sir James Wylie and Sir Alexander Crisham, physicians to the Emperor who were engaged with him in these heroic acts of mercy.

(Losses of the French during the campaign)

Slain in battle, soldiers,	125,000
Prisoners, generals,	18
— officers,	3,000
— soldiers,	190,000
Died of cold, fatigue, and famine,	132,000
<hr/>	
Total loss,	450,018
Eagles and standards taken,	75
Cannon,	929 (1)

The number of those who escaped from the campaign were about 80,000, of whom 25,000 were Austrians and 18,000 Prussians, so that the survivors of the proper French army were not above 57,000, out of above 500,000 who entered the Russian territory. The annals of the world afford no example of so complete an overthrow of so vast an armament (2).

The losses of the Russians, especially during the advance from Moscow, owing to the severity of the weather, were very great, and almost equalled that of the French. Only 55,000 of Kutusoff's army reached Wilna, and of these, 18,000 were soon laid up in the hospitals. At Kalisch, when the campaign was finished, not more than 50,000 men could be assembled round the headquarters of the Emperor Alexander, but the number rapidly increased by the junction of convalescents, and detachments from the interior (3).

Reflections on the military cause of this prodigious overthrow. The Russian campaign having been the chief cause of the overthrow of Napoléon's power, and having substituted the colossus of Russian ambition for the terrors of French predominance, has given rise to numerous reflections and much party spirit. The partisans of the French Emperor have incessantly urged that the destruction of the armament was solely owing to the severity of the winter; that the Russians were beaten in every encounter, and displayed both less conduct and courage than on former occasions, and that, but for the occurrence of circumstances which human wisdom could neither foresee nor prevent, the triumph of the French arms would have been complete. On the other hand, the adherents of the Bourbons have maintained that the overthrow was mainly owing to the impetuosity and want of foresight of the Emperor himself, that he made no provision for a retreat, and deviated from the fundamental principle of a base in military operations, and that, blindly trusting to his own good fortune, he rushed headlong on destruction, and precipitated his army into the horrors of winter, by obstinately clinging to Moscow, when reason and experience should equally have convinced him that he could not maintain himself in that position.

An impartial review of the circumstances of the campaign, will probably

(1) Bont ii. 446

(2) Bont ii. 446 Gourg ii. 199 Chamb iii. 134

"Was there ever any thing like this exhibited in the world before, the remains of 500,000 men, who

had crossed the Niemen in such splendid order in June, now recrossed it, pursued by a detachment of cavalry?"—CHAMBRAY, iii. 134

(3) Gourg, ii. 214. Aperçu sur la Campagne de 1813, 37

lead to the conclusion that there is some truth and much error in both these sets of opinions

Great ability of Napoleon generally in the campaign.

I. It seems the height of injustice to assert that the Emperor did not display his wonted military talent, and the troops their accustomed bravery, in this expedition. The arrangements made for providing the army during its advance—the minute and almost incredible attention which he paid to details of every description, and in every department (1)—the admirable talent with which he extricated himself from his perilous situation on the Berezina—have never been surpassed, and have extorted the admiration and obtained the generous praise of his enemies (2). In truth, *if the expedition failed from any thing imputable to the French*, it was the immense extent of the preparations made to secure its success, it being so true, in Montesquieu's words, that "distant expeditions fail from the very magnitude of the measures taken to carry them into execution."

Heroic energy of the Russians.

II. It is equally in vain for the French to deny that the courage and skill of their adversaries were deserving of the highest admiration. To have retreated five hundred miles in front of an army double their own strength, without a single battalion being broken, or a single standard taken, to have rallied the divisions originally separated, and fought a doubtful battle with superior forces in the heart of Russia; to have enclosed the conqueror in an iron circle, and reduced him to the danger of starving in the centre of his conquests; to have driven him to a ruinous retreat in the beginning of winter, and gained to the Russian arms all the advantages of the most decisive success, without the dangers by which it is usually purchased, to have united forces from the extremities of Europe, and brought them to the critical point of the enemy's retreat, at the very moment when he was compelled to pass it,—are achievements almost without a parallel in military enterprise, and certainly without an equal in military success.

III. The attempt so frequently made by the French to throw the disasters of the campaign entirely upon the severity of the climate, is perfectly hopeless, and has, in fact, been abandoned by their ablest military writers (3). The reasons of this are sufficiently obvious.

The severity of the Russian winter will not explain the disaster.

1st, Supposing it were true that the immediate cause of the destruction of great part of the French army was the winter of Russia, the question remains—*What compelled them to brave its severity?* To leave the comfortable winter-quarters of Twer, Novogorod, or Kaluga, containing ample cantonments for their whole forces, and a country, according to Napoleon's account, as rich as the most fertile parts of France or Germany (4), and fall back on the ruined and wasted line of the Smolensko road? *If they had really conquered their enemies in every encounter, and vanquished Russia but for the severity of its climate, what prevented them from obtaining the mastery of its resources, and maintaining themselves in the centre of the country, as they had done at Berlin and Vienna in former*

(1) *Geny*, ii. App. p. 229, ad Rem. (2) *Rem.* ii. 463.

(3) *Jam.* iv. 204. (4) *Rech. Dett.* iv. 116.

campaigns, or as the Allies subsequently did at Paris? It is obvious that the fact of their retreating implies the sense of an inferiority in the field, and an inability to maintain their ground before the growing forces of their enemies, and if this retreat was begun at a hazardous time, so much the greater must have been the pressure of that necessity which compelled them to embrace so grievous an alternative

2d The truth therefore being apparent, that it was the superiority of Russia in light troops that rendered any attempt, on the part of the French, to maintain themselves in the interior of the country hopeless and impracticable, the disasters of the retreat were the immediate consequence of the advantages gained by their enemies, and ought in fairness to be ascribed to their conduct. If a seventy-four sends its antagonist to the bottom by a broadside, no one thinks of ascribing the victory to the elements, although the unhappy victims of defeat are swallowed up by the waves — not mowed down by the fire of the enemy. When the Duke of Brunswick retreated before Dumouriez, in Champagne, the French were not slow in claiming the credit of the success, though it was mainly owing to the autumnal rains and the dysentery which paralysed their invaders, when Pichegru conquered Flanders and Holland in 1794, the world justly ascribed the triumph to the French arms, though the losses of the Allies were mainly owing to the cold, which was more severe than that which assailed the French army until after the passage of the Beresina (1), and Napoléon never thought of transferring to the elements the glory of Austerlitz, although, according to his own account, one half of the Russian loss was owing to the breaking of the ice on the lakes, over which their troops were driven by the fire of the French artillery (2).

The cold was unusually long of setting in 3d, The cold of the winter in 1812 was neither premature nor extraordinary till the close of the campaign. Napoleon repeatedly expressed his astonishment in the bulletins at the fineness of the weather in October at Moscow, which he compared to the autumn at Fontainebleau (3), and the winter was unusually late of setting in. The Russians themselves were astonished at its tardy advance, and began to fear that Providence, out of favour to Napoleon, had deprived them of its powerful aid (4). The snow did not begin to fall till the 6th November, and before that time, Marshal Davoust's corps alone had lost ten thousand men since leaving Malo-Jaroslawitz from the fatigues of the march (5); and the stragglers from the army already overwhelmed the rearguard. The cold in Holland in 1795, and in Poland in 1807, was more severe than that of Russia in 1812, till the troops approached Wilna (6), and yet no disorder prevailed in the French armies of Pichegru or Napoleon, who kept the field during both these seasons, whereas the French, when they left the Beresina, had lost, since the opening of the campaign, three hundred and fifty thousand men, and seven hundred pieces of cannon, and on the road from Moscow, not less than one hundred thousand, of whom more than half were prisoners of war.

And it affected the Russians as much as the French

4th, The cold was as severe on the Russians as the French, and the diminution of their forces for *present* operations as great from this cause as that of their adversaries. The army of Kutusoff left behind

(1) *Jom* iv 181.

(2) *Ante*, v 232

(4) *Lab* 241 *Sigur*,

(5) *Ibid* ii 170

thirty thousand between Malo-Jaroslawitz and Krasnoi, though they were hardly ever engaged with the enemy (1); and the French themselves admit, that when it arrived at Wilna it was only thirty-five thousand strong (2), though the loss in the battle of Krasnoi, the only serious action in which it was engaged on the road, was only two thousand men (3), and it left Malo-Jaroslawitz with at least one hundred thousand combatants (4). Nor is it difficult to account for so prodigious a loss, when it is considered that the highest medical authority has established the fact, that troops from the south of Europe bore the cold better than the Russians themselves, or the Poles, who had been inured to it from their infancy (5). It is in vain, therefore, to seek for an explanation of the French disasters in a cause which, pressing with equal severity upon both armies, left their relative strength the same as before. Nor can it be alleged that the Russians, by marching over an unexhausted country, suffered less than their adversaries, who moved on the wasted line of their former march; for, if the prisoners of war be deducted, the Russian loss during their march appears to have been greater than that of Napoleon himself; and if they did gain an advantage by that circumstance, they owed it to the courage of their armies, or the skill of their generals, which threw their adversaries on that line ten days before the winter commenced.

Napoleon long stay at Moscow was not what ruined him. IV. The conduct of Napoleon in lingering so long at Moscow, has been generally considered as the immediate cause of the ruin of his armament and, in a military point of view, it has been considered as hardly admitting of defence. It appears from official documents, that, a month before the commencement of the cold weather—viz on October 6,—he felt the necessity of a retreat, if the Russians did not make peace; and was already giving orders for the evacuation of the hospitals and the movement of the parks of artillery towards Mojaïsk (6). On the 5th, 6th, 10th, 13th, and 15th of October, orders to that effect were issued to his marshals (7). Had the retreat commenced at that period, however, there seems no reasonable ground for supposing that its results would have been materially different from what it actually was. The approach of Tchichagoff and Wittgenstein's armies would have rendered his projected winter-quarters at Smolensko untenable, and the army must still have fallen back to the Niemen, harassed and surrounded by the superior light troops of the enemy. The evils of famine, so severely felt on the whole road, would certainly not have been diminished if double the number of mouths had remained to be fed. If the artillery had not been disabled by the perishing of its horses from cold, it would have been as seriously impeded by the impossibility of maintaining them; and if the night bivouacs had not thinned the ranks of the French army, they would not have weakened the force of the enemy who was to assail them. The French army lost one-third of its numbers by the march through Lithuania in summer, when the resources of the country were still untouched, the army fresh, and in high spirits before the bloodshed began what had it to expect in a retreat for double the distance in autumn, over a country perfectly exhausted, with depressed and wearied troops, and a victorious enemy pressing its rear (8)?

On the other hand, the French Emperor had every ground for believing that the occupation of Moscow would terminate the war gloriously for his arms. He had uniformly found that the capture of a metropolis led, sooner or later, to the subjugation of a country; and his former experience of the character of Alexander, gave him no reason to believe that he would be able to resist the force of circumstances which had so often brought Austria and Prussia to submission. It may reasonably be doubted, therefore, whether Napoleon would have judged wisely in commencing his retreat at an earlier period, and thereby throwing away at once the chance which he had, by a protracted stay in the capital, of vanquishing the firmness of the Russian Government. By so doing, he would have certainly incurred the evils of a disastrous retreat, and of a general insurrection against him in Europe, and thrown away the probable chance of a submission which would, during his lifetime at least, place his power beyond the reach of attack.

Burning of
Moscow did
not occa-
sion it

V. The conflagration of Moscow, though a sublime example of patriotism by the Russians, cannot be considered as the cause of the ruin of the French. It may have rendered the continued resi-

dence of the army round the Kremlin inadvisable, though we have Napoleon's authority for asserting, that *after* the fire the greater part of the army were still cantoned in Moscow, and amply supplied with furs, provisions, and every species of necessaries, and that the neighbourhood contained two thousand villages and chateaux still in preservation (1). But, unquestionably, if the French cavalry and light troops had preserved their ascendancy in the field, and been able to forage successfully for the army, they might have secured winter-quarters in Novogorod, Twer, or in Kaluga, the centre of one of the richest countries in the world.

Real causes,
in a mili-
tary point
of view of
the disaster,

VI. It results from these considerations, that the real causes of the disasters of Napoleon were, 1st, His imprudence in advancing so far from the base of his operations, and thereby exposing himself to the hazard of having a temporary disaster converted into a lasting defeat (2), or, in plain language, in risking his army so far from its magazines, depots, and reinforcements. 2d, His advance to Moscow after the bloody battle of Borodino, and when his cavalry had suffered so severely as to preclude it from taking an efficient part for the remainder of the campaign. 3d, The alarming and extraordinary increase in the Russian light horse from the junction of the Cossacks of the Don, and the approximation of the seat of war to the nomade tribes on the eastern frontier of the empire, which immediately prevented the French from foraging, and threatened their vast army with destruction, from the very magnitude of its own numbers. 4th, The conducting of the retreat by separate corps, with an interval of miles between them, which enabled the Russian army, though not superior in number upon the whole to the accumulated strength of their enemies, to fall with an overwhelming force on their detached columns, and pass their long line over the sword's edge, without hardly any injury to themselves. This method of retreating was unavoidable for the supply of the army, and only demonstrates the more clearly the imprudence of advancing so far, when no better method of escape was practicable, and the

(1) 22d Bull iv 111 21st and 22d Bull iv. 109,
110 36th Bull iv 145

(2) Bout ii 447

(3) Gour. ii. 92.

the feeling of inferiority which must have existed to compel so great a captain to hazard it.

The Russian light horse was the great cause of his ruin. Of these causes, the most important place, in a military point of view, undoubtedly must be assigned to the immense preponderance which, when the French arrived at Moscow, was obtained by the clouds of light horse who crowded to the Russian standards from the banks of the Don, and the other nomade provinces of the empire. The more that the memorable campaign of 1812 is studied, the more clearly it will appear that this was the real cause of the destruction of the French army, and that it must have proved equally fatal to them, even though Moscow had not been burned, or the frosts of winter had never set in. If a European army advances in good order, forming magazines as it goes, it may doubtless be able to withstand the utmost attacks of the Asiatic cavalry; and it was because they took these precautions that the armies of Alexander and the Romans in ancient, and of the British and Russians in modern times, have so often prevailed over the innumerable swarms of the Eastern horse. But when an army rushes headlong into the middle of the Scythian cavalry without having the means, from resources of its own, of providing itself with subsistence and forage, it is certain to be destroyed. Alexander the Great wisely avoided such a danger, and, contenting himself with a barren victory over the Scythians on the banks of the Oxus, turned aside from their inhospitable territory. Darius, with all the forces of Persia, penetrated into it and perished. The legions of Mark Antony and Crassus sunk, under the incessant attacks of the Parthian horse; the genius of Julian proved inadequate to the encounter; the heroism of Richard Cœur de Lion was shattered against the innumerable squadrons of Saladin. The very magnitude of the carriages with which a European army invades an Asiatic territory, proves the immediate cause of its ruin, by augmenting its incumbrances, and accelerating the period when, from being surrounded by the light horse of the enemy, it must perish from want. The enterprise of Napoleon against Russia thus proved abortive, from the same cause which, in every age, has defeated the attempts of refined nations to penetrate the Eastern wilds; and it is a striking proof of the lasting influence of general causes on the greatest of human undertakings, that the overthrow of the mightiest armament which the power of civilised man ever hurled against the forces of the East, was in reality owing to the same causes which in every age have given victory to the arms of the shepherd kings.

Want of provisions, on Napoleon's part, for retreat. Although, however, the great superiority of the Russians in light horse unquestionably was the cause of the inability of the French to remain in the neighbourhood of Moscow, yet the disasters of the retreat would not have been nearly what they were had it not been for the entire want of provisions, on Napoleon's part, for the necessities of a retreat. He had no magazines whatever between Moscow and Smolensko, a distance of about two hundred miles; and accordingly it has been shown that General Barragney d'Hilliers, who was entrusted with keeping open that communication, was under the necessity of stopping the convoys on their road to Moscow, in order to subsist his troops (1). Immense magazines, indeed, had been collected at Borzow, Minsk, and Wilna, but between them and Smolensko there

were none, and of what avail were these great stores in Lithuania, when the army had nearly five hundred miles to march before they could reach them, and when the forces left to garrison the towns where they were placed were so insufficient, that they all fell into the hands of the enemy as soon as they were attacked? How was it possible that any troops, even if the weather had been as fine as possible, could have carried provisions with them for so great a distance, when marching over a country of which the resources had been entirely consumed by the passage of both armies over it in the early part of the campaign? Nay, so far had the Emperor been from anticipating a retreat, that he had not provided any thing for frosting the horses' shoes—a circumstance which was the immediate cause of the ruin of the cavalry, and the necessity for soon leaving so great a part of the artillery behind, and even the bridges which had been broken down in the course of the advance, had not even been repaired when the troops came to them again during their retreat (1) It is evident, therefore, that Napoléon, spoiled by the successes of twenty campaigns, had anticipated only a residence in the interior of Russia, and had made no provision whatever for a retreat, and to this cause, undoubtedly, great part of the unparalleled calamities in which he was involved is to be ascribed

Extraordi-
nary ability
of Kutu-
soff's con-
duct in the
pursuit

On the other hand, justice requires that due credit should be given to the Russian mode of pursuit by a parallel march—a measure which was unquestionably one of the greatest military achievements of the last age. Had Kutusoff pursued by the same road as the French, his army, moving on a line wasted by the triple curse of three previous marches, would have melted away even more rapidly than his enemy's. Had he hazarded a serious engagement before the French were completely broken by their sufferings, his own loss would probably have been so severe as to have disabled him from taking advantage of them. Despair rapidly restores the courage of an army—a disorderly crowd of stragglers often resume the strictest military order, and are capable of the greatest efforts when the animation of a battle is at hand. The passage of the Beresina, the battle of Corunna, the victory of Hanau, are not required to demonstrate this important truth. Well knowing that a continued retreat would of itself weaken his enemies, the Russian general manœuvred in such a manner as, with hardly any loss to himself, to make prisoners above half their army, and that at a time when the storms of winter were making as great ravages in his own troops as in those of his antagonists. Had he not pursued at all, Napoléon would have halted at Smolensko, and soon repaired his disasters, had he fought a pitched battle with him on the road, his army, already grievously weakened by the cold, would have probably been rendered incapable of pursuing him to the frontier. By acting a bolder part, he might have gained a more brilliant, but he could not have secured such lasting success—he would have risked the fate of the empire, which hung on the preservation of his army—he might have acquired the title of conqueror of Napoléon, but he would not have deserved that of saviour of his country (2)

Moral gran-
deur of the
conduct of
the Emperor
and people
of Russia

But it would have been in vain that all these advantages lay within the reach of Russia, had their constancy and firmness not enabled her people to grasp them. Justice has not hitherto been done to the heroism of their conduct. We admire the Athenians, who

(1) *Chamb.* ii. 382, 395

(2) *Bout.* ii. 450

refused to treat with Vercas after the sack of their city, and the Romans, who sent troops to Spain after the defeat of Cannæ what, then, shall we say of the generals, who, while their army was yet reeking with the slaughter of Borodino, formed the project of enveloping the invader in the capital which he had conquered? what of the citizens, who fired their palaces and their temples lest they should furnish even a temporary refuge to the invader? and what of the Sovereign, who, undismayed by the fires of Moscow, announced to his people, in the moment of their greatest agony, his resolution never to submit, and foretold the approaching deliverance of his country and of the world? Time, the great sanctifier of events, has not yet lent its halo to these sacrifices—separate interests have arisen; the terror of Russia has come in place of the jealousy of Napoléon; and those who have gained most by the heroism of their allies, are too much influenced by momentary considerations to acknowledge it. But when these fears and jealousies shall have passed away, and the pageant of Russian, like that of French ascendancy, shall have disappeared, the impartial voice of posterity will pronounce that the history of the world does not afford an example of equal moral grandeur.

*Moral causes
to which the
overthrow of
Napoleon
was owing.*

But all the heroism of Alexander, and all the devotion of the Russians, great and memorable as they were, would have failed in producing the extraordinary revolution which was effected in this campaign, if they had not been aided by the moral laws of nature, which impel guilty ambition into a boundless career of aggression, and provide a condign punishment in the vehement and universal indignation which its violence occasions. Madame de Staël has said, that Providence never appeared so near human affairs as in this memorable year—and the faithful throughout Europe, struck with the awful nature of the catastrophe, repeated, with feelings of awe, the words of the Psalm “*Efflavit Deus et dissipantur*.” Yet, while no reasonable mind will doubt the agency of Supreme power in this awful event, it is perhaps more consonant to our ideas of the Divine administration, and more descriptive of the established order of the universe, to behold in it the consequence of the fixed moral laws of our being, rather than any special outpouring of celestial wrath. It was the necessity of conquest to existence, which Napoléon throughout his whole career so strongly felt, and so often expressed, which was the real cause which precipitated him upon the snows of Russia; and we are not to regard the calamitous issue of the expedition as the punishment merely of his individual ambition, but as the inevitable result and just retribution of the innumerable crimes of the Revolution. The steps which brought about this consummation now stand revealed in imperishable light—the unbounded passions let loose during the first fervour of that convulsion, impelled the nation, when the French throne was overturned, into the career of foreign conquest—the armed multitude would not submit to the cost which their armies required; the maxim, that war must maintain war, flowed from the impatience of taxation in the Parisian, as it had done in the Roman people; and the system was of necessity adopted of precipitating armies, without magazines or any other resources except warlike equipment, to seek for subsistence and victory in the heart of the enemy's territory. Thence the forced requisitions, the scourging contributions, the wasting of nations, and the universal exasperation of mankind. Nothing was wanting, in the end, but the constancy to resist the vehemence of the onset, for the spirit of universal hostility was roused; and this was found in the firm tenacity of

Wellington at Torres Vedras, and the devoted heroism of Alexander in Russia. The faithful trembled and sunk in silence, and almost desisted, in the long-continued triumph of wickedness, the reality of the Divine administration of the universe, but the laws of Providence were incessantly acting, and preparing in silence the renovation of the world.

" Sæpè mihi dubiam traxit sententia mentem
Curarent Superi terras, an nullus inesset

END OF VOLUME EIGHT.

the preceding campaign, when Duhesme, as already noticed, had withdrawn to Barcelona after the failure before Gerona, there remained to the French in that province only that important fortress, garrisoned by eight thousand, and the citadel of Figueras, by four thousand men (1). Napoléon, however, had no intention of allowing the eastern gate of Spain to slip from his grasp, and even while the first siege of Gerona was still going forward, he was collecting a fresh corps at Perpignan to relieve those who were shut up in Barcelona, and confided the direction of it to Marshal St.-Cyr. That accomplished officer took the command in the end of October. Napoléon's parting words to him were brief but characteristic. "Preserve Barcelona for me; if it is lost, I cannot retake it with eighty thousand men." St.-Cyr crossed the frontier on Nov. 4, 1808, the 5th November, and advanced towards Rosas, the siege of which he immediately commenced. His forces consisted at first of thirty thousand, though they were some months afterwards augmented to forty-eight thousand men; but they were a motley group of Italians, Germans, and Swiss, upon some of whom little reliance could be placed, and the marshal felt great discouragement at entering with such a force a mountainous province, where eighty thousand men were said to be in arms. But his forebodings were in a great degree groundless: the patriot force in the province was by no means in the brilliant condition which the Spanish journals represented. To the first burst of patriotic exertion, had succeeded the usual depressing reaction when the effort is over, and the necessity for sustained sacrifices and organized armies is felt: great part of the peasants had returned to their homes; the local juntas were disunited, and had, in a considerable degree, fallen into incapable hands: a large part of the prodigal supplies of England had been embezzled or misapplied by the cupidity of the Spanish agents (2) to whom they had been consigned: while the English co-operation from Sicily, which was anxiously looked for, had been intercepted, by demonstrations of Murat against Sicily, which had the effect of retaining Sir John Stuart and ten thousand British troops in that island.

Siege of Rosas. Rosas, however, was too strong a place to fall without a vigorous resistance, and it was supported by means of defence which rarely fell to the lot of the Spanish beleaguered cities. The excellent, of seventy-four guns, with two bomb vessels, lay in the bay within cannon-shot of the town. Lord Cochrane came up in his frigate, the *Imperieuse*, in the middle of the siege; and the fortifications, though old, were regular and respectable. The citadel and the fort of Trinidad, a mile and a quarter distant, were the strongest points, though they were both commanded by the mountains rising above the town, and the garrison consisted of nearly three thousand men. The town, which was hardly fortified, was soon taken; but the citadel and Fort Trinidad made a stout resistance. Heavy guns were at length brought up close to the walls of the latter, and a large breach made in the ramparts, upon which the Spanish governor declared the post no longer tenable; but Lord Cochrane, who had just arrived, and to whose ardent spirit such scenes of danger were an actual enjoyment, immediately threw himself into it: and, by his courage and resources, prolonged a defence which otherwise would have been altogether desperate. Two assaults were repulsed by this intrepid officer and his undaunted seamen with very great slaughter: but meanwhile, a practicable breach was effected in the citadel; and a sally, attempted on the night of the 2d, having failed to

CHAPTER LXII

CAMPAIGN OF 1811 ON THE PORTUGUESE FRONTIER.

ARGUMENT

Wellington's reasons for undertaking the Siege of Badajoz—Comparative view of the Contending Forces at this period—Forces on the side of the Allies—And on that of the French—General causes which led to Wellington's success—His central Position in the Peninsula—Advantages which the English enjoyed from the command of the navigable Rivers—And of the general interruptions of the French communications by the Guerrillas—Hatred of the French—Its great effect on the war—Jealousy and Discord of the rival French powers in the Peninsula—Discord of the Marshals among each other—Desperate Hostility produced by the cruelty of the French—Difference between the English plunder and the French exactions—Dreadful severity of the French Military Decrees—General Partisan Resistance which this Oppression produced—And extraordinary Difficulties in which it involved the French—Wellington's difficulties—Corruption and Imbecility of the Portuguese Administration—Imbecility with which the Regency at Lisbon discharged their Duty—Wretched conduct of the Spanish Troops, and Jealousy of their Generals—Extreme penury of the English Army in Money during these Campaigns—And Wellington's suffering from it—Foundation for Wellington's complaints on this Subject—Uniform neglect by the British of Warlike preparation in time of Peace—Universal inexperience of inferior Functionaries—Causes which led to these obstacles to Wellington's success—The British difficulties were the greatest in the beginning—The French in the end—Commencement of the first Siege of Badajoz—Force of the Opposing Armies at Albuera—Description of the Field of Battle—And the French and English position—Battle of Albuera—The French accumulate their Forces on the British right, and force the Spanish position—Dreadful disaster of the British Division which first got up—Gallant Attempt to retrieve the day by Haughton's Brigade—The British at the summit begin to fall—Gallant charge of the Fusilier Brigade recovers the day—Heroic Gallantry of the English Infantry—Conclusion of the Battle—Its results—Wellington arrives, and takes the command of the Siege of Badajoz—Moral results of the Battle—Renewal of the Siege of Badajoz—Second Assault on Christoval, which is repulsed—Measures of Napoleon to Raise the Siege—His defensive Preparations through the whole of the North of Spain—Wellington Raises the Siege, and retires into Portugal—Entry of Marmont and Soult into Badajoz—Wellington takes post on the Cabe-Soult and Marmont declines fighting, and separate—Operations of Blake and Ballasteros in Andalusia—Fatal Rout of the Spaniards at Baza la Morada—Rise and rapid Progress of the Insurrection in the Northern Provinces—Operations of the Insurgents in them—Napoleon's new Dispositions in Spain—Wellington's movement to the North of Portugal—Defeat of the Galeanos on the Tago—Wellington's measures for the Siege of Ciudad Rodrigo—Ground of hope for a successful Enterprise against that Fortress—Project of Napoleon for invading the Alentejo by Soult and Marmont—Wellington turns the Siege into a Blockade—French approach to raise the Siege—Approach of the two Armies of Ciudad Rodrigo, which is repulsed—Combat of Elbuden—Heroic steadiness of Catilla's brigade—Imminent danger of the British Army at Fuente Guisado—Both Armies go into Cantonnements—Courtesy shown on both sides during these Operations—Re-occupation of Asturias by Bonaparte—And Concentration of the French forces at Valladolid and Burgos—Surprise of Gerard at Arroyo de Molinos—Total Defeat of the French—Improvement of the health of the British Army in their Cantonnements—French Expedition against Tarifa, which Fails—Second Expedition against and Siege of Tarifa—Defeat of the Assault, and Raising of the Siege—General Results of the Campaign—The British Government and Army learn their own deficiencies during its Progress—Napoleon's real intentions at this Period in regard to the War in Portugal.

Wellington's reasons for undertaking the siege of Badajoz.

WHEN the retreat of Masséna from Torres Vedras had delivered the realm protected by Wellington from the Imperial yoke, and the battle of Fuentes d'Onoro had destroyed his hopes of retaining a permanent footing within the Portuguese frontier (1), Wellington

ton's eyes were immediately turned towards Badajoz, the loss of which he justly considered as not only perpetually endangering the west of the Peninsula, but as by far the greatest calamity which had happened to the Allies since Napoleon had taken Madrid. For, though not belonging to the first rank, either from wealth or population, this renowned fortress was of the very highest importance, from its great strength and important situation on the Estremadura frontier—at once forming a base for the operations of an invading army, which should threaten Lisbon on its most defenceless side, that of the Alentejo, and the strongest link in the iron girdle which was to restrain Wellington from pushing his incursions into the Spanish territory. While Ciudad Rodrigo and Badajoz remained in the enemy's hands it was equally impossible for Wellington to feel any confidence in the safety of Portugal, or undertake any serious enterprise for the deliverance of Spain. The vast importance of fortresses in war, overlooked or forgotten amidst the unparalleled multitudes who overspread the plains of Europe during the latter years of the revolutionary war, was fully appreciated and clearly expressed by the greatest masters in the art of war it produced—Napoleon and the Duke of Wellington (1).

Compara-
tive view of
the contend-
ing powers
at this
period.

As the first siege of Badajoz by the English, and its immediate consequence, the battle of Albuera, are the true commencement of the deliverance of the Peninsula, and of that surprising series of victories by which the French were, in two campaigns stripped of all their conquests in Spain, and driven across the Pyrenees by an army which could not bring a third of their disposable forces into the field, it is of the highest importance to obtain a clear conception of the relative position of the contending parties at this eventful period, and of the causes which contributed to the production of so extraordinary an event.

Forces on
the side of
the Allies

The British and Portuguese forces in Portugal, nominally above eighty thousand strong, could seldom (from the extremely reduced state of the Portuguese regiments after the French retreat from Torres Vedras, and the vast number of English sick who encumbered the hospitals—the result chiefly of the invariable unhealthiness of fresh regiments when first taking the field, and of the seeds of permanent disease which many of them brought with them from the Walcheren marshes) number above fifty thousand men fit for actual service. The strong bond of patriotism which had, during the invasion of their country, held the Portuguese troops to their standards, had been sensibly weakened since the last French columns had receded from their frontiers, and though the extraordinary fatigues of the pursuit did not at the time disable a large proportion of the troops, yet when they were over, and stationary habits began to co-exist with hot weather, the number of sick became so excessive, that in the beginning of October 1811, above twenty-five thousand British and Portuguese troops were in hospital of whom upwards of nineteen thousand were English soldiers. And such was the desertion or sickness among the Portuguese at the commencement of Wellington's offensive campaign, that while thirty thousand stood on the rolls of the regiments

(1) "The loss of Badajoz I consider as by far the greatest misfortune which has befallen us since the commencement of the Peninsular war"—WELLINGTON.

"Had it not been for the fortresses in Flanders" says Napoleon, "the reverses of Louis XIV would have occasioned the fall of Paris. The Prince Eugene of Savoy lost a campaign in besieging Lille the siege of Landrecy gave occasion to Villars to bring about a change of fortune a hundred years

after, in 1793, at the time of the treason of Dumouriez, the strong places of Flanders again saved Paris: the Allies lost a campaign in taking Conde, Valenciennes, Quesnoy, and Landrecy that line of fortresses was equally useful in 1814, and in 1815, if they had been in a condition of defence, and not affected by the political events at Paris, they could have stopped, till the German armies came up, the Anglo-Prussian army on the banks of the Somme"—NAPOLÉON *Mémoires in Abrégé*, t. 2, 292.

for British pay, not more than fourteen thousand could be collected round the standards of the English general (1)

On the other hand, the French force at that period in the Peninsula, amounted to the enormous number of three hundred and seventy thousand men, of whom forty thousand were cavalry and of this number two hundred and eighty thousand were present with the eagles. A considerable part of this immense host, indeed, was actively engaged under Macdonald and Suchet in Catalonia, or was necessarily absorbed in keeping up the vast line of communication from the Pyrenees to Cadiz but still the disposable amount of the troops which could be brought into the field from the three armies of the north, of Portugal, and of the south were nearly triple those which the English general could command, and they seemed to render any offensive operation on his part utterly hopeless. Soult's forces, in Andalusia and the southern part of Estremadura, on the 1st of October, were eighty-eight thousand men, including ten thousand cavalry of whom sixty-seven thousand were present with the eagles. Marmont, in Leon, had sixty-one thousand under his banners, of whom above forty-one thousand infantry, and ten thousand horse, were in the field. Joseph, in the centre, had twenty-two thousand French troops, of whom seventeen thousand could take the field, besides nearly an equal number of Spaniards around Madrid, the greater part of whom could in case of need be joined to the columns of Marmont while the army of the north, under Marshal Bessières, and subsequently General Caffarelli, amounted to the enormous number of a hundred and two thousand men, of whom seventy-seven thousand foot and eleven thousand horse were present with the eagles. In addition to this, reinforcements to the amount of eighteen thousand men were on their march who actually entered Navarre in August and September of this year; so that the united force to which the British were opposed in the autumn of 1811, was not less than two hundred and forty thousand men actually in the field (2). Supposing a hundred thousand of this immense force to have been absorbed in guarding the fortresses, and keeping up the communications, which probably was the case, there would have remained a hundred and forty thousand men, who, by a combined effort, might have been brought to bear against

Wellington, without relinquishing any other part of Spain, or nearly triple the force which he could by possibility oppose to them (1) And these were not raw conscripts or inferior troops, but the very flower of the Imperial legions, led by the best marshals of the empire, comprising that intermixture of the steadiness of veterans with the fire of young troops, which, it is well known, is most favourable to military success, and who proved themselves capable, at Albuera, Badajoz, and Salamanca, of the most heroic exploits (2).

When the magnitude and composition of this force are taken into consideration, and it is recollected that, from the entire extinction of any regular Spanish force in the provinces which it occupied, no serious diversion was to be expected from their exertions, whatever partial annoyance the guerilla parties might occasion—when we call to mind that all the fortresses in the kingdom, with the exception of Cadiz and Alicante, were in the possession of the French generals, that the whole resources of the country were in their hands; and levied with merciless severity for the use of the troops, who were thus entirely taken off the Imperial treasury, and that the whole conflict was under the immediate direction of a ruler unparalleled in the ability with which he always brought his vast resources to bear on the vital point of the campaign, it becomes an object of the highest interest to inquire how it was that the British were in a condition to maintain their ground at all, in the Peninsula, against such overwhelming multitudes,

(1) This calculation coincides with that of Soult, made at the time in a letter to Joseph, even after twenty thousand men had been lost to France by the battle of Salamanca “If your Majesty should collect the army of Aragon, the army of Portugal, and that of the centre, and march upon Andalusia, 120,000 men will be close to Portugal” This was, without any part of the immense army of the north, full sixty thousand strong, of whom thirty thousand at least were disposable—Soult to Joseph, August 19, 1812, taken at Vittoria—See NAF v. 236

and still more, how it happened that, laying aside the defensive, they were enabled to dislodge this vast array from the whole strongholds of the country, and finally to drive them, like chaff before the wind, over the Pyrenees into the south of France. Such an enquiry cannot be satisfactorily answered by merely referring to the military talents of Wellington, and the extraordinary gallantry of his followers: for, granting their full weight to these certainly most important elements in the contest, they could not effect an impossibility, which the discomfiture of such a host by so small a body of assailants would at first sight appear. Experience, as Wellington himself remarked, has "never, at least in later times, realized the stories which all have read, of whole armies being driven by a handful of light infantry and dragoons," and even the most sincere believer in the direction of human affairs by a Supreme power, cannot doubt that, humanly speaking, there is much truth in Moreau's assertion, that "Providence favours the strong battalions." There must, it is evident, have been some causes, in addition to the *bravery of the English troops, which brought about this marvellous deliverance* and it is in their discovery that the great usefulness and highest aim of history are to be found. Such an enquiry can form no detracting from the merits of the British hero: on the contrary, it will lead to their highest exaltation, for no great revolutions in human affairs can be brought about but by the *concurring operation of many general causes* and it is in the perception of the incipient operations of these causes, when hidden from the ordinary eye, and contrary to those operating on the surface, and their steady direction to noble purposes, that the highest effort of military or political intellect is to be found.

His central position in the Peninsula.

I The first circumstance which gave an advantage to Wellington, and compensated in some degree the vast superiority of the enemy's force, was his central situation, midway between the widely scattered stations of the French generals, and the powerful citadel, stored with all the muniments of war, and resting on that true base of British military operation, the sea, which lay in his rear. Grouped at the distance of two hundred miles from the ocean, on either bank of the Tagus, with a secure retreat by converging lines to the strong position of Torres Vedras, *ascertained, by dear-bought experience, to be all but impregnable*, the English troops were in a situation to threaten either Ciudad Rodrigo and the forces of Marmont in the north, or Badajoz and the vanguard of Soult in the southern parts of the Peninsula. At the time when they were most widely severed from each other, the forces of Beresford or Hill in Estremadura, and Wellington himself in Belra or on the Agueda, were not distant by more than sixty or seventy miles, and could, if hard pressed, unite in a few days: whereas the French troops, after the occupation of Andalusia, were scattered over an immense line, more than five hundred miles in length, from the mountains of Asturias to the ramparts of Cadiz, and nearly two months must elapse before they could combine in any common operations. The force under Marmont, immediately in front of Wellington, was not superior to his own army in strength; and its means of obtaining subsistence, and keeping considerable bodies of men together, were, from the desert nature of the plains of Leon, much inferior: thus, by uniting with Beresford on the south of the Tagus, or calling him to his own standard on the north, he had a fair chance of striking a serious blow before the distant succour could be collected to avert it from the banks of the Douro or the Guadalquivir. It was by a

similar advantage of a central position between his widely separated enemies, that Frederick the Great so long resisted, on the sands of Prussia, the distant armies of Austria and Russia converging from the Vistula and the Elbe, that Napoléon, on the banks of the Adige and in the plains of Champagne, so successfully warded off the redoubtable blows prepared for him by the slow tenacity of the Austrian councils, and that the consul Nero, in the second Punic war, effected the deliverance of Italy, and changed the fate of the world, by taking advantage of the interior line of communication which separated the forces of Hannibal in Apulia from those of his brother Hasdrubal on the banks of the Po (1).

rivers

II The circumstances of the British armies in respect of supplies afforded another advantage to the English general, of which he did not fail to avail himself, and in regard to which he was much more favourably situated than his antagonist. The country from Madrid to the Portuguese frontier, and especially towards the Alentejo, was reduced by the devastations and grinding contributions of the French armies to an almost continuous desert, the peasants had for the most part abandoned their possessions, and joined the guerilla parties, with which all the mountain ridges abounded (2), deeming it better to plunder others than be plundered themselves, and to such a pitch had their penury arisen, that the Imperial generals were, in all the provinces, under the necessity of sending to France,

(1) The most perfect example of the wonderful effect of a skilful use made of an interior line of communication, by a force inferior upon the whole, but superior to either taken singly, is to be found in the march of the consul Nero, from the ground which he occupied in front of Hannibal in Apulia, to the Metaurus in the plain of Lombardy, where he met and defeated the great Carthaginian army under Hasdrubal, and thereby turned the fate of Carthage in the ancient world. The account of it is given in Livy, lib. XXVII, cap. xliii. xlviii. The march and plan of the consul Claudius Nero are admirably narrated in the following passages from Livy, and they are singularly instructive, as showing how exactly similar his plan of operations was to that which has justly required for Napoleon the admiration of the world —

“ Inter hæc ab Hasdrubale, postquam a Placentine obsidione abscessit, quatuor Galli equites, duo Numide, cum literis ad Hannibalem missi, quum per medios hostes totam ferme longitudinem Italiae emensi essent, dum Metapontum cedentem Hannibalem sequuntur, incertis itineribus Tarentum delati, a vagis per agros pabulatoribus Romanis ad Q. Claudium propretorem deducuntur. Cum primo incertis implicantur responsis, ut metus torquentium admotus fateri vera cogit, edocuerunt, literas se ab Hasdrubale ad Hannibalem ferre. Cum iis literis, sicut erant, signatis, L. Virginio tribuno militum ducenti ad Claudium consulem traduntur. Quæ simul tarmæ Samnitium præsidii causæ missæ. Qui ubi ad consulem pervenerunt, literarum lectæ per interpretem sunt, et ex captivis percutitio facta, tum Claudius, non id tempus esse rei publicæ ratus, quo consilium ordinarius provincia suæ quisque finibus per exercitus suos cum hoste destinato ab senatu bellum gereret audendum aliquid improvisum inopinatum, quod ceptum non minorum apud civis, quam hostes terrorem faceret, perpetratum in magnam letitiam ex magno metu verteret, literis Hasdrubalis Romanæ ad senatum missis, simul et ipso Patres conscriptos quid pararet, edocet, ut, quum in Umbria se obscururum Hasdrubal fratri scribat, legionem a Capuâ Romanam accessant, delectum Romæ habeant, exercitum urbium ad Narniam hosti obponant. Hæc senatus scripta præmissi

item per agrum Larinatem, Marrucinum, Frentanum, Præstuntinum, quæ exercitum ducturus erat, ut omnes ex agris urbibusque commineatus paratos militi ad vescendum in viam deferrent, equos juvenantque alia producerent, ut vchiculorum fessis copia esset. Ipse de toto exercitu civium sociorumque, quod roboris erat, delegit sex millia peditum, mille equites pronunciat, occupare se in Lucanis proximam urbem Punicamque in eâ præsidium velle, ut ad iter parati omnes essent. Profectus nocte flevit in Picenum. Et consul quidem, quantis maximis itineribus poterat a collega ducibat, relicto Q. Catio legato, qui castris præsesset. Nero postquam jam tantum intervalli ab hoste fecerat, ut detegere consilium satis tutum esset, paucis milites adloquitur. Negat ullius consilium imperatoris audacius, re ipsa tutius fuisse quam suum. Ad certam eos se victoriam ducere. Quippe ad quod bellum collegæ non ante quam ad satietatem ipsius peditum atque equitum data ab senatu copie fuissent majores instructioresque, — quam si adversus ipsum Hannibalem iret, profectus sit, eo ipsos, quantum cumque virum momentum addiderit, rem omnem inclinatoros. Auduit modo in acie (ram, ne ante audiretur, daturam operam) alterum consulem et altitum exercitum advenisse, haud dubiam victoriam facturum. Hannam bellum conficere, et parva momenta in spem metumque impellere animos. Glorie quidem ex re bene gestu partem fructum proprio omni ipsos laturos. Semper, quod postremum adjectum sit id rem totam videri traxisse. Cernere ipsos, quo concursu, quâ admiratione, quo favore hominum iter suum celebretur. — Liv. lib. xxvii, Cap. 43, 45.

(2) “ The whole country between Madrid and the Alentejo is now a desert, and a still smaller proportion of land than before has been cultivated this winter. The argument of the people of the country is, that it is better to rob than to sow and have the produce of their harvests taken from them, and the French begin to find, that they cannot keep their large armies together for any operation which will take time, and that, when we can reach them, they can do nothing with small bodies.” — WALLINGTON to LORD LIVERPOOL, “ December 1811 — G. 1, 422.

in spring 1811, for seed corn, to prevent agriculture from becoming altogether extinct (1). The consequence was, that the French armies approaching the Portuguese frontier either from the south or the north, were unable to keep together in large bodies for any considerable time; and whether the object for which they were assembled had failed or been accomplished, they were equally compelled to separate into distant and widely separated provinces, to seek the means of subsistence. They were thus continually experiencing the truth of Henry the Fourth's saying, "that in Spain, if you make war with a small force you are beaten with a large one starved" (2). On the other hand, although Wellington experienced nearly the same difficulties, so far as the resources of the country were concerned, yet he had means of overcoming them which the enemy did not enjoy of specie, indeed, he often had little or none; but the credit of the country, his own strenuous exertions, and the efforts of Government, went far to obviate this great disadvantage. Not only was the wealth of England applied with lavish, though sometimes misguided prodigality, to the support of his army, and supplies of all sorts brought by every wind that blew to the harbour of Lisbon, although the extraordinary difficulty of procuring specie from England, or the means of transport in the country, often exposed him to extreme difficulties on the Spanish frontier; but the great rivers of the Douro, the Mondego, and the Tagus, gave him the incalculable advantage of water carriage to a considerable distance in the interior. The former of these rivers was navigable for boats of a considerable burden to within eighty the Mondego to within a hundred miles of the frontier on the Agueda and Wellington took measures, which came into operation in March 1812, which rendered the Douro navigable as far as its junction with that lesser stream. This was an immense advantage, especially when the attack of fortified places was to be undertaken on the Portuguese frontier for the French principal magazines were on the Douro and the Tormes, and their battering train and stores required to be brought from Madrid or Bayonne, the former of which was above two, the latter more than three hundred and fifty miles from the scene of action whereas the stores of the English, even when carried to Ciudad Rodrigo or Badajoz, had only to be conveyed a hundred miles by land carriage, not half the distance. It was in a great measure from a consideration of this advantage that Wellington, in December 1811, wrote to Lord Liverpool "Our situation is improving, and whatever may be the fate of Valencia, if the Spanish nation hold out, I think they may yet be saved (3)."

III. The French generals, following out the established Imperial system of making war maintain war, and wrenching the whole expenses of the troops

(1) "Paine had made such an error over the whole Peninsula in the winter of 1812, that grain was wanting to sow the ground; and the general-in-chief in Andalusia, Le Maréchal Castejón, and Old Castile, wrote to Berthier to request him to forward seed corn from France. — *Barrington, Journ. des Séjours dans la Péninsule* I. 223.

(2) "Berthier was the destruction of the country says Maréchal, on the Portuguese frontier that in April 1811 the army of Portugal lost its whole artillery and great part of its cavalry horses in six days, between the Coa and the Agueda, of absolute famine. I arrived at the headquarters of the army of the north in January last. I did not find single grains of corn in the magazines, not even in the military chest; nothing any where but debris, and real or fictitious scarcity of which it is hardly possible to form an idea, the natural result of the

abused system of administration which had been adopted. Provisions, even for each day consumption, could be obtained only by arms in our hands there is wide difference between that state and the possession of magazines which can enable an army to move. On the other hand, the English army is always armed and disposable because it is supplied with money and the means of transport. Seven or eight thousand mules are employed in the transport of its means of subsistence. The way which the English cavalry commences on the banks of the Coa and the Agueda, comes from England." — *Maréchal de Bérthier, 22d Feb. 1812. Barrington, Journ. des Séjours dans la Péninsule* I. 629, 632. *Polignac* Just.

(3) Wellington to Lord Liverpool Dec. 8, 1811 *Gen. viii. 421 422. Rep. iv. 265.*

General interruption of the French communications by the guerillas, out of the provinces which they occupied, had inflamed immensely the general irritation felt at their authority, and the misery and despoil which their exactions produced, had augmented to a fearful degree the guerilla bands over the whole country. We have the authority of Mariano d'Orquiza, home secretary to Joseph, for saying, that the great increase of the guerilla parties, especially in Leon, Navarre, and the two Castiles, in the years 1810, 1811, and 1812, arose from the establishment of provincial governments, and the innumerable acts of extortion practised on the inhabitants by the French military authorities (1). This mode of providing for themselves was reduced to a perfect system by the Imperial generals, a fixed sum was imposed on the inhabitants, and levied from them with merciless severity by military execution, and to such a degree of perfection had long practice brought the French troops in this oppressive art, that they contrived to subsist, and levy all the resources which they required, out of districts which any other army would have considered as absolutely exhausted. The soldiers were every where trained themselves to reap the standing corn, and grind it by portable mills into flour; if green, they mowed it down with equal dexterity for their horses, if reaped, they forced it from the peasants' place of concealment, by placing the bayonet to their throats. In this way, they were, to a very late period of the war, when the general ruin of agriculture forced them to rely in some degree on magazines, entirely relieved from all care about communications or supplies, which to the English general, who paid for every thing that was consumed by, or required for his troops, often proved a matter of excessive difficulty (2).

But, on the other hand, they paid dearly for this advantage in the unbounded exasperation which they excited among the whole rural population, and the universal partisan warfare which they aroused in the flanks and rear of every considerable detachment. The consequence was, not merely that guerilla chiefs sprung up in every quarter where the shelter of mountains rendered pursuit difficult, and under Mina and Durrán in Navarre, the Empecinado in the Guadalupe mountains, the curate Merino in Leon, and Il Pastore on the coast of Biscay, kept alive the war, and did incredible mischief to detached bodies of the enemy, but smaller bodies called *Partidas* hovered every where round their flanks and rear, and almost entirely obstructed their communication with each other. On the other hand, the regularity with which the English always paid for all the supplies required for their army, rendered them so popular with the rural population, that they brought information and intercepted letters with incredible diligence and rapidity to headquarters, and kept the British general always as well informed of his adversaries' movements as they were ignorant of his. Thus Wellington, from his central position on the Portuguese frontier, was

(1) "His Majesty could cite a crowd of instances of oppression which have exasperated the minds of the inhabitants, furnished arms to the insurrection, and given the English grounds for supposing projects which really did not exist, and rendering the war interminable. Let the number of brigands and insurgents in Spain be counted, and it will at once be seen how much they have increased since the institution of the military governments. It is the decree of 8th February 1810, establishing military governments in Navarre, Biscay, Arragon, and Catalonia, that is the real cause of the war still continuing, and the flames of discord having again risen up after they seemed extinguished."—*The Minister of State D'Orquiza to the Duke de Santa*

Fz, Madrid, 12th Sept 1810, taken at Vittoria—See Napier, iv. 517, 523,

(2) *Nap v. 147, and Wellington to Lord Bathurst July 21, 1812 Gurw. ix. 298*

"The army of Portugal," said Wellington, "has been surrounded for the last six weeks, and scarcely even a letter reaches its commanders, but the system of organized rapine and plunder, and the extraordinary discipline so long established in the French armies, enable it to subsist at the expense of the total ruin of the country in which it has been placed, and I am not certain that Marshal Marmont has not now at his command a greater quantity of provisions and supplies of every kind than we have from Lisbon."—*Wellington to Lord Bathurst, 21st July 1812. Gurwood, ix. 298*

enabled to select his own time and place for an attack. His preparations were to a surprising degree unknown to the enemy, who, as already more than once remarked, had seldom any means of communicating with each other, and not unfrequently a serious blow was struck before they were even aware that preparations for it were going forward (1).

Joseph and discord of the rival French powers to the French king. 1) The strange and impolitic division of the government of Spain which Napoleon had made, rendered it absolutely impossible that any thing approaching to a regular or united plan of operations could be carried on against an enemy. Not only was the central dominion of the crown at Madrid set at naught by the authority of the Emperor, who, from Paris, overruled and directed all the military operations, and yet left to the phantom king the shadow of power and the reality of responsibility, but all possibility of a cordial union between him and his lieutenants was destroyed by the unexampled, and, to a sovereign, highly grating distribution of the resources of the country which the Emperor had established between them. The whole revenues of the provinces were assigned to the French generals, with all the contributions which, by the most rigorous military execution, they could extract from the wretched inhabitants. While the king in the capital was left with the burden of a court, the expenses of which he had no means of defraying except the pension of a million of francs (L, 10,000) a month which he received from France; and even that was, in the later stages of the contest, exclusively devoted to the payment of the troops, leaving the king himself utterly destitute. The consequence was, that the monarch and his court were reduced to such straits, that the royal councillors were seen begging their bread from door to door. Joseph himself was compelled to pawn his plate to raise the money required to purchase the necessaries of life; and Marshal Jourdan, major-general of the armies, after borrowing till his credit was exhausted, could, with difficulty, procure common subsistence (2). Such being the state of the court of Madrid, it is not surprising that the most bitter animosity should have prevailed between the king and the marshals in the provinces, who seemed placed there only to usurp his authority, and intercept his revenue. His letters to Napoleon during the whole of his reign, are accordingly filled not only with the bitterest complaints of his own sufferings, but with positive accusations of treason against his lieutenants, especially Soult, whom he openly charged with aspiring to the throne of Andalusia (3). But it was all in vain. The power of the sword was irrevocably vested in these rigorous taskmasters, and when Joseph, on one occasion, in desperation laid his hands on a large magazine of corn collected near Toledo, Marmont immediately sent troops, who recovered the magazine by force, telling the owners of the grain they might apply to the monarch for their payment (2).

Discord of the marshals among themselves. Nor was it only with the King of Spain that the French marshals, wielding the whole military power of the country, were then at variance. There was no cordial union or co-operation among them-

(1) Wellington to Lord Liverpool. Dec. 4, 1811. *Quart. Ill.* 422.

(2) Kapr. 414.
"I am in such distress," said Joseph, "as never king was before. My plate is sold—my mistresses and household are actually starving—my army is in every face, and even others less willing are deterred from joining. King is left alone to support them—my revenue is seized by the generals for the supply of their troops. I cannot, as King of Spain, without dishonour partake of the resources thus taken by rapine from my subjects, whom I have sworn to protect. I cannot, in fact, be at once King

of Spain and General of the French. Let me resign, and live peacefully in France. The Marquis Carville, a councillor of state and minister of justice, has been seen actually begging for 'placet of bread.' —*Journal de Bordeaux* April 11 1812, *Tales of Fátima*—*N. Rev.* v. 414, 415.

(4) Kapr. 215.

selves, and they wanted that indispensable preliminary to military operations—unity of design, and implicit obedience among the commanders employed. Each accustomed to regal state and authority in his own province, and looking to the Tuileries only for the instructions he was to obey, felt his vanity mortified, and his consequence lessened, when he was called upon to act in obedience to, or even to co-operate on equal terms with, any of his brother marshals. To such a height did this discord rise, that Ney was put under arrest by Masséna, during the retreat from Portugal, for direct disobedience of orders; and no subsequent military operation of length was undertaken by any two of the marshals jointly, till the victories of Wellington forced them into one still disunited mass after the battle of Salamanca. Soult remained in Andalusia living in regal magnificence on the banks of the Guadalquivir, and deeply engaged in great designs for that province, from which he was only occasionally diverted by the advances of the British in Estremadura. Bessières, openly condemning both the retention of Badajoz and the siege of Cadiz, found himself so occupied with the protection of the great communication in the north, from the increasing vigour of the Biscay and Navarre guerrillas, as to be able to lend only a casual aid to the army of Portugal (1), while Marmont, at the head of that force, found himself immediately exposed to the attacks of Wellington without any cordial support either from the army of the centre in his rear, or the distant columns of Soult or Bessières on either flank. When the English general assumed the offensive, and the period of disaster began, the French commanders mutually laid the blame on each other. Joseph loudly accused them of selfish regard to their separate interests; while Napoléon, who could ill brook reverses of any kind, thundered out his censure in such cutting terms from the Tuileries or Russia against them all, as made the greater number of them tender their resignations, and gave rise to a constant and rapid change of commanders on the exposed frontier at the most critical period of the war. Each marshal was solicitous chiefly for the protection of his own province, with the safety of which he was entrusted, and in which the foundations of his fortune were laid, and when the king applied to either for succour, the answer he got from Soult or Suchet was, that he should come to Seville or Valencia, but that they could spare no aid to him. Wellington, on the other hand, though at the head of far inferior forces, singly commanded them all. Experience had taught him the impracticability of any co-operation with the wretched armies of Spain, and, relying on his own British and Portuguese alone, he trusted, by unity of operation and the advantages of a central position, to obtain advantages over forces in number triple his own, but disseminated over an immense surface, and disjointed by separate interests and variety of direction (2).

V —But, beyond all doubt, the most powerful ally which Wellington had

(1) "All the world is aware of the vicious system of our operations—every one sees that we are too much scattered. We occupy too wide an extent of country—we exhaust our resources without profit and without necessity—we cling to dreams. Cadiz and Badajoz will swallow up all our resources. Cadiz, because it will not be taken. Badajoz, because it can only be supported by an army. The only safe course would be to destroy the one, and abandon, for the moment, all thought of the other. We should concentrate our forces, retain certain *points d'appui* for the protection of our magazines and hospitals, and regard two thirds of Spain as a vast battle-field, which a single victory may either secure to or wrest from us, until we have changed

our whole system, and seriously set about pacifying and conquering the country. We have not a man on the coast, from Roussillon to Barcelona. Valencia is the centre of all the insurgents of the north and centre, and still we are besieging Cadiz."—BESSIÈRES to BEAUFORT, 6th June 1811. BELMAS, *Appendix*, No. 73, vol. 1.

These views were highly displeasing to Napoleon, who a few months after superseded Bessières in the command of the army of the north, but they were far sounder than the Emperor's own, and he lost the Peninsula by not following them.

(2) See *Pieces Justes* in BELMAS, *Journaux des Sieges*, 1. 530—657.

in the prosecution of his operations against the French generals in the Peninsula, was to be found in the oppressive manner in which they were constrained by Napoleon to carry on the war, and the incredible excesses of cruelty to which they had recourse to maintain their soldiers, and repress the hostility which the exactions, which were every where going forward had excited in all the provinces. When it is recollected, indeed, that nearly four hundred thousand French soldiers were permanently quartered on the Spanish territory, and had been so now for three years; that during the whole of that time this immense body had been paid, fed, clothed, and lodged at the expense of the conquered districts, who had already been exhausted by the contributions of their own troops and guerrillas, and devastated by all the horrors of war during four successive campaigns, it becomes rather a matter of astonishment how they contrived to extract any thing at all in the end from a country so long exposed to such devastations, than that their rapine could be levied only by the last atrocities of military execution. As it was, however, the systematic rigour and cruelty with which they enforced their exactions, were as unparalleled in modern warfare as their enormous amount was unexampled. It has been already noticed, that, by his own admission, Suchet, whose civil administration was incomparably the least oppressive of any of the French generals in the Peninsula, contrived to extract eight millions of francs annually from the war-wasted province of Aragon, or more than double what it had yielded in the most flourishing days of the monarchy (1), and that two millions sterling were at once levied from the small province of Valencia and, judging of the comparative weight of his requisitions and those made by others, from the flourishing aspect and general submission of his province compared with the wasted features and fierce resistance which were every where else exhibited, we may safely conclude that his exactions were not half of what were elsewhere experienced. It was this oppressive system of military contributions which was adopted by the French, and invariably acted upon from the very outset of the revolutionary war, and not the passing devastations of the soldiers, that was the principal evil which provoked so universal a spirit of hostility to their government.

Difference between the English plunder and the French exactions.

The English soldiers at times plundered just as much as their opponents, and perhaps, from their habits of intoxication, and the inferior class in society from which they were drawn, they were on such occasions more brutal in their disorders than the French but there was this difference between the two, and it was a vital one to the inhabitants of the conquered countries: the English plunder was merely the unauthorized work of the common men, and was invariably repressed when order was restored by the officers: the whole supplies for the troops being paid with perfect regularity from the public funds of Government; whereas the French exactions were the result of a systematic method of providing for their armies, enjoined by express command upon all the Imperial generals, and forming the groundwork of the whole military policy of Napoleon. In the case of the former, when discipline was restored all military oppression ceased, and the presence of the army was felt only in the quickened sale for every species of produce which the inhabitants enjoyed, and the immense circulation of money which took place. In that of the latter, the more thoroughly that military subordination was established, the greater was the misery which prevailed around the soldiers' cantonments, from the greater

(1) *Ann. viii. 124, and Societ. t. 240 126.*

perfection which the system of methodical robbery had attained. And this difference appeared in the clearest manner when they respectively quitted the countries which they had long occupied. When Soult abandoned Andalusia, of which he had enjoyed the whole resources for three years, such was the universal destitution which prevailed, though the country was the richest in Spain, and had not seen any serious invasion during that time, that the French armies of the south, the centre, and Portugal, had received no pay for one, the civil servants none for two years (1), whereas the wealth which had been poured into Portugal during the same period was so enormous, that it had far more than counterbalanced all the devastations of Masséna's invasion, and all the sacrifices of the long protracted contest (2)

Dreadful
severity of
the French
military
decrees.

But oppressive as were the exactions of the French armies, the severity of the military executions by which they were levied, and the infamous cruelty of the Imperial decrees by which it was at-

tempted to suppress the insurrections to which they gave rise, were still more instrumental in producing the general and increasing hostility to their authority which characterised the later years of the war. Not only did Soult in Andalusia issue and act upon a proclamation, directing "no quarter to be given to any of the Spanish armies or armed bands, and all the villages where any resistance was attempted, to be delivered to the flames (3);" but Augereau, in Catalonia, announced "that every man taken with arms in his hands should be hung, without any form of process, by the highway, every house from which resistance was made should be burned, and every inhabitant in it put to the sword (4)," and Bessières in the north issued and enforced decrees unparalleled, it is to be hoped, in modern warfare, for the cold-blooded atrocity in which they are conceived. By the first of these it is declared, that "the clergy, alcaldes, cures, and justices of every village, shall be responsible for the exact payment of the contributions, and the furnishing the whole requisitions ordered by the military authorities. Every village which shall not immediately execute the orders which it has received, or furnish the supplies ordered, shall be delivered over to military execution, and every individual convicted of stimulating the people to withstand or delay obedience to the French orders for furnishings and requisitions, shall be forthwith delivered over to a military commission (5);" while by the second it was announced, that "*the fathers, mothers, brothers, sisters, children, and nephews* of all individuals who have quitted their domiciles, and do not inhabit the villages occupied by the French, shall be held responsible, *in their persons and effects*, for all acts of violence committed by the insurgents, that if any inhabitant is carried off from his domicile, three of the nearest relations of *some brigand* shall be arrested as hostages, and shot if the individual is put to death, that every person who shall be absent eight days without permission shall be considered as a brigand, and *his relations* proceeded against in terms of this decree, that every person not provided with a *carte de sûreté* shall be immediately sent to prison, every one found corresponding with the insurgents put to death, and every one writing to the
